İTĀ'Ā [see TĀ'Ā].

İTĀ' [see 'ARŪD, KĀFIYA]

İTĀĶ [see 'ABD]

İTALIYA, Italy, a name which seldom occurs in the classical Arab authors and which al-Idrīsī [*q.v.*] uses only once in his *Nuzhat al-mushṭāk* (cf. M. Amari, *BAS*, 15); in the Arab works on history and geography, together with less common expressions like *arḍ İfrānđī* [see İFRANĐJ] and *al-arḍ al-kabīra* (which sometimes denotes Calabria alone), one finds the terms الأندرية, أنكرية, which more specifically denote the regions in the centre and south of Italy under the domination of the Lombard principalities, although, in the *Mu'djam al-buldān* of Yāqūt, the territory denoted by the term الأندرية (strangely transliterated as al-Ankaburda) extends from Provence to Calabria.

The particulars furnished by Arab geographers and travellers in regard to Italy, both the peninsula and the islands, are not all equally complete and trustworthy. It need hardly be emphasised that, in their writings, Sicily (as will be made clear in the article ŞIKILLIYYA) was given a place of particular importance, in view of the fact that, for almost two and a half centuries, the island formed part of the *Dār al-Islām* [*q.v.*]. Among the remarkable output of Arab geographical writings, one work outstanding for the wealth and detail of the information it contains is the *Nuzhat al-mushṭāk*, four sections of which are devoted to Italy—three to its mainland territory (3rd section of the IVth climate, 2nd and 3rd sections of the Vth) and one to its island territory (2nd section of the IVth climate).

Although it should sometimes be treated with reserve, the information given by al-Idrīsī is only rarely the fruit of pure imagination: a typical and perhaps unique example is the fanciful, legendary description of the city of Rome. As regards the topicality of the particulars given, it should be borne in mind that they sometimes reflected the political and ethnic situation of certain cities in the 12th century (the *Nuzhat al-mushṭāk* was completed in Şhawwāl 548/January 1154), but at other times they derived from out-of-date sources, and show that the compiler or his informants found it impossible to bring the material up to date (on this question, cf. G. Furlani, *La Giulia e la Dalmazia nel "Libro di Ruggero" di al-Idrīsī*, in *Aegyptus*, vi, Milan 1925, 60 ff.).

The fullest, but also the least trustworthy, descriptions offered by geographers and travellers from the 3rd/9th to the 9th/15th centuries relate to the city of Rome (transcribed *Rūma*, *Rūmiya* and *Rūmiyya*); other much less comprehensive descriptions refer to various towns such as Genoa, Venice, Pisa, Naples and, further to the south, Reggio, Taranto, Otranto and Brindisi; an allusion to Lucera (the transcription of which varies from *Lūshīra* to *Lūdjāra*), where the emperor Frederick II consigned the last nucleus of Muslims from Sicily, is found in the writings of certain geographers who lived at least until the middle of the 7th/13th century, such as al-Ĥimyarī (cf. U. Rizzitano, *L'Italia nel "Kitāb arrawḍ*

*al-mi'fār fi khabar al-aḫlār*" di Ibn 'Abd al-Mun'im al-Himyari, in *Madjallat Kulliyat al-Ādāb*, University of Cairo, xviii (1956), 174), Ibn Sa'īd al-Andalūsī (in *BAS*, 136), Abu 'l-Fidā' (*ibid.*, 149, 421), Ibn Khaldūn (*ibid.*, 491) and some others.

At a later period Italy was visited, and sometimes even partially described, though in a superficial way, by a number of Arab travellers whose works were listed in H. Pérès, *Voyageurs musulmans en Europe aux XIX<sup>e</sup> et XX<sup>e</sup> siècles*, *Notes bibliographiques*, in *Mélanges Maspero* (Mémoires de l'Institut français du Caire, lxviii (1935), 185-95).

The earliest information provided by the Arab chroniclers about the Saracen attacks on continental Italy concerns the defeat of the Venetian fleet off Taranto (in 225/840 according to certain Arab historians, in the following year if the Latin sources are to be believed) and the accompanying attacks on Bari which were the prelude to the establishment in that town of an emirate which survived for a quarter of a century; it was on the occasion of these first incursions onto the mainland that the Muslims made their entrance into the complex and treacherous political intrigues of the Lombard principalities; indeed, the support of the Saracen forces, a step to which one or other of the Lombard rulers resorted, often exerted such influence on the economy of the civil wars which racked southern Italy from the middle of the 3rd/9th century that these troops rapidly became the masters of the situation, while such men as Radelgise, prince of Benevento, and Siconolfo, prince of Salerno and Capua, vied with each other in seeking to make an alliance with their daring commanders. Among these were two adventurers, Massar and Apolaffar (probably corruptions of the Arabic *kunyas* Abū Ma'shar and Abū Dja'far), who are worthy of note and who commanded respectively the Saracen troops of Benevento and Taranto; on the subject of these two men the Latin sources give merely a few details, while their exploits are passed over in complete silence by the Arabic historians who, here as elsewhere, had little inclination to give prominence to the achievements of men who, at best, were soldiers of fortune, often in revolt against established authority in Sicily or Ifrikiya.

In the same way, the two events which caused Christendom to experience, firstly its most tragic hour and then, three years later, the joy of exultant victory, were not of a kind to arouse the interest of the Arab chroniclers; in *Dhu 'l-Hijjā* 231/August 846, Saracen contingents reached the walls of Rome and sacked the basilica of St. Peter, and in 234/849 a large Muslim fleet was defeated at Ostia, whence it would probably have attempted to open up a way to the Eternal City, if the outcome of the battle had not been a decisive victory for the Christians.

On the question of the earliest Saracen moves against Bari (بَارِي in the texts, which must be read as *Bāru*, representing the Latin forms *Barum* and *Varum*), and especially regarding the emirate which was set up there in about 232/847, we possess only a number of details, collected by al-Balāḫūrī (in *BAS*, appendix i, 2) and reproduced by Ibn al-Aṭhīr (*ibid.*, 239, 260). From the various particulars furnished by these two historians it emerges that, in this minute state based on the Adriatic town, there were three successive amīrs—Khalfūn, a Berber of the Rabī'a tribe, who ruled the principality for about five years; al-Mufarraḡ b. Sallām, who built a mosque there and tried, though without success, to legitimize his situation in relation to the caliph of Baghdād; and

lastly Sawdān, also a Berber, who came to power in 243/857 and, more fortunate than his predecessor, after various mishaps (described by al-Balāḫūrī who was himself a contemporary), succeeded in securing from Baghdād an official investiture with his fief, the end of which came about in Rabī' I 257/February 871.

Another city in Apulia, Taranto, was the scene of Muslim occupation for more than thirty years (approximately 231/846-266/880), but in Ibn al-Aṭhīr we find only a brief allusion, repeated by Ibn Khaldūn with some omissions (*ibid.*, 470). The Arab chroniclers give no information about the numerous Saracen exploits in southern Italy, and particularly those which took place in the Garigliano valley, where a fortress, built in 269/883, enabled activities on a formidable scale to be maintained until 302/915; it may be supposed that the Saracen adventurers, operating in this sector as elsewhere, were encouraged by the news of the landing in Calabria in Shawwāl 289/September 902, under the Aghlabid amīr Ibrāhīm II b. Aḥmad (261/875-289/902); references to this renewal of Muslim expansionist activity in southern Italy may be found, particularly in Ibn al-Aṭhīr (in *BAS*, 242), al-Nuwayrī (*ibid.*, 453), Lisān al-Dīn b. al-Khaṭīb (3rd chapter of *A'māl al-a'lām*, ed. al-'Abbādi and al-Kattāni, under the title *al-Maghrib al-'arabi fi 'l-'aṣr al-wasīf* Casablanca 1964, 120), Ibn Khaldūn (*BAS*, 475-6) and some other sources of less importance.

From the beginning of 298/end of 910 and until 336/948 the Fāṭimids, who had at first come up against a legitimist body of opinion, supported principally by the pro-Aghlabid Ibn Ḳurhub, succeeded the Aghlabids in Sicily; for this period the Arab historical sources gave prominence not only to the Saracens' constant offensives in Calabria and Apulia but also to the campaign led by Šābir, a *ghulam* of al-Mahdī's court, who in 316/928 attacked the Lombard principalities on the Tyrrhenian coast and occupied several fortified places whose identity it is not easy to establish on account of uncertain toponymy of the Arab texts (*BAS*, 170, 368). The Fāṭimid imām al-Ḳā'im (322/934-334/946 [q.v.]) planned a daring invasion of the Ligurian coast, under the leadership of Ya'qūb b. Ishāk who, in 322/934, made an attack on Genoa, which he conquered in the following year (*BAS*, 170, 254, 368, 437, 459, 478; Ibn Taghribirdī, ii, 267; in the *A'māl al-a'lām* (53) we read that the expedition was entrusted to Djawhar [q.v.], the famous freedman of the Fāṭimid imām al-Mu'izz).

From the middle of the 4th/10th century until about the middle of the following century, Sicily was governed by amīrs of the dynasty of the Kalbids [q.v.], and no acts of war of any particular importance took place, apart from the usual raids, noted by certain Arab chroniclers, in southern Italy and especially in Apulia and Calabria [see *KILLAWRIYA*]; for the invasion of Sardinia by Muḏāhid b. 'Abd Allāh in 405/1015 see *SARDANIYA*.

After the conquest of Sicily by the Normans, which began in 453/1061 and ended with the surrender of Palermo in 464/1072, the interest felt in a territory now finally lost to Islam diminished considerably, and the Arabic historians restricted their references to Italy to the limited sphere of the relations of that country with the rulers of the Mashriḡ and the Maghrib.

**ITĀWĀ** (from *atā*, apparently a doublet of 'atā) literally "gift", a general term met with, especially in pre- and proto-Islamic times, meaning a vague tribute or lump payment made, for example, to or by a tribe or other group; later the words describes, sometimes in a denigrating way, a tip or bribe.

*Bibliography*: F. Løkkegaard, *Islamic Taxation*, index, s.v.  
(CL. CAHEN)

**ITĀWĀ** (إتآوا), a district in the south-west of Uttar Pradesh, India, lying between 26° 21' and 27° 1' N., 78° 45' E.; and also the principal town of that district, 26° 46' N., 79° 1' E., on the river *Djāmnā* [q.v.]. The common spelling of the name is Etawa; other forms are Etaya (Elphinstone), Itay (de Laet), and sometimes Infāwa in the Muslim chronicles. Popular etymology connects the name with *im' āwā*, "brick kiln".

The region of Ifāwā was probably within the kingdom of Kanawḍī [q.v.] at the time of the raid on that kingdom by Maḥmūd of Ghazna in 409/1018, and again at the capture of Kanawḍī by Kuṭb al-Dīn Ayyub for Muḥammad b. Sām in 589/1193. Many Rāḍīpūt chieftains seem to have brought their clans to settle in this region in the early 7th/13th century, and gathered round them the more turbulent of the disaffected Hindū population. Their intransigence persisted, and many expeditions to enforce the payment of revenues were launched by successive Dihli sultans; thus Firūz Shāh (Tughluq) was compelled to put down a rebellion of *samindārs* there in 779/1377 (Yaḥyā b. Aḥmad, *Tārīkh-i Mubārak Shāhi*, ed. Bibl. Ind., Calcutta 1931, 133-4; tr. K. K. Basu, Baroda 1932, 141; Firūz, Lucknow lith., i, 148); the refractory chieftains Sumer Sāh, Bir Singh and Rāwat Uddharan—these names are much distorted in the Muslim chronicles and their translations—were in 794/1391-2 defeated by the sultan Nāṣir al-Dīn Muḥammad (Tughluq) in person, who is said (Yaḥyā b. Aḥmad, *op. cit.*, 152, tr. 161) to have destroyed the fort, although references to a fort abound in later years. Maḥmūd Tughluq's governor,

the Khwādīa-i Djahān Malik Sarwar [q.v.; see also SHARKIDS], began his governorship by leading a force against the rebels of Ifāwā and Kanawḍī in Rāḍīab 796/May 1394 (Yaḥyā b. Aḥmad, *op. cit.*, 156, tr. 164). After this time the Ifāwā region, lying between the spheres of influence of the Djawnpur sultans and the factions contending for power at Dihli, was frequently invaded from both sides; thus by Mallū Khān Lōdī [q.v.] in 803/1400-1 (Yaḥyā b. Aḥmad, *op. cit.*, 169 ff., tr. 175 ff.) and again in 807/1404-5, when after a four months' siege the rebels offered tribute and a gift of elephants. In 817/1414, shortly after his accession, the Dihli sultan Khidr Khān the Sayyid sent out a large force under Tādī al-Mulk who, having received homage from Sumer and others, punished the infidels of Ifāwā (*kuffār-i iāwā rā gūshmal dāda*; *ibid.*, 185); he led further expeditions there in 821/1418 and 823/1420 when the village of Dihuli (Deoli, Duhli, even Delhi in translations!) was destroyed and Sumer besieged in Ifāwā. It would thus appear that the annual revenues of the district could be collected only by armed force, and only in 825/1422, when the son of Sumer had temporarily joined the forces of Mubārak Shāh, was no foray made against this region.

After the conclusion of a further expedition in 831/1427 the region was invaded by the army of the Djawnpur sultan Ibrāhīm under his brother Mukhtaṣṣ Khān, and the Dihli army had to return to meet the danger; not for two years, however, could an army be spared to bring Ifāwā again under subjection, but Sayyid power was declining and the fragmentation of the old Dihli sultanate left the district little disturbed thereafter. In the division of the lower Dō'āb territories between the first Lōdī sultan, Bahlūl, and Maḥmūd Shāh Shārkī in 855/1451, Ifāwā passed to Djawnpur. A series of inconclusive disputes followed between Bahlūl and the three successive Djawnpur sultans Maḥmūd, Muḥammad and Ḥusayn, the last of whom seems to have made Ifāwā his temporary headquarters ("Bībī Rāḍī" the queen mother died here in 891/1486), and in 892/1487 Ḥusayn's attack on Bahlūl was repulsed and Ifāwā taken for the Lōdī kingdom. It remained in Lōdī hands until 934/1528 when, on Bābur's invasion of the district, it was surrendered to him.

After the defeat of Humāyūn in 952/1545 the region passed to Shēr Shāh, who effected the partial pacification of the district by bringing in a force of 12,000 horsemen and by his efforts in opening up the country through a road-building programme. Neither he nor Akbar seems to have found its absorption into the state administration easy, although it retained some prestige when Akbar made the town of Ifāwā the chief town of a *pargana*; the town is mentioned in the *A'im-i Akbarī* as possessing a brick fort, and some reference is occasionally made to Ifāwā as a banking centre. It seems never to have been settled by Muslims to the same extent as other towns of the Dō'āb, and after the decline of the Mughal power fell into Marāḥā or Djāf hands, with Awadh sometimes powerful enough to gain control over it. Even after the district became part of the lands ceded by Awadh to the East India Company in 1801, many local chiefs retained a considerable measure of independence; the town had some prominence in the struggles of 1857.

Ifāwā town has an interesting *Dīāmi*<sup>c</sup> *masjid*, built out of Hindū temple spoil, the western *liwān* of which has a massive central propylon-type arch similar to those of the Djawnpur [q.v.] mosques; it has not been adequately studied, the only account

being C. Horne, *Notes on the Jumma Masjid of Etawah*, in *JASB*, xxxvi/1 (1867), 74-5. The central square of Ifāwā is called "Humeganj", the name commemorating A. O. Hume, the Scots collector of the district who played a prominent part in the foundation of the Indian Congress Party.

*Bibliography*: in the article.

(J. BURTON-PAGE)

**ITBĀ'** [see MUZĀWADJĀ]

**ITHBĀT**, verbal noun of the fourth form of the root *th-b-t*, has the general meaning of to witness, to show, to point to, to demonstrate, to prove, to establish, to verify and to establish the truth, to establish (the existence of something).

For the Sūfīs, *itḥbāt* is the opposite of *maḥw*. This latter word means literally to efface. In the mystical vocabulary, it denotes the effacement of the "qualities of habit" (*awṣāf al-'āda*) while *itḥbāt* is the fact of performing one's religious obligations. It comprises three ways: to efface the degradation of appearances (*dhillat al-zawāhir*), to efface the negligences of the conscience, to efface all the deficiencies of the heart (according to al-Tahānawī, 1356, who quotes the commentary of 'Abd al-Latif on the *Mathnawī*). Other definitions are given: *maḥw* consists of getting rid of the attributes of the carnal soul and *itḥbāt* is the strengthening of the attributes of the heart so that he who casts away the bad and replaces them by the good is called *ṣāḥib maḥw wa-itḥbāt*. A further definition is given: *maḥw* consists in putting aside the "vestiges" (*rusūm*) of actions by looking with an annihilating look at the carnal soul and all its emanations. On the other hand, *itḥbāt* consists in maintaining the vestiges but in affirming that it is God who is their source; the Sūfī is thus established in God and not in himself.

The origin of these two words is ḳur'ānic: "God effaces (*yamḥū*) and confirms (*yuthbit*) what He will" (XIII, 39); *i.e.*, according to the Sūfī commentary, God effaces from the hearts of the initiated all inattentiveness towards Him and all mention of deities other than Himself, and He confirms on the lips of the beginners the mention of God. Above *maḥw*, there is *maḥk*: while the first leaves a trace, the second leaves none.

*Bibliography*: Tahānawī, *Kashshāf*, 172 and 1356.

(G. C. ANAWATI)

**ITHNĀ 'ASHARIYYA**, the name of that branch of Shī'ī Islam [see SHĪ'Ā] that believes in twelve *Imāms* (*itḥnā 'aṣḥar* meaning "twelve" in Arabic) beginning with 'Alī and ending with Muḥammad al-Mahdī.

Within the whole body of Shī'ism the *Itḥnā 'aṣḥarī* school is both the most numerous in terms of adherents and theologically the most balanced between the exoteric and esoteric elements of Islam. Other branches like the five-*imāmī* school of the Zaydīs [*q.v.*] and the seven-*imāmī* school, known as *Ismā'īliyya* [*q.v.*], are also of significance and continue to have adherents, while those believing in other numbers of *Imāms* or different interpretations of their functions have also existed during Islamic history but have been extremely small in number and have died out within a short period of their birth.

The religious history of *Itḥnā 'aṣḥarī* Shī'ism can be divided into four periods:

1.) *The period of the twelve Imāms*: This period extends from the time of 'Alī to the major occultation [see GHAYBA] of the twelfth *Imām* in 329/940. The twelve *Imāms* are as follows:

1. 'Alī b. Abī Ṭālib (d. 40/661)
2. al-Ḥasan b. 'Alī (d. 49/669)

3. al-Ḥusayn b. 'Alī (d. 61/680)
4. 'Alī b. al-Ḥusayn (Zayn al-'Ābidīn) (d. 95/714)
5. Muḥammad al-Bāḳir (d. 115/733)
6. Dja'far al-Šādiḳ (d. 148/765)
7. Mūsā al-Kāzim (d. 183/799)
8. 'Alī al-Riḳā (d. 203/818)
9. Muḥammad Dja'wād al-Taḳī (d. 220/835)
10. 'Alī al-Naḳī (d. 254/868)
11. al-Ḥasan al-'Askarī (d. 260/874)
12. Muḥammad al-Mahdī (al-Kā'im and al-Ḥudjja) (entered major occultation in 329/940).

This period was unique in that it was one in which the *Imāms* lived among their followers and instructed them directly. They left behind not only a large number of disciples but sayings which were collected by their followers and became the basis of later Shī'ī intellectual life. In Shī'ism the *ḥadīth* literature includes the sayings of the *Imāms* in addition to those of the Prophet. Moreover, two major works survive which are ascribed to the *Imāms* themselves, the *Nahdī al-balāgha* to 'Alī and the *Šahīfa saḍīdīyā* to Zayn al-'Ābidīn. The *Nahdī al-balāgha*, compiled from the sermons and orations of 'Alī by Sayyid Šarīf al-Raḍī, remains to this day the most venerated book among the Shī'īs after the Ḳur'ān and prophetic *ḥadīth*, while the *Šahīfa* contains prayers of such beauty that it has been called the "Psalm of the Household of the Prophet" (*Zabūr-i āl-i Muḥammad*).

Some of the followers of the *Imāms* like Hishām b. al-Hakam [*q.v.*], the disciple of the sixth *Imām*, and Abū Dja'far al-Ḳummī, friend of the eleventh *Imām*, themselves became famous Shī'ī authorities, while the instruction of the *Imāms* reached even the Sunnī segment of the Islamic community especially with *Imām* Dja'far, who had many Sunnī students. This period terminated with the minor occultation (*al-ghayba al-sughrā*) and the major occultation (*al-ghayba al-kubrā*) of the Mahdī. During the minor occultation the Mahdī spoke to his community through his deputies or "gates" (*bāb* [*q.v.*]). The major occultation began when the last "gate" through whom the Mahdī spoke to the community, 'Alī al-Sāmarrī, died.

2.) *The period extending from the beginning of the major occultation to the Mongol invasion and Khwāzja Naṣir al-Dīn al-Ṭūsī*. This was the period of the compilation of the major collections of Shī'ī *ḥadīth* and the formulation of Shī'ī law. This elaboration of Shī'ism began with Muḥammad ibn Ya'ḳūb al-Kulaynī (d. 329/940), author of the monumental *Uṣūl al-ḳāfi*, to be followed by such figures as Ibn Bābūyah, also called Šhayḳh al-Šadūḳ (d. 381/991), Šhayḳh al-Mufīd (d. 413/1022) and Šhayḳh al-Ṭā'ifa, Muḥammad b. al-Ḥasan al-Ṭūsī (d. 460/1067) with whom the principal doctrinal works of Shī'ī theology and religious sciences became established. This was also the period of other renowned Shī'ī scholars such as Sayyid Šarīf al-Raḍī (d. 406/1015), who assembled the sayings of 'Alī, his brother Sayyid Murtaḍā 'Alam al-Hudā (d. 436/1044), Faḍl al-Ṭabarsī (d. 548/1153 or 552/1157), known for his monumental ḳur'ānic commentary, Sayyid Raḍī al-Dīn 'Alī ibn al-Ṭā'ūs (d. 664/1266), at once theologian and gnostic, and finally Naṣir al-Dīn (d. 632/1273), whose *Tadhīr* marks the beginning of systematic Shī'ī theology.

3.) *The period between Naṣir al-Dīn and the Safavid revival*. During this rich period Shī'ī theology continued to develop in the hands of such men as Naṣir al-Dīn's student 'Allāma Hillī (d. 726/1326) while a convergence took place between the Sūfism of Ibn 'Arabī and Shī'ī theology and theosophy producing

such men as Radja b. Bursī (d. around 774/1372), Šā'in al-Dīn b. Turka (d. 830/1427), Ibn Abī Dījumhūr al-Aḥsā'ī (d. around 901/1495) and, perhaps the foremost Shī'ī thinker of the period, Sayyid Ḥaydar al-Āmulī (d. after 787/1385), author of the monumental *Djāmi' al-asrār*. This period marks also the beginning of that wedding between Avicennan philosophy, the Illuminationist theosophy of Suhrawardī (see *ISHRĀK*), the Šūfism of Ibn 'Arabī and Shī'ī theology which gave birth to the great theosophical and gnostic figures of the Šafavid period.

4.) *From the Šafavid period to the present.* During this period Iran itself witnessed a remarkable revival of intellectual activity especially in the religious and philosophical sciences, while Shī'ism was spreading in the sub-continent and the influence of the Šafavid thinkers of the "School of Iṣfahān" was felt ever more deeply among the Indian Muslims and even among some Hindus. This period began with such figures as Mīr Dāmād (d. 1041/1631) and Mullā Šadrā (d. 1050/1640), masters of metaphysics with whom Islamic philosophy reached a new peak, Bahā' al-Dīn al-Āmilī, at once a Shī'ī theologian and a mathematician, and Mullā Muḥsin Fayḍ Kāshānī and 'Abd al-Razzāq Lāhīdī, foremost among later theologians of Shī'ism. It also produced the two Maḍjlīsīs, the second, Muḥammad Bākīr, being the author of the most voluminous compendium of the Shī'ī sciences, the *Bihār al-anwār*.

During the Kāḍjār period while the *uṣūlī* and *akḥ-bārī* debates—between those who believed in the exercise of reason within the confines of religious scripture and those who relied solely on the Qur'ān and *ḥadīth*—continued, major contributions were made to the science of the principles of jurisprudence (*uṣūl al-fikḥ*), which in fact reached its perfection in the hands of Waḥīd Bihbihānī (d. 1205/1790-1) and Shaykh Murtaḍā Anṣārī (d. 1281/1864-5). During this period Shī'ism was also witness to the establishment of the Shaykhī movement by Shaykh Aḥmad Aḥsā'ī, which continues to this day, and by the Bābī movement, which prepared the ground for the Bahā'ī [q.v.] movement.

Religious Practices: Ithnā 'aṣḥarī religious practice does not differ in any essential way from that of the Sunnīs. The fasting and the pilgrimage are the same while in the daily prayers two phrases are added to the call to prayer. There are also minor differences in other parts of the canonical prayers (*ṣalāt*) but not much more than those between the different Sunnī rites. The Shī'ites, however, place a great deal of emphasis upon the pilgrimage to the tombs of the *Imāms* and saints [see *IMĀMZĀDA*] so that Naḍjaf, Karbalā', Maṣḥhad, Qum and other sanctuaries have gained a remarkable prominence in religious life. As for other questions of the Šharī'a, the Shī'a differ from the Sunnīs in demanding the "one fifth" tax, called *khums*, in addition to *zakāt*, and in permitting temporary marriage or *mut'a* [q.v.]. They also condone hiding one's faith (*taḳīyya* [q.v.]) when its manifestation would endanger one's person.

As far as the sources of law are concerned they are nearly the same as the Sunnī, namely, Qur'ān, *ḥadīth*, *ijmā'* and *ḳiyās*, except that *ijmā'* is connected with the view of the *Imām* and more freedom is given to *ḳiyās* than in Sunnī Islam. In Shī'ism the gate of *ijtihād* is always open and in the absence of the Mahdī every Shī'ī must follow a living *mudjtahid* who in every generation re-interprets the Šharī'a in the light of its immutable principles and the situation in which the community finds itself [see *MARDJA'I TAḲLID*]. The *mudjtahids* thus perform as representa-

tives of the *Imām* a task which in reality belongs to the *Imām* himself.

Doctrine: The "principles of religion" (*uṣūl al-dīn*) as taught in Shī'ism include unity (*tawḥīd*), justice ('*adl*), prophecy (*nubuwwa*), imamate and resurrection (*ma'ād*). Unity, prophecy and resurrection are common to Shī'ism and Sunnism. Shī'ism considers the quality of justice as an intrinsic aspect of the divinity rather than an extrinsic one and its perspective is based more on intelligence than on will. As for the imamate, it is the cardinal doctrine which separates Shī'ism from Sunnism. According to Shī'ism revelation has an exoteric (*zāhir*) and an esoteric (*bāḥin*) aspect, both possessed in their fullness by the Prophet, who is at once *nabī* and *walī*, the *nubuwwa* being connected with his exoteric function of bringing a divine law and the *walāya* with his esoteric function of revealing the inner meaning of religion.

With the death of the Prophet the "cycle of prophecy" (*dā'irat al-nubuwwa*) came to an end but the "cycle of initiation" (*dā'irat al-walāya*) continues in the person of the *Imām*. The word *imām* itself means etymologically he who stands before, therefore, he who is a guide and leader. In its specifically Shī'ī meaning it signifies he who possesses the function of *walāya*. According to Shī'ism the *Imām* has three functions: to rule over the Islamic community, to explain the religious sciences and the law, and to be a spiritual guide to lead men to an understanding of the inner meaning of things. Because of this triple function he cannot possibly be elected. A spiritual guide can receive his authority only from on high. Therefore, each *Imām* is appointed through the designation (*naṣṣ*) of the previous *Imām* by Divine command. Moreover, the *Imām* must be inerrant (*ma'sūm*) in order to be able to guarantee the survival and purity of the religious tradition. Seen in this light his function is clearly one that is concerned at once with the daily word of men as well as the spiritual and unmanifested world ('*alam al-ghayb*). His function is at once human and cosmic.

This view of the *Imām* can be seen clearly in the Shī'ī concept of the hidden *Imām*, the *Mahdī*. He is alive yet not seen by the majority of men. He is like the *axis mundi* around whom the spheres of existence rotate and he is the guarantee of the preservation and continuation of the Šharī'a. Finally he is the supreme spiritual guide (*ḳutb* [q.v.]), literally "pole" and in Shī'ī Šūfī orders the master is inwardly connected to the *Mahdī* as the supreme pole. Yet, the *Mahdī* remains hidden from the external eye and will appear to the outside world only in an eschatological event through which the inward will once again dominate over the outward and the outward is prepared for its absorption in the inward. The Hidden *Imām* is for the Shī'īs the continuation of the personality and *baraka* of the Prophet and the means whereby the Qur'ān is preserved and its true meaning based upon unity (*tawḥīd*) revealed to men. Without the *Imām* men would cease to understand the inner levels of meaning of the revelation. Also without him all temporal rule is marked by imperfection and only his reappearance can establish that ideal state based on divine justice which Islam envisages in its teachings.

**I'TIBĀR KHĀN**, a *Kh'wādja-sarā'i* (eunuch) who ultimately rose to the high office of a provincial governor under the emperor *Djahāngīr* [q.v.]. Originally in the service of a grandee of Akbar's court, on his death he joined the service of the Great Mogul who appointed him *nāzīr* (comptroller) of the household of Prince Salīm (later *Djahāngīr*) on his birth in 977/1569. He served the prince well and soon after his accession to the throne Salīm rewarded him by assigning to him the district of *Gwāliyār* as his *djāgīr* in 1025/1607. Thereafter he received one promotion after another both in rank and status rising to that of 6000 men and 5000 horse. In 1031/1622 he was appointed governor of *Āgra*, the capital of the empire, was honoured with the title of *Mumtāz Khān* in recognition of his distinguished services, and the fort and the imperial treasury were placed in his charge. Having faithfully served *Djahāngīr*, who pays him a generous tribute (cf. *Tūzūk*, Eng. tr. ii, 285), for a long period of 56 years he died, over 80 years of age, in 1033/1623-24.

**I'TIḲĀD**, the act of adhering firmly to something, hence a firmly established act of faith. In its technical sense, the term denotes firm adherence to the Word of God. It may be translated in European languages by the words "croyance", "belief", "Glauben", with the proviso that this "belief" is not a simple "opinion" or "thinking" (*pensée*), but is the result of a deep conviction. As the root 'k-d indicates, the idea of a "knot", a bond established by contract, persists. The VIIIth verbal form combines with this a greater measure of firmness and coherence.

*I'tiḳād* recurs many times in chapters or works which treat of faith [see *IMĀN*, § I]. It may be compared with and distinguished from two other technical words, *taṣdīk* and *'akīda*.

At first glance, as D. B. Macdonald has pointed out (*EI*<sup>1</sup>, s.v. *I'tiḳād*), *i'tiḳād* seems to be synonymous with *taṣdīk*: both terms denote inner adherence to the fundamentals of faith. It must however be said that *taṣdīk* is the act of judging and *i'tiḳād* the act of adhering. *Taṣdīk* is then seen as an inner judgment of veridicity which affirms the reality and authenticity of the divine Word, a judgment which cannot fail to resolve itself in adherence. Let us say there could be no authentic *taṣdīk* without *i'tiḳād*. It will then be understood that these two terms, each with the connotations belonging to itself, are sometimes interchangeable in definitions of *imān*, in particular those of the *Ash'arī* school, which make inner

adherence the "pillar" of faith. The majority of authors however prefer to explain faith by means of *taṣdīk*. Al-Djurdjānī states specifically (*Ta'rifāt*, ed. Flügel, Leipzig 1845, 41) that faith, *taṣdīk* of the heart from the lexicographical point of view, becomes from the point of view of the Religious Law (*shar'*) *i'tiḳād* of the heart.

In the *Ihyā'*, to define faith, al-Ḡhazālī makes use of the term *'akīd* in the sense of adherence, and in his *Ihtisād* he uses the term *taṣdīk*. But in the actual title of the latter work, *i'tiḳād* becomes religious belief *in globo*, and therefore signifies not only the inner act which adheres but also the content of the faith. This meaning is common, both in *Shi'ī* literature and also in Sunnism.

In this connection, *i'tiḳād* is associated with another word from the same root, *'akīda* [q.v.], pl. *'akā'id*, articles of faith. Credo's will be called *'akīda* or *'akā'id*. But the kur'ānic prescriptions which directly involve faith will alone be defined, in the ordinary way, as pertaining to *i'tiḳād* (cf. al-Nasafi, *'Aḳā'id*, ed. Cairo 1321, 7). According to the comments of D. B. Macdonald (*art. cit.*), they will be called "fundamental" (*'aṣliyya*) or again *i'tiḳādiyya*; and distinguished from "derived" prescriptions concerning the action (*'amaliyya*), for example in the later manuals of al-Sanūsī of Tlemcen, al-Baḍjūrī, etc. Hence it will follow that the singular noun *i'tiḳāda* and the plural *i'tiḳādāt* will be used in the sense of *'akīda* and *'akā'id*. Finally, in some cases, *i'tiḳādāt* may have the meaning of "convictions rationally acquired". It is used in this way in the work of the Jewish theologian Sa'adyā Gaon, *Kitāb al-Amānāt wa'l-i'tiḳādāt*.

It remains to state that the inner act denoted by *i'tiḳād* connotes above all the idea of firmness in adherence. If some doubt should be felt, this would not be on account of the actual weakness of the act of adherence. It is, rather, that the motives upon which it relies are insufficiently elaborated, or are compounded with lack of knowledge not recognized as such. When on the other hand they are based on science or certain knowledge (*'ilm*), they lead to an *i'tiḳād* which can assume the quality of unassailable certainty (*yaḳīn*). Here, on the question of inner adherence, we once more find an equivalent to the problem of the degrees of faith—faith of pure tradition, faith based upon science, faith of certainty (see *IMĀN*, IV, 2).

**I'TIḲĀD KHĀN**, a *Kashmīrī* of obscure origin, whose name was Muḥammad Murād, was originally in the service of Bahādur Shāh I (*reg.* 1119/1707-1124/1712), enjoying a rank of 1,000 and the title of *Wakālat Khān*. On the accession to the throne of the ill-starred *Farrukhsiyar* [q.v.] in 1125/1713 his name was included among those listed for execution but on the intercession of the (Bārha) Sayyid brothers, 'Abd Allāh Khān and Ḥusayn 'Alī Khān, known as king-makers (*Bādshāh-gar*), he was spared, promoted to a high office, appointed as *basāwal* (harbinger) of the army, and given the title of *Murād Khān*. Acting as a spy on the leading nobles, he soon won the confidence of the emperor who conferred on him the rank of 7,000 men and 10,000 horse and the grandiloquent title of *Rukn al-Dawla Khān Bahādur Farrukhsāhī*. Later he became closely involved in the political machinations and intrigues which were going on to depose *Farrukhsiyar*. He was responsible for the clash between the emperor and the Sayyid brothers which resulted first in the emperor's being blinded and later in his cold-blooded

murder in 1131/1719. On the deposition of his patron, he was disgraced and thrown into prison, his house and property confiscated and his accumulated wealth and jewels seized. Subsequently he was released, his rank restored and he was given a financial grant; but all this fell short of his expectations. He died during the reign of Emperor Muḥammad Shāh (reg. 1131/1719-1161/1748).

**ITIKĀF**, a particularly commended pious practice consisting of a period of retreat in a mosque, the vow for which stipulates a certain number of days in accordance with the believer's own wish. He must not leave it, save for the performance of his natural functions and his ablutions. He will there practise fasting, ritual prayer and recitation of the Qur'ān; with regard to other activities, for example the instruction given in the mosque, the schools are not in agreement. There is a divergence between the theory of *fiḥh* and sociological reality in that retreat is very seldom practised. *Itikāf* can be undertaken at any time, but in particular during the last ten days of the month of Ramaḍān, when the *Laylat al-Qadr* [see RAMAḌĀN] is presumed to have taken place. According to tradition, it was at that time that Muḥammad is said to have engaged in it. It is therefore dealt with in books of *fiḥh*, etc. immediately after the ritual fast. Popular traditions have widely exploited the theme of the wonderful occurrences which characterize this mysterious Night of Destiny, but this has no connection with *itikāf*: pardon for sins, the bowing down of everything found on the surface of the earth including trees and mountains, the determining of each man's destiny for the coming year, direct entry into Paradise for anyone who dies on that night, wishes fulfilled, and so on.

*Bibliography:* The books of *fiḥh* and *ikhṭilāf*, even though only of a general nature, deal with this question. Also Ghazālī, *Iḥyā'*, book vi (analysis by Bousquet, § 36). (G. H. BOUSQUET)

**ITIL** (Etil, Idil), the river Volga, called Itil by Kāshgharī, i, 30, line 17, and 70, line 6 (= Brockelmann 244), Atil by the Volga-Bulgars, Idel by the Volga-Tatars, Rau by the Mordve, Iul by the Čeremiss and Adel by the Čuwašh. (List of Turkish forms of the name in Ibn Faḍlān, ed. Z. V. Togan, § 50 d and in D. M. Dunlop, *The History of the Jewish Khazars*, Princeton N.J. 1954, 91, n. 8). The largest river in Europe, the Volga is some 3,694 km. long but has a descent, in all, of only some 229.5 m.: it rises at the village of Volgino Verkhov'e in the Valday mountain range and flows into the Caspian Sea 28 m. below sea level south of Astrakhān. The Itil was called Ὠρεος or Πᾶ by the ancient Greeks (cf. Pauly-Wissowa vol. xvii, 1937, col. 1680 f.); Herodotus confused it with the Aras [see AL-RASS] while Ptolemy and Pomponius Mela took the Don and the Itil for two branches of the same river.

The Volga-Bulgars and the Khazars [q.v.] came to its banks in the course of the Turkish tribal migrations of the 3rd and 4th centuries A.D. Their capital city Itil or Atil [q.v.] was situated on both sides of the river, at its mouth, the site of the later

Astrakhān [q.v.]. In the early Middle Ages, and to some extent up to the present time, Finnish peoples, predominantly Mordve (Burtās [q.v.]), lived on the upper reaches of the river; here and there, Slav settlements reached it even then.

The Volga-Bulgars were the first to be touched by (Sunni) Islam in the form of an embassy of 310/922-23, described in detail by Ibn Faḍlān. About 349/960, the Itil is mentioned as the western frontier of the Turks who went over to Islam, at that time, as a result of intensive propaganda from the regions of the Sāmānids (Ibn al-Aṭhīr, ix, 355 ff.). The Byzantine sources, too, mention the river as the Atil (Ἀτῆλ, Ἀτέλ) cf. G. Moravcsik, *Byzantinoturcica*, Berlin 1958, ii, 78 ff.).

The Muslim geographers thought of the Kama as the upper course of the Itil and hence increased its length still further (W. Barthold, *Zwölf Vorlesungen zur Geschichte Mittelasien*, Berlin 1935, 112 ff.; Ibn Ḥawqal, ii, 387, 389; Ibn Rusta, (B.G.A. vii), 141; Mas'ūdi, *Tanbih*, (B.G.A. viii), 62; *Mappae Arabicae*, ed. K. Miller, Stuttgart 1926/29, i/3, 79, ii, 153-6, v, 118, 142, 145 (Kāshgharī), vi, Map No. XVI = Pl. 46-8).

Sunni Islam was further strengthened by the advance of the Mongols in the 13th century and the establishment of the Empire of the Golden Horde (Altūn Orda [q.v.]), whose capital cities of Old and New Saray were situated on the lower reaches of the river, and by the consequent increase in the number of Turks on its banks. In the 14th century, at the latest, they became assimilated with the Mongols and peoples already established there, such as the Volga-Bulgars and Volga-Finns, and also Slavs—particularly through the harem—the Turkish speaking, Muslim Volga-Tatars. The 13th-century travellers who got as far as the Itil give it various names: William of Rubruck talks of the Itil, John of Plano Carpini of the Volga; the Austrian envoy Siegmund Freiherr of Herberstein (1486-1566) sometimes calls it this and sometimes the Rha.

Meanwhile, the town of Kazan' on the middle course of the Itil emerged as the centre of the later Tatar region. As early as 618/1221, the town of Nižniy-Nóvgorod had been established at the mouth of the Oká, to be overtaken by Kazan', in the course of time, as the central market of the middle-river region. With the Muslim merchants acting as intermediaries, Kazan' remained the centre for trade with central Asia until the 19th century. On the lower Itil, Astrakhān took over the role of the Khazar capital of Atil as the centre for trade. The gradual advance of the rulers of Moscow at the expense of the Tatars brought with it the establishment of Russian fortresses and strongholds in the Volga region. Thus, under Vasili III (1505-33) Vasil'sursk was built at the mouth of the Sura for protection from the Tatars.

With the fall of Kazan' (1552) and Astrakhān (completed by 1557) into Russian hands, the Slav settlement expanded by force into the Volga basin with the river acting as line of advance. Many of the towns on its banks with Turkish names (Kazan': Cauldron; Saratov = Sarl Tau: Pale Mountain; Kamyshin: reed bank; Tsaritsyn (now Volgograd); Astrakhān) became Russian towns in which Tatars or other Turks were and still are only a small minority. The Russians took over many villages deserted by the Tatars and drove the Tatars completely away from the fertile river meadows and into the sandy and forested regions far from the water. In addition, new Slav villages and towns were established: as early as 1551, Sviyazsk, later Čeboksar' (now the principal town

of the Čuwash lands and called in their language *Shupashkar*) was founded. The state consciously encouraged the Slav settlement and gave land over to the vassals of the tsar (*služilnye lyudi*) and the clergy. Henceforward, indeed, the peasants remained in the control of the regime and found it oppressive in many ways. Very many tried to settle in more remote areas where they could remain unmolested. This too led to the expansion of the lands of the Slav peoples and the displacement of the Muslim Tatars, or those who were still pagan, by the Finns and Čuwash who were, at least nominally, Christian. Samara (officially Kuybyshev since 1935) was founded in 1586 to protect the area, as later was Ufa to ward off the Nogay [q.v.] particularly. Alongside other smaller settlements, Simbirsk (after 1924 Ul'yanovsk) was built in 1648, and Słzran' in 1683.

The Muslims of the banks of the Itil were by no means happy with these developments. As early as 1569, a Turkish force from the Crimea tried to hinder the movement and make a way through for the Turkish fleet by means of a canal between the Don and the Volga at the point where there was least distance between them, at Tsaritsyn (Ewliya Celebi, vii, 841 ff.; cf. bibliography for specialist literature). But the project had to be abandoned because of the season and the alliance of the tsar with the shah. Later the Tatars, though Sunnis, turned to the Shi'i shah 'Abbās the Great (1587-1629) for aid. On the Russian side, the first Ukrainian settlements (*Slobodl*) were founded in the 17th century. At the same time, the Orthodox mission won over part of the Muslim population including the Kreshčane around Kazan', as well as various noble families, so that the strength of the Muslim population along the Itil declined still further. The river became a route for traffic from central Russia to the south; the boatmen (*Burlaki*) became famous with their songs. The unrest on the Volga in the 17th and 18th centuries was an internal Slav problem, but, in 1667-71, Sten'ka Razin sailed over the Caspian Sea with his fleet and inflicted great damage on the Persian population on its southern shore. The revolt of Emilian Pugačev in 1773-4 found a positive response among the Tatars. The slavization of the banks of the river regions was completed in the 18th and 19th centuries. Thus the attempt of the Muslims of the area between the Volga and the Urals to build up an "Idel-Ural" state in 1917/18 came to nothing. In view of the overwhelming preponderance of the Russo-Ukrainian population in the area by this time, the project found no support among the majority of the inhabitants along the banks of the river. The Itil, as a result of all this, has no longer any special significance for Muslims.

(B. SPULER)

**I'TIMĀD AL-DAWLA**, literally: "trusty support of the state", a title of Persian *wazirs* during the Šafawid period and subsequently.

The title *i'timād al-dawla* does not occur during the reign of Isma'īl I (907-30/1501-24), and first appears towards the end of the reign of Tahmāsp I, ca. 976/1568-9 (see *Tārikh-i İlāi-yi Nisāmshāh*, B. M. Ms. Add. 23,513, fol. 480a). The introduction of this title reflected the growing importance of the bureaucracy in an increasingly centralized administration, and marked a significant increase in the power of the *wazir* at the expense of the *wakil* [q.v.]. Under the Kādjārs, the title *i'timād al-dawla*

was rarely used, that of *ṣadr-i a'zam* [q.v.] being preferred.

For a discussion of the function and powers of the *i'timād al-dawla*, see WAZĪR.

**Bibliography:** V. Minorsky (ed. and trans.), *Tadhkirat al-Mulūk*, London 1943, index, s.v. (R. M. SAVORY)

**I'TIMĀD AL-DAWLA**, title of Mirzā Ghīyāth al-Dīn Muḥammad Teherānī, commonly known as Ghīyāth Bēg, son of Khwādja Muḥammad Sharif, one-time minister to the Ṣafawid Shah Ṭahmāsp [q.v.], father of Nūr Dījhān, wife of Dījhāngīr [q.v.]. Both his father and an uncle Khwādja Aḥmad, father of the historian Amīn-i Rāzī, author of *Haft Ikhlīm*, held high offices of state under Ṭahmāsp. After the death of his father in 984/1576-7 he, for reasons not precisely known, left for India to seek his fortune. It is, however, clear that he was in straitened circumstances when he undertook this journey for on his way to Akbar's new capital, Fathpūr Sikrī, near Āgra, he had to content himself with only two mounts for a party of five persons including two women. His youngest daughter, Mihr al-Nisā<sup>2</sup>, better known to history as Nūr Dījhān, was born during this journey. Of noble birth, he was welcomed by Akbar [q.v.] in whose service he gradually rose to the personal rank of 1,000 and the office of Diwān-i Buyūtāt (Minister for stores and royal factories). On accession to the throne in 1014/1605 Dījhāngīr appointed him joint vizier of his empire and conferred upon him the title of I'timād al-Dawla with the rank of 1,500 (cf. *Tūzūk*, Eng. tr. ii, 22). He was also assigned the *dīwānī* (collection of revenue) of the Pandjāb. In 1015/1606 Dījhāngīr, before leaving the capital on his punitive campaign against his rebel son Khusrāw, put the fort of Āgra in his charge. In 1016/1607-8 his son Muḥammad Sharif was executed by the orders of the emperor for his complicity in the plot, devised by Khusrāw, to assassinate Dījhāngīr. He himself was placed under arrest and had to pay two lacs of rupees to purchase his freedom. As Dījhāngīr was contemplating marrying Nūr Dījhān, who after the death of her husband, Shīr Afgān, was then living in the royal palace, as a preliminary he honoured his prospective father-in-law in 1020/1611 with the rank of 2,000 men and 500 horse and also gave him 5,000 rupees as gift. The same year Dījhāngīr married Nūr Dījhān and as a mark of respect honoured her father with the *wakāla* (chief ministership) of the empire although Dījhāngīr describes this as a reward for I'timād al-Dawla's "previous service, great sincerity and ability" (cf. *Tūzūk*, Eng. tr. ii, 200). In view of the execution of I'timād al-Dawla's son Muḥammad Sharif and his own confinement this statement sounds rather implausible. The *Ma'āthir al-Umarā'* (Bib. Ind. i, 129) is quite clear on the subject and attributes the rapid promotion of I'timād al-Dawla to his daughter's marriage. In addition to the office of Wakīl-i Kull (Prime Minister), I'timād al-Dawla was awarded in 1024/1615 the rank of 6,000 men and 2,000 horse as well as kettle-drums and a standard, a very high mark of distinction in Moghul nobility. He moreover enjoyed the special privilege of beating his drums in the emperor's presence. In 1026/1617 Dījhāngīr conferred upon him the highest honour that a grandee of the empire could ever enjoy, of placing his own turban on his head thus confirming his close relationship with the royal family. He died in 1031/1622 near Kāngṭa, on the way to Kashmir in the entourage of Dījhāngīr. His dead body was brought to Āgra where he was buried on the bank of the

Yamuna in a beautiful garden laid out by him. Later a white marble tomb (completed in 1038/1628) with extremely fine lattice work was built over his grave. (For a description of his tomb see S. M. Latif, *Agra, Historical and Descriptive*, Calcutta 1896, 182-4; Gavin Hambly, *The cities of Mughal India*, London 1968, 41, 73-4, 83-4; P. Brown, *Indian Architecture (Islamic Period)*, Bombay n.d., 109).

A man of genial disposition, he was a popular figure in court circles and Dījhāngīr describes his company as far better than "a thousand strong tonics". He had the unique distinction of writing a few pages of Dījhāngīr's *Tūzūk* at the command of the emperor, who could not do so for emotional reasons (cf. *Tūzūk*, Eng. tr. ii, 326-8), which incidentally establishes his command over the Persian language and his skill in penmanship. A man of learning and culture, an accomplished letter-writer, a brilliant conversationalist, he was noted for his self-control. Greedy and avaricious, he had no scruples in freely accepting bribes.

'ITK [see 'ABD].

'ITKNĀME, *'itknāme*, also *'itknāme*, an Ottoman term for a certificate of manumission, given to a liberated slave [see 'ABD]. The document normally gives the name and physical description, often also the religion and ethnic origin of the slave, together with the date and circumstances of his manumission, and is dated, signed, witnessed, and registered. The issue of such certificates goes back to early Islamic times (for examples see A. Grohmann, *Arabic papyri in the Egyptian library*, i, Cairo 1934, 61-4; idem, *Arabische Papyri aus den Staatlichen Museen zu Berlin*, in *Isl.*, xxii (1935), 19-30). A collection of 18th-century Ottoman certificates was edited by K. Jahn, *Türkische Freilassungserklärungen des 18. Jahrhunderts (1702-1776)*, Naples 1963. Other and earlier examples are cited in Jahn's introduction. (ED.)

'ITR [see 'ANBAR, MISK, etc.].

ITTIHĀD, verbal noun of the VIIIth form of the root *w-h-d*. The first form *wahīda* and *wahūda* means to be alone, unique; the VIIIth *ittihāda*, means to be united, associated, joined together.

Muslim theologians understand the word in five different ways; three of these are metaphorical (*'alā sabīl al-isti'āra*), the two others are real (*'alā sabīl al-hakīka*).

1. — The real sense of *ittihād* is that a thing be-

comes another while remaining itself. This is called real because it is the first meaning that comes to mind when the word is used in its absolute sense. This real sense comprises two categories: 1) Where two objects unite together in such a way that it can be said that one is the other and reciprocally. In this case, there are, before their association, two distinct objects and after it only one of the two continues to exist. 2) Where there is one object which, while remaining the same, becomes something other than it was before. In this real sense *ittihâd* is considered necessarily impossible. From this comes the principle: *al-ithnân lâ yattahidân*.

2. — In the second sense, the metaphorical sense, there are three meanings, depending on whether it means: -a) that an object changes into another suddenly or gradually. Thus, for example, water becomes air: a substantial form is replaced by another; or black becomes white (in which case one attribute of an object disappears and is replaced by another). -b) that an object becomes another by composition so that it gives birth to a third; thus earth joined to water becomes clay. -c) when a being becomes another, as for example when an angel takes on human form. All three sorts of metaphorical *ittihâd* can be found in reality.

In the history of Muslim doctrines, the word *ittihâd* evokes two problems above all: that of the Incarnation of the Word in the person of Jesus (*ittihâd al-lâhût bi'l-nâsûl*) and that of the "mystic union" of the soul with God.

Muslim apologists have always vigorously rejected the idea of the Christian incarnation. *Ittihâd* and *hulûl* are here generally taken as synonymous, and the concept of a "union" of divinity with humanity is rejected as contradictory. (Cf., for example, al-Bâkîlânî who, in his *Tamhîd*, enumerates the different Christian opinions concerning what he calls "*al-ittihâd*" without further qualification, *ittihâd* considered as *hulûl*, or as *ihkîlâj* and *imtizâdj* or as dwelling in a temple or as the appearance of the image of man in a mirror (ed. McCarthy, 75-103; A. Abel, *Le chapitre sur le christianisme dans le "Tamhîd" d'al-Baqillani (mort en 1013)*, in *Etudes Lévi-Provençal*, I, Paris, 1962, 1-11). Christian apologists, in turn, strove to show that by distinguishing between "nature" (*tabî'a*) and "person" (*uḡnûm*), one could formulate, without contradiction, the doctrine of the Incarnation (and of the Trinity). (Cf., for example, Théodore Abû Kurrâ, *Mayâmîr*, ed. Bacha, 1904, *passim*; Paul Khoury, *Paul d'Antioche, Evêque melkite de Sidon (XII<sup>e</sup>s.)*, Beirut 1964, above all page 81 and notes 12 and 13).

From the point of view of Muslim mysticism, three theories of divine union were advanced in the 3rd/9th century. Union is considered as: a) either a union (*ittisâl* or *wisâl*) which excludes the idea of an identity of the soul and God; b) or as an identification (*ittihâd*) which itself has two meanings which are quite different: the first, which is synonymous with the preceding, and the second which refers to a union of nature; c) or as an inhabitation (*hulûl*); God's Spirit lives, without losing its identity, in the purified soul of the mystic. Orthodox Muslim scholars only accept the idea of union in the sense of *ittisâl* (or its equivalent, the first meaning of *ittihâd*), but reject vehemently any idea of *hulûl* in which they see, wrongly, a sort of equivalent of the Christian idea of Incarnation. The charge of *hulûl* was one of the most serious raised against al-Hallâdj [q.v.].

Sometimes the expression *ittihâd* comes to designate the experience of *tawhîd* or of *wahdat al-wudjûd* (the

monism of being): things have no consistency of their own, they are only one with God. As M. Gardet so pertinently remarks, the great Şûfî exponents of the oneness of being always hesitated to admit the idea of an intentional union of love, in which the "two" become "one" in spirit while remaining "two" in being. Normally everything is considered at an ontological level. Consequently, in order to maintain the idea of divine transcendence, the term substitution is used in preference to union (cf. Anawati-Gardet, *Mystique musulmane*, 182). The personality of the Şûfî is, so to speak, possessed and volatilised by God (cf. the characteristic examples in the *Tâ'iyya kubrâ* of Ibn al-Fârîd, *ibid.*, 118-9).

According to 'Alî b. Wafâ (quoted by al-Sha'rânî in *al-Yawâkîf wa'l Djawâhir*, Bülâk 1277, 80, l. 18-9), *ittihâd* means, in Şûfî terminology, the evanescence of the will of the creature in the divine will.

(R. NICHOLSON/G. C. ANAWATI)

**ITTIHÂD-I MUHAMMEDİ DJEM'İYYETİ**, generally translated as the "Muhammadan Union", was a politico-religious organization which acquired notoriety as the instigator of the insurrection in Istanbul on 13 April 1909. Its formation was announced publicly on 5 April 1909 (= 23 Mart 1325, by the Turkish "financial" calendar), though Hâfîz Dervîsh Waḡdetî, its leading spirit and editor of the daily newspaper *Volkan* ("Volcano"), claimed that the Muhammadan Union had in fact been founded on 6 February 1909 (= 24 Kânûn II 1324) (see T. Z. Tunaya, *Türkiyede Siyasi Partiler 1854-1952*, Istanbul 1952, 261 ff.). It seems to have been a paper entity made up of members drawn from the religious orders around the country. It had no representation in parliament, although many deputies sympathized with its stand against the modernizing policies of the Ittihâd we Terakki Djem'iyeti [q.v.], usually known as the Committee of Union and Progress or (in works in English) C.U.P. Thus the activities of the Muhammadan Union were virtually restricted to the inflammatory articles in *Volkan* and other opposition papers such as *Şadâ-yî Millet*, *Serbestî* and the British Embassy financed *Levant Herald*.

The doctrines and programme of action of the Muhammadan Union were explicitly clerical, and therefore hostile to modernization and reform. Its professed aim was non-political, namely to reform public morals and to bring them within the prescriptions of the Şharî'a. Its members were strictly forbidden to participate in politics. Yet the writings in *Volkan* seemed to suggest that the Muhammadan Union's only commitment was to the destruction of the C.U.P. This commitment was shared by the Liberal opposition.

The founding of the Muhammadan Union coincided with a mounting campaign launched by the opposition against the C.U.P. This campaign began immediately after the fall of Grand Vizier Kâmil Paşa [q.v.], on 13 February 1909. On 18 February *Volkan* announced that it was "the propagator of the views of the Muhammadan Union" (*Ittihâd-i Muhammedî Fırkasının murewidj-i efkârî*) (Tunaya, 265) and

thereafter became the most virulent critic of the C.U.P. It called the constitutional régime the "régime of devils" (*şeytânlar dewri*) (Tunaya, 264), and by exploiting religious prejudice succeeded in mobilizing opinion against the C.U.P.

This propaganda became so alarming that the government decided to take precautionary measures. Press Laws and Laws of Associations were introduced in parliament, and on 6 April the *Şhaykh* al-Islâm issued a manifesto to counteract *Volkan's* charges that the policy of the cabinet was anti-religious. Since *Wahdeti's* propaganda was making alarming headway in the army, on 10 April *Maḥmūd Mukhtâr Paşa*, the commander of the Istanbul garrison, issued a proclamation forbidding his troops to have any dealings with the religious *khodjas* and *softas*. *Kâmil Paşa's* exposé of C.U.P. politics, published on 3 and 4 April, and the murder and funeral of *Hasan Fehmî [q.v.]*, editor of *Scrbesti*, on 7 and 8 April, inflamed passions and prepared the ground for the insurrection which broke out on the night of 12-13 April 1909. It was crushed by the Third Army from Salonika (*Hareket Ordusu [q.v.]*), and the *İttihâd-i Muhammedî* was proscribed, while some of its adherents, including *Dervîsh Wahdeti*, were arrested and hanged. On account of the religious overtones of the insurrection, the Muhammadan Union has been held mainly responsible for it; but closer scrutiny of this organization as well as of events suggests that many other forces were at work. This group only provided a religious cover for the activities of all those elements which were determined to destroy the Committee of Union and Progress.

*Bibliography:* T. Z. Tunaya, *Türkiyede Siyasî Partiler 1859-1952*, Istanbul 1952, is the best starting point for a study of the *İttihâd-i Muhammedî*, especially for the notes and bibliography. The press of the period—*Volkan*, *Serbisti*, *Şadâ-yî Millet*, *İkdam* (opposition) and *Tanin* (C.U.P.)—to give only a selection, is invaluable. There are also accounts by contemporary observers: *Yunus Nadi*, *İkhtilâl ve İnkilâb-ı 'Othmânî*, Istanbul 1325 A. H., extracts from which appeared in *Cumhuriyet*, March-April 1959; A. F. Türkgeldi, *Görüş İhtikâlim*, Ankara 1951; *Ali Cevat*, *İkinci Mesrutiyyetin İlmî ve Otuzbir Mart Hadisesi*, ed. F. R. Unat, Ankara 1960; *Abdülhamid*, *İkinci Abdülhamid'in Hatıra Defteri*, Istanbul 1960; *I. H. Danişmend*, *31 Mart Vak'ası*, Istanbul 1961 (this work is based on the Grand Vizier *Tewfik Paşa's* official and private papers); *P. Farkas*, *Staatsstreich und Gegenrevolution in der Türkei*, Berlin 1909; *F. McCullagh*, *The fall of Abd-ul-Hamid*, London 1910; *Ismail Kemal*, *The memoirs of Ismail Kemal*, ed. Somerville Story, London 1920; *Halide Edib*, *Memoirs*, London 1926; *P. P. Graves*, *Briton and Turk*, London 1941. See also *Y. H. Bayur*, *Türk İnkılabı Tarihi*<sup>2</sup>, i/2, Ankara 1964; *B. Lewis*, *The emergence of Modern Turkey*, revised ed., London 1968; and *Feroz Ahmad*, *The Young Turks, the Committee of Union and Progress in Turkish Politics 1908-1914*, Oxford 1969.

**İTTİHÂD WE TERAĞKI DJEM'İYYETİ**, better known in Europe as the Committee of Union and Progress (C.U.P.), was the political movement responsible for the destinies of the Ottoman Empire from the revolution of 1908 to its destruction in 1918. The Committee had its immediate origins in a group called the "Ottoman Freedom Society" (*'Othmânîl Hürriyet Djem'iyyeti*), founded in Salonika in August-September 1906. Spiritually, however, its antecedents

went back to the conspiratorial activities of the Young Ottomans and their successors, both inside and outside the Ottoman Empire. (See T. Z. Tunaya, *Türkiye'de siyasî partiler 1859-1952*, Istanbul 1952; E. E. Ramsaur, *The Young Turks: prelude to the revolution of 1908*, Princeton 1957; and *Bernard Lewis*, *The emergence of modern Turkey*, revised ed., London 1968).

The Ottoman Freedom Society began as a group of ten, numbered one to ten according to age, the eldest member, *Bursalî Fâhir*, being designated number one. A central committee (*hey'et-i 'âlîye*, later *merkez-i 'umûmî*) of four—*Meḥmed Tal'at*, *Rahmî [Evranos]*, *Mîdhat Şhükrü [Bleda]*, and *Ismâ'il Dîjânbulât*—was chosen from amongst the ten. (See *Ziya Şakir*, "İttihat ve Terakki nasıl doğdu? nasıl yaşadı? nasıl öldü?" in *Son Posta*, 8 and 9 February 1933 and *passim*). Seven of the ten had some connexion with the military though in the central committee only *Ismâ'il Dîjânbulât* was a soldier. While it is true that initially soldiers were numerically dominant in the C.U.P., the civilians were aware of the political threat this posed and therefore always tried to keep it under control. In the constitutional period the military-civilian rivalry became a constant political theme. In the organizational phase soldiers, and to a lesser extent administrators, played a vital role since they alone were mobile and had communications with virtually every part of the empire. It is not surprising, therefore, that when the Rumelian branches of the Ottoman Freedom Society were set up in *Monastir*, *Ohri*, *Kıracova*, *Vodina*, *İşkodra*, *Serez*, *Drama* and *Edirne*, junior officers like *Enver [q.v.]*, *Meḥmed Şâdlık*, *Eyyüb Şabrî* and *Djemâl [q.v.]*, to mention but a few, were instrumental in this.

In 1907 the Salonika group made contact with exiled Young Turks in Europe. Later in the year *Dr. Nâzım*, a prominent member of *Aḥmed Rîdâ's* group in Paris, returned to Salonika and in September the two groups agreed to merge and adopt the older and more established name *İttihâd we Terakki* (Ramsaur, *Young Turks*, 121 ff.). This move had no practical significance because both groups remained autonomous and did not collaborate, since the centre of activity had shifted to the Ottoman Empire. However, in the minds of the exiles the merger created the illusion that they had a right to share the political power acquired by the C.U.P. as a result of the 1908 revolution. The Committee had no intention of allowing this and it soon destroyed the illusions of one such exile who returned to Salonika to be told: "Doctor . . ., this Committee of ours is not the one you worked with abroad. This Committee is the product of *Monastir* and *Salonika* . . ." (*Ibrahim Temo*, *İttihad ve Terakki Cemiyetinin teşekkülü ve hidematı vataniye ve inkilâbî millîye dair hatıratım*, *Mecidiye* 1939, 215).

If the Committee was unwilling to share power, it was not equipped, in terms of either organization or ideology, to exercise it alone. Its professed aim had been to restore the constitutional régime. Having achieved this in July 1908 the Committee had lost its *raison d'être* and many who had supported it in the struggle against the Palace were no longer committed to its policies. The extent of its power and organization was uncertain. There were no accepted or recognized leaders. Only the central committee exercised a collective leadership, in theory controlling the entire political machine, arbitrating, recommending and issuing directives which were binding on all Unionist branches at various levels, from the *wilâyet* to the *nâhiye*. Furthermore, as representa-

tives of the newly emerging middle class, the Unionists lacked the social status to assume power in a traditional society which they were unwilling to overthrow by force. They therefore permitted the bureaucracy of the Sublime Porte to rule while they acted as guardians of the constitutional régime, hoping to subvert their society through established institutions.

The C.U.P. remained a secret organization with its headquarters in Salonika. It exercised its political influence through small deputations of two or three prominent Unionists like Ʀal'at, Raĥmî, Dĵawid [q.v.], Dr. Nâzım, Bahâeddin Şĥâkir and Aĥmed Rlĵâ. These deputations visited the sultan, the grand vizier or foreign embassies and made known to them Unionist policies. This method was impossible to reconcile with the principles of constitutional government. It drew from the opposition the charge that the secret Committee was exercising power without responsibility and creating an *imperium in imperio*. At the C.U.P. Congress of 1908 held in secret sessions in Salonika, the Committee did nothing to meet the opposition charges. Decisions relating to the internal organization were kept secret. It was announced that Unionists returned to parliament would work together under the name of the Party of Union and Progress (*İttihâd we Terakĥî Fırkası*). A central committee of eight, elected by the Congress, was to continue to run the affairs of the C.U.P.

The Committee intended to maintain control through its parliamentary majority. But the independent behaviour of the deputies frustrated this scheme. After the parliament's abject surrender to the counter-revolutionaries on 13 April 1909, the Committee decided on active participation in government by having Unionist deputies appointed under-secretaries. When this measure was defeated in the parliament (May 1909) the C.U.P. had two of its members—Dĵawid and Ʀal'at—appointed Ministers of Finance and the Interior respectively. (See F. Ahmad, *The Young Turks: the Committee of Union and Progress in Turkish politics, 1908-1914*, Oxford 1969, 50-53 and *passim*). Internal dissension and conflict with the senior officers who had assumed control after crushing the counter-revolution continued to undermine the Committee's position. The dissidents failed to be appeased and organized another opposition (see HIZB, ii and HURRIYET WE İTLÂF FİRKAĞI). The Unionists responded to the new threat by having the Chamber dissolved (15 January 1912) and in the new elections, which they manipulated unscrupulously, they won an overwhelming victory. The opposition adopted extra-parliamentary methods and a group of officers intervened, bringing about the downfall of the Committee-backed cabinet of Sa'îd Pařha in July 1912. The Unionists made a comeback by staging a successful *coup* in January 1913 and by June they had suppressed the opposition and consolidated power.

The period from July 1908 to June 1913 was a period of intense political activity. In these five years the Unionists had learned from bitter experience that neither the country nor their Committee could be run along inflexible and centralized lines. At the 1913 Congress the Committee tried to rectify this. The programme of modernizing the entire political, socio-economic and administrative structure of the empire would henceforth be applied to a quasi-federalist, multi-national framework.

New regulations defined the powers and functions of the Committee's hierarchical structure, from the general assembly at the top to the local clubs at the

bottom. Once again the Committee declared itself a political party which its headquarters in Istanbul, Salonika having been lost to Greece the previous year. The C.U.P. was organized as a general assembly (*medĵlis-i 'Umûmî*) consisting of about twenty members and chaired by the president (*re'îs-i 'umûmî*), a central committee (*merkez-i 'umûmî*) of about a dozen members under the general secretary (*kâtib-i 'umûmî*), and a general secretariat (*kalem-i 'umûmî*) of about six members headed by the vice president (*vekil-i 'umûmî*). The function of the general assembly was to co-ordinate the work of the central committee, which dealt with all Unionist organizations outside the parliament, and the general secretariat, which handled Unionist deputies in the parliament. Thus the power to make decisions was no longer restricted to a single body which could be monopolized by a clique. Decisions were now made in the *medĵlis-i 'umûmî*, where all shades of opinion could be represented. The *merkez-i 'umûmî* remained the most powerful single body; the new regulations merely restricted its freedom of action.

After Turkey's entry into the first world war the C.U.P. formed an exclusively Unionist cabinet and thereafter Turkey became a one-party state. The influence of a small group like the *merkez-i 'umûmî* was further eroded and during the war the organization of the C.U.P. became more decentralized. During the years 1915-18 it is possible to talk in terms of the prevalence of consensus politics. Policy was now discussed at four different levels—the cabinet, the central committee, the general assembly and the parliamentary party (*fırka*). Factions in the capital, led by figures like Enver Pařha, Ʀal'at or Kara Kemâl, also exercised an influence, while provincial administrations under powerful governors like Raĥmî (Aydn) or Dĵemâl (Syria) were virtually autonomous. The *fırka* became the substitute for parliamentary opinion since the parliament met only infrequently. For day-to-day business the general assembly, made up of members from all the other groups, replaced the central committee as the most important single body.

The war proved disastrous for Turkey and the C.U.P. By the middle of 1918 Unionists were considering establishing a political party not tarred with their brush, which could negotiate a peace treaty with the Entente Powers. The situation developed too rapidly for such calculated action. The 1918 Congress, scheduled to meet on October 1, was postponed on account of the new situation created by the Bulgarian armistice (*Tanin*, 30 September 1918). The Congress opened on November 1, after the signing of the Armistice of Mudros. Talât Pařha presided over the morning session and during the afternoon session he and the central committee withdrew from the Congress, escaping to Europe soon after. Ismâ'îl Dĵânbulât, one of the founder members of the Ottoman Freedom Society, was left formally to dismantle the *İttihâd we Terakĥî Djem'ıyyeti* and to reconstitute it under a new name, the *Tedĵeddüd Fırkası* (Renewal Party).

*Bibliography:* Works by Tunaya, Ramsaur, Lewis and Ahmad cited in the text give extensive bibliographies. For the constitutional period it is essential to consult the contemporary press, especially newspapers like *Tanin*, *Şĥurâ-i Ummet*, *İkdam*, *Şabâh*, *Taşvir-i Efkâr* and *Âti* to mention only a few. İTTİŞÂL [see İTTİHÂD].

IVORY [see 'ADL].

'İWAÐ, exchange value, compensation, that which is given in exchange for something. In a very broad and generally accepted sense, the word is used in works of *fiqh* to denote the counterpart of the obligation of each of the contracting parties in onerous contracts which are called "commutative" (*mu'âwadaî*, from the same root as 'iwað); that is, contracts which necessarily give rise to obligations incumbent upon both parties. Thus in a sale, the price (*thaman*) and the thing sold are each the 'iwað of the other. Understood in this sense, compensation must be exactly determined and, in theory, equal in value to the thing of which it is the counterpart. Should it be lacking, then unjust enrichment (*faql mâl bilâ 'iwað*) will follow. Should the balance between the two dues be merely uneven then there is an illicit profit (*ribâ*) gained by the man who receives more than he has given.

In unilateral contracts, the word 'iwað (*baðal* and *thawâb* are also used) is employed in a more restricted sense; it is applied to the compensation offered by one of the two parties who is not absolutely obliged to give any. Two examples of this kind of 'iwað are the onerous gift and the *khul'* (agreed repudiation). In theory the donee is under no obligation whatsoever, but if he offers compensation ('iwað) to the donor this need not have the same value as the thing given; it can even be purely symbolic, or, conversely, be worth far more; in Mâliki law it is even permitted to be undetermined. A husband has the right to repudiate his wife unilaterally and, of course, without demanding anything from her; if he makes the statement of repudiation dependent on payment of an 'iwað, compensation paid by the woman, the repudiation becomes *khul'*, but the 'iwað that the woman agrees to pay can have no more than an absurdly low value and be undetermined both in its total amount and even in its existence, all of which is quite impossible when the 'iwað constitutes an obligation corresponding to another obligation in a *mu'âwada* contract.

(Y. LINANT DE BELLEFONDS)

'İWAÐ WADJİH, a leading scholar and theologian, originally from Akhsîkat near Samarkand [g.v.], was considered peerless in his day in both rational and traditional sciences. He received his education at Balkh in the "dars" of his namesake Mîr 'İwað Tâshkentî. After completing his education he returned to his native village where he began teaching. Later he moved to Balkh and was still teaching when that town fell to the Mughal army under Awrangzîb. He came to India in 1056/1646; he entered the imperial service and was appointed *muftî* of the army. In 1069/1659, soon after his accession to the throne, Awrangzîb appointed him censor of the imperial troops, with an annual salary of 15,000 rupees paid against the rank of 1,000 men and 100 horse. He could not, however, hold this office for long and by his over-strictness earned the displeasure of the emperor who, while returning from a visit to Kaşhmîr, replaced him by Khwâdjâ Kâdir (on whom see extract from *Mir'âl al-'Ālam*, ed. Muḥammad Shafî', Lahore 1953, 75), in 1073/1662 at Lahore. A year later he succeeded in regaining the favour of the Emperor, though not his office. He was appointed tutor to prince Muḥammad A'zam and his rank was restored. On the termination of this assignment he was appointed a teacher at the royal *madrasa* in Delhi, which post he held till his death. Held in high esteem, he was asked to act as a witness at the marriage of Prince Muḥammad Sulṭân, Awrangzîb's son, to Düstdâr Bânü Begum in 1082/1672 along with Chief Kâdî 'Abd al-Wahhâb. He again seems to have lost his rank, for the *Ma'âlîhir-i 'Ālamgîrî* (cf. Eng. tr. 92) speaks of his restoration in 1086/1676 while he was living as a hermit. He spent the greater part of his life in teaching, "being highly honoured by the nobility".

A fanatical Sunnî, he insisted on the execution of one Muḥammad Ṭâhir, a Shî'î who had slandered the first three orthodox caliphs, in 1082/1672. The criticism which his action aroused and the memory of his fall from grace twice during his life perhaps made him adopt the life of a hermit. No other work by him is known to exist except a gloss on *Akhâ'id-i Nasafî* which was preserved in the Berlin Library (cf. Brockelmann, *GAL S I*, 760). Brockelmann incidentally transliterates the second part of his name as al-Wadîh which indicates that it most likely was his sobriquet. This assumption is strengthened by the fact that *'Ālamgîr-nâma*, the official history of the first ten years of Awrangzîb's reign, at places describes him as "Mullâ 'İwað" only. *Farḥat al-Nâzîrîn*, a Persian history of the times of Awrangzîb (only partially published; see bibliography), follows this practice.

His younger brother Muḥammad Ṭâhir was also a noted scholar. He was sent on a diplomatic mission to the court of Awrangzîb by Subḥân Ḳulî Khân, ruler of Balkh, in 1086/1675 only a year prior to the death of his elder brother. He was well-received at the court and presented with robes of honour, 21,000 rupees, a *pâlkî*, an elephant and a jewelled stick before his return to his native land (cf. *Ma'âlîhir*, Eng. tr., 92, 96). He died in 1088/1677, apparently at an advanced age, and was buried in Delhi.

(A. S. BAZMEE ANSARI)

**IWĀN**, also **EYVĀN** and at times in spoken Arabic **LĪWĀN**, a Persian word adopted by the Turkish and Arabic languages and then by western travellers, archaeologists and art historians to refer to certain characteristic features of Near Eastern and especially Islamic architecture. Since there are notable differences in the meanings given to this term in mediaeval texts and in modern scholarship, the two must be clearly separated.

It has been suggested that the word itself derives from Old Persian *apadana* (E. Herzfeld, *Mythos und Geschichte*, in *Archäologische Mitteilungen aus Iran*, vi (1936), 88, n. 1; W. B. Henning in *Handbuch der Orientalistik: Iranistik*, Leiden 1958, 71, n. 6). This derivation, which has often been taken for granted, may not be as secure as has been believed but its investigation is not pertinent to Islamic times.

Four meanings can be given to the term when it appears in mediaeval texts; these meanings are probably all connected historically and typologically in ways which still require study. A first meaning is that of a chamber or of a hall which is open to the outside at one end, either directly or through a portico; it is similar in this sense to one of the meanings of *ṣuffa* and it is curious to note that the architectural units known to art historians as *iwāns* (cf. below) are at times called *ṣuffas* in texts, as in L Hunarfar, *Gandjīna-i Aḥār ta'rīkh-i Iṣfahān*, Iṣfahān 1344, 86 ff.; Lane's *Lexicon* s.v. *iwān*. A second meaning is that of an estrade or of a raised part of a floor; such a higher part could have been singled out because of its formal importance as a place of honour in an architectural composition or because of some purely functional need as in the case of the part of a bath in which one undressed (E. W. Lane, *Manners and Customs of the Modern Egyptians*, Everyman edition, London 1954, 344-5 (note existence of an attendant called a *liwāndjī*) and 12 for other meanings of the word). A third meaning is that of a palace or at least of some sort of very formal and official building; in this sense it appears to refer to a complete architectural entity rather than to part of a complex as in the instance of the first two meanings of the word. Thus a Muẓaffarid prince built in Yazd gardens with a pool and an *iwān* with four storeys; Aḥmad b. 'Alī, *Ta'rīkh dīadīd-i Yazd*, ed. I. Afshar, Tehran 1345, 86 ff. It is probably in this sense of palace that the term should be understood when it was used so commonly to refer to the celebrated Sasanian palace at Ctesiphon; for instance,

Ṭabari, ii, 1056, comments on *iwān kisrawī* (E. Herzfeld, *Matériaux pour un Corpus Inscriptionum Arabicarum: Alep*, Cairo 1956, 391). In many texts dealing with the Ctesiphon monument it would appear that *iwān* and *ḥāḳ* are synonymous or almost (cf. Max van Berchem, *Notes d'archéologie arabe*, in *JA*, 8th ser., xix (1892), 399 ff.) but in reality they are quite distinct since one refers to a form and the other to a function. *Iwān* in this sense is synonymous with *ḥaṣr*, as for instance in the case of the Fāṭimid palace in Cairo which could be called either *al-ḥaṣr al-kabīr* or *al-iwān al-kabīr*. Also in the *Shāh-nāma* most instances of the word's use appear to refer to palaces and not to some precise architectural form (N. V. Diakonova and O. I. Smirnova, *K voprosu ob istolkovanii pendjikenskoy rospisi*, in *Sbornik v česti I. A. Orbeli*, Leningrad 1960). Finally a fourth meaning has been given to the word, mostly in contemporary interpretations of Mamluk descriptions of Cairo or of Damascus (Max van Berchem, *Matériaux pour un Corpus Inscriptionum Arabicarum: Le Caire*, Cairo 1903, 95, n. 2). The *iwān* would be any one of the halls in a religious building, a *madrasa* or a mosque, which opens on a courtyard; it would be used most commonly for large units of the type implied by our first definition but by extension could be used also for other architectural forms such as the hypostyle. The *iwān kibli* would be the one such hall which is located in the direction of Mecca. While this particular meaning is (or was) certainly found in colloquial usage, there is some uncertainty as to whether the term is ever correctly used for the columnar wings of a mosque; none of the several meanings which can be given to the word *iwān* in the many instances of its occurrence in texts such as the description of Damascus translated by H. Sauvaire seems to apply to a hypostyle building (H. Sauvaire, *Description de Damas*, in *JA*, 9th ser., iii-vii (1894-6), index by E. Oucéhek, Damascus 1954, esp. vol. vi, 260 as opposed to vol. v, 301 or 392).

Altogether then the word has clearly two formal meanings and one functional meaning with a second functional meaning somewhat less obviously ascertained. It is possible that the functional meaning of palace was the original one and that, through the Ctesiphon ruins which played such an important role in the formation of mediaeval architectural concepts and terminology, the references to forms developed more slowly, but this question requires a systematic chronological analysis of texts, which has never been done.

Art historians and archaeologists have given the term *iwān* a technically precise meaning, that of a single large vaulted hall walled on three sides and opening directly to the outside on the fourth. The formation of the form has been the subject of many discussions and theories; cf. F. Oelmann, *Hilani und Liwanhaus*, in *Bonner Jahrbücher*, Heft cxxvii (1922); G. Gullini, *Architettura Iranica*, Turin 1964, 326 ff.; J. Sauvaget, *La Mosquée Omeyyade de Médine*, Paris 1947, 163 ff. These discussions and theories are fortunately not pertinent to the Islamic period, for it can easily be established that Sasanian architecture had consistently utilized such a unit of planning and construction as the main feature of its palaces in 'Irāk and in western Iran. Although some nuances may have to be introduced into this statement after further excavations and interpretative studies, this particular hall was the main audience and reception hall of Sasanian princes (as at Ctesiphon). But no evidence exists that it was actually called an *iwān* nor is it certain that an official function

was the only one associated with the form. On a number of occasions a domed room was just behind the *iwān* and in one instance (Ḳal'a-i Dukhātār near Firūzābād), *iwān* and dome formed the only unit of a royal building.

This secular function of the *iwān* was carried together with the form into early Islamic secular architecture. It occurs in the Umayyad palace at Kūfa, was transferred to the western part of the Fertile Crescent at Mshatta, and defines the main official parts of the great 'Abbāsīd palaces at Ukhayḍir and at Sāmarrā; in this last place it also occurs in simple house architecture; see K. A. C. Creswell, *Early Muslim Architecture*, 2 vols., Oxford 1932 and 1940; O. Grabar, *Al-Mushatta, Baghdād, and Wāsiṭ*, in *The World of Islam*, ed. J. Kritzek and R. B. Winder, London 1959; B. Fransi and Muḥammad 'Alī, *Jāmi' Abī Dulaf, in Sumer*, iii (1947). Even minor modifications which may appear to have been of western origin such as the transformation of the *iwān* into a tripartite hall through colonnades have a background in the architectural vocabulary of Sasanian Iran. In the often quoted and discussed texts describing the palaces of Wāsiṭ and Baghdād, the use of the word does not necessarily mean that this particular form was used—as had automatically been assumed by Creswell and Grabar in the works quoted above—but it is likely that it was, for the *iwān* became established quite early as the main form of palace and house architecture from Afghanistan to Egypt. In details of course there were many differences from one part of the Muslim world to another and from one period to another and it is not certain that the function of the form was always the official one of an audience hall. Secular architecture unfortunately has not been sufficiently well preserved or studied to allow for definitive conclusions and, since most of the sources for it are literary, the difficulty of interpreting correctly a mediaeval architectural vocabulary occurs constantly.

The appearance of the *iwān* in religious architecture is equally problematic, even though it is in religious architecture that the most celebrated examples of the form are found. The situation can be summarized in the following manner. With the exception of the rather peculiar mosque in Nīrīz, it is not until the early 6th/12th century that a group of some twelve mosques in western Iran acquire what became the typical shape of a courtyard on which open four *iwāns*; for a summary of the history of this form, for a list of examples and for bibliographies see O. Grabar in *Cambridge History of Iran*, iv (forthcoming) and v (Cambridge 1968). The four-*iwān* mosque became then the standard form for almost all buildings of religious inspiration in Iran until today and the changes which do occur are mostly stylistic, as the form reflected the modifications in taste which occurred over the centuries. The puzzling questions are those of the origins of the plan and of the reasons for its formation. On the first point, evidence exists to show that both 'Irāk and Central Asia used the form of four *iwāns* around a courtyard in house and probably monumental architecture before the 6th/12th century (cf. *Sumer*, iii (quoted above) and, among others, G. A. Pugačenkova, *Iskusstvo Turkménistana*, Moscow 1967, 102; also A. Godard in *Ars Islamica*, xvi (1951)). Since the main direction of cultural and artistic influences in the 5th/11th and 6th/12th centuries was an east-west one, a north-eastern Iranian or Central Asian background for the form seems likely. It would then be from the example of the western Iranian mosques

of the 6th/12th century that the type spread over the whole of Iran.

As to the reasons for the adoption of the plan, the main existing theory (Godard's, modifying Max van Berchem, but see critique by K. A. C. Creswell, *Muslim Architecture of Egypt*, ii, Oxford 1959, 132-3) is that it was connected with the spread of the *madrasa* as an official building from north-eastern Iran westward. The theory is far from being convincing and for a variety of reasons it may be easier to confess either that the question is unresolved or that a form hitherto used primarily for secular purposes was adapted to the mosque as part of the imposition of a new Saldjūk taste all over Iran.

West of Iran the *iwān*, either singly or in a pattern of four, was rarely used for mosques but became the characteristic architectural feature of *madrasas*, *ribāṭs*, hospitals, and of most of the numerous functions which were either introduced in Zangid and Ayyūbid times or acquired a new monumentality. The earliest use of an *iwān* in a *madrasa* seems to occur in the 530/1136 *madrasa* in Bosra (Creswell, *Egypt*, ii, 107) but the rather primitive construction and planning of this building makes it a rather doubtful witness. Without searching for an (anyway) accidentally "first" example, it may be simpler to conclude that, while the *iwān* as such was already fairly common in house architecture (as for instance in the private houses of Fustāt), its use in monumental official architecture was a result of the general impact of Iran following the Saldjūk reconquest. In the Arab Near East, however, it never became the unique architectural feature it was in Iran, although in the monuments of Nūr al-Dīn in Damascus (N. Elisséeff *Les Monuments de Nūr al-Dīn*, in *Bulletin d'Etudes Orientales*, xiii (1949-51) or much later in the superb *madrasa* of Sultan Ḥasan in Cairo (among others L. Hauteceur & G. Wiet, *Les Mosquées du Caire*, Paris 1932, 103 ff.), we have superb examples of the ways in which a form originally developed in lands of brick architecture was turned into stone.

Several attempts have been made in the past, especially by Max van Berchem and by E. Herzfeld (see for instance his *Damascus, Studies in Architecture*, in *Ars Islamica*, vols. ix ff. (1942 ff.)), to suggest that the spread and development of the *iwān*-based plan, especially in *madrasas*, is to be related to precise functional requirements (teaching for instance) and even to symbolic ones as in the Sunnī oecumenism of a building like the Mustansiriyya in Baghdād. Suggestive and interesting though they may be, these arguments do not seem to be entirely acceptable and it may be preferable to consider the *iwān* as one of the several ways in which the mediaeval Muslim world sought solutions to the problem of architectural space without attributing to it concrete or symbolic meanings permanently attached to the form itself. Like the domed hall or the tower it was a form which could be used for a variety of purposes determined by the needs and tastes of society at any one time; cf. as an example of unique use of known forms, L. Golombek, *The Timurid Shrine at Gazur Gah*, Toronto 1969.

One last aspect of the *iwān* as it appears to the art historian may deserve attention. It is that, regardless of the functions which were given to it, it has a very precise aesthetic value. It is a strong, dominating feature which serves as the main axis of an architectural composition both in plan and in elevation. As a result it is generally the shape and the proportions of the *iwān* which determined the rhythm

and the relations between parts found in most later Iranian facades and in most interior compositions of Iranian architecture. While not as richly inventive nor as exuberant as the Islamic dome, the *iwān* served as a major vehicle for the growth and development of one of the world's most impressive vaulting traditions and its walls were covered with all the various types of decorative techniques and ornamental designs known in the Muslim world.

*Bibliography:* Most of the immediately appropriate bibliography will be found in the text. Additional examples and discussions of individual monuments can be found in standard books on Islamic and especially Iranian and Central Asian architecture. For textual information on the uses of the *iwān*, see D. Sourdel, *Questions de Cérémonial Abbasside*, in *REI*, 1960. For the development of the religious building with four *iwāns* in Iran recent investigations and discoveries have made the traditional interpretation far less certain; see, for instance, O. Grabar, *Notes on the Great Mosque of Isfahan*, in *Bulletin of the Asia Institute in Memory of A. U. Pope* (Shiraz, 1972).

(O. GRABAR)

**IYĀD**, an ancient Arab tribe whose ancestor Iyād is according to the genealogists the son of Nizār b. Ma'add and the brother of Rabi'a, Anmār, and Muḍar. They dwelt first in the Tihāma. The Meccan tradition (see Wüstenfeld, *Chroniken*, ii, 137 ff.) tells that they drove the *Dj*urhum from Mecca and made themselves masters of the Ka'ba, but were turned out after a quarrel with the *Khuzā'a*. They went to Bahrayn, where they formed with other tribes the confederation al-Tanūkh [q.v.]. Then they moved into 'Irāk where the Sawād, the fertile region between the desert and the Euphrates, offered them grazing grounds and 'Ayn Ubāgh a perennial waterplace; this happened about the middle of the 3rd century A.D. if the statement is correct that they clashed with the ruler of al-Ḥīra, *Dj*adhīma b. Malik al-Azdī, who was a contemporary of Zenobia of Palmyra. Some Iyād settled at al-Ḥīra and became urbanized and christianized, if they had not been converted earlier; some were employed by the Sāsānids: Laḳīṭ b. Ya'fūr [q.v.], (for his father's name see al-Shammākh, *Diwān*, 1302 h., p. 29, 2) was secretary in the department of Arab affairs; the poet Abū Duwād [q.v.] was in charge of the horses of al-Mundhir III b. Mā' al-Samā' (reigned 505-54 A. D.). Others remained Bedouins wandering about the desert, often harassing the peasants. In the reign of *Kh*usraw I (r. 531-79) they even kidnapped a Persian lady and defeated the Persian cavalry sent against them at Dayr al-Djamādjīm [q.v.]; but being heedless of the warnings given them by Laḳīṭ in his famous poems they were crushed by the Persians; the survivors fled, some into the desert, others into Syria and even into Byzantine territory to a place called Anḳara (mentioned by al-Aswad b. Ya'fūr an-Nahshālī, *Mufaḍḍalīyyāt*, No. 44 = A'shā Nahshal, No. 17 Geyer) at the exit of the Euphrates from the mountains, whilst a third group went to Kūfa, the *Dj*azīra, and Takrīt; from Takrīt they were driven out by the Persians but later came back, for in 16/637 the Iyād secretly supported the garrison of Takrīt against the Muslims. Those who remained in 'Irāk had to join the Persian forces; they were sent against the Bakr b. Wā'il in the battle of *Dh*ū Ḳār [q.v.], c. 604 A. D., but went over to the Bakr; so the Persians were defeated for the first time by Bedouins.

The rise of Islam had no immediate influence upon

the Iyād; the story (*Aghānī*, xiv, 41 f.; Ibn Sa'd, i/2, 55) that they sent a deputation to Mecca in 8/629 belongs to the legends about *Ḳ*uss b. Sā'ida [q.v.]. Some Iyād joined the pseudo-prophetess of the Tamīm Saḳjāh [q.v.]. We find Iyādis, who were doubtless Muslims, in Kūfa (*Ṭ*abarī, i, 2482, 2495), freedmen (Ibn Sa'd, vi, 270, 277) as well as landowners (*Balādhuri*, 283, 5). When in 12/633 *Kh*hālīd b. al-Walīd conquered 'Irāk the Iyād together with other tribes and with Persian troops opposed him e.g. at 'Ayn al-Tamr (*Ṭ*abarī, i, 2062) and *Ṣ*andawdā' (*Balādhuri*, 310; Yāḳūt, ii, 420); the statement (*Ṭ*abarī, i, 2074) that the Iyād, *Ta*ghlib and Namir together with Byzantines and Persians were defeated by *Kh*hālīd at the fords (*al-firād*) of the Euphrates in 12/634 is dubious. About the same time, 13/634, the conquest of Palestine by the Muslims began. Towards the end of the same year Ḥimṣ was taken. Here in the northern parts of Syria lived Bedouins and amongst them Tanūkh, established there for centuries, often in separate settlements (*hādīr*). In 17/638 many Iyādis and other Bedouins of 'Irāk joined the Byzantine army which tried to regain Syria, but when the Muslims conquered Mesopotamia the Iyād went over and became Muslims, whilst the Byzantines were defeated and fled to Cilicia. 'Umar b. al-*Kh*aṭṭāb demanded from Heraclius their extradition and the emperor was forced to send them back (*Bakrī*, 49). They settled in Syria and Mesopotamia. In later times Iyādis are seldom mentioned. The best known of them are the *ḳ*ādī of al-Ma'mūn, Aḥmad b. Abī Duwād [q.v.], whose claim to this descent was, however, contested by his enemies. Also Iyādis were Ibn Abī 'l-Layṭh, *ḳ*ādī of Egypt, d. 250/864 (*Kh*aṭṭīb, *Tārīkh Baghdadā*, ii, 292), and Zāfir b. Sulaymān, *ḳ*ādī of Sijīstān (*ibid.*, viii, 494); see further *ibid.*, iii, 65 no. 1020; iii, 106 no. 1104; iv, 325 no. 2135; xii, 97 no. 6525). There were Iyādis in Spain (*Maḳḳārī*, i, 186, 15), amongst them the famous family of Ibn Zuhr [q.v.], in Seville.

The Banū Iyād b. Sūd were a clan of the Āzād.

**'IYĀD B. MŪSĀ** B. 'IYĀD B. 'AMRŪN AL-YAḤṢUBI AL-SABTĪ AL-ḲĀDĪ (476/1088-544/1149) was one of the most celebrated figures of Mālikism in the Muslim West. His existence coincided almost exactly with that of the Almoravid dynasty to whom throughout his life he remained inflexibly attached.

His family, of Yemeni origin through the Yaḥṣub, emigrated to the West very early and finally settled at Ceuta, after residing in Basta [q.v.], in Muslim Spain, in Fez, and also in Ḳayrawān at some indeterminate date. His great grandfather 'Amrūn was the first of the family to win fame, by reason of his perfect knowledge of the *Ḳur'ān*, and above all by his service under the celebrated al-Manṣūr ibn Abī 'Amīr [q.v.]. It was he who left Fez with his entire fortune—probably acquired in the service of al-Manṣūr—to settle in Ceuta, where he died in 397/1007 and where his descendants enjoyed a high rank among the notables of the town.

Of all these, 'Iyād was the most famous. On completing his studies in his native town, he went in

507/1113, to perfect his knowledge, not to the East—which he never visited, not even for the pilgrimage—but to Spain. In the *Šiḫā* of Ibn Baṣṣḫuwā, (i, 446, no. 972, reproduced by al-Nawāwiri, *Simṭ* Ms. B. N. Tunis no. 11,396, p. 10), the expression *bi'l-Maṣṣḫrik*, which occurs in connection with the studies he made under the direction of Abū ‘Alī al-Ṣadāfi, denotes the east of Spain and not the Orient, as is made clear in the *Mu‘djam* which Ibn al-Abbār had dedicated to the disciples of the last-mentioned master. The traditional travelling for study (*riḥla*) lasted about one year: in all ‘Iyāḍ had about a hundred masters, to whom he dedicated his *Ghumya* (still in ms.). These include Ibn Ḥamdīn (439/1047-508/1115), the most virulent opponent of the *Iḥyā’* of al-Ḡhazālī; Abū Bakr ibn al-‘Arabī (468/1075-543/1149), who had met al-Ḡhazālī in the East and had probably introduced his *Iḥyā’* to Morocco and Spain in 493/1100; and also the celebrated traditionist Abū ‘Alī al-Ṣadāfi (d. 514/1120-1).

On returning to Ceuta, ‘Iyāḍ was raised to the rank of *shūra* [q.v.] and then, in 515/1121-2, to that of *ḫādī* of the city of his ancestors. On 1 Ṣafar 531/29 Oct. 1136, he was entrusted with the office of *ḫādī* of Granada. He was already a great personage, and his new place of residence gave him a triumphal welcome. The triumph was ephemeral. Being regarded as too censorious, ‘Iyāḍ was discharged after some months at the request of Tāshfīn, then governor of the city. Tāshfīn’s death (26 Ramaḍān 539/23 March 1145) won back for him the favour of the now tottering Almoravids. Towards the end of 539/1145, he was again nominated by the short-lived Ibrāhīm b. Tāshfīn as *ḫādī* of Ceuta, where he was to play a political role of the first importance, in regard to which his biographers, unlike the historians, prefer to remain very reticent.

A convinced and militant Mālikī, ‘Iyāḍ in effect constituted the centre of resistance to the Almohads in Ceuta. After the final triumph of the latter, he was at first exiled to Tadla, among the nomadic tribes, and then, together with other notables from the suspect city, was sent to forced residence in Marrākush where he died, dejected and exhausted, on 7 Djumādā II 544/13 Oct. 1149. Legend, echoing the hostility which he incurred under the Almohads, attributed his sudden death while in the baths (*ḥammām*) to the invocations of al-Ḡhazālī, or else, with the accusation of secretly practising Judaism, alleges that he was put to death by the Mahdī Ibn Tūmart.

‘Iyāḍ was not without literary talent, but he was pre-eminently a traditionist and *faḫīh*. He was a truly typical *faḫīh* of the Almoravid period, strictly orthodox, and for whom there existed only one single unique truth, that which had been taught by Mālik and his school. He wrote more than twenty works, not all of which have survived. His best-known published works are: *al-Šhiḫā’ bi-ta’rif ḫuḫūḫ al-Mustafā’*, which enjoyed an enormous success and which still continues to play an important part in popular piety; *Mashārik al-anwār ‘alā ṣiḫāḫ al-āthār*; *Tartīb al-madārik wa-takrīb al-masālik bi-ma’rifat a’lām madhhab Mālik*, which constitutes the best defence for and illustration of the Mālikī school.

‘IYĀFA (A.), as opposed to *fa’l* [q.v.] which denotes human omens (cleidonomism), is applied in a general sense to animal omens (zoomancy) and, in the strict sense, to ornithomancy, that is to say the art of divining omens in the names of birds, their cries, their flight and their posture (*TA*, vi, 207, l. 24 ff.). With certain names of birds a fatal quality is associated, though why this is so is not always known; in general, black and greenish plumage and down constitute the only justification. This is the case with the crow, the roller, the jay, and with any animal or bird with a coat or plumage of dark colour interspersed with white, such as a she-camel, a she-wolf or a dove (for animals regarded by the Arabs as a subject of divination, cf. *Divination*, 498-519).

Even more than with regard to the nature of birds (that is to say, their consecration to some particular divinity of either a propitious or an ill-fated character) and their categories (that is to say, those whose flight and cries are the basis for divination), the rich ornithomantic and zoomantic documentation gathered from ancient Arab literature makes it possible to give a precise statement of the principles and rules of mantic interpretation of the flight and cries of birds, as well as of their posture, and of the movements of certain quadrupeds.

For the flight of birds, two techniques originally existed, *fira* and *zādīr*.

*Fira* is the observation and mantic interpretation of the spontaneous flight of birds. This was progressively extended, particularly with sedentarization, to include all kinds of manifestations of animate or inanimate beings, and especially to domestic divinatory techniques which a man based upon the gestures and utterances of his wife, the inhabitants of the house, the utensils, or the animals in his service. Originally, it included divination of both good and ill; but Islam condemned it as a pagan practice, consigning favourable omens to *fa’l*, which is permitted, whilst it prohibited *fira* as an act of faith in the blind forces and the gods who represented these forces.

*Zādīr* too lost its primitive meaning in assuming a wider significance, in the same way as *fira*, with which it is generally confused. Originally, *zādīr* consisted in causing a bird to take flight by throwing a stone in order that its flight might be interpreted; if the bird flew to the *zādīr*’s right, it constituted a good omen for him, if to the left it was a bad omen (cf. *Divination*, 438). But Ibn Ḳhaldūn, *Muḫaddīma*, i, 195, already defined it as though it were a question only of *fira*. This also is a consequence of the change from nomadic to sedentary conditions.

*Fira* and *zādīr*, the two techniques of ‘*iyāfa*, consist essentially in the interpretation of the direction of birds’ flights and their cries. The technical terminology used in this field derives from hunting and is applied to all zoomantic divination. It is not possible here to expatiate on these terms, which have been studied in *Divination*, 440-6; it will suffice to mention the two most commonly used terms, namely *al-sāniḥ*, “that which comes from your right, proceeding towards your left”, and *al-bāriḥ*, which is its antonym. These are their present meanings but they are sometimes found in the reverse sense, according to whether they are used in connection with ornitho-

mancy or hunting (cf. details in *Divination*, 440 ff.). In general, *al-sāniḥ* is favourable and *al-bāriḥ* is unfavourable; but here also there are numerous divergencies. According to Ibn Barri (quoted in *TA*, ii, 170, 24 f.), this depends upon regional customs: "The inhabitants of Naǧdī," he says, "regard *al-sāniḥ* as favourable, but it can happen that a Naǧdī may use the vocabulary of the Ḥiǧǧāzi". We believe, on the contrary, that these divergencies bear witness to a very ancient state of affairs, where the right side did not necessarily signify "favourable" and the left "unfavourable", as was the case in Assyro-Babylonian divination.

The interpretation of the cries of birds is widely attested in respect of the crow (cf. texts and translations in *Arabica*, viii (1961), 34 ff. and 49 f.); but the Arab also deduced omens from the cooing of pigeons, from the call of a bird, from the crowing of the cock, from the braying of donkeys, from the bleating of sheep, from the cry of the camel, from the barking of a dog, etc. (cf. details in *Divination*, 446-9).

For the Arab, the posture and behaviour of a bird provided material for divination. That a crow croaked on a withered tree, on a leafy tree or on a recently constructed wall would modify the meaning of the divination. That the bird shook itself, stretched its wings, pecked the ground, grubbed in the soil, wiped its beak—all these things are taken into consideration in the interpretation of the divination (cf. *Divination*, 449 f., and *Arabica*, loc. cit.).

For the relations between *jaʿl*, *ḥira* and *zādīr*, see FA<sup>2</sup>L.

*Bibliography*: T. Fahd, *La divination arabe*, Leiden 1966, 431-50 and 498-519, where the reader will find the basic texts and their analysis; idem, *Les présages par le corbeau. Etude d'un texte attribué à Ġāhiz*, in *Arabica*, viii (1961), 30-58, where texts of Arab divinations are compared with texts of Assyro-Babylonian and Iranian divinations. (T. FAHD)

İYĀR [see SIKKA].

İYĀLA [see EYĀLET].

İYĀS B. MUʿĀWIYA B. QURRA AL-MUZANĪ, Abū Wāḥila, was appointed *kādī* of Baṣra during the caliphate of ʿUmar b. ʿAbd al-ʿAzīz in 99/718 (the date 95/714 given by Wakiʿ is incorrect, for ʿUmar did not succeed to the caliphate until 99, and also it was ʿAdī b. Arṭāt, governor of the town from 99-101, who chose İyās for the post on the caliph's orders); he did not accept this post very enthusiastically (see especially an anecdote related by Ibn Kutayba, *Uyūn*, i, 62, which shows incidentally that parallel jurisdictions were still in existence), and in fact gave it up in 101 or 102/720-1; he died in 121/739 or the following year, aged 76.

İyās, who is considered to be one of the leading lights of Muḍar (for his genealogy see Ibn Kalbi-Caskel, *Djamhara*, tab. 88), became proverbial for his perspicacity, to such an extent that one said *azḥan min İyās* (see Freytag, *Prov. Arab.*, i, 593; al-Maydānī, i, 338). His ability to extract precise information from hints unnoticed by others and his shrewdness are often praised (cf. especially a verse of Abū Tamām, ii, 249, in which his *dhakā* is compared to the *hilm* of al-Aḥnaf [q.v.]).

*Adab* literature presents him as a kind of Solomon, and he is the hero of a large number of anecdotes, probably originally borrowed from al-Madāʿinī, who had composed a *Kitāb Akhbār İyās b. Muʿāwiya* (*Fihrist*, Cairo ed., 152). However, he is criticized for his tendency to gossip, his pride and the confidence he placed in dubious traditions.

İZMAIL [see İSMĀʿİL].

İZMİD [see Supplement].

İZMİR [see Supplement].

İZNİK, the ancient and Byzantine Nicaea (*Niḳiya* in Ibn Kḥuradādhbih and al-Idrīsī) was besieged in vain by the Arabs in their first campaigns against Byzantium in 99/717 and 107/725 (Theophanes, ed. de Boor, i, 397 and 405 ff.) and fell at the beginning of 1081 (middle of 473) into the hands of the Saldǧūk Sulaymān, son of Kutlumush, who made his residence there. The first Crusaders under Walter Sans-Avoir were severely defeated before Nicaea in 489/1096 by Alp Arslān, son and successor of Sulaymān; next year, however, the town could not withstand the onslaught of the Crusaders, led by Godfrey de Bouillon, and surrendered on 5-6 Raǧab 490/19-20 June 1097 to the Byzantines in alliance with the Crusaders, in whose possession it remained till the Ottoman invasion. Sultan ʿOḥmān I is said to have attacked Nicaea, but it was not till the time of Orḳhān that it was taken after a prolonged siege in 731/1331; he moved his capital thither for a time (ʿĀshikpaṣhazāde and Leunclavius, *Hist.*, 195; cf. Nicephorus Gregoras, iii, 508 f.). In 804/1402 the town was taken and devastated by a raiding body of Timūr's troops (Ducas, 72; *Sharaf al-Din*, *Zafar-nāma*, ii, 454), but it soon recovered from this blow, and it is described as flourishing and prosperous at the time of the rebellion of Prince Muṣṭafā (Leunclavius, *Hist.*, 525, l. 46). Bāyazīd II is said to have intended after the death of his father Muḥammad II, to renounce the throne and retire to Nicaea.

The decline of the town began about the middle of the 11th/17th century; the population, then estimated at 10,000 (Grelot), had sunk to about 1,500 by the end of the 19th century; in 1960 it was 6,290. Administratively İznik is now the centre of an *ilce* belonging to the *il (vilāyet)* of Bursa. The present town occupies a relatively small part of the area enclosed within the ancient city walls. The best preserved of the ancient buildings are the Roman and Byzantine walls consisting of a double rampart (best described by Prokesch and Texier; cf. thereon Körte, *Mitt. des Deutsch. Arch. Instituts*, Athens xxiv, 398-409) with their monumental gateways and 238 towers (Texier). The Byzantine part of these defences dates from the time of Leo III the Isaurian, who had them built after the Arab invasion of 726 (*Corp. Inscr. Graec.*, n° 8864); Michael III in 858, and later Theodore Lascaris (*Corp. Inscr. Graec.*, nos. 8745-8747) completed and improved them.

The town is very rich in Islamic monuments, some of which date from early Ottoman times. Sultan Orḳhān, soon after the conquest of İznik converted the Aya Sofya church into a mosque. It was redecorated in the early 11th/17th century, when its *kibla* wall was covered with faience tiles (Katharina Otto-Dorn, *Das islamische İznik*, Berlin 1941, 9-13, abb. 1-3, Tables 2-3). Orḳhān also built a *medrese* next

to this mosque, which was the first *medrese* in the Ottoman Empire (Dorn, *op. cit.*, p. 10). Another building erected by Orkhān is a small mosque, bearing his name, outside the city walls some 400 m. from the Yenisehir Gate. Previously it was believed that it dated from before the occupation of the town, but excavations there in 1963 and 1964 revealed an inscription giving its date as 735/1334 (Oktay Aslanapa, *Iznik'te Sultan Orhan İmaret Camii Kazısı*, . . ., 16-31; also Aptullah Kuran, *The Mosque in early Ottoman architecture*, 78-9, figs. 77-78). Another mosque dating from the reign of Sultan Orkhān is the Hādjīdīl Özbek Dīāmi'ī (also known as the Čarshī Mesdīdī). This is the earliest Ottoman mosque where the original dating inscription has been preserved, giving the date of construction as 734/1333. (Otto-Dorn, 15-18, *abb.* 5-6, Tables 4-5; Kuran, 34-5, figs. 6-8). The mosque and *türbe* complex of Hādjīdīl Hamza Beg were erected in 746/1345 and 750/1349 respectively (Otto-Dorn, 18-20, *abb.* 6, Tables 5/3, 6/1-2). It is interesting to note that none of these early mosques had minarets. Later mosques, like the Yeshil Dīāmi'ī (780/1378-794/1391), the Kuṭb al-Dīn Dīāmi'ī (c. 821/1418), the Maḥmūd Čelebi Dīāmi'ī (846/1442) and the Eshrefzāde-i Rūmī Dīāmi'ī (874/1469) have minarets built in the Salḡūk style. Of these perhaps the Yeshil Dīāmi'ī, which has faience tile decoration inside and on the minaret, is the most significant. The *mīhrāb* is built of marble and is richly carved, the earliest of its kind in Ottoman mosque architecture (Otto-Dorn, 20-33, *abb.* 7-11, Tables, 6/3-17; Kuran, 61-33, figs. 52-7). It was erected by Khayr al-Dīn (see *DIANDARLI*). The dating inscription gives the name of the architect as a certain Hādjīdīl Mūsā. The Kuṭb al-Dīn Dīāmi'ī has no date, but Otto-Dorn reasonably dates it to 821/1418, the year when Kuṭb al-Dīn died (Otto-Dorn, 33-5, *abb.* 12, Tables 19-20). The Maḥmūd Čelebi Dīāmi'ī is well preserved and its minaret has glazed blue and green faience tiles (Otto-Dorn, 35-9, *abb.* 13-15, Tables 21-2). The Eshrefzāde-i Rūmī Dīāmi'ī is actually part of a complex, which included a *türbe* and a *tekke* (monastery). It was erected for Eshrefzāde, a holy man who lived for 120 years (779/1377-899/1493). It is very much ruined and only its minaret, parts of the walls and the *kibla* wall survive with the *mīhrāb* (Otto-Dorn, 39-48, *abb.* 16-18, Table 23). Out of the few secular buildings that have survived in Iznik the Hādjīdīl Hamza *hammām* should be mentioned, dating from the late 8th/14th or early 9th/15th century (Otto-Dorn, 89-95, *abb.* 39-40, Tafeln 34-5).

Iznik was once a flourishing pottery centre. Excavations there between 1963 and 1966 have established that the so-called "Miletus ware" was manufactured in Iznik. This ware had a red clay body and the designs were painted in blue, turquoise-green and purple (Oktay Aslanapa, *Türkische Fliesen und Keramik in Anatolien*, 29-32, *abb.* 4-58, Tables 1231, in colour). This red ware was suddenly replaced, obviously under outside influence, by a sophisticated white-bodied faience which resembled porcelain. The classification of Iznik faience was first attempted by Arthur Lane, who divided it into three groups (*Later Islamic Pottery*, London 1957, 40-60; idem *The Ottoman pottery of Iznik*, in *Ars Orientalis* ii (1957), 254-81). Chinese influence is clearly visible on the earliest group, which can be dated to the late 9th/15th and early 10th/16th centuries. At a later stage purple and green colours were added (Lane's second group), while around the middle of the 10th/16th century, a lively red colour appears

on them (third group). The Iznik excavations revealed shards, kiln-wasters and pottery kilns as well, attesting that all these groups were manufactured locally (Oktay Aslanapa, *Pottery and kilns from the Iznik excavations*, 140-6). Manufacture of tiles and pottery still continued at Iznik in 1736 (Otter, *Voyage en Turquie*, i, 44), but it soon came to an end and was forgotten. It seems that potters moved to Kütahya, where they tried to revive the old Iznik traditions in pottery making.

(J. H. MORDTMANN-[G. FEHÉRVÁRI])

'IZRĀ'IL (in European literature one also finds 'Azrā'il), the name of the angel of death, one of the four archangels (next to Dījbrīl, Mīkhā'il, Isrā'īl). Like Isrā'īl, whose office of trumpet-blower at the last judgment is sometimes given to him, he is of cosmic magnitude; if the water of all the seas and rivers were poured on his head, not a drop would reach the earth. He has a seat (*sarīr*) of light in the fourth or seventh heaven, on which one of his feet rests; the other stands on the bridge between paradise and hell. He is however also said to have 70,000 feet.

The description of his appearance agrees almost exactly with that in Jewish literature: he has 4,000 wings and his whole body consists of eyes and tongues, the number of which corresponds with that of the living. He, however, is also said to have four faces.

At first he was an angel like the others. When Allāh wanted to create man, he ordered Dījbrīl to snatch from the earth for this purpose a handful of its main constituents. The earth, however, stirred up by Iblīs, offered resistance, so that neither Dījbrīl, nor Mīkhā'il nor Isrā'īl could carry out the commission. But 'Izrā'il managed to do it. Because of his pitilessness (*kīllat al-raḥma*) Allāh then appointed him angel of death.

Because of his strength he is also master of death. When Allāh had created Death, he summoned the angels to look at him. When they saw his astonishing strength, they fell down unconscious and remained lying for a thousand years. Then they awakened and said "Death is the most powerful of creatures". But Allāh said: "I have appointed 'Izrā'il to be lord over him".

Several angels of death are mentioned, as in Jewish literature; and it is said that 'Izrā'il deals with the souls of the prophets while the souls of ordinary men are under his *khaliṣa*. Special stress is laid on the beginning of Sūra LXXIX, as authority for a number of angels of death: "By those who tear forth and by those who draw forth" etc. The former are said to be those angels who drag the souls of the unbelievers by force from their bodies, while by the latter are meant those who have to separate the souls of the believers from their bodies. The explanation of the verse however is not certain. In Sūra XXXII, 11 mention is made of the angel of death (in the singular).

'Izrā'il keeps a roll of mankind. But he does not know the date of death of the individuals. Whether one belongs to the blessed or the damned he sees from the fact that the names in the first category are surrounded by a bright and those in the second by a dark circle.

When the day of a man's death approaches, Allāh causes to fall from the tree below His throne the leaf on which the man's name is written. 'Izrā'il reads the name and has to separate the person's soul from his body after 40 days.

But there are some people who strive against the separation, and object that the angel of death is acting arbitrarily. The latter then goes back to Allāh and tells him his experience. Allāh then gives him as credential an apple from paradise on which the *basma* [q.v.] is written; when the man sees this, he yields.

Man also has other means of making it difficult for the angel of death to carry out his task. If the latter wants to creep into his throat to fetch out his spirit, the dying man recites a *dhikr* [q.v.] and thus closes the entrance. The angel then returns to Allāh, who advises him to try to take the dying man's hand. If the latter however is just making a *ṣadaka* [q.v.] the angel's entrance is again impossible. Finally, however, 'Izrā'il writes the name of God on the man's hand. Then the bitter feeling of separation disappears and the angel can enter to fetch the spirit. It is also said that he pierces men with a poisoned lance. Another account is as follows: When a believer is on his deathbed, the angel of death stands at his head and draws his soul out as gently as water runs out of a skin. He hands it to his assistants, who carry it through the seven heavens up to the highest and then place it with the body in the grave (the soul's journey to heaven; cf. Bousset in *Archiv. f. d. Religionswissenschaft*, iv).

If an unbeliever dies, the angel of death tears the soul out of his body in the roughest fashion. The gate of heaven closes before the soul as it is carried up, and it is thrown down to earth again.

Characters like Idris, Ilyās, 'Isā and al-Khaḍir [q.v.], as is well known, were not subject to death. As regards Moses the same thing could not be asserted; but the Bible throws a veil over his death. Muslim tradition accordingly says that Moses defended himself against the angel of death, who came with the fatal message to him, and bruised his eye. Allāh said to the angel when he came back: "If he places

his hand on a cow, as many years are to be granted him as his hand covers hairs". "And then?" asked Moses. "Death", said Allāh. It is also related that the angel of death came to Moses with an apple from paradise; when he had smelled this, he died.

On an experience of Solomon's with the angel of death, see al-Bayḍāwī on Sūra XXXI, 34; on his visit to Idris, see that article.

'IZZ AL-DAWLA, an honorary title (*laḳab* [q.v.], pl. *alḳāb*) of the kind which came into being at the beginning of the 4th/10th century, conferred by caliphs and later also by other sovereigns. The first person to receive an honorary title composed with *dawla* was the vizier of the caliph al-Muktafi (902-8), al-Kāsim; in 289/902 he was entitled Wall al-Dawla (Friend of the Dynasty). Originally *dawla* [q.v.] signified: turn, reversal (especially in battle), then it became the designation of the old Maḥdī propaganda, and from the middle of the 3rd/9th century attained the meaning still in force today: "dynasty, state". With this meaning *dawla* became an element of those honorary titles which began to be granted shortly before the middle of the 4th/10th century, became customary at the time of the Būyids [q.v.], and are a marked characteristic of this period.

According to their meanings, concepts and words (*muqāḳāt*) linked with *dawla* can be divided into six groups: 1) verbal forms which describe an activity of the bearer in connection with the dynasty, e.g., Mu'īn (helper) al-Dawla, Naṣir, Mu'izz, Muḥarrir, etc.; 2) metaphors, mostly weapons or parts of the body, e.g., Sayf, Ḥusām, 'Aḍud (and developed from these: Yamīn, 'Ayn) etc.; 3) concepts from the cosmos, e.g., Nūr, Diyā', Bahā, and Ṣhams al-Dawla, Samā' al-Dawla (borne in this sequence by father and son, so that the development and intensification becomes especially clear); 4) concepts from architecture, e.g., 'Amīd, 'Imād, Rukn, Sanad, 'Umda, Ḳawām, etc.; 5) insignia and titles of sovereigns, e.g., Ṭādj (crown), and Sultān (a title which until then belonged only to the caliph), also Za'im; 6) the concepts fame, glory, honour: Fakhr, Djalāl, Maḍjīd, Sharaf, 'Alā', 'Izz.

In 348/959-60, while still crown prince, Baḳhtiyār [q.v.], the son of the Būyid chief amir Mu'izz al-Dawla, was granted the title 'Izz al-Dawla, clearly as a modification of the *laḳab* of his father. This tradition was continued when Baḳhtiyār named his son al-Marzubān, governor of Baṣra, as his successor, and the caliph bestowed upon him the honorary title of I'zāz al-Dawla. When 'Aḍud al-Dawla appeared in Baghdād, decisively wiped out the Būyids of Baghdād in 977 and Baḳhtiyār met with an inglorious end,

the tradition of the *dawla* title derived from ‘Izz and others also came to an end, at least among the Būyids. The later Būyids in *Shirāz* and *Baghdād*, without exception descendants of ‘Aḡud al-Dawla, chose other *alkāb* from the six groups listed above.

Besides the Būyids, almost all contemporary rulers who acknowledged the ‘Abbāsīd caliphate were recipients of *alkāb* in the form discussed here: the Marwānids, Mazyādids, Mirdāsids, Ghaznawids etc. In addition, the Sāmānids, who for a time did not acknowledge the caliph of *Baghdād* appointed by the Būyids, adopted the practice, bestowing such *alkāb* on their own authority upon the governors of *Khurāsān* in order to bind them closer to themselves. In Fātimid Egypt, on the other hand, *alkāb* were chosen on a different principle. In North Africa and Spain *dawla* titles appear only occasionally. There, clearly by deliberate intent, only rare resort was made to this ‘Abbāsīd practice.

The honorary title ‘Izz al-Dawla was evidently so compromised by the inglorious memory of the Būyid *Bakhtiyār* that it reappeared only later, and indeed principally in Persia. In particular the following holders of the title can be taken as examples: 1) the Ghaznawid ‘Abd al-Rashīd (1050-3); 2) the Baduspānids Hazārās b. Nāmwar (470/1077-510/1117 in *Māzandarān*) and *Qubād* b. *Shāh Ghāzī* (780/1378-801/1399); 3) the *Ustādhdār* of the *Artuqids*, *Abū Naṣr* b. al-Ḥasan in *Diyārbakr* 551/1156-565/1170).

Later *alkāb* with *dawla* are still found, though only occasionally; from *Saldjūks* times they were displaced by *alkāb* with *dīn* as an element. In the time of the *Ṣafawids* the *dawla* title was revived to some extent in Persia. The grand vizier took *ex officio* the title *I’timād al-Dawla* [q.v.]. Under the *Qādījars* they deliberately continued the Būyid (and *Ṣafawid*) traditions, and again made frequent use of *alkāb* in the form outlined here. All the compounds classified in groups 1) to 6) can be found, with the addition of several new formations. However, the title ‘Izz al-Dawla is infrequent. Under the *Qādījār* princes only ‘Abd al-Ṣamad *Mirzā*, a son of *Muḥammad Shāh* (1250/1834-1264/1848), held this title. It seems that the eulogizing ‘*azza wa-djalla*’ (only used in association with the name of God) hindered the use of *alkāb* of similar form; *Djalāl al-Dawla* also appears very infrequently among the *Qādījars*, who preferred *alkāb* with *Amīn*, *I’timād*, *Mu’ayyid*, *Mu’tamad*, and *Nizām*.

*Bibliography*: given at the end of the article ‘IZZ AL-DĪN. (H. BUSSE)

‘IZZ AL-DAWLA [see *BAKHTIYĀR*].

‘IZZ AL-DĪN. This *lakāb* originated within the same historical context as *alkāb* constructed with *dawla*. The *muḏāfāt* are for the most part identical with those mentioned under ‘IZZ AL-DAWLA, and can be classified according to their meaning in the same groups, at least in earlier times. In the light of this nomenclature, it is very doubtful if the *lakāb* on a coin from *Wāṣit* of the year 256/869-70 should indeed read ‘*Alī al-Dīn*. The first indubitable *lakāb* with *dīn* mentioned in the narrative sources was granted to the Kurdish *Barzikānī* amīr *Badr* b. *Ḥasan-wayh* in 388/998, almost a hundred years later than the first *dawla* title. The close connection with the *dawla* title can be seen very clearly in the combination *Nāṣir al-Dīn* wa ‘*l-Dawla*. The Kurdish amīr insisted on such a title, and could refer to his numerous merits in relation to the *dīn* (especially his ardent encouragement of the pilgrimage to Mecca). Ambition and the special political and religious circumstances of the Būyid period led the Būyids themselves and other

local princes to request a *dīn* title also as an adjunct to their *dawla* title granted by the caliph. Alongside the conventional *muḏāfāt* with *dawla* there appears the *lakāb* *Muḥyī al-Dīn* (Restorer of Religion), conferred upon *Abū Kālīdjār* (415/1020-440/1048), which is surprising for a *Shī‘ī* Būyid. As with the Kurdish prince *Badr*, the granting of a *dīn* title was then generally connected with services on behalf of orthodoxy. When in the year 403/1012-13 the Ghaznawid *Maḥmūd* (389/998-421/1030) refused a robe of honour from the Fātimid caliph, the ‘Abbāsīd caliph bestowed on him the *lakāb* *Nizām al-Dīn* wa-*Nāṣir al-Ḥaḡḡ* (Order of Religion and Helper of the Right). The *lakāb* ‘Izz al-Dīn does not appear in the Būyid period and is also relatively rare at later times, for the same reasons as those mentioned at the end of the article ‘IZZ AL-DAWLA.

With the arrival of the *Saldjūks* the *dīn* titles displaced the *dawla* titles. Unlike the Būyids, who on political and religious grounds insisted on the expression of a personal link with the caliphate, the *Saldjūks* preferred to stress their link with the abstract idea *dīn*, which expressed their view of themselves as restorers and protectors of orthodoxy. While *Tuḡhrīl Beg* still retained the combined *lakāb* *Rukn al-Dunyā* wa ‘*l-Dīn* (*dawla* is here replaced by *dunyā*!), his successors held to *alkāb* with *dīn* only. The same is true of the *Saldjūks* of *Rūm*, the *Ṣaffārids* from 496/1103, the *Artuqids* from 538/1144, the *Zengids* of *Aleppo*, the *Dānīshmendids* in *Anatolia*, the *Salḡurids* in *Fārs*, the *Ghūrīds* in east *Iran* and *India*, the *Shāhs* of *Khwārizm*, and the *Ismā‘īlis* of *Persia* from 564/1166.

The *lakāb* ‘Izz al-Dīn, amongst others, appeared several times under the *Zengids* of *Aleppo* and the *Rūm Saldjūks* of *Konya*. In the course of the 7th/13th century, however, the *lakāb* lost its status as an honour granted by the caliph or a local prince, and became simply a name which a man assumed himself or which was attributed to deserving people by contemporaries without any official procedure. *Ibn al-Fūwaṭī* (d. 723/1323-4) enumerates in his work *Madīma‘ al-ādāb fi mu‘djam al-alkāb* (ed. *Muṣṭafā Djawād*, *Damascus* 1962) more than five hundred bearers of the *lakāb* ‘Izz al-Dīn, covering all classes of the population: the sultan and the courtiers, officials in the capital, in the provinces and in the administration, holders of religious offices (judges, witnesses, professors at *madrasas*), theologians and jurists without official positions, and members of secular professions (poets, druggists, doctors, merchants, etc.). The earliest datable bearers of the title belong to the first years of the 6th/12th century (e.g., a *fakīh*, no. 231). By the end of the *Saldjūk* period, at the latest after the arrival of the *Mongols*, who were first converted to Islam with *Ghāzān Khān* (694/1295-703/1304), the *lakāb* must have lost the character of an officially bestowed honour. *Qalqashandī* (d. 821/1418) in the *Ṣubḥ al-A‘shā‘*, vi, 38 ff., mentions in the list of *alkāb* under ‘Izz only the *lakāb* ‘Izz al-Islām as the title “of some *mulūk*”.

Like the *dawla* titles, the *dīn* titles remained confined to the eastern Islamic world. In the East *Bīrūnī* had already criticized the *alkāb*, but on political and practical grounds: they were a sign of the decadence of the caliphate, an expression of vanity, and moreover too long for practical use. The Egyptian *Ibn Taghribirdī* mocked the *Persians*, amongst whom all things were connected with *dīn*. The *Maghribī* ‘*Alī* b. *Maymūn* (c. 900/1495) designated the *alkāb* simply as “diabolical innovation” (*bid‘a shayfāniyya*).

After *Ibn al-Fūwaṭī* and *al-Kalkashandī*, from the

beginning of the 10th/16th century at the latest, *din* titles were no longer considered as *alkāb* in the true sense, being reduced to mere proper names. In the Ottoman empire, there developed a predilection for double names composed of a *laḡab* with *din* and a proper name, as F. Babinger has noted. Quite apart from absurd combinations which go as far as ‘Umar al-Din (see J. H. Kramers), in more recent times a downward trend in the choice of names with *din* may be observed; in the biographical dictionary *Türk Meşhurları*, ‘Izzeddin appears only rarely. In Egypt names originally ending in *din* are habitually shortened to the *mudāfa*, Kamāl, Djamāl, etc. The Turkish name ‘Izzet may perhaps have arisen in the same way (but cf. Hikmet, Fikret etc.; see also ISM).

‘IZZ AL-DĪN KAYKĀWŪS II [see KAYKĀWŪS].

‘ARAB ‘IZZET [see Supplement].

‘IZZET MOLLA, KEĀDE II-ZĀDE (1200/1785-1245/1829) Turkish poet, born in Istanbul, the son of the *ḡādi’asker* Mehmed Şāliḥ. His family originated from Konya and took their surname from Süleymān Efendi, the *imām* of the Toprak Sokak mosque who made his living as a felt-maker (*kecedji*). His son Muṣṭafā (d. 1181/1767) went to Istanbul for his education and became a *ḡādi* and trained his son Mehmed Şāliḥ (the poet's father) for the same profession. ‘Izzet was only fourteen when Şāliḥ Efendi died and his two brothers-in-law, the *ḡādi’asker* Hāmid and the poet Es‘ād, took care of his upbringing, and trained him for the ‘ulemā profession. But under the influence of the latter's too free and easy life, ‘Izzet soon took to drink, squandering what little he had been left by his father, and his enemies got his name struck off the register of the profession. This ignominy, coupled with being in straitened circumstances, brought him to the verge of despair and he decided to commit suicide. The strange circumstances in which this act was being carried out and how he was dissuaded from it and was eventually introduced to Hālet Efendi [q.v.], the powerful confidant of Mahmūd II, are told in detail in a biographical article by Reṣḡād Fu‘ād, a great-grandson of his and with some variants by Ibnülemin Mahmud Kemal (Inal) (see bibliography).

Hālet Efendi presented him with a house, secured his livelihood and introduced him to the sultan (for a discussion of this relationship see: A. H. Tanpınar, *XIX. Asır Türk Edebiyatı Tarihi*?, Istanbul 1956, page 56, n. 1). Again thanks to Hālet, he was appointed *ḡādi* of Galata in 1236/1820. When Hālet fell into disgrace and was banished to Konya and later executed there (1238/1822), ‘Izzet, his favourite confidant, was the only one of his entourage who

escaped the purge. But he did not resist the temptation of praising his benefactor and denouncing his enemies in private conversation. An indecent couplet, (reproduced in *Djewdet*, *Ta’rikh*, xii, 67), composed to this effect, seems to have been the last straw. He soon found himself banished to Keṣḡan near Tekirdağ (Rodosto) in Thrace, where he stayed about a year (1238-9/1823-4) and where he wrote his masterpiece, *Mihnet-Keshān*. It was the new grand-vizier Ghālib Paṣḡa, who, although a former arch-enemy of Hālet, mediated to obtain his pardon from the sultan when ‘Izzet sent to him a *ḡaṣida* in submission. ‘Izzet had no difficulty in regaining the favours of Mahmūd II. He was successively appointed *ḡādi* of Mecca (124/1825) then of Istanbul (1242/1826) and Inspector of the Ḥaramayn (Mecca and Medina). But his prosperity did not last long. In a War Council, which met in the spring of 1243/1828 in the office of the Shaykh al-Islām, to decide whether or not to declare war on Russia, which had invaded Turkey, following the destruction of the Turkish fleet at Navarino a few months earlier, ‘Izzet joined, half-heartedly and reluctantly, the majority which favoured war. But immediately afterwards, he composed, together with ‘Ömer Rāsim Efendi, the treasurer of the *Defterdār*, a memorial (*lāyiha*) which he submitted to the sultan through the Silāhdār Agha. In it ‘Izzet expressed in detail what he did not dare to say publicly; he enumerated the reasons why it was not advisable to wage war. Mahmūd II, who was highly angered, had his memorial rejected by a countermemorial (*reddiyye*) and ordered that ‘Izzet be banished to Cyprus and Rāsim to Rhodes; ‘Izzet's place of exile was later changed to Sivas. Nine months later, upon the disastrous outcome of the Russian campaign of 1243/1828, ‘Izzet, who proved to be right, was pardoned, but the ailing poet died a few hours before the sultan's *fermān* reached Sivas. It was attached to his breast at the burial (Şafar 1245/August 1829). He was forty-four years old. In 1916 his remains were brought to Istanbul and buried in the family tomb.

‘Izzet Molla married Hibet Allāh Khanım, the daughter of Ismā‘il Makkī Beg (and not of Ḳara Muṣṭafā Paṣḡa as asserted by Fevziye Abdullah in *IA* s.v.), a descendant of Ḳara Muṣṭafā Paṣḡa (executed in 1095/1683). The eldest of his four sons was the famous 19th-century statesman Fu‘ād Paṣḡa [q.v.].

‘Izzet Molla is the last great representative of *Diwān* poetry. During the closing stages of the old school, when many of his contemporaries repeated themselves with interminable *clichés* and hackneyed similes, he showed comparative originality thanks to his strong sense of humour, his penchant for satire and repartee, allied with his unusual power of observation. Unlike many traditional poets, he did not shut himself in a world of allegory, but reflected, in most of his works, the real world around him.

Except for the short biography of his father, where he gives an example of the lofty ornate style (*inshā’*), his prose, particularly his memorial on reforms (*lāyiha*), is simple, fluent and to the point. ‘Izzet Molla is the author of the following works: (1) *Diwān* I, compiled in 1241/1825 under the title of *Bahār-i Efkār*, contains most of his verse outside his *mathnawīs* (Bülāḡ 1255). His many chronograms have unusual documentary value; (2) *Diwān* II, compiled under the title of *Khazān-i Āthār*, contains his few later poems (Istanbul 1257); (3) *Gülshen-i ‘Ashk*, compiled in 1227, a short allegorical *mathnawī* on mystic love, on the lines of Ghālib Dede's *Husn* u ‘*Ashk* and, like it, inspired by Djalāl al-Dīn

Rûmî's Şûfî theories. 'Izzet, who was a member of the *Mawlawî* order, appears himself as a leading character in the work. For a synopsis see Gibb, *HOP*, iv, 306-308 (lithograph ed. Istanbul 1265); (4) *Mihnet-Keshân* ("The Sufferers" with a pun on *Keshân*, as the title could also be read *Mihnet-i Keshân* "The Suffering at *Keshân*"), his most important work, which immediately secured his reputation and which distinguishes him from many contemporary *divân* poets. It is a narrative poem in *mutakârib* and in *mathnawî* form of about seven thousand couplets, interspersed with many *hasîdas*, *ghazals*, *murabba'* and chronograms, which relate in great detail and with pungent humour mixed with vital realism, the circumstances of his arrest in a public bath, this adventurous journey to *Keshân*, the colourful life in this little provincial township, the many local characters he meets and all his experiences there. Many reminiscences of his earlier life and people he knew in Istanbul are added with the same joyful humour to this lively and very spontaneous narrative, which make it a unique documentary work for the last period of Ottoman society before the great reforms of the 19th century. 'Izzet wrote most of the *Mihnet-Keshân* in *Keshân* and completed it on his return to Istanbul in *Djümâda II* 1239/February 1824. But the work was in the form of hurried notes on scattered pages. It was later arranged and copied out by two of his friends. (Lithographic edition, Istanbul 1269); (5) *Dawhat al-mahâmîd fî tarâjimat al-wâlîd*, a short biography of his father, Mehmed Şâlih Efendi, written in a flowery style of the best *inshâ'* tradition, published in 1916 (*TOEM*, No. 41, December 1332); (6) *Lâyiha*, a reform memorial on the line of many *lâyihâs* submitted to Selim III, written in 1243/1827 by order of Mahmûd II. It has not been edited (two Mss. are in the libraries of the Turkish Historical Society and of the University of Istanbul, Ibnülemin Collection). The text of his other *lâyihâ*, the famous anti-war memorial which he composed with 'Ömer Râsim Efendi and its "rejection" (*reddiyye*) prepared by 'Âkif and Pertev Efindis (later *pashas*), are given in 'Atâ, *Ta'rikkh*, iii, 267-275.

**'IZZET PASHA** (Ahmed 'Izzet Furgaç 1864-1937) Ottoman soldier and statesman. Ahmed 'Izzet was born in the Macedonian hamlet of Nasliç, near Görîdje (today Korçë in southeastern Albania) in the *wilâyet* of Manastır (today Bitola in southern Yugoslavia). The family were Ottoman-Muslim notables of the region; there is some dispute whether they were of Turkish or Albanian origin (see İnal, p. 2020, quoting General 'Ali Fu'âd [Erdem], and Klinghardt, p. 12). Under the Turkish "Family Name Law" of 1934 he took the name of Furgaç.

'Izzet's father, Ḥaydar, had entered the Ottoman civil service, in which he rose to *mutasarrıf*, and 'Izzet first grew up with his grandfather, Timut, in Nasliç, and then followed his father to assignments in Macedonia, Anatolia and Istanbul. He entered the military secondary schools in Istanbul at 13, and continued (1881-87) at the Ḥarbiye [q.v.], where he graduated from both the regular and the advanced general staff course (finishing the latter ninth in a class of 14). He rose, rapidly at first, in military

rank: captain (1887), *kolaghasî* (1889), major (1894), lieutenant-colonel (1898), colonel (1901), brigadier-general (1905), lieutenant-general (*ferîk*, 1907), general (*birindji ferîk*, 1908), marshal (1918). In 1913 he was made the sultan's aide-de-camp (*yâwer-i ekrem*) for life; from 1912 onward he also was a member of the senate (*a'yân*).

Upon graduation from the Ḥarbiye, 'Izzet stayed as instructor in military geography and aide to Colmar Baron von der Goltz-Pasha, inspector-general of Ottoman military schools. After advanced training in Germany (1891-94) and a brief assignment at al-Lâdhikiyya in Syria, he became military aide in the Ottoman high commission in Sofia (1895-96). When a court favourite became the next commissioner, he asked for a transfer. With the outbreak of the Greek-Turkish War, 'Izzet was appointed to the general staff of the army mobilized on the Thessalian front and to the office of war operations. His energetic stand against corruption and inefficiency led to his interrogation at the palace and, eventually, a punitive transfer to the reserve division at Damascus (1897). There he proved his military and diplomatic talents in pacifying the rebellious Djabal Durüz (1902), and his administrative skills in supervising work on the Hîdjâz railway near 'Aḳaba. From 1903-08 he served in Yemen, first as chief of staff to 'Ali Rîzâ Pasha, the later grand vizier, whose forces were dispatched against the rising of the Zaydî sect under Imâm Yaḥyâ, then as commander of the division in Ḥudayda (1907). The Young Turk Revolution interrupted his summer leave in Lebanon, and 'Izzet returned to Istanbul.

'Izzet's reputation as one of von der Goltz's star disciples, his field experience in Yemen, and his rare courage in standing up against the abuses of the Ḥamidîan regime led to his appointment, following the 1908 revolution, as chief of the Ottoman general staff. For two and a half years he worked, often in conjunction with von der Goltz and Mahmûd Şewket Pasha, to reform the system of training for officers and non-commissioned officers, to create a reserve officer corps, to introduce new model regiments, to arrange manoeuvres, and on transportation and mobilization schemes for the defence of the European parts of the empire. During the April 1909 Counter-Revolution, 'Izzet helped to establish order within the capital as the *Hareket Ordusu* approached Istanbul. Differences with Mahmûd Pasha, the minister of war, and his old teacher von der Goltz contributed to 'Izzet's desire for reassignment. 'Izzet disagreed with Şewket's method of handling unrest in Albania, and resented what he thought to be encroachment by the minister of war in matters of manoeuvres and personnel management. Meanwhile, Imâm Yaḥyâ had resumed his revolt and laid siege to the Yemeni capital of Şan'a'. Upon the death of 'Abd Allâh Pasha, commander-in-chief in Yemen, 'Izzet was dispatched to take his place (February 1911-December 1912), while officially on leave from his post as chief of staff. He succeeded in relieving the besieged Yemeni capital of Şan'a' and in concluding a compromise peace at Da'ân whereby Imâm Yaḥyâ was recognized as temporal and spiritual head of the Zaydî sect, with the prerogative of appointing local officials on the sultan's behalf. In return, Yaḥya acknowledged the sultan's suzerainty and joined an alliance with Ottoman forces against the rebellious Sayyid Idrîs to the north.

While in Yemen, 'Izzet was dismayed to learn that upon the outbreak of the First Balkan War, the new war minister, Nâzım Pasha, had acted in com-

plete disregard of İzzet's careful strategic plans by proceeding to the offensive before preparations were complete. Because of transportation difficulties, İzzet managed to return only as Turkish forces were withdrawing to Catalca, outside the gates of the capital. When members of the Committee of Union and Progress seized power in the *coup d'état* of 23 January 1913, İzzet was offered the post of generalissimo under the new cabinet of Mahmūd Şevket. At first he declined, having opposed the Unionist plot and being profoundly shocked at the death of Nâzım Paşa, who was shot during the *coup*. He subsequently reconsidered in view of the danger of renewed war on the Balkans and of the prospect that Enver [q.v.], whom İzzet considered impetuous, political, and less than competent, might obtain the post. Accordingly, İzzet on 30 January 1913 was named to the post of deputy commander-in-chief (*bâşkumandan vekili*—the sultan himself being the nominal *bâşkumandan*) and, following Mahmūd Şevket's assassination by anti-Unionist conspirators in June, that of minister of war in the cabinet of Sa'îd Hâlim Paşa. As generalissimo İzzet was in charge of the campaign resulting in the recapture of Edirne in the Second Balkan War (July 1913). Since he gave priority to his post as supreme commander, the minister of marine, Çürüksulu Mahmūd Paşa, frequently acted as interim minister of war, e.g., in concluding the agreement in the autumn of 1913 by which the German military mission under General Otto Liman von Sanders was brought to Turkey.

İzzet had some reservations about the far-reaching powers of that mission which, he believed, threatened the integrity of the Ottoman command structure. Subsequently, the purge of the incompetent officers after the Balkan Wars proved, for İzzet's taste, too sweeping in scope and too political in the details of its implementation, and these differences with the dominant Unionist partly led to his resignation both as minister of war and deputy commander-in-chief around the end of 1913. He was succeeded in both posts by Enver Paşa.

According to İzzet's own account (İnal, 1979; Klinghardt, 231 f.), the Ottoman government about this time favoured making İzzet prince of Albania. Although the plan received some backing among Albanian leaders both in Istanbul and in Albania itself, İzzet rejected it out of fear that "Albania might suffer harm on my account" (*yüzümden Arnavudluğa fenalık geleceği*).

İzzet spent two years in semi-retirement, but early in 1916 took command of the front against Russia with headquarters at Diyarbakır. The disastrous defeat at Sarıkamış, under Enver's personal command, had all but destroyed the Eastern front the year before. The best İzzet could do with his decimated and ill-supplied troops was to slow down the Russian advance through the Armenian and Kurdish mountains. When the revolution of February 1917 led to the collapse of the Russian armies, İzzet asked to be relieved of what was no longer an actual front command. He subsequently served as Ottoman military delegate to the peace conferences at Brest Litovsk, with Russia, and at Bucharest, with Roumania (December 1917-May 1918).

Following the collapse of the Palestinian-Syrian front, the resignation of the Tal'at-Enver cabinet, and Ahmed Tewfik Paşa's fruitless attempt to form a government, the task was assigned to İzzet Paşa. He served as grand vizier (*sadr a'zam*), from 14 October to 11 November 1918, at the head of a gov-

ernment that included a few moderate Unionists, notably Dîjâwid [q.v.] at the Ministry of Finance; the parliamentary leader of the Unionist anti-war faction that had formed early in 1918, 'Ali Fethî [Okyar]; and various non-political figures, such as the naval hero Hüseyin Ra'ûf [Orbay] and the imperial historiographer 'Abd al-Rahmân Şeref. The most urgent task was the conclusion of an armistice, and İzzet tried to make contact with the Allied powers through a variety of channels. The successful one proved to be the dispatch of the British General Charles Townshend, captured at Kut in 1916, to the headquarters of Vice-Admiral Sir Somerset Arthur Gough-Calthorpe in the harbour of Mudros on the Aegean island of Lemnos. The Ottoman delegation that went to Mudros soon after was headed by Hüseyin Ra'ûf and Reşhâd Hikmet, under-secretary of foreign affairs. On the grand vizier's instructions, the delegates insisted on obtaining safe-conduct for the German and Austrian military personnel stationed in Turkey; but they yielded on such points as the Allies' right to occupy key cities, harbours, and railway junctions throughout what remained of the Ottoman Empire. Determined not to jeopardize relations with the Allies through disputes over the interpretation of the armistice, İzzet ordered that no resistance be offered when British troops moved substantially beyond the lines attained when the armistice took effect on October 31, occupying the cities of Mosul and Iskenderun. (This decision led to a spirited exchange of telegrams with Muştafâ Kemâl Paşa, then commander of the Syrian front, which Kemâl published in 1926).

When it became known that Enver, Tal'at, Dîjemâl, and other leading Unionists had fled Istanbul on 2 November 1918, thereby evading any criminal or political responsibility for their war policies, İzzet's political authority was seriously undermined. He had had no advance knowledge of the escape and indeed tried to get German and Austrian authorities to return the fugitives from Odessa (the co-operation he received probably being less than sincere). In view of the political pressures against him, İzzet resigned on November 8, and three days later the sultan replaced his middle-of-the-road government with a clearly anti-Unionist one under Ahmed Tewfik.

In May 1919 İzzet briefly entered the second Dâmâd Ferid [q.v.] government as minister without portfolio as part of a show of national unity in view of the Greek landings at Izmir. In July he refused to enter Ferid's next cabinet which undertook to mount a military campaign against the Kemâlist "rebels". In October 1920 he accepted the ministry of the interior in a cabinet under Ahmed Tewfik that took a more conciliatory line. İzzet and Şâlih Khulûşî [Kezrak] Paşa were dispatched to Bilecik (midway to Ankara) in December to negotiate some arrangement with Muştafâ Kemâl Paşa and his Grand National Assembly. But Kemâl refused to recognize the delegation as representing any kind of government in Istanbul or to let his guests return to their capital. Instead Kemâl detained them in Ankara, hoping that Kemâlist successes against irregular forces (under Çerkes Edhem [q.v.]) and against the Greek armies would sufficiently impress them to join his side. Upon their steadfast refusal, İzzet and his colleagues were at last allowed to return to Istanbul, in March 1921, on promise of resigning their government offices there. When in June İzzet Paşa re-entered the next cabinet under Ahmed Tewfik Paşa as foreign minister, he

received a reproachful telegram from Muştafâ Kemâl; in reply he did not repudiate his earlier promise as having been extorted but rather pleaded patriotic duty and his manifest lack of personal ambition. He continued in his post until the dissolution of the sultan's government in November 1922.

'Izzet Paşa was a soldier of outstanding talent and high-minded patriotism. Pomiankowski (p. 38), as Austrian military plenipotentiary one of the most reliable observers of the late Ottoman military and political scene, refers to him on the occasion of his resignation in early 1914 as "in the best years of his many powers, an enlightened and experienced soldier, and at the time respected as the only competent and energetic Turkish military commander" (*damals als der einzige tüchtige türkische Heeresführer angesehen*). His administrative and diplomatic gifts became evident at various junctures, but he retained a life-long distaste for factionalism and political manoeuvring. It was his misfortune to have risen to the top of the military profession at a time when military and political questions were inextricably intertwined, both through domestic instability and through the empire's decline and eventual collapse under foreign pressure. His devotion to duty rarely allowed him to refuse a responsible assignment; his probity rarely allowed him to keep it for long. Thus he repeatedly saw others dissipate the fruits of his labours—only to find himself called back to retrieve or liquidate their mistakes. His political moderation and lack of party ambition typically kept him in the middle—between Unionists and anti-Unionists, or Kemâlists and anti-Kemâlists. A loyal servant of the Ottoman Empire until the very end, he lived under the Turkish Republic in quiet retirement in his home in Istanbul until his death.

(D. A. RUSTOW and G. W. SWANSON)

'IZZ AL-DİN B. AL-SULĀM AL-SULĀMĪ [see AL-SULĀMĪ].

'IZZĪ (SÜLEYMĀN EFENDĪ), d. 1168/1755, Ottoman official historiographer (*waḳ'a-nüvis* [q.v.]), was the son of a certain Khalil Agha, the *ketkhudā* of the Baltadil guard of Meḥmed IV's daughter Khadije Sulṭān. Educated by his father and private tutors, he also learned calligraphy (Mustakimzāde, *Tuhfe-i Khaffāfin*, Istanbul 1928, 212). His father's connexions with the court procured him a series of secretarial posts, so that he rose to be *Mektûbi-i ketkhudā-i şadr-i 'ālî* in 1152/1739. As such he was present at the operations round Belgrade, and the recovery of the city inspired him to make a copy of the *Süleymān-nâme* of Karaçelebizāde [q.v.] and append a short memoir of his own on this second conquest (autograph Ms: Istanbul, Topkapı Sarayı, Emanet Hazinesi 1395 = Karatay, No. 684). On 1 Raddjāb 1158/30 July 1745, on the recommendation of the Re'īs al-Küttāb, he was appointed *waḳ'a-nüvis* in succession to Şubḥî [q.v.]. In 1160/1747, without resigning as *waḳ'a-nüvis*, he was appointed "master of ceremonies" (*teşhîrîfâtî*). He died in Djumādā II 1168/March-April 1755, and was buried near Edirne Kapısı, beside Şeykh Murādzāde who had initiated him into the Nakşibendî order.

His official history covers the years 1157-65 (1744-52), and was printed in Istanbul in 1199/1785. Manuscripts are numerous (see Babinger, 288; *Ist. küt. türkçe tarih ve coğ. yazmaları kat.*, i/2, no. 82; Karatay, nos. 930-9, no. 937 being the "presentation copy" to the sultan; etc.). In a preamble he describes the value of history as a guide to conduct and policy, so that the historian's duty is to write honestly and frankly. He gives very full details on appointments and changes in the *Divān-i hümayūn*, so that the work is a valuable source for the biographies of statesmen; it occasionally incorporates the accounts of eye-witnesses which he commissioned. The work is written in the most elaborate and ornate style of *inshā'*, and abounds in chronograms. He composed a *diwān*, but won little fame as a poet. In the field of mysticism, he translated from Persian the *Anis al-talibin* of Şalāh al-Dīn b. Mubārak al-Bukhārī.

**JUDAEO-ARABIC**, the usual name for the spoken—or in some cases the written—language of the Jews in the Arabic-speaking countries.

### i. JUDAEO-ARABIC DIALECTS.

The traditional term “Judaean-Arabic” has certainly less justification when used in connection with the spoken usage than with the written usage defined above. It suggests the erroneous idea of a form of speech common to all Arabic-speaking Jews, and offering characteristics linked in some way to religious or ethnic facts. Now though it cannot be denied that the religious factor has influenced the Arabic spoken by the Jews, that influence is limited to what is least central to the language, to the cultural and particularly the cultic vocabulary, where forms of Hebrew or Aramaic origin abound. The actual structures of Arabic remain in all particulars untouched and do not reflect those of the religious language. In other respects there is no one form of Arabic common to all Arabic-speaking Jews, but dialectal usages as varied as those characteristic of the different groups of Muslims. There is thus properly speaking no such thing as Judaean-Arabic. But it is possible, nevertheless, to bring out, at numerous points within the Arab domain, particular characteristics which within a certain locality serve to distinguish the usage of the Jews from that of their Muslim neighbours.

These particularities may be few in number. Thus in Cairo the Jewish community (today virtually extinct) seems in its latter days to have been differentiated linguistically from the Muslim community merely by a few characteristics of which the only relatively important ones were, in the field of phonetics, the virtual disappearance of “emphasis”, and in the field of morphology the use of the prefix *n-* to mark the 1st pers. sing. of the imperfect. But the Coptic language also displays a weakening of the “emphatic” pharyngalization and the *n-* form is in general use in Alexandria. In Jerusalem, apart from the religious vocabulary, only minor, sporadic, un-

stable differences were to be noted, affecting above all the intonation of phrases, occasionally the production of vocalic variants or the frequency of certain adaptations of adjacent phonemes. Insofar as the few clear data at our disposal permit us to gain a comprehensive idea of this phenomenon, it appears that in the greater part of the Arab East (Arabian peninsula, northern ‘Irāk, Syria, Lebanon, Palestine, Jordan), the facts may be compared to the situation in Jerusalem; but different circumstances prevailed in southern ‘Irāk on the one hand and the Maghrib on the other.

As far as the East is concerned, it is in Baghdād that the speech patterns of the various communities diverged most clearly. That of the Jews (J) before their emigration presented certain analogies with the dialect used by the Christians and on the other hand differed from that of the Muslims (M) in various essential points. On the plane of phonology the following correspondances between the speech of the Muslims (M), that of the Jews (J), and classical Arabic (C) may be observed: (C) *ḥāf*: (M) *g*: (J) *ḥ*; (C) *kāf*: (M) *tsh* (in certain defined situations): (J) *k*; (C, M) *r*: (J) *gh* (for a large number of people); to (C) *l* there often corresponds when a velar is present (M) *l* but (J) *l*. (C) *ū* and *i* merge in (J) *ə*: M keeps a distinction between the two sounds but with a distribution different from that of (C): (M) occasionally equates *ū* or *ə* to (C, J) *a*; more often than (M), (J) has *-ā* corresponding to (C) *-ā*; equally, (J) demonstrates the *imāla* [*g.v.*] of *ā* that is unknown in (M); some differences in syllabic structure and accentuation may be illustrated by the following forms: (M) *ṣāḥbi* “my friend, *gubti* “my room”: (J) *ṣāḥbi*, *ḡabbti*. On the plane of morphology, the most outstanding items concerned conjugation. For the perfect the suffixes were: (M) sing. 1. -t, 3.f. -at; plur. 2. -tu, 3. -aw: (J) -tu, -at, -tam, -u; for the unattached pronouns, compare (M) sing. 1. *āni*, 3.m. *huwwa*, plur. 1. *əhna*, 2. *ənu*, 3. *humma*: (J) *āna*, *huwwi*, *nəhna*, *əntəm*, *hummi*; suffix pronouns: (M) sing. 1. -i/-ya, 2. f. *tsh*, 3. m. <sup>4</sup>, -a, f. -ha: (J) -i/-yi, -k(i), -(n)u, -(h)a, -(h)əm. The feminine ending was (M) -a/-at but, frequently, (J)-i; to obtain the *nomen unitatis* the suffix -a/-at was added in Baghdād (M), -āyi in Baghdād (J). Lastly we must note the difference in value of the verbal prefix *da-* which constituted the mark of the jussive and the progressive present for (M), but only the jussive for (J). (J) utilised for the present the verbal prefix *ka(d)-*, (M) had also, less frequently, a form *gārd* for this purpose). On the lexical plane the following are particularly noteworthy: (M) *batṣḥar* “tomorrow”: (J) *ghada*; (M) *hwaya* “much” (J) *ktigh*; (M) *hnā* “here”: (J) *hōni*.

In the Maghrib, although the phenomenon is not universal, Jewish speech forms which differ markedly from those of neighbouring Muslims were frequently encountered. At Fez for example, distinguishing features were numerous and important. The following, in particular, are noteworthy: the pronunciation <sup>2</sup> of *kāf* (M *k*), *z*, *s* (*z*, *s* in association with an “em-

phatic") of *ḏīm* and *shin* respectively; the form of the 3rd pers. fem. sing. of the perfect in CCVC-*t* (*ktəbt*) identical to the 1st and 2nd pers. (M CVCCV*t* *ktəbt*), the conjugation of an "unvoiced" verb in the perfect without the element *-i-* before the flexional ending (M *ḥabbīt*, J *ḥabbət*); the pattern -CVCC- of the imperfect (*idakhl* "he is entering"); for the personal pronouns, the forms of the 1st pers. *yāna* (after a vowel) and the alternating forms in *n-* for the 3rd pers.: *nōwa* and *hōwa*, *nīya* and *hīya*, *nōma* and *hōma*; the running together, in the form *nīn*, of the 2nd pers. sing. masc. and fem. pronouns; as far as lexicography is concerned, the use of *rā* "to see" (M *shāf*). It must be added that the Jewish speech form used, in current speech, derived verbal patterns with the prefix *n-* to express the passive, and acknowledged a form with the prefix *t-itt-* with lengthening of the theme vowel: *ittā-māl*.

Information about the speech forms of Jews in other Moroccan cities is rare, but one might note at Marrakesh the same assimilation of the prepalatal fricatives to the corresponding sibilants, i.e., *s* for *shin*, *z* for *ḏīm*, and the same treatment of the singular forms of the perfect: *ḏrabi* "I have, thou hast, she has hit". In other areas, for example at Tinghir, one noted once more the assimilation of sibilants and palatal fricatives, but this time, as in some Tunisian towns, to the advantage of the latter; *sin* > *sh*, *zāy* > *j*, except in conjunction with "emphatics" which compelled the pronunciation *ʃ* and *ʒ*. The speech of the Debdū Jews was characterized by a tendency to lose the "emphatic" articulation, the pronunciation *k* for *kāf*, and above all by the conjugation of the perfect, which gave in the sing. a 1st and 2nd pers. masc. with the form *kōttat*, and a 3rd pers. fem. with the form *ktāt*.

At Tlemcen a bringing forward of the point of articulation of velars and palatals made *k* and *tsh* correspond respectively to *k̄* and *k̄* among the Muslims. Apart from this, *h* was often reduced to nil, the diphthongs to long vowels homophonic with the semi-consonant. We must note also that the Muslim preposition *m'ā* "with" (in constructions including a suffix pronoun) was replaced by *mā* (before a vowel)/*mā* (before a consonant) amongst the Jews. Beside this the latter were differentiated by the use of the forms *dāba* for "now" (M *dərwoḥ*), *līyāsh* "why?" (M *līyāh*), *ashē*, *ashən-hūra/hīya* "what?" (M *āsh*).

In Algiers one noticed as differentiating characteristics of the speech of the Jews—which is now used only by a few elderly people who live outside Algeria—the extreme weakness of the "emphatics", often reduced to the corresponding simple consonants; the non-affrication of the unvoiced dental (J *t*: M *ts*), the tendency in certain cases to the affrication of *d* (M. *d*: J *dz*), the tendency to make the prepalatals into sibilants (often *s* for *sh*, *dz* for *ḏj*), the bringing forward of the point of articulation of *kh* and *gh*, the transfer from *k* to *ʔ*, the frequent dropping of *h*, the reduction of the series of short vowels to a single phoneme of neutral sound (with variants tending one way or the other according to neighbouring sounds), and a very pronounced *imāla* on the end syllable. As for morphology, particular note must be taken of the form of the masculine suffix pronoun after a vowel: *u* for Muslim *-a*. Furthermore J utilised *mā* "with" (M *m'ā*), *innā* "here" (M *hna*), *dābā* "now" (M *dərwoḥ*), *lbarah* "yesterday" (M *yāmās*).

The differences between various usages amongst Jews and Muslims respectively were also very pronounced in Tunis. The two phonological systems di-

verged widely over whole sectors. The two series of M dentals, occlusive and spirant, were replaced by a single occlusive series in J. J had brought together *s* and *sh* on the one hand, *z* and *j* on the other. The sounds produced were, generally, *sh* and *j*, with *s* and *z* constituting conditioned variants before non-emphatic *r*; in association with emphatics, *sh* and *j* resulted respectively in *ʃ* and *ʒ*. J had no laryngeally articulated phonemes. To M *h* corresponded, according to context, either nothing or a lengthening of the adjacent phoneme. The voicing of J had reduced the former *ā* and *ī* to a single phoneme *ə*; moreover *ū* remained distinct only within narrow limits. M had only partially operated this reduction, so that very frequently the vowel sounds for the same word were not identical in the two forms of speech. On the other hand, in most cases, J had kept the diphthongs *aw* and *ay* which have become *ū* and *ī* in M. The morphology also displayed fairly clear-cut differences. For example in detached personal pronouns plural were (M) *aḥna*, *əntūma*, *hūma*: (J) *əhna*, *əntumān*, *ūmān*; the masc. sing. attached pronoun for the 3rd pers., after a vowel, was (M) *-h*: (J) *-u*; for verbs with the 3rd radical *-y*, the 3rd pers. plur. in (M) *nəmsḥū*: (J) *nəmsḥūy*; the verbs which formerly had a 1st radical hamza were of the type (M) *āmər*: (J) *amər(r)*; the intensive pattern of verbs with a 2nd radical simple vowel was (M) *zawwəz*, *ʃeyyir*: (J) *juwwəjjjuwəjj*, *ʃiyyar/ʃiyar*; to the copula of being (M) *ʿād*, *ma ʿāsh* "there is (still), there is no longer" corresponded (J) *bha*, *ma bhāsh*, etc. Reasonably similar situations might be discerned in other Tunisian cities, and particularly in Sousse.

The speech patterns of Jews in Libya have not been sufficiently studied before the displacement of their communities. For Tripoli itself we can only mention a few characteristics, though these are significant. Thus the Jews of this town pronounced as an unvoiced back velar *k̄* the sound pronounced by their fellow citizens *g*. Also notable are (M) *t*: (J) *tsh* before *i* and *e*, and on the morphological plane (M) *mōlā-i* "my master": (J) *mōlā-ya*; (M) *iḥūf* "he sees": (J) *yāra*.

The essential problem was that of the meaning of this phenomenon of differentiation. It must be stressed that this phenomenon was not solely nor even particularly characteristic of the Jewish minorities in the domain of Arab Islam. To remain within this domain, which nonetheless is not the only one where such observations can be made, one may call to mind that where groups of Christians exist, for example, linguistic differences may also mark them out. So it is in southern *ʿIrāk* and in *Baghdād* itself where a speech pattern similar but not identical to that of the Jews clearly distinguishes Christians from Muslims. In the West where the only Arabic-speaking Christians are of Maltese origin, their own dialect has withstood several centuries of contact, and right up to the present day distinguishes them linguistically from other groups. We are speaking, in fact, of the normal consequence of the situations of relative isolation in which minorities may have lived. The development has taken place in a partly autonomous fashion in proportion as socio-historical conditions may have differed.

a) The retention in Jewish usage of characteristics which had disappeared or been transformed in neighbouring Muslim speech patterns was often due to the greater resistance of the Jews to certain socio-cultural pressures. Thus in numerous places where nomads had become part of the sedentary population,

their linguistic influence had operated with much greater force on the Muslims than on the Jews. The clearest example is that of 'Irāk, where Muslim speech is of the Bedouin type, closely related to that of the nomads in lower 'Irāk, whereas Jewish speech was clearly allied to that of the ancient cities of upper 'Irāk, free from Bedouin characteristics. In some Maghribī towns also, the unvoiced articulation of *kāf* distinguished the speech of the Jews from that of the Muslims who pronounce it *g* like the nomads. This is so in Tripoli, Oran, Sidi Bel Abbes, etc.

b) Developments particular to Jewish speech forms may, on the other hand, have been provoked or precipitated by cultural contacts alien to or less intense for the Muslims. Doubtless there are particular contacts, maintained with more or less facility according to the period, between Arabic-speaking Jewish communities of nearby or relatively distant regions: the links between the Jews of Algiers and Tlemcen can perhaps explain the use by Jews from Algiers of the form *dāba* "now", a western form not used by the Algerian Muslims. But the most decisive contacts, in known cases, seem to have been with non-Arabic speaking groups. Thus in the Maghrib the influence of Spanish-speaking immigrants operated, more strongly in the west than in the east, and was responsible notably for lexical modification, but perhaps also at least partially for certain phonetic phenomena such as the treatment of sibilants. Furthermore the influence of foreign colonies in Arab cities has often been more decisive for the Jewish community. Thus in North Africa French, which moreover finally supplanted Arabic almost entirely in some strata of the Jewish population, to a greater or lesser extent according to the country, had contributed in numerous instances to the changing of the Jewish speech forms, not only by the addition of a large new vocabulary, but also by the model it provided for new syntax patterns. On the phonetic plane, for example, a weakening of the "emphatics" or even their replacement by the corresponding simple consonants, as well as the back pronunciation of *r*, was common amongst the bilingual French-Arabic speakers.

c) One must also take into account the original heterogeneity of the population of a certain number of cities. The various ethnic groups, often taking up residence at different periods, may come from separate regions with linguistic habits already differentiated. An obvious example is that of the Christian population of Baghdād which seems to be made up largely of relatively recent immigrants from Mosul. This fact is reflected in their speech pattern which is of the sedentary type, similar to but not identical with that of the Jews whose arrival in Baghdād took place at a very much earlier date, but very analogous precisely to that of Mosul. (As has been pointed out above the speech of the Muslims is of the "Bedouin" type.) In this regard, the case of Tunisian speech patterns is also striking. All those of the Jews displayed the assimilation of the interdental to their corresponding dentals, whereas the distinction is maintained in all speech patterns of Muslims, except at Mahdiya. This last type doubtless represented the old *koine* of Kayrawān. Now it certainly appears that the Kayrawān area was the centre from which numerous colonies of Jews were dispersed to the Tunisian cities. It is interesting to note also from this same point of view, that the speech of the Jews of Tlemcen and Oran seems to have been of the same type as that of the Msirda and Trara hill Muslims, whereas that of

the old sedentary Muslims of Tlemcen belongs to a different type.

These linguistic particularities of certain groups of Arabic-speaking Jews have, in general, no common underlying features, except that of being speech patterns related to old urban dialects in contact with dialects which have occasionally been "Bedouinised", and which have evolved in relatively autonomous fashion. The traits which were most commonly cited as being characteristic, at least for the Maghrib: change from *k* to *ʿ* or velarized *k*, palatalization of *k* (*k* > *tsh*), apart from the fact that they are sporadic were in no way specifically Jewish; they arose from phenomena spread over vast areas, where they concerned Muslims equally. (See art. 'ARABIYYA: the Maghribī dialects). In the same way the pronunciation *gh* of *r* and the weakness of *h* are frequent amongst the oldest settled peoples. More characteristic, however, is the deterioration of the sibilants which has often been noticed in the speech of Maghribī Jews, Berber speakers, incidentally, as well as Arabic speakers. This deterioration is not everywhere, as is frequently stated, a lisp, the reduction of palatal to alveolar fricatives. Certainly this is the case in the speech of Fez or Marrakesh, and a tendency in this direction had been noted at Algiers. But it is the opposite, the change from alveolar to palatal fricatives, in the absence of complicating factors, which has been ascertained among other Moroccan Jews (Toghda) or those of certain Tunisian cities (Tunis or Sousse for example). What is in question, therefore, is the tendency to assimilation of the two series which is produced according to different patterns in the various speech forms concerned. It is possible that there may be here a characteristic of a particular group of Jews which was dispersed across the Maghrib. It seems, however, more realistic to see a sort of Spanishness which the Spanish-speaking immigrants introduced, as people with prestige, in the course of their Arabization.

*Private language.* A form of slang used by Jewish traders and artisans was spread across the whole area. It was normally called *lāshōn*, from the Hebrew word meaning "tongue, language", occasionally *ishūrūni* from *yeshurun* which in the Bible is applied to the people of Israel. This slang was based on the utilisation of a basically Hebrew vocabulary in accordance with completely Arabic morphology and syntax.

*Written language.* The majority of the Arabic-speaking Jewish communities used Arabic as a written language (by means of Hebrew characters provided where necessary with diacritical marks). This use, which often depended upon a linguistic level superior to that of the spoken language, is not to be confused with the variety of Middle Arabic called Judaeo-Arabic (see below under ii). At least in the few cases which it has been possible to study, in the absence of a more complete record, it was a question of using the local dialects, often purified of what was most strictly characteristic of them, taking as a general norm the Muslim speech of the large cities. For instance, in the Maghrib the confusions between *sin*, *zāy* on the one hand, and *shīn*, *ḍīm* on the other, and again between *kāf* and *hamsa*, were avoided because these confusions are particular to certain forms of speech and, moreover, felt to be more or less ridiculous changes for the worse. In the same way an effort to restore *h* could be noted everywhere, leading at times to hyper-correction. On the other hand the dentals were rarely distinguished from the interdental, since few urban speech forms, Jewish or Muslim, had retained this distinc-

tion. Often these kinds of *koine* had their own characteristics, absent from all or most Jewish speech patterns, and appeared as archaisms; thus to take as an example a *koine* current at least throughout the eastern Maghrib, one could see in it the distinction, relatively rare in the Jewish speech forms of this region, between the second persons masculine and feminine singular of the perfect, the formation of feminine plurals for adjectives in *-at*, the use of the relative *'lady* (read as *'aldī*), of the adverb *hākda*, "thus, like that", of the conjunction *'n* (read as *ən*), at times *'yn* (read as *in*), "if", of the preposition *mil* (*mall*), "as", etc.

*Bibliography*: An attempt at a general characterisation of Arabic speech in Jewish groups is found in H. Blanc, *Communal dialects in Baghdad*, Cambridge Mass. 1964, 12-16 and *passim*, which has provided the points mentioned here concerning Jerusalem and Baghdād. See also J. Mansour, *The Arabic dialect of the Jews of Baghdad . . .*, in *Journal of Jewish Studies*, viii (1957), 187-98. The general tendencies of M. Mišes, *Die Entstehungsursache der jüdischen Dialekte*, Vienna 1915, are doubtful.—See scattered information in D. Cohen, *Études de linguistique sémitique et arabe*, Paris 1970, 105-25.—On the Yemen, information is to be found in S. D. Goitein, *Jemenische Geschichten*, in *ZS*, viii (1932), 162-81, ix (1933), 19-43; *Jemenica, Sprichwörter und Redensarten aus Central-Jemen*, Leipzig 1933. D. Tomiche in *Encyclopédie de la Pleiade* (Vol. *Le Langage*), Paris 1968, 1179-80, deals rapidly with the Arabic dialects of the Egyptian Jews.—For the Maghrib W. ## ii. MEDIAEVAL JUDAEO-ARABIC.

Judaeo-Arabic (= JA) as used by mediaeval Arabic-speaking Jews in their writings, mainly in those written by Jews for Jews, especially in the first half of the second millennium A.D. is one of the main branches of Middle Arabic (= MA; see 'ARABYYA (3)). Since Jews, like Christians, were less inclined to use the Classical language in their writings than their Muslim contemporaries, their writings are especially apt for the investigation of MA. Like MA texts in general, JA writings are not written in genuine MA vernacular, but in what may be

styled "MA Literary Standard", exhibiting a whole range of styles with infinitely varied mixtures of classical and MA elements. Accordingly, the phenomena characteristic of (MA in general and) JA (in particular) have to be collected from deviations from classical features. Yet even among these deviations one has to distinguish carefully between genuine MA and pseudo-correct (including hyper-correct) features. The latter are original MA forms which were "corrected" because of the author's desire to write classical Arabic. As a result of these "corrections", however, non-existent forms came into being; these corrected forms were, as a matter of fact, neither classical (because the author, lacking sufficient knowledge of classical Arabic, did not succeed in forming the intended classical feature) nor living vernacular (because the author had "corrected" them).

As to the linguistic character of (MA in general and) JA (in particular), it already clearly exhibits all the structural peculiarities that characterize modern Arabic dialects. Perhaps the most important event in the field of phonetics was the change in the nature of vowels, partly, at least, caused by the accent becoming strongly centralized: they became weakened, becoming liable to change and elimination. Final short vowels have disappeared (this being one, but not the only, reason for the disappearance of cases and moods). In the sphere of the consonants the most conspicuous change is the weakening and disappearance of the glottal stop. As to the linguistic structure, so far as such different and intricate features may be reduced to a common denominator, the most conspicuous deviation from classical Arabic was that MA detached itself from the synthetic type and instead approached the analytic type, which generally indicates one concept by one word. The most striking outward sign of this phenomenon is the disappearance of the mood and case endings. The status constructus has been somewhat reduced. The dual is often replaced by the plural, and the relative pronoun *alladhī* has become invariable (in many cases apparently being a classical spelling for vernacular *illī*, which is very rare in MA texts). The differences between relative clauses after determinate and indeterminate antecedents, strictly maintained in classical Arabic, are blurred. Asyndetic clauses occur in every syntactic environment, both in coordination, especially after verbs indicating movement, and in subordination, particularly in object clauses. Indirect questions often take the form of conditional clauses. The most frequent negation is *mā*. The feminine plural is widely replaced by the masculine, and the passive, formed in classical Arabic by internal vowel change, by reflexive verbal forms. The most far-reaching changes have affected the numerals. Moreover, the fixed and accurate style of classical Arabic is largely replaced by an inconstant and careless language.

Despite the basic linguistic similarity of JA and other branches of MA, there were important differences between them, though mostly not linguistic distinctions proper: Jews, as a rule, wrote Arabic in Hebrew characters, dealt almost exclusively with Jewish topics and made use of Hebrew (and aramaic) phrases, thus making their literature virtually unintelligible to gentiles. One has the feeling that Jews themselves regarded JA as distinct from other forms of MA, as one may infer from special literary traditions in JA literature.

*Bibliography*: The general background of JA and its main linguistic trends are dealt with in

J. Blau, *The emergence and linguistic background of Judaeo-Arabic*, Oxford 1965, its language in J. Blau, *A Grammar of Mediaeval JA*, Jerusalem 1961 (in Hebrew). For additional bibliography, see *Scripta Hierosolymitana IX*, 1961, 208-9, J. Blau, *A grammar of Christian Arabic I*, Louvain 1966, 39-41. (J. BLAU)

### iii. JUDAEO-ARABIC LITERATURE.

While the presence of organized Jewish groups in both the north and south of the Arabian Peninsula antedates the birth of Islam, there is no definite evidence that Arabic was employed as a means of written expression adapted to the needs peculiar to the cultural and religious order of this minority, although it was widely used in everyday life. The Jewish Arabic-speaking poets, such as al-Samaw'al b. 'Ādiyā [q.v.] differ very little from their contemporaries, the *djāhiliyya* Arabs of the original stock. Not is there any genuine proof of the existence of Arabic versions of the Bible at this period which were initiated by Jews: the biblical elements found in the *Qur'ān*, from almost literal borrowing to vague allusions, doubtless arise from oral communication, part of which is incontestably of Christian origin. (On the problem of Christian-Arabic versions of the Bible, see A. Baumstark, *Islamica*, iv (1931), 562-75; on the subject of biblical echoes in the *Qur'ān*, consult the article by G. Graf, *GCAL*, i, 41-3 and J. Haddā, *al-Qur'ān wa'l-Kitāb*, Beirut (1961-2).) After the foundation and consolidation of the Muslim Empire, the Arabic language and the related culture were only slowly diffused among the Jewish population of the *dār al-Islām*; it is not to be seen before the second half of the 3rd century of the *Hijra*, and only became of real importance in their civilization from the 4th/10th centuries onwards.

One general observation must be made at the outset. There was always a measure of guilt in the Jewish intellectuals' use of Arabic in their writings in place of Hebrew, which was still in literary usage in Palestine long after the Muslim conquest, or of Aramaic in its Palestinian and Mesopotamian ("Babylonian") dialects, and, more rarely, of the language of the academies derived from the Babylonian Talmud, which to this day is reserved for juridical-casuistic and ritual works. (Whenever Arabic literary, scientific, theological and medical texts were copied for a Jewish public they were frequently reproduced in Hebrew characters, irrespective of the faith of the author). The writers excused their use of Arabic on the grounds of the loss of a large part of the Ancient Hebrew vocabulary, hence the inadequacy of what remained for expressing the new ideas put into circulation by Arabic civilization, in which, willy nilly, they had become participants and dependants. One of the indications of this ambiguous attitude towards the use of Arabic as the medium for treating subjects relating to Jewish teaching is the existence in two editions, Arabic and Hebrew, of several works in this field. (On this question see A. S. Halkin, *The Medieval Jewish Attitude towards Hebrew, in Biblical and other Studies*, ed. A. Altman, Cambridge, Mass. 1963, 233-48). It must also be emphasised that the use of Arabic in poetry, profane as well as religious, remains the exception during the Middle Ages. (Cf. on this point S. M. Stern, *Arabic Poems by Spanish-Hebrew Poets*, in *Romanica et Occidentalia*, Jerusalem 1963, 254 ff., and *Papers of the Institute of Jewish Studies*, i, London 1964, 186 ff.; *Hagut Ivrit be'Eyropa*, Jerusalem 1969, 91-103).

The written language used by the Arabic-speaking Jews during the first centuries of their incorporation into Muslim civilization is that designated "Middle Arabic". [Cf. 'ARABIYYA, and JUDAEO-ARABIC (LANGUAGE)]; at its various stylistic levels, this idiom does not constitute a deliberate and systematic break with the rules of "Classical" Arabic; free recourse to the dialectal is very rarely encountered among the Judaeo-Arabic writers of the Middle Ages. Later, the rift between the Jewish minority and Muslim culture, which was accentuated from the 9th/15th century onwards, resulted, especially in the *Maghrib*, in the loss of the ability to understand the oldest texts in written Judaeo-Arabic. Some continuity of the literary tradition is barely affirmed only in the Yemen, a Muslim environment with a geographical area more impervious to external influences than the rest of the *dār al-Islām*, and where there was never any sizeable settlement by Jews expelled from Spain. This continuity was no doubt due to the relatively small divergence between "Middle Arabic" and the spoken language and the conservatism and integration of the group concerned, bearing in mind the limits set by the irreducible differences of belief and the social repercussions resulting from them.

The rift between the Islamic literary culture and the Arabic-speaking Jewish minorities did not put an end to the latter's use of Arabic as a means of literary expression. However, the literary output in Judaeo-Arabic in the course of the last five centuries differs, except to some extent in the Yemen for the reasons indicated above, from that of the early period (4th/10th-9th/15th centuries) in two respects, giving it a radically new character in relation to the former situation. On the one hand, the language used has a dialectal base, although it is too conventional to reflect faithfully the living speech in use in the many different areas of Arabic-speaking Jewish diaspora. On the other hand, this literature was produced solely in answer to the needs of the less educated strata of the population, whether the work in question is liturgical or paraliturgical poetry (epithalamia, ballads etc.), religious instruction, edification, or, more recently, entertainment and general information (in the case of poetry there is a need for study of its formal relationship with vernacular poetry by Arabic-speaking Muslims; nothing significant has been done in this field). Henceforward the culture of the scholars was entirely in Hebrew; in this respect, it can be said that Judaeo-Arabic dialectal literature is essentially "popular", even in the case of a version, based on a mediaeval Hebrew translation, of a "classical" work, originally written in Arabic, such as the "Duties of the Heart" by Bahya Ibn Pakūdā. In short, despite its relative poverty and insignificance, this Judaeo-Arabic "popular literature" reveals some characteristics in common with the Judaeo-Spanish and Judaeo-German literatures, richer, more abundant and of a cultural importance far above that of their poor relation though they are. The whole spectrum of Judaeo-Arabic writing of the earlier period, however, though of greater cultural range, but most of the time lacking in aesthetic preoccupations, cannot be classified as literature in the strict sense of "belles lettres".

Given these conditions it is difficult to speak of "the history of Judaeo-Arabic literature". Therefore the present summary will be limited to recording succinctly, albeit with many omissions, the works composed in the Judaeo-Arabic literary language, mainly theological and philosophical, as well as devoting some space to the other disciplines: exegesis

and biblical philology, ritual legislation and casuistry. The most important editions of texts will be indicated. References to works dealing with the popular literature in dialect will be included in the selected bibliography. For convenience and very schematically, even at times arbitrarily, the writings mentioned will be grouped under four headings: theology and philosophy; Hebrew philology and biblical exegesis; law and rites; miscellaneous. On the subject of the authors and the works cited general reference should be made to the paragraphs of M. Steinschneider's old, but still fundamental and indispensable repertory, *Die arabische Literatur der Juden* (ALJ), Frankfurt 1902 (republished Hildesheim 1964); to lighten the bibliography, reference will rarely be made (with the exception of the publication of texts) to information given in this work and in G. Vajda's *Jüdische Philosophie* (*Bibliographische Einführungen in das Studium der Philosophie*, 19) Berne 1950 (JP, the figures referring to the corresponding issues).

A. *Theology and Philosophy*.—The oldest theological treatise in Judaeo-Arabic which has come down to us, with considerable lacunae in the text, is the *Išrūn Maḳālāt* of David b. Marwān al-Raḳḳī, called al-Muḳammīš (?), from the second half of the 3rd/9th century: ALJ, § 25; PJ 7. 11; cf. G. Vajda, *Oriens*, xv (1962), 61-85, and in *Jewish Medieval and Renaissance Studies*, Harvard 1967, 49-73. An important part of the abundant work of Sa'adyā b. Yosēf al-Fayyūmī (b. 882, d. Gaon of Baghdad in 942) comes under this heading, in particular his theological treatise *K. al-Amānāt wa-l-i'tihādāt*, ed. S. Landauer, Leiden 1880, and his commentary on the *Sēfer Yeširāh* ("Book of Creation"), ed. M. Lambert, Paris 1891; and J. Kāfiḥ, Jerusalem 1970 (see ALJ, § 31); JP 6. 11-62; G. Vajda, *Sa'adya, Commentateur du Livre de la Création*, in *Annuaire de l'École Pratique des Hautes Etudes, Section des Sciences religieuses*, 1958-9, 3-35; H. A. Wolfson, *Saadia on the Trinity and Incarnation*, in *Studies and Essays in Honor of Abraham A. Neuman*, Philadelphia 1962, 547-68; H. Davidson, *Saadia's List of the Theories of the Soul*, in *Jew. Med. and Ren. St.*, 75-94; for criticism, in Judaeo-Arabic, of some of his doctrinal positions by a younger contemporary see: *A Critique against the Writings of R. Saadya Gaon* by R. Mubashshir Halevi, edition with commentary (in Hebrew) by M. Zucker, New York 1955 (remainder, Sh. Abramson, *Sinai*, lvii (1964-5), 15-17; S. M. Stern, *REJ*, cxxvi (1967) 113-117).

The Arabic originals of the philosophical writing of Isaac Israeli (died in Ifriḳiya around 349/950 [see 15ḤĀḲ AL-ISRĀ'ĪL]) are for the most part lost: ALJ, § 28; PJ, 8, 11-15, 21-22; A. Altmann and S. M. Stern, *Isaac Israeli*, Oxford 1958. The same applies to the commentary on the "Book of Creation" by his disciple, Abū Sahl Dūnash b. Tāmīm: ALJ, § 36; PJ, 8. 23 (cont. *REJ*, cx (1949/50); cxii (1953); the fragments in Arabic, *ibid.*, cxii (1954), 37-61; cxxii (1963) 149-162). In Spain, where the Arabic language served as a means of expression for a good number of Jewish philosophers and theologians until the middle of the 8th/14th century, not only in the territories under Muslim domination but also at Toledo, reconquered by 1085, the list of authors of books in these disciplines is headed by Salomon Ibn Gabirol [see 15N GABIROL] (J. Schlanger, *La philosophie de Salomon Ibn Gabirol*, Leiden 1968), but of the original Arabic of his "Source of Life" only tiny fragments are extant; edition of his short manual of ethics ("*Išlāḥ al-akhḫlāk*") by S. Wise, New York 1901. On

the other hand the original Arabic of the treatise on spiritually *al-Hidāya ilā farā'id al-ḫulūb* by Bahyē (Bahya) b. Yōsēf Ibn Paḳūdā (last quarter of the 5th/11th century) has been preserved; it has been edited by A. S. Yahuda, Leiden 1912: ALJ, § 86; PJ 11. 11-14, 21-24; C. Ramos Gil, *Bahya Ibn Paquda, El Puro Amor Divino*, in *Miscellanea de Estudios Arabes y Hebraicos*, Granada 1952, 85-148. The works of religious philosophy by Joseph Ibn Šaddīḳ of Cordova (d. 1149): ALJ, § 102; PJ 12. 15, 22, 28, and of Abraham Ibn Dāwud of Toledo (d. 1180): ALJ, § 104; PJ 15. 01-2, have only been preserved in their Hebrew versions; the treatise in anti-philosophical vein by Judah Halevi (d. after 1140), *al-Hudūdīya wa'l-dalīl fī naṣr al-dīn al-ḥalīl*, commonly called *Kuzari*, has, on the other hand, been preserved almost in its entirety (ed. H. Hirschfeld, Leipzig 1887, also, N. Allony, *Kirjath Sepher*, xxxviii (1962/3), 113-121); ALJ, § 103; PJ 13. 11-15, 21-23; S. Pines, *Notes sur la doctrine de la prophétie et la réhabilitation de la matière dans le Kuzari*, in *Mélanges de Philosophie et de Littérature Juives*, i-ii (1956/7), 253-60.

Two other works—one certainly composed in the East and the other more than probably so—bear the imprint of Arabic Neoplatonism to a more pronounced extent than in the philosophical compositions of Isaac Israeli and his school: the *K. Ma'ānī al-naṣf*, by an unknown author, wrongly attributed to Bahyē Ibn Paḳūdā, ed. I. Goldziher, Berlin 1907; PJ, 12, 11, 23; A. Borisov, in *Bulletin de l'Académie des Sciences de l'U.R.S.S.*, Humanities School, 1929, 786; M. Plessner, *NGW* Gött., Ph. Hist. Kl., 1971, 5; and *Bustān al-ūḫūl*, by Nathanael Fayyumi probably in the Yemen around 545/1150; this treatise reveals the influence of Ismā'īlī metaphysical speculation; ed. D. Levine, New York 1908, reissued and improved by Yosēf Kāfiḥ, Jerusalem 1954; S. Pines, *Nathanael ben Al-Fayyumi et la théologie ismaélienne*, in *Revue d'Histoire Juive en Egypte*, i (single instalment), 1947, 5-22.

The zenith of philosophical and theological activity among Arabic-speaking Jewry was the work of Moses Maimonides (1135-1204), who was born and brought up in Andalusia: *Dalālat al-Ḥā'irīn*, "Guide of the Perplexed", ed. S. Munk, Paris 1856-1866, and with some additions, I. Joel, Jerusalem 1931; an edition transcribed and, when necessary, translated into Arabic by Hüseyin Atay is in the press in Ankara (1972); the complete text of his short treatise on logic, *Maḳāla fī šinā'at al-manḫiḥ* (greatly influenced, as is all his philosophical thought, by al-Fārābī), which was discovered a short time ago by Mübahat Türker-Küye, has recently been re-edited by J. Efros in *Proceedings of the American Academy for Jewish Research*, xxxiv (1966); corrections by L. V. Berman, in *JAOS*, lxxxviii (1968), 340-2; see also the same author, *ibid.*, lxxxix (1969), 106-11; a fragmentary, and probably apocryphal, treatise, ed. H. S. Davidowitz and D. H. Baneth, *De Beatitudine Capita Duo R. Mosi b. Maimon adscripta*, Jerusalem 1939; cf. the article 15N MAYMŪN, *supra*; G. Vajda, *La pensée religieuse de Moïse Maimonide: unité ou dualité?*, in *Cahiers de Civilisation Médiévale*, ix (1966), 29-49. His contemporary, Yosēf Ibn 'Aḳnīn, who almost certainly never left the Maghrib (he should not be confused with Joseph Judah, a disciple of Maimonides, cf. D. Z. Baneth, *Tesoro de los Judios Sefardies*, vii (1964), 11-20), also left important works, still not fully investigated: ALJ, § 3. 170; on his ethical treatise *Ṭibb al-nufūs*, see A. S. Halkin, *Classical and Arabic material in Ibn 'Aknin's Hygiene of the Soul*,

in *Proceedings* . . . , xiv (1944), 27-167; idem, in *Harry A. Wolfson Jubilee Volume III*, 93-111 (in Hebrew), and cf. B. below. The Judaeo-Arabic work of Abraham (1237), the son of Moses Maimonides, is also considerable: *ALJ*, § 159: the remnants of his work which is at the same time both ritual and theological-spiritual (in sympathy with Šūfism), *Kifāyat al-‘ābidān*, have been edited by S. Rosenblatt, *The High Ways to Perfection of Abraham Maimonides*, New York 1927 and Baltimore 1938; cf. B and C and S. D. Goitein, *Abraham Maimonides and his Pietist Circle*, in *Jewish Medieval and Renaissance Studies*, 145-64; Gerson D. Cohen, *The Soteriology of R. Abraham Maimuni*, in *Proceedings* . . . , xxxv (1967), 79-98 and xxxvi (1968), 33-56. On a short treatise on spirituality composed by “Obadyah, son of Abraham” (*ALJ*, § 161), see G. Vajda, *The Mystical Doctrine of Rabbi “Obadyah, Grandson of Moses Maimonides”*, in *Journal of Jewish Studies*, vi (1955), 213-25. Dwelling no further on other texts, little known and studied, of more or less Šūfi and Neoplatonic inspiration (cf. F. Rosenthal, *A Judaeo-Arabic Work under Sufic Influence*, in *Hebrew Union College Annual*, xv (1940), 433-84), we will mention only three authors from Spain and a fourth from Morocco, from the second half of the 7th/13th and the first two-thirds of the 8th/14th century: Moses ben Joseph Halevi, cf. G. Vajda, *Un champion de l’avicennisme*, in *Revue Thomiste*, 1948, 480-508; Moses Ibn Crispin: *ALJ*, § 127, and G. Vajda, *A propos de l’averroïsme juif*, in *Seferad*, xii (1952), 3-21; Joseph ben Abraham Ibn Waḳār of Toledo, author of an important treatise on the harmony of philosophy, astrology and the Kabbalah: *ALJ*, § 130 and G. Vajda, *Recherches sur la philosophie et la Kabbale dans la pensée juive du moyen âge*, Paris 1962, 116-297; Judah ben Nissim Ibn Malka, a Moroccan who expounded his ideas in the form of commentaries on the “Book of Creation” and the “Midrash of Rabbi Eliezer”, which was believed to be very ancient: *ALJ*, § 134; G. Vajda, *Juda ben Nissim Ibn Malka*, Paris 1954 (cf. idem, in *Homenaje a Millás Vallicrosa*, ii, Barcelona 1956, 483-500). The philosopher Ibn Kammūna [q.v.], although he remained a Jew, belongs more to the history of Islamic philosophy.

The Karaite branch of Judaism in its turn produced theological treatises in Arabic in which the influence of Mu‘tazilite *kalām* [q.v.] prevails. The principal author is Yōsēf (Yūsuf) ben Abraham al-Baṣīr (first third of the 5th/11th century): *ALJ*, § 50; *PJ*, 7. 15, 21, 22, 25; Z. Ankori, *Ibn al-Hiti and the Chronology of Joseph al-Baṣīr the Karaite*, in *Journal of Jewish Studies*, viii (1957), 71-81; G. Vajda, *La démonstration de l’unité divine d’après Yūsuf al-Baṣīr*, in *Studies in Mysticism and Religion presented to Gershom G. Scholem*, Jerusalem 1967, 285-315; idem, *L’universalité de la loi morale selon Yūsuf al-Baṣīr*, in *REJ*, 1969, 132-201. Of the work of his disciple, Joshua ben Judah, little has been preserved in Arabic (these fragments, moreover, pose unresolved questions of authenticity); the bulk of it has come down only in a Hebrew version: *ALJ*, § 51; *PJ*, 7. 22. Cf. also B and C.

B. *Philology and Biblical Exegesis*. The all-too-short outline given here may be amplified from H. Hirschfeld’s concise manual, *Hebrew Grammarians and Lexicographers*, Oxford 1926 and above all with the help of the introductions to the scholarly editions cited below. One of the first of the Judaeo-Arabic authors who wrote on these disciplines is Judah Ibn Quraysh of Tahert, around 900; his *Risāla*

to the Jews of Fez, in which he compares Hebrew, Aramaic and Arabic, has been edited by J. I. L. Bargès and D. B. Goldberg, Paris 1857: *ALJ*, § 35; G. Vajda, *La Chronologie de Juda Ibn Quraysh*, in *Sefarad*, xiv (1954), 385-7. Sa‘adyā (*supra*, A) produced an immense oeuvre, which has been published in part only and even more incompletely studied, in his translations of the Hebrew Bible (his versions influenced those of the Arabic-speaking Christians and Samaritans) and commentaries on it, and as the founder of the systematic grammar and lexicology of Hebrew; for the bibliography prior to 1920 consult H. Malter, *Saadia Gaon, His Life and Works*, Philadelphia, 1921 (repr. 1969); an important step in research is marked by M. Zucker’s work in Hebrew, with a summary in English, *Rav Saadya Gaon’s Translation of the Torah*, New York 1959. A complete if not critical edition of his annotated translation of the Psalms was produced by Yōsēf Kāfiḥ, Jerusalem 1966. As Sa‘adyā’s contributions to the grammar and lexicography of Hebrew were eclipsed by the work of the Judaeo-Arabic philologists in Spain, they were only fragmentarily preserved; this aspect of his work has been principally studied for about forty years by S. L. Skoss (d. 1953) and N. Allony; here we will cite only S. L. Skoss, *Saadia Gaon, The Earliest Hebrew Grammarian*, in *Proceedings* . . . , xxi (1952), 75-100 and xxii (1953), 65-90; N. Allony, *Ha’Egrot, Kitāb uṣūl al-ṣi‘r al-‘ibrānī*, Jerusalem 1969. Samuel ben Hofni (d 1034), head of the academy in Baghdād, wrote a commentary on the Pentateuch: *ALJ*, § 65, 15.

The contribution of the 4th/10th century Karaites [q.v.] to Hebrew Lexicography and biblical exegesis occupies an important place in the scholarly output in Judaeo-Arabic. In lexicography, the *Djāmi‘ al-alfāz*, compiled by David ben Abraham al-Fāsi (who seems to have lived mainly in Palestine), has been edited in exemplary fashion (unfortunately not in its most extensive redaction) by S. L. Skoss, 2 vols., New Haven 1936 and 1945. Strongly marked by polemics against all doctrinal adversaries of the Karaite sect, the exegetic work of Salmōn ben Yerūḥīm and Yefet ben ‘Eli (second and last third of the 4th/10th century respectively, but they had some precursors, both identifiable and anonymous, which lack of space makes it impossible to mention here) embraced a large part if not the whole of the Hebrew Bible; the edited texts and, with greater reason, the parts satisfactorily studied, cover only a small portion of the fairly plentiful material which has been preserved: *ALJ*, § 40, 44, which may be extended by the notes in G. Vajda, *Deux Commentaires Karaites sur l’Ecclésiaste*, Leiden 1970. Of the Arabic-speaking Karaite exegetes of later centuries, we will mention only ‘Eli (‘Alī) ibn Sulaymān (10th/12th century), who does little more than abridge his precursors; his commentary on Genesis was edited by S. L. Skoss, Philadelphia 1928.

The application to Hebrew grammar of the theory of triliteral roots, borrowed from Arabic grammarians, opened up a new period in the history of Hebrew philology; the Arabic-speaking authors who brought renown to the discipline between the end of the 4th/10th and the middle of the 6th/12th century were almost all Jews from Spain; most important are: Judah ben David (Abū Zakariyyā Yahyā) Ḥayyūdj: *ALJ*, § 75; Jonah (Abu ‘l-Walīd Marwān) Ibn Djanāḥ [q.v.]: *ALJ*, § 81; Isaac Ibn Bārūn, *ALJ*, § 97; P. Wechter, *Ibn Bārūn’s Arabic Works on Hebrew Grammar and Lexicography*, Philadelphia 1964; Sa‘dyā Ibn Danān (d. Granada 1485) one of the last

to write in Judaeo-Arabic in the West, also made a contribution to lexicography: *ALJ*, § 139.

What remains of the exegetic works of the brilliant Arabic school in Spain is quantitatively of less importance. Here we will mention Isaac b. Judah Ibn Ghīyāth (Ḡhayyāth), whose commentary on Ecclesiastes, published under the name of Sa'adyā by Y. Kāfiḥ (Ḥāmeṣh Megillōt, Jerusalem 1962, 161-296), is above all philosophical in character: *ALJ*, § 90<sup>a</sup>; S. Pines, *Tarbiz*, xxxiii (1963/4), 212-3; G. Vajda, *Quelques observations en marge du commentaire d'Isaac Ibn Ghīyath sur l'Ecclesiaste*, in *The Seventy Fifth Anniversary Volume of the Jewish Quarterly Review*, Philadelphia 1967, 518-27; Moses Ibn Gīkaṭīllia (Chiquitilla), likewise a grammarian: *ALJ*, § 91; Judah (Abū Zakariyyā Yahyā) Ibn Bal'ām: *ALJ*, § 92; S. Poznanski, *Arabischer Kommentar zum Buche Richter von . . . Ibn Bal'ām*, Frankfurt 1909; idem, *The Arabic Commentary of Ibn Bal'ām on the twelve Minor Prophets*, 1924. In the Maghrib, Joseph Ibn 'Aknīn, already mentioned above (A), wrote a predominantly philosophical commentary on the Song of Songs, published under the title of *Divulgatio Mysteriorum Luminumque Apparentia*, by A. S. Halkin, Jerusalem 1964. In the East, Abū 'l-Barakāt [q.v.] Hibat Allāh composed a philosophical commentary on Ecclesiastes before his conversion to Islam, which S. Pines intends to edit: cf. *ALJ*, § 148, and *Nouvelles Etudes sur Awhād al-Zamān Abū l-Barakāt . . .*, Paris 1955. Abraham Maimonides wrote a full commentary, for the most part preserved, on Genesis and Exodus, edited by E. Wiesenberg, Letchworth 1959. Finally let us mention the exegetic and lexicographic work of Tanḥūm ben Yōsef ha-Yerushalmī (second half of the 7th/13th century): *ALJ*, § 174; the first part of his *al-Murshīd al-Kāfi*, a dictionary of the Mishnah and of Moses Maimonides' Hebrew "code", was published by B. Toledano, Tel Aviv 1961, an edition continued by H. Shay (Shay), *Lešōnenū*, xxxiii (1968/9), 196-207, 280-6.

C. *Laws and Ritual*. — The need to give Arabic-speaking Jews access to the rules and instructions concerning the observances prescribed by religion and the conduct of everyday life, including the rules of law applicable by the courts of scholars within the limits of internal autonomy allowed to the *ahl al-dhimma*, frequently led spiritual leaders, Rabbinate and Karaite alike, to employ Judaeo-Arabic in a field which is exclusive to Judaism, liturgical directives, commentaries on the Talmud, more or less elementary manuals concerning the various aspects of Jewish law, contractual, matrimonial and successional rights, rituals for celebrating the feasts, food regulations, and finally the "consultations" (*She'elot u-teshūbot*, "Responsa"; cf. the *fatwā* in Islam). We shall mention only a small number of these texts (in addition to *ALJ* there are fuller notes, already no longer entirely up to date, in S. W. Baron's *A Social and Religious History of the Jews*, vi (1958), 356-61).

Sa'adyā found it expedient to accompany his recension of the Jewish liturgy with instructions in Arabic (*Siddūr*, ed. I. Davidson S. Assaf and I. Joel, Jerusalem 1941); what remains of his treatise on the laws of inheritance, *K. al-Mawārīth*, has been published by J. Müller, *Oeuvres complètes*, vol. IX. Hēfeṣ ben Yašīaḥ, a native of Kayrawān it seems, compiled his *Kitāb al-Sharā'īṣ*, an account of the pentateuchal precepts, towards the end of the 4th/10th century: *ALJ*, § 62, edition of the fragments preserved by B. Halper, *Book of Precepts*, Philadelphia 1915; an important complement in the paper of M. Zucker,

*Proceedings . . .*, xxix (1960/61), Hebrew section, 1-68. Arabic fragments of works on casuistry and the Talmud by Nissim of Kayrawān (mid 5th/11th century: *ALJ*, § 59) are published and studied in the Hebrew work of Sh. Abramson, *R. Nissim Gaon, Libelli quinque*, Jerusalem 1965. The preserved fragment of a commentary, probably from the 6th/12th century, by a Moroccan rabbi on the talmudic "précis" by Isaac Ibn al-Fāsi (d. 1103; very little remains in the original text of what al-Fāsi himself wrote in Arabic: *ALJ*, § 95), has been published in facsimile by J. Leveen, *Zekaryah b. Judah al-Agmati, A Digest of Commentaries on the . . . Babylonian Talmud*, London 1961. The most comprehensive and probably the most important work in this field is that of Moses Maimonides, who also composed a "Book of Precepts" (ed. M. Bloch, Paris 1880), a commentary on the *Mishnah* (published in complete form by Yōsef Kāfiḥ, Jerusalem 1963-68), just as he drafted his letters and responsa in Arabic when they were destined for Arabic-speaking correspondents; the most complete and recent edition of the responsa is that of Y. Blau, *R. Moses b. Maimon Responsa*, Jerusalem 1957-61; the responsa of his son Abraham, also for the most part drafted in Arabic, were published 20 years earlier by A. H. Freimann and S. D. Goitein, *Abraham Maimuni, Responsa*, Jerusalem 1937.

From the corresponding and highly developed Karaite branch of this genre, most noteworthy is the great code of Abū Ya'qūb Yūsuf al-Kirkisānī (mid-4th/10th century), which is also an outstanding theological treatise; entitled *K. al-Anwār wa'l-marākīb*, it has been largely preserved, and edited by L. Nemoy, New York 1939-43: *ALJ*, § 43, *PJ*, 7. 12-14 (add. G. Vajda, in *REJ*, cxx (1961), 211-57 and cxxii (1963), 7-74). The ritual code of Yūsuf al-Baṣīr (*K. al-Istibṣār*), as well as his *Masā'il*, of which sizeable portions are extant, have remained unpublished and unstudied. A small part only of a much more recent treatise has been published: *al-Murshīd* by Samuel ben Moses al-Maghribī, completed in Cairo in 1434: *ALJ*, § 199; F. Kaufmann, *Traktat über die Neulichtbeobachtung . . .*, Leipzig 1903.

D. *Miscellaneous*. — As was observed at the beginning of this outline, the Arabic-speaking Jews made little use of their "vernacular", which to a greater or lesser degree was in line with the written language, for those genres which are covered by the term "literature" in the narrow sense, for prose and poetry; moreover, they hardly ever used it in compiling historical works, a genre with little popularity which was relatively neglected by the Jews of the Middle Ages. The exceptions are few and without much difficulty can be attributed to theological preoccupations, even if those are blurred or to some extent have been lost sight of. Thus it was with a view to reaffirming belief in divine justice as much as to divert the Jewish public from reading Muslim books that Nissim b. Jacob of Kayrawān (said to be Ibn Shāhīn, cf. *supra* C) composed a treatise on consolations, made up of edifying narratives, probably in imitation of Arabic works on the theme of *al-sarādī ba'ā al-shidda*, but composed of material borrowed from the Jewish Aggada and from universal folklore. As well as a language which deviates appreciably from the norms of the literary idiom, this composition presents difficult problems: in the absence of more detailed research, Sh. Abramson's discovery of versions that differ from a manuscript long considered to be unique has confused rather than clarified these. The Leningrad manuscript forms the subject matter of a valuable if not definitive edition by J. Obermann:

*The Arabic Original of Ibn Shahin's Book of Comfort known as the Hibbur Yaphè of R. Nissim b. Ya'aqob*, New Haven 1944; the new fragments appear in R. Nissim Gaon *Libelli quinque*, 363-526.

Moses Ibn Ezra, one of the most brilliant Hebrew poets of Spain (around 1070-1140), composed two works in Arabic: *al-Muhāḍara wa 'l-mudhākara*, in type a book of *adab* but with Hebrew poetry as its subject, and *al-Ḥadiqa fi ma'na 'l-maḡiāz wa 'l-ḥa-ḥiqa*, which is reminiscent of 'ilm *al-bayān*; it is likely that the author's aim in these works was to enable biblical exegesis and national poetry in Hebrew to benefit from the attainments of Arab rhetoric and poetics as much if not more than to amuse the reader while instructing him; neither of these works has yet been published in entirety, although they have been the subject of several scholarly studies: *ALJ*, § 101; A. Diez Macho, *Mošè Ibn 'Ezra como poeta y preceptista*, Madrid-Barcelona 1953.

The exhortation to study written by Mūsā Ibn Ṭūḇl of Seville (first half of the 8th/14th century?) in highly popular language, is a rhymed composition of 70 lines, hence the title *al-Sab'iniyya*; in spite of its date, it is already in the line of the work of the versifiers which continues to be produced in the Maghrib to this day: *ALJ*, § 131; ed. H. Hirschfeld, *Program of Montefiore College*, 1893-94.

*Bibliography*: To the information in the body of the article should be added the notes and corrections to *ALJ* by S. Poznanski, *Zur jüdisch-arabischen Literatur*, in *OLZ*, vii (1904), 257-74, 304-15, 345-59. An outline of the whole, *Judaeo-Arabic Literature*, was written by A. S. Halkin for the collective work: *The Jews, their History, Culture and Religion*, ed. Louis Finkelstein, New York 1960<sup>3</sup>, 1116-47. The collection of pieces in the original language, H. Hirschfeld, *Arabic Chrestomathy in Hebrew Characters*, must be used with care because of its many inexactitudes. References may also be made to the encyclopaedia articles (especially *JE* and *Encyclopaedia Judaica*) concerning the authors mentioned above. Of the fairly numerous scholarly works touching more or less on the early Judaeo-Arabic literature, we shall cite here only S. Poznanski, *The Karaite Literary Opponents of Saadia Gaon*, London 1908 (extract from *JQR* 18-20, 1905-8, repr. *Karaite Studies*, New York 1971, 131-223); J. Mann, *Texts and Studies in Jewish History and Literature*, i, Cincinnati 1931, ii, Philadelphia 1935, repr. 1972. For popular literature in the various Judaeo-Arabic forms of speech, we shall limit ourselves to some references only: W. Bacher, *Die hebräische und arabische Poesie der Juden Jemens*, Budapest 1910; idem, *Zur neuesten arabischen Litteratur der Juden*, in *Zeitschrift für hebräische Bibliographie*, years 1903, 1908, 1911; S. D. Goitein, *Jemenica*, Leipzig 1934; idem, *Travels in Yemen* (ed. of the account written in Judaeo-Arabic of the journey of Joseph Halevy to the Yemen, by his guide Ḥayyim Ḥabshūsh), Jerusalem 1941; the bibliographic essay in Hebrew by Y. Ratzaby, "The literature of the Jews in Yemen", in *Kirjath Sepher*, xxviii (1952/3), 255-78, 394-409, and cf. *ibid.*, xxxiii (1957/8), 111-7, xxxiv (1958/9), 109-16; Eus. Vassel, *La littérature populaire des Israélites tunisiens*, Paris 1904-7; R. Attal, *Aperçu sur la littérature populaire des Juifs Tunisiens*, in *Ben Zvi Institute Studies and Reports*, iii, Jerusalem 1960, 50-4; David Cohen, *Le parler arabe des Juifs de Tunis*, Paris 1964; L. Brunot—E. Malka, *Textes judéo-arabes de Fès*, Paris 1939; H. Za-

frani, *Pédagogie juive en terre d'Islam*, Paris 1969; finally, there is a fair amount of bibliographic data in *Abstracta Islamica* (appendix to *REI*) under the heading *Judaeo-Arabica* from 1936 onwards. (G. VAJDA)

**JUDAEO-BERBER.** The Berber-speaking Jews of the Shleuḇ and Tamazight regions had their own living dialects, and a folklore that was in no way inferior to that of their Muslim neighbours [see *BERBERS*], as well as an oral traditional and religious literature of which unfortunately only a few vestiges remain. These have been collected recently by the author of the present article. Living in the valleys of the Atlas, in the Sous and on the borders of the Sahara (and in all likelihood in certain parts of Algeria and Tunisia), they formed small communities grouped in *mellahs* and had been established there for centuries, or even one or two millenia. Today there is scarcely a trace of them. After Moroccan independence they emigrated to Israel en bloc. Setting aside the problem of the origin of these communities and the very controversial hypothesis concerning the "Judaization of the Berbers" (H. Z. Hirschberg, *History of the Jews of North Africa*, Jerusalem, 1965, two volumes in Hebrew, reviewed in the *Journal of African History*, viii/3 (1966)), it is important to note that until recent years Berber was one of the vernacular languages of the Jewish communities living in the mountains of Morocco and the south of the country. Most of these communities were bilingual (Berber and Arabic speaking); others seem to have been strictly Berber speaking, as at Tifnut; of the latter category several isolated individuals, who had emigrated to Israel, have been discovered in Ashkelon (on the geographic distribution of the Jewish communities in Morocco, notably in the Atlas and the Moroccan south, and on the internal migrations of their populations, see H. Zafrani, *Vie intellectuelle juive au Maroc, Pensée juridique et Droit appliqué dans leur rapports avec les structures socio-économiques et la vie religieuse*, doctoral thesis, typed, 210-14; on the Jews of the Dadès and the other Berber speaking communities, see *ibid.*, 171 ff., and by the same author, *Pédagogie juive en Terre d'Islam*, Paris 1969, 33-38). In the valley of the Todgha (Tinghir), in the regions of Tiznit (Wijjan, Asaka), of Warzazat (Imini), at Ufran in the Anti-Atlas, at Illigh and elsewhere, Berber was used by the Jews not only as a means of communication in the family, social and economic milieus and in contacts with the other ethnic and religious communities, but it also constituted, alongside Hebrew, the language of culture and traditional instruction used in the elucidation and translation of sacred texts, as had been the case of Judaeo-Arabic or old Castilian in Arabic-speaking Jewish communities or those of Spanish origin. Certain prayers, benedictions of the Torah among others, were said solely in Berber; this usage, as we shall see below, is attested in the Passover liturgy. Written and oral documentation has been collected of the folklore and the intellectual life of these Berber-speaking communities: some biblical texts in their Hebrew and Berber versions, liturgical cantos, festive songs which mark the peaks of Jewish life (circumcision, *bar-miṣwā*, marriage, etc.) and especially the Passover Haggada, the most important and precious piece in the collection. The latter is of the greatest interest for the understanding of the linguistic and cultural traditions of a world that was too little explored when there was still time, a world belonging to a diaspora which had long been ignored and has now disappeared. (A

list of these documents was published by H. Zafrani, *Compte-rendu d'enquête*, in *JA*, cclii/1 (1964); others were collected later in Israel itself). This Haggada is the integral Berber version of the liturgical composition which the Jews recite on the eve of Passover, the basic theme of which is the story of the exodus from Egypt, accompanied by the *hallel* (a group of Psalms from CXIII to CXVIII which are a part of the liturgy for the high holy days and some other festivals). Like those in Judaeo-Arabic or old Castilian, it is a traditional translation of the Hebrew text, but it presents nevertheless some variants and nuances of interpretation. The text was transcribed recently (around 1959) in vocalized square Hebrew characters at Tinghir in the valley of the Todgha (there is no other known manuscript of a Berber text in Hebrew characters). Some morpho-syntactic ambiguities and oddities which sometimes make understanding difficult are consequences of the usual procedure of literal translation, being Berber calques of the Hebrew text; the Berber recitation coincides with the Hebrew original and follows the same rhythm and melody. The language of this Haggada is akin to Tamazight, a group of Berber vernaculars (here we should note the connection which South Moroccan Jews make between Berber and "the language of the Philistines"; the Hebrew *plishtim* of the biblical texts is always rendered as *brāber* in Moroccan Judaeo-Arabic translations; see H. Zafrani, *Pédagogie juive en Terre d'Islam*, 153, n. 31); it is nevertheless characterized by composite traits which make it difficult to assign it a specified location; it presupposes the existence of a literary language which is not the speech of a given group or a specific period (see P. Galand-Pernet and H. Zafrani, *Une version berbère de la Haggadah de Pesah, Texte de Tinghir du Todgha (Maroc)*, Paris 1970, *Supplément au tome XII des Comptes Rendus du G.L.E.C.S.*).

*Bibliographie*: Apart from the references given in the text, H. Zafrani, *Les langues juives du Maroc, in Revue de l'Occident musulman et de la Méditerranée*, iv (1967), 175-88. (H. ZAFRANI)

**JUDAEO-PERSIAN**, New-Persian written in Hebrew characters.

#### i. — LITERATURE

If we define as Judaeo-Persian literature strictly "literary" works composed by Jews in the Persian language but in Hebrew characters, then the first fruits of such literary endeavours could have emerged only when the Persian language had penetrated deeply enough into the life of Persian Jews to become a vehicle for their literary expression. This condition for the birth and growth of a genuine Judaeo-Persian literature seemed to have been fulfilled only during the rule of the *Īl-Khān* dynasty over Persia, from the end of the 7th/13th century on.

##### 1. *Early Judaeo-Persian Documents.*

Long before this period, however, evidence of the infiltration and penetration of the Persian language — always in Hebrew characters — among Persian-speaking Jews is available. There have come to light in widely scattered regions of the Eastern lands of the Caliphate inscriptional sources, business letters, and tombstone inscriptions such as the three stones from Tang-i Azao about 200 kilometers east of Herāt with Judaeo-Persian inscriptions, incised in the year A.D. 752-3; (according to Henning, though Rapp disagrees); a fragment of a Persian business letter of the eighth century found by Sir Aurel Stein at Dandān-Uyllk, near Khotan, in Chinese Turkestan (Sin-Kiang), containing thirty-seven lines in Persian,

written in Hebrew characters by a Jewish merchant; and those four signatures in Persian with Hebrew characters by Jewish witnesses on a copper plate referring to a grant for a Christian church on the coast of Malabar, in the early ninth century, known as the Quilon Copper Plate. A further proof of the use of Judaeo-Persian as a vehicle of correspondence is supplied by a Judaeo-Persian Law report found near Hormshir, the modern Ahvāz in *Khūzistān*, written in the year 1020-21, as well as a Judaeo-Persian document dealing with the sale of some land, found in the region of Khotan, ascribed to the year 1107. There is also a fragment of apologetics in the British Museum (Ms. Or. 8659) going back to the same period.

To the category of early Judaeo-Persian inscriptions belong also those fifty-four Judaeo-Persian tombstone inscriptions, accidentally discovered in the mountainous region of *Chūristān*, east of Herāt near the former capital of *Firūzkūh*. Those Judaeo-Persian inscriptions with texts ranging from one line to eight and covering the period from about 1189 A.D. to 1216 A.D. contain, along with Hebrew and Aramaic, many Persian names and terms. Fragments of Persian letters in Hebrew characters sent by the heads (Geonim) of the Jewish academies in *Baghdād* in the 12th century to scholars in *Hamadān*, then the seat of a rabbinical college, testify to the ever-increasing use of the Persian language in Jewish circles.

All these inscriptions and other literary records can, however, hardly be classified as literature. It was only from the 13th century on that Jews began to create Jewish literary values through the medium of the Persian language in their own Hebrew script.

This Judaeo-Persian literature, which was developed in many Jewish communities in the Persian speaking diaspora, encompassed three major fields: the translation of the Hebrew Bible into Judaeo-Persian and lexicographical treatises connected with it; the composition of original Judaeo-Persian poetry; and the transliteration of classical Persian poetry into Hebrew characters.

##### 2. *Judaeo-Persian Bible translations.*

There can be no doubt that Persian Jews were steadily engaged in the study and interpretation of the Hebrew Bible. Fragments of biblical books written or copied as early as the ninth century in Hebrew — not in Judaeo-Persian — among them a manuscript of the later prophets in Hebrew with Massoretic notes from Yazd, and a commentary on Ezekiel preserved in Leningrad with a Middle-Persian form of a passive and a Judaeo-Persian Daniel text attest to this.

The first Judaeo-Persian translation of the Pentateuch in Hebrew characters became known as late as 1556 and is attributed to Jacob b. Joseph Tavus, a Jewish scholar from Persia, who apparently functioned as a teacher at the Jewish Academy in Istanbul, established by Moses Hamon (*q.v.* 1490-1576). It was published in Istanbul as part of the Jewish Polyglot Bible by Solomon b. Moses Mazal Tov, together with the Hebrew original, the Targum and the Arabic *Tafsir* of Sa'adyā Gaon.

This Judaeo-Persian product, the first printed book in modern Persian of any sort, remained relatively unnoticed at the time and failed to attract the attention of scholarly circles. Only when, over a century later, in 1657, the Tavus Pentateuch version was transliterated from its Hebrew characters into Persian characters by Thomas Hyde and incorporated into the famous London Polyglot Bible of Bishop

Bryan Walton was an interest aroused in this new branch of Jewish-Persian literature.

It was long believed that until then this Judaeo-Persian Pentateuch translation was not only the oldest, but also the sole literary achievement produced by Persian Jews. It became evident, however, that this Tavus Pentateuch translation actually represents the culmination of Judaeo-Persian Bible studies which had been going on for many centuries long before Tavus completed his own translation.

This assumption has been corroborated by early Judaeo-Persian Bible manuscripts, the oldest of which is a Pentateuch version of 1319 A.D., now in the British Museum, and by the systematic collection of Jewish-Persian Bible manuscripts at the beginning of the 17th century by the Florentine scholar Giambattista Vecchietti. The manuscripts he had recovered in the Jewish communities of Hamadān, Iṣfahān, Shīrāz, Lār and Yazd represented Judaeo-Persian versions of the Pentateuch and the Psalms and of all other biblical books, as well as books of the Apocrypha, all belonging to the early 14th century.

Despite the different origins of these Judaeo-Persian translations, they show a certain uniformity in style, which leads to the assumption that they were the work of the same school of translators who flourished in the 14th and 15th centuries.

The authors of Judaeo-Persian Bible translations and lexicographical treatises such as *Sefer ha-Meliṣa* or *Agron* and dictionaries show an astounding degree of familiarity with leading biblical and rabbinical authorities of the West, and, following faithfully the traditional method of Bible interpretation, utilized not only Targum Onkelos, Talmud, Midrash, Sa'adyā Gaon and Hai Gaon, but also Western commentators such as Rashi, Redaḳ, Abraham b. Ezra and others.

### 3. Judaeo-Persian Poetry.

The literary abilities of the Persian Jews found their most characteristic manifestation in the field of original Judaeo-Persian poetry. This new branch was opened up by the 14th century Jewish poet Mawlānā Shāhīn of Shīrāz, who dedicated his talents to the writing of Bible-centred poetry and who can be regarded as the first Judaeo-Persian poet. Under the influence of classical Persian poetry, inspired by a keen desire to promote a deeper knowledge of the Jewish past and imbued with a profound Jewish consciousness and loyal adherence to his religious heritage, Shāhīn began to make the biblical narrative the topic of his writings.

His life work represents a poetical paraphrase, a reinterpretation of the Pentateuch, using the traditional epic style of the classical Persian poets. It is known as *Sefer Sharḥ Shāhīn 'al ha-Torah*, written in Persian with Hebrew characters.

Four distinct works of Shāhīn can be discerned: a Moses-nāma, a commentary to Exodus, Leviticus, Numbers and Deuteronomy (completed about 1327); an Ardāshīr-nāma (completed about 1332) consisting of the story of Esther and Mordecai and the story of Shero and Mahzad, a typical Iranian love story; an Ezra-nāma, dealing mainly with the ascension and rule of King Cyrus the Great and the building of the Temple of Jerusalem; and a Genesis-nāma (completed about 1358), which includes the story of Yūsuf and Zulaykhā.

In all his poetical writings, Shāhīn has taken over the typical features of the Persian poetic art and applied the patterns, forms, technique, metre and language of Persian classical poetry, particularly that of Firdawsī and Niẓāmī, to his presentation of Is-

rael's religious heroes and events as told in the biblical narrative.

By selecting Jewish themes as the subject of his poetry and by celebrating the heroes of the Bible in a way typical of Persian classical poetry, Shāhīn has indeed produced the most typical literary monument of the centuries-long association of Jews with Iran. In the memory of Persian-speaking Jews all over the Eastern diaspora, Shāhīn is admired as "Our Master Shāhīn of Shīrāz" (Mawlānā Shāhīn Shīrāzi), and hailed as the founder of Judaeo-Persian poetry.

By writing his poetry in the Hebrew script, however, Shāhīn prevented his work from becoming known in Muslim-Persian literary circles and thus never gained admittance to the annals of Persian literature.

Two centuries later another Judaeo-Persian poet appeared in Shīrāz, the birthplace of Shāhīn, in the person of 'Imrānī. Inspired by Shāhīn's poetical epic of the Jewish past, 'Imrānī made the post-Mosaic period, the historical books of the Bible including Joshua, Judges, Samuel and Kings up to the time of David and Solomon, the subject of his poetical presentation. His major work, *Faṭḥ-nāma* (The Book of the Conquest), was composed around 1523; followed by *Gandī-nāma* (The Book of the Treasures), a free poetical paraphrase and commentary of the first four chapters of the Mishna treatise *Pirḳē Abōth* (Sayings of the Fathers).

That type of Judaeo-Persian poetry was continued by Yahuda Lāri, of the city of Lār; only a small part of his verses has been preserved, including *Makḥzan al-Pand* (The Treasure House of Exhortation).

### 4. Classical Persian Poetry in Hebrew Transliteration.

Persian Jews, far from living in a cultural vacuum in isolation, took also a keen interest in the literary and poetical works of their Muslim neighbours and shared with them the admiration for the classical Persian poetry of a Firdawsī, a Niẓāmī, Rūmī, Sa'dī, Ḥāfiz, Djāmī and others. In order to introduce selections of these literary products into the Jewish community they transliterated the Persian texts into the Hebrew script while retaining the language, metre and rhyme of the original Persian poetry. Through this remarkable process a new branch of Judaeo-Persian literature came into being.

Among the various types of Persian classical poetry, the romantic, the lyrical and the didactic, there have been preserved: *Khusraw* and *Shīrīn* and *Haft Paykar* (The Seven Images) by Niẓāmī (d. 1201); some poems of the *Makḥnavī* by Djālāl al-Dīn Rūmī (d. 1273); some parts of the *Gulistān* by Sa'dī (d. 1291); the *Diwān* of Ḥāfiz (d. 1390); *Yūsuf and Zulaykhā* of Djāmī (d. 1414); portions of the *Diwān* of Šā'ib of Iṣfahān (d. 1678) [q.v.] and some others, all of which were made accessible in Hebrew transliteration and are preserved in various libraries in Europe, America and in Jerusalem.

Persian Jews evinced a lively interest also in the pictorial art and miniatures of their neighbours. In some of the Shāhīn and 'Imrānī manuscripts and in those of the classical poetry in Hebrew transliteration, large coloured miniatures and illuminations of exceptional beauty have been incorporated. They could well be regarded as typical Persian pictorial art were it not for the Hebrew lines on each miniature, which lends it a distinct Jewish character. Whether this pictorial art was cultivated by Jewish artists, or whether the Hebrew written explanations alone were the work of Jews, cannot be established. Nor can it

yet be ascertained whether and if so where there existed a school of such Jewish artists.

In the 17th and 18th centuries, under the impact of the persecution of the Jews and the policies of the Šafawid rulers, the literary productivity of Persian Jews was of a different genre. The literary output of that period mirrors the tragedy of Jewish existence. The torch of literary activity was carried on by a certain Bābā'ī b. Luṭf of Kāshān and Bābā'ī b. Farhād, who wrote *Kitāb-i Anūsī: The Book of the Events of the Forced Conversions of Persian Jewry to Islam*, a chronicle composed in Persian but written in Hebrew characters, which deals in poetic form with the martyrdom of the Jews in the time of Shāh 'Abbās I and Shāh 'Abbās II and his successors.

##### 5. *Literary Activities of the Jews of Bukhārā.*

In Bukhārā, where the Jews were not subjected to the persecution their brethren endured in Šafavid Persia, there appeared Jewish poets and translators who began to create Jewish literature and poetry in their own Tādjiki dialect. The most outstanding was Yūsuf Yahūdī (d. 1755), an exponent of biblical narrative. He wrote *Mukhammas*, an ode in praise and glory of Moses; *Haft Bivāderān* (The Seven Brothers), based on the Midrash of the martyrdom of the seven brothers and their mother; and bilingual and trilingual hymns honouring biblical heroes. He wrote also a commentary (*tafsīr*) to *Megillat Antiochus* and translated many of the *Zemirōth* of Israel Najāra into the dialect of Bukhāran Jews, incorporated into the Judaeo-Persian song-books used until today.

Inspired by him, a school of Jewish poets in Bukhārā emerged, among them Benjamin b. Mishal, known also as Amina, who published *Megillat Esther* in Judaeo-Persian translation, in metric form and translated some poems of Ibn Gabirol [*q.v.*], such as *Asharōth* and *Yigdal*, into Judaeo-Persian.

One of the finest poetical products in the Bukhāran Jewish dialect of the end of the 18th century we owe to the Jewish poet Mollā Ibrāhīm b. Abū'l Khayr. In his *Khodāādād* he narrated the tragic story of a Jewish merchant by the name of Nathaniel (Khodāydād) who, refusing to become a Muslim despite all the promises and temptations of the ruler and his neighbours, died a martyr. In making this event the subject of his poem, the author gives an interesting picture of the religious and political conditions in which the Jews of Bukhārā lived in the second part of the 18th century under the rule of Emīr Ma'šūm (1788). This poetical work furnished at the same time a most authentic documentation of the linguistic peculiarities of Bukhāran Jews.

##### 6. *Revival of Judaeo-Persian literature in Jerusalem.*

Judaeo-Persian literature experienced an unforeseen development in the second half of the 19th century, not in Persia but in Jerusalem. This was precipitated by a wave of immigration into Palestine of Persian speaking Jews from Bukhārā, Turkestan, Afghanistan and Persia, who initiated the establishment in Jerusalem of a publishing centre, a printing press for Judaeo-Persian literature, intended to meet the literary and liturgical needs of the Persian Jews in Jerusalem and in the Diaspora. Though Jerusalem was not the first place of Judaeo-Persian printing activities, and some Judaeo-Persian books had been previously published by European scholars as well as by Bukhāran Jews (particularly in Vienna and Vilna by the latter)—not to mention the first Judaeo-Persian print of any time in Istanbul in 1546—Jerusalem became the exclusive centre of Judaeo-Persian printing activities. From then on, all the liturgical and literary needs of Persian-speaking

Jews were satisfied from Jerusalem and its Judaeo-Persian press.

It can hardly be attempted, nor is it intended here, even to enumerate the results of these printing and publishing activities in Jerusalem; their extent and quantity would preclude such a survey. Almost everything that was thought fit to strengthen the religious and literary interests of Persian-speaking Jews was printed and published. Every field of Jewish literature, Bible, Bible commentaries, prayer books for every occasion, rabbinical writings, Mishna and *Zohar*, religious philosophy, medieval Jewish poetry, *Piyyūṭim*, *Seliḥōth*, *Pizmonim*, *Midrashim*, historical narratives, anthologies of songs and stories—all these were translated into Judaeo-Persian, printed and distributed. Even secular literature from other than Jewish sources, such as parts of the Arabian Nights, and a part of Shakespeare's *Comedy of Errors*, which appealed greatly to the imagination of the Oriental Jew, found its way to the translators and printers. It is of great significance that these Judaeo-Persian publishing activities represented a collective effort, a co-operative endeavour of all the various groups of Persian-speaking Jewry; Jews of Bukhārā joined hands with the Jews of Persia and Afghanistan and participated in the greatest common cultural enterprise in the history of Oriental Jewry.

Among the many outstanding figures who participated in this collective enterprise, mention ought to be made of Solomon Babadiān b. Pinchasof of Samarkand, an editor, author, translator and publisher, and of Simon Hākhām of Bukhārā.

One of the most outstanding Bukhāran Jewish scholars in the last centuries who can be credited with a major share in the promotion of Judaeo-Persian literature was Simon Hākhām, who, born in Bukhārā in 1843, moved in 1890 to Jerusalem, joining the rapidly-increasing colony of Bukhāran Jews, and it was there that he began his activities as author, translator, editor, and publisher of Judaeo-Persian works. The crown and glory of his many impressive literary accomplishments was his translation of the Bible into the Judaeo-Persian dialect of the Bukhāran Jews, into Tādjik.

With this monumental achievement, Simon Hākhām entered the ranks of the great Jewish Bible translators. What Sa'adyā Gaon accomplished for the Arabic-speaking Jews, what Moses Mendelssohn did for the German-speaking Jews, and what Joseph b. Tavus did for the Persian-speaking Jews, Simon Hākhām created for the Tādjiki-speaking Jews of Bukhārā and Central Asia.

The interest in Judaeo-Persian literature led in the early decades of this century to the establishment of a Hebrew printing press also in Tehran, which produced many Judaeo-Persian works aiming at a revival of the religious and cultural life of Persian Jews.

##### 7. *The European investigation of Judaeo-Persian literature.*

The ever-increasing number of Judaeo-Persian manuscripts which in the last century had reached European libraries (Parma, the Vatican, Paris, London, Oxford, Copenhagen, Jerusalem, St. Petersburg, Moscow, Berlin and others) aroused the interest of Western scholars and led to important publications and investigations. An unexpected development in the field of Judaeo-Persian studies took place when the London scholar, Elkan N. Adler, brought back from his journeys to Bukhārā and Persia in 1896-8 hitherto unknown Judaeo-Persian manuscripts which

opened up entirely new vistas. The more than one-hundred Judaeo-Persian manuscripts which he recovered changed fundamentally the prevailing conceptions as to the genre, scope and quality of the literary productivity of Persian-speaking Jews. While most of the manuscripts in European libraries were translations of books of the Bible or of the Apocrypha, creating thus the impression that their works were mostly of a religious character, Adler's collection revealed an all-embracing literature, not only translations, but also original works, not only religious literature, but literature of a secular character, poetry and prose, stories and philology. This collection showed that no sphere of literary endeavour had been neglected by Persian Jews in their own language. In 1923 Elkan Adler's manuscript collection was acquired by the Jewish Theological Seminary of America in New York.

The most decisive contribution to the investigation of Judaeo-Persian literature was made by the Hungarian scholar, Wilhelm Bacher (d. 1913) who, stimulated by the literary treasures long dormant in the European libraries and above all E. N. Adler's collection, turned his attention to this field; and through a continuous flow of studies and monographs he became the undisputed authority.

In the early 20th century, Tehran emerged as a centre of Judaeo-Persian printing activities, supplementing the Judaeo-Persian publications issued in Jerusalem. It is a sign of the cultural assimilation of the Persian-speaking Jews to their surroundings that they began to express their literary compositions no longer through the Hebrew script but through Persian characters, thus terminating, probably forever, the once flourishing Judaeo-Persian creativity.

The importance of Judaeo-Persian literature has most recently been summed up by J. Rypka (*History of Iranian Literature*, 1968, p. 740), in these words: "Judaeo-Persian literature may be regarded as lying near the periphery yet within the circumference of Persian literature. Nevertheless it is of extreme importance in its national and religious aspects for the Jewish colonies in the regions concerned, and linguistically for Iranian studies as a whole. The larger the collections of Judaeo-Persian manuscripts become, and the more minutely they are subjected to expert investigation, the greater will be their value for Iranistic scholars. A great deal has already been achieved in both these aspects, but it is still far too little. It is quite possible that the ancient Judaeo-Persian transliterations will prove valuable in the preparation of critical editions of many a Persian text."

## ii — LANGUAGE

A number of Judaeo-Persian writings display linguistic characteristics which are not found in Persian texts in Arabic script. Amongst these one must distinguish between on the one hand stylistic peculiarities common to the translation of Scripture (word for word rendering of the Semitic text, use of certain rare or archaic forms), and on the other dialectal traits which reflect local varieties of spoken Persian. In all probability, these local dialects of New Persian were not peculiar to the Jews, but they have left scarcely any trace in literature written in Arabic script, where the classical language predominates to the virtual exclusion of other forms; however a considerable proportion of the Judaeo-Persian writings, notably all the earliest ones, are written in a language close to that of everyday speech. They are therefore of great interest for the light they throw on the historical dialectology of Persian.

Judaeo-Persian literature is not linguistically homogeneous. Several dialectical variations may be perceived, and with systematic exploration still others will probably be discovered.

1) The Dandān-Uyllk letter is noteworthy for certain archaisms (use of the *iḏāfa* particle to denote the relative (as in Middle-Persian), paucity of Arabic words) and by the presence of some Sogdian words.

2) In spite of differences of detail, the fragment in the British Museum, the commentary on Ezekiel, and the Story of Daniel, mentioned above, a translation of the Pentateuch preserved in the Vatican, and a few other texts, are a reflection of a single dialectal group, which can probably be situated in the south of Iran (Fārs and Khūzistān). In these texts various morphological characteristics (optative particle *ky*, preposition 'i, the form *tys* "thing" = classical *čiz*) are found, along with a fairly large number of words which are otherwise unknown in Persian but appear in Middle-Persian. Rather than being archaisms peculiar to this form of Judaeo-Persian, these traits must have been characteristic of spoken Persian around the 5th/11th-8th/14th centuries in the south of Iran, which had remained much closer to Middle-Persian than the classical language.

3) Writings which can be classified as literature, especially poetry from the 8th/14th-12th/18th centuries, are generally free from dialectal characteristics. Imitations of the great classical works, they are usually couched in the same idiom.

4) The literary and exegetic texts composed at Bukhārā from the 11th/17th to the 19th centuries bear the marks of their origin, all the more clearly when the style does not reach a particularly high standard. Their language, which might properly be called "Judaeo-Tādjik", is very close to the present day literary language of the Soviet Republic of Tādjikistān.

Judaeo-Iranian dialects. — Unlike Judaeo-Persian in the true sense, the unwritten dialects still in current use among certain communities in Persia, at Kāshān, Hamadān, Iṣfahān, Kirmān, and Shīrāz, are not varieties of Persian, but are related to the local dialects of these regions. The Judaeo-Tāt of the Caucasus (Soviet Dagestān and Ādharbāyjdān) is a variation of the Tāt dialect, in use among the Muslim population also: Tāt was raised to the status of a written language during the Soviet period. All these dialects could be designated "Judaeo-Iranian".

A curious language reported in 1924 among the Jews at Herāt appears to be merely a jargon based on Persian.

## K

KA'ĀNĪ, ḤABĪB ALLĀH (1808-54) was the greatest Persian poet of the Kādjar period. He was born at Shīrāz, lost his father, the poet Gulshān, at the age of eleven and found a patron in the governor of Shīrāz, Ḥasan 'Alī Mirzā Shudjā' al-Saltāna, who gave him the pen-name of Kā'ānī. As a court panegyrist he was granted by Muḥammad Shāh the title of *Ḥassān al-'Adjām*. He settled in Tehran shortly before 1848 and was favoured by Nāṣir al-Dīn Shāh with the title of *Malik al-Shu'arā'*. Kā'ānī was a man of erudition, and the first Persian poet to master French. His *diwān* contains 23,000 verses mostly of panegyric character. His critical attitude towards society is reflected in his *Kitāb-i Parīshān*, conceived on the model of Sa'dī's *Gulistān*. As a poet Kā'ānī was a past master in the classical *ḥaṣīda* of the Khurāsānī style; however, apart from stylistic virtuosity his poetry contains little serious content.

KAARTA, a region of Mali with an area of around 54,000 square km. It is bounded on the north by Mauritanian Hōdh, on the south by Beledugu and Fuladugu, and on the west by the River Senegal from the western branch of the River Kulu as far as the Baoulé junction. The rivers of this vast schistose plateau tilting to the south east flow into Senegal. The climate is that of the Saharan zone: a brief season of abundant rain followed by a very long dry season. The vegetation is wooded or shrubbed

savannah. The land on the river banks often produces two harvests. The main crops are millet, maize, rice, peanuts, cotton and indigo. In the villages gardens are cultivated around the wells. Stock-farming is relatively well developed. The districts of Kaarta are Diafunu (Tambaraka) and Diomboko (Koniakari), Guidioumé (Niogomera) to the north of Diafunu; Tomora (Dida), Baghé and Kaarta Biné to the north of Fuladugu; Dianghaté to the east, and Kingui (Nioro). The main peoples are the Bambara and the Soninke, but the population also includes Khassonke, Fulani and Maures. The Bambara Massassi have a secret religious association known as the *Bouri*. Missionary activity for Islam is considerable.

Kaarta was visited by the British explorers Houghton and Mungo Park in 1795 and described by Duranton in 1828, Raffanel in 1864, Mage and Quintin in 1863 and Lenz in 1880.

Previously part of the empire of Ghāna [q.v.] and then that of Mali, Kaarta was divided between a number of principalities after the Mali uprising. At the end of the 17th century, a Bambara chief, Niangolo, settled in Sunsana, near Murdia, and created the Bambara kingdom on the left bank of the Niger. His son Sunsa married a girl named Keita, and it was their son Massa who gave his name to the Bambara Massassi. A notable farmer as well as progenitor, he had such good-looking children that their profitable marriages added to the extent of the kingdom.

Benefali enlarged the country still more, but his brother Fulekoro was defeated by Biton Kulubali, who united the two kingdoms (1754). Fulekoro's successors, Sey Bamana and Deniba-Bo, were little more than chiefs of a band of brigands who conducted raids. Sira-Bo (1761-80) took up residence in Guémao and extended his kingdom. Desse Kulubali (1788-99) took advantage of the dissension between the Bambara princes of Segu, sons of Ngolo Diara. He supported Namiankoro, but the latter was defeated by Da Manson, who then invaded Kaarta and captured the capital, Guemu (1796). Succeeding his brother, Mussa Kurabo (1799-1808) waged a campaign against 'Abd al-Kādir, *almamy* of Futa Toro. N'tin Koro (1808-11) and Sakhaba (1811-15) preceded Bodian Moriba (1815-32), who joined combat with Diawara and Khassohke. After Garan (1832-43), Mamady Kahdian (1843-54) left Yelimane and settled first in Kadie and then in Nioro (1847); the Diawara were driven back towards the desert before being defeated by the Tukulors of al-Hādīdjī 'Umar (1854).

The latter installed a viceroy; in 1874 this position was held by Mutaga, brother of Ahmadu. When besieged in Nioro, Mutaga blew up his establishment. Meanwhile the Massassi who had been defeated by al-Hādīdjī 'Umar took refuge in Bangassi (Fuladugu) under Mori, commander of Diringa, who died in 1870. Under his successor, Bussei, the Massassi split into two factions: one settled in Guemu-Kura (Kaarta-Bine) while the other moved to Diani (Gadiaga). The Bambara Massassi were reunited by Archinard, leader of Kaarta in 1891, after the capture of Nioro. Kaarta was divided once again between the provinces of Nioro, Kita and Kays in former French Sudan. No striking changes in local political structure have resulted from Mali independence in 1960.

**BANŪ KA'ĀB**, an Arab tribe which occupies, at present, parts of Khūzistān in South Western Iran. The Banū Ka'āb comprise several clans, and they are therefore known to the inhabitants of eastern Arabia and southern 'Irāk as *al-Ku'ūb* (in 18th century European sources *Chaub*). Arab authors and genealogists do not speak of them in detail but usually list them under Ka'āb b. Rabī'a. They are said to belong to Kays 'Aylān, a major central and eastern Arabian tribe. They do not seem to have emigrated from there to southern 'Irāk and south western Iran before the 17th century. By the time of the Danish traveller Niebuhr (1765), they seem to have gained some notoriety among the inhabitants of that area. The Turks, the Persians and the British were among their victims, and each of these powers failed to subdue Shaykh Salmān, the Ka'āb chief, during the second half of the 18th century. Qubbān, Dawraq and Fallāhiyya are mentioned among their fortified towns. Their second prominent ruler after Salmān was his great grandson Thāmir (1837-40).

Like other Arab tribes inhabiting Iran, they mingled with the non-Arab population and are slowly losing their Arab identity. The main divisions of the tribe are: the Drīs, the Muqaddam, the Khanāfira and the Ḥazbih.

The Banū Ka'āb cannot be described as completely settled, nor on the other hand is any considerable portion of them truly Bedouin. The bulk of the tribe is now semi-nomadic. At the zenith of their power shortly after 1775, the jurisdiction of their chief seems to have extended from the neighbourhood of Baṣra to the confines of Bihbahān; but their influence declined as that of the Muḥaysin of Muḥammara rose, and the chiefs of the Banū Ka'āb, stripped of political power, sank into undistinguished vassals of the Shaykh of Muḥammara, who early in the 20th century became, in turn, a vassal of the Iranian monarchs.

**KA' B. AL-ASHRAF**, opponent of Muḥammad at Medina, reckoned to belong to his mother's clan al-Naḍīr, though his father was an Arab of the Nabḥān section of Ṭayyī'. He presumably followed the Jewish custom of taking his religion from his mother, but it is doubtful if he was a scholar, as the words in a poem *sayyid al-ahbār* (Ibn Hishām, 659, 12) would imply, if the poem were genuine. Aroused by the deaths of many leading Meccans at Badr, he went to Mecca and used his considerable poetic gifts (he is called *fahl faṣīḥ* in *K. al-Aghānī*) to incite Quraysh to fight the Muslims. On his return to Medina he composed amatory verses of an insulting nature about Muslim women. When Muḥammad asked for someone to rid him of this man, Muḥammad b. Maslama offered. He collected four others, including Ka'b's foster-brother Abū Nā'ila b. Salāma. By pretending to have turned against Muḥammad they enticed Ka'b out of his *uḥum* (fort, castle) on a moonlight night and killed him in spite of his vigorous resistance. The date is given by al-Wāqidī as 14 Rabī' I 3/4 Sept. 624, but this conflicts with the date he gives for Muḥammad's expedition to Dhū Amarr (12-22 Rabī' I/2-12 Sept.), since Muḥammad was present in Medina at the time of the killing. In view of this, and of the report of al-Ḥalabī that, when Banu 'l-Naḍīr were attacked in Rabī' I 4/Aug. 625, they were mourning for Ka'b, it has been suggested that Ka'b's death was shortly before this attack (cf. Ibn Hishām, 658.18; 659.12). The alleged ruins of Ka'b's *uḥum* are still extant at Medina (M. Hamīdullah, *The Battlefields of the Prophet Muhammad*, Woking 1953; reprinted from *The Islamic Review*, 1952, 1953).

(W. MONTGOMERY WATT)

**KA' B. DJU'AYL AL-TAGHLABĪ**, a minor Arab poet of the 1st/7th century whom Ibn Sallām (*Ṭabaḥāt*, 485-9) places in the 3rd rank of Islamic poets. His genealogy varies with the different authors (Ibn al-Kalbī-Caskel, *Tab.* 165, no doubt provides the most accurate one), and very little is known of his life. Probably born during the earliest years of the *Hidjra*, he made his appearance at the time of the battle of Šiffin (37/657) as an intimate of Mu'āwiya, of whom, like most of the *Taghlib* [*q.v.*], he was a passionate supporter. The conflict with 'Alī inspired him to write a number of poems, in particular a verse which Mu'āwiya considered worthy of appending to a letter addressed to his adversary and to which al-Nadījāshī made a reply (al-Dinawarī, *Ṭi-wāl*, 170; al-Mubarrad, *Kāmil*, i, 281-2), and later some elegies on the death of 'Ubayd Allāh b. al-Khaṭṭāb, killed in the battle (Ibn Sallām, 488-9; al-Ṭabarī, i, 3315; *Nasab Quraysh*, 355-6; Yāqūt, s.v. Šiffin; Naṣr b. Muzāḥim, *Waḳ'at Šiffin*, 336, 410; *Sharḥ Nahj al-balāgha*, i, 498-9; Ibn Kathīr, *Bidāya*, vii, 265), and a poem in praise of Mu'āwiya and 'Amr b. al-'Āṣ (Ibn Sallām, 486-7; al-Marzubānī, *Mu'djam*, 344; Ibn Kutayba, *Shi'r*, 632; Yāqūt, s.v. Aḏhrub). Among the surviving fragments of his writings (about

80 verses) there also exist some panegyrics of 'Abd al-Raḥmān b. Kḥālīd b. al-Walīd (*Nasab Quraysh*, 325-6), a *hidjā'* of al-Mughīra b. Šu'ba (d. 50/670; *al-Ḥamāsa al-Baṣriyya*, ii, 182) and some verses composed between 50 and 59/670-9 in Medina, where he was to be found in the company of the governor, Sa'īd b. al-'Āṣ (Ibn Sallām, 255, 271; al-Ṭabarī, i, 2838, cf. ii, 107), enjoying the poetry of al-Farazdaq.

According to tradition, it was to Ka'b b. Dju'ayl that his young fellow-tribesman al-Akḥṭal [*q.v.*] owed his soubriquet (Ibn Sallām, 250, 396; *Aghānī*, ed. Beirut, viii, 280-1); according to a frequently quoted *khabar* (al-Djāhīz, *Bayān*, i, 63, 172; Ibn Kutayba, *Shi'r*, 456, 631-2; al-Mubarrad, *Kāmil*, i, 153; *Aghānī*, ed. Beirut, xv, 83), he is said to have suggested to Yazīd b. Mu'āwiya who, prior to 60/680, had ordered him to write some poems attacking 'Abd al-Raḥmān b. Ḥassān b. Ṭḥābit, that he should entrust al-Akḥṭal with this mission, since he himself refused to attack the Anṣār. On the basis of certain variants which are to be found in the reply made by Ka'b (and which incidentally are far from conclusive), L. Cheikho (*Shu'arā' al-Naṣrāniyya ba'd al-Islām*, 204) tries to show that the poet was then still a Christian, but all the evidence leads to the assumption that he had been converted to Islam.

He appears again (*Aghānī*, ed. Beirut, v, 13), at some uncertain date, on the Mirbad of Baṣra, in the company of several poets, in particular al-Nābiḡha al-Dī'ādī (on the relations between the two men, see M. Nallino, in *RSO*, xiv (1934), 404-5 and *Le poesie di an-Nabigah*, Rome 1953, 120). If al-Balādhurī (*An-sāb*, xi, 212) is correct, he lived long enough to write a panegyric of 'Abd al-Malik b. Marwān (65/685-86/705); the lines which he quotes appear however in a long *ḥasīda* of al-Ḳuṭāmī (ed. J. Barthe, Leiden 1902, 88, lines 89-90).

Ibn Sallām describes Ka'b b. Dju'ayl as a *muflīḥ* poet, but his *diwān* does not appear to have been collected, although his poems have enjoyed a certain reputation since Ibn Suraydj [*q.v.*] set some of his lines to music (*Aghānī*, ed. Beirut, iii, 275). Finally, the anthologists have been guilty of some errors in attributing to him verses by the pre-Islamic poet 'Umayra/'Amīra b. Dju'ayl/Dju'al (Cheikho, *Shu'arā' al-N. ḥabī al-Islām*, 195-6) or in regarding this poet as his brother (Ibn Kutayba, *Shi'r*, 631-2; al-Baḡh-dādī, *Kḥizāna*, Būlāk, i, 458 = Cairo, iii, 44). The passage quoted by Ibn Sallām (486-7) and other authors affords evidence of these misunderstandings.

*Bibliography*: The only account of any length is that of L. Cheikho, *Shu'arā' al-Naṣrāniyya ba'd al-Islām*, 203-12. **KA' B. MĀLIK**, ABŪ 'ABD ALLĀH OR ABŪ 'ABD AL-RAḤMĀN, one of the poets supporting Muḥammad, was an Anṣārī of the clan of Salīma of the tribe of al-Kḥazraḍī [see AL-ANṢĀR]. He must have been born before 600 A.D., since he is said to have taken part in the internal fighting in Medina before the *Hidjra*, and to have been present at the second 'Aḳaba [*q.v.*], when allegiance was sworn to Muḥammad. He was not present at Badr, but took part in most of the subsequent expeditions led by Muḥammad. At Uḥud he received several wounds and was the first to recognize Muḥammad after the rumour

that he had been killed. Some reports say that it was he who was charged with collecting the *ṣadaqa* from the tribes of Aslam and Ḡhifār. For a reason which is not clear he remained in Medina during the expedition to Tabūk in autumn 9/630, and afterwards, with two others, was "sent to Coventry" until reprieved by the revelation of Sūra IX, 117/18 f. He seems to have had some links with Ḡhassān, and this may have had something to do with his avoidance of the expedition. When the Emigrants first came to Medina, Ṭalḥa b. 'Ubayd Allāh was assigned to him as "brother", and some association continued between the two. He was later known as a partisan of 'Uṭhmān ('Uṭhmānī), supporting him as caliph and composing an elegy after his death. In accordance with this attitude he refused to pay homage to 'Alī. He later became blind and died in 50/670 or 53/673.

Many members of his family were noted for poetical gifts. Muḥammad realised the importance of poets in forming public opinion, and, following Sūra XXVI, 227 (see al-Ṭabarī, *Tafsīr*), regarded Ka'b as one of his poets along with Ḡhassān b. Ṭhābit [q.v.] and 'Abd Allāh b. Rawḥa [q.v.]. Much of Ka'b's poetry is found in the *Sīra* of Ibn Hishām. Its authenticity has been disputed but most appears to be genuine. The sentiments are nobler than those of Ḡhassān and there is genuine enthusiasm for Islam. The poems deal with Badr, Uḥud, Bi'r Ma'ūna, Banū 'l-Naḍīr, the *Khandaq*, *Khaybar*, Mu'ta and other expeditions. Stories about Ka'b seem to have been preserved in his family, and his sons 'Abd Allāh and 'Abd al-Raḥmān and other descendants are mentioned as sources by Ibn Hishām and al-Wākidī.

(W. MONGOMERY WATT)

**KA' B. ZUHAYR**, an Arab poet and contemporary of the Prophet. A son of Zubayr b. Abī Sulmā [q.v.], he seems to have given proof of his poetic talent at an early age; although belonging to the Muzayna, he lived with the *Dhubyān* and was involved in the wars of his tribe against the Ṭayyi', the *Quraysh* and the *Khazrajī*. His brother *Budjāy* was converted shortly before year 7 of the *Hidjra*, but he refused vehemently to follow suit and wrote some satirical verses attacking Muḥammad. The latter officially sanctioned his murder. From that day, "the earth became too confined" for Ka'b, who resolved to make his submission. He presented himself without warning, in the year 9, in a mosque in Medina where Muḥammad was present and recited to him his famous piece known by the name of *Bānat Su'ād* (Su'ād has disappeared). Transported with admiration on hearing the praises of himself and of the *Qurayshites*, the Prophet threw onto the poet's shoulders his own striped mantle from the Yemen, his *burda*, from which came the name *al-Burda*, applied also to this *ḡaṣida* (the same title was to be adopted by al-Būṣīrī [q.v.]).

The *Bānat Su'ād* has none of the characteristics of a religious poem; it takes its inspiration from the sentiments of pagan poetry, and it begins with a commonplace observation so frequently employed that

Ḥammād al-Rawīya [q.v.] boasted of knowing 700 other poems with the same opening. Nevertheless it is the most authentic example in existence of the eulogistic poetry of the period; "the extended themes, the repeated clichés, the style and the vocabulary can serve for comparison with the traditional writings; in this work, the essential elements of the laudatory genre are defined for the first quarter of the 1st/7th century" (R. Blachère). It has frequently been reproduced, in the form of *tashjūr* and *takḡmīs*. Commentators on it are numerous: the most celebrated are Ṭhā'lab, Ibn Durayd, al-Tibrīzī (ed. F. Krenkow, in *ZDMG*, lxx, 241-79), Ibn Hishām (ed. Guidī, Leipzig 1871), Ibn Ḥiḡdīja, al-Suyūṭī, and al-Bādjūrī (v. Brockelmann, I, 38-9, S I, 68-9). It was published for the first time by Lette (Leiden 1748), and was later produced in several editions, in particular by G. Freytag (with Latin translation, 1823) and T. Nöldeke (*Delectus*, Berlin 1890, 110-4). R. Basset brought out (Algiers 1910) an edition accompanied by a French translation and two unpublished commentaries. Finally, it appears in the *Diwān* of Ka'b published by T. Kowalski (Cracow 1950), containing 33 poems and fragments.

The date of Ka'b's death is not known, but he appears to have lived to a ripe old age.

*Bibliography*: R. Basset, *La Bānat So'ād*, 14-82, and the authors mentioned 9-13; R. Blachère, *HLA*, ii, 270-1 and bibl. (R. BASSET\*)

**KA' B AL-AḤBĀR**, ABŪ IṢḤĀK B. MĀṬI' B. HAYSU'/HAYNŪ', a Yemenite Jew who became a convert to Islam, probably in 17/638 (al-Ṭabarī, i, 2514), and is considered the oldest authority on Judaeo-Islamic traditions. *Hibr/ḡabr*, from the Hebrew *ḡāber*, the scholarly title immediately below *rabbī* current among Babylonian Jewish scholars, is presumed to be equivalent to the Arabic 'ālim (al-*Khawārizmī*, *Mafātīḡ*, 35); in Ka'b al-Aḡbār the plural is a determinative complement, while in the less frequent Ka'b al-ḡabr the latter element is in apposition to Ka'b.

Lidzbarski (*De prophetis... legendis arabicis*, Leipzig 1893, 34-5) assumes that Ka'b was originally called 'Aḡībā or Ya'ḡōb, but very little is known of this man who, according to tradition, came to Medina during the caliphate of 'Umar b. al-*Khattāb*, accompanied the latter to Jerusalem in 15/636 (al-Ṭabarī, i, 2408) and after his conversion was on intimate terms with the caliph, whose death he predicted three days before it took place (al-Ṭabarī, i, 2722). He was a vigorous champion of 'Uṭhmān, which led on one occasion to his corporal chastisement by the pious Abū *Dharr* (al-Ṭabarī, i, 2946-7). Subsequently, Mu'āwiya tried to attract him to Damascus to become his counsellor, but it seems most likely that he withdrew to Ḥimṡ, where he died in 32/652-3, in 34 (al-Ṭabarī, iii, 2474-5) or in 35 (Ibn al-'Imād, *Shadḡarāt*, i, 40). According to al-Harawī (*Ziyārāt*, 9/20-1) his burial place and *makām* are in this town, but Yāḡūt (ii, 595) and Ibn Baṭṭūṭa (i, 222; tr. Gibb, i, 139) locate his vault in Damascus (where a grave-stone bearing his name is still extant; Gibb, *loc. cit.*). Ibn *Djubayr* (55) and al-Maḡrizī (ed. Wiet, iv, 6) consider that it is situated in al-*Djīza* in Egypt, while al-Harawī (14/35) reports that some people believe him to be buried in Medina and states (39/94) that the tomb of one of his sons is at *Djīza*.

Though his true figure is difficult to discern, so wrapped is he in legendary trappings, Ka'b is considered to have possessed a profound knowledge of the Bible and southern Arabian tradition, as well as a personal wisdom attested by the numerous state-

ments attributed to him without argument because he inspired so much confidence (al-Nawawī, *Tahdhīb*, 523); he is also the originator of traditions concerning 'Umar b. al-Khaṭṭāb which are considered authentic; al-Djāhīz (*Ḥayawān*, iv, 202-3) believes him to be trustworthy and would appear to be coming to his defence by implying that, in discussing the external data of the Pentateuch, Ka'ab did not say, "It is written in the Torah" but, "We find it in the books of the prophets". Sometimes he is accused of introducing Jewish elements into Islam, e.g. in a story, preserved by Ṭabari (i, 2408-9), in which 'Umar charges Ka'ab with Judaizing when he treats the temple mount in Jerusalem as a holy place. See further ISRĀ'ILĪYYĀT.

Posterity sought to add lustre to his name by crediting him with a great variety of traditions, particularly those relating to the prophets, such as the *Ḥadīth Dhi 'l-Kiṣf* printed at Bülāḳ in 1283 (Broekelmann, S I, 101) or the legend of Joseph [see YŪSUF] in Aljamiado [see ALJAMĪA], edited in a Latin transcription by F. Guillen (*Legendas de José hijo de Jacob y de Alejandro Magno*, Saragossa 1888) and studied by M. Schmidt (*Über das altspanische Poema de José, in Roman. Forschungen*, xi (1901), 321), which is in fact a borrowing from al-Tha'labī's *Kiṣāṣ al-anbiyā'*. Al-Kisā'ī cites Ka'ab in his story of Joseph and he is also mentioned as an authority in Firdawsī's *Yūsuf u-Zalikhā* (ed. H. Ethé in *Anecdota Oxoniensia*, Aryan Series, vii, Oxford 1908, 258, verse 2599).

(M. SCHMITZ\*)

**KA'BA**, the most famous sanctuary of Islam, called the temple or house of God (*Bayt Allāh*). It is situated almost in the centre of the great mosque in Mecca. Muslims throughout the whole world direct their prayers to this sanctuary, where every year hundreds of thousands of pilgrims make the greater (*ḥajj*) or lesser (*'umra*) pilgrimage. Around it they gather and make their ritual circuits; around the Ka'ba the young Muslim community spent the early years of Islam. For the Muslim community the Ka'ba holds a place analogous to that of the temple in Jerusalem for ancient Jewry.

I. The Ka'ba and its immediate vicinity.

The name Ka'ba is connected with the cube-like appearance of the building; formerly the word was also used to designate other similarly shaped sanctuaries. The structure is 50 ft. high, with a flat roof sloping gently to the north west corner, where is the water spout (*miṣāb*); the shorter walls are about 35 ft. long and the façade is 40 ft. long.

The façade, which contains the door (at about 7 ft. above ground level), faces north east and the Black Stone (*al-ḥadjar al-aswad*) is built into its eastern corner. Beyond the northern corner is the beginning of the *Ḥiḍjr*. In front of the façade are the Maḳām Ibrāhīm, the arch-shaped gate known as that of Banū Shayba, and the Zamzam well. Also in front

of the façade, but outside the mosque enclosure, is the ritual walk from Ṣafā (south east) to Marwa (north). Photographs showing the Ka'ba in the foreground with the Maḳām Ibrāhīm in the middle ground (and consequently with the *Ḥiḍjr* to the left of the Ka'ba) reveal in the background, outside the mosque, the ritual walk from Ṣafā to Marwa, an area which cannot be seen on photographs where the Ka'ba stands out in front of the Maḳām Ibrāhīm and the Banū Shayba gate.

The Ka'ba is built of layers of the grey-blue stone produced by the hills surrounding Mecca. It stands on a marble base (*shādhawān*) 10 inches high, projecting about a foot. The four corners (*rukn*, pl. *arkān*) roughly face the four points of the compass. At the east is the Black Stone corner (*al-rukn al-aswad*): perhaps an astral orientation towards the Levant in pre-Islamic times? At the north is *al-rukn al-'irāqī* (the 'Irāqī); at the west *al-rukn al-shāmī* (Syrian); and at the south *al-rukn al-yamani* (Yemenite).

The four walls of the Ka'ba are covered with a curtain (*kiswa*), which in Egypt is called *al-burku'* (the veil). In front of the door is a special curtain, embroidered in gold and silver, with numerous inscriptions. Since Mamluk times (mid 7th/13th century) this *kiswa* has been traditionally provided by Egypt except during periods of political tension (e.g., 1926-36 and after 1962). At one period the black *kiswa* was replaced by a white one between the 25th (or 28th) *Dhu 'l-Ka'da* and the end of the pilgrimage (cf. al-Batanūnī). Witnesses affirm that this practice has been discontinued. The curtains are occasionally fixed to the ground by rings and cords, or the base is raised by cords placed out of reach of human hands. The *kiswa* is usually of black brocade, with the *shahāda* outlined in the weave of the fabric. About two-thirds of the way up runs a gold embroidered band (*ḥizam*) covered with ḳur'ānic texts. (Numerous photographs can be found in Ibrāhīm Rif'at, *Mir'āt al-Ḥaram*, i, Cairo 1925). Each year, when the curtains are replaced, the Banū Shayba divide the old ones into small pieces which are distributed and sold as relics.

In the north-east wall, about 7 feet from the ground, is the door, parts of which have mountings of silver-gilt. When the Ka'ba is opened, a wooden staircase (*darādī*, *madradī*) running on wheels is pushed up to the door; when not in use, it is kept between the Zamzam and the Gate of the Banū Shayba (see Snouck Hurgronje, *Bilderatlas zu Mekka*, no. ii; for a picture of the staircase, see Ali Bey, *Travels*, ii, 80).

In the interior of the Ka'ba are three wooden pillars, which support the roof, to which a ladder leads up. The only furnishings are the numerous hanging golden and silver lamps. On the inner walls there are many building inscriptions. The floor is covered with slabs of marble.

On the outside of the Ka'ba, in the eastern corner, about 5 feet above ground, not far from the door, the Black Stone is built into the wall; formerly broken into three pieces and several small fragments, it is now held together by a ring of stone mounted in a silver band. The stone is sometimes described as lava and sometimes as basalt; its real nature is difficult to determine, because its visible surface is worn smooth by hand touching and kissing. The surface is hollowed out irregularly, as can be seen in sketches and photographs. Its diameter is around 12 inches. The colour is reddish black with red and yellow particles.

The part of the wall between the Black Stone and the door is called *al-mulṭazam*, because the visitors press their breasts against it while praying fervently.

In the east corner too, about five feet above the ground, another stone (*al-ḥaḍjar al-as'ad*, the "lucky"), is built into wall. It is only touched and not kissed during the perambulation.

Outside the building there is still to be mentioned the gilt water-spout (*mizāb*), which juts out below the top of the north-west wall, and has an appendage which is called the "beard of the *mizāb*". The spout is called *mizāb al-rahma*, "spout of mercy" (on it cf. Ben Chérif, *Aux Villes Saintes de l'Islam*, p. 75); the part between it and the west corner is the exact *ḫiḍba* [q.v.]. The rain-water falls through the spout on to the pavement below, which here is inlaid with designs in mosaic. The ground all round the Ka'ba is covered with marble slabs.

Opposite the north-west wall, but not connected with it, is a semi-circular wall (*al-ḥaḍīm*) of white marble. It is three feet high and about five feet thick; its ends are almost six feet from the north and west corners of the Ka'ba. The semi-circular space between the *ḥaḍīm* and the Ka'ba enjoys an especial consideration, because for a time it belonged to the Ka'ba; in the perambulation therefore it is not entered; the *ṭawāf* goes as close as possible along the outer side of the *ḥaḍīm*. The space bears the name *al-ḥiḍr* or *ḥiḍr Ismā'il*. Here are said to be the graves of the patriarch and his mother Hagar. The pavement on which the *ṭawāf* is performed is called *maṭāf*; a depression in it just opposite the door has still to be mentioned; it is called *al-mi'ḍjan* "the trough"; according to legend, Ibrāhīm and Ismā'il [q.v.] here mixed the mortar used in building the Ka'ba.

The *maṭāf* and the buildings around it have not always remained the same throughout the ages. Only the arch-shaped gate, the Banū Ḥayba (once also called the *bāb al-Salām*), still marks the traditional entrance to the *maṭāf*. Between this archway and the façade (N.E.) is a little building with a small dome, the *maḥām Ibrāhīm*. In it is kept a stone bearing the prints of two human feet. The patriarch Ibrāhīm, father of Ismā'il, is said to have stood on this stone when building the Ka'ba and the marks of his feet were miraculously preserved. Beside the *maḥām Ibrāhīm*, slightly to the north, is the pulpit (*minbar*); at the beginning of this century it was made of white marble in the classical *minbar* shape. The dimensions of the *maḥām Ibrāhīm* were considerably reduced during the recent reconstruction. The relic is now closely surrounded by glass and bars set into a polygonal base, the whole structure, capped by a much narrower kind of "helmet", being about three yards above ground level.

The pavement which is used for the *ṭawāf* was relaid during the important work on the mosque which began in 1956. On old photographs the slender columns which surrounded the *maṭāf*, clearly demarcating it, can be seen. They were used to hold the lamps which lighted pilgrims at night. Today a new electric lighting system has been installed. On Ali Bey's plan of the mosque there were two further buildings, at the edge of the outer pavement and to the north east of the Zamzam building; these were called *al-ḫubbatalayn*; by Snouck Hurgronje's day they had disappeared. For many years the Zamzam well was covered by a building or *ḫubba*. A description of this well can be found in the *Rapport quarantenaire* of 1905 by Dr. Soliman Bey (p. 13; published in Egypt; a résumé of the text is given by J. Jomier in

*Le Mahmal et la caravane égyptienne des pèlerins de la Mekke*, Cairo 1953, 154-6), but the situation nowadays is completely different. There are no buildings on the surface and pilgrims can take advantage of this extra space. A staircase leads to a sort of underground hall divided into two sections, one for men and one for women, with water distributed by means of a system of taps.

The three little buildings previously situated on the exterior of the *maṭāf* also vanished during the course of the recent works, not only to provide some open space but also because, to an increasing extent, the diversification of rules has become of secondary importance to many Muslims. Such buildings housed the *imāms* of the four main schools during the prayers. The largest building (*maḥām* or *muṣallā hanafī*) was north west of the Ka'ba in front of the *Ḥiḍr*; the Ḥanbalī was to the south east and the Mālikī to the south west. The Ḥaḍīfīs used the Zamzam well building.

Finally we must mention the work begun in 1956 which has transformed the promenade from Ṣafā to Marwa into a spacious covered passage with a lofty ceiling. A group of huge galleries, with a floor overlooking the courtyard of the mosque, has been built on the outside of the old arcades of the *iwān*, which have been allowed to remain.

## II. The history of the Ka'ba.

Aside from Muslim traditions, practically nothing is known of the history of the Ka'ba. The sole reason for presuming that the Ka'ba was already in existence in the 2nd century A.D. is the mention of Mecca, under the name of Macoraba, by the geographer Ptolemy (*Geography*, vi, 7). Glaser (*Skizze der Gesch. u. Geogr. Arabiens*, Berlin 1890, ii, 235) believes that this name may have signified the same as the south Arabian or Ethiopian *mikrab*, i.e., a temple. The accounts of the campaign of Abrahā [q.v.], which have been elaborated with legendary features, also suggest the existence and worship of the Ka'ba in the sixth century but tell us nothing of its appearance or equipment. The Tubba' As'ad Abū Karib al-Ḥimyari, who came to Mecca, is said to have for the first time provided the building with a *ḫiswa* and with a door with a lock. The information available regarding the distribution of the offices [see below iii.] among the sons of Ḳuṣayy shows that the worship of the sanctuary had developed into a carefully regulated cult several generations before Muḥammad.

In matters pertaining to the history of the building of the Ka'ba, modern Muslims tend to hold fast to the letter of the Ḳur'ān and discount, to an increasing extent, other accounts. It is in fact in the Ḳur'ān, and in the Medinan *sūras*, that Ibrāhīm and Ismā'il are said to have laid the foundations of the Ka'ba (Ḳur'ān, II, 121/127). The *maḥām Ibrāhīm* is indicated as a suitable place for the *ṣalāt* (II, 119/125). At God's command, Ibrāhīm ordained the pilgrimage (XXII, 28/27). The Ka'ba was the first sanctuary to be established on earth, and was now named the sacred house (V, 98/97), the ancient house (XXII, 30, 34/29, 33). We can only speculate about the milieu in which these tales circulated in pre-Islamic times. Were these stories similar to the Coptic traditions concerning the Holy Family's flight to Egypt which the Judaized milieu of Arabia transposed to Abraham's journeys to Mecca? We will never know. For Muslims, these accounts are grounded on the authority of the Ḳur'ān and the Ḳur'ān alone. Whether or not in pre-Islamic days Ḳuṣayy demolished and rebuilt the edifice, as historians say, is impossible to determine.

The historical references only begin with Muḥammad. When Muḥammad had reached man's estate, the fire of a woman censuring the Ka'ba is said to have caught the building and laid it waste. It happened that a Byzantine ship was thrown ashore at Djudda [q.v.] and the Meccans brought its wood hither and used it for the new building. In connection with this the name of a man Bākūm (it is given in various forms) is always mentioned, sometimes as the captain of the ship, sometimes as the carpenter whose advice was taken; he is said to have been a Coptic Christian.

The old Ka'ba is said to have been only of the height of a man and to have had no roof. The threshold is said to have been on the level of the ground so that the water had an easy entrance in the frequent floods (*sayl*). The Ka'ba was then built of alternate layers of stone and wood, its height was doubled and a roof covered it. The door was placed above the level of the ground so that whoever wished to enter had to use a ladder. Unwelcome visitors were tumbled down from the high threshold. When the Black Stone was to be put in its place, the Meccans quarrelled among themselves as to who should have the honour. They had just decided that the first comer should be given the task when Muḥammad (who had been engaged in helping to carry the stones) came past. With grave authority he is said to have placed the precious object in a cloak—or in his cloak—and to have ordered the heads of tribes each to take an end. He himself then took out the stone and placed it in position.

At the conquest of Mecca in 8/629, Muḥammad left the Ka'ba as a building unaltered. But according to tradition, he later said that only the very recent conversion of the Meccans prevented him from instituting all kinds of innovations. These real or alleged intentions of Muḥammad were brought to realization in 64/683 by 'Abd Allāh b. al-Zubayr [q.v.]. As anti-caliph he was besieged by al-Ḥuṣayn b. Numayr [q.v.] in Mecca. Catapults were erected on the hills round Mecca, which hurled a hail of stones on the town and sanctuary and so damaged the house of Allāh that it finally looked "like the torn bosoms of mourning women". 'Abd Allāh and his helpers pitched their tents beside the sanctuary (he henceforth called himself *al-ʿĀ'idh bi 'l-Bayt*, "he who took refuge at the temple") and again a conflagration threatened to complete the destruction. In the fire the Black Stone was split in three pieces.

When the Umayyad army was withdrawn, 'Abd Allāh discussed with the Meccan authorities the demolition and rebuilding of the Ka'ba. When he had made his decision and the ruins had to be cleared away, no one dared to begin the work. The bulk of the populace, with Ibn 'Abbās at their head, had left the town because they feared a punishment from heaven. But 'Abd Allāh climbed up himself, axe in hand, and began the grim task. When his people saw that he remained unharmed, they took courage and assisted.

During the building a covered scaffolding was left on the spot to mark the *ḥibla* and the *maṭāf* at least. The masons are said to have worked behind the covering. 'Abd Allāh guarded the Black Stone, wrapped in a piece of brocade, in the council hall (*dār al-naḍwa*). When put back into its place it, or rather the three pieces into which it was broken, was bound with a band of silver.

The Ka'ba was then built entirely out of Meccan stone and Yemen mortar and built to a height of 27 ells. According to the tradition of the Prophet,

the *ḥidjir* was included in the building and two doors were made on the level of the ground, the eastern as an entrance and the western as an exit. In the *ḥawāf* the four corners were kissed.

These alterations lasted only a short period. In 74/693 al-Ḥadīdjādī b. Yūsuf [q.v.] conquered Mecca and killed 'Abd Allāh b. al-Zubayr. In agreement with the caliph 'Abd al-Malik he again separated the *ḥidjir* from the Ka'ba and walled up the west door. The building, in keeping with the wish of the Umayyads, thus practically received its pre-Islamic form again and this form has survived to the present day. The piety of the populace has always resisted any considerable innovations. Only to an unimportant degree have the authorities now and then made improvements. As was the case in the pagan period, floods have continued to be a danger to the building. When in 1611 it threatened to collapse, a girdle of copper was used to avert the disaster. But a new *sayl* made this support also insufficient, so that in 1630 renovations were decided upon. But the old stones were used as much as possible for the rebuilding.

The Ka'ba successfully withstood the Ḳarmatian invasion of 317/929; only the Black Stone was carried off. After an absence of some twenty years it was sent back to Mecca (cf. de Goeje, *Mém. sur les Carmathes*<sup>3</sup>, 104-III, 145-8).

The custom of covering the Ka'ba is said to have been introduced by the Tubba'. The annual re-covering of the Ka'ba only became an established custom in modern times; for the oldest Muslim period, the 'Āshūrā day is mentioned as the day of covering, but in Raḍjab also and in other months the building has changed its covering. The *ḥiswa* consisted sometimes of Yemeni and sometimes of Egyptian or other cloth; during 'Umar's caliphate the building threatened to collapse on account of the many coverings hung on it. All sorts of colours are mentioned also. The Wahhābis even covered the Ka'ba with a red *ḥiswa*.

The *maḥāms* around the Ka'ba are mentioned as early as the 'Abbāsid period, sometimes under the name *zulla* ("a shade"). The present buildings are said to date from 1074/1663. A dome over the Zamzam well is mentioned in an equally early period; the present one was built in 1072.

The Ka'ba had offerings dedicated to it in the pagan as well as the Muslim period. Al-Azraḳī devotes a detailed chapter to this subject (135-6). Many a worldly ruler has used these treasures for political purposes. Tradition reports that 'Umar said: "I will leave neither gold nor silver in the Ka'ba but distribute its treasures". To this, however, 'Ali is said to have raised vigorous objections so that 'Umar desisted from his plan.

### III. The Ka'ba and Islam.

Every man living in Mecca in the 6th-7th century A.D. must of necessity have had some relationship with the Ka'ba. On Muḥammad in his Meccan period the Ḳur'ān is silent in this respect. All that is known is that the early community in Medina turned to face Jerusalem in prayer. This was in the early days when it was still reasonable to hope that the Medina Jews would be won over. Subsequently, about a year and a half after the *Hidjra*, the community turned to Mecca in prayer and in Mecca itself faced the Ka'ba.

"Turn then thy face towards the sacred mosque and wherever ye be turn your faces towards that part" (Ḳur'ān, II, 139/144).

At this same period the Ḳur'ān began to lay

stress on the religion of Ibrāhīm, presenting Islam as a return to the purity of the primitive religion of Ibrāhīm which, obscured by Judaism and Christianity, shone forth in its original brightness in the Kur'an. Guarded support for this interpretation is advanced by Sprenger and followed by Snouck Hurgronje in his *Het Mekkaansche Feest* (cf. *EI*<sup>1</sup>, appendix to article IBRĀHĪM; for a contrary opinion see Yoakim Moubarac, *Abraham dans le Coran*, Paris 1958).

It is incontrovertible that an entire pre-Islamic ritual, previously steeped in paganism, was adopted by Islam after it had been purified and given a strictly monotheistic orientation. The pilgrimages to the Ka'ba and ritual progressions around the building were continued, but were now for the glorification of the One God. The abrahamic vision of the Ka'ba created a means of discerning an orthodox origin buried in the midst of pagan malpractices to which the first Muslims pointed the way.

In 6/627 a prospect of taking part in the Mecca cult was held out to the Muslims by the pact of al-Hudaybiya [q.v.]; in connection with it, the *'Umrat al-Kadā'* took place in the year 7. Muḥammad's political endeavours culminated in the conquest of Mecca in 8/629.

All the pagan trappings which had adhered to the Ka'ba were now thrust aside. 360 idols are said to have stood around the building. When touched with the Prophet's rod they all fell to the ground. The statue of Hubal which 'Amr b. Luḥayy is said to have erected over the pit inside the Ka'ba was removed as well as the representations of the prophets. When they began to wash the latter with Zamzam water, Muḥammad is said to have placed his hands on the pictures of Jesus and Mary and said: "Wash out all except what is below my hands". He then withdrew his hands. A wooden dove also which was in the Ka'ba is said to have been shattered by Muḥammad's orders. The two horns of Abraham's ram did not crumble to dust until the rebuilding of the Ka'ba by 'Abd Allāh b. al-Zubayr.

At the capture of Mecca, Muḥammad made arrangements regarding the religious and secular offices which had been filled in Mecca from ancient times. The historians say that in the old heathen period Kuṣayy, after a fierce struggle with the tribe of Khuzā'a, became master of the Ka'ba and held all the important offices, religious and secular: the administration of the *Dār al-Nadwa* and the tying of the standard, the provision of the pilgrims with food (*riṣāda*) and with drink (*siḥāya*) as well as the supervision of the Ka'ba (*sidāna* and *hidjāba*). His descendants:

administered the offices after his death, 'Abd Manāf and his descendants getting the *riṣāda* and *siḥāya* etc., while 'Abd al-Dār and his descendants saw to the *sidāna* and *hidjāba* etc.

When Muḥammad conquered Mecca his uncle 'Abbās or, according to another tradition, 'Alī asked for the administration of these offices. But Muḥammad said he had abolished all of them except the *siḥāya* and the guardianship of the Ka'ba. The former remained in the hands of 'Abbās; the latter he gave

to 'Uṭhmān b. Ṭalḥa who allowed his cousin Shayba b. Abī Ṭalḥa to act as his deputy. The Banū Shayba are the doorkeepers at the Ka'ba to this day. The *riṣāda*, which was in the hands of Abū Ṭālib, was taken over by Abū Bakr in 9/630; after his death the caliphs looked after the feeding of the pilgrims.

Muḥammad's control over Mecca and the Meccan cult was first clearly marked at the *Ḥadijī* of the year 9. As plenipotentiary of the Prophet, who did not participate in the pilgrimage, Abū Bakr announced to the assembled pilgrims the latest arrangements, which were put in the form of a revelation. They are contained in Sūra IX, which from them is often called the Sūra of Immunity (*barā'a*) (v. 1-12, 28, 36-7).

According to it, idolators are henceforth forbidden to participate in the Meccan festival as they are impure (*nadjās*). Moreover, they are declared outlaws. A period of four months is given them during which they can go freely about the country; but after that "kill them wherever ye find them". Excepted are those with whom an alliance has been made in so far as they have punctiliously observed its terms and helped no one against the Muslims.

In 10/631 Muḥammad himself led the pilgrimage, at which therefore according to tradition not a single idolator was present: the Ka'ba had become an exclusively Muslim sanctuary. At every *ṣalāt* Muslims throughout the world turn towards Mecca and at the ceremonies of the pilgrimage the Ka'ba forms the beginning and the end of the holy rites.

Two special ceremonies concerning the Ka'ba may here be mentioned, the opening and the washing of the building. The opening takes place on definite days and men are first admitted, then the women. On this occasion the above-mentioned staircase is pushed up to the building. The days in question change at the will of the Meccan authorities—but some usually fall in the month of the pilgrimage and one on the 10th Muḥarram (*'Āshūrā* day). It is considered particularly meritorious to perform the *ṣalāt* in the Ka'ba.

The procedure for the washing of the inside of the Ka'ba was as follows at the beginning of the 20th century. After the *Ḥadijī* is completed, at the end of the month *Dhu'l-Hijjā*, the Ka'ba is washed, a ceremony in which the Grand Sharīf, the governor and other authorities, as well as a number of pilgrims, take part. The first to enter is the Sharīf, who after a *ṣalāt* of two *raka'*s himself washes the ground with Zamzam water which flows away through a hole in the threshold. The walls are washed with a kind of broom made of palm leaves. The Sharīf then sprinkles everything again with rose-water and finally the building is fumigated with all manner of perfumes (cf. *al-Kibla*, no. 409, 1). The Sharīf throws the broom away among the crowd of pilgrims, who fight among themselves for possession of it. Al-Batanūni says (109) that the *samsamis* and the *mufawwifs* sell the pilgrims similar brooms for a minimum of half a real.

As is evident from this example, the veneration for the sacred building extends to all that comes in contact with it: to the Black Stone, the water-spout, the *mulḥazam*, and above all to the Zamzam water. It is however said—and probably with truth—that 'Umar thus expressed himself on the Black Stone: "I know that thou art a stone, that neither helps nor hurts, and if the messenger of Allāh had not kissed thee, I would not kiss thee". But then he kissed the stone. And hardly a single pilgrim will think of 'Umar's words during the *ṣawāf*. The *ṣalāt*

under the water-pipe is described as particularly efficacious: "Anyone who performs the *ṣalāt* under the *math'ab* becomes as pure as on the day when his mother bore him" (al-Azraḳī, 224). The Zamzam water, which the pilgrim has poured over him again and again, is useful for every purpose for which it is drunk (*mā' Zamzam li-mā shuriba lahu*, Kuṭb al-Dīn, 34).

There is abundant testimony in Muslim as well as European literature to the intensification of devotional feeling which the sight of the Ka'ba produces in the pilgrims. We may here quote al-Batanūnī's description of the *ṣalāt* at the Ka'ba as particularly characteristic (26): "The whole assembly stood there in the greatest reverence before this highest majesty and most powerful inspirer of awe before which the greatest souls become so little as to be almost nothing. And if we had not been witness of the movements of the body during the *ṣalāt* and the raising of the hands during the prayers, and the murmuring of the expressions of humility and if we had not heard the beating of the hearts before this immeasurable grandeur we would have thought ourselves transferred to another life. And truly we were at that hour in another world: we were in the house of God and in God's immediate presence, and with us were only the lowered head and the humble tongue and the voices raised in prayer and weeping eyes and the fearful heart and pure thoughts of intercession" (cf. Macdonald, *The Religious Attitude and Life in Islam*, Chicago, 1909, 216-7; Ben Chérif, *Aux villes saintes de l'Islam*, ii-iii, 45-6, 68).

Even the Shī'īs and the Wahhābīs have left the Ka'ba its place in Islam. Only the Ḳarmatians form an obvious exception.

Many moderns lay stress on the fact that Mecca was chosen by God as the place of revelation; they emphasise that the Ka'ba is a symbol of the unity of the Muslim world, the place of God's grace, His worship, and the proclamation of His glory.

As to the mystics, their attitude to the Ka'ba depends on their position regarding the law. For the, so to speak, nomistic mystics like al-Ḡhazālī, the Ka'ba is, it is true, the sacred building which one has to go round in the *ṭawāf*. The *ṭawāf* and its object however only receive their value for men when they give them an inducement to rise to a higher spiritual level. Ibn al-'Arabī goes a step further when he says that the true Ka'ba is nothing other than our own being (*al-Futūḥāt al-Makkiyya*, i, 733); the Ka'ba however also plays a part in his mystic experiences. Huḍjwīrī however quotes some sayings of mystics, who no longer require the Ka'ba as an inducement to rise, and even despise it. Muḥammad b. al-Faḍl says: "I wonder at those who seek His temple in this world: why do they not seek contemplation of Him in their hearts? The temple they sometimes attain and sometimes miss, but contemplation they might enjoy always. If they are bound to visit a stone, which is looked at only once a year, surely they are more bound to visit the temple of the heart, where He may be seen three hundred and sixty times in a day and night. But the mystic's every step is a symbol of the journey to Mecca, and when he reaches the sanctuary he wins a robe of honour for every step". Abū Yazīd al-Bisṭānī also says: "On my first pilgrimāge I saw only the temple; the second time, I saw both the temple and the Lord of the temple; and the third time I saw the Lord alone. In short, where mortification is, there is no sanctuary: the sanctuary is where contemplation is. Unless the whole universe is a man's

trusting-place where he comes high unto God and a retired chamber where he enjoys intimacy with God, he is still a stranger to Divine love; but when he has vision the whole universe is his sanctuary. The darkest thing in the world is the Beloved's house without the Beloved.

Accordingly, what is truly valuable is not the Ka'ba, but contemplation and annihilation in the abode of friendship, of which things the sight of the Ka'ba is indirectly a cause" (al-Huḍjwīrī, tr. Nicholson, 327).

#### IV. The Ka'ba in Legend and Superstition.

In the article KA'BA in *EI* there is an account of a whole series of legends concerning the origins of the Ka'ba; we will not go into these here. It is common knowledge that when protesting against his coreligionists' imaginative excesses Muḥammad 'Abduh even cited certain current legends about the Ka'ba (*Tafsīr al-Manār*, i, 466-7). Well known too is the fact that after the Sa'ūdī conquest of Ḥijāz (1924-6), a number of popular cultic places, such as the tomb of Eve in Ḍjudda, were suppressed. Among the legends relating to the Ka'ba are those describing its creation at the beginning of the world, what happened to it during the flood, how Abraham was guided to make his way to Arabia, details of his conduct during the construction of the Ka'ba, how Gabriel brought the Black Stone which had been preserved since the flood in Abū Ḳubays [*q.v.*]. Originally white, the stone had taken on its present colour after contact with the sins of the pagan era. There are also legends about the Zamzam well, especially concerning the role of 'Abd al-Muṭṭalib and the two golden gazelles he discovered. These had been concealed by the Ḍjurhum, along with swords and armour. All this was deposited at the Ka'ba or used to decorate the buildings.

From analogous theories developed earlier with relation to Jerusalem, Mecca was considered the navel of the world (cf. the account of these theories in the article KA'BA in *EI*).

Mecca is also a burial ground. Not only Ismā'īl and his mother but a whole series of prophets, numbering hundreds, is said to have been buried round the Ka'ba.

#### V. Religious history before Islam.

From the fact that Ptolemy calls Mecca "Macroba" (*i.e. mikrāb*, temple) we may conclude that in his day the Ka'ba was regarded as a sanctuary dedicated to one or more deities. According to a statement of Epiphanius (*Haereses*, v, following the text in *Philologus*, 1860, 355), Ḍhu 'l-Shāra had in Petra his *χαλβου*, a word which is probably the same as Ka'ba. It is not clear from Epiphanius, however, whether the temple in Petra was meant, or the quadrangular black stone which represented Ḍhu 'l-Shāra. Al-Bakrī (*Mu'djam*, ed. Wüstenfeld, 46) relates that the tribe of Bakr b. Wā'il [*q.v.*], as well as the main body of the Iyād tribe, had their centre of worship in Sindād in the region of Kūfa and that their holy tent (or temple, *bayt*) there was called Ḍhāt al-Ka'abāt (but cf. al-Hamdānī, *Sijāt Ḍjazīrat al-'Arab*, 171, l. 14, 17, 230, l. 12). What was the relationship between the sanctity of the Ka'ba and the Black Stone? We can do no more than offer hypotheses, like Wellhausen's.

No tradition suggests that the Black Stone was connected with any particular god. In the Ka'ba was the statue of the god Hubal, who might be called the god of Mecca and of the Ka'ba. Caetani gives great prominence to the connection between the Ka'ba and Hubal. Besides him, however, al-Lāt, al-'Uzzā, and

al-Manât were worshipped and are mentioned in the *Qur'ân*; Hubal is never mentioned there. What position Allâh held beside these in pagan times is not exactly known.

Many other idols are mentioned in the Ka'ba and the vicinity, among them the 360 statues.

The Ka'ba possessed in a high degree the usual qualities of a Semitic sanctuary. First of all it made the whole surrounding area into consecrated ground. Around the town lies the sacred zone (*haram*) marked by stones, which imposes certain restrictions on each one who enters it [see *IHRÂM*]. Moreover, the sanctity of the area is seen in the following points. In the *haram* the truce of God reigns. When the Arab tribes made a pilgrimage to the Ka'ba, all feuds were dormant. It was forbidden to carry arms. Next, the *haram*—and the Ka'ba especially—is a place of refuge. Here the unintentional manslayer was safe just as in the Jewish cities of refuge. On the Ka'ba there was a kind of handle to which the fugitives clung (al-Azraqî, 111), an arrangement which recalls the purport of the horns on the Jewish altar. Blood was not allowed to flow in the *haram*. It is therefore reported that those condemned to death were led outside the *haram* to execution.

The idea of peace extended even to the flora and fauna. Animals—except a few injurious or dangerous sorts—are not to be scared away; hence the many tame doves in the mosque. Trees and bushes were not cut down except the *Idhkhir* shrub, which was used for building houses and in goldsmiths' work. These regulations were confirmed by Islam and are in force to this day.

As to the rites, it is said that in the heathen period animals were sacrificed at the Ka'ba. Among the ancient Arabs the idol of stone replaced the altar; on it they smeared the blood of the sacrificial animals. In Islam the killing takes place in Minâ.

It is a question whether and how far the Ka'ba was connected with the *hadîdî* in the pre-Islamic period. On the one hand, the *hadîdî* was an integral part of the ceremonies carried out outside Mecca, notably at 'Arafât: the halt there is the summit of the pilgrimage. On the other hand, the *Qur'ân* (III, 91/97) uses the formula *hidîdî al-bayt* to refer to the Ka'ba. It is therefore most probable that in pre-Islamic times there was a fusion of two groups of ceremonies which, in a fashion still followed by the Arabs, united two adjacent holy places in the same celebration. It cannot be denied that the cult of the Ka'ba in the pagan era reveals traces of an astral symbolism. Golden suns and moons are repeatedly mentioned among the votive gifts (al-Azraqî, 155 ff.). According to al-Mas'ûdî (*Murûdj*, iv, 47, ed. and tr. Pellat, § 1373), certain people have regarded the Ka'ba as a temple devoted to the sun, the moon and the five planets. The 360 idols placed round the Ka'ba also point in this direction.

However, such a view cannot be safely propounded as foremost. In the pagan era the cult of the Ka'ba was certainly syncretistic, conforming to the usual features of Arab paganism. It is impossible to discern to what extent North Semitic cults were represented in Mecca.

(A. J. WENSINCK-[J. JOMIER])

**KABAKBÂZÎ** [see LA'BA].

**KABAKÇI-OGHLU MUŞTAFÂ**, chief of the rebellion which overthrew the Ottoman sultan Selîm III. Originally from Kastamuni, a town in north western Anatolia, he was chosen as their leader by the *yamaks* (supernumerary janissaries) of the Rumelîkavak fortresses on the Bosphorus, who rioted on 17 Rabî' I 1222/25 May 1807 upon the instigation of the *kâ'im-makâm* of the grand vizier, Kôse Mûsâ Paşa, and the *Shaykh al-Islâm* 'Atâ' Allâh Efendi. He conducted the rebellion in an orderly manner, put to death the principal organizers of the *Nizâm-i dîjedîd* [q.v.] and served the aims of the instigators of the riot in preparation for the enthronement of Muştafâ IV [q.v.] (21 Rabî' I/29 May). Nominated commandant of the fortresses on the Rumelîan side of the Bosphorus with the rank of *turnadîl-başî*, he exercised influence in government affairs through his collaboration first with the *Shaykh al-Islâm*, later with Maḥmûd Fayyâr Paşa, appointed *kâ'im makâm* in Sha'bân/October, and again with the *Shaykh al-Islâm*. He was killed on 19 Dîjumâdâ I 1223/13 July 1808 in Rumelîfener by 'Alî Agha, the *a'yân* of Pınarhisar, sent with a troupe of soldiers by Muştafâ Paşa Bayraktâr [q.v.], who was marching with the Ottoman army toward Istanbul to restore Selîm III [q.v.] to the throne.

An uneducated man, he showed a remarkable capacity for leadership in conducting the rebellion. Nevertheless he has been rightly criticized for his harmful action which resulted in the suppression of

1. North-eastern façade. In the foreground, to the left, are the *Maḳām Ibrāhīm*, the *Bāb Banī Shayba*, the *Minbar* and the Zamzam well; the building (*ḳubba*) of the latter is obscured from view.

2. North-western wall with the *mizāb*; to the left are the Zamzam building and the *Maḳām Hanafī*.

3. South-western corner before the recent works. Opposite the north-western wall is part of *al-ḥaḥīm* with *al-ḥidjir*: to the right lie the *Maḥām Ibrāhīm*, the *Bāb Banī Shayba* and the *ḵubba*. a. *Maḥām Ḥanafī*; b. *Maḥām Mālikī*.

4. South-western corner; to the left is the *Maḥām Ḥanafī*, to the right the *Maḥām Ibrāhīm*.

the reform movement which was followed under Selim III.

(E. KURAN)

**KABĀLA** (A.) "guarantee", a juridical term used mainly in connection with fiscal practice, in a manner which is still very difficult to define precisely.

The particular field with which this discussion is concerned is a double one—that of the levying of the land-tax, *kharādî* [q.v.], and that of special taxes, *mukûs*. As was already the case before the Arab conquest both in the Byzantine Empire and under the Sasanids, local communities were held jointly responsible by the Treasury for the payment at the required time of the full amount of land-tax demanded. Nevertheless, it frequently occurred that many individuals had difficulty in finding the necessary ready money immediately. In these conditions, as a result of an agreement between the inhabitants and the administration, application was made to a notable, often but not necessarily a man of the locality, to advance the sum required, for which he had to ensure that he would be reimbursed later. The matter having generally been agreed in advance, this notable in effect acted as a guarantor for the debt of the locality in question. This procedure constitutes the contract of *ḡabāla*, the offer being called *ṭakbīl* and the person named *mutakabbīl*. In this form, Abū Yūsuf does not disapprove of *ḡabāla*. But in practice it appears that matters often happened otherwise, that is to say that not only the principle of the guarantee but also of the amount were known in advance; here, jurists and traditionists, such as Abū Yūsuf and Abū 'Ubayd, disapproved—traditionists, more particularly when, as the harvest could not be estimated in advance, the tax to be levied on it was likewise not calculable if it consisted of a percentage; and jurists, because the total sum envisaged, being necessarily less or greater than the eventual proceeds of the tax, was bound to be injurious either to the taxpayers or to the Treasury. But it is precisely on account of the anticipated profit that the military leaders began to seek out *ḡabālāt*. At the start, they had been allotted emphyteutic concessions (*ḡafā'ī'*; pl. of *ḡafī'a* [see ١٢٧٤']) on the State lands (*ṣawāfi*). But as these were practically hereditary, it was not possible to find new ones, and they therefore turned their attention to the private *kharādî* lands, so that they might succeed either in retaining the *kharādî* for themselves while only paying the tenth (see *Arabica*, i (1954), 358), or, a less serious offence, contract an advantageous *ḡabāla*.

However, the *ḡabāla* disappeared quite rapidly in face of the development of the new type of *ikṡā'*, although definitions of it are still to be found occasionally in the later lexicographers, such as al-Zamakhshari. Clearly it possessed some of the characteristics of tax-farming, and the texts sometimes confuse *ḡabāla* and *ḡamān*; nevertheless, *ḡabāla* usually denotes merely the operation at the basic level of the whole local community, whilst *ḡamān* also applies, throughout the whole course of Muslim history, to the far wider concession of the right to organize and levy taxes, for some years, from a vast district, in return for the payment—more or less in advance—of a sum which is guaranteed, but markedly smaller than the scheduled revenue. Sometimes the texts also compare the *ḡabāla* with the *mukāṡa'a* which, in the case of a small estate, in effect probably differs only in the matter of duration, but which also applies to vast semi-autonomous districts or provinces in whose entire internal administration the State definitively renounces all interest, in return for the settlement of a guarantee.

What has just been said appears to be applicable in some measure to Muslim Asia in general. In the Maghrib and in Spain, where the *ḡabāla* is to be found in regard to *mukûs*, it is not certain if the term occurs in connection with *kharādî*; occasionally it denotes the fixed dues owed by the administrator of a *wakf*. But it is above all with reference to Egypt, always distinctive in agricultural and fiscal matters, that some particularly delicate questions arise.

In Egypt, indeed, it seems that no *ḡafā'ī'* were distributed, although State lands and private lands possessing some degree of autonomy existed there before the conquest and were retained afterwards. But no doubt both because the Arab population of Egypt was originally limited to the garrison towns, and because control of the Nile and the resultant agricultural organization created, throughout all the irrigated territories, a unified administration which deprived each of them of part of its own effective autonomy, the very term *ḡafī'a* in this sense seems unknown (although in the plural *ḡafā'ī'* it denotes the Ṭulūnid quarter of Fustāṡ created on the model of Samarrā). *ḡabālāt*, however, do exist, often in the hands of persons whom the papyri call *māsūṡ*, μετζότερος. Then in the 2nd/8th century, Arab tribal groups settled in Egypt and, as it was not possible to give them *ḡafā'ī'*, they were granted lands for which they assumed the *ḡabāla*, under conditions which guaranteed an income for the State but which also left them with a substantial profit for themselves. It appears that this was brought about by distribution by auction, held in Fustāṡ for four years, with a revision of the basic tax survey every thirty years. Despite reforms in the methods employed (particularly under al-Aḡdal and al-Ma'mūn al-Baṡā'īhī, in the second century of Fāṡimid rule,) it seems that the system was maintained in certain respects until the Ayyūbid conquest introduced into Egypt a new system more or less inspired by the eastern *ikṡā'*. In short, the old system differed from similar systems in the Near East only in its systematic and durable character, and by its adaptation to the specific agricultural organization of Egypt.

However, this does not solve all of the problems. Papyri, and later the fiscal treatises from the Fāṡimid and subsequent periods, reveal that there was a distinction between lands lying outside the *ḡabālāt*, which were subjected to permanent surveys (*misāḡa*), deciding each year the areas to be flooded and the different types of cultivation to be employed on them,

and lands of *ḡabĀlĀt*, which were themselves *bilā misāḡa*, and for which therefore it was sufficient to have a contract drawn up independently of the annual verification of the surface area and type of cultivation. In the fiscal treatises of al-Maḡhẓūmī, Ibn Mammāṭī and al-Nābulusī, the first system is called the *muḡĀdana*, imposition by *faddān*, or simply *zirā'a*, and the second *ḡabĀla*, but also, at least in certain cases, *munāḡjaza*, settlement after dispute, sometimes *muḡġġara*, equal division (Ibn Hawḡal, i, 133 distinguishes between *ma'ḡud* and *maḡlūl*). On the other hand custom tended increasingly to give *ḡabĀla* the sense of *arḡ al-ḡabĀla*, land subjected to the system of *ḡabĀla*, and if one or two papyri give the impression that a *ḡabĀla* can include several small properties of another sort, as in the Asiatic system, others on the contrary suggest relatively small pieces of land, and the later fiscal treatises reveal a situation where the tax agents controlled the entire body of lands consisting both of divisions of land in *muḡĀdana* and of others in *ḡabĀla*, and had the right to transfer certain of these from one category to the other, according to the types of cultivation dependent upon the condition of the land after inundation: this suggests that now that the distinction between the Arabs and the converted native inhabitants is blurred, the difference between the two categories of lands is connected with a difference of agricultural utilization, the *ḡabĀla* being applicable only to those lands used for the cultivation of cereals and leguminous plants, to the exclusion of orchards and economic crops (flax, sugar, etc.). We do not know if this was already the situation at the time of the earliest adjudications.

Finally, if we come down to the Mamlūk period, we see that this evolution continues. There remain some lands for which the "rent" (*idjāra*) is fixed at a sum determined in advance by *tanāḡidjuz* = *munāḡjaza*, but what is now called *ḡabĀla* is no more than the agricultural unit of land generally subjected to *misāḡa*, and within it a distinction is made between the different types of land imposed on the *faddān* according to the type of cultivation: in other words, integration with the common system is complete, without adjudication or tax-farming or any other "guarantee" save that of paying what is due. This is a normal conclusion since frequently these dues now go not to the Treasury but to the *muḡḡā'*, the true heir to the profits of the former *mutaḡabbil*. In the Ottoman period, if there are *muḡġa'āt* and *iltizāmāt* (the meaning of which is etymologically related to *ḡamān*, but in fact corresponding rather to *iktā's*) the word *ḡabĀla* disappears from the vocabulary of land taxation; and, with Bonaparte's scholars, *munāḡjaza* was explained as signifying merely poor lands.

Alongside its use with regard to taxation on land, as described above, the word *ḡabĀla*, as well as *ḡamān* in this context, occurs in a more permanent sense to signify the farming of special revenues, generally of *muḡūs*, especially in towns, such as the sale of salt or the management of baths or even of a local customs office. It is most often in this sense that we must interpret those passages which show rulers abolishing or condemning *ḡabĀlĀt*, like *muḡūs* elsewhere; and it is in reference to such *ḡabĀlĀt*, which are perhaps more often designated in this way in the West than in the East, that Europeans have understood the word and adopted it (Spanish *alcabala* attested in 1101, Italian *gabella* current in ports and among the Normans in Sicily in the 12th century, from which the French *gabelle*, which however has so

far not been found before the beginning of the 14th century; Provençal *gabele*). (It should be noted however that, in the account of Ramon Muntaner of the Catalan expedition to the East, at the beginning of the 14th century, *gabella* denotes the Turkish tribes, and therefore derives from *ḡabĀla* and not from *ḡabĀla*.) For these taxes, see provisionally *ḡarḡba* above, but no study has been devoted to the methods employed for levying them.

**KABARDS**, a Muslim people of the Caucasus. In Russian they are called Kabardintsi, in Turkish Kabartaylar; other designation, *Kāsāg*. The name of the Kabards was first mentioned as *Cheuerthoi* by Barbaro, who visited the Caucasus in 1436. Its etymology remains uncertain.

The Kabard language belongs to the eastern branch of the Adḡḡe (Čerkes) linguistic group, which is also referred to as "high Adḡḡe".

According to the 1926 Soviet census, there were 139,925 Kabards ethnically and 138,925 linguistically. The census of 1939 records 164,000 Kabards.

The Kabards live in the basin of Upper Terek and some of its tributaries and are divided into two groups: one, forming the tribes of the Great Kabarda, lives between the rivers Malka and Terek to the west of the Terek; the other, forming the tribes of the Little Kabarda, lives between the Sunja and the Terek, to the east of the Terek.

The Kabards arrived in their habitat in the 13th century from their original homeland further to the west, after the Alans had been weakened by Mongol invasions, and after the collapse of the Golden Horde they began to play a leading role in the history of the Caucasus. In the 16th century Kabard princes maintained friendly relations with the rulers of Moscow. The second wife of Ivan IV was a Kabard princess, Marie, daughter of Temrük. In the 17th century the Kabards led the coalition of Caucasian peoples against the Kalmuks. Because of the dominating role they played in the Central Caucasus and their location near the Daryal pass, they were the first to come under Russian control in the 19th century, accepting it without any strong resistance. At the time of the Russian conquest a number of Kabards settled between the upper Kuban and the Zelenchuk and were called Fugitive Kabards. After 1864, some Kabards, mostly of the fugitive group, emigrated into the Ottoman Empire.

Sunni Islam of the Hanafi *madhhab* was introduced in the second half of the 16th century by the Crimean Tatars, in competition with Christianity. They were completely islamized by the end of the 17th century.

The traditional Kabard economy consisted of horse-breeding, agriculture, horticulture, apiculture and home industry. Traditional Kabard society had a complex structure which consisted of eleven classes grouped in two main divisions: the noblemen, or the free group, and the *pshtts*, or the non-free group. At the head of society were the princes (*pshtz*), among whom the *wälî* was the chief of the Kabard people. They were followed by the nobles (*uork*, or *uorkkh*). These in turn were subdivided into four classes according to the rights and obligations which bound them to the princes. The nobles were followed by the free peasants (*ifokholl*). The non-free group consisted of the *azat* (freed peasants who were bound by some servitude to their former masters); *og* (serfs); *loganaput* (between *og* and slaves); *unaut* (slaves).

In the 19th century attempts were made by K. Atažukin to create a literary language, and in 1865 he published a Kabard alphabet based on the Cyrillic script. However, Kabard did not attain the status of a literary language until 1924. The speech of the Great Kabarda was used as the basis of the literary language, and this language is used officially in the Kabardo-Balkar A.S.S.R. and the Karaçay-Çerkes A.R. The first newspaper in the Kabard language was published in 1924 under the title *Kara Khalk*. According to the *Letopis' periodičeskikh izdanij S.S.S.R.* there were in 1960 two Kabard newspapers and two magazines.

The Kabards were first organized into the Kabard Autonomous Region on 1 September 1921. On 16 January 1922 they were joined with the national district of Balkar, which on 5 December 1936 became the Kabardo-Balkar Autonomous Region. In 1944 the Kabard Autonomous Soviet Socialist Republic was announced, which further changed into the Kabardo-Balkar Autonomous Soviet Socialist Republic on 9 February 1957. The territory of the Republic occupies 12,400 sq. km. In 1959 there were 420,115 people in the A.S.S.R. Of these 45 % were Kabards, 8.1 % were Balkars, 38.7 % Russians, and the rest other groups of Caucasians.

AL-ḲABBĀB, ABŪ MUḤAMMAD 'ABD ALLĀH B. ḤUSAYN AL-TAMGRŪTĪ AL-DAR'Ī AL-RAḲḲĪ (from al-RaḲḲa [q.v.], his native town), a very famous Moroccan saint. Born in the *zāwiya* of Sayyid al-Nās as it was called (from the name of the Prophet), the founder of which was Abū Ishāḳ al-Anṣārī, known under the name of Sayyidī Ibrāhīm al-Ḥādīdī, he grew up there in prayer and asceticism. Accompanied by the son of this latter, Aḥmad, he went to the *zāwiya* of Tamgrūt, founded by Abū Ḥafṣ, 'Umar b. Aḥmad al-Anṣārī, in Ramaḍān 983/Dec.-Jan. 1575-76, and settled there until his death on Friday 12 Djumādā II 1045/23 Nov. 1635. He was buried in the place since called *rawḍat al-ashyākh*, on the Sidjilmāsa road. His fame had attracted many disciples, whom he initiated into the *dhiḳr shādhilī* and who acquired some fame, such as the aforementioned Aḥmad b. Ibrāhīm and the two brothers Muḥammad and Ḥusayn Ibn Nāṣir al-Dar'ī. The teaching of the *ṣarīḥa*, which he had received from Abū 'l-'Abbās Aḥmad b. 'Alī al-Ḥādīdīdī al-Dar'ī, derived from Abū 'l-'Abbās Aḥmad Zarrūk, whose teaching was transmitted by Abū 'l-Kāsim al-Ḡhāzī, 'Alī b. 'Abd Allāh al-Sidjilmāsi and 'Alī b. Yūsuf al-Rāshīdī.

ḲABBĀN [see MĪZĀN].

ḲABD (A.), verbal noun meaning "seizure", "grasping", "contraction", "abstention", etc., and used in the special vocabulary of various disciplines.

i.—In *fiḳh* the word signifies taking possession of, handing over. In Mālikī law *ḥiyāza* is more frequently used. *Tasallum* is also employed to mean the act of handing over. Taking possession is accomplished by the material transfer of the thing when movable goods are involved; by occupation when it is a question of real estate, but also symbolically by the handing over of the keys or title deeds of the property. *Ḳabḍ* only has a subsidiary role to play in the sale, since *fiḳh*, from the very beginning and in all its versions, recognized that the ownership of the thing which has been sold, when a definite object is involved, is transferred immediately by the agreement of the parties, before any formal transfer.

The part played by the *ḥabḍ* in the matter of gifts (*ḥibā*), loan (*ḥarḍ*), commodate (*'ariyya*) and security (*rahn*), is a subject of dispute amongst the legal schools. The Mālikīs excepted, most authors teach that the agreement of the parties on which these contracts are founded does not carry with it any legal obligation on the part of the one who gave the undertaking, nor any absolute right on the part of the beneficiary. The former cannot be forced to hand over the thing he has promised, nor can the latter demand its transfer, *ḥabḍ*. These contracts are "efficacious", therefore, only on the basis of the *ḥabḍ*, freely agreed. The formula of the classical authors, according to which *ḥabḍ* is useful for the completion (*tamām*, *luṣūm*) of these contracts, is

not sufficiently significant. Properly speaking, these contracts only become juridically valid through the operation of the *ḥabd*. Only the Mālikī school holds that immediately after the agreement of the parties relative to a gift, loan, commodate or security the beneficiary may constrain the man who made the contract to hand over the object (Dardīr, *al-Sharḥ al-ṣaḥīr*, ii, 344 for the gift; ii, 226-9 for the commodate; ii, 121 for the security).

However the *ḥabd* becomes a condition of the validity of the agreement itself (*sharḥ al-ṣiḥḥa*) as regards two contracts which become invalid if the material transfer does not take place at the time of the agreement: these are the *salām*, or forward sale (the price to be paid at the time of the contract) and the *ṣarf*, contract of exchange (exchanged currencies must be transferred there and then).

*Ḥabd amāna* and *ḥabd damān*. In regard to contracts which involve the temporary transfer of something from one contracting party to the other, in particular hiring, commodate, safe custody and mandate, there arises the question as to whether this taking possession is a *ḥabd amāna*, in which case the trustee is only held responsible if he has been at fault or in transgression (*ta'addī*) of the rules of the contract or of the customary dealings in such matters, or if it is a case of a *ḥabd damān*, which holds the trustee responsible for any loss arising in respect of the object, even through chance or circumstances over which he has no control. The Ḥanafis are of the opinion that in all these contracts, without exception, *ḥabd amāna* is the only possibility. The Shāfi'is and the Ḥanbalis make a distinction according to whether the contract is concluded in the interests of the trustee (commodate, hiring), in which case the *ḥabd* is *damān*, or whether the contract is profitable chiefly to the owner of the thing (safe custody, mandate), and in this case it is *ḥabd amāna*. As for the Mālikis, they adopt another criterion. According to whether the thing held in trust in accordance with one of the contracts outlined above can be concealed easily (*mā yughābu 'alayhi*) or with difficulty, in the first case they enforce the consequences of *ḥabd damān*, and in the second those of *ḥabd amāna*.

*Bibliography*: Muḥammad Yūsuf Mūsā, *al-Amwāl wa-naḥariyyat al-'aḳd*, Cairo 1953, 449; Muṣṭafā Aḥmad al-Zarkā, *al-Madhḥal al-fikḥī al-'amm*, Damascus 1964, no. 163. For Mālikī law: Dardīr, *al-Sharḥ al-ṣaḥīr* (with the commentary of Ṣāwī, Būlāḳ 1289, ii, 226-7 (commodate), ii, 344 (gift), ii, 121 (security); D. Santilana, *Istituzioni di diritto musulmano malichita*, Rome 1938, i, 316, ii, 379, 477 and *passim*; Chafik Chahata, *Les concepts de qabd damān et de qabd amāna en droit musulman hanéfite*, in *St. Isl.*, xxxii (1970), 89 ff. (V. LINANT DE BELLEFONDS)

ii.—In Ṣūfism, a technical term used to denote a spiritual state of "contraction" as opposed to "expansion", *baṣṭ* [q.v.].

According to al-Kuṣḥayrī [q.v.]: "just as *ḥabd* is above the degree of *ḥhawf* (fear) and *baṣṭ* above that of *radjā* (hope), so *hayba* (reverential awe) is above *ḥabd*, and *uns* (intimate ease) is above *baṣṭ*". The explanation of this hierarchy is clearly that *ḥabd* and *baṣṭ* denote the pure objectivity of the 'arif (gnostic) untinged with any individual subjective reaction such as fear and hope, while on the other hand *hayba* and *uns* denote a greater degree of unveiling on the part of the Divinity. The end of the path is when Divine Subjectivity obliterates the objective experience of *ḥabd* and *baṣṭ* in a transcendent synthesis of the two. The terms themselves, as used by the Ṣūfis, spring

from the Divine Names [see AL-ASMĀ' AL-ḤUSNĀ] *al-Kābiḍ* (He who causes contraction) which is an *ism djalālī* (Name of Majesty) and *al-Bāsiṭ* (He who causes expansion), which is an *ism djamālī* (Name of Beauty); and the Ṣūfis frequently use *djalālī* and *djamālī* as synonyms of *ḥabd* and *baṣṭ* when referring to the divinely subjective experiences of the 'arif (gnostic). Aḥmad al-'Alawī [see IBN 'ALĪWA] quotes his Shaykh as saying, in moments of *ḥabd*: "My Majesty is One with My Beauty"; and he comments: "Since the gnostic is with Him who contracts, not with the contraction itself, and with Him who expands, not with the expansion itself, he is active rather than passive and has thus become as if nothing had happened to him... Let your attribute be *kamāl* (perfection) which is beatitude in both *djalālī* and *djamālī*".

*Bibliography*: Kuṣḥayrī, *Risāla*; Ibn al-'Arabī, *Risālat al-Kuds* (for examples of *ḥabd*); Ibn 'Alīwa, *al-Minah al-Ḳuddūsiyya*, 283-5.

(M. LINGS)

iii.—In prosody *ḥabd* means "contraction". To the exposition in the article 'ARŪD, 671-2 and in G. Weil, *Grundriss und System der altarabischen Metern*, Wiesbaden 1958, 27, 30, the following may be added (on some of the rules governing the *ḥabd* there is no agreement and a complete survey cannot be given):

The *ḥabd* is a suppression of the fifth quiescent letter in the feet *fa'ūlun* and *mafā'ilun* which occur in the metres *ṣawīl* [q.v.], *ḥazāḍī*, *muḍārī* [q.v.], and *mutakārib* [q.v.], so that these feet are reduced to *fa'ūlu* and *mafā'ilun* respectively. A foot suffering this alteration is called *maḥbūd* (this last term occurs already in a discussion of poetry in the *Sira* of Ibn Ishāq [q.v.], but its meaning is uncertain, see R. Blachère, *Deuxième contribution, in Arabica*, vi (1959), 133, 141).

The shortening of *mafā'ilun* to *mafā'ilun* is obligatory in the last foot of the first hemistich ('arūd) of all varieties of the *ṣawīl*, so that this foot can never appear in its "primitive" form, except in case the first hemistich rhymes with the second (*taṣrī*, see KĀFIYA). The same is true of the last foot of the second hemistich (*darb*) of the second variety (which would imply that the *ḥabd* belongs not only to the *ziḥāfāt*, but also to the 'ilal, see Muḥammad b. 'Alī al-Sabbān, *al-Kāfiya al-shāfiya fi 'ilmay al-'arūd wa'l-kāfiya*, Cairo 1321, 10). The *ḥabd* is also recommended (according to some it is obligatory) in the penultimate foot of the third variety of the *ṣawīl*. In this variety the last foot of the second hemistich is reduced to *fa'ūlun*, and the penultimate foot, which is also *fa'ūlun*, should become *fa'ūlu*. This rule also applies to the first hemistich in case of *taṣrī*. On the other hand the *ḥabd* may not occur in the metre *mutakārib* when the penultimate foot of either hemistich has been reduced to a single closed syllable (*fa* or *fa'*, but cf. *Darstellung*, 283), and in all cases where the foot *mafā'ilun* has already been reduced to *mafā'ilu* (*kaṣf*). Finally it should be noted that in the metre *muḍārī* the foot *mafā'ilun* appears never in its primitive form, but is always changed into *mafā'ilun* or *mafā'ilu* (cf., however, Ṣabbān, *al-Kāfiya*, 32, l. 7-8).

(MOH. BEN CHENEH-[S. A. BONEBAKKER])

**KABID** (according to lexicographers the only correct form) or **KABD**, **KIBD**, "the liver".

1. Names for the liver and their semantic field. The Muslim peoples, like all others, recognised the internal organs of the human body and identified them with the analogous organs of animals. They also attributed to them one or another physiological and psychosomatic function based on observations which they interpreted according to mental structures that are only partially clear to us.

Language itself testifies to these early identifications. As E. Bargheer says, "these are significant characteristics which very often endow an organ with a pre-eminent place in the conceptual world of the people; in the case of the heart it is its beating or rhythmic movement, of the lungs breath, and of the liver its central position, its exceptional size in relation to the other organs, its variable shape and edible nature" (*Handwörterbuch des deutschen Aberglaubens*, hrsgb. von E. Hoffmann-Krayer, Berlin 1927-42, v, col. 976, s.v. *Leber*).

In Arabic the classical name of the liver is *kabid*, but the frequent dialectal forms, *kabd* and *kibd*, are also encountered at a very early date (cf. *Wörterbuch der klassischen Arabischen Sprache*, i, Wiesbaden 1970, 18). As in other Semitic languages, it is the great weight in the liver that attracted attention. The noun for liver, common to all Semitic tongues, comes from the root *k-b-d* or *k-b-t* where the Western Semitic *d* seems to derive from an assimilation (to *b*) of the Accadian *t* (*kabattu* later *kabittu*, poetically *kablatu*), which is thought to be the original form (Brockelmann, *Grundriss der vergleichenden Grammatik d. semit. Sprachen*, Berlin 1908-13, i, 152). But we also find in Accadian *gabidu*, *kabidu*, probably borrowed from Western Semitic. It seems clear that this is a metaphorical derivation from the adjective "heavy" (Acc. *kabtu*, fem. *kabattu*, *kabitu*; Heb. *kābēd*; Ugar. *kbd*; Gōʿez *kēbūd* etc.) and the corresponding verb (cf. Arab. *kābada*, "to endure, to support"; cf. H. Holma, *Die Namen der Körperteile im Assyrisch-Babylonischen*, Leipzig 1911, 78; P. Fronzaroli, *Studi sul lessico comune semitico*, *Rend. Linc.*, series 8, vol. 19, fasc. 5-6, 1964, 32 f., 47, 54). The use of this metaphor to denote the liver ("the heaviest and thickest of vessels", Galen, *De usu partium*, vi, 17 = iii, 495, ed. C. G. Kühn; i, 360, l. 19 f. ed. G. Helmreich) is a Semitic innovation in comparison with Hamito-Semitic, which has a number of very different words for it. It is questionable whether, as A. Cuny avers, it is to be found in Indo-European (*Recherches sur le vocalisme... en "nostratique"*, Paris 1943, 68 f.). The word most frequently found in Indo-European (from an etymon \**yek<sup>w</sup>.r(t-)* is perhaps linked to the idea of lump, swelling tumour (J. Pokorny, *Indo-germanisches Etymologisches Wörterbuch*, i, Berne-Munich 1948-59, 504). In our field it is represented chiefly by the Persian *ājigar* (Lat. *iecur*, Gr. ἥπαρ, etc.), which was borrowed by Ottoman Turkish (and Serbo-Croat for the liver of animals).

The Turkish word, in its most current form *bağır* (attested as early as the runiform inscriptions of the Yenisei, cf. V. G. Egorov, *Étimologičeskij slovar<sup>9</sup> čuvaškogo jazıka*, Čeboksary 1964, 155, who also gives all the forms of the word in Turkish languages), is perhaps associated with the idea of a tie, a bundle,

a sack or a pocket (cf. the Ottoman Turkish noun *bağ* and the verb *bağlamak*, but L. Bazin notes that the relationship presents some phonetic difficulties).

It should be said that the words cited above were stabilized at a very early date as corresponding to a "normal" or "central" meaning (L. Bloomfield, *Language*<sup>8</sup>, London 1935, 149) which is the organ "liver". But they also correspond, from no doubt as early a period, to a semantic field comprising "marginal" or "metaphoric" values, the result of "transfers".

Through contiguity of meaning, some of these "transfers" (cf. S. Ullmann, *The principles of semantics*, Glasgow 1951, 231 ff.) led the words in question to be used to designate the parts of the body in the vicinity of the liver. Thus in classical Arabic *kabid* can denote the surfaces of the body more or less close to the liver as well as the chest and even the belly; a woman is described as having *kabidu<sup>n</sup> malsā<sup>n</sup>*, "a sleek stomach" (Aʿshā, *Diwān*, ed. R. Geyer, London 1928, 77: 15a = *Ṭarafa, Diwān* in W. Ahlwardt, *The diwans of the six ancient Arabic poets*, London 1870, 11: 6a) and so on (references in *Wörterbuch der klassischen Arabischen Sprache*, i, Wiesbaden 1970, 18-20). Similarly Uyghur has *beğirğa basmaq*, "clasp to the breast or heart", *bağrı yorğan palvan*, "a hero (or athlete) of a mighty chest" (É. N. Nadžip, *Uygurško-russkij slovar<sup>9</sup>*, Moscow 1968, 226) and likewise in Azeri *bağırına basmaq* means "to embrace, seize in one's arms, clasp to one's bosom" (H. A. Azizbekov, *Azerbaydžanskoy-russkij slovar<sup>9</sup>*, Baku 1965, 47).

In Persian, the composite *ājigar-band*, "the liver complex" (attested for example in Saʿdī and *Šhams-i Tabrizī*) denotes the pluck, the internal organs of the chest as a whole: lungs, heart, liver. The Turkish languages had already borrowed the word *ājigar* in the sense of "liver" in the Turkish translation of the *Gülistan* prepared in Egypt by Sayf of Saray (1391; cf. É. Fazylov, *Staroubekskij jazık*, Tashkent 1966-71, i, 370). But the existence of another word (*bağır*, etc.) for the same concept in the same languages, and probably the use of *ājigar-band* in the sense indicated above as well, led to the extension of *ājigar* itself to another organ of the thoracic cavity, the lung, despite the existence of a properly Turkish word to designate this (*ök(h)ā, öpkā, övka, ökpe*, etc., with the anciently recorded metaphorical sense of "anger, grief, dissatisfaction, affliction" (cf. Egorov, *Étim. slovar<sup>9</sup>*... , 280 f.), which remains the only meaning in current Ottoman for the word *öfke*, Lat. orthog. *öfke*, alongside the dialectic term *öygän*, "lung"). Consequently it was necessary to use an adjective to distinguish between the "black liver" (Azeri *gara ājıyār*, Ottoman *kara ājiger*, Lat. orthog. *kara ciğer*)—that is the liver itself—and the "white liver" (Azeri *agh ājıyār*, Ottoman *āk ājiger*, Lat. orthog. *ak ciğer*), that is the lungs. Other languages within the sphere of the Ottoman Empire borrowed this same distinction, for example Bulgarian (where the distinction was applied to the Slav word *drob* rather than to the loanword *ājiger*, "lungs and liver", cf. *Bālgariski etimologičen rečnik*, v, Sofia 1966, 362) and Serbo-Croat (forms *crna ājigerica*, "liver", *bijela ājigerica*, "lung", cf. Abdulah Skaljic, *Turcizmi u srpskohrvatskom jeziku*, Sarajevo 1965, 240 f. while the Indo-European word *jetra* is strictly specialized in an anatomical sense). The expression "white livers" (*kubūd biđ*) was also used in Arabic, at least occasionally, probably for the lungs (Ibn *Djazla, Minhādī al-bayān*, s.v. *kabid*, Ms. Paris, Bib. Nat., Ar. 2949, fol. 159 v., etc.).

The process of transfer of meaning by contiguity extended the semantic field covered by the word "liver" not only to the organs of the thoracic cavity but also to all the internal organs of the trunk. Moreover these organs as a whole are described, in a more or less vaguely limited fashion, by the plural of the word "liver". Thus in the Persian translation of al-Ṭabarī (4th/10th cent.), *diḡarān* denotes the entrails (G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 195). But in Turkish *baḡır* as such (or with a suffix *baḡırsaḡ* and variants) means "belly, paunch" and also "entrails" (cf. refs. in *Drevnetyurškiy slovar*<sup>2</sup>, Leningrad 1969, 77, 78). From this is derived the Uyghur *beḡırlımaḡ*, for example, which means "to grovel, to drag oneself along on the belly". In the modern languages of Ethiopia too the Proto-Ethiopic word corresponding to the Gəʿəz *kabā*, "liver", has acquired the meaning of "belly, heart, interior, intestines, paunch" (Tigre *kābd*, Tigrifa *kābdī*), and this has become the only meaning of *hod* in Amharic (from *kabā*, cf. Brockelmann, *Grundriss*, i, 204), which has therefore had to use another word to designate liver (*gubbāt*).

Such shifts in meaning explain the use of these terms generally to cover the middle, centre, interior (we would say heart) of something. Thus Arabic has *fī kabādī ʿajabātī*<sup>3</sup>, "in the heart of a mountain", *ʿalā kabādī ʿl-baḡrī*<sup>4</sup>, "in the heart of the sea", etc. (refs. in *Wörterbuch* . . ., 20). In Old Turkish *ya baḡır*, "the liver of a bow" denotes its central curve (Maḡmūd Kāshgharī, *Diwān lughāt al-Turk*, Istanbul 1333-35, i, 301; C. Brockelmann, *Mitteltürkischer Wortschatz*, Budapest 1928, 28) as does the Arabic *kabīdū ʿl-kawṣ*<sup>5</sup> (F. W. Schwarzlose, *Die Waffen der alten Araber*, Leipzig 1886, 260, 265 f.; A. Boudot-Lamotte, *Contribution à l'étude de l'archerie musulmane*, Damascus 1968, 164, see index p. 179 and plate iii). In Tatar *Ural bawır* means the "centre (liver) of the Urals" (*Tatarʹsko-rusškiy slovar*<sup>6</sup>, Moscow 1966, 51). Similarly Persian has, for example, *diḡar-i ḡī*, "the bowels of the earth, the tomb". Passing from space to time, we find expressions like *fī kabādī ʿl-laylī*<sup>7</sup>, "in the middle, the heart of the night" (Ibn Saʿd, *iii/1*, 205<sup>23</sup>).

In Turkish this generalization of meaning also frequently embraced the front, the fore and also the side. In Uzbek, for example, *toḡh baḡırıda* means "on the mountainside" (A. K. Borovkov (ed.), *Uzbeksko-rusškiy slovar*<sup>8</sup>, Moscow 1959, 58). In the *Shor* dialect of Altaï it even acquires a prepositional sense in *baḡırında*, "beside" (W. Radloff, *Versuch eines Wörterbuch der Türk-Dialecte*, St. Petersburg 1893-1911, iv, col. 1134).

2. Primitively and popular psycho-physiology of the liver. Whatever marginal meanings the word for liver acquired to denote other organs or parts of the body and of the world, from the pre-theoretic stage the organ itself was attributed with one or another physiological and psychosomatic function.

Thus the liver, alongside the heart, was very widely regarded as the centre or one of the centres of psychic life, in other words as the prop of "the soul" or of a "soul" (cf. W. Wundt, *Völkerpsychologie*<sup>9</sup>, iv, Leipzig 1920, 105 ff.; A. Merx, *Le rôle du foie dans la littérature des peuples sémitiques*, in *Florilegium* . . . Melchior de Vogüé, Paris 1909, 427-44; M. Jastrow, *The liver as the seat of the soul*, in *Studies in the History of Religion presented to C. H. Toy*, New York 1912, 143-68; F. E. Clements, *Primitive Concepts of Disease*, University of California Publica-

tions in American Archaeology and Ethnology, xxxii/2 (1932), 233 f.; Bargheer, *Leber*, 977 f.; id., *Eingeweide, Lebens- u. Seelenkräfte des Lebensinneren*, Berlin and Leipzig 1931, 93; W. D. Wallis, *ERE*, x, 373 ff.). It was probably because of the liver's central importance as the seat of qualities with magical undertones that the noun in Semitic languages is frequently feminine. It is feminine in Syriac and also in Ancient Hebrew, contrary to the traditional view (cf. G. R. Driver, *JRAS*, 1948, 175, n. 2), and most frequently in Arabic although in Arabic it can also be masculine and grammarians generally consider using both genders permissible (A. J. Wensinck, *Some Aspects of Gender in the Semitic Languages*, Amsterdam 1927 (Verh. Ak. Amst., xxvi/3), 30, cf. 36 f.; M. Feghali and A. Cuny, *Du genre grammatical en sémitique*, Paris 1924, 55).

In more analytic fashion, the internal organs are generally credited with a causal function in engendering feelings, emotions and passions (a conception which is not entirely erroneous). Therefore for the Mesopotamians and perhaps partly for the Hebrews the liver was the seat of joy (when it is "illuminated" in a state of well-being) and of sorrow (when it is "ill" or aching), of anger (when it is burned up), of calm (when it is appeased) and finally, alongside the heart, of desire (cf. E. Dhorme, *L'emploi métaphorique des noms de parties du corps en hébreu et en akkadien*, Paris 1923, 128 ff.; Merx, *Le rôle du foie*, 436 ff., 439 ff.). For the Arabs the liver is wounded by the sorrows which we attribute to the heart, the pangs of love. The liver of the bashful lover or one who suffers in like fashion is "rent" (radicals *ṣ-d-ṣ*, *f-l-r*, *f-l-k*), broken (*kabīd marḡūda*, Ḥarīrī, *Maḡāmāi*, ed. Silvestre de Sacy, 2nd ed. Paris 1847-53, 57<sup>24</sup>), wasting away, thirsty, weighed down, burnt up. It is said of someone that "the pangs of love are consuming his liver". A slender, delicate liver is the mark of a tender spirit, a sensitive heart. A saintly man has a black body but a white liver (Ibn Djubayr, 240<sup>25</sup>), that is a pure soul (a very widespread metaphor found as far as the Ndembu of Zambia; cf. V. W. Turner, *The Drums of Affliction*, Oxford 1968, 48, 283; cf. Bargheer, *Leber*, 979; id., *Eingeweide*, 95 ff.). To eat or strike the liver is to inflict great sorrow. As a result, the liver is regarded as a particularly precious part of the body and beloved persons are located in or assimilated to pieces of liver. A child is "the deep-seated blood" (*muhāja*) of the liver; a dear friend or a venerated man is placed "between the liver and its membrane" (*khilb*). More generally, people dear to one are "pieces (*kiʿa*) of liver". (Refs. in *Wörterbuch* . . ., 19 f. and A. Merx, *Le rôle du foie* . . ., 429-33). This last expression is still current in, for example, the Tunisian village of Takrūna (W. Marçais, *Textes arabes de Takrūna*, i, Paris 1925, 80-1, 272, 292, n. 42, with information from old texts, including a 6th/12th-century Mozarab deed between Christians) where the word "liver" simply means a cherished person, especially a child: *yā kubdī*, "my precious" (W. Marçais, *ibid.*, ii, bk. vii, Paris 1960, 3354-6). In the region of Constantine children are described as *kbād*, "livers" of their parents (M. S. Belguedj, *La médecine traditionnelle dans le Constantinois*, Strasbourg 1966, 121).

Exactly similar expressions are found in Persian literature, which Merx believes to be direct transpositions from Arabic. (See, for example, the expressions in Merx, *Le rôle du foie* . . ., 434-5 and in *Farhangī zaboni toḡjīkī*, Moscow 1969, 779b, as

well as those in the various dictionaries). To take only two examples: to a father his son is like the blood of his liver, *khūn-i djegar*, already in Firdawsī (*Shāhnāmah*, i, 256, ed. Mohl) and *djegar-pare*, "a piece of liver" (or *djegar-guṣṣe*, "lobe of the liver") is a current expression for a dearly loved child.

Similar expressions are also found in Turkish languages; in these cases it is not easy to distinguish between those influenced by Persian and Arabic and those which could be original. A ruthless man is said to have a liver of stone or to be "liver-less" (*baghirsiz*) in *Kutadghu Bilig* (5th/11th cent.; ref. in *Drevnetyurskiy slovar*, 78). In contemporary Uyghur "my liver" means "my dear, my dearest" (É. N. Nadžip, *Uygursko-russkiy slovar*, 226). In Turkish literature in Turkestan during the 8th/14th century there are numerous texts which speak of love in terms of the liver being broken in two, rent, torn apart, burnt up, used as a target, eaten on skewers (these are often translations from Persian); a good choice of these has been collected by E. Fazylov in *Staroubekskiy yashk*, i, Tashkent 1966, 201-2. Elsewhere the liver is occasionally described as the seat of anger (some unconvincing references in Radloff, *Versuch*, iv, col. 1431 f.; in most cases it is the lung, cf. above).

Popular psycho-physiology of this kind underpinned metaphysical and moral speculation on the soul and its seat. Plato's division of the functions of the soul were pushed to greater or lesser lengths by the philosophers, who tended to incorporate these functions or modes in souls which were to some degree separate. Plato himself located the parts of the soul he distinguished in distinctive organic seats. Under the influence of a hepatoscopy originating in Mesopotamia, he placed the "appetitive soul" (ἐπιθυμητικὴ ψυχὴ, *al-nafs al-shahwāniyya*) in the immediate neighbourhood of the liver and in connection with it (*Timeos*, 69-72, known in the Islamic world through Hunayn b. Iṣḥāk's [q.v.] translation of Galen's compendium, XVII c, ed. and tr. P. Kraus and R. Walzer, *Galenus... Compendium = Plato Arabus*, i, London 1951, Arab. p. 23, Lat. p. 74). The soul, identified with the breath (πνεῦμα, *rūh*), being at the same time the mainstay of the affections and psychological faculties and of the physiological functions, it was proper to allot these to the different bodily organs, following popular notions that were corrected to some extent according to the logic of a particular system. The medical school known as "pneumatic" (founded by Atheneos of Attalia in the 1st century) only recast these conceptions. Galen introduced this doctrine (which, as we will see, accords the liver an important place) into his system alongside the theory of humours and through him it was adopted by later physicians, notably the Arabs.

In the pneumatic doctrine, both in antiquity and among the Arabs, sites were made more specific or modified according to current ideas, especially those which were conveyed by the language (for the liver cf. H. Hagen, *Die physiologische und psychologische Bedeutung der Leber in der Antike*, thesis, Bonn 1961; Syriac and Hebrew authors in Merx, *Le rôle du foie*, 437 ff.). Thus the *Rasā'il ikhwān al-ṣafā'* criticizes the notions of non-specialist scholars who distribute the affections and psychological faculties among the various bodily organs and locate, for example, passion (*shahwa*) in the liver (ed. Cairo 1347/1928, bk. i, 200 f.). According to the *Hārūniyya*, a compilation of popular medicine very widely known in various versions and reputedly the work of one Maṣīḥ b. Ḥakam, who had compiled it for Hārūn al-Raṣīd, "the liver is the fount of mercy" (Vatican

Ms. cited by M. S. Belguedj, *La médecine traditionnelle dans le Constantinois*, Strasbourg 1966, 121); Greek and Indian authorities are cited in support of this view.

The association of the liver with love for children, as noted above, is apparent in expressions current among the people of the region of Constantine. If grand-parents or parents are over-indulgent with a child, this is because "their liver prevents them from punishing them"; the liver "burns" to a decline in the absence of a child, and it is "torn apart" when a child dies (Belguedj, *op. cit.*, 121).

This conception also lies at the root of some ritual practices, for example the ritual consumption of liver during an infant's naming celebrations. In Morocco on this occasion a sheep is sacrificed and its liver divided between the members of the family so that tender love for the infant will be born in them (J. Jouin, *Hespéris*, xlv (1957), 308; Legey, *Essai de folklore marocain*, Paris 1926, 95; E. Westermarck, *Ritual and Belief in Morocco*, London 1926, ii, 390). Also in Morocco the liver is associated with conjugal love; in some tribes the bridal couple eat at one of their first meals together the liver of a sheep that was slaughtered on the occasion of their marriage (E. Westermarck, *Marriage ceremonies in Morocco*, London 1914, 101; European parallels in Bargheer, *Leber*, 978 f., idem, *Eingeweide*, 216).

Popular physiological ideas deem the liver to be the fount of liquids drunk or secreted by the body. This idea, clearly expressed in the 13th century by Hildegard of Bingen (*Causae et curae*, 98, 110) and often conveyed by current German idioms (Bargheer, *Leber*, 984; idem, *Eingeweide*, 387), is attested in the Islamic world by the *Rasā'il ikhwān al-ṣafā'* (bk. ii, 162), which describes the liver as governing the field of liquid food (*bayt al-sharāb*).

3. Scientific knowledge and scholarly theories. Rational study of the liver conducted by Muslim writers falls into the categories of anatomical descriptions of the organ, its psycho-physiological role—of interest to philosophers as well as anatomists and physicians—its pathology and therapeutics, and the use of animal liver in pharmacology.

All the general treatises on medicine include extensive statements on the liver, in view of its central role in the Galenic physiology adopted by Muslim science. Monographs on the liver and its pathology, along the lines of Greek monographs like those by Rufus of Ephesus and Philagrius, were compiled by Kuṣṭā b. Lūḳā and Muḥammad b. Zakariyyā' al-Rāzī (F. Sezgin, *Geschichte des arabischen Schrifttums*, iii, Leiden 1970, 68, 156, 273, 292), although these may be chapters only of general works.

As far as the anatomy of the liver was concerned, Muslim writers, who, like the Greeks for the most part, were forbidden to make dissections, made do with copying Galen's descriptions of the organ; Galen himself had followed Herophilus of Chalcedon (3rd cent. B.C.), who had dissected corpses in Alexandria and made studies of the liver, but had apparently allied observations of unhealthy human livers and the livers of animals to his study of the normal liver. Galen's faith in Herophilus on this point was confirmed by dissections of monkeys (cf. Ch. Daremberg, *Oeuvres anatomiques, physiologiques et médicales de Galien*, Paris 1854-56, i, 293, n. 1; Max Simon, *Sieben Bücher Anatomie des Galen*, Leipzig 1906, ii, xxxiv, xxxvii f.). Muslim physicians followed him in teaching that the human liver had sometimes two or three lobes (*afraf*) or extensions (*sawā'id*), but

most commonly four or five, surrounding the stomach. Descriptions of the liver of this type are to be found in the *Manṣūrī* of Muḥammad b. Zakariyyā al-Rāzī and the *Malakī* of 'Alī b. 'Abbās in an edition with French translation opposite by P. de Koning (*Trois Traités d'anatomie arabe...*, Leiden 1903, 68-71, 374-9), as well as a French translation of the relevant chapter of Book iii of Ibn Sīnā's *Kānūn*, *fann 14*, chap. 1 (*ibid.*, 706-15; ed. Rome 1593, 455-6; Lat. tr., Venice 1564, 740-2) with the parallel texts of Greek authors.

The ideas of Arab physicians on the psycho-physiological role of the liver derive first from the physiological system of humours that Galen had codified from earlier teachings, a system that was generally accepted in the countries conquered by the Arabs and in the Christian West (cf. the excellent recent account of the matter by Luis Garcia Ballester, "Galeno" in P. Lain Entralgo, *Historia Universal de la Medicina*, ii, Barcelona, 1972, 209-268; idem, *Galeno en la sociedad y en la ciencia de su tiempo*, Madrid 1972; simplified summary by G. Sarton, *Galen of Pergamon*, Lawrence, Kansas, 1954; diagram of blood formation and distribution in *Historia Universal*, 244 and in A. C. Crombie, *Augustine to Galileo, A.D. 400-1650*, London 1952, i, 132). In this system the liver plays a role of prime importance: "all organs act by virtue of it, but it acts independently" (Ibn Sīnā, *Urđjūza fi 'l-ḥibb*, verse 417, ed. and tr. H. Jahier and A. Noureddine, Paris 1956, 40). The blood takes shape in it through purification and consolidation of food, which has previously been digested ("cooked") in the stomach and reduced to the state of "chyle" or "chyme" (*kilās* or *kīmās*, sometimes vocalized as *kaylās*, *kaymās*, the two words interacting as in Greek *χυλός* and *χυμός*, cf. Khwārizmī, *Mafāṭīḥ al-ʿulūm*, ed. G. van Vloten, Leiden 1895, 181; Cairo 1349/1930, 107). Another preliminary digestive process ("coction") could have taken place in the mesenteric veins (*μεσαραϊκαὶ φλέβες*, *māsaraykā* or *māsaraykā*, Lat. *mesaraicae*) which, participating in the nature of the liver, partially transform the chyle into blood (Ibn Sīnā, *Kānūn*, iii, *fann 14*, *maḥāla 1*, beginning; for Galen's doubts on this point see Mani, i, 68, which gave rise to disputes in the Middle Ages and the Renaissance). The gastric "coction" had already taken place under the prime influence of the liver, the source of heat, whose lobes were thought to surround the stomach like fingers.

The chyle, already transformed to some extent, reaches the liver by the vena porta (ἡ ἐπὶ πύλῃ φλέψ, ἡ πύλῃ, tr. as *al-ʿirḳ al-ustūwānī*, Simon, *Sieben Bücher...*, i, 346, then as *al-bāb*) into which pour the mesenteric veins. There it is transformed into blood proper, fitted for the nourishment of the body (the adage *sanguificatio est chyli in sanguinem mutatio* was dogma until the 19th century, Mani, i, 59). A part of this blood becomes the substance of the liver, which can be regarded as coagulated blood (Ibn Sīnā, *Kānūn*, i, *fann 1*, *ta'ḥim 3*, *faṣl 2*; *ibid.*, iii, *fann 14*, *maḥāla 1*), a formulation that goes back at least as far as Aretaios of Cappadocia (2nd century; Mani, i, 58, cf. p. 64). The liver, as the organ of formation of the blood proper, may be regarded as the place of origin of the four "humours" (*manṣāʿ al-akḥlāʿ*, Ibn Sīnā, *urđjūza*, verse 416; cf. *Kānūn*, i, *fann 1*, *ta'ḥim 4*, *faṣl 2*). Two of these are produced immediately, heavy dregs which constitute the black gall or atrabile (χολῆ μέλαινα, *al-mirra al-sawdāʿ*, Lat. *atra bilis*) and tenuous, light parts, a kind of scum which constitutes the yellow gall (χολῆ ξανθῆ, *al-mirra al-safrāʿ*, Lat. *cholera*), both

drawn mostly by two vessels (*wi'āʿ*), kinds of necks (*bi-manṣilat al-ʿunḳ*, οἶον στομαχοῦ τινός in Galen) which join the liver to the spleen and to the gall-bladder respectively (cf. Rāzī, *Manṣūrī*, *apud* Koning, *Traités*, 76 f., 'Alī b. al-'Abbās, *malakī*, *ibid.*, 177, 378 ff., Ibn Sīnā, *Kānūn*, *ibid.*, 706, with parallel Greek texts opposite, first Galen, *De usu partium*, iv, 4, profitably commented on by Daremberg, *Oeuvres... de Galien*, i, 282, n. 1).

The blood, still loaded by other elements, is distributed, starting from the liver (this is not exactly circulation, but ebb and flow with a slow renewal) through the venous system. All the veins (*ʿawrida*, *al-ʿurūḳ al-sawākin*) originate in the liver, while the heart is the place of origin of the arterial system. The veins branch out from the vena porta which takes its departure from the liver cavity, and the vena cava (χολῆ φλέψ, *al-ʿirḳ al-adjwaf*), which issues from its convex side (*Kānūn*, i, *fann 1*, *ta'ḥim 5*, *ḡiumla 5*).

Theories establishing a connection between the elements of the cosmos on various planes place the yellow bile along with the igneous element which predominates there and the "temperament" (κρᾶσις, *mizājī*) which makes manifest its dominance, in a special relationship with the liver. But one variant links this organ rather with the blood, in which air predominates and, naturally, the sanguine temperament (see the diagram in M. Ullmann, *Die Medizin im Islam*, Leiden-Cologne 1970, 99 and that of R. Herrlinger, with colours showing the development since the Hippocratic corpus, at the end of E. Schöner, *Das Viererschema in der antiken Humoralpathologie*, Wiesbaden 1964; the common modern form taken from popular manuals can be found in T. Canaan, *Aberglaube und Volksmedizin im Lande der Bibel*, Hamburg 1914, 33).

Muslim physicians naturally also followed Galen in his linking of the principles of pneumatic teaching to the theory of humours, the inspiration for which we saw above. Some "spirits" (πνεύματα, *arwāḥ*), subtle vapours, animate the body and are thought to explain the performance of the vital functions. One of them, the natural or physical spirit (πνεῦμα φυσικόν, *rūḥ ḥabīʿī* or *ḥabīʿiyya*), has its seat in the liver according to Muslim medicine, which follows not so much Galen, who had doubts and vacillated on this point, as the Alexandrians and the Syrians, who systematized his ideas in a simplified fashion. This "spirit" is put on the same plane as the vital or animal spirit and the psychic spirit, which have their seat in the heart and in the brain respectively (classic treatment by Ḥunayn b. Iṣḥāq, *al-mudḫhal fi 'l-ḥibb*, cf. O. Temkin, "On Galen's Pharmacology", *Gesnerus* [Aarau], viii (1951), 180-189). It is distributed with the blood by the veins.

Every one of these spirits, still according to Galenism, corresponds with a chief "faculty" or a group of "faculties" (δυνάμεις, *ḥuwā*, Lat. *virtutes*) and physiological and psychological phenomena are attributed to the actions of these. Thus the physicians claim that the "natural" faculty or faculties are subdivided into one type whose function (*fiʿl*) is to conserve and make up the individual, which presides over nourishment and is situated in the liver, and a second type which conserves the species and is situated in the sexual organs. Taking their cue from Aristotle, Ibn Sīnā and many others differ from this theory to some extent and place the heart as the first substratum and mainspring of the faculties (cf. Mani, ii, 21). The nutritive faculty spread out from the heart towards the liver (Ibn Sīnā, *Ḥifāʿ*,

*ḥabī'iyāt*, *fann* 6, *maḳāla* 5, *faṣl* 8, ed. J. Bakoš, *Psychologie d'Ibn Sīnā* . . . , i, Prague 1956, 265; cf. *Kānūn*, i, *fann* 1, *ta'lim* 6). More precisely, pure Aristotelians like Ibn Ruṣḥd took issue with Galen in order to demonstrate that the principle of nutrition resided in the heart and not in the liver (*Kullīyyāt*, ii, ch. 9; cf. J. C. Bürgel, *Averroes "contra Galenum"*, *NGW Gött.*, i, 1967, No. 9, 292 f.). Various lists of faculties are given and they are conceived of as acting on other organs alike.

We will not deal here with the Muslim physician's pathology or therapeutics. A clear and simple exposition of them can be found in one of the oldest treatises, *Firdaws al-ḥikma* by 'Alī b. Sahl Ṭabarī (ed. M. Z. Siddiqi, Berlin 1928, 40 f., 218 f.), and a full treatment which has become classic in *fann* 14 of Book iii of Ibn Sīnā's *Kānūn* (ed. Rome 1593, 455-79; ed. Tehran 1295 H., 179-204; Lat. tr. Venice 1564, 740-81); the first *maḳāla* of this is devoted to the anatomy of the organ (see above). Surgical treatises speak of cauterisation of the liver or in cases of liver infections (cf., finally, P. Huard and M. D. Grmek, *Le premier manuscrit chirurgical turc*, Paris 1960, 109, 113, 121, fig. 27, 31; present-day application, M. S. Belguedj, *La médecine traditionnelle* . . . , 148).

The *Kānūn* also contains numerous scattered pieces of information on the liver which can be easily found thanks to the very careful index to the Latin translation published in Venice in 1564. In the copious treatise on simple drugs in Book 2 (ed. Rome 1593, i, 249-347, put into Latin alphabetical order in the Venice 1564 translation, i, 124-280), as well as in the pharmacology of Book 5, there are notes on herbs and foods and simple and complex drugs known to have some effect on the liver. These complex drugs are listed in an abridged version in *maḳāla* 12 of the first *ḍjumla* (*summa*) of Book v (ed. Rome 1593, vol. ii, 243; Lat. tr. Venice 1564, ii, 305-6), classified according to the diseases for which they are remedies.

One pharmacological chapter in Book 2 of the *Kānūn* treats of the liver of animals (ed. cit., i, 196; tr. cit., i, 299). Ibn Sīnā's findings are among those taken up and developed from a dietetic point of view in Ibn Ḍjazla's widely circulated treatise on dietetics, *Minḥādī al-bayān* (Mss. Bib. Nat., Paris, Ar. 2949, fol. 159 v., 2950, fol. 279 r., 2952, fol. 231 r.-v.). One general disadvantage in eating liver is its production, during digestion, of blood so thick that it flows very sluggishly through the blood vessels. This can be remedied by eating it along with saumure or oil. The liver of quadrupeds should generally be avoided. The liver of a fat duck or chicken is the best, and fattened goose liver is also excellent, especially with a milky paste. Salt and oil should be added to avoid burdening the stomach. Roasted sheep liver is good for diarrhoea. Goat's liver (especially the male goat's) is a useful test for epilepsy, for it brings on a fit. As an eye lotion, to be eaten or used to fumigate, it is also good for infections of the iris (cf. a similar remedy in use in present-day Ḥaḍramawt, R. B. Serjeant, *BSOAS*, xviii (1956), 7). The dried and pounded liver of a partridge made into a potion is also good for epilepsy, as is roast ass liver taken on an empty stomach. Wolf liver is effective in cases of liver complaints. The liver of the *wasagha* (a kind of large lizard) eases toothache. Finally, the liver of a mad dog cures rabies, particularly when eaten by a person bitten by that particular dog. This remedy (already mentioned by Pliny, xxix, 32, and widespread in Europe until the

19th century, cf. Bargheer, *Eingeweide*, 283 f.) was apparently known in Jerusalem at the beginning of the 20th century, for it is mentioned in S. Y. Agnon's novel *Tmōl shilshōm*, iv, 18 (Fr. tr. *Le chien Balak*, Paris 1971, 565 f.).

4. Developments in magic, religion and fable. Alongside a popular psycho-physiology which, like its scientific counterpart, considers the role of the liver in the body, in conjunction with scientific pathology, dietetics and pharmacopoeia from which (as a rule) cures for infection are derived, as well as an estimate of the value of animal liver as food or remedy, there exist the rudiments of basically symbolic and magical doctrines which were also developed for practical use. These sometimes appear in scientific treatises and are occasionally supplemented there.

Following Galen, Ibn Sīnā reports, though with some doubt, that the size of an animal's liver is in proportion to its greed and timidity (cf. P. de Koning, *op. cit.*, 708, 711). Employing the magical principle of like to like, it was thought that eating sheep's liver strengthened the liver of man (Dāwūd al-Antākī, *Tadhkira*, Cairo 1356/1937, i, 207).

The scholarly conception of the liver as being formed (ontogenically, it could be said) from coagulated blood is understood literally or linked to a popular conception to give rise to a *ḥadīth* excepting the liver and the spleen from the general prohibition of blood: "two bloods have been permitted us" (liver and spleen: Ibn Māḍja, xxix, 31; Ahmad b. Ḥanbal, ii, 97).

Talismans are used in cases of hepatic disorders. Thus the *Kitāb dhakhīrat al-Iskandar*, a Hermetic collection purporting to be of Greek origin, contains a description of a talisman consisting of a liver-shaped red stone with an ibex and an enigmatic inscription painted on it. This is a useful remedy for liver pains (J. Ruska, *Tabula Smaragdina*, Heidelberg 1926, 98 f.). Books of practical medicine contain many prescriptions which contain a mixture of empirical observation, magical deductions (the use of wolf liver pulverized in oil), pure charlatanism (camel urine), and the use of washed talismans etc. (cf. for example, Pseudo-Ḍjalāl al-Dīn al-Suyūfī (Muh. al-Ṣanawbari, d. 815/1412), *Al-Rahma fi 'l-ḥibb wa 'l-ḥikma*, Cairo 1357, 106 f. ch. 102). In Morocco pieces of prickly pear cut into the shape of a liver are attached to the outside walls of a Marabout sanctuary; they are thought to cure the sick as they dry (E. Westermarck, *Ritual and belief in Morocco*, London 1926, i, 202). Another Moroccan practice consists of drying on a terrace the liver and kidney of a sheep skewered to a piece of prickly pear cut into the shape of the sole of the sick man's shoe and stabbed repeatedly with a knife (A.-R. de Lens, *Pratiques des harems marocains*, Paris 1925, 12). The Bedouin of central Arabia eat for breakfast cinnamon, known moreover as *d'irf el-ḥebūd* (*ḥiraf al-ḥubūd*), "skins of liver", as a cure for liver complaints (J.-J. Hess, *Von den Beduinen des Innern Arabiens*, Zürich and Leipzig 1938, 148 f.).

Divination by means of the liver (hepatoscopy), which was so important in ancient Mesopotamia and Etruria but already renounced by the Arab queen Zenobia in the 3rd century (Zosimus, i, 59), was not practised by the Arabs (cf. T. Fahd, *La divination arabe*, Leiden 1966, 397, 527) although it is mentioned by Ibn Khaldūn in a general list of methods of divination (*Muḳaddima*, i, 191, 194, ed. Quatremère; i, 369, 371 ed. Wāfl) and referred to by a Rabbi Levi of uncertain date who compares the king of Babel's

practice of hepatoscopy in Ezekiel xxi, 26, with "some Arab who slaughters a sheep and studies its liver" (Midrash Rabbā to Eccles. xii, 7, etc. in *Monumenta Talmudica*, v, *Geschichte*, Vienna and Leipzig 1914, 48, § 84).

The liver plays a minor role in folklore, mostly as a curative. In Turkish tales the liver of a prince is the sole cure for a mad princess (W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953, 302), a young girl sells an animal's liver for a kiss (*ibid.*, 224), and there is a cannibal who eats human liver (*ibid.*, 172). One version of the universal theme of the heart of a magic bird (A. Aarne and S. Thompson, *The Types of the Folktale*, Helsinki 1964, 208, type 567) has the liver in place of the heart; this is sometimes replaced by the kidneys, the crop, or the heart once again (Eberhard and Boratav, *Typen* . . ., 196-8). A story from Adakale tells of a miser who eats liver as an economy, an indication that the tale is a recent one (*ibid.*, 88; cf. below).

The theme of a magical cure effected by a bodily organ (cf. Bargheer, *Eingeweide*, 159 ff., 229 ff.) combined with that of the extraordinary powers of marvellous beings is at the root of the *Shāhnāma*'s account of the cure of Kay-Kāwūs and the Iranians blinded through spells cast by the white *diw* during the invasion of Māzandarān (cf. s.v. *diw* above, ii, 323). Blood drawn from the liver of the white *diw*, which Rustam had wrenched from its breast when he defeated it, gave them back their sight (ed. J. Mohl, Paris 1838-76, Kay-Kāwūs, verse 652 ff.; ed. E. E. Bertels et al., ii, Moscow 1962, 109, Māzandarān, verse 613 ff.; tr. J. Mohl, i, Paris 1876, 428 ff.). The efficacy of the liver against blindness on this occasion came close to a principle of Taoist magical biology (J. C. Coyajee, *Journal and Proceedings of the Asiatic Society of Bengal*, n.s., xxiv, 1928, 187 f.). But, as we have seen above, the use of goat's liver for eye infections appears in Avicennian scientific medicine, and in the Book of Tobit the liver, heart and gall of a fish help cast out demons (Tobit, vi, 5; viii, 2) and the gall gives sight to a blind man (vi, 9; xi, 8). Thence without doubt the frequent use of the liver in European popular ophthalmology (Bargheer, *Eingeweide*, 284 f.).

The prime importance of the liver in the body no doubt explains, by magical deduction, a group of practices. To chew or at least nibble the liver of an enemy seems to mean annihilation or the highest curse. This gesture, Hind's nibbling Hamza's liver at Uḥud (Ibn Hishām, 581), was the origin of Mu'āwiya's derogatory sobriquet, *ibn ākilat al-akbād*, "son of the liver eater" (Mas'ūdī, *Murūjī*, iv, 439, French tr. Pellat § 1742, Pseudo-Mas'ūdī, *Kitāb iḥbāt al-waṣiyya li 'l-imām 'Alī*, cited by Ch. Pellat in *Le shī'isme imāmīte*, Paris 1970, 85). The Sinai Bedouins believe that Druzes eat the liver of Muslims (W. P. Zenner, in *Middle Eastern Studies*, viii, no. 3, Oct. 1972, 411). See parallels in Bargheer, *Leber*, 977; id., *Eingeweide*, 93, 216; W. D. Wallis, *ERE*, x, 373 ff.

In the sacrifice of the "great feast" on ro *Dhu 'l-Ḥijjā*, the liver of the victim must be eaten first, following a well-documented custom of the Maghrib allegedly supported by some *fukahā* and the Prophet's own example (E. Douṭṭé, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, 473; J. Desparmet, *Coutumes, institutions, croyances des indigènes de l'Algérie*, i, Algiers 1939, 275; E. Westermarck, *Ritual and Belief in Morocco*, London 1926, i, 234 f.; ii, 120 f.; J. Chelhod, *Le*

*sacrifice chez les Arabes*, Paris 1955, 113 f.; J. Jouin, *Hesperis*, xlv (1957), 320; A.-M. Goichon, *La vie féminine au Mzab*, Paris 1927, 264).

Among some tribes in Morocco, the bridegroom makes the gift of a bull to his bachelor friends: the liver, which must be eaten first, conveys the *baraka* and must be distributed among all the men present, but not the women (E. Westermarck, *Marriage Ceremonies in Morocco*, London 1914, 126).

5. A animal liver as food. Liver, often classed with offal and tripe, was despised and left to the destitute. Thus in southern Libya a proverb says that impoverished men grab at something *mull en-nawār 'al-kabbā*, "like gypsies after a piece of liver" (F. J. Abela, *Proverbes populaires, adages et locutions proverbiales du Liban-Sud* (in the press)). Yet in other regions liver and heart are regarded as choice morsels, as in Ḥaḍramawt (F. Stark, *The Southern Gates of Arabia*, Harmondsworth 1945, 78). In Aden today offal is imported from Somaliland, where it is not eaten (information given by Yūsuf Ṭālib). Raw liver is sometimes looked upon as a delicacy, as in the Lebanon and Jordan (A. Jaussen, *Coutumes des Arabes au pays de Moab*, Paris 1908, 65). In the Sahara, an animal killed in the hunt is speedily disembowelled. Liver, heart and lungs are tossed onto live charcoal and covered with burning sand, then eaten immediately or on the following day (M. Gast, *Alimentation des populations de l'Ahagger*, Paris 1968, 136).

In the Middle Ages, Arab markets always had their *kubūdis*, "liver vendors", who sold liver cooked with onions or roasted on skewers to people who ate on the streets or did no cooking. Manuals on *ḥisba* forbid the mixing of goat or cattle liver with that of sheep. They describe in minute detail the type and quantity of ingredients which must be added ("Ibn al-Uḫhuwwa", *The Ma'ālim al-ḫurba* . . ., ed. R. Levy, London 1938, 95 ff. of the Arabic text). Such food was often adulterated. A treatise entitled *Kimiyā' al-ṭabā'ikh*, which denounces cooks who sell fried liver that contains no liver, is already attributed to the philosopher Ya'qūb al-Kindī (3rd/9th century) (Shay-zarī, *Nihāyat al-rutba*, apud Ibn al-Uḫhuwwa, *ibid.*, 107, n. 8 and Ibn Bassām, *Nihāyat al-rutba*, in *Mashrik*, 10, 1907, 1081). On the other hand scrapings of dried or pounded and roasted liver were used as spurious musk (Sakaṭī, *Un manuel hispanique de ḥisba*, ed. G.-S. Colin and E. Lévi-Provençal, i, Paris 1931, 46; tr. P. Chalmeta-Gendron, *El-'Kitāb fi ādāb al-ḥisba*", Madrid 1968, 116 = *al-Andalus*, 33, 1968, 193) and Spanish and Moroccan *balādja* (a sort of pâté made from meat and offal) was also adulterated with liver that had gone bad, a great deal of bread, spices, etc. (*ibid.*, text p. 39, l. 13; tr. cited p. 180).

The type of rich cooking shown in mediaeval cookery books makes little use of liver. Of the many oriental treatises of this type only the *Wuṣṣla* has recipes for liver, one in which boiled liver is roasted on skewers in a caul (in the fashion of the *sharā'ih kurdjiyya*, which is made from pounded giblets and includes liver), and one for liver boiled and stuffed with whole or chopped spices (*Wuṣṣla*, Ms. A, fol. 59 r.-v.; cf. Rodinson, *Recherches* . . ., 135). Apart from that, liver is mentioned, chopped with the fat tail of a sheep (*aliya*) in the "artificial brain" (*Wuṣṣla*; cf. Rodinson, *ibid.*, 158) and fried black in sesame oil along with poultry giblets or pieces of lamb to make a sort of sauce utilized in various dishes (*Wuṣṣla*; cf. Rodinson, *ibid.*, 133, n. 4, 156). There is no real recipe for liver in the Baghdādī cookery book

of the 7th/13th century of Shams al-Dīn Muḥammad ibn al-Ḥasan al-Baḡdādī nor in the Hispano-Maghribī culinary treatise of the same era edited and translated by A. Huici Miranda.

In present-day Lebanon recipes are found for mutton or beef liver which is usually grilled on skewers. These are called *mi'laḡ*, strictly speaking "pluck, the viscera of the thorax" (M. K. Khayat and M. C. Keating, *Food from the Arab World*, Beirut 1961, 32 f.; P. Bazantay, *Enquête sur l'artisanat à Antioche*, Beirut 1936, 47; a Lebanese recipe for liver fried in vinegar in Claudia Roden, *A Book of Middle Eastern Food*, London 1968, 180). Small pieces of liver, lightly fried and served hot or cold, are used as *mezze*, hors d'oeuvres served with an aperitif (Roden, 33). In the Maghrib, brochettes of liver and heart, formerly the food of the poor, have recently become a smart dish. Since the pieces are wrapped in caul they are called *malfūf* (M. Beausse, *Dictionnaire pratique arabe-français*, Algiers 1931, 904 b; M. Gast, *Alimentation des populations de l'Aghagar*, Paris 1968, 134, 135, n. 2), and in Morocco *bū lfāf* (L. Brunot, *Textes arabes de Rabat*, ii, Paris 1952, 744; Z. Guinaudeau, *Fès vu par sa cuisine*, Rabat 1957, 39). When pieces of liver are alternated with chunks of mutton fat the dish is called *kwah* (the name for tripe, pluck, etc.) in Morocco (Z. Guinaudeau, *ibid.*, 41; cf. H. Mercier, *Dictionnaire arabe-français*, Rabat 1951, 101). The specialist chef of the grill is called a *kwayḡhī* (*ibid.*).

In Egypt, various kinds of poultry are often eaten stuffed with a mixture made from chopped liver and gizzards mixed with crushed raw wheat or minced meat (C. Wissa Wassef, *Pratiques rituelles et alimentaires des Coptes*, Cairo 1971, 381).

In Iran offal of sheep or chicken is used in a number of dishes, but liver is only mentioned in a comprehensive cookery book, probably compiled by the shah's cook and edited in 1301/1884, in kebabs grilled on skewers or in a kind of stew called *ḡasrat al-mulūk*, "the sigh" or "desire of kings" ("Alī Akbar b. Mehdī Kāshānī, *Sofre-ye aḡeme*, Ms. collection P. Ikowski, ed. and tr. M. Ghavam-Nejad, unpublished thesis, Paris 1967, 26, 27; the first recipe is found at a slightly later date in the books by Josephine Richard, alias Neshāt al-ḡawla, *Ṭabbakḡhī-yi Neshāt*, Tehran n.d., 22, and Badr al-mulūk-i Bāmdād, *Rāhnamā-yi ṭabbakḡhī*, Tehran n.d., 36).

Until recently liver was not eaten in Turkey and the butchers threw it to cats or dogs. However, consumption of liver and lungs (called *takım*, "the whole") and of pluck and tripe has recently gathered a little ground, being the speciality of itinerant Albanian merchants (called *sakatçısı*, "tripe-sellers"; information given by P. Boratav; cf. W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953, 88). Recipes for pilau using liver are found in present-day cookery books (*kuzulu pilav*, I. Orga, *Turkish Cooking*, London 1958, 125; *iç pilav*, with goose or chicken liver, C. Roden, *op. cit.*, 248), and found in Bursa by a Turkish ethnographical survey (H. Z. Kosay and A. Ülkücan, *Anadolu yemekleri ve türk mutfakı*, Ankara 1961, 101). Cf. also the brochettes of liver rolled in yoghurt in I. Orga, *Cooking with yoghurt*, London 1956, 40.

In Uzbekistan also liver is cooked en brochette (*ḡiḡar kabob*) and sometimes, as in Soviet Ādḡarbayḡdān, with pieces of fat-tail of sheep alternating with morsels of liver (*dumba kabob*); liver is also grilled then stuffed (*kovurilgan ḡiḡar*) (K. Mahmudov, *Usbekskie bljuda*, Tashkent 1962, 98, 102; N. K. Alhazov et al., *Azerbajdzanskaya kulinarıya*, Baku 1963, 43).

*Bibliography:* in the article. See also: Nikolaus Mani, *Die historischen Grundlagen der Leberforschung*, 2 vols., Basle 1959-67.

(M. RODINSON)

**KĀBİD** (?—934/1527), heretic of the early 10th/16th century. Originally from Persia, he came to Istanbul, where he was educated. In 934/1527 he was publicly maintaining, in different parts of the city, that the Qur'an depended in large measure upon the Old and New Testaments, and that Jesus was superior to Muḥammad. Complaints being made to the authorities, on 8 Şafar 934/3 November 1527 Kābīd was brought before the imperial *dīwān*, where he was interrogated by the *kāḡdī'askers* of Rumeli (Fenārızāde Muḡyī al-Dīn) and Anatolia (Kāḡdīrī Çelebi). He defended his doctrines by citing Qur'anic verses and *ḡadīths*, and the *kāḡdī'askers*, failing to refute him in argument, resorted to violent language and insults. The grand vizier (Ibrāḡīm Paḡḡa) intervened, saying that if Kābīd's teachings were false, their falsity should be demonstrated; but that it was unfitting that 'ulemā' should lose their tempers. He suspended the meeting of the *dīwān*, and Kābīd was freed. Shortly afterwards Ibrāḡīm Paḡḡa explained the position to the sultan, Süleymān, who had been following the proceedings from behind the grille (*ḡafes*). The sultan commented that there were other 'ulemā' than the *kāḡdī'askers*, and in accordance with his command the case was re-opened next day, when the *Shayḡḡh al-Islām* Kemāl Paḡḡa-zāde Aḡmed [q.v.] and the *kāḡdī* of Istanbul, Saḡdī Çelebi, were summoned. When Kābīd repeated his arguments, Kemāl Paḡḡa-zāde demonstrated the true significance of the texts upon which Kābīd relied and reduced him to silence. When Kābīd was invited to renounce his doctrines, he refused; whereupon the *Shayḡḡh al-Islām* referred the matter to the *kāḡdī* for him to pronounce sentence according to the *ḡarī'a*. The *kāḡdī* too invited him to recant and return to the true doctrine, and when he again refused sentenced him to death. He was executed immediately. Kābīd was evidently a fearless and tenacious adherent of his doctrines, from the trend of which he is assumed to be the founder of the *Khūbmeslīh* [q.v.] sect. The incident illuminates the religious currents of the period, and the personalities of the individuals involved.

**KĀBİL** [see HĀBİL].

**KABĪLA** (A.) denotes a large agnatic group, the members of which claim to be descended from one common ancestor; this word is generally understood in the sense of tribe. It derives from the Arabic root *k-b-l*, of which the form *kābala* signifies to meet, to be face to face with. The definition given by al-Nūwayrī (*Nihāya*, ii, 269), the only one, we believe, which refers to its morphology, refers specifically to this etymology: "the *kābala* was so named because its component parts are placed face to face and in equal numbers". Its structure seems indeed to be connected with that of the skull, in which the four bones, also denoted by the word *kābala*, are placed opposite to one another (*LA*, root *k-b-l*).

This term is often found in pre-Islamic Arabic poetry. Curiously enough, it is there employed almost exclusively in the plural, *kabāʾil* (*Aghāni*, ed. Beirut, ii, 81, vii, 285; al-Balādhuri, *Ansāb al-ashraf*, i, Cairo 1959, 19, 41, 50; al-Sūwaydī, *Sabʾik al-dhahab fī maʾrifat kabāʾil al-ʿArab*, Cairo n.d., 104). The Qurʾān uses it only once: "We have established you in peoples (*shuʿub*) and tribes (*kabāʾil*) so that you may know one another" (XLIX, 13). On the strength of its inclusion in the Qurʾānic vocabulary, this substantive has been the subject of various explanations. Unfortunately, these are at once imprecise, contradictory and unsatisfactory. As examples of *kābala*, al-Ḳalkaṣhandī (i, 308) cites the Rabīʿa and Muḍar groups, which others regard as *shuʿub*; the tribe would in that case include a considerable number of divisions and sub-groups. Al-Bayḍawī (*Anwār al-tanzīl*, Istanbul 1303, ii, 453) and al-Ṭabarī (*Maʾjmaʿ al-bayān fī tafsīr al-Qurʾān*, Beirut 1961, xxvi, 96) consider it to be of more modest size. According to the former writer, the Kināna would belong to this type of group, while the latter names the Bakr. In the story of ʿAntar, the Banū ʿAbs are described as a *kābala*, which is thereby reduced to a very limited size. In reality, such examples are valid only when placed in precise historical perspective. An endogamous group, of unilineal descent, does not retain either the same size or the same rank in the social hierarchy throughout its existence. Thus the Quraysh, a mere branch of the Kināna in about the middle of the 6th century A.D., after some decades had become a powerful tribe. It would therefore be difficult to accept the models suggested by the classical authors. All that can be deduced from them with certainty is that the *kābala* is a smaller group than the *shuʿub*, which is made up of several tribes, and larger than the *ʿashīra* ([*q.v.*] cf. Qurʾān, XXL, 214; IX, 24; LVIII, 22).

The Arabic dictionaries prove, in the event, to be of little more help. Like the genealogists, in classifying the technical terms of social architecture they have relied solely on one criterion, that of size. The groups fit into one another like a set of boxes: the *djāhīm* (the stock or origin) contains the *djumhūr* (population, mass), which contains the *shuʿub*, which contains the *kābala*, which contains the *ʿimāra* (sub-tribe, small tribe), which contains the *baḡn* (belly or division), which contains the *fakhdh* (thigh or section), which contains the *ʿashīra* (clan), which con-

tains the *faṣīla* (kindred; cf. Qurʾān, LXX, 13), which contains the *rahḡ* (family; cf. Qurʾān, XI, 91 f.). Although more complete than that of al-Māwardī (*Aḡḡām*, Bonn 1853, 353), the above list drawn up by al-Nūwayrī likewise omits the word *ḡayy*, to which Robertson Smith attached much importance. Despite this plethora of technical terms, the social structures of the ancient nomadic Arabs remain extremely fluid.

In the writings of contemporary authors, *kābala* is often synonymous with *ʿashīra*, although they are agreed in regarding it as numerically inferior to the latter. The same variability is to be observed among the desert Arabs, who use the two words indiscriminately to denote the clan, while the tribe is sometimes called *kābala*, sometimes *ṣaff*. In the face of such uncertainty, some ethnologists eventually gave up using a vocabulary which appears to be unsuitable for translating the social reality which nevertheless it claims to express (R. Montagne, *La civilisation du désert*, Paris 1947, 50).

We are scarcely better informed in regard to the ancient tribal organization. When seen from outside, no social group appears to be as homogeneous and united as the *kābala*. The traditional conception regards it as a large patriarchal family whose members, all closely linked with each other, bear the same patronymic name, that of their common ancestor. The homogeneity of the tribe, not to say that of the ethnic community itself, would appear to result from the process of its development, thanks to an uninterrupted series of endogamous marriages, from the time of the original founder. The groups claiming to derive from the same origin would therefore be connected with one another, like the links of a chain, and in this way they would form an enduring consanguineous unit.

The over-simplified nature of this representation is evident. Criticism is all the more justified in denouncing the artificial aspect of the classical theory since, at the tribal level itself, an extraordinary intermingling, brought about by migrations, wars and the constant movement to and fro between the desert and the city, periodically challenged even the surest of the genealogical foundations. The clan itself accepts the presence among its own people of certain foreign elements (dependents, protégés, confederates) who in the end become totally integrated with it by marriage or through the alliance of blood.

Does this mean that everything in the traditional theory of relationship among the Arabs must be rejected, and that one is confronted with a later construction, fashioned during the first century of Islam? Despite the well-known thesis of Robertson Smith, the existence of a system based on matrilinearity, in pre-Islamic Arabia, today seems very problematical. The genealogists' theories, although manifestly exaggerated, would not appear to be devoid of foundation. Certainly there could be no question of accepting the thesis of the consanguineous unity of the tribe. However, taken at the level of the line of descent, this unity is effective and serves as a basis for determining the *damawīyya*, formerly the *ʿākila* [*q.v.*], that is to say those jointly responsible for a crime committed by one of their members. A system of endogamy, carried to the limit of incest and practised on a very wide scale, forces the group back upon itself to such an extent that, when it extends, it does not cease to regard itself as a large family.

In short, it follows from this cursory examination of the classical documents that the exact significance of the word *kābala* remains as indeterminate as its morphology. We are therefore compelled to resort

to ethnological research in order to define each of these aspects. For this purpose, then, instead of citing examples from the ancient authors, let us consider the tribe as it exists today among the Bedouin. The *ḥabila* appears as an independent political group, varying in size from a thousand to two thousand persons, and even larger when the process of sedentarization has started. It is generally composed of two or three sections, nominally united by ties of kinship and in principle interdependent upon each other. Its members claim to be descended from one common ancestor, whose name they generally bear, along with those of their own section and of the clan, they jointly own an area of grazing-land, and they are ruled by one single ruler, formerly the *sayyid*, today the *shaykh*, old man, elder, a title also borne by the head of the clan.

Despite its monolithic appearance, the *ḥabila* falls into as many small, practically autonomous groups as it contains different lines of descent. The genealogists who have dwelt so insistently upon the unity of the Arab tribe have almost entirely lost sight of its heterogeneity. Now, the division of Bedouin society into interlocking groups has resulted from a fundamental duality which sets them against each other at all levels of the social structure: 'Adnān/Kaḥṭān, Rabi'a/Muḍar, Ḥimyar/Kahlān, Bakr/Taghlib, Aws/Khazraj, 'Abs/Zubayān, Hishām/Umayya, etc. Bedouin society has in fact been subjected to a progressive process of segmentation. At each stage, two blocks of apparently equal strength confront each other, and attract or repel one another in accordance with the interests of the moment. At the family level, the division should cease to operate and should be replaced by absolute solidarity, for any conflict between the members of this group would be tantamount to an act of suicide. In fact, the duality pursues its way inexorably. The division begins even within the patriarchal family, where each male is a contestant for power. To restrict ourselves to an examination of the tribe, we may state that it is often divided into two large subdivisions which strive against each other for supremacy and even make war. The Banū Ṣakh̄r, for example, are divided into the Ṭuwaga and the Ka'ābina; for a long time the leadership belonged to the latter, and then it passed into the hands of their rivals. Indeed, the tribe may be composed of several divisions, but it seems that a pluralism then tends to be reduced to a duality; an entire little world gravitates, like satellites, around the two principal leaders. When the *ḥabila* consists of three subdivisions, it often happens that the most recent of these, if not the least important, endeavours to preserve the balance between the other two. Thus the Ḥuwaytāt are divided into three large groups, two of whom show no liking for each other (Ibn Dī'āzi and Abū Tāyih), while the third (Ibn Nūjād) observes a positive neutrality, trying to make the best possible use of this ambiguous situation. Even within the subdivision, the relations of the clans with each other are not free from duality. Each one of them seems to have its twin, the other half of the cell, for whom it is both rival and supporter, and with whom it avoids contracting marriages.

In the light of these ethnographical data, the definition of *ḥabila* given by al-Nūwayrī and referred to above is seen in a new aspect. Its component parts are indeed symmetrical and of evidently equal strength.

Al-Hamdānī confirms the existence of this type of organization. The author of the *Iklīl*, who is not

particularly careful in his use of the terms of relationship, does nevertheless give most useful information on the organization of the Naṣḥk, a branch of the Bakil; they were divided into two factions (*baḥṣ*), the Yumḍjid and the Dhū 'l-Djirāb, and lived in the lower part of Ḍjawf in Rawḥān. The two groups had their own areas—over against one another and separated by the width of the valley. Each tribe (*ḥabila*) had about three hundred members. Fratricidal war decimated the two *ḥayys* (*Iklīl*, ed. Khaṭīb, Cairo 1369, x, 123 f.).

Is the structure of the *ḥabila* then of a dualist type? It would appear rather to be a matter of a particular kind of dualism, since the different sections in question, far from intermarrying, practise strict endogamy. This hypothesis seems all the more probable in that, when the tribe becomes settled, it projects the image of its divisions onto the soil itself. On the eve of the *hidira*, Mecca was divided into two concentric, rival and complementary halves: in the centre were the Kuraysh al-Biṭāḥ, on the periphery the Kuraysh al-Zawāhir. A similar situation was observed in Medina where the two sister tribes were rivals for power. The Khazraj had taken possession of the principal points of the city, while the Aws were relegated to the outskirts. This same type of structure is found today in many small Jordanian towns inhabited by former Bedouins, particularly in Ma'ān and Karak.

**KĀBĪR PANTHIS** [see Supplement].

**KĀBĪS** (Gabès), a town in Tunisia on the gulf of the same name (the Little Syrte of antiquity), 404 km. to the south of Tunis and 150 km. from Gafsa [see KĀFSA]; it has 40,000 inhabitants, of whom 1,200 are Europeans, and is the chief town of a governorate with a population of 204,000 (1966 census). The town of Gabès, divided since 1957 into four districts, includes the old townships of Manzil, situated higher up the Oued-Gabès, and Djāra, situated downstream, localities which have always been divided by fierce and still potent rivalry. A new quarter, Bab-Bhar or Gabès-Port, which is located further downstream, dates from the time of the French protectorate, and another built-up area extending towards the south has been added in more recent times. In 1959 and 1962 Manzil and Djāra suffered severely from the devastating floods of the Oued-Gabès, which is now kept under control by an additional channel that drains off the flood-waters directly to the sea. In effect, Gabès is situated at the bottom of a basin which is enclosed on the north by a loop of the *oued*, and on the south shut in by the

hills of Sidi-Boulbaba—the site of the sanctuary of the patron saint of the town, alleged to be a companion of the Prophet—and the Manāra, a superb view-point where, in the Middle Ages, a lighthouse stood, and where, since 1962, a working-class district has been constructed to house those made homeless by the recent floods.

According to A. Bechraoui, who has devoted a very recent study to the subject, the oasis of Kābis contains a stock of 1,400,000 trees, of which 650,000, that is 47 per cent of the total, are rather mediocre date palms. Next in order of importance come the pomegranate trees, 107,000 in number and of excellent quality, which are the second most important crop produced in Tunisia; then come peach trees, vines and apricot trees. Olive trees succeed only in the Kettana-Teboulbou-Oudref-Metouia region. Banana trees produce ripe fruits, but they are rather sparse. Cultivated land is devoted to the production of cereals in small quantities, fodder (especially lucerne), tobacco, henna and also market-gardening, asparagus being a recent introduction. Live-stock are few in number; animal rearing is mainly carried out on a domestic basis and is regarded as a means of making a little extra money. The coastal waters, which are shallow and contain an abundance of fish, have been left almost unexploited. With the help of irrigation, the oasis has been extended as far as possible. Some 60 borings having been made between 1890 and the present day, the over-exploited underground water-supply is in fact on the verge of becoming exhausted.

Kābis has recently been selected as a development centre for southern Tunisia: equipment has been provided for a port carrying vessels of 50,000 tons; Industries Chimiques Maghrébines (I.C.M.), a company specializing in the manufacture of nitrate fertilizers, has been set up; and a gas pipe-line connecting the town with the El-Borma fields, providing fuel for brick-kilns and the power station, has been installed. Craft-work and tourism provide additional employment and can be developed still further.

History.—Kābis is the Arabic form of the name of the city known in antiquity as Tacape, Tacapa or the plural form Tacapae. The Arabic form derived from the very commonly used accusative, Tacapas, with the elision of the Libyan Berber prefix *ta*. The site of Kābis has certainly been inhabited since the neolithic period, as is shown by many remains. Later, the Phoenicians were probably the first to establish an emporium specializing in trade with Numidia and across the Sahara. The emporium became a Carthaginian port, before being transformed into a Roman colony; after this date, specific information regarding the town is to be found.

From the reign of Tiberius (14-37 A.D.) the systematic development of the region began, as is attested by the *comitia centuriata*. Tacapas was connected with Carthage by the main coastal road. In the year 14 a strategic route was opened, connecting it via Capsa (Kāfsa) with Thelepte and Ammaedara (Hādra) where the 3rd Legion (Augusta) was stationed. As a result of the Carthaginians' efforts in an earlier period, and as a result also of this network of roads which stimulated the port's activity, as well as of the abundant waters of the Oued-Gabès and of the Pax Romana, the town, the centre of which was certainly located upon the eminence where the sanctuary of Sidi Boulbaba now stands, was extensively developed—as to the scale of this development, however, there is some disagreement—and during the Christian period it became the

seat of a bishopric. However, it was fortified only at a comparatively late date. "Until the middle of the 6th century Gabès at least still possessed no ramparts", wrote Ch. Diehl (*L'Afrique byzantine*, i, 229). It was defended only by a *castellum* barring the invasion route, that is to say the isthmus between the coast and the Chott El-Fedjedj, linking Byzacena with Libya. It was there that, in 547, the Byzantine forces suffered a disastrous defeat at the hands of the Astrices tribe. No doubt it was after this disaster that a wall was erected round Tacapas which survived at least until the 16th century. Today, no monuments from its ancient past remain in Kābis though, to be strictly accurate, there are traces of the "Roman dam" across the Oued-Gabès, several pillars and capitals that have been incorporated in the mosque of Sidi Idris or in the sanctuary of Sidi Boulbaba, and also some other fragments of lesser value which have been used in buildings in the old quarters.

The circumstances under which Kābis came to Islam remain obscure. It is however certain, despite assertions made later by al-Wazīr al-Sarrādjī (*Hulal*, i, 344), that 'Abd Allāh b. Sa'd [*q.v.*] did not besiege the town during his invasion of Byzacena in 27/647-8. It was only later that it was captured, probably during the campaigns directed by Mu'āwiya b. Hudaydj or his successor 'Uqba b. Nāfi', between the years 34/654 and 50/670. It was later evacuated, after the defeat and death of 'Uqba in Tahūda, in about 64/684. The victor, Kusayla, established himself in Kayrawān and from there, according to Ibn 'Abd al-Hakam (*Futūḥ*, 70-1), he extended his rule over the neighbouring regions, including the "Gate of Kābis". It was through this gate that, in about 74/693-4, the forces of al-Kāhina [*q.v.*] expelled Ḥassān b. al-Nu'mān [*q.v.*] from the country he had come to recover. Some years later, however, the same gate once more served as his route.

From this time, Kābis was finally acquired by Islam and became intimately involved in its existence. In particular, Kābis was not spared the violent *Khāridjite* storm which racked the whole of Ifrikiya from 122/740 to 155/772. The Zanāti 'Ukāshā b. Ayyūb al-Fazārī, of Ṣūfrite persuasion, captured it in 123/741 and threatened Kayrawān, before being defeated and killed (125/743). Some years later, under the rule of 'Abd al-Raḥmān b. Ḥabīb, it once again fell into the hands of the *Khāridjites*, this time those of Ibādite tendencies. Again, it was recovered and the rebel leader Ismā'īl b. Ziyād al-Nafūsī was defeated and killed in about 131/748-9. The assassination of 'Abd al-Raḥmān b. Ḥabīb (137/755) was the signal for new disturbances and a new *Khāridjite* outbreak, during which the town passed from one to another of the opposing factions. The Ibādite Abu 'l-Khaṭṭāb captured it at the beginning of 141/middle of 758. It was liberated by Ibn al-Ash'ath in 144/761, only to be lost once more. Finally Yazid b. Ḥātim al-Muhallabī, the founder of the Muhallabid dynasty, entered the town on 20 Djumādā I 155/28 April 772 and for a quarter of a century brought an end to the bloodshed that had tormented the region for several decades.

In the Aghlabid period, Kābis became the chief town of the district and the seat of a governor. From the testimony of al-Shammākhī (*Siyar*, 203), who mentions an *'āmil* of the *imām* 'Abd al-Wahhāb (168/784-208/823), it might be thought that the town formed part of the Rustamid kingdom. In fact, this *'āmil* was merely a tax-collector who in a somewhat clandestine manner was organizing the *ṣadaqāt*

of the Ibādites of the "diocese" on Tāhart, since we know for certain that, throughout the 3rd/9th century, the town was at all times dependent upon the political authority of Ḳayrawān. For Kābis it was a period of peace, scarcely broken by the battle at which, in 283/896, not far from its walls, Ibrāhīm II crushed the Nafūsa Ibādites, who had become too menacing. In the 4th/10th century it passed into the hands of the Fātimids, who had it governed by the Kutāma Banū Luḳmān, whose liberality was immortalized by the poets.

The rule of the Zirids was less peaceful. It began with a Khāridjite revolt (361/972). Kābis was besieged and the suburbs devastated. The Fātimid caliph al-Ḥākim (386/996-411/1021 [q.v.]) then attempted, though in the end without success, to take both Gabēs and Tripoli from the Zirids. The town was governed for the Zirids by the Banū 'Āmir, and afterwards by a brother of Bādīs (386/996-406/1016 [q.v.]), Ibrāhīm, who in turn was succeeded by Manšūr b. Mawās. Its last governor, nominated by al-Mu'izz (407/1016-464/1062) was Ibn Walmiya. The town then broke away from the Zirids.

In fact, it was in the same region, at Ḥaydarān [q.v.], in 443/1052, that the disaster occurred as a result of which Ifrīkiya passed into the hands of the Hilālīs [see HILĀL]. It should however be explained that the Hilālīs caused no damage either to the town—which was by then surrounded by a strong wall—or to the oasis, although it was undefended. Some sort of understanding, naturally based on the payment of tribute, must certainly have been reached between the invaders and the governor of the town since, from 445/1053-4 and thanks to the protection afforded by the Riyāhid chief Mu'nis b. Yahyā, certain members of the Zirid dynasty who were in extreme danger openly took refuge in the safe haven of the town. Kābis did not immediately break off relations with Mahdiyya. It was in about 454/1062-3 that the governor, al-Mu'izz b. Muḥammad b. Walmiya, angered by the way in which his brothers Ibrāhīm and Ḳāḍī had been treated by the Zirid amīr, plotted with Ḳāḍī and proclaimed himself independent, under the protection of Mu'nis b. Yahyā. "This was the beginning of the occupation of the town by the Hilālī Arabs", remarks al-Ṭijānī (*Riḥla*, 96). Ibrāhīm succeeded his father, and then came the turn of Ḳāḍī, who was put to death (489/1095-6) by the inhabitants of Kābis in retaliation against his tyranny.

This assassination brought to power the Banū Ḍjāmi' who, through the medium of the Dahmān, were allied with the Riyāh Hilālīs. We are told, it is true, that the Fātimid caliph al-Mustanṣir (427/1036-487/1094), at the same time as he unleashed the Banū Hilāl upon Ifrīkiya, had offered Tripoli and Kābis to the Zughba group as their share. In fact, these latter were satisfied with Tripoli, and it was a Dahmano-Riyāhid, Makkī b. Kāmil b. Ḍjāmi' (al-Ṭijānī, *Riḥla*, 71, 97), who founded a dynasty in Kābis, after eliminating a brother of the amīr Tamīm (454/1062-501/1108), 'Umar b. al-Mu'izz, whom the Kābis insurgents had placed in authority. Makkī's successor was his son Rāfi', who in turn was succeeded first by Ruṣḥayd b. Kāmil b. Ḍjāmi' (about 515/1121-541/1147) and then, after the brief seizure of power by the freedman Yūsuf, by Muḥammad b. Ruṣḥayd, and finally by Mudāfi' b. Ruṣḥayd.

From the middle of the 5th/11th to the middle of the 6th/12th century, both under its independent governors who enjoyed Riyāhid protection and also under the direct administration of the Banū Ḍjāmi',

the history of Kābis was one of constant turmoil, at home through a whole series of intrigues and fruitless struggles in the attempt to seize power, and in external affairs through the expansionist policy of the Normans of Sicily, who were trying to establish control over the coast of Ifrīkiya. Despite various sieges (in 474/1081-2, 479/1086-7, 486/1093-4 and in about 511/1117-8) which finally failed, the town was only recovered for brief periods (in 489/1095-6 and 542/1147) by the successors of al-Mu'izz. In order to oppose these successors, the town in its turn adopted a frankly aggressive policy, welcoming their enemies and sending its troops, either alone or with allies, to assault their capital (in 476/1083-4, 493/1099-1100, and in about 511/1117-8). Against them, it made alliances not only with the Hilālīs but also with the Normans of Roger II, who sent the usurper, at his own request, a diploma of investiture in fair and correct form as well as certain Christian decorations, and then provided a successor, Muḥammad b. Ruṣḥayd, after the occupation of Mahdiyya (543/1148) and the whole of the Sahel. Despite all these conflicts, the town does not appear to have suffered immoderately. It was even embellished with a fine palace, that of al-'Arūsayn, begun probably by Ibn Walmiya and completed by Rāfi', who took the credit for it. It should incidentally be noted that Ruṣḥayd struck coins in his own name, a gesture affirming his independence.

The coming of the Almohads put an end to the independence which Kābis had already practically lost since 541/1146-7 by passing under the domination (tolerant, admittedly, but effective) of the Normans. The town, which had risen against the Normans in 553/1158-9, was captured by Abū Muḥammad 'Abd Allāh, the son of 'Abd al-Mu'min b. 'Alī [q.v.], in 554/1160. The period of peace it then enjoyed lasted only for a few decades. Soon Kābis became in fact a subject of contention between the Almohads and two adversaries who at certain times were allies, at other times hostile to one another, Ḳarākūsh [q.v.], already master of Tripoli, and the Banū Ḡhāniya [q.v.]. Al-Manšūr (580/1184-596/1199) had to intervene personally in Ifrīkiya since he was in danger of losing it and, by his victory at al-Ḥamma (583/1187-8), he succeeded in recovering the town, which Ḳarākūsh, in alliance with 'Alī b. Ḡhāniya, had turned into a fortified base. Ḳarākūsh soon established himself there once again, but then, having fallen out with his former ally, he lost the town again to the Almohads, who had taken advantage of the situation. Yahyā b. Ḡhāniya had meanwhile succeeded 'Alī, and after crushing Ḳarākūsh and taking Tripoli from him, he laid siege to Kābis in 591/1195; to force it to surrender, he laid waste the oasis where, it is claimed, he left only one palm-tree standing to mark the spot. On his victory, he made Kābis his capital and extended his authority over the whole of Ifrīkiya, including Tunis, which had been captured in 600/1203. Al-Nāṣir (596/1199-609/1213) thus had to reconquer the whole of the eastern part of his kingdom. He inflicted a decisive defeat on Yahyā b. Ḡhāniya near Kābis (Rabi' I 602/October 1205) and recaptured the town, which was then finally acquired by the Almohads.

But the Almohads' reign in Ifrīkiya was nearing its end. Abū Zakariyyā' Yahyā (625/1228-647/1249), the founder of the Ḥafsid dynasty, was the ruler of Kābis when he was nominated by the caliph al-Ma'mūn (624/1227-629/1232) as governor of the whole of Ifrīkiya. Supported by 'Abd al-Malik b. Makkī, the most influential land-owner in the city,

he succeeded in capturing Tunis from his brother, who was dismissed from office. This date marks the rise to fortune of the Banū Makkī, who, from 681/1282 to 796/1394, constituted what was truly a small, local and largely autonomous dynasty in Kābis—and, in actual fact, independent. The two most powerful members of this dynasty were 'Abd al-Malik b. Makkī and his brother Aḥmad; the latter was ruler of Djerba, in particular, and from there for a time he succeeded in extending his authority as far as Tripoli. The two brothers were of Luwāta origin; they were cultured—they liked to affect the style of a *faḳīh*—and also clever, and they often succeeded in influencing Ḥafṣid policy, in which they took an active part, to their own advantage.

In Rādjab 681/October 1282, 'Abd al-Malik opened the gates of Kābis to the usurper Ibn Abī 'Umāra (1282-4) and helped him to ascend the throne. In his gratitude, he is said to have presented 'Abd al-Malik "with all the young slaves who were in the palace of the late sultan" (R. Brunschvig, *Ḥafṣides*, ii, 106) and to have appointed him as his vizier, with particularly wide financial powers. But the reign of Ibn Abī 'Umāra did not last long, and 'Abd al-Malik returned to his fief of Kābis. In 1286, the town was besieged by the amir Abū Zakariyyā' and its palm-grove was laid waste. During the disturbances that followed, 'Abd al-Malik did not remain inactive. In 1287-8 he gave his support (this time without success, however) to the pretender Ibn Abī Dabbūs against Abū Ḥafṣ (683/1284-692/1293); then, in 693/1294, he rejected the suzerainty of Tunis in order to lay claim to that of Bougie where a grandson of Abū Zakariyyā', the man who had besieged Kābis in 1286, was seeking to obtain his ancestor's inheritance. In 732/1332 a new pretender, 'Abd al-Wāḥid al-Liḥyānī, also received his support against Abū Bakr (718/1318-747/1346). The years that followed saw the apogee of the Banū Makkī. From 751/1350, while hostile to the powerful and crafty chamberlain Ibn Tafrādjīn, they succeeded in enlarging their territory and in making their authority more firmly based. Their prestige was such that, in about 1355, Venice concluded an advantageous treaty with them separately. Consistently hostile to Tunis, they gave their support to the second Marinid invasion (752/1352-757/1357), led by Abū 'Inān [q.v.].

But some decades later, the reign of Abu 'l-'Abbās (772/1371-796/1374) marked the end of independence for all the cities in the south. The reconquest of Kābis was not easy, however. In Dhu 'l-Ka'da 781/February-March 1380, the town was taken and a Ḥafṣid governor, Yūsuf b. al-Abbār, was installed there. But in the following year 'Abd al-Wahhāb, a grandson of 'Abd al-Malik b. Makkī, made himself master of the town and put the governor to death. Abu 'l-'Abbās had to lay siege to it in person in 789/1387 and, to force it to surrender, he had its date-palms cut down, a step which gave it a somewhat healthier climate, according to Ibn Khaldūn. 'Abd al-Wahhāb then surrendered, handed over one of his sons to the Ḥafṣid sovereign as a hostage, and paid a substantial indemnity. But 'Abd al-Wahhāb was assassinated in 792/1390 by his uncle Yaḥyā b. 'Abd al-Malik b. Makkī, who proclaimed his independence. In 796/1393-4 a successful plot delivered him into the hands of the Ḥafṣid sovereign, Abū Ḥafṣ, who had him put to death. This was the end of the Banū Makkī and of the independence of Kābis.

From then onwards, little was heard of the town. Like the rest of the south, it again broke away from the authority of the last Ḥafṣids, who were under

Spanish protection, before coming under Turkish domination along with the whole of Tunisia, which was organized as a *paṣṣalik* (1574). 'Uṯmān Dāy (1590-1610), who made great efforts to restore peace in the country, established in Dījāra a colony of *kū-lughlis* (*kul-oghlu*), that is to say those of mixed breed, the progeny of Turks and native women. With its population of citizens, and with its situation on the edge of the Sahara, Kābis suffered more than many other towns from the anarchy which preceded the French occupation. It was under two-fold pressure, both from the nomads, who used to vanish into the desert or take refuge beyond the Libyan frontiers on the approach of regular troops, and from the beylical authorities. Thus, without being at the centre of the storm, Kābis was not spared in the insurrection of 'Alī b. Ḥadhāhum (1864). In 1870, it was actually plundered by the *khāsnadār*.

At the time the Protectorate was set up, a split developed between the two rival groups over the attitude to be adopted—Dījāra opted for acceptance, Manzil for resistance. The occupation of the latter place was thus relatively difficult: it began on 24 July 1881, but was not completed until the end of November, after the fortifications had been entirely destroyed.

During the Second World War a defence line was constructed to the south of Kābis, at Mareth, as a result of which the town was bombarded violently and severely devastated, but it did not escape occupation by the German army (19 Nov. 1942). It was recaptured by British and French forces on 29 March 1943.

Historical Geography:—Kābis has been well defined as "a maritime oasis". At all periods, its prosperity has been bound up with the richness of its luxuriant vegetation and the activity of its ports, the natural outlet for Saharan trade. Strabo (c. 58 B.C.-c. 25 A.D.) already described it as "a very large market" where merchandise from the regions of the Sahara was exchanged for goods being sent to Numidia. The elder Pliny (23-79 A.D.) speaks of the equitable sharing of water for irrigation, according to a fixed quota, among the inhabitants—a system still in force—and of the richness of the vegetation, which falls into three categories—date-palms; then olives, figs, pomegranates and vines; and lastly cereals and market-gardening.

No further precise geographical particulars relating to Kābis, which in the meanwhile had become Muslim, are recorded until the 3rd/9th century. Ibn Khurrādādhbih (d. 272/885-6) refers to it, without further comment, as "the town of the foreign *Afāriḳa*" (*madīnat al-Afāriḳa al-a'ādjim*), *Masalik*, 6-7; this expression suggests that in his time the *Afāriḳa*, that is to say the descendants of the Graeco-Romans and the latinized Berbers, mostly Christian, still constituted the major part of the population. It is certainly these *Afāriḳa* who are designated by the term *Aḍjam* in al-Ya'qūbī (d. about 282-92/895-905), who adds that the "very mixed" population was composed of Arabs and Berbers alike. Al-Ya'qūbī also notes that Kābis was "an important and prosperous town, where trees and fruit are abundant".

In the middle of the 4th/10th century, Ibn Ḥawkal tells us that it was inhabited predominantly by Berbers, and for the first time records a community of Jews, who were subject to a special tax. He remarks that its inhabitants "are not over-endowed by nature in matters of beauty and cleanliness and are somewhat simple" (*Ṣūrat al-Ard*, 72; trans. Kramers-Wiet, 66). He notes that it was surrounded by a wall and a ditch, and that outside the walls there

was a suburb—here recorded for the first time—where the markets were held. Of its varied and abundant produce he makes particular mention of oil, wool, great quantities of silk of excellent quality, and very good leather, soft to the touch and perfumed, which was exported to all parts of the Maghrib. Alas! the hinterland was inhabited by thieving Khāridīites who had sacked and burnt the suburb, bearing a particular grudge against the possessions of merchants and *Dhimmis*.

At the end of the 4th/10th century, al-Muḳaddasī depicts it as a town "smaller than Tripoli", "built of stone and brick, rich in date-palms, grapes and apples" (*Aḥṣan al-taḥāsim*, 12-13). Its "hinterland was inhabited by Berbers" and its walls "pierced by three gates".

The description given by al-Bakrī and often repeated by later geographers is the most detailed and goes back to the middle of the 5th/11th century, the time when the town was ruled by Ibn Walmiya under the protection of the Hilālī chief Mu'nis b. Yaḥyā. The town was then still contained within its ancient wall, constructed of hewn stone, the wall being reinforced with a ditch which could be flooded in time of danger. Since the time of Ibn Ḥawḳal, however, it had seen great developments. In particular it was surrounded, not by one but by several suburbs to the south and east, and by markets and inns (*fanādiḳ*), a sign of intense commercial activity. It was embellished with a rich mosque and possessed numerous *ḥammāms*.

The only shadow in this picture was that the climate had become unhealthy—this had not been so earlier—as a result of the destruction of a talisman which had come to light during the search for some treasure. This legend of the talisman certainly refers to the demolition of the ancient buildings situated within the walls on the heights of Sidi Boulbaba, where the air is always very healthy, to allow for the construction, from the middle of the 4th/10th century, of the suburbs in the unhealthy basin enclosed by the *oued*. At the end of the 5th/11th century the suburb furthest away from the ancient walls, on the site of the present quarter of *Djāra*, was already fully urbanized, as is shown by the mosques of Sidi Idris, Sidi al-Ḥādīdī 'Umar and Sidi b. 'Isā, which G. Marçais attributed to the Banū *Djāmi*' (*Architecture*, 77-8) and which are all concentrated in this quarter. It was noted earlier that some fragments from buildings of antiquity have been re-used in these and also in other old buildings. Thus, from the middle of the 5th/11th century, the ancient city had begun to be deserted and eventually disappeared entirely, being replaced by the suburbs, an operation that intensified the unhealthy situation condemned by all the geographers from al-Bakrī onwards, whereas there had been no question of this beforehand.

Among the inhabitants, according to al-Bakrī, a distinction was still made between Arabs and *Afāriḳa*, which indicates that the ethnic fusion was still incomplete. The populace was the subject of various gibes—which are repeated in the *Masālik* somewhat complacently—on the grounds that the houses were not equipped with any latrines, and that excrement was used to improve the orchards, customs which can all still be verified (A. Bechraoui, *La vie rurale dans les oasis de Gabès*, 317). The Berbers lived in huts (*akḥṣāṣ*), and principally they inhabited the hinterland. They were composed primarily of Luwāta, Lamāya, Nafūsa, Mazāta, Zuwāgha, Zuwāra and other smaller groups. The oasis of Kābis produced great quantities of bananas, sugar cane and all kinds of fruit which provided supplies for Ḳayrawān.

Unique in Ifriḳiya, it possessed a huge forest of mulberry trees which made it possible for excellent silk to be produced in abundance. In this connection it should be noted that Geniza [*q.v.*] documents confirm that Ifriḳiya was a great exporter of silk in the 5th/11th century, but that S. D. Goitein has failed to find any specific reference there to Kābis. Finally, al-Bakrī tells us that the port of the town, marked by a lighthouse which was praised as a marvel—a tower of which nothing now remains except its site on an eminence still known by the same name, *al-Manāra*—was visited by ships "from all corners of the earth".

In the middle of the 6th/12th century, al-Idrīsī still speaks of the *Afāriḳa*, but in an incidental way, and there can be no doubt that, in that period, they no longer constituted a really important and distinct element of the population. The people, he adds, "are lacking in elegance, but are correctly and cleanly dressed" (*Nuzha*, 77). The town was still developing rapidly. Al-Idrīsī gives especial praise to its *ruḳab*, a variety of honey-like dates conserved in large jars. It still produced oil, "exported in great quantities in all directions". It had however undergone various changes—the harbour, once so frequented according to al-Bakrī, was said by al-Idrīsī to be barely navigable on account of its shallowness and the wind; there was no longer any reference to the lighthouse; the silk industry, now in decline, had withdrawn to the little village of Ḳaṣr Saḍīdīa, at the source of the *oued*; the leather industry, praised by Ibn Ḥawḳal and passed over in silence by al-Bakrī, had on the contrary become outstanding and its products were exported in large quantities.

Writing at the beginning of the 7th/13th century, Yāḳūt tells us nothing new, merely repeating al-Bakrī word for word. Ibn al-Shabbāḥ (618/1221-681/1282), reproduced by al-Wazīr al-Sarrāḍī, describes Kābis as "a large town" and states that, among its inhabitants, three elements could still be distinguished—Arabs, Berbers and *ʿAdjam*, that is to say *Afāriḳa*. This is the last time that the division of the populace into three ethnic groups is mentioned. Towards the end of the 7th/13th century, al-ʿAbdarī, when travelling through the city while on the pilgrimage, formed a very poor impression of the place: it is a dirty, evil-smelling town, he remarks, the pretentiousness of whose inhabitants is only equalled by their ignorance and impiety.

The account given by al-Ṭīḍjānī, who spent four days in the town in the middle of *Djūmādā I* 706/end of November 1306, is different again. "This is a beautiful maritime and Saharan town", he exclaims, "a true earthly paradise, in short a Damascus on a smaller scale". However, an important transformation was in progress. It is true that the ancient walls were still standing, but the centre of activity had moved out to "the suburbs, which were extensive and included most of the markets" (*Rihla*, 86-7). In the heart of the old town, the minaret of the Grand Mosque had lost its equilibrium and was leaning dangerously; the *Ḳaṣaba* and the palace of the Banū *Djāmi*' "the Ḳaṣr al-ʿArūsayn a marvel unparalleled in the world", were nothing more than ruins (*Rihla*, 94-5). The air was unhealthy than ever, the inhabitants' faces were pale and epidemics frequent, on account of the oleanders (*al-dīflā*), al-Ṭīḍjānī explains, for they polluted the water, apart from two springs, ʿAyn al-Amīr and ʿAyn Salām.

We then have to wait until the beginning of the 16th century—that is to say, for the account of Leo Africanus, who visited Tunisia in 1517 (*Description*, ii, 398)—for further details of the development of

Kābis. It was, it seems, still "a very large town", and the old city was still surrounded by its "high ancient walls". But the fact that "it has been sacked by the Arabs" has brought about its decline. Its inhabitants were scattered about in the oasis. "Their skins are black. They farm or they fish, in poverty, and under constant pressure from the Arabs and from the king of Tunis" (*Description*, ii, 398). In short, the town's ruin was complete; there was no longer any reference to its abundance of fruit, to its industries, its exports in all directions. Not one word of the activity of its port, or of its markets: insecurity had killed its trade, including the trans-Saharan trade which had left such a strong mark, doubtless through interbreeding with black slaves, upon the complexion of the inhabitants, who finally became of one single type in their poverty.

In the middle of the 19th century, V. Guérin was unable to discover any traces of the ancient walls. Nothing survived except for old hovels in Manzil and Dǧāra which, according to F. Laffite and J. Servonnet, scarcely deserved to be called houses. Manzil then had 3,500 inhabitants and Dǧāra 4,000, out of a total population for the oasis estimated at 10,000. In 1873, Captain Roudaire conceived the idea, which when examined proved to be impracticable, of an inland sea, inundating the region of the Chotts by means of a canal linking it with the Gulf of Kābis.

AL-KĀBIŞI, 'ABD AL-'AZIZ B. 'UṬHMĀN B. 'ALĪ, ABU 'L-ŞAQR, astrologer, came from one of two towns called Kābişa (Yāqūt, *Mu'ǧjam al-buldān*, iv, 308 of the Beirut ed.), the one two farsakhs east of Mawṣil and the other near Sāmarrā. He is said by Ibn al-Nadīm (ed. Flügel, 265; quoted by Ibn al-Kiṭī, ed. Lippert, 64) to have studied Ptolemy's *Almagest* under 'Alī b. Aḥmad al-'Imrānī of Mawṣil (d. 344/955-6) "in our time"; Ibn al-Kiṭī adds that this refers to 370/980-1. Al-Kābişī is in fact cited by al-'Imrānī in his *In electionibus horarum* (J. M. Millás Vallicrosa, *Las traducciones orientales*, Madrid 1942, 338).

Al-Kābişī's principal surviving work, *al-Madkḥal ilā šinā'at aḥkām al-nudǧūm* (Hādǧidī Khalfā, v, 473 and 476) in 5 fuṣūl, is dedicated to Sayf al-Dawla, the Hamdānid ruler of Aleppo from 333/944-5 to 356/966-7. In *faṣl* 4 he uses, in an example, the year 317 Yazdǧird (A.D. 948-9). This book is, as its title indicates, an introductory exposition of some of the fundamental principles of horoscopy; its present usefulness lies primarily in its quotations from al-Andarzǧhar, al-Kindī, al-Hind, Ptolemy, Dorotheus, Māshā'illāh, Hermes, and Valens. But it was highly valued in the Middle Ages; there are many Arabic manuscripts (including some in Hebrew script), though no commentaries. A Latin version was made by Ioannes Hispalensis in 1144, a French translation (presumably from the Latin) by Pêlerin de Pousse in 1362; Ioannes' Latin translation was commented on by Ioannes de Saxonia at Paris in 1331 and by V. Nabod in 1560, and probably was also the text commented on by Francesco degli Stabili (Cecco d'Ascoli) (1269-1327).

In the preface to *al-Madkḥal* al-Kābişī mentions his (now lost) *Kitāb fi šihbāt šinā'at aḥkām al-nudǧūm*, which answers the equally non-extant *Risālat 'Isā ibn 'Alī fi ibṣāl aḥkām al-nudǧūm* (see also al-Bayhaqī, *Tatimma*, 85). 'Isā ibn 'Alī may be the well-known Ḥarrānian astronomer who made observations at Baǧhdād and Damascus in 214/829-30 and 217/832-3. A manuscript in Istanbul (AS 4832) contains three short treatises written by al-Kābişī: *Risāla fi anwā' al-a'dād wa farā'if min al-a'māl mim mā dǧama'ahū min mutakaddimī ahl al-'ilm bi hādḥihi al-šinā'a*, a *Risāla fi 'l-ab'ād wa 'l-adjirām*, and a *Mā šarahaḥū min Kitāb al-fuṣūl li 'l-Farǧhānī*. The first two are dedicated to Sayf al-Dawla. We also have a poem describing the rainbow which Ibn Kḥallikān (*Wafiyāt*

*al-a'yān*, iii, 79 of the Cairo ed.) says some (including al-Tha'ālibī in his *Kitāb yaṭimat al-dahr*; not located therein) attribute to Sayf al-Dawla, others to al-Ḳabiṣī. There also exists, in a Latin translation by Ioannes Hispalensis and with a commentary by Ioannes de Saxonia, a *De planetarum coniunctionibus* attributed to Alchabitius; it was translated into French by Oronce Finé (1551). It is not, as Steinschneider suggested, *fuṣūl* 4 and 5 of *al-Madkhal*, and perhaps it is not by al-Ḳabiṣī at all; it was not known either to al-Bayhaḳī or to Hādīdjī Khalifa.

**Bibliography:** There are short references to al-Ḳabiṣī in the several Arabic sources cited above. In modern times he has been noticed by M. Steinschneider, *Die hebräischen Übersetzungen*, 561-2, and *Die europäischen Übersetzungen*, repr. Graz 1956, 45-6; Suter, 60-1; C. A. Nallino, *Al-Battānī*, i, 246 and 309, and *Raccolta di scritti*, v, 338; and Brockelmann, I, 254 and S I, 399. Manuscripts and editions of the Latin translations of his *Isagoge* and *De planetarum coniunctionibus* are listed in a most confused and unreliable fashion by F. J. Carmody, *Arabic Astronomical and Astrological Sciences in Latin Translation*, Berkeley-Los Angeles 1956, 144-50. I list here the editions actually existing in the British Museum, the Bibliothèque Nationale, and at Harvard. 1) *Isagoge*: Ed. Matheus Moretus de Brixia, Bologna 1473. Publ. E. Ratdolt, Venice 1482. Ed. Bartholomaeus de Alten de Nusia (with the comm. of Ioannes de Saxonia), E. Ratdolt, Venice 1485; I. and G. de Forlivio, Venice 1491; I. and G. de Gregoriis, Venice 1502 and 1503; and M. Sessa, Venice 1512. Ed. Guilhelmus Huyon (with the comm. of Ioannes de Saxonia and the notes of Petrus Turrellus), B. Trot, Leiden [1520?]. Ed. Antonius de Fantis Taruisinus (with the *De planetarum coniunctionibus* and the comm. of Ioannes de Saxonia), M. Sessa and P. de Ravanis, Venice 1521; and P. Liechtenstein, Venice 1521. And publ. (with the comm. of Ioannes de Saxonia), Paris 1521. V. Nabod's comm. was published as *Enarratio elementorum astrologiae*, Cologne 1560; Cecco d'Ascoli's *Commento all' Alcabitio* was edited by P. G. Boffitto, Firenze 1905. 2) *De planetarum coniunctionibus*: Ed. Bartholomaeus de Altem (with the comm. of Ioannes de Saxonia), E. Ratdolt, Venice 1485; and I. and G. de Forlivio, Venice 1491. See also the editions of the *Isagoge* by Antonius de Fantis. The French translation by Oronce Finé was published as an appendix to his *Les canons et documents très amples touchant l'usage et pratique des communs almanachs*, Paris 1551 and 1557. (D. PINGREE)

**AL-ḲABIṢĪ** (OR IBN AL-ḲABIṢĪ), ABU 'L-ḤASAN 'ALĪ B. MUḤAMMAD B. ḲHALAF AL-MA'ĀFIRĪ (324/935-403/1012), one of the principal representatives of the Mālikī school of Ḳayrawān, of which he was the leader after the death of Ibn Abī Zayd (d. 386/996). His father, a native of al-Ma'āfirīyyīn in the neighbourhood of Gabès, had married a woman from Ḳayrawān. An oral tradition affirms that al-Ḳabiṣī, Ibn Abī Zayd and Sīdī Maḥrez (Muḥriz b. Ḳhalaf) were first cousins, since their fathers had married three sisters. His principal teachers in Ifrīqiya were Abu 'l-'Abbās al-Ibyānī, a Tunisian with Shāfi'ī leanings, Ibn Masrūr al-Dabbāgh, and Darrās al-Fāsī who professed Aṣḥ'arism; he was influenced by two devoutly religious men of Ḳayrawān, al-Sabā'ī and al-Djaban-yānī. His *riḥla* in the East lasted from 352/963 until 357/968; he was accompanied by Darrās al-Fāsī and the Spaniard al-Aṣḥī. Since he was blind, his compan-

ions acted as his secretaries. Before devoting himself to *fiqh*, he taught Ḳur'ānic "reading". An Uṣūlī of Aṣḥ'arī tendencies, he had a predilection for the work of Ibn al-Mawwāz, but above all he was a traditionalist of high repute and spread in the Maghrib the *Ṣaḥīḥ* of al-Buḳḥārī, a *riwāya* of which, attributed to al-Ḳabiṣī, is known to us. Of his works, we may mention a collection of *ḥadīths* of the *Muwaffā'*, highly esteemed particularly in Spain, and still extant in manuscript; a treatise on the rules of conduct of schoolmasters, largely inspired by the work of Muḥammad b. Saḥnūn, which has been published; a voluminous but incomplete compilation of traditions, classified according to the headings of *fiqh*; various epistles on Ḳur'ānic exegesis, practices of worship, articles of faith, the rites of the *ḥadīdī*, the enclosures of *ribāṣ*, 'adāla and objection to witnesses, fear of Allāh, repentance, etc.; one on al-Aṣḥ'arī and another in which he refutes the "Bakrites". Particularly after the death of Ibn Abī Zayd and Ibn Shīblūn, he became a jurisconsult of very high authority. His role as spokesman for and *shaykh* of the jurists of Ḳayrawān was clearly revealed in the affair of the nephew of the nurse of Bādīs. He had countless disciples. At the end of his life he was still teaching some 80 Ḳayrawānīs, Andalusians and Maghribīs. Abū Bakr ibn 'Abd al-Raḥmān and Abū 'Imrān al-Fāsī were his principal continuators, bringing to its completion a work which was crowned by the breach between the Zirids and the Fātimids, the consecration of the definitive triumph of Mālikism in Ifrīqiya.

**AL-ḲABḲ**, DJABAL AL-ḲABḲ (the most common rendering), al-Ḳabḳh (e.g., Mas'ūdī) or al-Ḳabdjī (e.g. Ṭabarī, Yāḳūt), Turkish Kavkaz, the name given by the Muslims to the Caucasus Mountains. The form *ḳabḳ* may derive from Middle Persian *ḳāfḳōh* "the mountain of Kāf", Armenian *ḳaphok*; in Firdawsī we find the Caucasus called *ḳāh-i ḳāf* (Hübschmann, *Armenische Grammatik*, i, 45, cf. Marquart, *Ērānšahr*, 94). A village called Ḳabḳ is also mentioned by Ibn Rusta, 173, tr. Wiet, 201, as being the first stage on the road from Harāt to Isfīzār and Sīstān.

#### 1. Topography and ethnology.

The Caucasus became known to the Muslims from the time of the Orthodox caliphs, when the first raids northwards were launched through Ādḥarbaydjan to Arrān and beyond. Early Muslim geographers, apparently following Iranian concepts which may go back to Babylonian cosmological ideas, regarded the Caucasus mountain chain as part of the Kāf mountain range which forms a girdle round the earth, to the south of which lie the lands of civilization, but to the north of which lies the Land of Darkness. Thus Ibn Ḥawḳal, on the authority of Ḥasday b. Ishāḳ, connects the Caucasus with the Carpathians, Alps and Pyrenees as a mountain chain dividing Europe (ed. Kramers, i, 192; 193 (=map), 194, tr. Kramers and Wiet, i, 188-9 and Map 8; see also B. Munkácsi, *Der Kaukasus und*

*Ural als 'Gurtel der Erde'*, in *Keleti Szemle*, i (1900), 236 ff., and ḲāḲ). Because of this identification with the mountains of Ḳāf, Muslim exegetes and antiquarians located in the Caucasus and Caspian Sea region the rock, sea and town mentioned in the story of Moses and al-Ḳhiḍr in Ḳurʿān, XVIII, 59 ff.; thus Ibn Ḳhurradādhbih, 124, and Ibn al-Faḳīh, 287, say that "the rock is the rock of Ṣharwān, the sea is the sea of Dīlān (sc. the Caspian) and the town is the town of Bādjārwān ("the bazaar place", in Mūghān, south of the Araxes or Aras River)". Furthermore, the Caucasus region was regarded by these early authorities as the location of the *Saddayn*, the two mountains between which *Dhu 'l-Ḳarnayn* or Alexander the Great erected a barrier against Gog and Magog [see *Yāḏiūḍi wa-Māḏiūḍi*]. Commentators like Ṭabarī and Bayḏāwī identify the *Saddayn* with the mountain massifs of Armenia and *Āḏhar-bāyḏjān*, and the *Epistles* of the *Iḳhwān al-Ṣafā'* apparently refer to the Caspian when they mention the *Baḥr Yāḏiūḍi wa-Māḏiūḍi*. The more careful amongst the Muslim geographers placed the Caucasus either in the fifth clime (e.g., Ḥamdallāh Mustawfī, *Nuṣḥat al-Ḳulūb*, 91-3, tr. Le Strange 92-4), or in the sixth (e.g., Maḳḏisī, 61, tr. Miquel 135).

The conception of the earth-encircling mountain girdle of Ḳāf also led the geographers to fit the Caucasus into their orographical conceptions as a westward extension of the Alburz Mountains or as a northwards prolongation of the mountains running up from the Yemen and Ḥiḏjāz. In the anonymous Persian geography of the late 4th/10th century, the *Ḥudūd al-ʿālam*, we find quite a detailed consideration of the topography of the Caucasus (for which the author, who wrote in Gūzgān in what is now northern Afghanistan and was not himself a traveller, probably drew to a considerable extent on the Abū Zayd al-Baḳḳī-Isṭaḳḥrī tradition). The *Ḥudūd* regards the Caucasus as a northern continuation of the Sinai-Syrian Mountains-Armenian Taurus chain, running southwest to northeastwards to Arrān and Ṣharwān, but then turning northwestwards south of Sarīr to the land of the Alans (al-Lān, the modern Ossetes; see *ALĀN*). But then this range, roughly connecting Darband or Bāb al-Abwāb [q.v.] on the Caspian coast with the Alan Gate or Darial Pass in the central Caucasus, is made by the *Ḥudūd* to turn directly northwards through the *Ḳhazar* and Pečeneg lands to eastern Russia, instead of continuing westwards to Circassia and the Black Sea. According to this author, the range was only called *Ḳabḳ* as far as the Alan land; thereafter, each section of the range was named after the towns or districts along it. He also mentions a subsidiary range running eastwards, which must be that separating the Terek and *Ḳoy-Su* basins in Dāghistān [q.v.], sc. that marking the southern frontier of the modern *Čečen* province. Finally, he describes the western terminus of the true Caucasus as being after the Alan Gate and in the present Mount *Kazbek* region (*Ḥudūd*, tr. Minorsky, §§ 18, 48, 49).

Thus the Caucasus was early known to the mediaeval Muslims as a region of tightly-knit mountain ranges and deep, inaccessible valleys, highly fragmented politically and a refuge area for diverse ethnic groups, their social customs and their faiths. Its linguistic complexity was proverbial. Already in classical times, Strabo, xi, 4, attributed 26 languages to Caucasian Albania, sc. Arrān. The earlier Muslim geographers ascribe to the Caucasus 70 or 72 different languages, all mutually unintelligible (see *Yāḳūt*, iv, 31, and *Barbier de Meynard, Dictionnaire géograph-*

*ique, historique et littéraire de la Perse*, 437); by Abu 'l-Fidā's time (early 8th/14th century), we find a figure of 300 tongues, with the region characterised as *Diabal al-alsun* "Mountain of languages" (*Géographie*, ed. Reinaud and de Slane, 71).

During classical antiquity, the Caucasus had formed a major channel of entry into the Near East for peoples sweeping down from the Eurasian steppes, whence the remnants of various Indo-European, Ugrian and Turkic peoples to be found in the Caucasus in mediaeval times and even, in some cases, today. The *Ās* or *Alans* settled in *Ossetia*; the *Magyar* *Sevordi* (Armenian *Sewordik* "company of black ones") were established in the district of *Ṣhamkūr* northwest of *Gandja* and were known to *Mas'ūdī* as the *Sīyārwardīyya*, producers of fine-quality battleaxes used by the Persian troops (*Murūḏi*, ii, 75; *Marquart, Streifzüge*, 36-40); and the *Avars*, Hunnic or Turkic nomads who appeared in the Caucasus in the 6th century A.D. left behind remnants in *Dāghistān* in what became in Islamic times the region of *Sarīr* (see *Minorsky, Ḥudūd al-ʿālam*, commentary, 447-8, and *AVARS*).

In the period immediately before Islam, the little information which we have relates mainly to events in *Transcaucasia*; *Ciscaucasia* was at this time exposed to the full force of barbarian onslaughts, and little is known about it. But to the south of the Caucasus range, the Christian kingdom of *Iberia* (sc. *Georgia*, see *KURDĪ*), and to the east of *Iberia*, the region of *Albania* (sc. the territory between the *Kur* River and the Caucasus, Islamic *Ṣharwān* and the northern part of *Arrān* [q.v.]), were caught up in the prolonged *Byzantine-Sasanid* warfare. In general, *Albania*, though largely Christian from an early period, tended to fall within the Persian sphere of influence, and Persian culture thus made itself felt as far north as *Darband*; whereas *Kaḳhetia* and *Georgia* were more deeply imbued by *Byzantine* and *Christian* influences. A perpetual aim of the Persians was to hold the passes through the Caucasus against barbarian pressure from the north, such as that from the *Avars*, *Huns*, *West Turks* and latterly, the *Ḳhazars*. Hence *Darband* and other strongpoints in the *Ṣharwān* and *Maskaṭ* regions were fortified afresh c. 560 A. D. by the Emperor *Ḳhusraw Anūshirwān*, and Persian diplomacy endeavoured at various times to get the *Greeks* to contribute to the cost of garrisoning fortresses at the *Alan Gate* (often misleadingly called the *Caspian Gate* by classical authors) and the *Caspian Gate* proper at *Darband* (see *Marquart, Ērān-Šahr*, 94-118, and *Christensen, L'Iran sous les Sassanides*, 238-9, 281, 373, 448). When the *Byzantine* Emperor *Heraclius* invaded the *Sasanid* dominions, the *Ḳhazars* moved southwards to *Darband*; but when the first Muslim armies appeared at *Bāb al-Abwāb* in 22/642, there was still a Persian garrison there under a governor with the name or title of *Ṣhahrbarāz*. However, like the Persian governor *Bādhām*, who was similarly isolated in the *Yemen*, *Ṣhahrbarāz* submitted to *Surāḳa b. ʿAmr* and rallied to *Islam* (*Ṭabarī*, i, 2663-71; *Ibn al-ʿAthīr*, *Beirut* 1385-7/1965-7, iii, 28, 29-30; *D. M. Dunlop, The history of the Jewish Khazars*, Princeton 1954, 47-50).

Something of the internal political organization and ethnic complexion of the Caucasus on the eve of the Muslim incursions can be gauged from *Balāḏhurī*'s information on *Ḳhusraw Anūshirwān*'s allocation of the Caucasian principalities to various rulers—or more probably, his confirmation of existing arrangements there. In his section on the conquest of *Armenia* (*Futūḥ*, 197), *Balāḏhurī* states that the emperor

conferred princely power (*shāhiyya*) on (1) the *Khākān al-Djabal* or *Shāhib al-Sarīr* who is called \*Wahrazān-Shāh; (2) the ruler of Filān, called Filān-Shāh; (3) the Ṭabarsarān-Shāh; (4) the ruler of Lakz, called \**Khursān-Shāh*; (5) the ruler of Maskaṭ, "whose principality has now disappeared"; (6) the ruler of Lāyzān, called Lāyzān-Shāh; (7) the ruler of Sharwān, the Sharwān-Shāh; (8) the ruler of \**Balkh*; and (9) the ruler of Zirīkarān. Most of these names can be identified and their principalities are traceable into Islamic times.

The *Shāhib al-Sarīr* or "Master of the Throne" eventually gave his name to the geographical district of Sarīr, the middle *Ḳoy-Su* valley in southern Dāghistān. His other title, \*Wahrazān-Shāh, may possibly relate to the undoubted identity of the people of Sarīr with the Avars, Armenian *Awrhazk*<sup>4</sup> (see Minorsky, *A history of Sharwān and Darband*, Cambridge 1958, 98-9). The Filān are somewhat mysterious, but were probably an Avar group in southern Dāghistān; according to Mas'ūdī, *Murūdi*, 41-2, they were later absorbed into the principality of Sarīr. Ṭabarsarān [*q.v.*] is the mountainous district inland from Darband, often under the suzerainty of the Sharwān Shāhs in later Islamic times. Lakz also lay in southern Dāghistān, inland from Maskaṭ (which itself was situated on the Caspian coast south of Darband), and formed an important buffer-state for Sharwān against attack from the north; Mas'ūdī, ii, 5, describes it as "the bulwark (*mu'awwal*) of the kingdom of Sharwān". Lāyzān corresponds to the present Lāhīdī valley in the Garmadān river region of southern Sharwān, and was later incorporated into that principality. The precise location of the Caucasian \**Balkh* (Minorsky's restoration of the text's *B. kh*) is unknown, but it may refer to the modern places of *Balkha* or *Balkhar* in Dāghistān north of Bākū; in an early 6th/12th century collection of correspondence relating to Arrān, Sharwān and the adjoining lands, *Balkh* is placed in Lakz (Minorsky and Cl. Cahen, *Le recueil transcaucasien de Mas'ūd b. Nāmdār*, in *JA*, ccxxxvii (1949), 121). The Zirīkarān (read \*Zirīhgarān, glossed in *Murūdi*, ii, 40, as *'ummāl al-zard* "makers of cuirasses") lived in the region of the southern branch of the *Ḳoy-Su*, adjacent to Sarīr, and corresponding to the modern village of Kubači (Turkish *kübedji* "maker of mailed coats", cf. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii, 1517). Noteworthy is the absence of information about the northwestern Caucasus, that part beyond Ossetia, which tended to fall within the sphere of influence of the steppe peoples controlling the Kuban-Don regions. (See for an excellent survey of the geography and ethnology of the eastern Caucasus, Minorsky, *A history of Sharwān and Darband*, 75 ff., and for Sarīr in particular, idem, *Hudūd al-'ālam*, commentary, 447-50.)

## 2. The early Islamic period.

The Arabs came up against the Caucasus barrier after they had overrun *Ādharbāydjān* and Armenia. Their general position here was not without parallel to that of the Arabs in Spain when they reached the Pyrenees. In both cases, the Arabs were able initially to cross the mountains, but came up against hostile and powerful peoples beyond them, sc. the *Khazars* and Turks and the Franks. The Arabs in Spain could only hold the Narbonne for a short time, and in the eastern Caucasus, the Arabs made no permanent conquest north of their bastion of Darband. The *Khazars* [*q.v.*] and Turks remained for nearly four centuries factors inhibiting Muslim expansion into the Ciscaucasian steppes; and even the islamization of

Dāghistān and the central and western parts of the Caucasus took many hundreds of years, with no total victory over the rival faiths of Christianity and paganism. See for an appraisal of the existence of the *Khazar* state as a barrier to Islamic expansion, Dunlop, *The history of the Jewish Khazars*, 46-7; but note also the insistence of K. Czeglédy, *Khazar raids in Transcaucasia in 762-764 A.D.*, in *AO Hung.*, xi (1960), 76-9, that in the fighting in the whole Caucasus region, one should distinguish—at least in the earlier period—between the *Khazars* and their West Turkish suzerains, the *Khākāns*, with their capital at Atil [*q.v.*] or Itil. It is undoubtedly true that Ṭabarī, if not Balādhuri, speaks of *al-Turk wa'l-Khazar* and of the *Khākān al-Turk* in connection with these Arab campaigns.

As mentioned above, the Arabs were in Darband before the close of 'Umar's Caliphate. At this time, and during 'Uthmān's reign, Muslim warriors from Kūfa were raiding across the Araxes and into the Kur valley, i.e., into Arrān. Ḥabīb b. Maslama penetrated to Tiflis, and from Bardha'a, the administrative centre of Arrān, places on the southern slopes of the Caucasus like Baylaḳān, Ḳabala and *Shamkhr* were reduced by Salmān b. Rabī'a al-Bāhili's forces, and the local ruler of Sharwān agreed to become tributary (Balādhuri, *Futūh*, 201-4). It was probably here that groups of *Khazars* were first encountered, for the disintegration of the Sasanid empire had drawn the *Khazars* into the eastern Caucasian power vacuum (cf. Balādhuri, 197). However, the first full-scale clash with the *Khazars* took place north of the Caucasus and is well-documented by Ṭabarī. In 32/652-3 'Abd al-Raḥmān b. Rabī'a al-Bāhili, emboldened by what had been only token resistance on previous probes, went against the expressed wishes of 'Uthmān and advanced to the important *Khazar* centre of Balandjār ([*q.v.*]); it was probably located in the *Ḳoy-Su* basin in Dāghistān, to the north of Darband). But there, 'Abd al-Raḥmān was heavily defeated, with the slaughter of 4,000 Kūfans (Ṭabarī, i, 2889-94, 2896-7; Ibn al-Athīr, Beirut, iii, 131-3).

The eruption of *fitna* or internecine strife within the Caliphate for a time deflected Arab energies from conquests in hazardous and less-rewarding highland zones like the Caucasus and Central Asia. Yet *Khazar* counter-raids meant that, once the Umayyads were firmly established on the throne, the Caucasian frontiers could not be neglected. Moreover, the raids into the Caucasus and *Khazaria* must have had an economic importance as a source of slave captives. In 'Abbāsīd times, the *nisba* of "al-*Khazari*" is quite common amongst military slaves and others; this may well have been a blanket designation for Caucasian peoples as well as for *Khazars* proper and Turks. The Arabic sources for this warfare in the Caucasus are much less detailed than those for the conquests in the Iranian east, and the picture which has to be constructed from such sources as Balādhuri, Ibn A'tham al-Kūfi, Ṭabarī and Ibn al-Athīr is somewhat skeletal. Dunlop has observed (*The history of the Jewish Khazars*, 58) that the antipathy of historians in the 'Abbāsīd period towards the Umayyads and all their works has prevented a just appraisal of the exploits of the Caliph 'Abd al-Malik's son by a slave mother, Maslama [*q.v.*], and of Hishām's cousin and eventually the last caliph of the Umayyad line, Marwān b. Muḥammad.

According to Armenian sources, cited in Marquart, *Streifzüge*, 443, the *Khazars* raided into Georgia, Arrān and Armenia during Yazīd b. Mu'āwīya's Caliphate and again in the opening years of 'Abd al-

Malik's, on this second occasion killing the Mami-konian prince of Armenia. It seems that the Khazars recaptured and temporarily garrisoned Darband soon after this, and it is probable that control of this strategic point oscillated between the Khazars and Arabs for a time. At a critical juncture after a Khazar invasion of Armenia, al-Djarrāḥ b. 'Abd Allāh al-Ḥakamī al-Madhḥijī was in 104/722-3 appointed governor of the northwestern provinces of the Caliphate, with its attendant responsibility for the defence of the Caucasus frontier. From Bardha'a, he appeared in southern Dāghistān and attacked the people of Ghūmik, that Caucasian people known later as the Ghāzi- or Kāzi-Kūmūk or Lak [q.v.], who lived on a branch of the Koy-Su, and then he successfully reduced the Khazar centre of Balandjār, returning to Kabala and Shakkī. During the two following campaigning seasons, al-Djarrāḥ operated in the central Caucasus, through the Alan Gate, attacking the Khazars in 105/723-4 and making the Alans tributary in 106/724-5. The Alans were Christian, at least in part. They were natural allies of the Byzantines against the Arabs, and were to be found in Byzantine armies as auxiliary troops; whence the Muslims' need to secure as far as possible the Darial Pass entry into Transcaucasia. Noteworthy at this point is the mention of a practice common in later times, the planting of colonies of Khazar captives in Ḳabala (which perhaps corresponded to the ancient town of Shakkī, see Minorsky in *EI*<sup>1</sup>, *SHĒKKI*) by al-Djarrāḥ (Balādhuri, 206; Ṭabari, ii, 1200, 1453, 1462, 1472; Ibn al-Aṭḥir, Beirut, iv, 540, 555, v, 110-13, 125, 134; Dunlop, *The history of the Jewish Khazars*, 59-66).

After 109/727, the energetic warrior-prince Maslama b. 'Abd al-Malik took charge, an indication of the importance attached by the Caliph Hishām to the Caucasus frontier. Maslama led raids through the Alan Gate against the Khazars, and at some time during his governorship, re-fortified what Mas'ūdī, in *Murūdi*, ii, 43-4, calls "the Alan castle", *Ḳal'at al-Lān*, a stronghold allegedly built in the first place by the Persian hero Isfandiyār to hold back the Alans. But not even Maslama's skill could contain the violence of the Khazars. In 112/730 they poured down through the Alan Gate, defeated and killed al-Djarrāḥ, overran Ādharbāyḍjān and Armenia, and penetrated as far south as Diyār Bakr and al-Djāzira before the invasion was stemmed and Maslama carried the war back into the Khazar lands. Maslama is said now to have received the submission of various "kings of the mountains", including the rulers of Sharwān, Lāyẓān, Ṭabarsarān, Filān, Khursān and Masḳat. Whether acceptance of Islam was required as a condition of submission is unclear. At all events, the impact of Muslim religion must have been very superficial at this time. The general picture in Arrān and the Caucasus region resembled that in Armenia: the Arabs made no attempt at imposing direct political control, but were content to leave local rulers in power as their tributaries.

Some years after the great Khazar invasion of 112/730, the new governor Marwān b. Muḥammad campaigned against rebels in Armenia and then against the Alans, occupying the Darial Pass and three fortresses there before returning through Georgia (118/736). In the next year, he penetrated into Khazaria, reportedly reaching the Khazar capital and converting the Khazar king to Islam. (Minorsky suggested the possibility that Marwān's expedition was directed at the lower Don rather than the lower Volga region, since large numbers of Ṣakāliba, i.e., Slavs, were taken captive, some of whom, according

to Balādhuri, 207-8, were settled in Kakhetia; see *A new book on the Khazars*, in *Oriens*, xi (1958), 127-8.) The shortlivedness of Maslama's agreements with the various native princes of the Caucasus is shown by the fact that Marwān had to re-impose them, exacting tribute in the form of slave boys and slave girls and of grain for the upkeep of the Darband garrison. Amongst the rebels whom Marwān subjugated were the Dūdāniyya (read \*Didūwaniyya, according to Minorsky, the modern Didos of central Dāghistān [q.v.]); but it was very long before Islam made much impression there, and a part of the Didos was still pagan in the 12th/18th century. See Balādhuri, 197-209; Ya'qūbī, *Ta'rikh*, ii, 381, 395; Ṭabari, ii, 1506, 1526, 1530-1, 1560, 1573, 1635; Ibn al-Aṭḥir, Beirut, v, 145, 159-62, 173-4, 177-9, 198, 215, 240; F. Gabrieli, *Il califfato di Hishām. Studi di storia omayyade*, in *Méms. de la Société d'Archéologie d'Alexandrie*, vii/1, (1935), 75-81; idem, *L'eroe omayyade Maslama ibn 'Abd al-Malik*, in *Rend. Lin.*, Ser. 8, Vol. v (1950), 30-1; Dunlop, *The history of the Jewish Khazars*, 67-87; Minorsky, *Studies in Caucasian history*, London 1953, 28-9; Czeglédy, *Khazar raids in Transcaucasia in 762-764 A.D.*, 77-8.

The advent of the 'Abbāsids brought no improvement in the generally weak pattern of Arab control over the Caucasus region, a control that could in any case only have practical significance on those infrequent occasions when Muslim armies entered the mountains to enforce the terms of agreements. The military and political influence of the Arabs was, if anything, diminished by the disorders in the Caliphate consequent on the progress of the 'Abbāsīd *da'wa*. The Turkish and Khazar menace remained, and there were no commanders now of the calibre of the great Umayyad generals.

Al-Manṣūr's governor of Armenia, Yazīd b. Usayd al-Sulamī, took over Sharwān in eastern Transcaucasia (see Barthold in *EI*<sup>1</sup>, *SHIRWĀN*), including its naphtha wells (*naffāḥa*) and its saltpans (*mallaḥāt*), and the caliph attempted to neutralise his northern enemies c. 142/759 through a marriage alliance between Yazīd b. Usayd and the daughter of the Turkish Khākān or of the Khazar king; this plan, however, came to naught. Relations worsened, and in 145/762 there was a major Turkish and Khazar invasion via Darband as far as Armenia. This was followed by an even more devastating one two years later, affecting Arrān, Kakhetia, Georgia and Armenia, under a commander whom Czeglédy identifies as a leader of the Dāghistān Avars or Huns, one Rās (or Ās) Ṭarkhān. See Balādhuri, 309-10; Ya'qūbī, ii, 446-7; Ṭabari, iii, 318, 647, 648 (under years 182 and 183 A. H.); Ibn al-Aṭḥir, Beirut, v, 571, 577; Dunlop, *op. cit.*, 179-81; and Czeglédy, *op. cit.*, 78-88. In the closing years of the 8th century A.D., the 'Abbāsids were beset by rebellion in Armenia; in general, the Turks and Khazars did not take advantage of these embarrassments, although in 183/799 the Khazars did answer an appeal by the disintegrated local nobility of Darband and invade Arrān (Ṭabari, iii, 648; Ibn al-Aṭḥir, Beirut, vi, 163; Dunlop, *op. cit.*, 183-5).

The revolt of the Khurrami heresiarch Bābak [q.v.], the epicentre of which was at Badhdh, just south of the Araxes, had some repercussions in Transcaucasia. It was the Armenian prince of Shakkī, Sahl-i Sumbatian, who captured Bābak and handed him over to the 'Abbāsids in 222/837, and this prince came to dominate Arrān and the adjacent parts of Armenia and Georgia till Bughā's drive against the local rulers there, described below (see Minorsky, *Caucasica IV*. 1, *Sahl ibn Sunbāt of Shakkī and Arrān*, in *BSOAS*,

xv (1953), 504-14). In al-Mutawakkil's Caliphate, the Turkish general Bughā the Elder [see *BUĠĤĀ AL-KABĪK*] was appointed governor of Ādharbāyḡjān and Armenia in 237/851-2, and over the next few years he conducted operations in the course of which he sacked Tiflis and deposed and killed its Arab amīr, Ishāḡ b. Ismā'īl. This line of Arab amīrs was either of Qurashī origin or was descended from a client of the last Umayyad Caliph Marwān b. Muḡammad; the amīrate had long been a focus of Arab power in the Caucasus, and Mas'ūdī, *Murūḡī*, ii, 66, dates the decline of Arab power and influence in the Caucasus from this senseless act of destruction. Bughā also reduced to obedience various Christian and non-Christian rulers of Arrān and Kakhetia, including the Christian Ṣanāriyya (Georgian Ts'anar) of the central Caucasus region to the north of Georgia (see on this people Minorsky, in *Hudūd al-'ālam*, commentary, 400-2; it is possible that they were ethnically related to the Četens, even though in Mas'ūdī's time they allegedly claimed descent from the North Arabian tribe of 'Uḡayl; see *Murūḡī*, ii, 67). Many of the rebels and malcontents were deported by Bughā to 'Irāk. The techniques of deportation and resettlement were further employed by him in 240/854 in regard to Ḳhazar families who were planted on the old site of Ṣhamḡūr in Arrān, now re-named al-Mutawakkiliyya in honour of the caliph; and he is also said to have brought in 3,000 Alan families through the Darial Pass. See Balādhuri, 211-12; Ya'ḡkūbī, ii, 518, 598; Ṭabari, iii, 1407-9, 1414-16; Ibn al-Aḡḡir, Beirut, vii, 58-9, 67-8; Marquart, *Streifzüge*, 408 ff. (Armenian sources); Minorsky in *EP*, TIFLIS; Dunlop, *The history of the Jewish Khazars*, 193-4; and C. J. F. Dowsett, tr., *The history of the Caucasian Albanians by Movṣēs Daxurancī*, London 1961, 218-19.

### 3. The ascendancy of local Caucasian, Daylamī and Kurdiṣh dynasties.

With the opening of the 4th/10th century, we reach an age during which the Caucasus region, in so far as the Caliphal representatives had had any influence there at all, becomes wholly abstracted from the direct control of Baghdād; this is merely one aspect of the general enfeeblement of the 'Abbāsīd Caliphate at this time. In particular, the eastern Caucasus and Transcaucasia begin to be affected by the dynamic upsurge of hitherto submerged western Iranian elements, the Daylamīs and Kurds, who in the course of the century extended their power into the Araxes-Kur basin and beyond, once the firm hand of the Sāḡīd governors [*q.v.*] had passed away in 317/929. Hence there emerge in eastern Transcaucasia three Muslim principalities of significance, that of the Arab Banū Hāshim in Darband [see *BĀB AL-ABWĀB*], the Arab Banū Yazīd in Ṣharwān [see *SHARWĀN-SHĀHS*], and the Daylamī Musāfirīds in Arrān, supplanted there in 360/970 by the Kurdiṣh Ṣhaddādiḡs [see *MUSĀFIRIDS* and *BANŪ SHADDĀD*].

As for the indigenous peoples and chieftains of the mountain massifs, information continues to be sparse, except inasmuch as events there impinge on the history of the adjoining Muslim, Georgian and Armenian principalities. The Muslim geographers of the period devote some space to the Caucasus in their works. The information of the *Hudūd al-'ālam* has been noted above; amongst the other authorities, see Ibn Ḳhurraḡḡbih, 123-4; Ibn Rusta, 89, 147-9, tr. 99, 165-8, discussed in detail by Minorsky in *A history of Ṣharwān and Darband*, 166-9; Ibn al-Fakīh, 286-98; Iṣṡākḡrī, 180-93; Ibn Ḥawḡal, ii, 331-55, tr. ii, 325-48; and Maḡḡḡḡḡ, 374-84.

Also from this period is the very important in-

formation on the Caucasus in the historian Mas'ūdī, dating from c. 332/943, and given in *Murūḡī*, ii, 1-7, 19-22, 25-6, 39-50, 65-77; this has been translated, with many corrections to Barbier de Meynard's rendering of the names, by Minorsky in *op. cit.*, 142-65. From Mas'ūdī's text, we glean many interesting items of information on the political and religious condition of the Caucasus at this time. He describes the then Ṣharwān-Shāh, the Arab Muḡammad b. Yazīd (d. 345/956), and the ruler of the Avar principality of Sarīr as descendants of the Sāsānīd emperor Bahrām Gūr, an indication of the strength of Iranian cultural influence in the eastern Caucasus. The expansionist tendencies of the Ṣharwān-Shāhs are illustrated by the fact that they had by Mas'ūdī's time absorbed the adjoining principalities of Lāyẓān and the Mūḡān which lay to the north of the Kur (to be distinguished from the better-known Mūḡān or Mūḡhān south of the Araxes), and the lands of the \*Ḳhursān-Shāh and the Wardān-Shāh. Ṭabarṣarān was controlled by a relative of the Darband Hāshimī amīrs. Of non-Muslim peoples, he mentions the people of Ḳhayḡḡḡ or Kayṡṡṡ in Dāḡḡḡḡḡ, dependents of the Ḳhazars and continual harassers of the Muslims in Darband, despite the fact that their ruler was nominally a Muslim himself. The rulers of Ḡḡumīḡ and Sarīr were Christian, as were those of the Alans, except that Mas'ūdī says that in 320/932 they had renounced their Christianity (this must have been a temporary apostasy only, for in the Mongol period the Alans were Greek Orthodox in faith). The great power of the Alan king and the impregnability of his fortresses is stressed; and the Alan capital is named as \*Magḡḡḡ, the exact location of which is still unknown (see Minorsky, *Caucasia II. The Alan capital Magas and the Mongol campaigns*, in *BSOAS*, xiv (1952), 232-8). On the southern slopes of the Caucasus lay several Christian, or partly Christian, partly Muslim, partly pagan, principalities, like those of Georgia, Ṣanār, Ṣhakḡī and the adjacent Ḳabala, etc. Finally, we have some information on the Čerkes of the north-western Caucasus, named as the Ḳaṣḡḡḡ or Kasak (= the Kasog of the old Russian chronicles, see below) and already praised by Mas'ūdī for their handsome men and beautiful women, the features that were to make them so highly-prized as slaves by the Mamlūks and Crimean Tatars. Mas'ūdī describes them as *maḡḡḡḡḡ* or fire-worshippers, but by this time Christianity must have had at least a foothold in the indigenous paganism [see further ČERKES].

Amongst the geographers proper, the information in Ibn Ḥawḡal's *K. Ṣūrat al-arḡḡ*, in particular, in ii, 342-4, 348, 354-5, tr. ii, 335-7, 341-2, 347-8, is likewise of prime value, since it dates from a generation later than that of Mas'ūdī and is particularly concerned with the contemporary political situation in Arrān, Armenia and the adjacent parts of the eastern Caucasus. Ibn Ḥawḡal himself probably did not penetrate very far to the north of the Araxes, but relied on "reports" (*akḡḡbār*).

These passages on Arrān and Armenia have been extensively studied by Minorsky in *Caucasica IV. The Caucasian vassals of Marzubān in 344/955*, in *BSOAS*, xv (1953), 514-26. They show how Daylamī influence, in the expansionist stage of that obscure people's history, was able to extend a considerable distance northwards from Daylam proper at the southwestern corner of the Caspian. From a base at Ardabil in eastern Ādharbāyḡjān, the Musāfirīd Marzubān b. Muḡammad (330-46/941-57) was able to penetrate well beyond the Araxes and for a period draw several of the border and mountain potentates of

eastern Transcaucasia into his orbit. The greatest achievement here was the incorporation of Sharwān within the Daylamī sphere of influence as a result of two Musāfirid invasions, the first by Marzubān b. Muḥammad at some time between 334/945 and 337/948, and the second by his son Ibrāhīm c. 357/968. On the first of these occasions, the Sharwān-Shāh (apparently Abū Ṭāhir Yazīd b. Muḥammad, see Minorsky, *A history of Sharwān and Darband*, § 9) was compelled to pay tribute of a million dirhams. Amongst other rulers who came to terms with the Daylamīs at this time were the lord of Shakkī, who is given the Armenian-sounding name of \*Ishkhānik (text, Ishdīānik); the lord of \*Dj.r.z, which Minorsky tentatively restored as Khazar, referring to Qabala between Shakkī and Sharwān, where Khazars had long been settled (see above); and one Abu 'l-Kāsim Dj.y.dhānī. Minorsky thought that this last name might conceivably be read as \*Khayzānī, referring to the Khayzān on the Caspian coast north-west of Bākū, rather than \*Khaydhākī, referring to the Dāghistān district of Khaydhāk or Khaydhāk mentioned by Mas'ūdi, see above. Miskawayh in *Eclipse of the 'Abbasid Caliphate*, ii, 161, tr. v, 172, refers to Marzubān as successfully quelling in 344/955 a people who had rebelled against him in the region of Darband, but it seems improbable that Musāfirid suzerainty could have been effectively extended into the northeastern corner of the Caucasus.

The Musāfirid empire in eastern Transcaucasia was only a transient achievement, and under pressure from the Kurdicised Arab family of the Rawwādid [q.v.], the Musāfirids had lost even Ādharbāyḍjān by 374/984-5. From now until the middle Salḍjūk period our most valuable single source on Caucasian history is the anonymous *Ta'rikh Bāb al-Abwāb*, a local history of Darband, Sharwān and Arrān preserved in Mūnedjīim-Baḥlī's compilation the *Djāmi' al-duwal*; it stems, according to the compiler, from the opening years of the 6th/12th century, and the quotations from this history of the eastern Caucasus have been published and translated by Minorsky in his *Studies in Caucasian history* (concerning the Musāfirids, Shaddādids and Rawwādid) and in his *A history of Sharwān and Darband*. The fortunes of the two originally Arab lines of the Hāshimīs in Darband and the Yazīdis or Mazyadis in Sharwān were closely intertwined, and there were frequent marriage alliances between the two reigning houses (e.g., in 426/1035, when the amīr of Darband 'Abd al-Malik b. Maṣṣūr married the sister of the Sharwān-Shāh Abū Maṣṣūr 'Alī b. Yazīd; see *A history of Sharwān*, §§ 16, 39). However, there were also frequent rivalries and disputes, with the intermediate zone of the western Caspian shore, including Maskaṭ and Shābarān in northern Sharwān, forming a bone of contention. The lords of Darband on occasion employed the Dāghistānis of Sarīr as mercenary troops against Sharwān, e.g., in the reign of the Sharwān-Shāh Aḥmad b. Muḥammad (345-70/956-81), see *A history of Sharwān*, § 12. But more frequently Darband, as the bastion of Islam in the north, suffered from the depredations of these mountain peoples; thus in 360/971 there was a violent battle outside Darband with the people of Sarīr, in which the Muslims lost 1,000 of the Darband garrison and *ghāzīs* from outside (*ibid.*, § 35).

The Muslims in turn retaliated by punitive expeditions into the interior, which served as outlets for the bellicose piety of volunteer fighters for the faith (*ghuzāt*, *muffawwi'a*), and doubtless provided some economic return in the form of the prized Caucasian

slaves. The Sharwān-Shāh Aḥmad's son Muḥammad marched into the interior of the Caucasus in 371/981-2 and captured the town of Qabala from its ruler 'Abd al-Barr b. 'Anbasa, presumably the son of the 'Anbasa al-A'war mentioned in Mas'ūdi, *Murūdj*, ii, 68, and described as "the shelterer of thieves, brigands and malefactors". A further clash took place in 389/999, when the Sharwān-Shāh Yazīd b. Aḥmad defeated Ibn 'Anbasa again and captured the fortress of Gurzūl on the Gök-çay river, a stronghold which was still in the shah's hands a quarter of a century later and which constituted a strategically-valuable salient into the southern slopes of the Caucasus massif (*A history of Sharwān*, §§ 13, 14).

However, there were throughout the whole Caucasian and Transcaucasian region frequent shifts of alliances and groupings, in which religious affiliations were seldom decisive. An amīr of Darband could recruit a guard of pagan Rūs (see below). In Tiflis, Muslims and Christians lived side-by-side, and in the three-cornered struggle in the second quarter of the 5th/11th century for control of the city between Bagrat IV of Georgia, his powerful vassal Liparit and the Muslim incumbent ruler of Tiflis, Dja'far b. 'Alī, Bagrat and Dja'far could at times be found ranged against Liparit; Dja'far had also joined a coalition of Georgian and Armenian magnates against the Shaddādīd Faḍl or Faḍlīn b. Muḥammad b. Shaddād in c. 417/1026-7 (see Minorsky, *Studies in Caucasian history*, 43-4, 56-7). As in similar frontier regions, such as Anatolia and the Iberian peninsula, interconfessional marriages were quite common. Thus in 416/1025 the *History of Sharwān*, § 38, records the marriage of the amīr of Darband Maṣṣūr b. Maḥmūd to a daughter of the ruler of Sarīr Bukht-Yishūf, whose religion is clearly shown by his Syriac Christian name.

It is in the 4th/10th century that the Rūs (probably by now mixed bands of Scandinavians and Slavs; see Rūs) impinge on the history of the Caucasus and of the steppe region to the north of the mountain zone. A notable event in Islamic history, from the alarm and terror which it caused, was the Rūs descent on Bardha'a in Arrān in 332/943-4, when these adventurers sailed up the Kur, sacked the town and occupied it for several months [see BARDHA'A]. It was the Khazars who bore the brunt of Rūs raids down the Volga basin, and these attacks seem to have destroyed the Khazar state as it had existed in its heyday, or at least, left it seriously enfeebled and thrown back on the southerly Khazar lands, the Kuban steppe region. According to the Russian Primary Chronicle, Sviatoslav of Kiev in 965 defeated the Khazar Khān and took the Khazar town of Biela Vieža or "White tent or tower", usually identified with Sarkil on the lower Don, the Greek Aspron Hospitium (*Chronicle*, § 32, tr. S. H. Cross, in *Harvard Studies and Notes in Philology and Literature*, xii (Cambridge, Mass. 1930), 171; Dunlop, *The history of the Jewish Khazars*, 240-1; cf. Marquart, *Streifzüge*, 2-3, 479). Ibn Hawqāl, i, 15, tr. i, 14-15, states that in 358/969 the Rūs utterly destroyed Bulghār and "Khazarān, Samandar [on the Caspian coast, south of the Volga mouth?] and Atil" (Dunlop, *op. cit.*, 241 ff.). The Russian Primary Chronicle further relates that after taking Biela Vieža, Sviatoslav subdued the Yas (sc. the Ās or Alans) and the Kasog (sc. the Kaḥhak or Čerkes), implying that their raids reached to the northwestern and central parts of the Caucasus. After the Rūs raids of 965, the Khazar chiefs seem to have sought and received help from the Sharwān-Shāh Muḥammad b. Aḥmad (or possibly

this may be Ibn Ḥawkal's mistake for this shah's father, Aḥmad b. Muḥammad, who reigned in Ṣharwān till 370/980-1) to enable him to return to Atil and Khazarān (Ibn Ḥawkal<sup>2</sup>, ii, 397-8, tr. ii, 388; Dunlop, *op. cit.*, 246, and Arū).

There were certainly Rūs ships operating along the western shores of the Caspian around this time. The amir of Darband, Maymūn b. Aḥmad, endeavoured in 377/987 to employ some of the Rūs who had arrived there in 18 mercenary ships as mercenary troops (*ghilmān*), even though they were still pagan. The understandable unpopularity of these Rūs contributed to popular disturbances in Darband against Maymūn in 379-80/989-90, leading to his temporary deposition (*A history of Sharwān*, §§ 13, 36). The inability of the remnants of the Khazars to keep the lower Volga course closed to Rūs raiders must have allowed the Rūs frequent access to the Caspian. In 421/1030, 38 Rūs ships appeared off the coast of Ṣharwān and defeated the Shāh Manūčīhr b. Yazīd at Bākū. They apparently repeated the pattern of events of 90 years previously by sailing up the Kur, and entered the service of one of the contending parties in a dynastic dispute of the Shaddādids of Gandja (*ibid.*, §§ 15, 38). They eventually passed on to the western Caucasus and the Black Sea, making a circuit of the mountain region. It is possible that they then turned northwards to the Taman peninsula, where the Kievan prince Mstislav had in 988 founded the Rūs principality of Tmutorokan (*Russian Primary Chronicle*, § 43, tr. 207, cf. § 52, tr. 223). This Rūs foothold south of the Azov Sea enabled them to exert pressure on the Čerkes and other peoples of the western Caucasus. In 1022 the Chronicle records that Mstislav attacked the Kasog under their ruler Rededyā, and in the next year he was using Kasog and Khazar troops (Khazars of the Taman peninsula region?) in a dynastic dispute with his brother Yaroslav (§ 52, tr. 223). Later in the century, in 1066, Mstislav's son Rostislav received tribute in Tmutorokan from the Kasog and other peoples, and the Khazars of the region are mentioned as late as 1083 (tr. 234, 258).

It seems that the Rūs raiders were no longer exclusively water-borne. Two years after the attack of 421/1030 on Ṣharwān, there is mentioned a punitive expedition of *ghāzīs* led by the amir of Darband Maṣūb b. Maymūn which harassed plunder-laden Rūs returning from Ṣharwān through the Caucasus. In reprisal, a coalition of Rūs and Alans tried to crush the little principality of Karakh, which was a frontier region to the west of Darband and whose ruler bore the title of *Marzbān*, according to Mas'ūdī, *Murūdj*, ii, 40; but the Rūs and Alans were decisively defeated by the warriors of Karakh, themselves converted to Islam only a generation previously (*A history of Sharwān*, §§ 15, 36, 38).

#### 4. The Saldjūk period.

The appearance of the Oghuz Turcomans in northern Iran and Armenia, once the Ghaznavid defences in Khurāsān were down, eventually injected a new factor into Caucasian affairs, for both the Christian principalities of western Transcaucasia and the Muslim ones of the east generally felt the effects of disturbances in Ādharbāyḍjān, Armenia and the Byzantine frontier sooner or later. Already in 436/1044-5 or 437/1045-6 the Ṣharwān-Shāh Kubāḍh b. Yazīd fortified his capital of Yazīdiyya (founded by the amir Abū Ṭālib Yazīd b. Muḥammad, the unifier of Ṣharwān, in 306/918, see *A history of Sharwān*, § 9) with a strong stone wall and iron gates for fear of the Oghuz (*ibid.*, § 17).

The Christian kingdoms of western Georgia or Abkhāz and eastern Georgia or Kakhetia, under the Bagratids and the family of Gagik respectively, had felt the Turcoman threat on their southern flanks before this. Certain sources, and especially the Syriac and Armenian Christian ones, mention a long-distance incursion of Turcomans under Çağrı Beg Dā'ūd, brother of the later Saldjūk Sultan Toğhrıl, into Ādharbāyḍjān and Armenia in the years 409/1018 or 412/1021, although other sources place the raid several years later (cf. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, Edinburgh 1963, 223-4). If the raid took place at one of the earlier dates, it may have been a contributory factor in the abandonment by the last Ardrunid, Senek 'erim or Sanḥārib, of the exposed province of Vaspurakan to the Byzantines in exchange for lands in Anatolia (1021), although the sources mention other factors; see E. Honigmann, *Die Ostgrenze des byzantinischen Reiches von 363 bis 1071*, Brussels 1935, 168 ff. For the moment, the threat to Georgia and the surviving Armenian principalities came more from the vigorous policies of the Byzantine Emperor Basil II Bulgaroctonus, but after his death in 1025, the Georgian ruler Bagrat IV, the ruler of Kakhetia Kiurike III and other Georgian and Armenian nobles pursued a confused but generally expansionist policy against the Shaddādids of Arrān and the amir of Tiflis, Dja'far b. 'Alī, this latter city coming sporadically under Georgian control after Dja'far's death c. 438/1046-7 (see Minorsky in *EI*<sup>1</sup>, TIFLIS, and *idem*, *Caucasica in the history of Mayyāfāriqin*, in *BSOAS*, xiii (1949-50), 29, 31; the line of Amir Dja'far in Tiflis went back, according to Ibn al-Azraq, to c. 315/927).

The Shaddādids suffered further from other marauders from Dāghistān and the mountain regions. After the death in 441/1049-50 of the amir Lashkarī 'Alī b. Mūsā, the leading men of the state abandoned several outlying fortresses constructed against the men of Shakkī, the Dādīdiyya (Didos?), the Abkhāz or Georgians, and the Rūm or Byzantines, hoping thereby to discourage their incursions (*Studies in Caucasian history*, § 13, cf. pp. 27-9). Hence when the roving bands of Oghuz, and later, the Saldjūks and their amirs, appeared in Transcaucasia, they found plenty of troubled waters in which to fish.

The Oghuz had harassed Arrān during the reign of Lashkarī 'Alī (425-47/1034 to 1049-50) (*Studies in Caucasian history*, § 12), but when Toğhrıl came to Ādharbāyḍjān and Arrān in 446/1054-5, the Shaddādīd Abu 'l-Aswār Shāwūr, his Rawwādid rival Wahsūdān b. Muḥammad, and other potentates of the region, all submitted to the Saldjūk and made the *khufba* for him (Ibn al-Aṭhīr, Beirut, ix, 598-9, cf. *Studies in Caucasian history*, 54). The Shaddādids continued to feel Georgian pressure, and it was doubtless Georgian incitement which stimulated a large-scale invasion of Arrān in 454/1062 by the Georgians' Alan allies, compelling Abu 'l-Aswār Shāwūr to fortify Gandja (*ibid.*, § 15, cf. pp. 74-5).

Toğhrıl's successor Alp Arslan followed a similar policy of deflecting Turcoman and *ghāzī* elements from Persia to the western frontier zones, and in 456/1064 himself campaigned in Armenia, capturing Ānī from the Byzantines and Armenians (Ibn al-Aṭhīr, Beirut, x, 37-41; eventually the town was granted to a branch of the Shaddādids, see Arslan and *Studies in Caucasian history*, 79 ff.). Two campaigns were made into Georgia against Bagrat IV, and Alp Arslan consolidated his influence there by marrying one of the king's nieces; see W. E. D. Allen, *A history*

of the Georgian people, London 1932, 91-2. Alp Arslan's second Caucasian campaign of 460/1068 seems to have been connected with a second incursion through the Darial Pass into Arrān by the Alans, who were joined by infidels from *Shakkī*; the invaders shut the terror-stricken *Shaddādīd* forces up within *Gandja*, penetrated to the Araxes and took back with them an immense booty (*A history of Sharvān*, § 40; *Studies in Caucasian history*, § 16). Nevertheless, Abu 'l-Aswār was at other times himself able to pursue an aggressive policy against *Sharwān*, invading it on four separate occasions, and making the *Shāh Fariburz b. Sallār* his tributary. In turn, *Fariburz* intervened in a dynastic dispute at *Darband* during 457/1065, imposing his son *Afridūn* there as ruler in 458/1066 (*A history of Sharvān*, §§ 19, 41).

*Darband* was, indeed, racked by internal strife between members of the ruling family and between the *Hāshimī* amīrs and the local notables, exposing it on various occasions to fresh attacks from the *Avars* of *Sarīr* and the *Ghumīk* of northern *Dāghistān*, see *ibid.*, § 40. Possibly the raids of the pagan *Ghumīk* were lessened by their reported conversion to Islam at some time in the last decades of the 5th/11th century and their adhesion to the *Sharwān-Shāh Fariburz's* cause when he was at *Darband*. Two letters from the shah's chancery describe how, through the intermediacy of the Muslim *Laks* of *Kuwā* or *Fuwā* (to be connected with modern *Kubba*, north of *Bākū?*), the *Ghumīk* agreed to accept Islam, and how the *Shāh* sent to them his son 'Aḡud plus an *imām* and a *khafīf* to teach the rudiments of Islam (*Minorsky and Cahen, Le recueil transcaucasien de Mas'ād b. Nāmādr*, 118-19, 131-3, 138-41).

*Sharwān* began to suffer from Turcoman marauders towards the end of *Toghrīl's* reign. During the second attack of the *Oghuz* leader *Karatigin* in 459/1066-7, *Yazīdiyya* and *Bākū* were attacked, so that in the next year *Fariburz* agreed to pay a tribute to keep them away. Later in the same year *Sultan Alp Arslan* appeared in person and received the submission of both the *Shaddādīds* of *Gandja* and the *Sharwān-Shāh*. *Fariburz* tried to placate *Turkmen* chiefs who claimed to have been granted *Sharwān* as an *ikhṭā'*, until there arrived in 468/1075 the "amīr of the Two 'Irāks" *Sawtigin*, who had been granted all the Caucasian marches as his *ikhṭā'*. *Sharwān* was now definitely reduced to the status of a *Saldjūk* vassal-state and tributary. *Sawtigin's* appearance also meant the deposition of *Faḡlūn b. Faḡl b. Abi 'l-Aswār Shāwūr* and the end of the main branch of the *Shaddādīds* in *Gandja*, and in *Darband* there was a third *Saldjūk* occupation (*Studies in Caucasian history*, §§ 18-19; *A history of Sharvān*, §§ 20-9, 42, 46).

With the end of the narrative of the *Ta'rikh Bāb al-Abwāb* in 468/1075-6, our detailed information on eastern Transcaucasia and the Caucasus tails off. It seems, however, that lines of the *Sharwān-Shāhs* and the amīrs of *Darband* re-emerged as the Great *Saldjūk* empire passed its apogee under *Malik-Shāh* and fell into dissension. The scattered mentions of *Darband* in the later *Saldjūk* period have been collected together by *Minorsky* as Annex II of his *A history of Sharvān*, 139-41; it seems that some of the 6th/12th century amīrs of *Darband* may have been scions of the earlier *Hāshimīs*. *Mūnedjīm-Baḡhl* gives some information on the later *Sharwān-Shāhs*, whom he calls "the third race" of *Kasrānīds*; it is, however, clear that these "Kasrānīds" of the 6th/12th century are lineal descendants of the earlier *Yazīdīs*, albeit increasingly Persianised in culture and outlook (see *A history of Sharvān*, 68-9, and Annex I, 129-38,

and *Barthold* in *EI*<sup>2</sup>, *SHIRWĀN*(*SHĀH*)). The period before the Mongol invasion was one of great florescence for the descendants of *Fariburz*, who had himself managed to survive the imposition of *Saldjūk* rule by *Sawtigin* and whose skill had put the principality on a firm footing once more. The court of *Sharwān* became a centre of Persian culture, attracting poets like *Nizāmī* and *Khākānī* (whose nom-de-plume or *takhalluṣ* stems from the title *Khākān-i Kabīr* adopted by the *Shāh Manūčīhr b. Afridūn b. Fariburz*) and the astronomer-poet *Falākī Sharwānī* (see *J. Rypka et alii, History of Iranian literature*, Dordrecht 1968, 202-4, 208-9).

The *Sharwān-Shāhs* continued to assert their hegemony over *Darband*, but during this period were to a considerable extent under the protectorate of *Georgia*, whose kings themselves took the title *Sharwān-Shāh*. The shahs proper further acknowledged themselves as nominal vassals, at least, of the Great *Saldjūks* of 'Irāk and western Persia, and this acknowledgement appears on coins minted in *Sharwān* down to the death of the last *Saldjūk*, *Toghrīl b. Arslan*, in 590/1194. The shahs made alliances with the Georgians aimed at recovering *Darband*, and marriage links were frequent; the *Shāh Akhsatān b. Manūčīhr b. Afridūn* was the son of a Georgian princess.

This century was, of course, the Georgian monarchy's great period of expansion, under such rulers as *Dmitri I* (1125-56), *Giorgi III* (1156-84) and *Queen Tamar* (1184-1212), when the southern frontiers were held against the *Ildegizids* of *Ādharbāyjdjān* and *Arrān* [*q.v.*] and Georgian arms frequently penetrated to the Caspian shores. Already in 1124 *David II* "the Restorer" had led an army to *Darband* in support of his son-in-law the *Sharwān-Shāh's* claims there. *Dmitri I* was operating in *Ossetia* and as far as *Darband* and *Lāyzān* in *Sharwān* in 548-9/1153-4, just after the historian of *Mayyāfāriqīn*, *Ibn al-Azraq*, entered his service as the royal secretary (*Minorsky, Caucasia in the history of Mayyāfāriqīn*, 31, 33, 35; *Minorsky* also notes here how the engagement of *Ibn al-Azraq* was a sign of the growing influence of Arabic culture in the capital *Tiflis* and other parts of *Georgia*, Arabic now becoming a diplomatic language).

*Giorgi III* repelled an invasion of *Sharwān* by the amīr of *Darband* *Beg-Bars b. Muẓaffar* in 569/1173-4 or 571/1175-6, and one of *Khākānī's* odes describes how the vanquished *Darband* forces included *Alans*, *Avars* of *Sarīr*, *Rūs* and *Khazars* (these last being, in the plausible surmise of *Minorsky*, *Kīpčak* or *Polovtsi* rather than remnants of the historic *Khazars*). This *Darband* expedition was apparently a combined land and sea one, probably with the *Rūs* supplying the naval forces; *Khākānī*, whose patron was at this time *Akhsatān b. Manūčīhr* of *Sharwān*, claims that 73 *Rūs* ships were destroyed and that operations took place near the mouth of the *Kur* and also well upstream of that river (see *Minorsky, Khākānī and Andronicus Comnenus*, in *BSOS*, xi (1943-6), 557 ff., also in *Iranica, twenty articles*, Tehran 1964, 127 ff.).

In general, the *Saldjūk* and Mongol periods saw the beginning and development of a gradual process of Turkicisation in many parts of the Caucasus and Transcaucasia, especially in the lower-lying areas. The *Turcoman* begs brought with them their followers, and many parts of *Arrān* and *Ādharbāyjdjān* proved suitable for their flocks. In these provinces, too, the establishment of the *Ildegizid* *Atabegs*, with a powerful military machine of *Turcomans* and *Kīpčak*, favoured an increase in the Turkish ethnic elements there. The indigenous princes of the Caucasus were quick to

discern that the Turks could be used as mercenaries in their internal quarrels. In the 6th/12th century, Darband, under pressure from the *Sharwān-Shāhs* and their Georgian allies, tended to look towards the *Saldjūks* for help, although geographical distance inhibited much direct assistance. Great *Saldjūk* influence in the Caucasus was, at least in the earlier part of the century, more successfully exercised in Georgia and the southern Georgian fringes, symbolised in King Dmitri's acknowledgement of the names of the 'Abbāsīd caliphs and the *Saldjūk* sultans of 'Irāk on his coins.

The Georgian monarchs were often in military alliance with the Christian Alans, and there were frequent marriage alliances between the two princely families, as also between the Alans and the Byzantine emperors (see *Studies in Caucasian history*, 74-5). Alan troops were used in the Georgian armies, and David the Restorer specially constructed fortresses to keep open the route to the Alan Gates and Ossetia; in 1189 Queen Tamar took as her second husband the Alan prince David Soslan (Allen, *A history of the Georgian people*, 104). C. 1118, David further formed a special guard of 5,000 *Ķlpcāk* military slaves, converts to Christianity, and settled *Ķlpcāk* families brought from north of the Caucasus in the devastated districts of Georgia and Armenia recently reconquered by him. During Tamar's reign, the *Ķlpcāk* military element in the Georgian state was at times influential; militarily, it was used with effect on such occasions as in 599/1203, when the Ildegizid Nuşrat al-Dīn Abū Bakr was repulsed from Arrān by an army of Georgians and *Ķlpcāk*, allowing *Shamkūr*, *Gandja* and *Dvin* to fall into Georgian hands (Allen, *op. cit.*, A. Z. V. Togan, *Umumi türk tarihine giriş*, Istanbul 1946, 190-1).

##### 5. The Mongol and *Timūrid* periods.

The period of the *Kh̄wārazmian* and Mongol invasions brought devastation and upheaval to the Caucasus, and, for one thing, broke up the unity of Georgia and destroyed the Bagratids' ambitions for a greater Georgia dominating Transcaucasia. After pursuing to his death the *Kh̄wārazm-Shāh* 'Alā' al-Dīn Muḥammad, Čingiz *Khān*'s generals *Diebe* and *Sübetey* in 617/1220 passed through western Persia to *Ādharbāydjān*, receiving the submission of the Ildegizids, and then entered Arrān. They passed via *Baylakān* into *Sharwān*, devastated *Shamākhī* and went on to Darband. By means of a stratagem, they got the *Sharwānis* to guide them through the Caspian Gate. The Alans were humbled, and the Mongols then emerged into the South Russian steppes, defeated an army of Russians and *Ķlpcāk* and rejoined Čingiz in Central Asia (cf. *Djuwayni-Boyle*, i, 148-9).

The new *Kh̄wārazm-Shāh* *Djalāl al-Dīn* appeared in *Ādharbāydjān* in 622/1225; he defeated the Georgians at *Garni* in *Siunik* in that year, and in the following year 623/1226 occupied *Tiflis*, massacring all the Georgians and Armenians there (see *Minorsky*, in *ET*<sup>1</sup>, *TIFLIS*). In *Sharwān*, *Djalāl al-Dīn* claimed to exercise the suzerainty rights of the Great *Saldjūks*, and imposed on the *Sharwān-Shāh* *Fariburz b. Garshāsp* the same tribute as had been paid in *Malik-Shāh*'s time, till the shah protested that his dominions had considerably shrunk in the intervening century-and-a-half; eventually, *Sharwān* was assessed at 30,000 *dīnārs* only. Transcaucasia remained open to the pillagings of the undisciplined *Kh̄wārazmian* troops, and in 625/1228 the *Kh̄wārazm-Shāh* returned. At *Mindor* near *Loré* he encountered a confederacy of Caucasian peoples under the Georgian

commander-in-chief *Iwané Mkhargrdzeli*. The allies are described as comprising Georgians, Alans, Armenians, Avars of *Sarir*, *Lakz*, *Ķlpcāk*, *Suwāniyān* (i.e., the *Svan*, the mountain people of northern Georgia), *Abkhāz*, *ČanIt* (i.e., *Č'anet'i*, the Georgian name for the *Laz*, corresponding to the Greek *Sannoi* or *Tsannoi*), *Syrians* and *Rūmis* or *Anatolians*; but they failed to stand up to *Djalāl al-Dīn* and were defeated (*Djuwayni-Boyle*, ii, 438).

Although *Djalāl al-Dīn* left the region soon afterwards, Transcaucasia continued to be disturbed, till a further catastrophe took place in the shape of the Mongol invasion of 633/1236. In the previous year, the Mongol general *Čormaghun* had raided *Sharwān* and eastern Caucasia as far as *Darband*, and now he entered Georgia via *Gandja*. The political unity of Georgia was now shattered. Hostages were taken from the Georgian nobles, and the kings forced to attend the Mongol *kuriltays*. Georgians were pressed into the Mongol armies, and there were Georgian contingents present at the fall of *Baghdād* in 656/1258 and at 'Ayn *Djalūt* in 658/1260. Only the internal divisions which arose within the Mongol royal house, and, in particular, the disputes between the *Il-Khānids* of Persia and 'Irāk and the *Djočids* or *Bätü'ids* of the Golden Horde, permitted the Georgian monarchs some freedom for political manoeuvre. The *Bätü'ids* claimed that *Anatolia*, and a *fortiori* the *Caucasus*, had been granted by *Čingiz* as an appanage for *Djoči* and his heirs. Much fighting between *Bätü's* brother *Berke* [q.v.] and the *Il-Khānids* took place in Arrān and eastern Transcaucasia. *Hülegü's* forces reached as far as the *Terek* river before being defeated in 661/1263 by *Berke's* troops. Three years later, *Berke* returned to the *Caucasus*, occupying *Gandja* and sacking *Tiflis*, where he died in 665/1267 (*Spuler, Die Goldene Horde*<sup>1</sup>, 42-4, 49-51). Only after the reign of the *Il-Khān* *Öldjeitü* was the Georgian king *Giorgi V* (1316-46) able to drive out the Mongols and bring much of Transcaucasia, including *Sharwān* and Arrān, under Georgian rule.

*Sharwān* was thus frequently a battlefield for the *Il-Khānids* and *Bätü'ids*, and the constriction of the indigenous dynasty's authority is shown by the fact that during the *Il-Khānid* period, the *Sharwān-Shāhs* do not seem to have minted any coins. Despite its inaccessibility, *Ossetia* suffered from the attentions of the Mongols, and the Alan capital, \**Magas*, was destroyed in 636/1239 after a long siege, see *Minorsky, Caucasia III. The Alān capital Magas and the Mongol campaigns*. The period of the Mongol invasions nevertheless allowed the Christian Alans to break out of their mountain fastnesses and play a rôle on the wider stage of European and Inner Asian history. Papal missions reached them, and in turn, Alan missions are mentioned at the court of the Christian Great *Khān* *Güyük* (*Djuwayni-Boyle*, i, 259). Alan colonies were planted in centres of the Golden Horde such as *Saray* on the *Volga* and *Kertch* in the *Crimea* (*Spuler, op. cit.*, 237, 239, 284, 314). According to *Ibn Baṭṭūṭa*, ii, 448, tr. *Gibb*, ii, 516, the Alans in *Saray* had a special quarter and had become Muslim. Moreover, Alan troops found their way as far east as the borders of *China*.

Further havoc was wrought in the southern parts of the *Caucasus* region by *Timūr*. *Timūr* first appeared in the winter of 788/1386-7, and undertook a campaign, described as a *djihād* or holy war, against the Christian Georgians. In defence of Transcaucasia, the Georgians were joined by the Muslim governor of *Shakki*, *Sidi 'Ali* of the *Arulat* tribe of the *Čaghataid ulus*, but this alliance brought forth further

Timūrid invasions, culminating in the campaign of 805-6/1403-4, when Tiffls was again devastated and all the lands from Arrān to Trebizond given to the Timūrid prince *Khalil Mirzā*. The 9th/15th century was a confused one in Georgian history, with attacks from the Turkmen *Ḳara Ḳoyunlu* amīrs and internal weaknesses, so that towards the end of the century, the kingdom became divided into three parts (see Allen, *A history of the Georgian people*, 131 ff.).

The *Sharwān-Shāh Shaykh* Ibrāhīm (784-820/1382-1417) had to submit to Timūr and accompany him during his campaign against the *Khān* of the Golden Horde *Toqtanīsh* in 797/1395, but he did manage to retain his throne. In the post-Timūrid period, *Sharwān* enjoyed considerable prosperity, with a flourishing cultural life and with many fine buildings erected in *Bākū* and *Shamākhī*. The shahs were latterly allied with the *Aḳ Ḳoyunlu* amīrs, in particular with *Uzun Ḳasan*, but *Shāh Farrūkh-Yasār* b. *Khalil Allāh* was eventually killed in 906/1500 near *Shamākhī* by *Ismāʿil Šafawī*, and *Sharwān* was in 945/1538-9 incorporated into Persia. As for the adjoining district of *Shakkī*, *Sidī ʿAlī*'s son *Sidī Aḥmad* was re-established there c. 801/1398-9. The mention of *Ḳabala* by *Don Juan* of Persia shows that it was still of importance in the later 10th/16th century, when *Shakkī*, after falling to the *Šafawids* in 958/1551, eventually became an Ottoman *şandjak* (984/1576); see Allen, *Notes on Don Juan of Persia's account of Georgia*, in *BSOS*, vi (1930-2), 181, *Minorsky* in *EI*<sup>1</sup>, *ŠHEKKI*.

The northern parts of the Caucasus fell within the lands of the Golden Horde. *Dāghistān* was conquered by Timūr in 797-8/1395-6, but it is about this time that the three main powers in *Dāghistān*, the *Ḳaytāk*, the *Ḡhāzī-Ḳūmūḳ* and the *Maʿšūmī* princes of *Ṭabarasarān*, emerge [see *DĀGHISTĀN*]. The north-western part of the Caucasus, sc. *Circassia*, played an important rôle in Golden Horde affairs and also in Islamic military history. The *Čerkes* were still mainly Christian, and *Ibn Baṭṭūṭa*, ii, 448, tr. *Gibb*, ii, 516, mentions that the Christian *Čerkes* and *Ḳlpcāk* had their own quarters in *Saray*, just like the *Alans* (see above). From the inauguration of the *Mamlūk* Sultanate in *Egypt* and *Syria* in the middle of the 7th/13th century, *Čerkes* military slaves, carried from *Circassia* by the *Genoese* of *Kaffa* and other merchants, were a notable element in the state, and after 784/1382 provided most of the *Mamlūk* Sultans themselves.

The general process of Turkification in the Caucasus region must ultimately have favoured the spread of Islam. The steppelands to the north of the Caucasus must have been islamised fairly early after the decline of the *Khazars* there. *Ibn Baṭṭūṭa* visited *Māčar* on the *Kuma* river (to be identified with *Burgomadžary*). He found it a fine Turkish city. It was a flourishing trade centre of the Golden Horde *Tatars*, with a *ḳaysāriyya* (chief bazaar), and a famous *Šūfī shaykh* of the *Rifāʿiyya* order, *Muḥammad al-Baṭāʾihī*, had his *sāwiya* there (*Rihla*, ii, 375-9, tr. *Gibb*, ii, 479-81). But the spread of Islam was a slow process, and the mountainous heartland long resisted islamisation. The *Laz* of *Mingrelia* on the *Black Sea* coast, a people of Georgian stock and Christian since the beginning of the 6th century, maintained their faith through their close political and cultural connections with the adjacent *Byzantine* principality of *Trebizond*. Only after *Trebizond* fell to the Ottoman Sultan *Mehemmed II* in 865/1461 were the *Laz* gradually converted to Islam and the *Shāfiʿī madhhab* (see *Minorsky* in *EI*<sup>1</sup>, *LAZ*).

The rise of the Ottomans, together with pressure

from the Muslim powers in *Arrān* and *Ādharbāyḡjān*, also brought about the end—in very obscure circumstances, but probably towards the end of the 9th/15th century—of Christianity in *Dāghistān*. As part of the Roman Church's attempts in the Mongol period to unite the Eastern Christian churches and then win over all the oriental peoples for Christianity, *Dominicans* had been installed in *Tiffls* in the 7th/13th century. A Roman Catholic archbishopric was set up at *Matrega* or *Azov* in the succeeding century, and a vigorous missionary campaign undertaken into *Dāghistān* (in *Chaydakensi patria*, sc. the land of the *Ḳaytāk* or *Ḳhaydāk*). Helped by *Genoese* trading enterprises aimed at opening up a route to the east via the *Caspian*, this Christian church flourished till the ousting of the *Genoese* from the *Black Sea* and the establishment of Ottoman supremacy there (see *J. Richard*, *Les missionnaires latins chez les Kaïtak du Daghestan (XIV<sup>e</sup>-XV<sup>e</sup> siècles)*, in *Trudy XXV Kongressa Vostokovedov 1960*, iii (Moscow 1963), 606-11). However, by 872/1466, when the Russian merchant *Afanasii Nikitin* was travelling across the *Caspian*, the ruler of the *Ḳaytāk* was a Muslim, one *Alil (Khalil?) Beg*, brother-in-law of the *Sharwān-Shāh Farrūkh-Yasār*.

*Bibliography*: An extensive bibliography of the older geographical and travel literature was given by *C. van Arendonck* in his *EI*<sup>1</sup> article. For the classical period, see the article *Καύκασος* in *Pauly-Wissowa*, *Real Encyclopädie der classische Altertumswissenschaft*<sup>2</sup>, xi, 1, 59-63. An important addition to the Islamic geographical literature is the anonymous *Hudūd al-ʿālam*, tr. *Minorsky*, *GMS*, London 1937. A geographical survey of the Caucasus is given in *A. Sanders*, *Kaukasien*, Munich 1944, and there is much useful information in the article *Kavkaz* in *BSE*<sup>2</sup>, xix, 248-63.

The historical literature proper has been mentioned in the course of the article. Amongst all this, the works of *V. Minorsky* are outstanding, especially his *Studies in Caucasian history*, London 1953, his *A history of Sharvān and Darband*, Cambridge 1958, and his four *Caucasica* articles in *BSOAS*, xii-xv (1948-53); see also his article *Transcaucasica*, in *JA*, ccxvii (1930), 41-111 (deals mainly with topographical and historical-geographical problems). Some of the many obscurities of Caucasian history have been illuminated by numismatic researches, in which the *Bākū* orientalist *E. A. Pakhomov* was a pioneer. The results of Russian and Armenian research have recently been utilised in the Ph.D. thesis of *Dickran Kouymjian*, *The numismatic history of Southeastern Caucasia and Adharbayjan based on the Islamic coinage from the 5th/11th to the 7th/13th centuries*, Columbia University, New York, 1969 (unpublished).

(*C. E. Bosworth*)

#### LANGUAGES.

The indigenous languages of the Caucasus form a family with three distinct branches. It is to the languages of this family still or formerly spoken in the area that the name *Caucasian* languages is applied. In the course of time, however, speakers of languages belonging to the *Indo-European* and *Turkic* families have also penetrated the region and these languages have in turn been influenced by those of the *Caucasian* family, according to the length and closeness of their contact. The most significant of these languages is *Armenian*, a separate branch of the *Indo-European* family, which has a literary tradition, both Christian and secular, going back to the

fifth century of our era. The modern Eastern dialect is spoken by over two million people in the Armenian S.S.R. and in urban communities throughout the Caucasus. There are a number of representatives of the Iranian branch of the Indo-European family, the oldest established being Ossetic. This Eastern Iranian language, spoken by the remnant of the Alans living in the Central Caucasus and south thereof in Georgia, has two main dialects: Iron, used as a literary vehicle, and the more archaic Digoron, the latter spoken by a partly Muslim population. Ossetic is unique among modern Iranian languages in being little affected either by Islam, i.e. by Arabic loans, or by Persian culture. Other Iranian languages, all of the Western branch, are Northern Kurdish, Tällsh, and Täfti. Kurds are scattered throughout Armenia and the Ādharbāyidjān S. S. R. Tällsh is spoken in a region along the Caspian coast astride the Irano-Soviet border and Täfti on both slopes of the eastern end of the Caucasus chain and on the Apscheron peninsular. Almost half of the Täfti speakers are Jews; the remainder, and all the Tällshi, are Muslims. About a quarter of the Kurds are Yazidis, the rest Muslims. Other Indo-European languages represented are Greek, and the German, Russian, and Ukrainian introduced by comparatively recent settlers.

Among Turkic languages the most widely spoken, by well over two million people in Soviet territory, is Āzerī, which has been a literary language since the 8th/14th century. To the north-east of the Caucasus languages of the Kıpçak group are found, namely Kumuk, Ḳaraçay, Balkar, and Noghay. All these Turcophone peoples are Muslims. Kalmuk, a Western Mongolian language, is spoken in the North Caucasus. The only Semitic language found in the Caucasus is the Neo-Syriac spoken by the scattered communities of so-called "Assyrians".

The Caucasian languages proper are divided geographically into Southern, North-Western and North-Eastern branches. The Southern, or Kartvelian, branch comprises four languages: Georgian, Svanetian, Laz and Mingrelian, the last two together forming the Zan group. Georgian alone is a literary language, the oldest texts dating from the fifth century of our era. The Laz and two groups of Georgian speakers, the Açar and some Ingilo, are Muslims. There are three languages of the North-Western branch, Abkhāz, Circassian, and Ubēkh, but the last is no longer spoken in the Caucasus, being kept alive only by a diminishing number of refugees in Turkey. The Circassians (Čerkes, or Adlghe) have two main dialects, Kabardian and Kiakh, both having a modern literature. The Abkhāz living south of the Caucasus have three related dialects; those living north of the Caucasus among the Circassians, known as Abaza, speak two different dialects. The great majority of Circassians and Abkhāz are Muslims.

The North-Eastern branch of the Caucasian family comprises a large number of languages and dialects, spoken for the most part in Dāghistān by an almost entirely Muslim population. They fall into six groups: I. the so-called Veinakh ("we people") group, consisting of Čečen, Ingush, and Bats (the latter a small Christian community); II. the Ayaro-Andi group, comprising Avār, Andi and its fellows (numbering eight in all), Dido (four languages) and Arči; III. the Lak-Dargwa group, i.e. five dialects of Lak and three of Dargwa; IV. the Samurian group, comprising Lezgian, Rutul, Tsakhur, Tabasaran (Ṭabarsarān), Aghul, Budug, and Djek; V. Khinalug, and VI. Udi, the language of a Christian people thought to be the

remnant of the Caucasian Albanians. Čečen, Ingush, Avār, Lak, Dargwa, Lezgian, and Tabasaran are written languages, a status Udi formerly enjoyed. Avār is especially widely used as a *lingua franca*.

Although the three branches of the Caucasian family are very distinct they have a number of features in common. One is the richness of their consonant structures. Georgian, for example, has 29 consonants, including contrasting series of aspirated and glottalized voiceless stops and affricates, *p, t, c, č, k, q, p̣, ṭ, c̣, č̣, ḳ, q̣*; a similar contrast is found in Armenian, Ossetic and Northern Kurdish. Some North Caucasian languages have well over 50 consonant phonemes, including labialized and non-labialized pairs. In contrast to this, vowel phonemes are few; Georgian has five vowels and both Abkhāz and Circassian have systems reducible to two vowel phonemes. A syntactic feature widespread among Caucasian languages is the "passive construction" of transitive verbs, wherein the agent of such a verb is expressed in an oblique case and the patient is the subject of the verb. This type of construction does occur, but only with the past tenses of transitive verbs, in many Iranian languages, including Northern Kurdish, and it is so restricted in Kartvelian, but in other Caucasian languages it applies to all tenses of the verb; thus "I am doing the work" is expressed as "by-me the-work is-being-done". The distinction between transitive and intransitive verbs is absolute; a transitive verb must involve an object, so that, in Georgian for example, the sixth commandment can only be expressed "thou shalt not kill *men*". In the North-Western, and to a lesser extent the Southern, languages there is a multiple attachment of pronominal particles to the verb, each taking an appropriate position; for example, "the bread which the mother gives her daughter" is expressed in Abkhaz as "mother her-daughter which-to-her-by-her-give bread", the pronominal particles representing subject, indirect object, and agent in turn. In modern Georgian many of these pronominal forms are elided, leaving the unambiguous minimum; e.g. *g-klav* "(I)-you-kill", *m-klav* "(you)-me-kill", *klav* "(You-him)-kill", *klavs* "he-(him)-kills". The North-Eastern branch alone has a system of noun classes, whereby signs indicating the class of thing involved (e.g. male, female, inanimate, material) run through the sentence; cf. Avār *be-ca-w čī ro-žo-w w-ugo: be-ca-y ču ru ro-žo-y y-igo: be-ca-b ču ro-žo-b b-ugo* "the blind man/woman/horse in-the-house is". In combinations with the passive construction this system produces such intricate concord as (Čečen) "I work *it*-being-done *I*-am" for "I work", "by-me work *it*-is-done" for "I am working", and "by-me *it*-being-done *it*-is work" for "I am (actually) working". Although these and other features more or less common to the Caucasian languages can be matched both in languages of the ancient Near East and, among other modern languages, in the Basque of the Pyrenees and the Burushaski of Hunza [q.v.], no valid connexion between these and the Caucasian family has yet been shown.

*Bibliography:* B. Geiger, T. Halasi-Kun, A. H. Kuipers, and K. H. Menges, *People and languages of the Caucasus; a synopsis*, The Hague 1959; G. Deeters, *Die kaukasischen Sprachen*, in *Handbuch der Orientalistik*, Abt. I, VII Bd., *Armenisch und kaukasische Sprachen*, Leiden 1963. (D. N. MACKENZIE)

**KABOU**, a locality in Togo (9° 25' N., 0° 50' E.), 24 km. to the north of Bassari, an important market whose prosperity, in pre-colonial times, was based

partly on the barter of crude iron given to the Kabre iron-smiths of Lama-Kara in exchange for slaves, and partly on its function as a halting place on the kola-caravan routes. The presence in Kabou of Muslim outsiders (particularly Ḥawsa and Djerma) was therefore not unusual.

It was a certain Oukpane, a native of Kalanga (about ten km. to the west of Bassari), who founded the village of Kabou, probably during the first third of the 19th century. Shortly afterwards Biraima, a Tyokossi of Sansané Mango, arrived, becoming the first Muslim actually to settle there; to some extent, no doubt, he was the representative of the authority of the Tyokossi sovereigns, which extended over Bapure (20 km. to the west of Kabou), of which Kabou was probably a dependency at that time. After Oukpane, the supreme chief was Outoune, who reigned for thirty-five years. At that period, Kabou had its third *imām*, Baba Toma (in succession to Biraima and Saliya). In Outoune's reign, the surviving members of the communities of Kalanga settled round Kabou.

Karakpe, a younger brother of Outoune, received the French explorers Baud and Vermeersch in April 1895, and Baud for the second time in January 1896, before the Treaty of Paris (23 July 1897), which left Kabou in the *Schutzgebiet* of Togo. At the time the Europeans arrived a Muslim quarter already existed, containing several dozen Djerma mercenaries.

The leaders of this pagan country, for many years a vassal of the Tyokossi warlords of Sansané Mango, had appealed for help to the Muslim warriors of the Dagomba chief of Yendi. The prestige of Islam was so great that Mama Bonfoh, the first of the Bassari race to be converted to Islam, was nominated as chief by the German administration at the beginning of the century. The pro-Muslim policy of the German administration brought about the conversion of large numbers of the inhabitants, following the chief's lead.

Although the town (whose various districts comprise 4000 to 5000 inhabitants) is predominantly Muslim, the surrounding country is inhabited by Kabre and Losso from the over-populated regions of Lama Kara. Very few of these "immigrant settlers" appear to have been converted to Islam. (R. CORNEVIN)

**KABR** (A.), tomb was first applied to the pit used as a burial place for a corpse, as was the term *qariḥ*, giving rise to its habitual use in the text of numerous epitaphs containing the expression *hādḥā kabru*... "this is the grave of...". Originally distinguished from the term *ṣandūq*, "cenotaph" (cf., J. Sauvaget, "*Les perles choisies*" *d'Ibn ach-Chihna*, Beirut 1933, 212 and "*Les trésors d'or*" *de Sibṭ al-'Ajamī*, Beirut 1950, 184), it had the more general meaning of the tumulus or construction covering the grave to bring it to notice, a custom current in Islamic countries from early times. Contrary to the formal injunction in *ḥadīth* to practise *taswiyat al-ḥubūr*, that is making the tomb level with the surrounding earth (cf. G. Wiet, *CIA Egypte*, ii, 64 f.), which was the outcome of juridical discussions and was linked with doctrinal controversies concerning "saint-worship" and the various rites of veneration of tombs (including that of the "pious pilgrimage" or *ziyāra* [q.v.]), funerary monuments of all kinds, ranging from a simple heap of pebbles or mound of earth, with perhaps also a raised stone, to a mausoleum occasionally reaching monumental scale and forming part of a veritable architectural complex, in fact always constituted a significant portion of Islamic art.

Without going into the legal prescriptions and

customary practices associated with the notion of "burial place" and therefore "tomb" in the Muslim world, we find that the word *ḥabr* designates a definite archaeological reality, though one which is sometimes difficult to define. In part this is due to lack of documentation, as regards both eras and regions, of the available monuments. To a greater extent it stems from a reluctance to group under the same heading the greatly differing remains covered by a variety of terms relating not only to differences in language and dialectal usage but more especially to distinctions in appearance and architectural style (e.g., *raḍīam*, *ḥarkūr* [q.v.], *ḥawsh*, *tābūt*, *ḥawīfa*, *mḥabriyya*, *ḥubba* [q.v.], *ḥaṣr* [q.v.], *ḡunbādḥ*, *ḡūr*, *turba* or *tūrbe* [q.v.]), or even qualitative differences applying to the dead man and therefore to the value of the sanctuary (e.g., *rawḍa*, *mashḥad*, *imām-sāde* [q.v.], *shāh-sāde*, *walī*, *marbūt*, *maxār*, *makām* and even *makān*). Nevertheless, it is permissible to make a preliminary distinction in the midst of such confusion, following the usage proposed by Max van Berchem and justified by Arabic texts (cf. M. van Berchem, *CIA Egypte*, i, 286, note, and 293; *CIA Jérusalem*, i, 6, 124), between the tomb itself, treated here under the word *ḥabr*, and the "mausoleum" (*ḥubba* or *turba*), that is "the construction consecrated to the tomb, either free-standing or joined on to another edifice", which is sometimes confused with those indeterminate structures that can be grouped under the heading of "commemorative monuments".

This article therefore excludes the many funerary edifices which constitute one of the most representative categories of ancient Islamic art and include notably the open-air funerary enclosure, the domed cubic monument and the funerary tower—the most widespread interpretations of the functional theme of the mausoleum. Yet the tomb situated directly over a real or assumed burial place is far from conforming to a simple, uniform type varying according to the time and region discussed. The existence of an original primitive element that can easily be recognized in many cases—hummock of earth, tombstone or stone-work bench, rectangle defined by pebbles or low walls, raised block at the head or feet of the corpse—does not alter the fact that in detail of forms and even in decoration and inscription, Muslim tombs reveal a great variety to be seen in the archaeological remains from various epochs; it is to be regretted only that there does not yet exist an exhaustive catalogue of these monuments.

Such a lack is made even more apparent by the fact that cemeteries preserved intact for centuries on the outskirts of town and containing truly venerable tombs in the midst of more recent ones—in cities as diverse as Salé, Ḳayrawān, Cairo, Damascus and Istanbul, for example—have often had to give way to urban development and the extension of dwelling-areas. At the same time some popular and traditional customs or regular visits to particular sites are disappearing (for such religious attitudes before "our secularization of urban cemeteries" see L. Massignon, *La cité des morts au Caire, Qarāfa—Darb al-Aḥmar*, in *BIFAO*, lviii/19, 25-79). However, many groups of tombs situated in places that are protected or difficult of access still provide a rich documentation which should be submitted to detailed study. In the light of a broadened perspective and on more solid chronological and statistical bases, we must look again at the sole systematic attempt of this kind, the fifty-year-old study of old, decorated steles in the cemeteries of Salé and Rabat which lends itself to comparisons with examples as far

distant as Egypt and Turkey (see J. Bourrilly and E. Laoust, *Stèles funéraires marocaines*, coll. *Hespéris IHEM*, no. 3, Paris 1927).

In the absence of any new studies, research on the tombs erected throughout the Islamic world is dependent on a paucity of information and on data gathered in the course of some other research, mainly epigraphic. The first necessity is to sift the basic compilations of Arabic inscriptions made by town or by region (such as the series of *Matériaux pour un Corpus Inscriptionum Arabicarum* impressively begun by Max van Berchem, or the several volumes, ordered according to slightly varying norms, which have appeared under the title *Corpus des Inscriptions arabes de Tunisie*) and the vast inventories of the epigraphic productions of a given region such as Sicily or Spain (see the section *Epigrafi sepolcrali* by M. Amari, *Le epigrafi arabiche di Sicilia*, in the new edition, corrected and published by F. Gabrieli, Palermo 1971; and see especially E. Lévi-Provençal, *Inscriptions arabes d'Espagne*, Leiden-Paris 1931, in which pages xxxiii-xxv of the introduction are devoted to the form or embellishment of epitaph stones).

Interesting descriptive notes may also accompany the publications of series of Arab steles, or of isolated examples, preserved in museums (the documentation of the Arab steles of Egypt contained in *Catalogue du Musée arabe du Caire, Les stèles funéraires*, i and iii by H. Hawary and H. Rached, Cairo 1932 and 1938, ii, iv-x by G. Wiet, Cairo 1936-42 is of particular interest, as are also G. Wiet's comments on Iranian steles of the 6th/12th century in *L'exposition persane de 1931*, Cairo 1933). They are also found, with more accurate information than in the case of uprooted funerary inscriptions, in those rare epigraphic works centred on a homogeneous series of epitaphs which were published while the epitaphs were still *in situ* (see, e.g., the descriptions in B. Roy and P. Poinssot, *Inscriptions arabes de Kairouan*, IHET Paris 1950-58, and J. Sourdel-Thomine, *Stèles arabes anciennes de Syrie du Nord*, in *Annales Arch. de Syrie*, vi (1956), 11-38, or *Stèles arabes de Bust (Afghanistan)*, in *Arabica*, iii (1956), 285-306; see also the important inventory of Aḥlāt steles recently published by B. Karamağaralı, *Ahlat mezartaşları*, Ankara 1972). Finally a few rare studies attempt to trace the stylistic evolution of tomb decorations or inscriptions (see, e.g., J. Strzygowski, *Ornamente altarabischer Grabsteine in Kairo*, in *Isl.*, ii (1911), 305-36, or J. Sourdel-Thomine, *Épigraphes coufiques de Bāb Saghīr* apud *Les monuments ayyoubides de Damas*, bk. iv, Paris 1950, or the series of articles relating to the tombs bearing figurative representations in Anatolia, the latest of which is B. Karamağaralı, *Sivas ve Tokat'taki figürlü mezar taşlarının mahiyeti hakkında*, in *Selçuklu Araştırmaları Dergisi*, ii (1971), 75-109).

However, such notations as we have are so ill-assorted that in the present state of our knowledge it is impossible to draw up even an approximate chart showing the development of a funerary art and epigraphy which gave birth to true works of sculpture in stone and contributed to a large extent to the rise of the most elaborate kinds of ornamental Arab scripts. At this moment no more can be said than that in Islamic civilization—setting aside temporary periods of austerity—as in many others tombs present a true reflection of the wealth and degree of refinement of a society in any one era; they also register the cultural and religious climate in which the epigraphs were composed, with their information

about the personality, circle and opinions of the deceased.

Inscriptions of a greater or lesser length are a constant characteristic of the majority of tombs, apart from those rustic ones which stand in humble anonymity. While here we will deal only with those in Arabic, it must not be forgotten that a number of important epitaphs were composed in later times in other languages. Such inscriptions appear on steles, cippi or cenotaphs and are inscribed on surfaces of a variety of shapes (most frequently rectangular panels or bandeaux), but in both style and disposition they always occupy the foreground of the tomb's layout. The prime purpose of such inscriptions being to record the name of the person buried there and to bear witness to his faith (through a variable use of Qur'anic quotations) by calling blessings down on him, they are above all epitaphs. They are classified in Arabic under the vague term *kitāb* and follow a classical schema apparent from the end of the 2nd/8th century (more exactly from 174/790, the date of the oldest stele in the Cairo museum).

From this date the inscriptions generally include, after the obligatory *basma*, either commonplace introductory phrases, such as the *taṣliya* or less frequently the *ḥamdala*, or pious sentences consisting of "the solemn affirmation of certain divine prerogatives, and the assertion that the death of a creature is due to God's divine decree". Subsequent to this comes the name of the deceased, announced in various stereotyped fashions and accompanied by a varying amount of detail on his genealogy or titles. Usually this is followed by eulogies in his honour, ranging from one to many and sometimes including "transferred eulogies". The verb which was employed earliest to introduce the name of the deceased was *shahida*, "has testified", found on the first Arab epitaphs in Egypt. The parallel usage of *tuwaffiya*, "X is deceased", which was first used especially to introduce the date of death, was later sometimes used alone in brief funerary texts (e.g., in the 6th/12th and 7th/13th century in northern Syria). Likewise *hādḥā kabr*, noted above, which appears on a third of the earliest Islamic steles in Egypt, became the sole formula used without exception in later epitaphs from Ifrīkiya, al-Andalus, Syria, Anatolia and even eastern Iran.

Another important element, at least in the early period, was the confession of faith, with or without the *risāla*, sometimes supported by quotations from the Qur'ān such as verse IX, 33. Later, the absence of the *shahāda* can be noted in some regions (rural epitaphs cut in Syria in the 6th/12th and 7th/13th centuries or contemporary ones from Anatolia) and in some types (epitaphs of children, for example, as attested by examples from Kayrawān). Likewise verse IX, 33 was used less frequently in Egypt from the Fātimid era; although still popular in the same period in Ifrīkiya and al-Andalus, it no longer appeared in Syria or the eastern provinces, nor in Anatolia from the 6th/12th century. This evolution parallels that observed in the case of other verses from the Qur'ān which were put to different use according to place and period. In Egypt, for example, verse XXII, 7, stressing the necessary advent of the final hour, was in vogue until the 4th/10th century and was also found in Ifrīkiya. In al-Andalus, XXXV, 5, on the vanity of earthly life, was widely used, as was the phrase "every soul tastes of death", taken from Qur'ān III, 182 or XXIX, 7, in the whole of the mediaeval east from the 6th/12th century. Depending on period or region, basic religious texts

enjoyed greater or lesser favour, although verses II, 256, III, 16-18, and Sūra CXII were always popular.

Also to be taken into account is the presence or absence of religious maxims whose precise meaning is known to us through studies like those done on the saying, "reliving the mourning for the Prophet" (cf. L. Massignon, *La Rawda de Médine, cadre de la méditation musulmane sur la destinée du Prophète, annexe I*, in *BIFAO*, lix (1960), 260-7), and also those moral maxims, complementary invocations and poetic texts which constitute, along with information on the date of death, the "accidental" portions of the funerary inscription. As a general rule, the wealth of doctrinal allusion and religious sentiment revealed by the epitaphs of the first four centuries of the *Hidjra* are contrasted with the later poverty of traditional formulas, compensated for by new tendencies such as the development of the titular description of the deceased according to new customs of society, the abundance of quotations from the *Kur'an* as a feature of ornamental design (as in some Iranian steles in *mihrāb* form from the beginning of the 6th/12th century), the progressive introduction of "literary" customs leading to an increasingly bombastic style and multiplying the occasional verses or snatches of rhythmic or assonant prose (see examples of epitaphs of Maltese or Sicilian origin).

The epigraphic decoration of the most sumptuous tombs—not always those most venerated, for popular devotion was often given to graves marked by a simple heap of stones—cannot be separated from their form, material used, nor from the other decorative elements of which it was an intrinsic and harmonious part. It is not fortuitous, for example, that a particular type of ornate inscription, associated in Syria from the 6th/12th century with artistic influences from Upper Mesopotamia, was developed on a class of tombs which were also highly specialized in origin and in the circumstances of their appearance (see J. Sauvaget, *La tombe de l'Ortokide Balak*, in *Ars Islamica*, v (1938), 207-15; cf. J. Sauvaget, *La madrasa Djahārkasiya*, apud *Les monuments ay-youbides de Damas*, 41-50); a number of comparable cases could be cited, especially with reference to the arched steles whose stylistic evolution was parallel to the flat *mihrāb* and contemporary door frames.

However, the various currents which joined forces to give rise to the curious parallelism of methods of constructing funerary monuments from one end of the Islamic world to the other cannot yet be determined with any precision and we must confine ourselves to the following observations. Firstly, it would appear that the tabular steles used "to create that which is known in Arabic as *shāhid*, the witness" constitute the oldest type of Muslim funerary stones (cf. E. Lévi-Provençal, *Inscriptions arabes d'Espagne*, xxiii), a type which is attested in Egypt from the 2nd/8th century and endured until the Ottoman era, many specimens of the latter being known. These variously carved slabs, sometimes bearing the name of *rukḥāma* or *lawḥ*, were most frequently set at one or sometimes at either end of the tombs, being classified as archaic since they are in the shape of "boxes without lids" found in backward regions and isolated rural districts.

These steles vary greatly in appearance. They may consist of double rectangular steles, rounded or disc-shaped, of moderate size and quite simple decoration, sometimes without inscriptions, as in Spain and northern Syria. They may also be single, monumental steles, frequently remarkably ornamented, sometimes

with abundant and finished inscriptions; these latter may still be seen *in situ* at Salé or *Aḫlāt*, for example, and are exemplified in museums by the so-called Almerian steles of the early 6th/12th century and by a no less interesting series of Iranian slabs of the same period. At times they consist of a rectangular framework surrounding inscriptions which are incised or sculpted in relief on a hollowed ground; this is the most dominant pattern in the first centuries of the *Hidjra* from Egypt to Spain. At others the central motif is the inscribed arch, single or double, around which are arranged beautifully patterned ornamental compositions; this type appears in both east and west. Yet sometimes the tabular steles give way to shafts of columns embellished with inscriptions (*amūd ḡabr* and *sāriyat ḡabr*), which predominated in cemeteries in Toledo and *Qayrawān* in the 4th/10th and 5th/11th centuries and still indicate Ottoman graves, where the cylindrical stele is usually crowned by a "turban" carved in marble.

On the other hand, from the 5th/11th century scaled-down sarcophagi were also popular. These consisted of strips of stone laid in tiers or of "long, low steles of white marble forming a prism standing on a pedestal", which are often given the Maghribi names *mḡābirīyya*, *ḡiannābiyya* or *ṣanam*, and are generally recognized as schematic imitations of the primitive pile of earth. These stones or low constructions may also be accompanied by raised slabs, a hybrid style which appears in a number of regions. Examples are the old Syrian tomb of al-Ma'arri (cf. J. Sourdél-Thomine, *Inscriptions du mausolée d'Abū l-'Alā' à Ma'arrat al-Nu'mān*, in *Arabica*, ii (1955), 289-94) and especially the various combinations seen in the tombs of *Aḫlāt*. But in this case too there is a great diversity of shapes enabling the tombs to be allotted to different categories, limited by neither place nor period, from the earliest archaeological evidence furnished by the tomb of Subuktākin at *Ḡhazna*, most probably c. 387/997 (cf. S. Flury, *Le décor épigraphique des monuments de Ghazna*, in *Syria*, 1925, 61-90). Ayyūbid examples from Syria can be interpreted as imitations in stone of the sculptured wood cenotaphs well known elsewhere (Mesopotamian, Syrian and Egyptian examples cited by J. Sauvaget, *Le cénotaphe de Salādin*, in *Revue des Arts Asiatiques*, vi (1929-30), 168-75, or by G. Wiet, *Les inscriptions du mausolée de Shāfi'ī*, in *Bull. Inst. Eg.*, xv (1933), 167-85). Other prismatic steles are closer to the type of stepped platform identified by D. S. Rice in a papyrus preserved in Vienna and attributed to the 3rd/9th century by A. Grohmann, of which he found later representatives modelled in brick and stone-work in the miniatures accompanying many copies of al-Ḥarīrī's *Maḡāmāt* (cf. D. S. Rice, *The oldest illustrated Arabic manuscript*, in *BSOAS*, xxii (1959), 207-20 and fig. on p. 219). A whole new chapter could be written on the funerary stones bearing representations of animals in relief which forms part of an even more original chain of tradition. The popularity of this style in Turkey has been the subject of many studies (see the most recent, noted above).

(J. SOURDEL-THOMINE)

In works of *fiḡh* (usually in the chapter dealing with obsequies) two problems connected with tombs are discussed. May they be decorated to a certain extent? Is it permitted to visit them? On the first point it is surprising to observe the complete unanimity of the *fuḡahā'* (no matter what school they belong to) in disapproving of all ornamentation on tombs, however

simple it may be. To mark the site of the tomb the more lenient among them permit at the most the construction of a lowly erection of unfired brick (*labin*); the use of fired brick (*ādīurr*) is firmly advised against as it would be the first step towards ornamentation. This modest construction must not be rough cast (though this is permitted by the Ḥanafis only) and must bear no inscription relating to the deceased (paradoxically enough, Ibn Ḥazm allowed his name to be inscribed) nor even passages from the Qur'ān. It is blameworthy to build a dome or any monument whatsoever above a tomb. It is obvious that this teaching, which the *fuḳahā'* based on traditions that they traced back to the Prophet, was never respected, except in impoverished villages. In the presence of the considerable number of richly decorated tombs found in all Muslim countries, it must be admitted that there are few areas where the divorce between theory and practice was so marked. No doubt this was the result of the nature of the condemnation formulated by the legal scholars: the decoration of tombs is blameworthy, reprehensible (*makrūh*), but not *ḥarām*, that is, categorically forbidden; this has given rise to the almost general belief that their decoration does not absolutely infringe religious law.

The permissibility of visiting tombs (*ziyārat al-kubūr*) was admitted very early on by *idīmā'*; all the schools, including the Ḥanbalis and Zāhīris, even went so far as to recommend the practice, while forewarning the faithful to shun the behaviour characteristic of Christian pilgrimages (carrying candles, chanting, distributing alms).

(Y. LINANT DE BELLEFONDS)

**KABRA**, in Spanish Cabra, a town in a mountainous region of Andalusia to the south-east of Cordoba, situated at an altitude of 448 m. on the slopes of the Sierra de Cabra; at present it is the centre of a *partido judicial* of the province of Cordoba and has a population of 20,000.

The Muslim town of Kabra, which succeeded the Roman Igabrum — one of the principal cities of Baetica according to Pliny — ranked as one of the fortresses of al-Andalus. Colonised by the *ajund* of Wāsiṭ in 'Irāk in the time of the governor Abu 'l-Khaṭṭār al-Kalbī (125/743-127/745) under the Umayyads it was the centre of a relatively small district (*ḥūra*) which took in Ecija. A single *ḥādī* had jurisdiction over both these towns. The bishopric of Kabra, which date from the 4th century A.D., continued to exist under the Umayyad caliphate. Some rare, and unfortunately too brief, descriptions by Arab geographers speak of the equable climate, the abundance of running water, the profusion of olive groves and the luxuriant vegetation of Muslim Kabra; they bear witness to the existence of a great mosque with three aisles and a busy street-market. Not far from the town some lead mines were worked.

Muḳaddam b. Mu'āfā (d. 299-300/912 [q.v.]), the originator of the *muwaṣṣhaḥāt*, was a native of Kabra.

Kabra was involved in the frontier disputes between the Castilians and the Andalusian Muslims. Ḥabbūs b. Māksan, the Zīrid dynast of Granada, captured it in 419-20/1029-30. Conquered by Ferdinand

III (the Saint) in 641/1244, the town belonged successively to the Council of Cordoba and to the Order of Calatrava. In 733/1333 the Naṣrid Muḥammad IV seized Kabra, destroyed the ramparts and part of the castle, and sent the inhabitants to captivity in Granada. Re-populated shortly afterwards by the Master of the Order of Calatrava, Kabra subsequently reverted to the Crown of Castile. In 849/1445 Henry IV gave the town to Diego Fernandez of Cordoba in reward for his services and granted him the title of Count of Cabra.

Various remains dating from the time of the Muslim occupation, in particular a ruined castle, can still be seen in Kabra.

(R. ARIÉ)

**KABSH** [see BADW (IIa), YÜRÜK, ZAKĀT, and SILĀḤ].

**AL-KABTAWRI**, ABU 'L-KĀSİM *KHALAF* B. 'ABD AL-'AZĪZ AL-*GHĀFIQĪ*, poet and letter-writer, from the island in the Guadalquivir called Kabtawra or Kabtūra (formerly Caput Tauri, Ibn Khaldūn—de Slane, *Hist. des Berbères*, ii, 113; today Isla Mayor, south of Seville). The son of a Sevillian scholar, he was born in Shawwāl 615/December 1218-January 1219. After the fall of Seville (646/1248) he moved to Ceuta, where he became head of the chancellery of the 'Azafid emirate; following the death of the amir Abu 'l-Kāsim al-'Azafī he left Ceuta for Tunis and there taught *ḥadīth*. He made two pilgrimages to Mecca, the first from Ceuta and the second from Tunis in 696/1297. Subsequently he settled in Medina, dying there in 704/1304. Among his teachers were Abu 'l-Ḥasan al-Dabbāḍj and Ibn Abi 'l-Rabī', then, in the East, al-*GHARRĀFĪ*, while his students included Ibn Sayyid al-Nās, Ibn Djabīr al-Wādiyāshī, 'Abd al-Muḥaymin al-Ḥaḍramī, Abu 'l-Kāsim al-Tudjībī and Ibn Rushayd [q.v.].

Only a portion of his poetic output survives, but to judge from the extracts preserved in the works of biographers and the *riḥlas* of al-Tudjībī and Ibn Rushayd, al-Kabtawri was a minor poet who conformed to the tastes of his age by cultivating formal stylishness. His letters date from the period when he was head of the chancellery at Ceuta. M. H. El-Hila (*Lettres d'al-Gāfiqī*, Sorbonne thesis 1967) has collected eleven letters preserved in the 'Abdelliyya Library in Tunis (no. 2804) and two other communications reproduced in *al-Dhakhira al-saniyya*, ed. Ben Cheneb, Algiers 1920, 113-23 (the author is unnamed but the historical data, in conjunction with internal textual criticism, make their attribution to al-Kabtawri extremely likely).

This body of correspondence supplies new particulars about political aspects of the relationship between the countries of the Maghrib and the connexions between the Maghrib and Spain in troubled and confused times. Strong light is thrown on the policy of Ceuta vis-à-vis both the Naṣrid kingdom of Granada and the two Moroccan states (Almohad and

Marinid). From a literary point of view these letters, models of the type prevailing at the period, are characterized by affectation, *saḍīʿ*, and a wealth of metaphors, antitheses and borrowings from the Kurʿān and *hadīth*. At times the striving for literary effects transforms some sentences into punning riddles. There is one striking oddity in this correspondence: a letter addressed to the Prophet, which is a sort of panegyric expressing an ardent desire to visit him at Medina. This letter is probably the oldest of its kind still in existence, for it antedates the two known letters of Ibn al-Ḳhaṭīb (*Subḥ al-aʿshā*, vi, 469).

*Bibliography*: Šafadī, *Wāfi*, Ms. Paris no. 2064, fol. 22; Ibn Ḥaǧǧar, *Durar*, Haydarābād 1929-31, ii, 85; Ibn al-Ḳāḍī, *Durrat al-ḥidjāl*, Rabat 1939, no. 393; Maǧǧarī, *Nafḥ*, Cairo 1939-43, iii, 352. (M. H. EL-HILĀ)

#### KĀBŪL [see BAYʿ].

**KĀBUL**. 1. A river of Afghānistān and the North-West Frontier region of Pākistān, 700 km. long and rising near the Unai Pass in lat. 34° 21' N. and long. 68° 20' E. It receives the affluents of the Panǧjīr, Alingar, Kunar and Swat Rivers from the north, and the Lōgar from the south, and flows eastwards to the Indian plain, joining the Indus at Atak (Attock). The *Hudūd al-ʿālam* (end of 4th/10th century) calls it "the River of Lamghān", and describes it as flowing from the mountains bordering on Lamghān and Dunpūr, passing by Nangrahār (sc. the Djalālābād district) and running down to Multān and the ocean. Bīrūnī calls it "the River of Ghōrward", because one of the arms of the Panǧjīr River rises near the Ghōrband Pass. From these and other statements in the geographers, it is clear that the Kābul River was at this time considered as the main course of the Indus. It is probable that the Kābul River (in Sanskrit Kubhā, one of the seven rivers of the Ṛig-veda) gave its name to the region and eventually the town of Kābul, see below.

*Bibliography*: J. Humlum et al., *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 46; Pauly-Wissowa, *Real Encyclopädie*, Reihe 1, xi, 1361-2, s.v. Kophen, Kophes.

2. The name of a region, and then of a town, in eastern Afghānistān, the city of Kābul being now the capital of that kingdom. The city lies in lat. 34° 30' N. and long. 69° 13' E. at an altitude of 1,750-1,800 m. on the Kābul River in a fertile and well-watered plain surrounded by chains of mountains and hills. Its excellent position as a communications centre, where the route up the Kābul River valley meets the various routes across the Hindū Kush and the route from Ghazna and the south, made it a place of importance at an early date.

In pre-Christian times, the Kābul region formed part of the Hellenized Bactrian states-system, but early in the Christian era it was overrun by invaders from the steppes to the north such as the Kushans and Kidarites and then the Hephthalites [see НА-ΥΛΤΙΛΑ]. Buddhism flourished there and in the whole of the Gandharan region, as the numerous stupas surviving in the Kābul valley attest, and as the travel narrative of the Chinese Buddhist pilgrim, Hiuen-Tsang, who knew Kābul as Kao-fu, likewise shows. Yet the diffusion of cultural influences from the Hindu Gandharan kingdom, based on Udabhāndapur or Wayhind, favoured the indianisation of the Hephthalite rulers of Kābul and the replacement of Buddhism by Indian cults. At this period, Kābul remained the name of the whole district of the upper Kābul River valley rather than a specific town [see KĀBULISTĀN]. Hence a Muslim geographer like Ya-

ʿqūbī, *Buldān*, 290-1, tr. Wiet, 106-7, gives as the chief town of the region the cryptic حروس, and the capital of the Kābul-Šhāhs as the fortress of حمریندس, possibly to be identified with the citadel of Kābul itself (Wiet reads these names as applying to a single place, Djarwīn, following Marquart's Djarwīn in *Ērānsāhr*, 277-89).

The name Kābul was known to the Arabs even in pre-Islamic times. The Dījāhīlī and Mukḥaḍram poets (sc. those of the intermezzo between the pre-Islamic and Islamic periods) use the phrase *Turk wa-Kābul* as a synonym for remoteness, an *Ultima Thule*; see T. Kowalski, *Die ältesten Erwähnungen der Türken in der arabischen Literatur*, in *KCSA*, ii (1926-32), 38-41. However, first-hand knowledge of eastern Afghānistān came only with the expansion of the Arabs from their basins in Sistān and at Bust eastwards into Zamīndāwar and Zābulistān [q.v.], the territories of the Zunbils, epigoni of the southern branch of the Hephthalites. These local rulers strongly resisted the Arabs for over two centuries, barring the way to the Kābul valley, and the fact that these Zunbils seem to have been related to the Kābul-Šhāhs made for solidarity against the Muslim raiders.

During Muʿāwiya's caliphate, the governors of Sistān, ʿAbd al-Rahmān b. Samura and al-Rabīʿ b. Ziyād, raided as far as Kābul, compelling the local rulers there and in Zābulistān to pay tribute. The main product yielded by the raids through these inhospitable regions was, of course, slaves. ʿAbd al-Rahmān brought back slaves captured at Kābul to his house at Bašra, where they built for him an oratory in the Kābulī architectural style (Balādhuri, *Futūḥ*, 397). The famous Syrian *mawlā* scholar Makḥūl al-Dimashqī, teacher of al-Awzāʿī (d. 118/736), had been captured at Kābul during the first Muslim raid there (Ibn Saʿd, vii/2, 161; Ibn Ḳhallikān, tr. iii, 437). Yet the political effects of these and subsequent raids were invariably transitory, and in ʿAbd al-Malik's caliphate, a Muslim army under ʿUbayd Allāh b. Abī Bakra suffered a grievous defeat in the Kābul region (78/697-8); it was to retrieve the Muslim position that the famous "Peacock Army" was sent out under Ibn al-Ashʿath [q.v.]. In Hārūn al-Rashīd's time, the governor of Khurāsān, al-Faḍl b. Yahyā al-Barmakī, sent expeditions into northern and eastern Afghānistān which strengthened the hold of Islam on certain parts of the region. In 179/795 the general Ibrāhīm b. Dījibrīl attacked Zābulistān and then penetrated to Kābul, at that time under the rule of the Turk-Šhāhī dynasty; and under al-Maʿmūn there was a further raid entailing the capture of the ruler of Kābul and his adoption of Islam. For some time under the governorship in Khurāsān of ʿAbd Allāh b. Ṭāhir (213/828-230/845), the Kābul-Šhāh paid tribute to the Muslims in the form of 1½ million *dirhams* annually plus 2,000 Oghuz Turkish slaves (Ibn Ḳhurradādhbih, 38).

Only under the Šaffārids of Sistān [q.v.] was real headway made by the Muslims. Thus Yaʿqūb b. Layṭh's expedition of 256/870 via Balkh to Bāmiyān, Kābul and the silver mines of Panǧjīr brought about the first lengthy Muslim occupation of Kābul. Arab historians record the wonder excited in Baghdād by the presents of elephants and pagan idols from the Kābul valley forwarded by the Šaffārids (Tabarī, iii, 1841; cf. Masʿūdī, *Murūdj*, viii, 125-6). The islamisation of the Kābul region progressed considerably under Alptigin and the Turkish slave governors of Ghazna in the later decades of the 4th/10th century; under the Ghaznavids [q.v.], Kābul seems to have been a depôt for the army's force of elephants

(Bosworth, *The Ghaznavids*, 116-17). It now begins to be considered as administratively within the orbit of Ghazna rather than in that of the Bāmiyān-Ghōrbānd area, cf. Maḳḳasī, 297.

The geographers of the 3rd/9th and 4th/10th centuries give a somewhat vague and confused account of the Kābul region, especially since it was peripheral to the experience of most of them. Long before it became islamised, Muslim merchants resorted to Kābul, primarily because it was an entrepôt for the products of India: in the enumeration of Ibn Khurrādādhbih, 38, for inferior aloes wood, coconuts, saffron, and above all, myrobalanus (*ihliladi, halil-adi*), the astringent medicament, of which a special Chebuli or Kābuli variety was distinguished (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, 607-10, and Laufer, *Sino-Iranica*, 378). Towards the beginning of the Ghaznavid period, Kābul begins to be distinguished as a town, with a mixed Muslim and Indian population (the Indians regarding Kābul as a pilgrimage centre), a strong citadel and a prosperous *rabaḳ* or commercial quarter (Muḳaddasī, 304; *Hudūd al-ʿĀlam*, 111).

The dominance of the capitals Ghazna and then Frūzkūh [*q.v.*], under the Ghaznavids and Ghūrids respectively, inevitably overshadowed Kābul, and contemporary sources do not have a great deal to say about it at this time. Such destructions of Ghazna as those of 'Alā' al-Dīn Ghūri and Timūr favoured the gradual rise once more of Kābul, although the traveller Ibn Baṭṭūṭa still found there in 733/1333 a mere village, with nothing there of note save a *zāwiya* or hermitage of the Ṣūfi Shaykh Ismā'il al-Afghānī (*Rihla*, iii, 89-90, tr. Gibb, iii, 590-1). Eastern Afghānistān formed part of the Timūrid empire, and after Timūr's death it became an appanage (*soyūrghāl*) for Timūrid princes. Thus Abū Sa'īd's son Ulugh Beg (not to be confused with the more celebrated Ulugh Beg b. Shāh Rukh, d. 853/1449, [*q.v.*]) reigned in Kābul and Ghazna from 865/1461 to 907/1501-2. After his death, Kābul came temporarily under the control of the Arghūnid Muḳīm, who had married a daughter of Ulugh Beg, until in 910/1504 Bābur came from Transoxania and took over Kābul, compelling Muḳīm to retreat to Kāndahār. Kābul now flourished under Bābur, who is eloquent in his memoirs about the climate and natural beauties of the region, its amenities and its products, and the fact that it was a mecca for trading caravans, bringing thither the products of India, China, Central Asia and Persia; and it was at Kābul that Bābur laid out numerous gardens. He made it his centre for campaigns against Kāndahār and into northern India, and his successors the Mughal Emperors of India kept it firmly within the orbit of their dominions. For the first time, Kābul becomes a mint centre for gold and silver coinage, and Mughal coins were produced there down to the reign of 'Azīz al-Dīn 'Ālamgīr (1167/1754-1173/1759). It was to his favoured centre of Kābul that Bābur's body was brought, in accordance with his express desire, some years after his death at Āgra in 937/1530; his tomb is now a pleasant spot on the slopes of the Shīr Dawāza mountain on the west side of modern Kābul (see *Bābur-nāma*, tr. Beveridge, 188 ff., 705-6, 709-11, lxxx-lxxxii).

Nādir Shāh captured the citadel of Kābul in 1151/1738, en route for his famous Indian campaign, but after his death in 1160/1747, the Kizilbāsh garrison of Kābul yielded it up to Ahmad Shāh Durrānī of Kāndahār [*q.v.*]. Under Ahmad's son and successor

Timūr Shāh, it became clear that the Durrānī empire in north-western India could not be satisfactorily held from Kāndahār, so Kābul became the capital. In this way began Kābul's modern rôle as capital of Afghānistān, even though at times in the 19th century the authority of the amirs of Kābul was geographically fairly circumscribed [for the history of the period, see AFGHĀNISTĀN, v]. The town suffered during the first two Afghān-British Wars and the civil strife between rival members of the Sadōzay and Muḥammaḳzay or Bārakzay families. Thus when British forces returned to Kābul in autumn 1842, they burned the great bazaar of Kābul in retaliation for the murder of Macnaghten and the sufferings of the British forces during their retreat from Kābul at the beginning of that year. In recent decades, Kābul has expanded to a city of 435,000 people (1965 estimate), has acquired paved roads and has become a considerable industrial centre; in particular, it has expanded northwestwards in the Shahr-i Naw suburb towards the British Embassy and southwestwards towards the University of Kābul and King Amān Allāh's former palace of the Dār al-Amān.

*Bibliography*: For the geographical position of Kābul and the development of the modern city, see J. Humlum *et al.*, *La géographie de l'Afghanistan, étude d'un pays aride*, 130-9, and the detailed social, demographic and economic survey in H. Hahn, *Die Stadt Kabul (Afghanistan) und ihr Umland*. i. *Gestaltungswandel einer orientalischen Stadt*. ii. *Sozialstruktur und wirtschaftliche Lage der Agrarbevölkerung im Stadtumland*, Bonner geographische Abhandlungen, Hefte 34-5, Bonn 1964-5 (contains many useful maps). For Kābul's history during the mediaeval period, see scattered references in R. Ghirshman, *Les Chionites-Hephthalites*, Cairo 1948; J. Marquart, *Erānshahr*, Berlin 1901; C. E. Bosworth, *Sīstān under the Arabs, from the Islamic conquest to the rise of the Saffārids*, Rome 1968; H. C. Ray, *The dynastic history of Northern India*, i, Calcutta 1931; M. Forstner, *Ya'qūb b. al-Layl und der Zunbil*, in *ZDMG*, cxx/1 (1970), 69-83. The information of the Muslim geographers is subsumed in Le Strange, *The lands of the Eastern Caliphate*, 348-50, to which should be added *Hudūd al-ʿĀlam*, tr. Minorsky, 11, 343-7. The *Bābur-nāma*, tr. A. S. Beveridge, London 1921, devotes much space to the topography and products of the Kābul region. For the modern period, see the sources quoted in the bibliography to AFGHĀNISTĀN, i, and v; the accounts of 19th and early 20th century travellers and officials like Mountstuart Elphinstone, Alexander Burnes, J. P. Ferrier, Sir Thomas Holdich, etc., are especially valuable here.

(C. E. BOSWORTH)

**KĀBULISTĀN**, the upper basin of the Kābul River (see preceding article), vaguely defined in early Islamic times as the region between Bāmiyān in the west and Lamghān in the east. The geographer Muḳaddasī (c. 375/985) includes within it all the country north of Ghazna and Zābulistān, *i.e.*, the Lōgar valley, cf. Le Strange, *Lands of the Eastern Caliphate*, 349; and it is only about this time that the term "Kābul" becomes specialised for the name of the town rather than being applied to the whole region of Kābulistān. In contemporary Afghānistān, the heart of the mediaeval Kābulistān has since 1964 formed the *wilāyat* or province of Kābul.

(C. E. BOSWORTH)

**KĀBŪS B. WUSHMAGĪR B. ZIYĀR, SHAMS AL-MĀ'ĀLI ABU'L-ḤASAN** (reigned 366-71/977-81 and

388-403/998 to 1012-13), fourth ruler of the Ziyārid dynasty which had been founded by Mardāwīd b. Ziyār [q.v.] and which ruled in Ṭabaristān and Gurgān (Djurdjān). Like other families rising to prominence in the "Daylami interlude" of Persian history, the Ziyārids endeavoured to attach themselves to the pre-Islamic Iranian past, and Kābūs's grandson Kay Kā'ūs makes Kābūs's ancestors rulers of Gilān in the time of Kay Khusrāw (*Kābūs-nāma*, Preface). As under his predecessors, suzerainty over the Caspian coastlands continued in Kābūs's time to be disputed by the Sāmānids in Khurāsān and the Būyids of western Persia. It seems to have been support from the Būyid 'Aḍud al-Dawla [q.v.] which enabled Kābūs to succeed his brother Zahir al-Dawla Bisutūn in 366/977, for the great Amīr's overlordship is acknowledged on Kābūs's first coins; it was also at this point that he received the honorific of 'Shams al-Ma'ālī' from the Caliph al-Ṭā'ī.

However, Kābūs soon afterwards gave help to his son-in-law Fakhr al-Dawla [q.v.], the Būyid ruler of the Kurdish region of Djībāl, against the latter's brothers 'Aḍud al-Dawla and Mu'ayyid al-Dawla. This course proved disastrous for Kābūs. He lost control of much of Ṭabaristān by 369/979-80, and in 371/981-2 the remainder of his kingdom was invaded by Būyid forces under Mu'ayyid al-Dawla in person. After a defeat at Astarābād, Kābūs and Fakhr al-Dawla were compelled to seek refuge in Nišāpūr with the Sāmānid general Ḥusām al-Dawla Tāsh. Despite Sāmānid aid, the two fugitives were unable to stage a revanche as long as 'Aḍud al-Dawla lived. The Caspian region remained under Mu'ayyid al-Dawla's control until his death in 373/984, when Fakhr al-Dawla returned from Nišāpūr and with the Šāhib Ibn 'Abbād's support, became ruler in Rayy and Djībāl. Būyid ingratitude prevented Kābūs from sharing in this reversal of fortunes, and it was not until after Fakhr al-Dawla's death that Kābūs, after 17 years' exile among the Sāmānids, returned at the invitation of the local people to his ancestral lands (388/998).

The events of Kābūs's second reign are less well-documented in the sources; nor do we possess any coins from these later years. The historians relate that Kābūs's tyrannical and bloodthirsty rule, which had culminated in the execution of the governor of Astarābād for alleged Mu'tazilī beliefs, finally led to a military revolt. Kābūs agreed to abdicate in favour of his son Manūčīhr; but shortly afterwards the rebels murdered him by exposure to the winter cold (403/1012-13). His mausoleum, erected in 397/1006-7, may still be seen outside the modern town of Gurgān [see GUNBADH-I KĀBŪS]. After Kābūs's death, the Ziyārid kingdom fell increasingly under the influence of the Ghaznawids, heirs to the Sāmānids in Khurāsān.

Despite his reputation for cruelty, Kābūs achieved a great contemporary renown as a scholar and poet in both Arabic and Persian. His long exile among the Sāmānids brought him into fertile contact with the luminaries of the brilliant Bukhārā court culture. In the *Yatimat al-dahr*, Ṭha'ālībī calls him "the seal of rulers, the outstanding figure of the age, and the fountainhead of all equity and beneficence", whilst Ibn Shuhayd, cited in Ibn Bassām's *Dhakhkhira*, i/1, 202 (cf. Ch. Pellat, *Ibn Shuhayd, Hayātuhu wa-āthāruhu*, Amman 1966, 132), links him with Bad' al-Zamān al-Hamadhānī as the leading figures in the new wave of rhymed-prose writers. The extant Arabic works of Kābūs comprise a collection of *rasā'il* and a work on *adab* and proverbs, but 'Askarī gives high

praise to a *Risāla fi'l-iftikhār wa'l-ṣitāb*, now lost (see Brockelmann, S I, 154). Kābūs was also an expert calligrapher and authority on astrology. As a patron of the arts, he received the dedication of verses by several of the great poets of the time, but the greatest lustre accruing to him came from his association with Ibn Sinā (Avicenna), who fled from Khwārazm for refuge at Kābūs's court before going on to Rayy, and also from his association with Bīrūnī, who came to Gurgān shortly after Kābūs's restoration in 388/998 and there dedicated to the amir his *al-Āthār al-bākiya*.

#### KĀBŪS-NAME [see KAY KĀ'ŪS].

**KABYLIA**, a mountainous region in the Algerian Tell. The word Kabylia, coined by the French, means "land of the Kabyles" (*bilād al-Kabā'il*). This name is of fairly recent origin, however, for it is not found in the works of Arabic historians and geographers; it is probably of oral origin and intended for use by foreigners, *i.e.*, Europeans; it seems to have been introduced into geographic nomenclature by European writers from the 16th century onwards. The word "Kabyle", the etymology of which is sometimes questioned, seems to correspond to the Arabic word *kaḳā'il*, plural of *kaḳāila* "tribe", which certain Arabic writers used as a synonym for the Berbers. It was already employed with this meaning by the author of the *Rawḍ al-Kiriṭās* who, in various passages enumerating the contingents of the Marīnid armies (notably pp. 217 and 238 of the Arabic text), carefully distinguishes between the *Kabā'il* and the Arabs.

Geography and Economy. To the east of the plain of Mitidja a barrier of high land extends as far as the Tunisian frontier; these mountainous regions constitute the Kabylia, whose unity is as much physical as human. Close to the Mediterranean the base of ancient rocks, granite and micaceous, which in all probability constitutes the geological basis of North Africa, rises and forms a coastal rim, outcropping as plateaux, deeply dissected by erosion

into long parallel projections: such are the massifs of the Arbaa n-Ath-Iraten (formerly Fort National), Collo, and Edugh. The crystalline rocks have more recent strata, of which two are of great geographic importance: the secondary calcareous rocks were folded into long ranges spiked with peaks; the highest point of one of them, the Djurdjura, is the Lalla Khadidja at 2308 m.; the Djebel Babor rises to 2004 m. The tertiary sandstones spread out in an increasingly continuous surface layer from the west to the east, and because of the nature of the soils deriving from them are forested. Near the sea, torrents plunge over the Kabylia rim, where they gouge out virtually inaccessible vertical gorges; the gorges of Palestro and Kerrata and the canyons of Rhumel have a certain grandeur.

The northern flanks of the Kabylia are exposed to the masses of humid air originating in the Atlantic, thus receiving heavy rainfalls. One of the highest annual average rainfalls in Algeria, 1773 mm., was recorded at Bessombourg in the Collo massif. By reason of the altitude the precipitation can take the form of snow in midwinter, even reaching the depth of one metre at the 'Ayn al-Ḥammām station (formerly Michelet). Abundant humidity and the predominance of siliceous soils favour the spread of forests. Here they cover vast areas; in the main they are of oak, carpeting the middle slopes: the cork on the Numidian sandstones, the *zān* (*chênes zéens*, *quercus Mirbeckii*), the *afares* (*quercus castaneafolia*) and *ballūt* or hazelnut oak. Above 1,500 m. the cedar takes over; it used to grow on the scree on the slopes of the Djurdjura. Trees are important in the everyday life of the people of Kabylia: ash trees close to their houses are used to support vines; their leaves are used as fodder for cattle in summer and the wood is used in the manufacture of agricultural tools and domestic utensils. Olives and figs, which flourish as high as 600 m. and 1,000 m. above sea level respectively, are important components of the diet of the mountain dweller.

All these geographical elements, relief, humidity, low temperatures and forests, contribute to making the Kabylia an unproductive mountainous environment which became the refuge of a population determined to preserve its identity in the face of invaders. The Berber ethos has been maintained for centuries; it has kept its essential characteristics: its old social organization and its customs. Islam may have been accepted, but it was wholly vested with beliefs peculiar to Berber traditions. Arabic has not wholly supplanted Berber dialects, which are still in use throughout Great Kabylia.

The Kabylia mountains are closely kin to those of the western Mediterranean, their landscape bearing the imprint of the same ancient civilization. This is borne out first by the type of dwelling. In the Arbaa n-Ath-Iraten massif the village predominates: it runs along a single central street which follows the line of the ridge. Stone houses roofed with round tiles are inhabited by a group of families, the *kharrūba*, who refer to each other as brothers; each conjugal family occupies one room divided in two by a bench: on one side the people, on the other the livestock. The rooms are arranged around a central courtyard shut off on the outside by a double wooden door. In contrast to the collective village or *thadderth* is the *tūfik*, which is made up of scattered hamlets. Such dwelling places, perched high up and reached by winding paths, seem to have been imposed by the concern common to the populations of the Mediterranean world for protection against the attacks of neigh-

bours or strangers. Another possible explanation is that they meet the requirements for working a soil which is particularly difficult to utilize. Threshing floor and oil presses are installed at the entrance to the village. Under the walls of the houses the women cultivate small vegetable gardens. The slopes, rarely terraced, support groves of olive and fig trees, and fields of barley. The valley bottoms, where the wadis flow between steep banks covered with brushwood, are chilling, narrow, damp and gloomy, and it is easy to see why they remain uninhabited. The people are concentrated on the high land, moving from ridge to ridge. Where the valleys widen out into alluvial plains, the population abandons the high land, spreading out into *tūfiks* among the of barley fields. As in Lesser Kabylia, people are occasionally so dispersed that family huts are isolated in the midst of grazing for the oxen.

The geographer will be surprised at the almost total absence of terrace agriculture and the pastoral movement of flocks which have enabled other Mediterranean mountain dwellers to turn their environment to the best account. Instead, the Kabylia works silver, copper and wood to make coarse jewellery, carved tables and engraved dishes, while his wife weaves woollen carpets and makes pottery decorated with geometric figures. Pedlars travelled beyond the Mediterranean to sell these objects. Such ingenuity does not suffice to explain the great densities of population concentrated in such an unfavourable geographical environment: more than 140 inhabitants to the square kilometre in the major part of the Great Kabylia of Tizi Ouzou, with a maximum of 250 inhabitants in the district of Arbaa-n-Ath Iraten; between 95 and 140 in the Lesser Kabylia of Bidjāya (formerly Bougie); between 70 and 95 in the Lesser Kabylia of Collo and the districts of Skikda (formerly Philippeville) and 'Annāba (formerly Bône). These extraordinary population densities characterize a strongly structured human environment, appearing to be an instinctive defence to ensure the survival of a population which believes itself constantly threatened.

Be that as it may, the Kabylia could not have survived in such numbers if they had been reduced to living off the produce of their mountains. To these scanty resources they added the far more abundant ones available through emigration. The massifs are reservoirs of manpower from which the plains, settled at an early date, and the developing towns tapped a supply of workers when they needed them. Algiers is in part a Kabylia city; the outskirts constitute a waiting zone where those who still dare not face the unknown of the city crowd together: Aïn Taya has grown at the fastest rate, increasing from 2,910 inhabitants in 1954 to 21,906 in 1966. The urban centres of the mountains are also growing: in 12 years the population of Tizi Ouzou has risen from 6,056 to 25,852; that of Bidjāya from 29,748 to 59,991; that of Constantine from 111,315 to 240,672.

Since the beginning of the 20th century mountain dwellers from the east of Algeria have even crossed the sea to look for jobs in France and neighbouring countries. The 1966 census brings the number of emigrants living abroad who have remained in touch with their families by sending letters and money up to 268,000; according to the 1968 French census there were 612,000 natives of all regions of Algeria living in France. The two Kabylia départements of Tizi Ouzou (Great Kabylia) and Sétif (Lesser Kabylia) account for 20.77% and 25.99%, i.e., over 46% of all Algerian emigrants, which represents 16.9% and

14.5% of their total populations: thus one in six of those born in Great Kabylia lives abroad. The sums (savings and allowances) remitted by workers to their families have risen annually to 900 million Algerian *dinārs*, a currency contribution exceeding that derived from the export of wine or citrus fruit. Almost half of this income is sent to the Kabylia, whose basic resource is now their labour force of young men.

The results of emigration have not all been happy. The equilibrium of the mountain settlements has been upset. Several regions in Great and Lesser Kabylia have temporarily lost 20-30% of their adult male population. Old people, women and children predominate: there are not enough workers to cultivate the fields and shrub plantations. Agriculture is reduced to gardening on the outskirts of the villages and is declining. The wasteland gains more ground each year. Goats or poultry are reared on a small scale at the expense of flocks, which are decreasing in size. Traditional society has been disturbed, with a monetary economy supplanting the exchange of goods in kind. As food and clothes are bought from the local trader, the number of shops increases: the old pedlar has settled down. Often the standard of living has risen: foodstuffs such as sugar, tea, coffee and bread baked from wheat are becoming part of the regular diet. The returning emigrant often brings back luxury goods like cameras and transistor radios as presents. On his lavishly celebrated arrival, he introduces new ideas, tastes and desires which transform the outlook of his people. It is difficult for a young worker from a Renault factory to accept the absolute authority of an old man whose experience owes nothing to the modern world; breaking with tradition, he leaves the paternal roof and settles with his wife and children in a more open house, equipped with chimneys. Thus conjugal families often leave the *kharrāba*.

The Algerian government is aware of the dangers involved in emigration: if France should refuse to take in these workers, the economic and social consequences in Kabylia would be extremely grave. To put an end to this dependent state, the establishment of new jobs is envisaged to attract the emigrants home and to ensure their reintegration into the national economy by 1985. This goal can be reached only through large-scale industrialization of the mountain regions. For several years the number of newly-created jobs there has been increasing. The largest textile complex in Algeria, which will employ 2,200 workers, has been established in Great Kabylia at Drāben Khedda (formerly Mirabeau). In Lesser Kabylia Bidjāya today is an oil port capable of handling 14 million tons a year. Further to the east Constantine has a textile factory. Skikda will soon have a huge factory producing methane. The region of 'Annāba, which houses the leading metallurgical complex of al-Ḥadjar (formerly Duzerville), is tending to become a focal point of development, the centre for a vast mountain hinterland.

In spite of its indisputable unity, the Kabyle world is divided into several differentiated regional entities. Great Kabylia is unquestionably the most individualistic, comprising from north to south the slight mountainous ridge of the Mizrana, behind the sheer slope from Dellys to Tigzirt, the rich valley of Sebāou, the ancient massif of Tizi-Ouzou, and the mighty limestone sierra of Djurdjura, whose southern slope comes down into the Soummam valley. Here the Berber ethos has been preserved: the people living in the heights have remained firmly attached to their own language and customs, resisting

changes brought by Islam and French colonization. Beyond the forested borderland of Yakouren, the Kabylia are populated by Arabic-speaking Berbers. The Lesser Kabylia of Bidjāya, comprising the lower valley of the Soummam and the Babor mountain range, is occupied by small communities who make a living by tilling the soil and raising oxen. The Kabyle Collo massif shelters wild peoples in the heart of its dense forests. Eastern Kabylia is a region of wooded mountain ranges, interspersed by basins where richer agriculture and facilities for transport have allowed towns to develop; Skikda, Constantine, 'Annāba, Guelma and Souk Ahras are poles of attraction for the mountain dwellers.

(H. ISNARD)

**Ethnography.** A significant proportion of the inhabitants of Kabylia, though the precise number is impossible to determine, is Berber-speaking, occupying Kabylia of the Djurdjura or Great Kabylia in particular. Although the inhabitants of Lesser Kabylia or Kabylia of the Babors are Berber-speaking to a slight degree only, Berber customs are firmly rooted among them. However, the Kabyles cannot be considered as constituting one true ethnic group, for all the evidence points to their being ethnically different, although their origins are obscure. They form part of the relatively ancient, pre-Carthaginian peoples of North Africa who probably arrived from different directions, but at least some from the Mediterranean. Living together for centuries in the Maghrib, they eventually built up a common civilization with a single language, which was not written down in the majority of cases and diversified into a great number of dialects with many features in common.

This essentially rural civilization has lasted until the present day in spite of historical vicissitudes and the other civilizations—Carthaginian, Roman, Arabic, Turkish and French—which confronted it. Perhaps the Kabyles became more firmly attached to their ancestral way of life the humbler and more rustic they perceived it to be; at any rate, they had no wish to sacrifice it for the elaborate civilization of the Arabs, for example. That the latter was accommodated to a greater extent than any other was the result of a long association, it is true, but also because of the numerous eastern elements in Berber civilization and the affinities established at an early date. Much has been written on the customs of the Kabyles which, generally speaking, vary from community to community. Their rule of law, which until practically the present day was hardly ever written down but was preserved in the memory of all, differs on several points, notably the disinheritance of women, from Muslim law. Under French occupation a number of customs were recorded in French for the benefit of the magistrates, and French law gradually came to modify local custom and Muslim law.

That the Kabyles have been Muslims for a very long time is certain. Perhaps they embraced *Kharijism* during its greatest expansion (from the middle of the 2nd/8th century), but no information is available on this point. At the time of the French occupation it was apparent that Kabyle society professed an Islam more pietist than dogmatic, and that numerous holy men and women were venerated in the country. Religious figures, members of religious brotherhoods, and marabouts or *Shurfā'* enjoyed great esteem, often using their influence to settle differences arising between families or tribal groups, and had such privileges as exemption from tax. They

were almost the sole bearers of the written, that is Arabic, culture, which on the evidence of the work of *Shaykh* al-Warṭhīlānī (12th/18th century) was fairly rudimentary. They were however capable of teaching the basics of Arabic and a smattering of theology and Muslim law. Significant also were the religious brotherhoods, that founded by Sidi Muḥammad 'Abd al-Raḥmān Abū Ḳabrayn (Bū Ḳabrīn) (1126/1715-1208/1798) being by far the most important. Alongside God, the Prophet and the saints, the Kabyles believed firmly in the existence of maleficent and beneficent forces closely interwoven with man's existence.

Finally, we must consider the oral tradition in the Kabyle language, as distinct from the limited literature written in Arabic. Numerous specimens from this very rich field have been collected, transcribed and very often translated by orientlists or Kabyles. It was handed down within the framework of the family or village and subject to all the hazards inherent in a purely oral transmission. The tradition was also preserved by professionals who travelled from village to village singing the praises of God and the saints and recounting the struggles of tribes and the exploits of warriors. Others were practitioners of a more lighthearted, even bawdy, style. Verse was important, for it was more easily remembered than prose, and pious, moral and humorous tales were popular. This largely unexplored treasure is in great danger of disappearing, for the young are no longer interested in such old ways.

History. It is more or less established that neither the Carthaginians nor the Romans penetrated deeply into the Kabyle bloc. There are significantly few Roman ruins in Djurdjura, except in some coastal settlements. Arab civilization reached Kabylia of the Babors by the end of the 3rd/9th century, as evidenced by the welcome given by the Kutāma to the Fāṭimid missionary Abū 'Abd Allāh al-Shī'ī, but seems to have reached Kabylia of the Djurdjura only in the shape of Islam, which was probably introduced at an early date though in superficial fashion. In fact, throughout the Middle Ages little is heard of Kabylia. It was subject to the Almohads, but we have no idea under what conditions it then came under the authority of the Ḥafṣids or of the Zayyānids of Tlemcen, and sometimes, for very short periods, even the Marinids of Fez. Kabylia seems rather to have survived these vicissitudes than to have played a prominent rôle, and it may be supposed that during this period of more than two centuries it was largely autonomous.

It is not until the 10th/16th century that the Kabyles, perhaps unwittingly, took an active part in the history of the Maghrib. The Barbarossa brothers, 'Arūḍj and then Ḳhayr al-Dīn [q.v.], made the Djidjelli region their first base of operations, with Algiers as their final objective. Since the Kabyle massifs constituted a screen between Djidjelli and Algiers, the Turks were forced to take account of the local inhabitants who could cut off their route, and the latter had to adopt attitudes which obviously influenced subsequent events. At that time the Kabyle peoples were divided between three powers, which Western writers called the kingdom of Kūko, the kingdom of Labbès (Banū 'Abbās) and the principality of the Banū Djuubar. The last-named held sway over the tribes inhabiting the coastal zone to the east of Bidjāya. The kingdom of Labbès was situated to the east of the Wādī 'l-Sāḥil or Summām, and spread over at least part of Kabylia of the Babors; that of Kūko stretched from Djurdjura

to the sea and was served by the port of Azeffūn: in other words it included the major part of Kabylia of the Djurdjura. At the time of 'Arūḍj, the leader of Kūko was named Aḥmad b. al-Ḳāḍī; 'Arūḍj concluded an alliance with him, obtaining contingents of mountain fighters as reinforcements for his scanty Turkish army. During this time the Banū Djuubar and the Banū 'Abbās usually sided with the Spaniards from Bidjāya. Under Ḳhayr al-Dīn the scene changed: having quarrelled with him, Ibn al-Ḳāḍī went so far as to attack him, and played no small part in his short-lived surrender of Algiers (1520-25). The Turks then turned back towards the Banū 'Abbās and regained the upper hand. A similar state of affairs must have obtained during almost the whole of Turkish domination, with the different Kabyle groups sometimes allying themselves with the rulers of Algiers, then rebelling against them for a time, until, besieged in their mountains, they were obliged to negotiate in order to gain breathing space. Occasionally a matrimonial alliance strengthened the bonds between the Kabyles and Algiers, (the marriage of Ḥasan Paṣḥa to a daughter of the king of Kūko in 1560); often Kabyle contingents arrived to reinforce the Turkish troops (during the Turkish expedition against Morocco in 1574). This did not prevent the Kabyles from continuing their intermittent relationship with Spain nor from welcoming Christian prisoners who escaped from Algiers: it was in this way that in 1559 the chief of the Banū 'Abbās had at his disposal "a good troop of musketeers" (Haiedo, *Histoire des Rois d'Alger*, 119) and that for about ten years, from 1598 to 1608, the leader of Kūko maintained close relations with Philip III of Spain, who at one point thought of taking Algiers with the help of the Kabyles (Carlos Rodriguez Jouliz Saint Cyr, *Felipe III y el Rey de Cuco*, Madrid 1954). These vicissitudes sometimes brought in their wake internal political changes, such as the disappearance of the kingdom of Kūko and its transformation into a confederation of the Zwāwa, or the birth of a new confederation of the Geshṭūla (Ighshḍal) in the western part of Djurdjura at the instigation of a *shaykh* named Gassem (Ḳāsim).

Right up to the end, Turkish authority remained very shaky. The theoretically subject tribes were split into two Kaidates, Boghni and Sebaou plus the town of Bidjāya. To maintain law and order and to raise taxes the Kaidats had at their disposal several hundred janissaries, stationed at fortified posts, and troops of auxiliaries, some black ('*abid*'). They intervened as little as possible in local affairs and held the country by the constant threat of a blockade which it could not withstand, for the resources brought from outside were indispensable. In addition the Turks fostered local discord and gave their support to religious personalities by helping them erect sacred buildings. On the whole Turkish rule left no bitter taste in Kabylia since it was not rigidly enforced: "In popular songs the Turk is represented as a brave, dignified character; when the poet wishes to praise one of his compatriots, he compares him to a Turk" (Hanoteau, *Poésie populaire de la Kabylie du Djurdjura*, 63-4, n. 3).

During the Turkish period the Kabyle populations preserved their political and administrative institutions intact. These constituted an aggregate of small republics grouped into a federation extending over a small area. The political and administrative unit was the village (*thaddarth*), which was subdivided into groups, called *adrām*, *tharīfth*, *takherrūbt* and *kharrūba* according to locality. A collection of several

villages bound by reciprocal obligations constituted a tribe, 'arsh. At the time of the French conquest there were 1,400 villages divided among 120 tribes. A federation of several tribes was called *thakbilh* (Arabic *ḥabila*). In certain cases several confederations united as a temporary measure for communal military action, but any alliance outside the tribe was very unstable.

The village seems to have been a municipal republic subject to the authority of the citizens' assembly (*thadīma'ith*, Arabic *djāmā'a*), which had very far-reaching powers. It appointed a president (*amok-krān*, *amghār*, *amin*) charged with carrying out its decisions, and *temmān* (sing. *tāmen*, Arabic *dāmin*) as his deputies, or perhaps his supervisors. The *djāmā'a* assessed the quota and allocation of taxes, decided on war and peace, regulated relief funds and modified local customs if the need arose. It was composed of all the male inhabitants old enough to observe the fast of Ramaḍān, but in reality decisions were made by an oligarchy of rich and influential men who laid down the law. The authority of the *djāmā'a* was limited by the respect it owed to the rights of individuals and families, and by customs in force. Tribes and confederations employed the same type of organization, but the more widespread the grouping the looser the bonds of solidarity between its members. Moreover this solidarity was restricted by the existence within all the groups of *soff*, or parties, of whose origins and methods of functioning little is known. In short, Kabylia was made up of very small units whose relations with each other were perpetually unstable, and as the traveller al-Warḥī-lānī bears witness, the country lived in a state of endemic anarchy.

Such was the situation in Kabylia when the French disembarked at Algiers in 1830. They immediately came into contact with the Kabyles, since the latter were numerous in the capital, but had no thought of occupying their country, because, for several years, they were not even sure if they would remain in Algiers. After the departure of the Turkish garrisons, Kabylia enjoyed a period of complete independence which was hardly conducive to the cohesion of the country. Nevertheless an immediate understanding was reached between the Kabyles and the new occupants, since from August 1830 onwards Bourmont contemplated establishing military units of Zwāwa (Zouaves); the chequered career of these units opened on 1 October 1830.

Before the French took any real interest in the Kabyles the amīr 'Abd al-Kādir made approaches to them, since he considered them part of his sphere of influence as defined by the treaty of Tafna, and since he knew them to be hostile to French domination. He appointed a *ḫalīfa* of Sebaou, but was not recognized as sultan by the Kabyles. When Bugeaud was appointed governor-general and commander-in-chief, he was too absorbed in his struggle against 'Abd al-Kādir to attend to Kabylia; this he did in 1844, when, as soon as he gained a slight respite, he occupied Dellys. In 1847, in spite of French government opinion, he embarked on a fresh campaign and had some successes on the periphery of the territory, but the problem of the Kabyle massif remained more or less untouched. It was only after the election in France of Prince-President Louis Napoleon Bonaparte that the Kabyle question was taken up again. A campaign against the supposed *sharif* Abū Baghla opened in 1851, followed by another in Kabylia of the Babors led by General de Saint Arnaud which resulted in the decisive occupation of Djidjelli.

Kabylia of the Djurdjura remained unconquered, however, and disturbances were frequent, especially at the instigation of the Rahmāniyya brotherhood. On each occasion the French reacted, finally deciding to occupy the Kabyle massif completely, under the leadership of Marshal Randon, the governor-general. After a campaign, made difficult by the nature of the terrain and the tenacity of the tribes, the latter submitted at the beginning of July 1857. In return for hostages and a war tax the Kabyl tribes secured the preservation of their municipal regime, but the great native commands which had continued to exist in the face of many vicissitudes progressively disappeared.

The two Kabylas played an active part in the 1871 insurrection, and were harshly punished by confiscation of land and heavy fines; the municipal assemblies were theoretically suppressed, but the *amins* of the communities were maintained; French magistrates were introduced into the Djurdjura, charged with preserving Kabyle custom. Later, from 1880 onwards, Kabylia of the Djurdjura was divided into four "communes mixtes" and four judicial districts, and for several years gallicization was pursued with a measure of success. With the agreement of his principal councillors, Jules Cambon then clamped down on Kabyle politics, which he considered illusory. At the time of the creation of the Financial Delegations (1898), the Kabylas provided six (four for Kabylia of the Djurdjura) out of 21 native delegates. This mark of favour was followed by a new tendency to gallicize Kabylia, especially through the schools, which were relatively well-developed in this part of Algeria. At about the same period Kabyle emigration to France began. At first it was slight, but it conformed to a very ancient Kabyle tradition and need, and increased in volume during World War I. It produced quite a considerable rush of capital into the country with the workers sending all their savings to their families.

Thus it is not surprising after that that the Kabyles took a large part in the development of the "North African Star", founded in Paris in 1926 at the instigation of the French Communist Party and largely composed of Kabyles. As this group, which from 1927 was led by Maṣṣālī Hādīdji, soon clamoured for the independence of Algeria, a number of Kabyls found themselves at the head of the Algerian independence movement, although in the country itself tradition remained strong. It was on the border of Kabylia or in Kabylia of the Babors that the 1945 Algerian insurrection broke out; like that of 1871, it was firmly punished. From 1947 onwards a small group of Kabyles under the leadership of Belkasem Krim (Ibn al-Kāsim Karim) decided, for political reasons, to live as outlaws: this group became the core of the 1954 revolt in Kabylia.

Individual Kabyles, like Krim, Ait Ahmad, Boudiaf, Ouamran, etc., played a decisive role in triggering the Algerian War, whether they were directing action on the spot or living outside Algeria and travelling the world over to promote the Algerian cause. There was even a period (1955-7) when the action undertaken in Algeria was directed by the Kabyle Ramdan Aban. The apogee of this period came in August 1956 with the Soummam Valley Congress, inspired and brought into being by Aban and Krim. Of the death of the former in 1959 little is known; the latter was one of the negotiators of the Evian Agreement, which, in March 1962, put an end to the Algerian War. Not content with providing several influential leaders, a very large part of the population of Kabylia partici-

pated in the war, and the entire population maintained silence about the movements of the members of the National Liberation Army. At the end of the war the sector of Kabylia of the Djurdjura (*Wilāya III*) was under the command of a Kabyle, Colonel Moḥand u l-Hādī. After the war and the referendum instituting independence, a fierce struggle for power began in Algeria, especially between the members of the N.L.F. who arrived from abroad and certain resistance groups (*Wilāya III* and *IV*); among the latter were the Kabyles of *Wilāya III*, including Belkasem Krim. On several occasions (July and the end of August) they united in their mountain stronghold, and then matters were settled, at least on the surface. But the uneasiness continued, as witness the referendum and presidential election of September 1963 in which a great many abstentions were recorded in the electoral constituencies of the Djurdjura.

Not long afterwards, on 29 September 1963, Kabylia of the Djurdjura rose under the leadership of Ait Ahmed and Colonel Moḥand u l-Hādī, seemingly on the pretext of the government's dissolution of the Socialist Forces Front, founded by Ait Ahmed. The actual hostilities were insignificant, and the Algerian-Moroccan fighting which broke out on October 11 was made the occasion of smoothing over the conflict; everything returned to normal after October 20, although Ait Ahmed remained underground. This general protest by the Kabyles had an important consequence: the meeting of the N.L.F. Congress of April 1964, where, for the first time since the end of the war, it was possible to speak freely in outlining a common programme for the new Algerian state. In spite of this, outrages still took place in several places in Kabylia from April to June 1964 and Kabyle participation in the legislative election of 20 September was small: 57.38% voters and an appreciable number of blank papers.

Subsequently Ait Ahmed was arrested (17 October 1964), condemned to death and reprieved (12 April 1965). Escaping on 30 April he went to swell the opposition group living outside Algeria. Belkasem Krim founded an opposition movement abroad on 15 October 1967. For the moment all this is of little consequence. On the spot, the local elections of February 1967 were still marked by a large percentage of abstentions in Kabylia. But the government of Colonel Boumedienne (Abū Madyan) has ensured that Kabylia is peaceful, and in October 1968 published an economic and social development programme for Great Kabylia, matched by a sizeable number of millions of Algerian *dinārs*.

**KACĀCH** [see Supplement].

**KACĀCHĪ** OR **KACĀCH GANDĀWA**, province of Pākistānī Balūcīstān extending from 27° 53' to 29° 35' N. and from 67° 11' to 68° 28' E. It forms a level plain enclosed on the north and east by the southern Sulaymān range and on the west by the Kīrthār Ranges. To the south it is open, being bounded by the plain of northern Sindh.

The history of the region is more closely connected with that of Sindh than that of Balūcīstān. Its chief town, Kandābīl (probably Gandāwa) is said to have been taken by the Brāhman Rāy Čāc in the 7th century A.D., and to have been despoiled by the Arabs many times after the conquest. The region later

passed into the control of the Sūmras and Sammās of Sindh. The Balōc arrived in the 9th/15th century, but they were never a strong political force and control passed first to the Arghūns, then to the Mughals, and at last to the Kalhōrās of Sindh. In 1153/1740 Mir 'Abd Allāh, the Aḥmadzay Khān of Kalāt, was killed by the Kalhōrās, and Nadīr Shāh made the region over to the Brāhūl in compensation. Later, before the creation of Pakistan, it formed part of the Khānate of Kalāt [q.v.] with the exception of small areas in the eastern half of Kačchī, where the Dōmbkī, Umarānī and Kahīrī tribes were only nominally subject to the Khān. These tribes lie to the east of the railway from Jacobabad to Quetta, which traverses the province from south to north. The territory west of this line is also mainly occupied by Balōc tribes with the exception of the area near Dhādhār in the north, where nomadic Brāhūis are found. Everywhere there is a large settled population of Dīāfīs (i.e. Dīāī [q.v.]). There are no large towns; Gandāwa, Shōrān, Dhādhār, Sibī and Lahri are the principal places. Cultivation is carried on by irrigation from the small streams and hill-torrents which issue from the mountains: the Nārī and Bōlān on the north, the Mūla and Suklēdjī on the west, and the Lahri and Chātār on the east. The valleys of the Mūla, Bōlān and Nārī form passes by which communication with the uplands has been carried on from time immemorial. The two first-named are now traversed by railways which lead to Quetta and Peshīn by the Bōlān and Harnai countries. The population is scattered but denser than in most parts of Balūcīstān.

(M. LONGWORTH DAMES\*)

**KADĀ'** (A.), originally meaning "decision", has in the Qur'ān different meanings, according to the different contexts: e.g., "doomsday" (XLV, 17; X, 93), "jurisdiction" (XXVII, 78; XXXIX, 69; XL, 20), "revelation of the truth" (XXVIII, 44) and "predestination, determination, decree" (XL, 68) (cf. E. Tyan, *Histoire de l'organisation judiciaire en pays d'Islam*, Leiden 1960, 65). In *A Dictionary of Islam* (London 1885, 479), T. P. Hughes gives the following concise definitions of the word: (1) the office of a *kādī* [q.v.], or judge; (2) the sentence of a *kādī*; (3) repeating prayers to make up for having omitted them at the appointed time; (4) making up for an omission in religious duties, such as fasting, etc.; (5) the decree existing in the Divine Mind from all eternity, and the execution and declaration of a decree at the appointed time; (6) sudden death. In the *EI*, D. B. Macdonald gives as the first "technical" meaning: "the office and functioning of a judge (*kādī*)," although this may not be the original (first formed) conceptual sphere of the word. D. S. Margoliouth has pointed out, in refuting J. Hammer's incorrect interpretation, that had the *kadā'* been a Qur'ānic institution, the word would be found in this sense in the Qur'ān (*Omar's Instructions to the Kadi, JRAS* (1910), 312-3).

On the basis of the Qur'ān the word *kadā'* can be understood as God's "eternal decision or decree" concerning all beings. It is given different interpretations, especially when contrasted with another term, *qadar* [see AL-KADĀ' WA-KADAR], meaning "destiny, predestination". For instance, according to al-Bukhārī [q.v.] *kadā'* is the eternal, universal and all-embracing decree of God, while *qadar* denotes the details of His eternal, universal decree. Contrary

to this, al-Rāghib [q.v.] interprets *ḡadar* as predestination and *kaḡā'* as the detailed, definite decree. Akḡtari [q.v.] (in the middle of the 10th/16th century) may have been influenced by him when he concluded that: "*ḡader devlet-i 'alīyyede defter-i idīmāl ve kaḡā' anīā terā' ve taḡsīmī mensilindedir*" (*Kāmūs terā'ümese*, iv, Istanbul 1305/1888, 1136). He also quotes a saying which is highly relevant to this differentiation; when the caliph 'Umar on his way to Damascus turned back for fear of plague, Abū 'Ubayda al-Djarrāḡ [q.v.] asked him: "Are you running away from the *kaḡā'*?", to which the caliph answered: "I am fleeing from Almighty God's *kaḡā'* to His *ḡadar*". The meaning of this, according to Akḡtari, is that "insofar as the *ḡadar* does not appear in the form of *kaḡā'*, there is a chance of averting it" (*op. cit.*, 1136). The essential point in all interpretations, however, is that the *kaḡā'* is the "decree or decision" of God that must be fulfilled in all circumstances. This sense of the word was related to the neglected performance of religious duties (*ṣalāt, ṣaum* [q.v.]), which was therefore also called *kaḡā'* (Th. W. Juynboll, *Handbuch des islamisches Gesetzes*, Leiden 1910, 68, 122). This concept of the word later passed into legal terminology, so that *kaḡā'* came to mean "payment of a debt" (J. Schacht, *An introduction to Islamic Law*, Oxford 1964, 148).

As well as this, it also acquired a more important legal interpretation: the judgement of the *ḡādī*, which he could never withdraw once it had been uttered, was also called *kaḡā'* (Schacht, *op. cit.*, 196 and Tyan, *op. cit.*, 445). The *kaḡā'* announced by the *ḡādī* was always binding while the *fatwā* [q.v.] given by the *muftī* was not. In forming his *kaḡā'* the *ḡādī* could rely not only on the *ṣharī'a* but also on the 'urf, for when some local customs grew stronger, the *urfī kaḡā'* gained ground alongside the *ṣharī kaḡā'* (M. Fuad Köprülü, *Fihh, IA*, iv, 614).

In the Ottoman empire *kaḡā'* meant not only the judgement of the *ḡādī* but also the district which his administrative authority covered. The extent of the *kaḡās*, however, varied, for local circumstances (the importance of a place, density of its population, etc.) dictated whether a city was made a separate *kaḡā'* or how many *kaḡās* a *livā* contained. For instance, in 936/1530 in Rumelia the *livā* of Alaḡja-ḡiṣār was divided into five *kaḡās* and the *livā* of Hersek into four; the *livā* of Izvornik contained only one *kaḡā'*, while the *livā* of Bosna consisted of six, and so on (T. Gökbilgin, *XV-XVI asırlarda Edirne ve Paṣa livası*, Istanbul 1952, 8-12). The term *kaḡā'*, denoting an administrative district, has remained in use in the Turkish republic.

AL-KAḌĀ' WA 'L-KADAR. When combined into one expression, these two words have the overall meaning of the Decree of God, both the eternal Decree (the most frequent meaning of *kaḡā'*) and the Decree given existence in time (the most frequent sense of *ḡadar*). Other translations are possible: for example, *kaḡā'*, predetermination (usually eternal but according to some schools operating within time); *ḡadar*, decree (usually operating within time but according to some schools eternal) or fate, destiny, in the sense of determined or fixed. It is also possible

to use *kaḡā'* alone for Decree in its broadest sense and define *ḡadar* more precisely as existential determination. The expression combining them is in general use and has become a kind of binary technical term of 'ilm al-kaḡām.

A.—Analysis of the terms.—1. *al-kaḡā'*. The dictionary meaning of this is judgement, decision (from which comes the corresponding technical sense of this in the "science of law"). In 'ilm al-kaḡām (and secondly *falsafa*) it means a "universal" judgement or divine decree operating from all eternity and for eternity on whatever has existence (cf. al-Djurdjāni, *Ta'rifāt*, ed. Flügel, Leipzig 1845, 185). Al-Bāḡḡūrī (*Hāṣḡiya 'alā . . . Djawharat al-tawḡid*, ed. Cairo 1352/1934, 66) takes pleasure in noting that *kaḡā'* can have seven possible meanings.

The verb *kaḡā* recurs frequently in the text of the Kur'an, usually referring to an act of God. However in XXXIII, 36 Muḡammad's name is joined to His ("when God and His Prophet have resolved. . ."). On four occasions (II, 117, III, 47, XIX, 35, XL, 68) *kaḡā* indicates the absolute power of God, free from any type of intermediary, allied to the single creative Word: "Whenever He has decreed (*kaḡā*) something, He says 'Be it (*kun*)' and it is so".

Understandably, in order to magnify the transcendent Will of the Almighty, the Aṣḡ'arī school laid stress on this sovereign Decree. Two references will suffice: a) In the *Luma'* (ed. and Eng. tr. by R. McCarthy, *The Theology of al-Aṣḡ'arī*, Beirut 1953, 45-6/65), al-Aṣḡ'arī distinguishes two aspects of *kaḡā'*. In so far as it is (realized within) creation (*ḡhalḡ*), it relates as much to the true as to the false, to acts done in obedience to the Law as to impious acts. Nothing escapes it: the decree and its object coincide. But in so far as it is the Command (*amr*) of God, the Decree is simply rectitude and justice, for it is distinguished from that which is decreed.—b. Al-Bāḡḡillānī's *Tamḡid* (ed. McCarthy, Beirut 1957, 325-6) takes up these themes almost word for word, substantiating them with kur'ānic proofs. For the Aṣḡ'arīs as a whole, *kaḡā'* was the very expression of the Divine Will. Like Will it is "an attribute of essence" and thus eternal.

Those of Māturīdī tendencies, however, understood *kaḡā'* as the bringing into being of things in time, and therefore as "an attribute of action". Because of this, the Aṣḡ'arīs accused the Māturīdīs of making *kaḡā'* a "contingent" attribute, while the latter retorted that in their view "attributes of action" had an eternal nature and that *kaḡā'*, allied not only to the Divine Will but also to the Prescience, was the eternal attribute which dictates the production of things, *takwin*. (Cf., for example, al-Taftāzāni, *Ṣharḡ al-'aḡā'id al-nasafīyya*, ed. Cairo 1321, 95; also 'Abd al-Raḡīm b. 'Alī, *Naṣm al-sarā'id*, ed. Cairo n.d., 28-30).

—2. *al-ḡadar* has the meaning of measure, evaluation, fixed limit (cf. Ibn ḡazm, *K. al-Fiṣal fī'l-mīlāl*, ed. Cairo 1347, iii, 31). "God distributes widely and measures out (*yaḡḡdiru*) His gifts to whom He pleases" says the Kur'an in several places (XIII, 26, XVII, 30, XXVIII, 82, XXIX, 62, XXX, 37). In its 1st and 2nd form the root ḡ-d-r has the general sense of to determine, to establish, to decree. God is "He who established [the fate of men] (*ḡaddara*) and directed them on the straight road" (idem, LXXXVII, 3). There are a great number of *ḡadīḡs* on the subject (cf. *kitāb al-ḡadar* in al-Buḡḡārī's *Ṣaḡīḡ*). The Decree of God "for good or evil, weal or woe", which is stressed by several *ḡadīḡs*, is presented as one of the articles of faith which must be explicitly professed.

In its technical sense *ḳadar* therefore designates the divine decree in so far as it sets the fixed limits for each thing, or the measure of its being. It is often practically synonymous with the *maṣḍar* of the 2nd form, *taḳḍīr*, the act of determining or decreeing. Two of al-Djurdjānī's definitions (*Ta'rifāt*, 181) summarize the Ash'arī conception of *ḳadar*, singly and in its relationship with *ḳaḍā'*: "*ḳadar*: the relationship of the essential Will with things in their particular realization", and "*ḳadar*: the passage of possible entities from non-being into being, one by one, in accordance with *ḳaḍā'*. *Ḳaḍā'* pertains to pre-eternity, while *ḳadar* belongs to the present order of things".

Thus Ash'arī traditions stresses: a) both *ḳadar* and *ḳaḍā'* belong to the eternal Divine Will; and (b) that the former, the determining principle of contingent entities, is no longer "an attribute of essence", like *ḳaḍā'*, but "an attribute of action", itself designated "contingent" by reason of its end. In al-Ash'arī's *Luma'* (ed. cit., 37-53), the chapter dealing with the Divine Decree and its relationship with men's actions is entitled *al-ḳadar*, with questions concerning *ḳaḍā'* forming only one rather short section. Here too the Māturīdī line relates *ḳadar* not to the Will but to the eternal Prescience and considers it (unlike *ḳaḍā'*) "an attribute of essence".

Right from the first centuries the question of the Decree was one of the most frequently debated. According to Nallino (*Raccolta*, Rome 1940, ii, 176-80), all the thinkers who centred their discussions around *ḳadar*, no matter to which tendency they belonged, were termed *Ḳadariyya* from the outset. Yet al-Ash'arī, in the *Ibāna* and the *Luma'*, intends this term to be reserved for those early trends of *'ilm al-kalām* which, affirming human freedom, deny that the Divine Decree was pre-determined. They are usually considered as predecessors of the Mu'tazilīs. Subsequently they were sometimes confused with the latter (as by Ibn Taymiyya) and sometimes distinguished from them, it being emphasised that if the Mu'tazilīs held it to be true that man measures and determines his actions himself by his *ḳadar*, this is by reason of a *ḳudra*, an effective power which belongs to him but which has been created by God in each man. Ash'arite tradition considers that the *Ḳadariyya* argument deserves the stigma of impiety (*taḳfīr*); that of the Mu'tazilīs is "false, though less reprehensible" (al-Bāḍjūrī, *op. cit.*, 65). On this meaning and the various meanings of the word *Ḳadariyya*, see W. Montgomery Watt, *Free Will and Predestination...*, London 1948, 48 ff.; see also ḲADARIYYA below.

The *ḳadari*, says the *Luma'*, is he who maintains that man's actions are determined by man himself, not by God, and that man therefore possesses personally not only the power to act (*ḳudra*) but also the power to determine his action and decree its effect. It is in this sense that the *Maḳālāt al-Islāmiyyin* summarized al-Djubbā'ī's standpoint. Al-Ash'arī protested against those who wish to call *Ḳadariyya* the proponents of a divine Decree which alone creates and determines the acts of men.

This last meaning, however, which is etymologically defensible, was allowed by Ibn Taymiyya in his treatise *al-Ḳaḍā' wa'l-ʿAmr*, in which he distinguishes between the *Ḳadariyya-mudjabbira* and the *Ḳadariyya-ʿadliyya*. The first, among whom he lists, jumbled together, Djahmīs and many Ash'arīs, are seen as preaching belief in an absolute divine Decree at the expense of all human initiative. The second, comprising Mu'tazilīs, *Falāsifa* and *Shīʿīs*, are the

defenders of the liberty and responsibility of man at the expense of divine Omnipotence. Ibn Taymiyya sets off one type of *Ḳadariyya* against the other and affirms both divine Omnipotence and the responsibility of man, who becomes free only through obedience to the Law (cf. H. Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad B. Taymiyya*, Cairo 1939, 165-7, and refs.).

—3. Finally, the *Falāsifa* integrated the conceptions of *ḳaḍā'* and *ḳadar* (or *taḳḍīr*) and defined them by and large in the same way as the Ash'arīs, except that they placed the absolute divine Decree (*ḳaḍā'*) and its existentialization within time (*ḳadar*) in accordance with the universal determinism of things, in a sense very close to their conception of divine providence or *'ināya* [q.v.]. Near the end of the *Ilāhiyyāt* of the *Shīfā'* (ed. Cairo 1960, 414 ff.), when Ibn Sinā enquires how it is that evil comes under the absolute Decree of the Prime Being, he reminds himself of the conception of *'ināya*. He distinguishes moreover between *ḳaḍā'* and *taḳḍīr* by locating each within the divine creative Knowledge (cf. also *Nadjiāt*, ed. Cairo 1357/1938, 302). "Every thing", say the *Ishārāt* (ed. Forget, Leiden 1892, 185), "(...) is attained by His existential determination (*ḳadar*), which is the particularization (*taḳḍīl*) of His first Decree (*ḳaḍā'*), and necessarily so since that which is not necessary does not exist". Here, the production of beings is seen as an emanation from the Prime Being, necessary and willed. A similar viewpoint is found in a variety of *Shīʿī* sects or schools.

B.—The problems posed.—1. The expression *al-ḳaḍā' wa'l-ḳadar* was frequently used to designate the absolute nature of the Divine Decree in the aggregate, in eternity as much as in its contingent realizations. Depending on whether we are dealing with Ash'arī traditions or Māturīdī tendencies, as we have seen, the precise meanings of these two terms differ, as does their relationship with one another and their relationship with the Divine Essence and attributes. Yet every time that *'ilm al-kalām* deals with the acts of the Almighty, one of the most frequently asserted instances is the problem of *ḳaḍā'* and *ḳadar*. At the will of school or writer, it is constantly allied with conceptions of "contingent power" (*ḳudra ḥāditha*), the "capacity" for action (*istiṭā'a*), and the "acquisition" of his deeds by man (*ḥasb, iḥtisāb*). In *'ilm al-kalām* it is the very expression of the aporia of divine Omnipotence and the absolute freedom of God in comparison with freely chosen human action (*iḥtiyār*).

It was occasionally *ḳaḍā'* but oftener *ḳadar* (or both together) which was compared with human freedom. The Ash'arī and Māturīdī *mutakallimūn* endeavoured to affirm both the existence of the Divine Decree and man's responsibility, which latter is dependent on the Decree itself, through the *ḥasb*, the relationship, created by God, between acts and the subjects who performed them. (Cf. L. Gardet, *Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme*, Paris 1967, 116-20, 128-32).

Agreeing with this, Ibn Taymiyya upheld the absolute nature of the Decree (*ḳadar*) and the human faculty of free choice, but considered it pointless and futile to resort to the conception of *ḥasb* or *iḥtisāb*, the "acquisition" or "endorsement" of acts in R. Brunschvig's translation. (See Ibn Taymiyya, *Minḥādī al-Sunna*, ed. Cairo 1382/1962, i, 85-7, and R. Brunschvig, *Devoir et Pouvoir*, in *St. Isl.*, xx, 40-1 and refs.). This "pragmatic" attitude is found once more among the modern *salafiyya*, such as

Muḥammad 'Abduh in the *Risālat al-tawḥīd* (Cairo 1353, 61).

—2. Must man give his consent (*riḍā*) to the Decree of the Almighty? The question was clearly put by the Mu'tazilīs. If every thing that exists comes under the divine *ḳaḍā'*, they said, then the acceptance of the impiety of the ungodly (an acceptance which is itself impious) is obligatory . . . (Cf. 'Abd al-Diabbār, *Sharḥ al-uṣūl al-ḳhamsa*, ed. 'Uṭmān, Cairo 1348/1965, 771 ff.). Among the possible replies, we may cite a short chapter of the *Iḳhwān al-Ṣafā'*, a text of the *Tamḥīd* of al-Bāḳillānī and the *Mafātiḥ al-ghayb* of Fakhr al-Dīn al-Rāzī on Ḳur'ān XXXIII, 37-8 ("God's Command must be carried out", XXXIII, 37 . . . "God's Command is an enacted Decree", *ibid.*, 38).

a) The *Iḳhwān al-Ṣafā'* (*Rasā'il*, ed. Cairo 1347/1928, 133-6) define *ḳadar* as the reward which the "fates" (*maḳādir*) have in store for the soul, by "fates" meaning here the necessary astral laws. *Ḳaḍā'* is God's eternal Knowledge, from which these same astral laws derive. For a man to give his consent to and acceptance of *ḳaḍā'* thus understood, says the text, is extremely rare, but it is the noblest of the conditions (*sharā'iṭ*) of faith and the most deserving of the virtues which designate the Believer (*ibid.*, 134).

This recourse to the action of the stars on human destiny—which is in no way independent of Divine Knowledge but emanates from it—and the affirmation that all that happens occurs for the good of the soul are points of view belonging to the Ismā'īlī atmosphere of the *Iḳhwān al-Ṣafā'*. Other points of reference can be found among Shī'ī scholars which, like the *Falāsifa*'s conception of Providence, are always dominated by an emanistic view of the world. This is the sense in which we should understand, for example, Mullā Ṣadra Shīrāzī's statement in his *Kitāb al-Mashā'ir* mentioning among the central themes of his thought "knowledge of the *ḳaḍā'* and the *ḳadar*", "*du Décret prééternel et de la Destinée*" in H. Corbin's translation (Arab. and Pers. ed. and Fr. tr. by H. Corbin, Tehran 1342/1964, 5/90).

Here, in comparison, are two Sunnī elaborations: —b) "We give our consent to and acceptance of God's Decree taken as a whole and for each single thing" (*Tamḥīd*, 327). But what if it is a case of *kuḍr* and sin? Here al-Bāḳillānī makes a distinction between *ḳaḍā'* in the aggregate and its particularization. Assent is not given to *kuḍr*, even though every thing in existence and every accomplished act come under the Divine Decree, just as child, companion, wife and partner are not ascribed to God, although all that exists belongs to Him.

c) As far as vocabulary is concerned, Fakhr al-Dīn al-Rāzī distinguishes more clearly between *ḳaḍā'* and *ḳadar*, which are both understood in the Ash'arī sense. Consent and acceptance are given, with no difficulty, to *ḳaḍā'*, the eternal Decree. The existentialization of existing things, one by one, belongs to *ḳadar*, and here the question becomes delicate. Every Muslim must adhere to both *ḳaḍā'* and *ḳadar* together, but it is difficult for the ordinary man to reconcile such an adhesion, which is ordained by the Law, with condemning evil and wicked deeds, as the Law also demands. The solution sought by al-Rāzī lay in extending the distinction which al-Ash'arī had already made between *ḳaḍā'* understood as the sovereign Command of God and what is enacted in the order of creation; or, in more precise terminology, between *ḳadar*, the attribute of action which determines every contingent thing, and *maḳdūr*, the enacted object: it

is not *ḳadar* but *maḳdūr*, once placed by God in being or contingent action, which can be the object of reward or punishment, of praise or blame.

After having commanded the aporia of divine Omnipotence and human freedom, *al-ḳaḍā' wa'l-ḳadar* is as it were in the centre of the problem of good and evil, and of the moral qualification of actions.

*Bibliography*: in the text; to this may be added all the chapters on *'ilm al-ḳalām* which deal with the question, which was considered again and again, for example in the manuals of "set conservatism", such as those of Sanūsī of Tlemcen, Laḳānī, Fuḍālī, Bādīūrī, etc. (L. GARDET)

**ḲADAM SHARĪF** (ḲADAM RASŪL ALLĀH). Among the miracles (*mu'ḍjizat*) popularly attributed to Muḥammad was the fact that when he trod on a rock, his foot sank into the stone and left its impress there. This miracle is usually referred to along with others, e.g., that he cast no shadow, that if one of his hairs fell in the fire, it was not burnt, that flies did not settle on his clothes etc. (cf. al-Ḥalabī, *al-Sīra al-Ḥalabīyya*, Būlāk, 1292, iii, 407), or that his sandals left no imprint on the sand (cf. Ibn Ḥaḍḍjar al-Haytamī, commentary on *al-Ḳaṣīda al-Ḥamziyya*, l. 176. (Ind. Off. Ms., Loth, no. 826, fol. 94). No early authority refers to such a miracle, nor can any *ḥadīth* be quoted in corroboration of it, as Djalāl al-Dīn al-Suyūṭī himself pointed out (see al-Ḥalabī, *loc. cit.*, i, 497). But sufficient evidence of this miracle is considered to be provided by the numerous impressions of one or both of the feet of the Prophet, which are venerated in different parts of the Muslim world. The most famous of these footprints is that in the Masḍīd al-Aḳṣā, at Jerusalem, on the rock from which Muḥammad mounted Burāḳ [q.v.] for his journey to heaven (al-Suyūṭī, *Iḥḳāf al-Aḳḥiṣṣā' fi Faḍā'il al-Masḍīd al-aḳṣā*, in JRAS, n.s. xix (1887), 258-9); this footprint is on a stone separated from the Rock at the extremity of the south-west corner; Sultan Aḥmad ordered an iron grill inlaid with silver to be placed over it in 1088/1609 (Muḍjīr al-Dīn al-Ḥanbalī, *al-Uns al-djalīl*, Būlāk 1283, 371, tr. H. Sauvaire, *Histoire de Jérusalem*, Paris 1876, 106).

In the ancient village of Ḳadam, which lies to the west of the present district of the same name in the south of Damascus, there still exists a *masḍīd al-ḳadam* which seems to have been connected originally with the memory of Moses then transferred to that of Muḥammad; the latter's foot also left an imprint on a black stone that was carried from Ḥawrān and preserved in the Muḍjāhidīyya *madrasa* in the days of al-Harawī (*Ziyārāt*, 14/36) and today is in the library of the oratory of Sitt Ruḳayya (A. Talass, *Mosquées de Damas*, Beirut 1943, 230; J. Sourdel-Thomine, in *B. Ét. O.*, xiv (1952-4), 76). According to popular belief, the first footprint was made by the Prophet, when he half-ighted from his camel, but was warned by the angel Gabriel that God had given him the choice between the Paradise of this world and that of the next; whereupon he relinquished his intention of entering Damascus (W. G. Palgrave, *Journey through Central and Eastern Arabia*, London 1865, ii, 19). In Cairo there are two footprints, one in a mosque called *Āḥḥār al-nabī* (*Rev. des Trad. Pop.*, ix, 689), the other at the tomb of Ḳā'it Bāy [q.v.] (Baedeker's *Egypt*, 1914, 113), who, according to Aḥmad Daḥlān [q.v.], purchased it for the sum of 20,000 *dinars*; in Ṭanṭa, there are impressions of both the feet of the Prophet, in the shrine of Sayyid Aḥmad al-Badawī (*Rev. des Trad. Pop.*, xxii, 410), as also at Istanbul in the tomb of Sultan 'Abd

al-Ḥamīd I, in the tomb of Abū Ayyūb al-Anṣārī [q.v.], and (six) in the *Khirkā-i Saʿādet* room of the Topkapı Palace [see SARĀY] (Reşad Ekrem Koçu, *Topkapı Sarayı*, Istanbul n.d., p. 79; for a colour photograph of one of these see Kemal Çiğ, *al-Manānāt al-muḥaddasa*, Istanbul (Turizm ve Tanıtma Bakanlığı) 1966, p. [9]).

Closely connected with the veneration of the footprints of Muḥammad, is that paid to representations of his sandals. Copies of these are hung up in the houses of the pious, as a protection against the assaults of Satan, the evil eye, the depredations of robbers, etc.; they are also said to relieve the pangs of childbirth (al-Ḳaṣṭalānī, *al-Mawāhib al-laduniyya*, Cairo 1281, i, 337). Such representations are common in Algeria, Egypt, India and Syria.

India and Pakistan: The footprints of the Prophet, whether accepted as genuine relics or frankly admitted as mere token representations, are accorded special veneration in India and Pakistan. One may suspect here an Islamization of an old Indian reverence for the footprints of gods and sages; the Buddha was represented symbolically by the soles of his two feet, often embellished with auspicious marks, before representations of his person appeared in Buddhist iconography; and similar representations of the footprints of the god Viṣṇu continue that tradition in Hindū terms. Literary references (bowing to or touching the feet in homage, the sanctity of the dust of the teacher's feet, etc.) are commonplace. The accepted genuine relics may be placed in mosques, as at Gawī [see LAKHNAWT], or be housed in special buildings, as in the Ḳadam Rasūl building at Lakhnaʾū (Lucknow) whence the relics disappeared in 1857, or in the best known example, the Ḳadam Sharīf at Dihlī [q.v.], where the prints, imported from Arabia with great ceremony by Firūz Shāh b. Raḍjab, were placed over the grave of his son Faṭḥ Ḳhān who predeceased him in 776/1374; here the relics are kept constantly covered by water and garlanded with marigolds, and the relic shrine, with its accompanying graveyard, is contained within a fortified enclosure.

Both relics and token representations are accorded special ceremonies at the Bārah Wafāt, i.e. 12 Rabiʿ I, the ʿurs of the Prophet's death; for a description of these in India see Djaʿfar Sharīf, *Kānūn-i Islām*, tr. G. A. Herklot as *Islam in India* and ed. W. Croke, Oxford 1921, s.v. Bārah Wafāt.

(J. BURTON-PAGE)

**QADAR** [see AL-QADĀʾ WA ʿL-QADAR].

**QADARIYYA**, a name commonly used by Islamists to denote a group of theologians, not in itself homogeneous, who represented in one form or another the principle of *liberum arbitrium* (free will) in the early period of Islam, from about 70/690

to the definitive consolidation of the Muʿtazila [q.v.] at the beginning of the 3rd/9th century. In Islamic sources the notion is ambivalent; only authors of a determinist standpoint use it in the above sense (in later works the term can also refer to the Muʿtazila). Authors of a non-determinist standpoint, on the other hand, apply it (apparently synonymously with *muḍjibira*) to defenders of divine omnipotence (the earliest examples at present are the title *Kitāb al-radd ʿala ʿl-Ḳadariyya* of ʿAmr b. ʿUbayd [q.v.] d. 143/760 or 144/761, cf. *GAS*, i, 597) and a passage in Ibn al-Muḳaffaʾs ([q.v.] d. (after?) 139/756) translation of the Middle Persian Letter of Tansar, cf. the New Persian version in Ibn Isfandiyyār, *Tārīkh-i Ṭabaristān*, ed. Iqbāl, Tehran 1954, i, 40, 4). The word was always derogatory, never applied to oneself. Even sources fundamentally of the same tendency may therefore differ as to the scope of the notion, according to the rigour of their polemical intention. Conversely it may happen that one and the same phenomenon may be described with differing terminologies in different sources (for example Ḳadarites are often called "Murḍjīʿites" in Muʿtazili texts, and also elsewhere). Regional differences of meaning also seem to have played a part. The term apparently arose in ʿIrāq; previously such locutions as *al-muḳadhdhībūna bi ʿl-Ḳadar* (*bi-maḳādir Allāh*) or *alladhīna yaḳūlūna lā Ḳadar* were used. Cf. C. Nallino, *Sul nome di ʿQadariʿi*, in *RSO*, vii (1916-18), 461 ff. (= *Scritti*, ii, 176 ff.); W. M. Watt, *Free Will and Predestination in early Islam*, London 1948, 48 ff.; J. van Ess in *Oriens*, xviii-xix (1965-6), 127 ff.

*Sources*: 1) Ḥasan al-Baṣrī's "Ḳadarite" *Risāla* to the caliph ʿAbd al-Malik (ed. H. Ritter, in *Isl.*, xxi (1933), 67 ff.; for the content cf. J. Obermann in *JAOS*, lv (1935), 138 ff., and M. Schwarz in *Oriens*, xx (1967), 15 ff.). 2) Several references in the anti-Ḳadarite composition (genuine?) of al-Ḥasan b. Muḥammad al-Ḥanafīyya (d. c. 100/718), which we know through its refutation by the Zaydī imām al-Ḥādī Yaḥyā b. al-Ḥusayn (d. 298/910; cf. *GAS*, i, 595). 3) The *Risāla* of the caliph ʿUmar II against a more extreme faction of the contemporary Ḳadariyya, preserved in Abū Nuʿaym, *Ḥilya*, v, 346 ff. (cf. *GAS*, i, 594; for its genuineness, *Abr Nahrain*, xii (1971), 19 ff.). 4) The heresiographical report of *Khushaysh* (d. 253/867), preserved in Malaṭī, *Tanbīh*, ed. Dederig, 126 ff. (cf. Watt, *Free Will*, 51 ff.). 5) Lists of Ḳadarites, mainly traditionists, in Ibn Ḳutayba (*Maʿārif*, ed. ʿUkāsha, Cairo 1960, 625, 8 ff.; repeated with several corrections and supplements, by Ibn Rusta, *al-Aʿlāḳ al-mafīsa*, *BGA*, vii, 220, 7 ff.), in Ibn Ḥaḍḍar (*Ḥady al-sāri*, Cairo 1347/1928, ii, 112 ff.), in Suyūṭī (*Tadrīb al-rāwī*, Cairo 1385/1966, i, 328 f.), in Ibn al-Murtaḍā (*Ṭabaḳāt al-Muʿtazila*, ed. Diwald-Wilzer, 133 ff.) etc; in addition the corresponding biographical details in *Dhahabi*, *Mizān al-ʿitidāl*, Ibn Ḥaḍḍar, *Taḥḍīb al-taḥḍīb*, etc. 6) Scattered historical data, especially in Ṭabarī. 7) Counter-polemical in the standard collections of *Ḥadīth* (e.g., the *Kitāb al-Ḳadar* in the *Ṣaḥīḥ* of Muslim), in the works dealing with *mawḍūʿāt* (Ibn al-Djawzī, *Kitāb al-mawḍūʿāt*; Suyūṭī, *al-Laʿālī al-maṣnūʿa*, etc.), in other books of traditionist outlook (cf., e.g., the *Kitāb al-Sharīʿa* by Abū Bakr al-ʿĀḍjurrī, Cairo 1369/1950, 149 ff.; the material of the relevant chapter is obviously mainly taken from the *Kitāb al-Ḳadar* by Firyābī, cf. *GAS*, i, 166), and finally also in works of *adab* (e.g., Ibn ʿAbd Rabīh, *ʿIḥd*, ii, 376 ff.).

*Historical development*: The sources mentioned

der 5) list 40 certain names for Baṣra, about fifteen for Syria, six for Mecca, five to seven for Medina, about five for Kūfa, three for Yemen, and not a single one for Egypt and the whole of the East. These figures, however, express only part of the reality; they mirror above all the variable state of our information. The interest in a biographical listing of the Ḳadariyya apparently arose in Baṣra, where the pupils of Ḥasan al-Baṣrī, and their pupils in turn, began to quarrel over the correct interpretation of his doctrine; here, therefore, contemporaries were classified in accordance with a particular understanding of the idea, and for the past relevant material was most systematically collected. Elsewhere fuller information existed only for Syria, where, in the last twenty years of Umayyad rule, Ḳadarites played a part in history through their revolutionary activity. It is possible that in many other areas, for example in Egypt, the doctrine never became a problem. According to the nature of the information, the Ḳadariyya is seen in Syria primarily as a political movement; in Baṣra on the other hand it is viewed as a school of theology. The political argument developed from the principle that a ruler is answerable for his actions, and in the case of unrighteousness should therefore be deposed or should abdicate; the theological stance arises from the idea that one must not "ascribe evil to God". In the consequences which were drawn from this latter interpretation, a moderate and an extreme wing can be discerned.

The earliest document of the movement is the *Risāla* of Ḥasan al-Baṣrī; it was certainly composed between 75/694, the arrival of Ḥaǧǧīǧāǧī in 'Irāk, and 80/699, the beginning of the revolt of Ibn al-Ash'ath. From it the moderate wing of the Ḳadariyya drew its argument: God creates only good; evil stems from men or from Satan. Man chooses freely between the two; but God knows from all eternity what man will choose. He only "leads him into error" (*idāl*) if man has first given him occasion for this through his sin. Ḥasan viewed this thesis, which he supports with subtle ḳur'ānic exegesis, as "orthodox" (p. 68, 9 ff.). In fact this was certainly no "innovation", but it was only now systematically formulated for the first time. This is confirmed by the fact that among Ḥasan's contemporaries are found other Ḳadarites, all of whom could hardly have been his followers: in the Yemen Wahb b. Munabbih (c. 34/655-114/732 [q.v.]), whose non-deterministic sayings (in his *Hikma* and in his *Kiṭāb al-Ḳadar*) could not be disregarded, even in later times; in Syria the ascetic Khālīd b. Ma'dān b. Abī Kurayb al-Kalā'ī (d. between 103/722 and 108/727; a Ḳadarite according to Ibn Ḳutayba, *Ma'ārif*, 625, 14) and the famous jurist Makḥūl b. Abī Muslim (d. perhaps 113/731; at any rate he first came to Damascus as a prisoner of war from the region of Kābul); in Baṣra itself, amongst others, the ascetic 'Aṭā' b. Yasār al-Hilālī (d. 103/722 or 104/723). In its moderate form the Ḳadarite doctrine was a rule of practical piety.

The absence of earlier theoretical formulations prevents our going back beyond Ḥasan's treatise. We are given to understand that the purport of divine predestination had been "first" discussed when, at the siege of Mecca by the troops of Yazīd I in 64/683, the Ka'ba caught fire (cf. *Sira Ḥalabiyya*, Cairo 1382/1962, i, 185, 15), or, conversely, that Mu'āwiya was the first to justify his use of force by divine "compulsion" (*djabr*) (Kāǧī 'Abd al-Djabbār, *Mughnī*, viii, 4, 3 ff., after Djubbār; cf. in addition the speech of 'Amr b. Sa'īd, the rebel against 'Abd al-Malik, in Ṭabarī, ii, 784, 18 ff.). But these are only

answers to the wrong question. There was never a point in time when Ḳadar was spoken of "for the first time"; there are only particular moments at which theological solutions emerge for the first time, or become generally significant or controversial. The alleged Ḳadarite beliefs of the last Sufyānid, Mu'āwiya II (reigned 64/684; cf. Maḳḳisī, *al-Bad' wa 'l-ta'rīkh*, vi, 16, 13 ff. and Lammens, *Études sur le siècle des Omayyades*, 181 ff.) probably derive from the belief that he abdicated of his own accord, before his early death, which was perceived to be in accordance with the political programme of the Ḳadariyya (cf. Lammens, *Études*, 183, 192 ff.; Wellhausen, *Arabisches Reich*, 106). The letter from Ḥasan b. 'Alī (d. probably 49/669-70) to Ḥasan al-Baṣrī on the question is manifestly a forgery (cf. the determinist version in Harrānī, *Tuḥaf al-'uḳūl*, Naǧaf 1385/1965, 162, 10 ff., and, shorter, in 'Alī b. Muḥammad al-Walīd, *Tāǧī al-'Aḳā'id*, ed. Tāmīr, Beirut 1967, 180, 1 ff.; a Ḳadarite version in Ibn al-Murtaǧā, *Ṭabaḳāt al-Mu'tasila* 15, 3 ff.).

Probably two decades after Ḥasan's *Risāla*, Ḳadarite doctrine is again encountered in 'Irāk in a group called by Khushaysh (in Malaṭī, *Tanbīh*, 133, 22 ff.) Shabībiyya, the adherents of the Khāridjīte Shabīb al-Naǧrānī who lived about 100/718 (cf. Ash'arī, *Maḳālāt*, 116, 2 f.; contrary to a conjecture made by H. Ritter in his indices to Ash'arī's *Maḳālāt*, 637, and by W.M. Watt, *Free Will*, 53, he must be differentiated from the earlier Khāridjīte Shabīb b. Yazīd al-Shaybānī who was drowned in the Tigris in the year 77/697 when fleeing the forces of Ḥaǧǧīǧāǧī). There is no direct connection with Ḥasan's theology; the doctrinal outlook is considerably different. The Shabībiyya believed that the deeds of men and their destinies in the hereafter are not foreknown by God; God has no will concerning their actions, leaving them to their own discretion (*tafwīd*; cf. Malaṭī, *ib.*, and Shahrastānī, *Mīlāl*, ed. Cureton, 94, 5 f.; also Ash'arī, *Maḳālāt* 93, 7 ff. concerning the Maymūniyya who seem to have borrowed from them).

This comes very close to—and is perhaps identical with—the Ḳadarite "innovations" attacked by 'Umar II (reigned 99/717—101/720) in his treatise preserved in Abū Nu'aym. God knows that one will sin, but also that one could abstain from sin (*Hilya*, v, 347, 3 ff.); His knowledge has only the function of recording, not of effecting (*ḥāfiẓ*, not *nāfi'ih*; 350, 3 and 351, 1 f.). A murder is not the same thing as the preordained destiny of death, since it originates in the autonomous will of a man (*adǧāl*; 352, 18). There is neither *hudā* nor *idāl* (351, 1; 348, 10 ff.); it is "left to man's own discretion" (*tafwīd*) whether he decides for good or for evil (351, 4; 352, 2 f.). 'Umar II sees that this is more extreme than Ḥasan's doctrine; he accepts expressly the Ḳadarites of the old school as *ahl al-Sunna* (351, 15). He, however, makes no explicit mention of a possible Khāridjīte background. We have some reason to assume that these ideas went beyond the small sectarian circles of the Khāridjītes; Khushaysh mentions, besides the Shabībiyya, a so-called *mu-fawwiḍa* (cf. Malaṭī, *Tanbīh*, 133, 1 ff. and 134, 14 ff.).

Politically the doctrine was not yet considered dangerous or subversive. 'Umar's predecessor, Sulaymān b. 'Abd al-Malik (reigned 96/715—99/717), is said to have "talked about *ḳadar*" (cf. Ibn an-Nadīm, *Fihrist*, trans. B. Dodge, 381) and 'Umar II himself took no action against the "deviationists" he attacked. Ḳadarites who later came into conflict with the government were entrusted with offices of state under

him: 'Umar b. Hāni' al-'Anṣī, who in 127/744-5 was put to death on the orders of Marwān II on account of his participation in Yazīd III's revolt against Walīd II, was governor of Batanaea and Ḥawrān under 'Umar (cf. Buḫārī, *Ta'riḫh kabīr*, iii/2, 535), and Ghaylān al-Dimashqī [q.v.], whose critical opinions he knew throughout (cf. Ghaylān's *Risāla* to him in Ibn al-Murtaḍā, *Ṭabaḳāt al-Mu'tazila*, 25, 9 ff.), was in his time apparently active in the financial administration (cf. I. 'Abbās in *al-Abḥāth*, ix (1956), 329 after Balāḡhurī, and Ibn al-Murtaḍā, *Ṭabaḳāt*, 26, 9). It was known that the Qadarites were not conformists; several of them had taken part in the revolt of Ibn al-Ash'ath, and Ma'bad al-Djūhanī, a friend of Ḥasan al-Baṣrī, was executed for this reason under 'Abd al-Malik.

But Ghaylān was the first to develop a political programme, not indeed under 'Umar II, but first under Hishām, when 'Umar's measures to give the same rights to *mawālī* as to Arabs were once more negated; significantly Ghaylān himself was a Copt. He denied the exclusive claim of Quraysh to the Caliphate; anyone may be chosen who lives by the Qur'ān and the *Sunnā*. If the ruler disregards these principles he may be deposed (cf. the passage in al-Nāshī' al-akbar, *Uṣūl al-niḥāl*, ed. van Ess, Beirut 1971, paras. 107-8; tr. in van Ess, *La Qadariyya et la Gailāniyya de Yazīd III* in *Stud. Isl.*, xxxi, 1970, 269 ff.). At first Ghaylān had been on good terms with Hishām; in 106/725 he made the pilgrimage with him (cf. Dhahabī, *Ta'riḫh*, iv, 290, 2 ff. and Buḫārī, *Ta'riḫh kabīr*, iv/1, 102 no. 457); it was only later, obviously during a mission to Armenia after the defeat of the Muslim troops in 112/730 and perhaps through the enmity of Marwān b. Muḥammad, later Marwān II, who was at that time the commander-in-chief in the war against the Khazars, that he clashed with the authorities (cf. Balāḡhurī in 'Abbās, *loc. cit.*, and Ibn al-Murtaḍā, 26, 16 f.). In principle, Ghaylān's propaganda was unrelated to Qadarite teaching; at about the same time it was represented in Transoxiana by Hārith b. Suraydī [q.v.], who apparently was himself a determinist. On his return from Armenia Ghaylān was arrested in Karyatayn on the edge of the Syrian desert, and executed in Damascus together with an adherent of whom we know little, Abū 'Abd al-Salām Ṣāliḥ b. Suwayd al-Dimashqī (cf. Ibn Badrān, *Tahdhib Ta'riḫh Dimashk*, vi, 369 f.). Other Qadarites were banished to the island of Dahlak [q.v.] in the Red Sea (cf. Ṭabarī, ii, 1777, 14), among them Abū 'l-Mughīra 'Amr b. Sharāḥil al-'Anṣī, whose subversive *ḥadīths* are preserved in the *Ta'riḫh Dārayyā* of 'Abd al-Djabbār al-Khawlanī, Damascus 1369/1956, 93 ff. About this time in Medina, under the governorship of Ibrāhīm b. Hishām al-Makḥzūmī (executed 125/743), Ibn Ishāk ([q.v.] 85/704-150/767 or 151/768) was flogged on account of his Qadarite leanings (cf. Dhahabī, *Mizān*, iii, 472, 15 ff.; also *Ta'riḫh Baghādā*, i, 225, 5 ff.). The execution of Ghaylān was manifestly felt to be harsh; numerous legends attempted to justify it, and above all to obliterate his good relations with 'Umar II (cf. S. Diwald, *Der Bericht des Ibn 'Asākir über Gailān ad-Dimashqī*, in *Festgabe für Hans Wehr*, Wiesbaden 1969, 40 ff., especially 53 ff.). We learn characteristically little about the theological basis of Ghaylān's Qadarite beliefs. Nevertheless, contrary to Ḥasan al-Baṣrī's purely exegetic judgements, a stronger theoretical theological motivation can be perceived: God's will has no determining influence on the actions of men (Ash'arī, *Makālāt*, 513, 5 ff.; Watt, *Free Will*, 41); men are determined above all

by their reason ('aql) in the direction of freedom of action (cf. *Tahdhib Ta'riḫh Dimashk*, iii, 177, 11 ff.; and Dhahabī, *Tahdkirat al-huffāz*, Hyderabad 1375/1955, i, 147, 3 f.).

Walīd II kept up Hishām's anti-Qadarite policy (cf. Ṭabarī, ii, 1777, 15 ff.). Yazīd III, on the other hand, took over Ghaylān's political programme in his declaration from Damascus when he proclaimed the revolt against Walīd (cf. Ṭabarī, ii, 1835, 6 ff., etc.). Therefore his supporters are called Ghaylāniyya, and often also simply Qadarites. The latter is perhaps precipitate; it is not always easy to decide whether those who took up this position because of the political programme were also Qadarite in the theological sense. Many of them were Kalbites, particularly from Mizza near Damascus; thanks to the political development by which the Kalb saw themselves increasingly neglected in favour of the Ḳays, the former *mawālī* party now received support from the indigenous Arabs. After Yazīd's premature death, the hopes of the Qadarites were transferred to his brother Ibrāhīm; when the latter capitulated before Marwān II they were again persecuted (cf. Marwān's letter in Ṭabarī, ii, 1851, 7 ff.). The names of several traditionists who took up a position in favour of Yazīd III are known to us; with the assumption of power by Marwān, they had to flee from Syria, one of them being killed at the instigation of the caliph (cf. in detail van Ess in *Stud. Isl.*, xxxi, 1970, 277 f.). With that the political role of the Qadariyya was played out; it remained confined to Syria.

In Baṣra, apparently, the movement remained confined to personal statements: 'Amr b. 'Ubayd approved of Yazīd III's revolt (cf. Ibn al-Murtaḍā's *Ṭabaḳāt*, 120, 12 ff., and Ṣhahraṣṭānī, *Mīṭal*, 17, 15); his "orthodox" opponent Ayyūb al-Sakhtiyānī censured it (cf. *Aghānī* 3, viii, 82, 10 f.). The political development in the town proceeded differently (cf. Caetani, *Chronographia*, 159r). The quietistic Qadariyya in the style of Ḥasan al-Baṣrī was continued by his pupil Kātāda b. Di'āma (d. 117/735) and henceforth predominated. Militant characters, especially refugees from Syria, were finally integrated with the arrival of the 'Abbāsids. Instead, theological antagonisms intensified. For a long time there survived a moderate wing, which, following Ḥasan and Kātāda, exempted sin from predestination, and obviously derived its argumentation from Qur'ānic exegesis; it was represented among the *muhaddithūn* and others by Sa'īd b. Abī 'Arūba al-'Adawī (d. 156/773) and his school, Hishām b. Abī 'Abd Allāh al-Dastuwā'ī (d. 153/770 or 154/771) with his son Mu'ādh (d. 200/815-6), Sallām b. Miskīn al-Namarī (d. 164/781), Abū Hilāl Muḥammad b. Sulaym al-Rāsibī (d. 167/784), 'Abd al-Wahhāb b. 'Aṭā' al-Khaffāf (d. 204/820 or 206/821-2), and, furthermore, by numerous ascetics and *ḥuṣṣās*, whose names we learn particularly from Ibn al-Murtaḍā, and certainly by many others in whose deeds the authors of lists of Qadarites have no interest (cf., e.g., for the grammarians of Baṣra, Tawḥīdī, *Baṣā'ir*, ed. Kaylānī, iii, 592, 8 ff.; Kiftī, *Inbāh al-ruwāt*, ed. Abū 'l-Faḍl Ibrāhīm, ii, 38, 4 etc.). At the same time there developed a stronger theologically aligned group around 'Amr b. 'Ubayd, which later merged with the Mu'tazila; apparently of their number were Abū Salāma Ḥasan b. Dhakwān, 'Amr b. Fā'īd al-Uswārī, Ḥamza b. Naḍīb, Baṣhīr al-Raḥḥāl, 'Abd al-Wārith b. Sa'īd al-Tannūri (d. 180/796), perhaps also the Kāḍī 'Abbād b. Mansūr al-Nāḍjī (d. 152/769). They took as their starting point divine justice in-

stead of human "freedom to do evil": God must keep His word (cf. the anecdote in van Ess, *Traditionistische Polemik gegen 'Amr b. 'Ubaid*, Beirut 1967, 31 ff.: wa'd here still covers the later Mu'tazill wa'd wa-wa'id); a taklif bimā lā yufāk is impossible (cf. Tawhīdī, *Baṣā'ir*, iii, 223, 1 ff.). Here, too, the consequences for ḵur'ānic exegesis are for the moment in the foreground: verses of the Kur'an in which someone is explicitly given over to damnation (cf. Sūra CXI, 1 for Abū Lahab; as a further example Sūra LXXIV, 11) cannot have been in this form in the original text in Heaven, because otherwise they would have had preordaining power (cf. *Traditionistische Polemik*, 16 f.; Tirmidhī, *Ṣaḥīḥ*, Ḳadar 16, no. 2244).

This accentuation of the teaching aroused opposition. In 'Irāq it came mainly from Kūfa. In Baṣra it was at first still weak; until the middle of the 2nd/8th century the boycott of the Ḳadarites there remained confined to small circles, to which greater significance was only ascribed in later accounts projecting their own attitudes back to an earlier period. But gradually the opinions polarised; the more the Mu'tazila itself became conscious of itself, the more the belief in a strict determinism was strengthened on the other side. It was expressed in the form of *ḥadīth*, and because of this in the course of time gained stronger and stronger authoritative force. Pro-Ḳadarite *ḥadīths* are rare (cf. Dhahabī, *Mizān* no. 2441 = i, 634, 5 f.; Ibn Ḥaǧǧar, *Tahdhīb*, x, 129, 5); the Ḳadarites obviously placed much more reliance on the persuasive power of their ḵur'ānic exegesis. However, it can be proven that a large number of the anti-Ḳadarite *ḥadīths* are also late, or were first raised to the rank of sayings of the Prophet as time went on; those respected traditionists who at that time were still Ḳadarite cannot have thought them authentic. Some of them are obviously in direct reference to the arguments Ḥasan al-Baṣrī developed in the course of his *Risāla*; particularly effective was the reproach that the Ḳadarites were "the Magians of this community" (cf. Wensinck, *Concordance*, v, 318a), in so far as they attributed evil to any other than God, or even to Satan himself. The mediating position of Ḥasan became increasingly untenable under the influence of these centrifugal tendencies; in the first decade of the 3rd/9th century the moderate Ḳadariyya in the old style apparently became extinct in Baṣra. After that Ḥasan al-Baṣrī was claimed by both sides; the determinists sought to rescue his "orthodoxy" by increasingly emphasising the role of his contemporary Ma'bad b. 'Abd Allāh b. 'Ukaym al-Djuhanī (this is the correct form of his name) as "founder" of the Ḳadariyya. Nothing more was known about his doctrine; but it was known that together with his brother he took part in Ibn al-Ash'ath's revolt, and that both were executed on the orders of Ḥadīdīādī (cf., e.g. Ibn Taghribirdī, *al-Nuǧūm al-nāhira*, Cairo 1930 ff., i, 201, 9 f., and 200, 14 f.; also 206, 16 ff.). Obviously they wanted to discredit the whole movement by pointing to the military origins of such a "Syrian" type.

Little can be said about the other centres of the movement. In Mecca it focused on the traditionist and exegete Abū Yaṣār 'Abd Allāh b. Abī Naǧīb al-Thaḳafī (d. 131/748 or 132/749), who adhered to Ḥasan's doctrine, and also attended Abū 'Ubayd's lectures (cf. on his circle Dhahabī, *Mizān*, ii, 515, 10 f.); one of his adherents, Zakariyyā' b. Ishāk al-Makkī, was banned from lecturing on account of his doctrine (at the time of Highām or Marwān II?

cf. Ibn Ḥaǧǧar, *Tahdhīb*, iii, 329, 7 f.). In Medina several Ḳadarites obviously supported the revolt of Muḥammad al-Nafs al-Zakiyya (145/762; cf. Madelung, *Qāsim ibn Ibrāhīm*, 72 f.); that there were still Ḳadarites in the town at the time of the Caliph al-Mahdī, to be precise during the governorship of Dja'far b. Sulaymān b. 'Alī (160/777-166/783), is testified by an account in Ṭabarī (iii, 534, 11 ff.). In the Shī'ite circles of Medina and Kūfa opinions about the problem were divided: Ḥasan b. Muḥammad b. al-Ḥanafīyya (d. c. 100/718) had been a supporter of predestination, and so too were the immediate disciples of Zayd b. 'Alī (fell 122/740) as he himself was probably a supporter of predestination (cf. Madelung, *Qāsim ibn Ibrāhīm*, 55 ff.); otherwise they frequently steered a middle course, which while coming near to that of the moderate Ḳadariyya did not give anyone occasion to call them Ḳadarites (the formula: *lā ḍiabr wa-lā tafwid*). The term *tafwid* was almost always rejected or at least avoided (cf. the otherwise rather contradictory sayings of the *imāms* in Kūfīnī, *Kāfi*, Tehran 1334/1955, i, 150 ff.). Here there was no necessity for a political Ḳadariyya, since the Shī'is had their own political motivations to offer.

Occasionally in polemic the Ḳadarite doctrine was attributed to Christian influence (in fact much more rarely than one would expect; the *Ḥadīths* speak of the "Magians" instead of the "Christians" of this community). This was expressed in the anecdote that Ma'bad al-Djuhanī, the "first" Ḳadarite, had taken over from an (erstwhile) Christian: Sanḥōya, the husband of Umm Mūsā (cf. Ibn Sa'd, *Ṭabaḳāt*, vii/2, 27, 1 ff.), perhaps a former concubine of 'Alī (cf. Dhahabī, *Mizān*, no. 11036), or from Abū Yūnus Sansōya al-Uswārī, who is perhaps the same person (cf. Maḳrīzī, *Khīṭaṭ*, iv, 181-6 f.), or a certain Sūsān (cf. Dhahabī, *Ta'rikh*, iii, 305, 14 f. etc.). The theological relationship is in fact unmistakable: for John of Damascus sin arises *ἐκ τῆς ἡμετέρας ῥαθυμίας καὶ τῆς διαβόλου πανουργίας* (Migne, *PG*, 94, 1589), and in that respect he takes his place in a tradition for which we already find models in Efreim Syrus and Theodore of Mopsuestia (cf., e.g., references in A. Vööbus, *History of the School of Nisibis*, 258 f.). Ghaylān al-Dimashqī, as a *mawlā* of Coptic origin, built upon Christian ideas (cf. Madelung, *Qāsim ibn Ibrāhīm*, 239, and M. S. Seale, *Muslim Theology*, 18 ff.). The Khāridjite founder of the Shābībīyya came from Naǧrān, the Christian centre of the Arabian peninsula. But it must not be concluded from that that the Ḳadariyya had been engendered by Christian polemic against Muslim predestination (as in the thesis of C. H. Becker, *Christliche Polemik und islamische Dogmenbildung*, in *ZA*, xxvi (1911), 175 ff. = *Islamstudien*, i, 432 ff., especially p. 441; cf. against it the argument of W. M. Watt, *Free Will*, 58, n. 27, and the counterargument of W. Thomson in *MW*, xl (1950), 209). Predestination is "earlier" only in the sense that it is strongly connected with certain "Qāhīlī" ideas (cf. H. Ringgren, *Studies in Arabian Fatalism*, Uppsala 1951, *passim*, especially 116 ff.); in the Kur'an deterministic and non-deterministic sayings stand side by side, on the basis of the idea of a personal God (cf. Watt, *Free Will*, 12 ff.). There was nothing to prevent Muslim neophytes, at least after the conquest of Syria (cf. Subkī, *Ṭabaḳāt al-Shāfi'iyya*, i, 50, 4 ff.), from naively solving the theological problem posed by the ambiguity of the Scriptures with categories familiar to themselves; we have no evidence to show that at the time this was thought strange or un-Islamic. How far

the interdependence of the two religions could go is best shown by the well-known argument based on the child born of adultery. Christian theologians have from the earliest times cited adultery as an example of the sins that man may not ascribe to God (cf. the Nestorian Bābai in Vööbus, *School of Nisibis*, 260), and the Ḳadarites said the same thing later (cf. Laoust, *La profession de foi d'Ibn Baḡḡa*, 92, n. 1). Muslim determinists counter with the question, inspired by the Qurʾān, who then created the foetus engendered by adultery in the mother's womb? (cf. Sūra XCVI, 2; XXII, 5 etc.). To that question Ḥasan al-Baḡrī (cf. Schwarz in *Oriens*, xx (1967), 19) and, diverging somewhat, John of Damascus a generation later (cf. Becker in *Islamstudien*, i, 440, and G. C. Anawati in *L'Oriente cristiano nella storia della civiltà*, Rome 1964, 542 f.) provide an answer; the latter's argument agrees with the Ḳadarite position reported in *Khushaysh* (in Malaṭī, *Tanbīh*, 134, 8 f.). John of Damascus was active in Damascus at the time of Hishām; when he as a Christian assailed the predominant Islamic belief of his time, it was natural for him to use the same arguments as the Ḳadarites. Only later, when, as a result of the internal development of Islam, the Ḳadariyya was forced from a moderate to an extreme position, did this plausible but accidental "alliance" cause offence.

**ḲADĀSA** (A.), a neologism of comparatively recent creation, generally understood in the sense of holiness. The word does not occur either in the Qurʾān or in *ḥadīth*, and the *LA* ignores it. On the other hand, the root ḳ-d-s is well known to the Arab lexicographers; the Qurʾān (II, 30, 87, 253; V, 21, 110; XVI, 102; XX, 12; LIX, 23; LXII, 1; LXXIX, 16) and *ḥadīth* (Wensinck, *Concordance*) use it sporadically. Basically, it is used to denote beings and objects that are pure, wholly unsullied or in touch with the divine.

This religious meaning seems to be alien to Arabic and borrowed from Aramaic (A. Jeffery, *The foreign vocabulary of the Qurʾān*, 1938, 232; however, cf. Lagrange, *Études sur les religions sémitiques*, 1905, 145 n. 7, where the religious meaning is regarded as original in Arabic). But the borrowing would have

taken place before Islam, as might be concluded from a verse of Imru' al-Ḳays who speaks of the garment of a pilgrim to Jerusalem (*muḳaddasi*) torn to pieces by the children (*LA*, root ḳ-d-s).

As a manifestation of purity, *ḳadāsa* is not merely the negation of impurity, *nadḡāsa*, it is also its antonym. It does not indeed signify the absence of any impure element in persons and things, a condition denoted by *ḡahāra*, in the current sense of the word; it implies also the presence in them of supernatural forces, of celestial origin, which might make them dangerous to the profane. Nevertheless, with the help of certain precautions it would be possible to approach them: "I am thy Lord", said Allah to Moses, "take off thy sandals for thou art in the sacred (*muḳaddas*) valley of Ṭuwa" (Qurʾān, XX, 12).

In the ethnological meaning of the word, *ḳadāsa* represents the positive pole of the sacred, *ḡarām*. This last word is applied in fact to everything that is forbidden to the profane and separated from the rest of the world. The cause of this prohibition could be either impurity (temporary or intrinsic) or holiness, which is a permanent state of sublime purity. *Ḳadāsa*, in short, is merely the manner of existence of what is pure and sacred, that is to say of the divine, of that which contains a divine breath, of that which is the immanence of divinity, in touch with it or rightfully belonging to it. In its ordinary manifestations, it takes the form of *baraka*.

*Bibliography*: The sacred has been the subject of a very large number of studies which cannot be listed here. Some bibliographical outlines on this question will be found in J. Chelhod, *Les structures du sacré chez les Arabes*, Paris 1964, ch. I. (J. CHELHOD)

**ḲADDŪR AL-‘ALAMĪ**, the name by which is known the famous Moroccan popular poet 'ABD AL-ḲĀDIR B. MUḤAMMAD B. AḤMAD B. ABI-L-ḲĀSİM AL-IDRĪSĪ AL-‘ALAMĪ AL-ḤAMDĀNĪ AL-ṬĀLIBĪ AL-‘ABD AL-SALĀMĪ. He grew up in Meknes in an austere atmosphere, renouncing the pleasures of this world, spending his time visiting the tombs of the saints and enjoying the company of the pious. His teachers were al-Ḥāḡḡī al-Muḳhtār al-Baḡḡālī, 'Alī b. 'Abd al-Raḡmān known as al-Djāmal, Mawḡāy al-Tayyīb al-Wazzānī, Muḥammad b. Aḡmad al-Ṣīkillī, and other eminent masters of his time. He gained numerous disciples no less famous, amongst whom were the Sultan Mawḡāy 'Abd al-Raḡmān, Muḥammad b. 'Abd al-Ḥafīz al-Dabbāḡh, the *imām* Muḥammad Ṣāliḡ al-Rīḡwī, al-‘Arabī b. al-Sā'īḡ al-Ṣharḡī and Muḥammad Ḡḡarrīṭ. Sayyidī Ḳaddūr al-‘Alamī, although unable to read or write, composed poems in the neo-classical and popular language, with astonishing skill and eloquence. These poems, which were long believed to have largely disappeared, or to have been burnt according to his wishes, have fortunately survived. Whether they were composed in *raḡīal* or in *malḡūn*, almost all deal with the glorification of God, the praise of the Prophet, and of the saints and important people of Islam. As for wine, beauty and love, of which they sing, these are to be interpreted allegorically, recalling thereby the mystical works of Ibn al-Fāriḡ and Ibn al-‘Arabī. The poem which had the most success is the one devoted to the saints of Meknes, and which begins thus: *āṣḡ man 'ār 'alīkum a raḡīal Məknās? mshāt dārī fī ḡmā-kum yā ḡl ləkrāyem!* About four years before his death, which took place at Meknes on 25 Ramaḡān 1266/4 Aug. 1850, he went into a trance, and never again set foot in the *Djāmi' al-Zaytūna*, where he had been accustomed to perform the Friday prayer.

He is said to have lived 112 *hidjra* years, i.e., 109 Gregorian years, which would give as the date of his birth 1154/1741.

**KADDŪRA AL-DJAZĀʿIRĪ**. Of Tunisian ancestry, but settled in Algeria, Abū ʿAbd Allāh Muḥammād b. Saʿīd was, like his father, Saʿīd b. Ibrāhīm (d. Shawwāl 1066/July-Aug. 1656), the most learned man and greatest mufti of Algeria of his time. Amongst his most brilliant disciples was Abū 'l-Kāsim Muḥammad Ibn Zākūr al-Fāsī, to whom he was the last to grant an *idjāza* (beginning of Rādjab 1094/26 June 1683). He died at Algiers on 15 Dhū 'l-Hidjja 1098/12 Oct. 1687.

**KADHF** (A.), slanderous accusation of fornication (*zināʾ* [q.v.]), or of illegitimate descent; in this latter case, it amounts to accusing the mother of fornication. The guilty party is punished by a fixed penalty (*ḥadd*) of 80 lashes, laid down by the Qurʾān (XXIV, 4). A slave guilty of the same crime therefore receives only 40 lashes, on account of the general principles of *fiqh*. According to the majority of *fuḥahāʾ*, *ḥadhf* only occurs if the expressions used by the slanderer expressly relate to the fornication or illegitimate descent of the person who is slandered. The Mālikīs alone consider as *ḥadhf* an accusation expressed by allusion (*taʿrīd*) or by preterition, which considerably extends the scope of the crime amongst them.

It is necessary to make clear at once that if, on account of the very restrictive interpretation put upon *ḥadhf* by the majority of schools, certain slanderous accusations are not of a kind to warrant punishment by the Qurʾānic penalty, the judge may in such a case, by virtue of his discretionary powers (*taʿzīr* [q.v.]), inflict on the guilty party another penalty less than the Qurʾānic *ḥadd* (but in Mālikī law it may be greater).

Any person having attained puberty and being in possession of his reason, whether he be slave or free, Muslim or not, may be punished for committing *ḥadhf*. The only ones to escape, apart from those who can produce four witnesses to prove the truthfulness of their statements, are the progenitors (except in the Mālikī school which admits no exceptions) and the husband if, after formulating an accusation of adultery against his wife, he has recourse to the procedure of *liʿān* [q.v.]. But, on the other hand, *ḥadhf* in the technical sense only occurs if the slandered person is *muḥṣan*. This expression in the context of *ḥadhf* (unlike that of *zināʾ*) can only be applied to a person who has reached puberty (except in Mālikī law, which protects even people below the age of puberty against the accusation of illegitimate descent, for example); this person, being in the possession of reason, must, moreover, be free, Muslim, and have no previous conviction for fornication. If

the slandered person lacks one of the qualities set out above, the author of the crime may only be given a punishment by *taʿzīr*, and not by the Qurʾānic *ḥadd*. The slandered person need not be alive at the time of the action; all his heirs, according to the majority of the *fuḥahāʾ*, or certain of them (according to the minority), may instigate a court action to punish for the *ḥadhf* if the *de cuius* had not done it in his lifetime.

*Bibliography*: All the works of *fiqh* include a chapter on *ḥadhf*. See, for example, Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1327, xvii, 40-65; Khallī b. Ishāk, *Mukhtaṣar*, tr. Bousquet, Algiers 1962, iv, 50-1. For comparisons between schools: Aḥmad Faṭḥī Bahnaṣī, *al-Djārāʾim fi 'l-fiqh al-islāmī*, Cairo 1959, 123 ff.; L. Bercher, *Les Délits et les peines de droit commun prévus par le Coran*, Tunis 1926, 119-28; J. Schacht, *An Introduction to Islamic Law*, Oxford 1964, 179.

(Y. LINANT DE BELLEFONDS)

**KĀDĪ** (A.), "judge", a representative of authority, invested with the power of jurisdiction (*ḥadāʾ*). In theory, the head of the community, the caliph, is the holder of all powers; like all other state officials, the *kādī* is therefore a delegate (*naʾīb*)—direct, if appointed by the Caliph in person, indirect and in varying degrees according to the situation if nominated by intermediate representatives (*wazīr*, governor of a province, etc.). But in all cases the delegator retains the power to do justice in person (the principle of „retained justice.”)

There is a *kādī* in the capital and a *kādī* in the leading town of each of the great territorial divisions. But each of these can appoint direct delegates. The *kādī*'s justice has always been exercised by a single *kādī*. At the most he may be instructed to consult qualified jurists (*shūrā*). In the Muslim West, particularly in Spain, this practice was even elevated into a system; alongside each *kādī* was a *consilium* of jurists, whose role was purely consultative. The collegiate system was applied only in the extraordinary justice of the *mazālim* [q.v.]. Moreover, there were no degrees of jurisdiction; every *kādī*, although delegated by another, pronounced judgement without appeal, apart from recourse to the *mazālim*.

The objective being the application of the *sharʿ*, which is essentially religious law, the function of the *kādī* is of this same character.

In theory, the competence of the *kādī* is general, embracing both civil and penal cases. The religious nature of his office has led to the acquisition of administrative functions of the same nature, such as the administration of mosques and *wakfs* [q.v.]. However, his competence in penal matters is extremely limited; being responsible for enforcing the *sharʿ*, he is restricted solely to the very few crimes envisaged by that law, while their repression is concurrently undertaken by the *shurṭa* [q.v.], the organism responsible for the maintenance of public order. In fact, it is this organism which undertakes repressive jurisdiction in general, a function which it fulfills officially, and outside the constraints and limitations of the *sharʿ* (the discretionary punishment of crimes).

In those Islamic states—such as the Ottoman empire—which in the middle of the 19th century set out to modernize their structure, the office of *kādī* had been maintained until that time. Thereafter, it has survived only within the limited sphere of personal status and certain other specialised questions (inheritance, *wakfs*).

The institution of the *ḥadāʾ al-ḥudāt* (the holders'

title being *kāḍī 'l-kuḍāt* "the judge of judges") was so to speak the crowning point of the system of judicial organization of the Islamic state, and, combined with the institution of the *wizāra*, to which was delegated the executive power and which appeared during the same period, it was the final and highest step in the organization of that state, under the authority of the caliph.

Until the time of Hārūn al-Rashīd, the only *kāḍīs*, in the capital and in the various provinces, were of uniform status, with no hierarchy among themselves. The procedure for introducing the new régime was very simple: between the years 174/786 and 182/798, the caliph elevated the office of *kāḍī* of his capital to that of *kāḍī 'l-kuḍāt*, while delegating to the holder authority for the general administration of justice. In fact, the institution of *kāḍī 'l-kuḍāt* was an adaptation of the Persian institution of *mōbedān-mōbed*. The ancient Arab authors did not fail to notice the close relationship between them.

The evolution of the office was to pass through four successive stages. While the 'Abbāsīd Caliphate more or less maintained its general authority, until the appearance of the Fāṭimid Caliphate (372/984), there existed only the one *kāḍī 'l-kuḍāt* of Baghdād. However, the Fāṭimid Caliphate introduced an identical organism in Cairo. Subsequently, and corresponding with the process of the divesting of authority particularly within the 'Abbāsīd Caliphate, the various kingdoms or principalities set up on their own account some *kāḍī 'l-kuḍāt* (very markedly after the 6th/12th century).

From the beginning of the Mamlūk period (663/1264) two new phenomena appear. On the one hand, the number of *kāḍī 'l-kuḍāt* increased; they were to be found within the principal divisions of the realm (*niyābāt*). But despite their title, these officials were merely the delegates of the *kāḍī 'l-kuḍāt* of the capital. The second phenomenon was the institution, in the capital, in addition to the previously existing office of *kāḍī 'l-kuḍāt* of the Shāfi' *madhhab*, of three other positions of *kāḍī 'l-kuḍāt* for the three other Sunnī *madhhab*s—Hanafī, Mālikī and Hanbalī. These also had their corresponding figures in most of the principal *niyābāt*.

The *kāḍī 'l-kuḍāt* is, above all, a judge. But to him is delegated the judicial administration: the nomination, control and dismissal of the *kāḍīs*; the special jurisdictions (*shurṭa*, *hisba*, *kaḍā' al-askar*) fall outside his authority; still more is this true of the jurisdiction of the *maẓālim*, which is the prerogative of the sovereign or his qualified representative, a minister or a governor of a province. This additional responsibility has moreover remained of "political" character; it has not been recognised in doctrine.

In outline, the powers of judicial administration of the *kāḍī 'l-kuḍāt* were exercised, more or less successively, in two different forms. From the start of the institution until the end of the 3rd/9th century and even, in general, during the 4th/10th, the *kāḍī 'l-kuḍāt* in the 'Abbāsīd Caliphate did not exercise his authority in his own name. Thus, the deeds of nomination of *kāḍīs* emanated from the caliph himself. The *kāḍī 'l-kuḍāt* plays a role only in presenting candidates. This situation continued for some time during the Fāṭimid Caliphate. But from then onwards, the *kāḍī 'l-kuḍāt* exercised their powers personally, as part of the general delegation that they had received.

The delegating authority was at first the caliph, and then, from the middle of the 4th/10th century, the sultan; finally, it was often the minister.

The *kāḍī 'l-djamā'a*. In its origins, the institution of the *kaḍā' al-djamā'a* of Muslim Spain differs considerably from the *kaḍā' al-kuḍāt* of the East. At that time it was merely a matter of a new title which 'Abd al-Rahmān gave, between 138/755 and 141/758, to the *kāḍī* of the Spanish territory already conquered, until then known as *kāḍī 'l-djund* (*kāḍī* of the military district). No doubt it was to indicate that the territory over which he had just asserted his independent authority was no longer merely a province of the Caliphate, that 'Abd al-Rahmān rejected the old name; and moreover that, in place of *djund*, he substituted the term *djamā'a* (community of Muslims), both to signify that henceforward he was the sole legitimate authority of the Muslim world, and also as a mark of distinction from the judges of the native populations, the vast majority of whom remained strangers to Islam. Thus, in the particular circumstances, it was not a question of borrowing some foreign institution; nor was it a matter of new duties coming to be added to the jurisdictional function, properly speaking. Moreover, the term *djamā'a* had already been in use for a long time, in Arabo-Muslim circles, to denote the holder of an office concerned with these circles, when the Muslim were still in a minority. Thus, the judge of the group of Muslims at the battle of Yarmūk (15/636) had been called *kāḍī 'l-djamā'a*. However, by reason of the general conditions under which he had to perform his duties, the new *kāḍī 'l-djamā'a*, a confidant of the sovereign who for his part was absorbed by his other occupations, was naturally bound to play the part of counsellor to the sovereign, as far as judicial administration was concerned.

Having once started upon this path, the institution was not slow to coincide with the *kaḍā' al-kuḍāt*. Moreover, at some period after the 3rd/9th century which cannot however be defined more precisely, it is known that the *kāḍī 'l-djamā'a* directly exercised powers of judicial administration and nominated provincial *kāḍīs*. From the beginning of the 5th/11th century, the name *kāḍī 'l-kuḍāt* was applied indiscriminately to the *kāḍī 'l-djamā'a*.

Moreover, as was the case in the East, the small kingdoms which came into being as a result of the decline of the Umayyad Caliphate showed their independence by each creating on its own account the office of *kāḍī 'l-djamā'a*, also called *kāḍī 'l-kuḍāt*. It should be added that the institution did not remain peculiar to Muslim Spain, but became general throughout the Muslim West.

Ottoman Empire. According to the Turkish chronicles the appointment of the first *kâdî* can be related to the events that made 'Othmân independent. Karadjaḥiṣâr was occupied as early as about 1290 A.D., but 'Othmân did not appoint a *kâdî* there until around 1300; it was then that the *fakîh* Dursun, who became jointly *kâdî* and *khaṭîb*, first read the *khuṭba* [q.v.] in the name of 'Othmân as the sign of sovereignty ('Āshīkpaṣhazāde, German tr., ed. R. Kreutel, 39-40; Neshrî, ed. F. R. Unat, 108-10). With the expansion of the Ottoman empire the number of the *kâdîs* increased so quickly that a new office soon had to be set up to supervise them. Therefore when Murâd I appointed the first *kâdî 'asker* [q.v.] in Bursa around 764/1363, he put him in charge not only of the military jurisdiction but also of the supervision of the *kâdîs*.

The *kâdîs* were already paid under Orkhân (Neshrî, *op. cit.*, 186) but the amount was so inconsiderable that Bâyezîd—although he was on the point of punishing them severely for corruption—on discovering this, ordered that they should be given two per cent of every inheritance and two *aḳḳes* for each written document ('Āshīkpaṣhazāde, *op. cit.*, 104 and Neshrî, *op. cit.*, 338). Their salary was reviewed on later occasions, and according to Mehemmed II's code they were authorized to receive seven *aḳḳes* for a *sidjill* (record), 12 for a copy of the *sidjill*, 32 for a *hüddîdîet* (certificate), 12 for their signature, 30 *aḳḳes* on the marriage of a maiden and 15 on that of a widow, and two per cent of every inheritance. Besides this, they also received a daily allowance, fixed at between 10 and 500 *aḳḳes* in the time of Mehemmed II.

The district over which a *kâdî* had jurisdiction was called a *kaḳḳâ'* [q.v.] or *kaḳḳâ'*, consisting of one or more *nâhiye* [q.v.]. According to the extent of the *kaḳḳâ'*, the *kâdî* had a certain number of deputies, called *nâ'ibs* [q.v.]. Next in rank to the *kâdîs* of the *kaḳḳâ'*s were the *kâdîs* of the *sandjaks* [q.v.], then the *eyâlets* [q.v.]. The *kâdî* districts of the larger or more important places were called *mevleviyets* [q.v.]. In the 9th/15th century the districts of the *kâdîs* in Istanbul, Edirne, Bursa, Selânik, Filibe and Sofia were *mevleviyets*; their number increased greatly as the empire expanded.

The *kâdîs* were appointed by the *kâdî 'asker* if their daily allowance was less than 150 *aḳḳes*; otherwise their appointment was proposed to the sultan by the grand vizier, on the basis of the *kâdî 'asker*'s opinion. From the end of the 10th/16th century, however, the increased influence of the *shaykh al-islâm* [q.v.] was reflected in the appointment of the *kâdîs*.

The latter were appointed to the *kaḳḳâ'*s for 20 months and to the *mevleviyets* for one year, and after the expiry of their term they became unpaid ex-office-holders (*ma'zûl kâdîs*) until their turn came round again. In the meantime, the number of the free schools, supported by the *wakfs* [q.v.] (religious foundations) increased so much that in the reign of Sulaymân I the number of applicants for the offices greatly exceeded the number of the posts available in the empire. Therefore from 965/1557 on, on the advice of the grand *miftî* Abu 'l-Su'ûd, all who graduated from higher schools and passed their final examination were officially listed in order that they would be granted posts in due course. At the beginning of the 11th/17th century there were ten applicants waiting for one *kâdî* post to fall vacant (*Koḳi Bey Risalesi*, ed. A. K. Aksüt, 108). The *ma'zûl* system which resulted reduced not only the *kâdîs* but all the functionaries to idleness, thus affecting basically the whole administration of the Ottoman empire.

Only after the *lanzimûl* [q.v.] was it decided that beside officials of higher ranks (e.g., the *kâdî* of Istanbul) every ex-office-holder should receive according to his merits a half, a third or a quarter of his pay while he was unemployed. This system was called *ma'zûliyet ma'âshî*.

The authority of the *kâdî* covered such a large area of responsibility that the full meaning of the title cannot be accurately rendered by the word "judge". Besides the usual legal matters, they held confidential posts to which they were appointed by the government, which expected them to report from time to time on the activities of high ranking officials, the general situation and the mood of the population. They had to see that craftsmen were attached to the army before it set off to war, that roads were safe, and that goods needed for domestic consumption were not exported. As well as this they had to supervise the public affairs of the cities, the suitability of buildings, the guilds, the quality of goods and their prices. They were also responsible for seeing that foodstuffs were sold at officially fixed prices and the *devshirme* [q.v.] conducted properly. They were important as public notaries; their function was to issue different kinds of certificates and documents concerning sales, contracts, loans and the occasional manumission of slaves, to attest private and public documents, and to supervise the accounts of the *wakf* incomes and endorse them with an authentication clause.

This extended authority of the *kâdîs* was restricted in the 19th century by the endeavours of reformers, and after the proclamation of the Turkish republic the very title was abolished. Thus the institution became a thing of the past, but the vast written material pertaining to it is of great interest to historians. The *kâdîs* recorded in their *sidjills* the directives of the central government and the judicial and notarial affairs brought before them and these records are one of the most valuable sources of Turkish history.

**KÂDÎ 'ASKAR** (A.), "judge of the army". The first data relating to the institution of the *kâdî 'askar* date from the 2nd/8th century: Kindl mentions that after Şâlih b. 'Alî had become the governor of Egypt (c. 132/750), he organized a military expedition and appointed a judge over each unit of his army (E. Tyan, *Histoire de l'organisation judiciaire en pays d'Islam*<sup>2</sup>, Leiden 1960, 529-30). In the Ayyûbid state the office of the *kâdî leshker* (i.e., *kâdî 'askar*) first came into being in Salâdin's time (1138-93) (İ. H. Uzunçarşılı, *Osmanlı devleti teşkilâtı*).

*inna medhal*<sup>2</sup>, Ankara 1970, 387). The Anatolian Saljuks also had the institution of *kādi leshker*, as is first mentioned in sources referring to the 1270s (*op. cit.*, 122-3, 140).

In the Ottoman empire Murād I appointed the first *kādi 'asker* in Bursa in 765/1363, with authority for military jurisdiction and also supervisory powers over all *kādīs*. Later, in 886/1481, Mehemmed II established a second office of *kādi 'asker* with the same wide range of functions, thereby dividing the empire into two parts each containing a *kādi 'asker*, one for Anatolia and the other for Rumelia; the latter was the more important of the two. As a result of further conquests, in 922/1516 Selim I set up a third *kādi 'asker* office in Diyarbakir with the title *'Arab ve 'Adjem kādi 'askerligi*, but soon after the occupation of Syria and Egypt he abolished it.

Up to the 11th/17th century the *kādi 'asker* was appointed on the advice of the grand vizier, and later that of the *mufti* of Istanbul, although it was considered desirable that both should be in agreement. The *kādi 'asker*, like the *kādīs* [q.v.] of higher rank, was appointed for an annual term, but this could be prolonged if it seemed necessary. Their daily payment (500 *aḳtes*) was not more than that of the *kādīs*; their income, however, was a great deal higher because they were awarded 15 per thousand of the soldiers' estates (recorded separately in the *ḥassām defteri*).

The influence of the Anatolian and Rumelian *kādi 'askers* was greatly increased by the fact that both were members of the imperial council (*diwān-i humāyūn* [q.v.]). Besides this, they were authorized to appoint *kādīs* who received less than 150 *aḳtes* as well as to fill vacancies in schools and mosques. However, they began to lose their influence and leading position after the middle of the 16th century when, as a result of the activity of Abu 'l-Su'ūd, power passed into the hands of the spiritual leader of Islam, the grand *mufti* of Istanbul. The *kādi 'askers*, however, remained members of the *diwān-i humāyūn* until the middle of the 19th century. The offices of the Anatolian and Rumelian *kādi 'askers* existed until 1914, when the two were united. However, the reorganized office of the Anatolian *kādi 'asker* was short-lived, for it was abolished under the Turkish republic.

**AL-KĀDĪ AL-FĀDİL**, ABŪ 'ALĪ 'ABD AL-RAḤĪM B. 'ALĪ B. MUḤAMMAD B. AL-ḤASAN AL-LAKHMĪ AL-BAYSĀNĪ AL-'AŞĀLĀNĪ, MŪḤYĪ (MUDJİR) AL-DĪN, the famous counsellor and secretary to Saladin, was born on 15 Djumādā II 529/3 April 1135 at 'Aşkalān [q.v.], where his father, a native of Baysān, known as al-Kādi al-Ashraf, was the judge. He was put by his father into the *Diwān al-inshā'* at Cairo as a trainee, about 543-4/1148-9. Already before 548/1153 he entered the service of the *kādi* of Alexandria, Ibn Ḥadid, as a secretary. As the elegant reports he drafted there brought him to the attention of the Cairo authorities, he was recalled to Cairo by the last representative of the family of viziers, the Banū Ruzzik, al-'Ādil Ruzzik b. al-Šāliḥ Ṭalā'ī, as head of the *Diwān al-Djāysh* [see DĪWĀN]. A little later, when Ruzzik had been set aside by Shāwar, the prefect of Ḳūs, al-Kādi al-Fādil entered the

service of Shāwar's son Kāmil as secretary, and, after the murder of Shāwar, the service of Shirkūh, his successor as vizier. In 563/1167-8 he replaced Ibn al-Khallāl, the director of the *Diwān al-inshā'* under whom he had begun his career, in his functions, and, after the death of the latter on 23 Djumādā II 566/4 March 1171, he became his successor, Saladiu having meanwhile taken over the functions of vizier. The following year, after the death of the last Fātimid, when Saladin himself became ruler of Egypt, al-Kādi al-Fādil was his right hand man in the execution of the necessary reforms in the fiscal and military administration. He then accompanied the sultan on his expeditions to Syria; from 585 to 586/1189-90 he remained in Egypt to control the administration of finance and reorganise the army and the fleet. Subsequently he returned to Syria and stayed with Saladin until his death on 27 Šafar 589/5 March 1193. When al-Malik al-Afḍal, who had seized power in Damascus, rapidly compromised his position by imprudent actions, al-Kādi al-Fādil went to Egypt to serve al-Malik al-'Aziz. Soon afterwards war broke out between the two brothers, but al-Kādi al-Fādil, through his mediation, brought it to an end in 591/1195. After this he returned to private life. He died suddenly on 6 or 7 Rabī' II 596/26 or 27 January 1200.

Of the official writings of al-Kādi al-Fādil while at the *Diwān al-inshā'*, many examples have survived, in manuscript form (Helbig, see below), in early collections such as that of his emulator a century later, Muḥyī al-Dīn b. 'Abd al-Zāhir, *al-Durr al-naẓim min tarassul 'Abd al-Raḥim*, ed. Cairo 1959, in the works of chroniclers such as, in particular, his colleague and friend 'Imād al-Dīn al-Işfahānī [q.v.] or at a later date Abū Šhāma, in compilations of *inshā'* such as that of al-Kākaşhandī [q.v.] in particular, and lastly in various works such as the *Khariḍa* of the same 'Imād al-Dīn (for a correspondence with Usāma b. Munkidh see H. Derenbourg, *Vie d'Ousama*, 383 ff.). While he was in office, he also edited an official diary known by the name of *Mutadajaddidāt* (according to Maḳrīzī) or *Mādjarāyāt* (according to Kamāl al-Dīn b. al-'Adīm; according to the latter the compilation was partly the work of the historian of the same period Abū Ghālib al-Şhaybānī), of which considerable extracts have been preserved by these writers: Al-Kādi al-Fādil was also the author of a considerable volume of poetry in part mingled with his correspondence.

It has often been said that al-Kādi al-Fādil was vizier to Saladin. This he never was: Saladin, who first achieved power in Egypt as vizier of the Fātimid caliph, never took a vizier himself. Al-Fādil was, however, a counsellor whose advice was heeded, and the director of his chancellery. The personal prestige he enjoyed in his old age was considerable; but it was not so much to the loftiness of his moral purpose, as to the exceptional quality of his private and official epistolary style that he owed his extraordinary reputation among his contemporaries and his emulators in subsequent generations. This style, which can be compared to that of his collaborator and friend 'Imād al-Dīn al-Işfahānī, combines richness (perhaps a little less prolix) and suppleness of form with a realistic treatment of the facts, a lesson too often forgotten by later writers, which makes his correspondence a valuable historical source. It is all the more strange to note that the work, which was considered to be a model by thousands of secretaries, has not yet found an editor in modern times. The Diary is lost, the *Diwān* has been published recently

(by Ahmad A. Badawī and Ibrāhīm al-Ibyārī, Cairo 1961, 2 vols.), but the correspondence is still only accessible in the form of extracts found in the works mentioned above. The ideal would be to establish a concordance of all these extracts and manuscript collections; a long, exacting, but indispensable task, which was begun but by no means finished by Helbig, and which will be taken up again.

**Bibliography:** Almost everything said by the numerous authors who devote a biography to al-Kāḍī al-Fāḍil goes back to the chroniclers of Ṣalāḥ al-Dīn and to the account given by his friend 'Imād al-Dīn, who died a few months later, and reproduced by Abū Shāma *s.a.* 596. In addition, see in particular Ibn Khallikān, no. 384, and Ibn 'Abd al-Zāhir, *op. cit.* In modern literature the fundamental work is still that of Ad. Helbig, *Al-Qadi al-Fadil*, Diss. Heidelberg, 1908. See also Walther Björkmann, *Beiträge zur Geschichte der Staatskanzlei im islamischen Agypten*, 1928, and Horst-Adolf Hein, *Beiträge zur Ayyubidischen Diplomatik*, Diss. Freiburg/Br. 1968, with bibliography; *GAL*, I, 315, S I, 549; Hilmy M. Ahmad, in *Historians of the Middle East*, ed. Holt and Lewis, 95-6 and n. 16; A. S. Ehrenkreutz, *Saladin*, Albany N. Y. 1972, index.

**KĀDĪ KHĀN**, FAKHR AL-DIN AL-HASAN B. MAṢŪR AL-FARĠĤĀNĪ, 6th/12th century Ḥanafī jurist (d. Ramaḍān 592/August 1196), a native of Transoxania, who wrote commentaries on those works of Muḥammad al-Shaybānī, Abū Hanīfa's disciple, recognized as *yāhīr al-riwāya* (authentic version). A few manuscript copies of his commentaries are extant, notably a *Sharḥ al-Djāmi' al-ṣaḡīr* and a *Sharḥ al-Ziyādāt* in the Cairo National Library. Kāḍī Khān's fame rests on his *Fatāwā*, also called *al-Fatāwā al-khāniyya*, not, as the name would seem to suggest, a collection of practical decisions but rather a theoretical work, analogous in form and in essence with all treatises on *fiqh*. Nevertheless, Kāḍī Khān was less preoccupied than the other *fukahā'* with abstract explanations and methodology (*uṣūl*). This was perhaps the reason for the success of the *Fatāwā* in the eyes of practitioners, especially in India, where the first printed editions of the work appeared (Calcutta 1835). Nowadays the preferred text is the Būlāḳ one, where the text is printed on the margin of the first three volumes of *Fatāwā hindiyya* (1310).

Kāḍī Khān was one of those men whom the Ḥanafī school agreed should be classed as qualified to handle *idjtiḥād* [q.v.] and to put forward new solutions in legal matters. He was the last jurist of the classical period of Ḥanafī law, a time when a measure of legislative creativity was still possible.

**KĀDĪ 'L-KUḌĀT** [see KĀDĪ].

**KĀDĪ MUḤAMMAD**, a Sunnī of the Shāfi'ī *madhhab*, b. c. 1895, was head of the leading aristocratic and religious family of Mahābād [q.v.] (the principal town of the Kurdish part of the province of

Āḍharbaydjan since separated as the Third Ostan), where there was a tradition of lively Kurdish cultural activity. After succeeding his father, 'Alī, as *kāḍī* he quickly established a reputation for outstanding competence and incisiveness alike as judge, orator and practical man of affairs.

In August 1941 the Anglo-Russian invasion of Persia was followed by a general rising of the Kurdish tribes and the total breakdown of the machinery of government. At Mahābād a committee of townsmen, headed by the *kāḍī* and supported by the tribal chiefs, took over the local administration. A political party, the Society for the Revival of Kurdistan, formed by a group of young nationalist intellectuals, later co-opted the *kāḍī* as president. Kurdish was introduced as the language of instruction in the schools, and nationalistic emotions were aroused by theatrical productions, the publication of anthologies of patriotic verse, and other journalistic activities in that tongue. Although the last vestiges of government authority had long disappeared, it was not until 22 January 1946 that the Autonomous Kurdish Republic was proclaimed with Kāḍī Muḥammad as president.

The withdrawal of the Soviet forces four months later opened the way for the central government to reassert its authority. With the reoccupation of Tabriz on 13 December both the Mahābād Republic and the larger Communist "Democratic Republic" of (Persian) Āḍharbaydjan, set up in the Turkic-speaking parts of the province, collapsed. Kāḍī Muḥammad surrendered four days later and, after trial on a charge of treason, was hanged on 31 March 1947.

Although the Kurdish Republic, as such, lasted only eleven months, the committee led by the *kāḍī* had administered the district with commendable efficiency and success for over five years.

AL-KĀDĪ AL-TAĤARTĪ [see IBN AL-RAḤĪB].

**KĀDĪZĀDE RŪMĪ** [see SUPPLEMENT].

**KĀDĪB**, rod, one of the insignia of sovereignty of the caliph. As early as the Umayyad era, the rod (*kāḍīb*) or staff (*'aṣā*) was already, along with the seal, one of the badges of rank which was conveyed with speed to the new caliph on the death of his predecessor. This custom was adhered to under the first 'Abbāsīd caliphs, notably after the death of al-Manṣūr, who ended his life at Mecca, and after the deaths of al-Mahdī and Hārūn al-Raṣhīd, who perished during an expedition to the eastern provinces; in these cases a special messenger, bearing the *kāḍīb* and the seal, was despatched to the heir presumptive, who was then in the capital. In the 4th/10th century narratives dealing with caliphal audiences describe the caliph holding the *kāḍīb* along with other badges of rank. Considered the staff of the Prophet which was received in succession by the first caliphal dynasties who ruled over the Islamic east, and thus endowed with a religious significance borne out by kūr'ānic references to a "staff" carried by biblical prophets such as Mūsā, this rod seems also to have served as a kind of sceptre.

A like appurtenance of sovereign dignity is also attested in Muslim Spain, where the Umayyad caliphs possessed, along with other badges of rank, a rod called *khayzurān*. On the other hand, the 'Abbāsīd caliphs of Cairo in the Mamlūk era had lost the rod, but even so it did not pass into the hands of the sultans

and seems no longer to have figured in the Ottoman ceremonial. Nevertheless the rod or staff (*ʿaṣā*) of the sovereign became in later literature the symbol of power, as is demonstrated in a passage from Ibn Khaldūn (*Muqaddīma*, part iv, ch. 1).

**KĀDIR** [see KĪDAM].

**KĀDĪN** [see MAR'Ā, SARĀY].

**AL-KĀDIR** [see AL-ASMĀ' AL-ḤUSNĀ].

**AL-KĀDIR BI'LLĀH**, 25th caliph of the 'Abbāsīd dynasty, who reigned from 381/991 to 422/1031. Born in 336/947-8, Abu'l-'Abbās Aḥmad b. Ishāk was the grandson of the Caliph al-Muqtadir [*q.v.*] and cousin of the Caliph al-Ṭā'ī, who was deposed in 381/991 by the amīr Bahā' al-Dawla. Called to assume the caliphate by the latter, Abu'l-'Abbās received the regnal name of al-Kādir bi'llāh. The amīr, who had met with some vestiges of resistance in al-Ṭā'ī, hoped to find a more tractable ruler in the person of al-Kādir, who had had to flee from the capital to escape the vengeance of his cousin after a family quarrel. In fact, the new caliph at first appeared to make common cause with the amīr and seemed disposed to support his policies. Moreover, the proclamation was not initially recognized by the amīrs in the eastern provinces; it was not until around 390/1000 that the Sāmānids and Ghaznawids decided to recognize the new caliph installed by their Buwayhid rivals. Obligated to give way to the various demands of the chief amīr, in the first stage of his reign al-Kādir bestowed on the latter honorific titles comparable with those awarded to 'Aḍud al-Dawla [*q.v.*], was satisfied with ratifying the nominations he proposed, and agreed to marry Bahā' al-Dawla's own daughter, though in fact she died before the marriage was celebrated. He was also content with very limited financial resources. The only demonstrations of his authority were the construction of the sixth Great Mosque in Baghdād, that of Bāb Ḥarb (383/993), and the announcement, before an assembly of pilgrims from Khurāsān (390/1001), that his heir was his son, who was given the appellation al-Ghālib bi'llāh.

From around 390/1000, however, the chief amīr Bahā' al-Dawla, who had settled in Shīrāz, treated 'Irāk merely as a province of the kingdom. On account of this the caliph began to enjoy greater freedom. He was thus able to re-establish the 'Abbāsīd *khufba* in Yamāma and Bahrayn. Similarly, he opposed the nomination as chief *kādi* of a man whom the chief amīr wished also to appoint as *naḥīb* of the 'Alids, president of the *maṣālim* court and amīr of the pilgrimage, the *sharīf* Abū Aḥmad al-Mūsawī (394/1004). The caliph thus managed to block the universal application of Imāmīte law and to ban an 'Alid from the office of chief *kādi*. He had previously had the occasion to demonstrate his determination to defend the Sunnī régime which he embodied; in 390/1000 he had addressed a letter to the new *kādi* of Dīlān asking him to urge the populace to obey the caliph. A few years afterwards, there occurred the incidents which led him to intervene against Imāmism; following controversies concerning Ibn Mas'ūd's Qur'ānic recension, which the Sunnīs considered inexact, and the ensuing disturbances in the capital, the caliph convened a commission

of Sunnī scholars, who condemned the suspect version (Radjab 398/April 1006), and soon after arrested and executed a Shī'ī who at Karbalā' had dared to anathematize "those who had burned the *muṣḥaf*" of Ibn Mas'ūd. In these circumstances the chief amīr intervened to pour oil on troubled waters and to prevent the situation from becoming more grave. As a matter of fact there was a new danger threatening caliph and chief amīr alike: Fātimid propaganda making itself felt in the Shī'ī quarters of Baghdād. The name of the Caliph al-Ḥākim [*q.v.*] was hailed during the affair of Ibn Mas'ūd's Qur'ān and shortly afterwards the amīr of al-Mawṣil, Kirwaṣh, whose authority stretched as far as al-Anbār [*q.v.*], threw in his lot with the Fātimid regime and delivered a *khufba* in which he professed Ismā'īlism (Muḥarram 401/August 1010). At once al-Kādir sent an emissary to the chief amīr in the person of the theologian al-Bākillānī, who had for many years been greatly favoured by the Buwayhid amīrs, and obtained the amīr's intervention in the matter of Kirwaṣh, who re-established the 'Abbāsīd *khufba* soon afterwards. He played his part by having read publicly in the palace, in Rabi' II 402/November 1011, a manifesto condemning the Fātimid doctrine, criticizing the genealogy of the Fātimid caliphs, and numbering the Ismā'īlīs among the enemies of Islam. The manifesto was signed by Imāmī as well as Sunnī scholars.

The death of Bahā' al-Dawla in 403/1012 and the succession of his son Sulṭān al-Dawla made no great change in the political situation. It should not be forgotten that for a number of years the agitation of the Arab and Kurdish elements in 'Irāk had progressively weakened Buwayhid power, while the long-standing rivalry between Daylamites and Turks was ignited again in the course of any local disturbances, and incidents between Sunnīs and Shī'īs in Baghdād and other towns could break out at any moment. Al-Kādir's main preoccupation was the struggle against any doctrines deemed pernicious and especially those which constituted a danger to the caliphate. From 408/1017 he demanded that the Ḥanafī jurists who had shown some sympathy with Mu'tazilism make an act of penitence; at the same time he forbade the teaching of Mu'tazilī and Shī'ī doctrines. Then, in 409/1018, he had a reading given in the palace of the text called *al-risāla al-kādirīyya*, a profession of faith defining the official doctrine which also conformed to the ideas of the Men of Old (Ibn al-Djawzī, *Muntazam*, viii, 109; A. Mez, *Renaissance*, 198-201; G. Makdisi, *Ibn 'Aqīl*, 299 ff.). Inspired by Ḥanbalite ideas, this text condemned not only Shī'ism in all its forms but also Mu'tazilism and even Ash'arism, which was denounced for taking a stance that was a dangerous compromise with Mu'tazilism, and also put forward the veneration of the Companions as a genuine obligation. In the same period the chief amīr Sulṭān al-Dawla appeared in Baghdād for the first time: soon after, he retired to Iran and ceded his position to Muḥarrif al-Dawla, who turned up in Baghdād in Muḥarram 414/March 1023 and demanded that the caliph come to meet him. Al-Kādir complied, but he protested soon afterwards when, without seeking the caliph's authorization, the chief amīr wanted to renew the Turkish chieftains' oath of allegiance and procured the amīr's vow of submission and fidelity.

The rivalry which broke out between the Buwayhid princes after the death of Muḥarrif al-Dawla in 416/1025 gave the caliph the opportunity to play a truly political role once more. Opposed were Djalāl al-

Dawla, the brother of Muḥarrif al-Dawla, who at once secured the proclamation in the *khutba* of his name, and Abū Kālidjār [q.v.], his nephew, who had himself proclaimed chief amir by the troops, an announcement ratified by the caliph until those same troops were deserting Abū Kālidjār and rallying to iǧlāl al-Dawla. The latter arrived in Baghdād in 418/1026, installed himself in the amiral palace and assumed certain caliphal prerogatives, but less than a year later the troops clamoured for his dismissal. Al-Kādir despatched the chief notables, the two *naḥīb*s and the *ḥādīb*, to inform him that he must withdraw; he did so and was prohibited from returning to the capital for some time afterwards.

The caliph devoted the last years of his reign to reinforcing 'Abbāsīd propaganda. During 420/1029 three letters were solemnly read aloud from the palace: the first denounced Mu'tazilism anew; the second attacked in particular the doctrine of the "created Qur'ān"; while the third proclaimed the superiority of the early caliphs and affirmed the obligation to "command good and forbid evil". At the same time doctrines favourable to Mu'tazilism had to be duly amended and the preacher at the mosque of Barāthā was dismissed as a Shī'ī extremist. Moreover the caliph received frequent reports of events in the eastern provinces, where Maḥmūd of Ghazna harried the Shī'īs and further extended Islamic power by setting out on the conquest of India, while at the same time engaging in battle against the Buwayhids, seizing Rayy in 420/1029 then attacking Kirmān in 422/1031. In 421/1030 the ageing caliph secured the succession by declaring his son Abū Dja'far his heir without any reference to the chief amir. On his death in 422/1031, though it had not regained its traditional power, the caliphate had won a considerable amount of prestige. Above all al-Kādir had worked effectively for the restoration of threatened Sunnism and in this way achieved ends as much political as religious. Al-Kādir's activities were reflected by the redaction of two treatises on public law, the two works entitled *Al-Aḥkām al-sultāniyya*, the one by the Shāfi'ī al-Māwardī [q.v.] and the other by the Ḥanbalī Ibn al-Farrā' [q.v.].

(D. SOURCE)

AL-KĀDIRI, ABŪ 'ABD ALLĀH MUḤAMMAD B. AL-ṬAYYIB B. 'ABD AL-SALĀM AL-ḤASANĪ AL-KĀDIRI, *sharīf*, Moroccan historian and biographer, born in Fās on 7 Rabī' I 1124/14 April 1712, died in the same town on 25 Sha'bān 1187/ 11 November 1773. He was a pupil of the leading scholars of his time but, unlike them, throughout his life revealed an almost complete detachment from the good things of this world. Quite early he turned to Ṣūfism and, to make his living, was content to act as an 'ādil (legal witness to a deed). Al-Kādirī left a fairly considerable number of writings. In the list of works, compiled by himself (*Iḥikāf al-durar*, fol. 104 v.), some of the most noteworthy of these (apart from works relating to Muslim learning) are a monograph relating to the saint Kāsim al-Khaṣāṣī, a short

work devoted to the *ashrāf* of Sicilian origin, an obituary in *radjāz* on the family of the Fāsiyyūn [q.v.], an appendix to the *Kifāyat al-muḥtādī* of Aḥmad Bābā [q.v.], etc.: but the most important of al-Kādirī's works are his dictionaries of the celebrities of the 11th/17th and 12th/18th centuries, the *Iḥikāf al-durar* and the *Nashr al-mathānī*. The first exists only in a few manuscripts. The second, thanks to the lithographed edition (2 vol., Fās 1310/1892 [with an error of pagination in vol. ii between pages 161 and 249]) and the French translation (vol. i, tr. A. Graulle and Maillard, in *Arch. Maroc.*, xxi (1913); vol. ii, tr. E. Michaux-Bellaire, *ibid.*, xxiv (1917)) is well known. These two works, probably the last written by the author, fulfilled the same purpose. While the hagiographic record compiled by Ibn 'Askar [q.v.] had been continued for the 11th/17th century by al-Ifrānī [q.v.], for this same century there existed no dictionary of Muslim celebrities of all types. It was this gap that al-Kādirī set out to fill, although he seems to have been unaware of the existence of the *Ṣafwat man intashar* of al-Kattānī [q.v.], written at about the same time. The first results of his researches were recorded in the *Iḥikāf al-durar wa-mustafād al-mawā'iz wa'l-'ibar min akhbār a'yān al-mi'a al-thāniya wa'l-ḥadiya 'ashar* (which also contains substantial autobiographical elements). In a revised, completed and often abridged form, this work was presented under a new title, *Nashr al-mathānī li-ahl al-karn al-ḥādī 'ashar wa'l-thānī*. The two works thus resemble each other closely. They possess an original feature in that, following the obituaries for each year, they almost always give a résumé of the outstanding political events of that year. It seems that al-Kādirī also produced another version of the *Nashr al-mathānī*, apart from the one lithographed at Fās; this is stated by al-Kattānī (*Salwat al-anfās*, iii, 361), who had in his possession a more complete *Nashr*, covering the period until 1183/1769. This more extensive edition was said to be entitled *al-Azhār al-nādiya fi akhbār ahl al-mi'a al-ḥadiya 'ashar wa'l-thāniya*.

Al-Kādirī was familiar with the whole body of literature relating to the Sa'ādis [q.v.], but his sympathies lay primarily with Muslim scholars, whether they were like himself Moroccan or not.

AL-KĀDIRI AL-ḤASANĪ, ABU 'L-'ABBĀS (and Abu 'l-Faḍā'il) AḤMAD B. 'ABD AL-KĀDIR B. 'ALĪ B. MUḤAMMAD, Moroccan mystic who was also a man of the pen and of the sword. He owed his education to his stay at the *sāwiya* of Dilā', profiting from the teaching of qualified masters such as al-Yūsī. He made the pilgrimage twice, in 1083/1673 and in 1100/1689. During his first stay in the East, he followed courses given by doctors learned in Islamic sciences, amongst whom were: 'Alī al-Udjhūrī, 'Abd al-Bākī al-Zurkānī, and Muḥammad al-Khīrshī. At the end of his second journey he composed a *rihla* with the title *Nasmat al-ās fi ḥidāyat Sayyidina Abi*

'*L-Abbās* (it deals with Ahmad b. Muḥammad b. 'Abd Allāh Ma'n al-Andalusī, in whose company he had visited the Holy Places). He is also the author of the following works: *Diwāb fi 'l-nasab al-ḥasanī wa 'l-ḥusaynī*; *Ta'rif fi nasab al-shurafā'* al-'*Alawiyayn*; three poems in *radjāz* metre: one on the Companions of the Prophet who had emigrated to Abyssinia, the second on the mosques in which the Prophet had prayed, and the third in *yā'* rhyme on the masters of his time. He passed the rest of his days in the odour of sanctity, devoting himself to the perusal of works of mysticism, and associating only with saints, such as Kāsim al-Khaṣāṣī, Muḥammad al-'Arabī Bardalla, and the aforementioned Ahmad b. Muḥammad b. 'Abd Allāh Ma'n. Previously at Fez, he had followed the courses of al-Yūsī and 'Abd al-Kādir al-Fāsi. He died at Fez, Monday 19 Djumādā I 1133/18 March 1721, and was buried outside the Bāb al-Futūḥ near the oratory of 'Adwat al-Andalus.

AL-KĀDIRI AL-HASANĪ, ABŪ 'ABD ALLĀH MUḤAMMAD AL-'ARABĪ B. AL-ṬAYYĪB, Moroccan scholar very learned in history and genealogy. He had eminent teachers in the various branches of knowledge, notably 'Abd al-Kādir al-Fāsi, his two sons Muḥammad and 'Abd al-Rahmān, al-Ḥasan al-Yūsī, and the *ḥādī* Muḥammad b. Ahmad al-Fāsi. He frequented well-known mystics, amongst others Kāsim al-Khaṣāṣī, Ahmad b. 'Abd Allāh Ma'n al-Andalusī, in whose company he made the pilgrimage, and Ahmad b. Muḥammad b. Idrīs al-Yamanī. All his works are devoted to mysticism: *al-Ṭurfa fi 'l-ḥitāṣār al-Tuḥfa* (which is a history of the *Djazūlī* and *Zarrūkī* movement from the beginning until his own time, and a résumé of the work of al-Mahdī al-Fāsi), a treatise on the descendants of *shaykh* 'Abd al-Kādir b. Mūsā al-Ḥasanī al-Djilānī, and another on the saints of Fez with the title *al-Ta'rif bi-ṣūlāḥā' Fās wa-akhbārihim*; he had given the draft of this, when he was about to travel to the east, into the keeping of Muḥammad b. 'Ayshūn al-Sharrāt, who appropriated it, passing it off as his own. Muḥammad al-'Arabī al-Kādirī also composed a *kunnāsh* which, his biographers say, contained most interesting information. He died at the end of *Dhu 'l-Hijjā* 1106/11 Aug. 1695, and was buried outside Bāb al-Futūḥ at Fez in the place called Maṭraḥ al-Djamra.

Basset, *Recherches*, 27, no. 69; Ibn Sūda, *Dalīl*, i, 51, 200, ii, 294, 314, 463.

(M. LAKHDAR)

AL-KĀDIRI AL-HASANĪ, ABŪ MUḤAMMAD 'ABD AL-SALĀM B. AL-ṬAYYĪB, celebrated Moroccan genealogist of the Chorfa. Born at Fez, 10 Ramaḍān 1058/28 Sept. 1648, he followed there the courses of eminent teachers, including 'Abd al-Kādir al-Fāsi and his two sons, Muḥammad and 'Abd al-Rahmān, al-Yūsī, al-'Arabī b. Ahmad al-Fiṣṭālī, and Ahmad b. al-'Arabī b. al-Hādīdī. He was accomplished in lexicography, rhetoric, logic, dialectic, and *ḥadīth* and its principles (*uṣūl*). But his speciality was genealogy in general and that of the Banū

Hāshim and of the 'Alawī branch in particular. 'Abd al-Salām al-Kādirī left an important body of work dealing with most aspects of learning. The following works may be cited, according to discipline: a) Literature: a *diwān* and a *fahrasa*—b) Mysticism: *Adū' al-ḥukūk fi ibdā' al-furūq*—c) Tradition: i) a rendering in verse of the *Mukhtaṣar fi 'l-Sira* of Ibn Fāris, ii) *al-Durra al-khatīra fi muḥimm al-Sira*—d) Biography and Hagiography: i) a notice of Ibn Abī Zar', ii) of Ahmad b. 'Abd Allāh Ma'n al-Andalusī: *al-Makṣad al-aḥmad*, iii) of Ahmad al-Shāwī: *Mu'ṭamad al-rāwī*, iv) of Abū Bakr al-Dilā'ī and his son Muḥammad: *Nuḥat al-fikr*, v) of Kāsim al-Khaṣāṣī: *al-Zahr al-bāsim* (or *al-'Urf al-nāsīm*)—e) Genealogy: i) *al-Durr al-sanī fi man bi-Fās min ahl al-nasab al-ḥasanī*, ii) *al-'Urf al-'āfir fi man bi-Fās min abnā'* *al-shaykh* 'Abd al-Kādir, iii) *al-Ishrāf 'alā nasab al-Akṭāb al-arba'a al-ashraf*, iv) *Tuḥfat al-nabīh bi-nasab Banī Ṭāhir wa-Banī 'l-Shabīh*, v) *'Ukūd al-la'āl wa-wasīlat al-su'āl bi-mā lahu s.l.m. min al-āl*, vi) *Maṭla' al-ishrāk fi 'l-shurafā'* *al-wāridīn min al-'Irāk*.

He died at Fez on Friday 13 Rabī' I 1110/19 Sept. 1698, and was buried outside the Bāb al-Futūḥ.

(M. LAKHDAR)

KĀDIRIYYA, Order (*ṭarīqa*) of dervishes called after 'Abd al-Kādir al-Djilānī [q.v.].

1.—Origin. 'Abd al-Kādir (d. 561/1166) was the principal of a school (*madrasa*) of Ḥanball law and a *ribāṭ* in Baghdād. His sermons (collected in *al-Faḥ al-Rabbānī*) were delivered sometimes in the one, sometimes in the other; both were notable institutions in the time of Ibn al-Aṭṭār, and Yāqūt (*Iṣṭiḥāṭ al-Arib*, v, 274) records a quest of books made to the former by a man who died in 572/1176-7. Both appear to have come to an end at the sack of Baghdād in 656/1258, till when it is probable that their headship remained in the family of 'Abd al-Kādir, which was numerous and distinguished. In the *Bahājat al-Asrār*, where an accurate account of his descendants is given (pp. 113-117), it is stated that 'Abd al-Kādir was succeeded in the *madrasa* by his son 'Abd al-Wahhāb (552/1151-593/1196), who was followed by his son 'Abd al-Salām (d. 611/1214). Another son, 'Abd al-Razzāk (528/603-1134/1206-7), was a notable ascetic. Several members of the family perished during the sack of Baghdād, when it would appear that both these institutions came to an end.

A *ribāṭ* was at this time distinguished from a *zāwiya*, the former being a *coenobium*, the latter a place where an ascetic lived in solitude (al-Subrawardī, *Awārif al-Ma'ārif*, margin of the *Iḥyā'*, Cairo 1306, i, 217). In the time of Ibn Baṭṭūṭa *zāwiya* had come to be used in the former sense also, and his description of the religious exercises practised at the *zāwiya* (i, 71) would probably suit what went on at 'Abd al-Kādir's *ribāṭ*. The body of rules and doctrines which had his authority was sufficient to constitute a system (*maḥḥab*; *Bahājat*, p. 101), and by accepting the *khirka* from the *shaykh* the *murīd*

signified that he subordinated his will to that of the former (al-Suhrawardī, i, 192). A long list is given in the *Bahdja* of men who attained various degrees of distinction who had received the *khirka* from 'Abd al-Kādir, two of them at the age of seven and one at the age of one. These persons were said to "ascribe themselves" (*intasaba* or *intamā* or even *tasammā*) to 'Abd al-Kādir, and could bestow the *khirka* on others as from him; in doing so they would stipulate that the *murid* was to regard 'Abd al-Kādir as his *shaykh* and director after the Prophet. In a tradition which is likely to be apocryphal (*Bahdja*, p. 101, dated 592/1196), 'Abd al-Kādir declared that assumption of his *khirka* was not absolutely necessary for entry into his Order; personal attachment to himself was sufficient. It would appear that during his lifetime several persons carried on propaganda in favour of his system; one 'Alī b. al-Ḥaddād obtained proselytes in Yemen, and one Muḥammad al-Baṭā'iḥī, resident in Baalbek, did likewise in Syria; one Taḳī al-Dīn Muḥammad al-Yūnīnī, also of Baalbek, was another propagandist, and one Muḥammad b. 'Abd al-Ṣamad in Egypt "ascribed himself to 'Abd al-Kādir and in treading the Path relied on him after God and His Apostle" (*Bahdja*, pp. 109, 110). Since all who ascribed themselves to him were promised Paradise, the Order is likely to have been popular; and even in recent times missionaries in Africa appear to have little difficulty in obtaining fresh adherents to it (cf. O. Lenz, *Timbuktu*, ii, 33).

That 'Abd al-Kādir's sons had some share in spreading it is likely, though Ibn Taymiyya (d.728/1328) mentions that he had associated with one of his descendants who was an ordinary Muslim and not a member of it, and so did not agree with those who held fanatical views about him (*Bughyat al-Murtād*, p. 124). The *Bahdja* however does not bear out Le Chatelier's assertion (*Confréries Musulmanes du Hedjaz*, p. 35) that in 'Abd al-Kādir's life-time some of his sons had been preaching his doctrine in Morocco, Egypt, Arabia, Turkestan and India. It says much of 'Abd al-Razzāk, but nothing of the "mosque now in ruins, whose seven gilded domes have often served as the subject of description by Arabic historians", which this son is supposed to have built. Indeed this mosque appears to be later than Ḥamd Allāh Mustawfī (740/1339-40), the first author later than the *Bahdja* who mentions 'Abd al-Kādir's tomb (*Nuzhat al-Kulūb*, tr. Le Strange, p. 42). Nor does it confirm the statement that this 'Abd al-Razzāk introduced the use of music in the ritual, and indeed the employment of this was earlier than 'Abd al-Kādir's time, and is discussed by al-Suhrawardī (ii, 116) without allusion to 'Abd al-Razzāk. E. Mercier (*Histoire de l'Afrique Septentrionale*, iii, 14) asserts that the Kādiriyya Order existed in Berbery in the 6th/12th century and was closely connected with the Fātimids (whose rule terminated 567/1171), but he gives no authority for these statements.

Al-Suhrawardī holds that the exercises of each *murid* should be determined by his *shaykh* in accordance with his individual needs, whence it is unlikely that 'Abd al-Kādir instituted any rigid system of *dhikr*, *wird* and *ḥizb*, and indeed those in use among different Kādiri communities differ (Rinn, *Marabouts et Khouan*, p. 183 ff.). The initiation ceremonies given on Turkish authority by J. P. Brown (*The Darvishes*, p. 98) are quite different from those furnished by Rinn on North African authority. In one of these latter there is a tendency to set 'All above Muḥammad and to insist on the importance of Ḥasan and Ḥusayn, which cannot well represent the views

of the Ḥanbalite 'Abd al-Kādir. The *wird* of 'Abd al-Kādir in *al-Fuyūḍāt al-Rabbāniyya* is given on the authority of one 'Abd Allāh b. Muḥammad al-'Adjamī, who lived 185 years (536-731) and may be regarded as mythical.

2.—Development. Kādirism seems from an early period to have developed on different lines according as 'Abd al-Kādir was regarded as the founder of a system involving rites and practices, or as a worker of miracles. In the latter direction it meant the deification of 'Abd al-Kādir, the extremists holding that he was Lord of Creation after God, absolutely, whereas the more moderate supposed that he was so only in his own age (*Bughyat al-Murtād*, *loc. cit.*). The latter was the view of Ibn 'Arabi, who takes him as an example of a *khalifa* who showed himself and practised sovereignty (*taṣarruf*; *al-Fulūḥāt al-Makkiyya*, ii, 407); such a *khalifa* in his system is independent of the revelation to Muḥammad (*Fuṣūṣ al-Ḥikam*, § 16). But there was also a theory that 'Abd al-Kādir practised in his grave all the activities (*taṣarruf*) of the living (Ibn al-Wardī, (d. 749), *Ta'rikh*, ii, 70); and Ibn Taymiyya (*al-Djawāb al-Saḥīḥ*, i, 323) mentions him among saints who in his time still appeared to people, being in reality impersonated by demons. In the initiation ceremonies recorded by J. P. Brown, *loc. cit.*, the candidate for admission to the Order sees 'Abd al-Kādir in dreams; in one case so often and so clearly that without having seen 'Abd al-Kādir's portrait he could recognize him among a thousand. The form of Kādirism which means the worship of 'Abd al-Kādir seems to prevail in North Africa, where it is called *Djilālism* (or *Djilānism*), and whole communities are called *Djilāla*. Their system has been described as the application of Sūfī mysticism to beliefs that are certainly pre-Islamic, and the materialization of that mysticism under the form of a cult of hidden subterranean powers (E. Michaux-Bellaire, in *Archives Marocaines*, xx, 235). Here the word *khalwa* is used for a heap of stones where women attach rags to reeds planted between the stones and where they burn benzoin and styrax in pots (herds (*ibid.*, xvii, 60). Such *khalwas* are to be found in all the Arab villages. Similarly "in the province of Oran on all the roads and on the summits of the chief mountains *kubbas* are to be found in the name of 'Abd al-Kādir Jilali" (E. de Neveu, *Ordres Religieux chez les Musulmans d'Algérie*, p. 30). The society of the Genawah or Negroes of Guinea has placed itself entirely under the protection of Mawlāy 'Abd al-Kādir with all his array of male and female demons; wherein Michaux-Bellaire found traces of the powers which, according to the Qur'ān (and even earlier authorities), belonged to Solomon. The cult of 'Abd al-Kādir is most ardently practised by the women in the *Khloṭ* and *Tilk*, who come to the *khalwa* for every sort of object, and to satisfy their loves and hates in all the acts of their existence. The men on the other hand chiefly go to the *khalwa* when they are ill (*Arch. Maroc.*, vi, 329).

That this development is inconsistent with Islamic orthodoxy is evident, and it is attacked by such authorities as Ibn Taymiyya and Ibrāhīm al-Shāṭibī (*I'tiṣām*, i, 348 ff.). The system to which the name Kādiriyya is more ordinarily applied differs from other orders mainly in ritual, although, through circumstances connected with its origin, "it has not that homogeneity of statutes which is to be found in other congregations, which seem to form small exclusive churches outside which there is no salvation" (Rinn, p. 186). Though the founder was a

Hanballi, membership is by no means confined to that school, and the Order is theoretically both tolerant and charitable.

3.—Geographical Distribution. Since historical and geographical works rarely distinguish between the different *ṭurūḥ* in their accounts of religious buildings, little can be said with certainty of the date at which the first Kādirī *zāwiya* or *khānkhāh* was established in any country save 'Irāk. The Order is said to have been introduced into Fez by the posterity of two of 'Abd al-Kādir's sons, Ibrāhīm (d. 592/1196 in Wāsīt) and 'Abd al-'Azīz (who died in *Dijāl*, a village of *Sindjar*); they had migrated to Spain and shortly before the fall of Granada (897/1492) their descendants fled to Morocco. The full genealogy of the *Shurafā'* *Dijlāla* of Fez is given in *Arch. Maroc.*, iii, 106-114, on the authority of *al-Durr al-Sanī* of al-Kādirī al-Ḥasani (1090/1679), who claims to have used a series of authentic documents. The *khālwa* of 'Abd al-Kādir in Fez is mentioned as early as 1104/1692-3 (*ibid.*, xi, 319). The order was introduced into Asia Minor and Istanbul by *Ismā'il Rūmī*, founder of the *khānkhāh* known as the Kādirī*khānah* at the *Topkhāne*. This personage (d. 1041/1631), who is called *Pir thānī*, "Second *Shaykh*", is said to have founded some 40 *tekiyes* in these regions (*Kāmūs al-'Alām*). A Kādirī *ribāḥ* in Mecca is mentioned by *Shāliḥ b. Maḥdī* in *al-'Alam al-Shāmīkh*, p. 381, about 1180/1767, but the assertion that a branch was established there during the lifetime of 'Abd al-Kādir (Le Chatelier, *op. cit.*, p. 44) is not improbable, since Mecca has a natural attraction for the *Ṣūfis*. In the *Ā'in-i-Akhbarī* (about 1600; tr. Jarrett, iii, 357) the Kādirīyya Order is mentioned as one that is highly respected but is not included among those recognized in India; nor does there appear to be any allusion to it in the list of Indian *Ṣūfis* in the *Ma'āthir-i Kīrām* (1752), though some other Orders are noticed, and 'Abd al-Kādir himself is mentioned. Yet see *Khāfi Khān, Muntakhab al-Lubāb*, ii, 604 and art, HIND, p. 432.

Some statistics (to be received with caution) of the Kādirīs and their *zāwiyas* are given by Depont et Coppolani (*Confréries Religieuses Musulmanes*, pp. 301-18). Much of its development is admittedly recent, and may be due to the fame won by the name-sake of 'Abd al-Kādir [q.v.] who for so many years resisted the French occupation of North Africa. It is doubtless represented in all Islamic countries, though it would appear that certain derived *ṭurūḥ* enjoy greater popularity in many places. Thus the Kādirism of Touba in Guinea, which has become a distinct sign whereby the Diakanke tribe can be recognized, is derived through the Sidia from the Kādirism of the Kounta of Timbuctu (P. Marty in *Revue du Monde Musulman*, xxxvi, 183). These Kounta however form a *filiale* of the Kādirīyya, and some of them prefer to call themselves *Shādhiliyya* (*ibid.*, xxxi, 414).

4.—Organization. The Kādirī community acknowledges nominal allegiance to the keeper of 'Abd al-Kādir's tomb in Baghdād, and the deeds of investiture published by Rinn, p. 179, and in the *Revue du Monde Musulman*, ii, 513 and ix, 290, are from this source. It would seem however that the actual authority of this personage is chiefly recognized in 'Irāk and Pakistan. The latter periodically send gifts which form the main source of the revenues of his establishment; the members of this family find it worth while to learn Urdu. The Meccan *zāwiyas* were subject to the *Shaykh al-Turuk*, who had the right to nominate their *muḥaddam*. The Egyptian branch was under the control of the Sayyid al-Bakrī, who was

also *Shaykh al-Turuk*; 'Ali Paṣha Mubārak (iii, 129; see also P. Kahle in *Der Islam*, vi, 154) reckons the order as one of the four which go back to a *ḥuṣb*, but asserts that it has neither *furū'* nor *buyūt*. In Africa, according to Rinn, each *muḥaddam* names his successor; in the event of one dying without having nominated anyone, an election is made by the *ikhwān* at a *ḥaḍra*. The approval of the head of the Order in Baghdād is then solicited, and has never been refused. The organization of the Order in North Africa is described somewhat fully by Rinn, Depont and Coppolani, in the works cited. The system appears to be in general congregational, *i.e.*, the *zāwiyas* are independent, and the relation between them and the central institution in Baghdād is very loose. The principle whereby the headship of a *zāwiya* is hereditary is generally recognized.

5.—Symbols and rites. The sign of the Turkish Kādirīs was said to be a rose which is green, having been adopted by *Ismā'il Rūmī*. The candidate for admission to the Order after a year brought an *'arāḥiyya* or small felt cap, to which if the candidate be accepted the *Shaykh* attached a rose of 18 sections, with Solomon's Seal in the centre. This cap is called by them *tāḍī*. The symbolism of this is explained by J. P. Brown, *The Dervishes*, p. 98 ff. (copied by Wilberforce Clarke, tr. of *'Awārif al-Ma'ārif*, p. 159; the Urdu translation *Kashf Asrār al-Mashāyikh* adds nothing to Brown's information). According to him, they preferred the colour green, though they allowed others; in Lane's time the turbans and banners of the Kādirīs in Egypt were white; most members of the Order were fishermen, and in religious processions they carried upon poles nets of various colours (*Modern Egyptians*, 1871, i, 306). There are festivities in honour of 'Abd al-Kādir on 11 Rabi' II, and pilgrimages are made in many places in Algeria and Morocco to the *zāwiyas* and shrines of the saint (Rinn, p. 177). The *Mausim* of the *Dijlāla* at Salé is described at length by L. Mercier in *Arch. Maroc.*, viii, 137-9; it commences the seventh day of the *Mūlud* (*Mawlid*), *i.e.*, the Feast of the Prophet's Birthday, and lasts four days 17-20 Rabi' I. Sheep and oxen are presented to the descendants of 'Abd al-Kādir. Michaux-Bellaire distinguishes in Morocco between the ceremonies of the Kādirīyya, who recite the *ḥizb*, and the *Dijlāla*, who recite the *dhikr* to the accompaniment of instruments; and again between the *Dijlāla* of the country, whose instruments are the *bender* (a sort of big tambourine without bells) and *'awāda*, and those of the town, whose instruments are the *ṣebila*, *ṣabal* and *ghayṭa* (*Arch. Maroc.*, vi, 330 and xvii, 60). A description of the *ḥaḍrat al-mallūk*, a performance executed with these last instruments, which leads to ecstasy, is given by him in the first passage cited. He further records some special ceremonies connected with the *Awlād Khālifa* in the *Gharb* (*ibid.*, xx, 287). All the *Hilālī* of the *Gharb* are *Dijlāla*, and in all the *ḥaḍras* (services) of the *Dijlāla* the presence of at least one *Khalif* is necessary for the direction of ceremonies, and when no actual *Khalif* is present, someone there takes the name in order to perform the priestly duty. The origin of the name *Awlād Khālifa* is obscure (p. 284); it may be noticed that the *Bahdja* mentions one *Khālifa* b. *Mūsā* al-Nahrmaḥliki as having played a leading part in the propagation of 'Abd al-Kādir's system. "The *ḥaḍra* of the *Dijlāla* of the country contains neither the *ḥizb* nor the *dhikr* instituted by the *Shaykh*, but a plain *dhikr* of improvised words in the ceremonial rhythm of the *banādir* (plur. of *bender*). These improvisations always terminate with the

words 'Thus spoke Mawlāy 'Abd al-Kādir' or 'O Mawlāy 'Abd al-Kādir.'" (Michaux-Bellaire, p. 288).

Various collections of rituals supposed to have been recommended by 'Abd al-Kādir have been published in Egypt, Turkey and India. In *al-Fuyādāt al-Rabbāniyya* he who is about to enter upon *ḫhalwa* (retreat) is advised to fast in the day and keep vigil at night. The *ḫhalwa* lasts forty days. "If a figure reveals itself to him saying 'I am God', he should say 'Nay rather thou art in God', and if it be for probation, it will vanish; but if it remain, then it will be a genuine revelation (*taǧalli*)" (Dihli 1330, p. 60). Reduction of food during the 40 days should be gradual till for the last three fasting is complete. At the end he returns by degrees to his former diet.

Some practices peculiar to the *Djilāla* of Tangier are recorded by G. Salmon (*Arch. Maroc.*, ii, 108). Those who make vows to 'Abd al-Kādir are in the habit of depositing in the *sāwiya* white cocks, which are called *muḥarrar* (Sūra III, 31); they do not kill them, but leave them free to rove about the *sāwiya*, where however they do not long survive; the *sharīf* who lives hard by takes them for his food. The four daughters of a deceased *sharīf* continued to live on the revenues of the *sāwiya* and carry away the *muḥarrar* fowls. The *muḥaddam* at this *sāwiya* was the *sharīf*, who conducted the ceremonies at which the *Ḳur'ān* is repeated without the *ḫizb* of 'Abd al-Kādir being pronounced, and where dances similar to those of the 'Isāwā [*q.v.*] are performed. Circumcisions are performed at the *sāwiya* on the first day of the *mawlid*. A nightly meeting called *layla* is held on the eve of this day, at which the *ḫizb* of 'Abd al-Kādir is recited. At El-Qsar, where there are also some local practices, all the potters belong to the *Djilāla*, among whom the richer members of the community are to be found (*ibid.*, ii, 163).

The first time that the *Ḳādirīs* appear to have played a political part was during the French conquest of Algeria, when the chief of the *Ḳādiriyya*, Muḫyi 'l-Dīn, having been offered the leadership in the war against the infidel, permitted his son 'Abd al-Kādir to accept it. This person was able to utilize the religious organization of his Order in order to establish the sovereignty which the French had accorded him, and when his sovereignty was threatened could fall back on his rank as *muḥaddam* of his Order to win fresh recruits (H. Garrot, *Histoire générale de l'Algérie*, Algiers 1910, p. 800, 863 ff.). After his fall and exile it seems that the *Ḳādirīs* in Africa lent their support to the French government. "In 1879 when there was a local insurrection in Aurès the *shaykh* of the *Ḳādiriyya* of Menā'a, Si Muḥammad b. 'Abbās, displayed unimpeachable loyalty [see *awrās*]; and the same Order helped the French government to extend their influence in the Sahara at Wargla and El-Wad. Their *nā'ib*, Si Muḥammad b. Ṭayyib, fell on the French side at the battle of Charouin, March 2, 1901." (Israel Hamet, *Les Musulmans Français du Nord de l'Afrique*, Paris 1906, p. 276).

**KĀDIS** (Spanish: Cádiz; English: Cadiz; French: Cadix), the capital (pop. 117, 871) of the province of the same name, the most south-

erly in Spain; it prides itself on being the oldest town in the West, since it is said to have been founded by the Phoenicians in about 1500 B.C.; in Phoenician, it is named Gad(d)ir (cf. *AGADIR*), from which the Greeks derived the name Γάδιρα, the Romans Gadir and Gades, and the Arabs *Ḳādis*. Under the domination first of the Greeks and later the Carthaginians (after 500 B.C.), it became the most important place in the south of the peninsula. The Romans succeeded in capturing it from the Carthaginians (206 B.C.), and Julius Caesar named it *Augusta Urbs Julia Gaditana*. Then followed a period of obscurity during which the legends of the Greek and Roman historians regarding the temple of Hercules, later adopted by the Muslims, first took shape.

Neither under the Muslims, who captured it in 93/711, nor under the Visigoths did the town experience any great prosperity. It was occupied by the Normans, for the first time in 229/844 and then attacked once again in 245/859, but it played only a very minor role, and finally fell into the hands of Alfonso the Wise on 8 Dhu 'l-Ḳa'da 660/24 September 1262.

The occasional references to *Ḳādis* by Arab historians and geographers were above all due to the famous pillars of Hercules (*aṣnām Hirḳil*), the most celebrated of these being the *ṣanam Hirḳil* or *manārat Hirḳil*.

Thanks to the geographer of Almeria who is known by the name al-Zuhri, we have some idea of the appearance of the tower at Cadiz, since we possess the eye-witness account of a writer who saw it on several occasions before its demolition in 540/1145 and who states that the building in question was not the temple of Hercules with which it has often been confused, notably by the author of the *Rawḍ al-mi'fār*. This square *manāra*, 100 cubits and three storeys high, was constructed of dressed granite (*kaḥḥān*); the second storey was about one-third the size of the first, and the third, triangular in shape, was surmounted by a statue of a man looking towards the East, from the ocean, with his left arm outstretched and his fingers curled, except for the index finger, which pointed the way to the straits of Gibraltar. His right hand held a baton which seemed to indicate the sea (the author states explicitly that it was not a key).

The date of construction of the Cadiz tower is unknown, but we must assume that it goes back to a period before the official introduction of Christianity to Spain, since the account refers solely to a statue, a purely Roman sign.

A member of the celebrated family of the Banū Maymūn of Denia became amir of Cadiz at the end of the Almoravid period. Having been led to believe that the *manāra*, erroneously called the Tower of Hercules, had been constructed on top of a vast treasure, 'Alī b. 'Isā b. Maymūn summoned a force of stone-masons and labourers who set to work removing the outer stonework; each time a block of stone was removed, a wooden beam was inserted into the empty space, with the result that in the end the vast mass of the tower rested only on wood. Then, after the spaces had been filled with wood, this support caught fire and the tower collapsed with a stupendous crash; all that could be found in the rubble were the lead that had served to bind the blocks of stone together and the brass from which the statue had been made. Ibn Maymūn's vain pretensions were thus exposed, and shortly afterwards he was assassinated by Yaḫyā, the grandson of the founder of the Almoravid dynasty.

*Bibliography*: Zuhri's text on the tower at

Cadiz has been published by Dozy in his *Recherches*<sup>3</sup>, appendix xxxv; it will be found in §§ 239-40 of the *K. al-Djā'rafiyya*, published by M. Hadj-Sadok in *BEO*, xxi (1968), 7-312; cf. *al-Rawḍ al-mi'fār*, ed. Lévi-Provençal, 145 in the text, 173-8 in the tr.—The Arabic and mediaeval sources on legends relating to the temple of Cadiz and the pillars of Hercules have been collected by Dozy, *Recherches*<sup>3</sup>, ii, 311-4; see also R. Basset, *Hercule et Mahomet*, in *Journal des Savants*, 1903; Madoz, *Diccionario*, v, 193-204.

(A. HUICI MIRANDA)

AL-KĀDISIYYA, the name of several places in 'Irāk and al-Djazīra. The *Muḥṭarīk* of Yāqūt (337) lists five places of that name of which the two most important were situated near Sāmarrā and al-Kūfa. The history of these places is most difficult to trace.

1. A town in 'Irāk, on the Eastern bank of the Tigris, 8 miles S.E. of Sāmarrā. It seems to have been closely connected with the latter in its period of prosperity. We do not know what special part al-Kādisiyya played at that time. Herzfeld, (*Reise*, i, 107) suggests it is really identical with the town of al-Kātūl which Hārūn al-Raḥīd or the Caliph al-Mu'taṣim began to build before the foundation of Sāmarrā. Yāqūt and other Arab geographers mention the glassworks of al-Kādisiyya, and it is reported to have been a large village (*ḥarya kabira*) but little is known of its history. It is probable that it ceased to be of any importance shortly after the abandonment of Sāmarrā towards the end of the ninth century, for the 4th/10th century geographers al-Iṣṭakhrī and Ibn Ḥawqāl make no mention of it. It is found in al-Muḥṭarīk, but the reference seems to indicate the existence of a single structure, presumably the octagonal building which still survives today. In the middle ages the important Duḡjayl Canal left the Tigris opposite the town. The ruins of al-Kādisiyya lie in Lat. 34°5' N., between the two canals still existing out of the former three Tigris canals, called al-Kātūl. They are a short quarter of an hour distant from the bank of the Tigris. The old name has survived and is now popularly pronounced Dīādisiyya (occasionally corrupted to Dīāsiyya and Dīāliyya). We owe full accounts of these ruins particularly to Ross and Jones; E. Herzfeld also investigated the ruins. Jones gives a plan of the ruins of the town, which Herzfeld says is entirely correct.

The enclosing walls, which measure about 6000 paces, form a regular octagon. They are flanked by towers at the corners and defended by 16 bastions at intervals. They were built of bricks which in technique, plan and preservation resemble the castra of Sāmarrā. According to all criteria, these ruins belong—in Herzfeld's opinion—to the 'Abbāsīd period, not to an older one. Ten minutes from al-Kādisiyya, just on the river bank, are also mounds of ruins, called al-Ṣanam. They mark the site of a medieval or ancient town, half of which has already been eroded by the Tigris. On a remarkable find of statues made here, see Cl. Rich, *Narrative of a Residence in Koorḍistan*, 1836, ii, 152. Al-Ṣanam perhaps was within the area of al-Kādisiyya and is to be regarded as its port.

(M. STRECK-[J. LASSNER])

2. A place lying to the south-west of al-Hīra [*q.v.*] and to the south-south-west of the plain where al-Kūfa was later founded. This al-Kādisiyya is famed as the site of the resounding victory of the Muslims over the army of the Sāsānian king Yazdādīrd III [*q.v.*] at a date between 14/635 and 16/637. This victory was of no small importance to the Muslims for it opened up the route to Ctesiphon-Seleucia (= al Madā'in [*q.v.*]), the winter capital of the Sāsānids, put them in the position of carrying off another great success at Djalūlā' [*q.v.*] and finally, after the whole of 'Irāk had fallen to them, enabled them to cross the Zagros and undertake the conquest of the Iranian plateau. Al-Kādisiyya was situated in the western part of the Taḡf, that steppe region rising above the cultivated land (*al-Sawād*) and characterized by springs (e.g. that of al-'Udhayb) which is the transitional area to the high plateau of the Arabian desert. In the Sāsānian period the Taḡf was protected by a series of watch-houses (*maslaḥas*) and a great fortified ditch (*ḥhandak*) from the raids of Arab tribes. The last village of the Taḡf, just before the desert, was al-'Udhayb, later a station on the Baghdād-Mecca road.

The exact location of al-Kādisiyya was unknown until quite recently. An attempt had been made to identify it with the early Islamic ruins of al-Uḥaydir (25 miles S.S.W. of Kūfa)—for example by Ritter, *Erkundung*, xi, 956, Loftus, *Travels in Chaldaea and Susiana*, London 1857, 64 note, and Justi in the *Gr. I. Ph.*, ii, 546. This identification, however, is definitely to be rejected as erroneous (cf. the article of W. Caskel, *Uḥaydir*, in *Isl.*, xxxix (1964), 28-37, which calls for an 'Abbāsīd date for these ruins). Besides, Ritter, *op. cit.*, x, 186 places al-Kādisiyya much too far north, while the locations of al-Kādisiyya and al-'Udhayb given by Wagner (*Nachr. d. Gött. Gesellsch. d. Wiss.*, 1902, 257-9) are fairly correct. A. Musil, on his journey of exploration in 1912, was the first to discover the real site of al-Kādisiyya, cf. his report in the *Anzeiger der phil.-hist. Kl. der Wien. Akad. der Wiss.*, 1913, i, 11 (12 of the reprint). Musil there remarks that the spring al-'Udhayb rises in the valley of Mshayzīl; on the left bank of that valley, on the edge of a swampy *hōr* he was shown the ruins of al-Žādsiyye or Dār al-Kāzī (= Kādisiyya). According to the map which Musil appends to his essay in the *WZKM*, xxix (1916), 461, the ruins mentioned are situated in 31°45' N. Lat. and 44°8' E. Long. directly south of Naḡjaf and 19 miles from Kūfa.

The locality of Kāides, which in his excursion to the ruins of Babylon in 1790 Beauchamp visited and reported as the find-spot of a statue some considerable distance away (see the reprint of his account of his journey in the *Revue d'Assyriologie*, x, 190), is perhaps also identical with the remains of al-Kādisiyya discovered by Musil. Kāides probably = Kādis, the shorter form of the name, which is occasionally found alongside Kādisiyya, as for example in an old Arab poet (see al-Bakrī, ed. Wüstenfeld, 226), in al-Ṭabarī, etc. Firdawsī writes Kādisī and Kādisiyya. In the neighbourhood of al-Kādisiyya there was a village called al-Kūdays, "little Kādis". The poets give the whole district round al-Kādisiyya the collective name al-Kawādis.

The Arab geographers of the 4th/10th century (al-Iṣṭakhrī, Ibn Ḥawqāl, al-Muḥṭarīk) describe al-Kādisiyya as a small town with two gates and a mud

fortress, in the midst of cultivated fields and groves of date-palms, watered by a canal led from the Euphrates, the last running water in 'Irāk. In ancient times the Persian Gulf seems to have stretched up to the region of al-Kādisiyya. The main arm of the Euphrates once flowed, as al-Mas'ūdī notes (*Murūdj*, ed. Paris, I, 215 = § 229), towards al-Hira, where its ancient bed was still visible and was called al-'Atīk "the old (river)". It flowed between al-Kādisiyya and al-'Udhayb; at al-Kādisiyya there was a bridge across it called *Djīsr* al-'Atīk or *Djīsr* al-Kādisiyya.

The battle. To this one single battle of al-Kādisiyya al-Ṭabarī has devoted around one hundred pages and nearly another hundred pages to the preceding and subsequent events which must be taken into account for an understanding of this vitally important occurrence. The greater part of his account, however, is based on traditions of Sayf b. 'Umar, whom some Islamists have accused of falsification. This is not the place for a detailed discussion of such accusations: it is sufficient to observe that Sayf's account also forms the basis of the story related by the majority of Arab and Persian historians to such an extent that we have no alternative but to make use of this traditionist for any account of the battle, correcting him where possible with the help of other accounts.

After the disastrous defeat of the Muslims at the Bridge [see *Djīsr*] (*Shā'bān* or *Ramaḍān* 13/October or November 634) the campaign in 'Irāk suffered a setback, despite the arrival of reinforcements from Medina, the victory of al-Buwayb (*Ramaḍān* 13/Nov. 634 or *Ṣafar* 14/April 635, or one year after the Battle of the Bridge) and several fruitful raids and *razzias*. Al-Muḥannā [*q.v.*], fearing that the hostilities would take a dangerous turn since Yazdadjird III was preparing to react vigorously, believed it prudent to withdraw to the outskirts of the desert, to disperse his warriors to various spots where there were watering places and to limit his actions to *razzias*. So as to be able to seize the offensive once more, he appealed to Medina for help. Making a general levy among the Bedouins (*Dhu* 'l-*Ḥijjā* 13/Feb. 635 or *Dhu* 'l-*Ḥijjā* 14/Jan.-Feb. 636), the caliph 'Umar assembled and equipped at *Ṣirār*, near Medina (*Muḥarram* 14/March 635 or *Muḥarram* 15/Feb.-March 636?), an army under the command of Sa'd b. Abī Waḳḳāṣ [*q.v.*], ordering him to leave for 'Irāk.

En route Sa'd was joined by other contingents sent by 'Umar, then halted at the beginning of winter (*Shā'bān* 14/635 or 15/636?) in the *Naḍīd* at *Zarūd* (or al-*Ṭha*'*labiyya*, near *Zarūd*) to call to arms the tribes of the surrounding area. He then made his way to *Sharāf*, which was at the western end of the Arab plateau near al-*Aḥsā'* and was well supplied with waterholes. While waiting in a well-organized camp for the arrival of several thousands of other Bedouins (who also included some Christian bands), he divided his men into decuries, established a hierarchy of command and sent al-Muḥīra b. *Shu*'*ba* [*q.v.*] to occupy various localities in order to secure his forces against a possible attack. It was at *Sharāf* that Sa'd was to meet up with al-Muḥannā, but the latter died during the winter of the wounds he had sustained at the Bridge. At last Sa'd advanced as far as 'Udhayb al-*Ḥijjānāt*, leaving there the women who had followed the expedition and going on to strike camp in the plain of al-Kādisiyya. While awaiting the enemy—for a month it is said—he carried out *razzias* to secure his supplies.

Meanwhile, Yazdadjird had assembled a large army and compelled his marshal, Rustam [*q.v.*], to advance, taking no heed of the latter's reluctance to face the Arabs on ground he considered unfavourable. At last the Persians pitched camp, separated from the Muslims by the channel called al-'Atīk. Hostilities did not open immediately; on the contrary, they entered into negotiations, which proved fruitless. During the month of *Muḥarram* Rustam built a kind of dyke with reeds, earth, straw and pack-saddles. In this way he enabled his army to cross the channel and the following day battle commenced; this occurred on a Monday in *Muḥarram* 15/636 or 16/637; the date given by Sayf, 14/635 (al-Ṭabarī, I, 2289 and 2298) is undoubtedly an error. The Persians had behind them the channel and the Muslims the moat of a fortress named al-*Kudays*. Sa'd, who suffered from abscesses (*hubūn*) on the thighs and hips and could neither mount a horse nor remain upright, remained lying down and relayed his orders from the top of the fortress to his lieutenant, *Khālid* b. 'Urṭufa, by means of notes. According to Sayf the battle lasted three days and one night; as the latter was drawing to a close the Persian retreat began and by the fourth day they were completely and irreparably routed. Rustam fell in the *melé*, killed by an unknown Arab warrior. Each day of the combat and the night of the third to fourth day have been given special names: 1) *Yaum Armāth* = Day of the Rafts (perhaps a reference to the dyke on the channel?); 2) *Yaum Aghwāth* = Day of Help (an allusion to the arrival of reinforcements from Syria?); 3) *Yaum 'Amās* = Day of the Hard War and *Laylat al-Harir* = Night of the Cries of Sorrow (maybe a reference to the relentless savagery of the fray); 4) the last part of this night: *Laylat al-Kādisiyya* = the Night of al-Kādisiyya and the fourth day: *Yaum al-Kādisiyya* = the Day of the Battle of al-Kādisiyya (perhaps so called because the decisive hours of this night and the next day truly merited the name?).

Caetani, in his *Annali*, gives a detailed summary of al-Ṭabarī's traditions. Noteworthy among the interesting details are: the Muslims were very badly equipped; the Persians made use of a number of elephants but their adversaries discovered a method of extricating themselves from this difficulty; some Syrian reinforcements arrived on the second and third day; the poet Abū Mihdjan [*q.v.*], who had been put in irons, succeeded in playing a valiant part in the fray; *Ṭulayḥa* b. *Khūwaylid* [*q.v.*], the "false prophet" who had been defeated by *Khālid* b. al-Walīd [*q.v.*] during the *riḍā* and later joined the Muslim ranks, proved himself to be a brave defender of Islam; for the first two days fighting took place during the day only—the night was employed in burying the corpses, giving water to the dying and carrying away the wounded Muslims, enemy wounded being despatched with blows of a staff; 30,000 (?) Persians, who had chained themselves to one another so that they could resist to the bitter end, fled when defeat was inevitable but were drowned in the channel, which the pursuing Muslims were able to cross using their bodies as a bridge; the Muslims seized the great Persian royal banner known as *Dirafsh-i Kāvīyān*.

Subsequent events. Sa'd sent a section of his forces in pursuit of the fugitives and remained at al-Kādisiyya for a month longer. One of the Persian commanding officers, *Djāllnūs*, was killed while trying to protect his retreating forces; other attempts to reassemble the fleeing troops, in the district of

Bābil for example, and to resist the Muslim advance became no more than a few battles which in no way altered the situation. Finally Sa'd marched on al-Madā'in and, after having besieged and conquered Bahudasir, one of the seven or ten towns which made up the al-Madā'in ("the towns") group, was even able to ford the Tigris; this remarkable occurrence was regarded as the result of divine favour. After reaching the east bank of the river the Muslims occupied the other towns of al-Madā'in, which had been abandoned without a struggle by Yazdajird (Dhu 'l-Hijja 15 or 16?). Another battle of some importance took place on 'Irāqī soil, at Djalūlā' (on Šafar 16 or 17?; other dates are also mentioned in the sources), marking the definitive overthrow of Sasanid dominion in 'Irāq by the Muslims.

Problems associated with the battle. There are two such problems which, in all probability, must remain insoluble: 1) The total strength of the forces which met at al-Kādisiyya, for there is too great a difference between the figures given in the sources and every attempt to arrive at an evaluation comes up against the impossibility of finding any solid foundation to build on; 2) the chronology of the events preceding the battle and following it and thus of the battle itself—dates given in the sources for the battle vary between the years 14 and 16, but the earlier date must be rejected since there is too much circumstantial evidence against it. Islamists working on the chronological problem, such as Wellhausen, Caetani and S. M. Yusuf, have looked for an answer by reasoning from the facts, and since it has proved impossible to reconcile the data given in the sources have chosen those which shored up their own beliefs. They consider it impossible that the Muslims could have recovered their strength almost immediately after the defeat at the Bridge and have dated the battle of al-Buwayb in 14 (according to Caetani no earlier than Ramaḍān), which obliges them to date the battle of al-Kādisiyya at the beginning of 16 (Wellhausen adds further considerations of the supervening events of the period which occurred between this battle and the battle of Djalūlā'). In addition, Caetani and S. M. Yusuf consider the relationship between the campaign in Syria and that in 'Irāq and decide that the caliph 'Umar could not have concerned himself with the second until after the end of the first, that is after the battle of Yarmūk: as this celebrated victory of the Muslims over the Byzantines took place on 12 Raġjab 15/20 August 636, the battle of al-Kādisiyya could not have been fought before the early months of the year 16. S. M. Yusuf places it a little after Raġjab 15, i.e. a month after Yarmūk.

After a fresh examination of the facts as they developed and as they are set down in chronological accounts in the sources, the author of the present article has concluded that Muḥarram 15/February-March 636 is the date to be preferred for the battle of al-Kādisiyya. The Muslim success at al-Buwayb soon after their defeat at the Bridge is not to be considered impossible for the following reasons: 1) the troubles which broke out at al-Madā'in stopped the Persians from capitalizing on their victory at the Bridge; 2) Muslim reinforcements from Medina arrived immediately. Nor is it necessary to suppose that 'Umar could not have been concerned with the 'Irāqī campaign until after the battle of Yarmūk, for such a view makes it extremely difficult to determine the date when the caliph resolved to send a fighting army into 'Irāq; in fact, 1) if 'Umar did not

take his decision until after Yarmūk, there is not a sufficient interval of time between the great battles of Yarmūk and al-Kādisiyya for Sa'd's march, with the halts he made and his waiting period for the enemy (which the sources describe with too great detail for them to be ignored); it was perhaps this difficulty which led Caetani to propose that the battle did not take place in Muḥarram 16 but some months later; 2) if, to allow the necessary time for Sa'd's march and his waiting for the enemy, the caliph were presumed to have taken his decision in 15 during the month preceding the battle of Yarmūk, then 'Umar would have directed his forces towards 'Irāq precisely at the moment when he must have been greatly preoccupied by the news of the Byzantine emperor's preparations for the offensive. On the contrary, if we concede that Sayf has given an exact account of the assemblage of the army at Širār during Muḥarram 14 and of Sa'd's long march, then it follows that 'Umar decided at the end of the year 13 to renew with vigour the campaign in 'Irāq, that is during the period when his victories in Syria were following one after the other. These considerations, which are also supported by other circumstances—which the author of this article intends to set forth in another work—lead us to decide on the date of Muḥarram 15/February-March 636 for the battle of al-Kādisiyya.

(L. VECCIA VAGLERII)

iii. In addition to the two towns mentioned above, Yāqūt knows three other places called al-Kādisiyya, namely two villages in the district of al-Mawṣil in the Nahr al-Khāzīr between al-Mawṣil and Irbid, and a third near Dījazirat b. 'Umar; see Yāqūt, *al-Muṣṭarīk* ed. Wüstenfeld, 337. Ibn al-Aṭhīr also mentions an al-Kādisiyya near Baḡhdād (xii, 91). For the possible relationship of these places and others similarly named to a people (Kādishaeans) that may have settled them, see Nöldeke, *ZDMG*, xxxiii, 157 f., 162; J. Marquart, *Ērānshahr nach der Geographie des Pseudo-Moses Xorēnaç'i (Abhandlungen der Gött. Ges. der Wiss., 1901)*, 77, 78. (M. STRECK-[J. LASSNER])

**KĀDJĀR**, Turcoman tribe, from which sprang a ruling dynasty of Persia (see next article). There is no foundation for the statements of later historians that the Kādjār tribe entered Iran with Hülāgū [q.v.]. In the 9th/15th century they formed part of the Boz Ok branch of the Turcomans of Anatolia, dwelling in the Kayseri-Sivas region and recognizing the suzerainty of the Dhu'l-Qadr rulers. They probably take their name from a leader named Karāçar (= Karçar). In the 9th/15th century they were divided into four sub-tribes (*oba*): Aghça Koyunlu, Aghçalu, Shām Bayātī, Yīva. The first two of these were branches of the great tribes belonging to the *ulus* of the Dulqadrīl. The third was a branch of the Bayāts of northern Syria (it is very probable that the Dulqadrīl dynasty sprang from the Bayāts); Shām Bayātī owes its name to the fact that it wintered in Syria, but we do not know to which of these subtribes the Kādjār dynasty belonged. After the Kādjārs had entered Iran and settled in northern Ādharbāyḡdjān (Arrān) they were joined by an important clan called Igirmi (= Yirmi) Dört.

The defeat of the Kara Koyunlu by the Aq-Koyunlu, who thenceforth ruled much of Iran, prompted important branches of the Turcoman tribes of Anatolia to move into Persia: thus towards the end of the 9th/15th century the Kādjār settled in the Karabāgh (Gandjā) district of northern Ādharbāyḡdjān. In 897/1491-2 a member of the ruling house of the Aq Koyunlu, named Dana Khallī-oghlu Ibrāhīm Beg and known as Ayba (or İba) Sultān, with the support of the Kādjār raised to the throne Uzun Ḥasan's grandson Rustam Beg. When Rustam Beg was defeated by Ahmad b. Ughurlu Muḥammad b. Uzun Ḥasan Beg he took refuge with the Kādjār in 1497. Although the Kādjār supported Rustam, the latter was defeated again and killed. Soon afterwards a part of the Kādjār rallied to Shāh Ismā'īl and, like so many other Anatolian Turcoman tribes, contributed to the establishment of the Ṣafawid

dynasty. For the next two centuries, however, they were not held in such esteem by the shahs as were, e.g., the Ustadjālu (Ustadjlu), Tekelū, Shāmlu and Dhulqadr (Dulqadr). At this period the Kādjār were again dwelling in north Ādharbāyḡdjān. At the end of the 10th/16th century Imām Kull Khān, who was *beglerbegi* of Karabāgh, was a member of the Yīva *oba* of the Kādjār. But during Ṣafawid times the Kādjār were administered mostly by the Ziyād Oghlu family from which sprang the future ruling Kādjār dynasty. At the time of Shāh 'Abbās some of the Kādjār were transferred to the district of Astarābād, to be a barrier against the raids of the Yaqa Turcomans.

In the 12th/18th century, whereas some tribes—Shāmlu, Dulqadr, etc.—broke up and lost their power, the Avshar (Afshar) and Kādjār remained numerous and strong. Hence under Nādir Shāh the Afshar were able to put an end to the Ṣafawid dynasty and seize power, and at the end of the century the Kādjār could succeed the Zand. In the 18th century the Astarābād Kādjār were divided into two branches: the Ashāka Bāsh and the Yūkhārī Bāsh. The Ashāka Bāsh were formed by the Koyunlū (or Kowānlū), 'Izz al-dīnlū, Shām Bayātī, Karā Mūsānlū (Mūsālū?), Wāshlū (Ashlū?) and Ziyādllū subtribes. The Kādjār dynasty belonged to the Koyunlū (or Kowānlū) subtribe of the Ashāka Bāsh. As for the Yūkhārī Bāsh, they were formed by the other six subtribes, i.e., Dawālū, Sāpānlū, Köhnālū, Khazīnadarlū, Kayāklū, and Kerlū(?). The chief subtribe of this branch was the Dawālū.

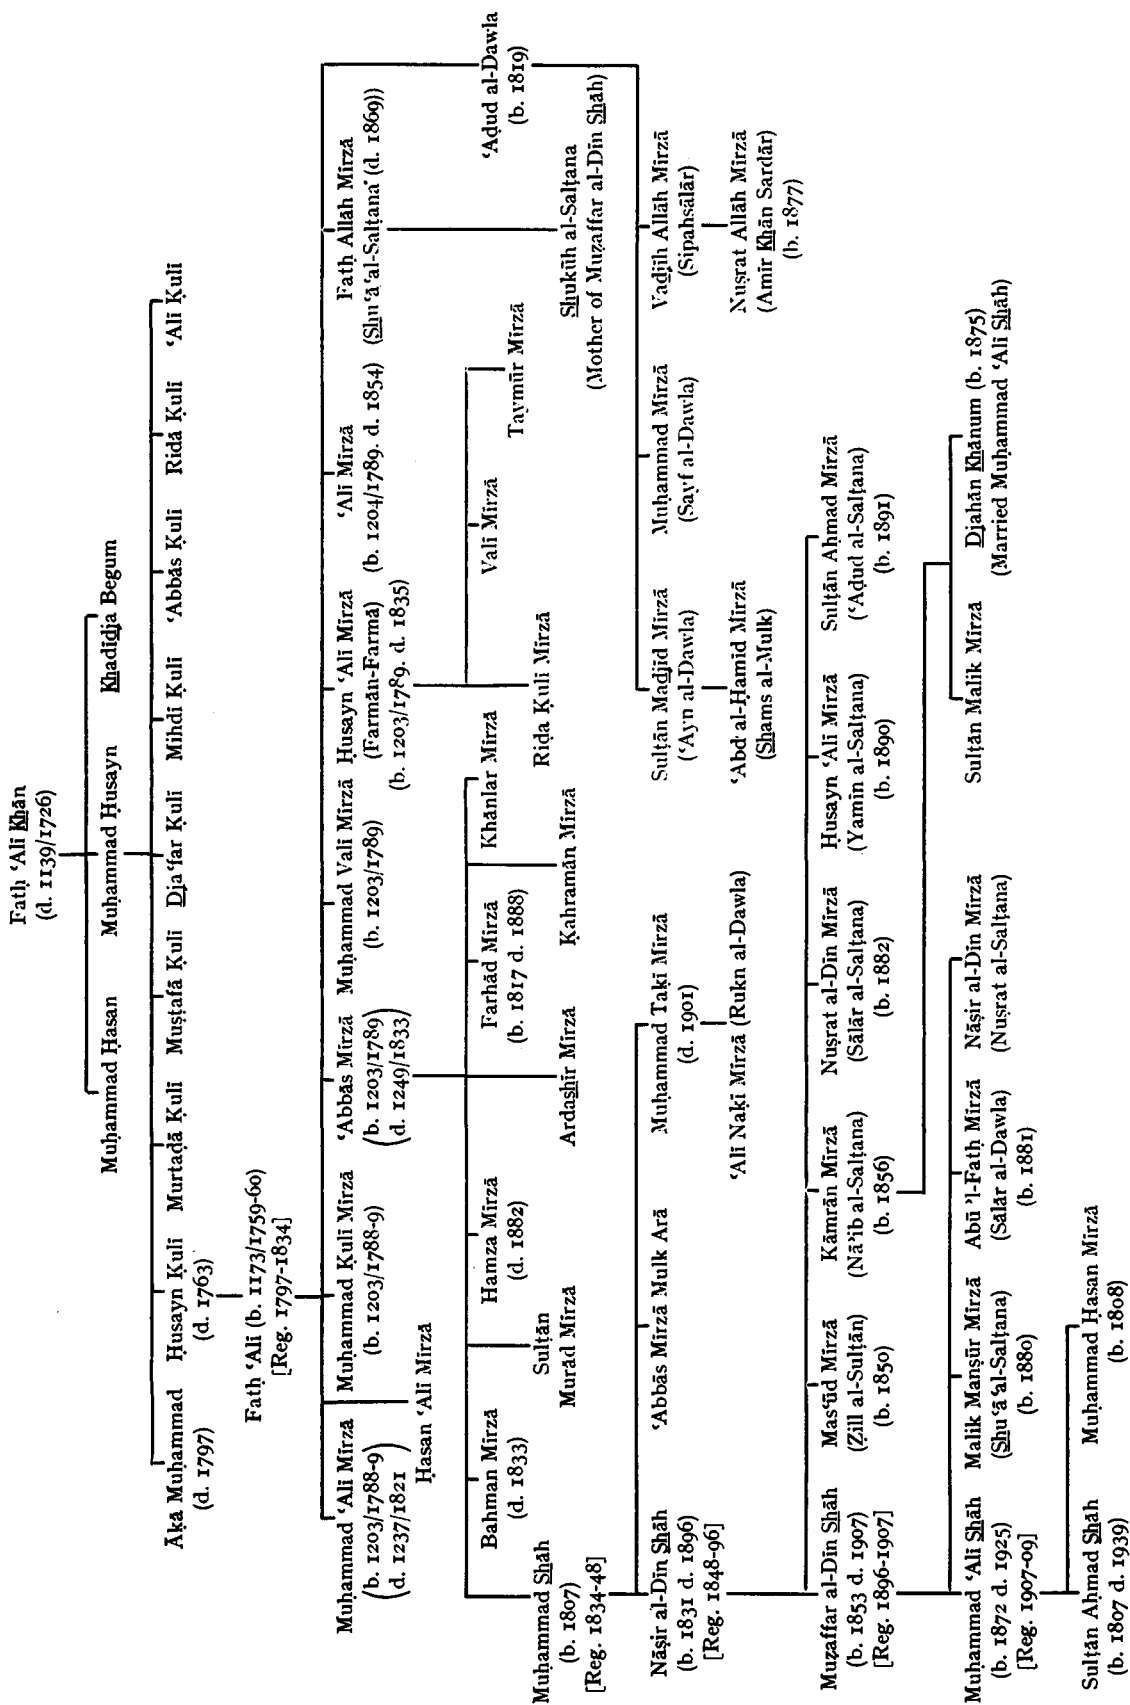

The Kādjār rulers never forgot that they were Turks. They were even proud of it. Thus, some members of the Kādjār dynasty bore the names of Ilkhānid and even Ottoman rulers, e.g., Hülāgū, Abāqa, Arghun, Ildirim Bāyazīd etc. We see also some Kādjār clans (*oymak*) in Anatolia in the Ottoman period, between the 16th and 20th centuries.

*Bibliography*: F. Sümer, *Oğuzlar*, Ankara 1967, 152, 154, 155, 228, 234, 286, 287, 358, 366; idem, *Safevi devletinin kuruluş ve gelişmesinde Anadolu Türklerinin rolü* (in press). (F. SÜMER)

**KĀDJĀR** (*kaçar* "marching quickly"), cf. Sulaymān Efendī, *Lughat-i Çağhatai*, Istanbul 1298, 214; P. Pelliot, *Notes sur l'histoire de la horde d'or*, Paris 1950, 203-4), a Turcoman tribe, to which the Kādjār dynasty of Persia belonged; also a village in the Litkūh district of Āmul [q.v.]. Nineteenth century Persian historians assert that the Kādjār took their name from Kādjār Noyān b. Sirtāk Noyān. The latter was the son of Sābā Noyān b. Djalā'ir, and was appointed *atabeg* [q.v.] to Arghūn (Riḡā Kulī Khān Hidāyat, *Tārīkh-i rawdat al-safā-yi nāshiri*, Tehran 1961-2, ix, 4). It is also alleged that the Kādjār migrated from the Mughān steppe to Syria towards the middle of the 8th/14th century and that they came back to Persia with Tīmūr. This may well be so, but there does not appear to be any mention of a tribe by the name of Kādjār in Mongol or Timurid times. What may be the earliest mention of them is in 897/1491-2 when the *lashkar-i kādjār* is said to have joined Dānā Khallī b. Ibrāhīm of the Aq Koyunlū to free Rustam Beg b. Maḡṣūd from the fortress of Alindjāk, where he had been held captive by rival khāns (Yahyā Kazvīnī, *Lubb al-tawārīkh*, 1936-7, 225-6, quoted by F. Sümer, *Oğuzlar*, Ankara 1967, and Ibn Karbalā'ī, *Rawdat al-djinnān wa-djannat al-djanān*, ed. Dja'far Sultān al-Karā'ī, Tehran 1946-7, 526), but it should be pointed out that Kādjār may here be simply the name of a person.

Karā Pīr Beg Kādjār is mentioned as being among

## SIMPLIFIED GENEALOGICAL TREE OF THE KĀDJĀR RULING HOUSE

the followers of the Šafawid Šaykh Haydar, and Sulṭān ‘Alī nominated Ismā‘īl (later Šhāh Ismā‘īl I) his successor and sent him to Ardabil, he was accompanied, among others, by Qarā Piri Beg Kādġār (W. Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin 1936, 79, 96). Later, when Ismā‘īl defeated the Aq Koyunlū Aḥmad at the battle of Šarūr in 907/1501, the Kādġār were among his supporters and formed one of the Kizilbāsh tribes. Kādġār khāns held important offices under Ṭahmāsp I and Šhāh ‘Abbās I (Iskandar Munšī, *Ta’riḫ-i ‘ālamārā-yi ‘abbāsi*, Tehran 1956, i, 140, ii, 1085). One, Šhāh Kulī Kādġār, was sent by the former in 962/1555 and 975/1567 to treat for peace with the Turks (Pečewi, i, 327, 334; v. Hammer, *Hist. de l’empire ottoman*, French tr., vi, 69, 320; Riḡā Kulī Khān, ix, 5, is wrong in giving the date as A.H. 969). Another, Allāh Kulī Beg, became *kurūbāshī* to Šhāh ‘Abbās in 1000/1591-2 (*‘Ālamārā*, i, 439). Karābāgh was the main Kādġār centre in the 10th/16th century and the office of *beglerbegi* of Karābāgh was held by various Kādġār khāns. Muḥammad Khān b. Khallī Khān b. Šhāhverdi Sulṭān Ziyādoḡhlū, who succeeded Imām Kulī Khān on his death in 996/1587-8, was later appointed governor of Gandġa in 1015/1606 (*ibid.*, i, 385, ii, 716). The offices of *beglerbegi* and *amīr al-umārā* of Karābāgh appear to have remained in the hands of the Ziyādoḡhlū family (*ibid.*, ii, 657). Another Ziyādoḡhlū khān, Ḥasan, was made *dārūgha* [q.v.] of Šhīrāz in 998/1590 (Aḥmad Kummi, *Khulāṣat al-tawāriḫ*, ed. H. Müller, Wiesbaden 1964, Persian text, 68). Amīr Gūna Khān Kādġār became governor of Erivan in 1011/1603 (*‘Ālamārā*, ii, 652), while his son Ṭahmāsp Kulī Khān was governor of Erivan and Čukhur Sa‘d in the reign of Šhāh Šaffī (Iskandar Munšī and Muḥammad Yūsuf, *Dhayl-i ta’riḫ-i ‘ālamārā-yi ‘abbāsi*, ed. Suhaylī Khānsārī, Tehran 1938-9, 293). Kādġār khāns also held governorships in Astarābād and Marv. Ḥusayn Khān Ziyādoḡhlū is mentioned as being governor of Astarābād in 1010/1601-2 and in 1011/1602-3 when he was recalled to Karābāgh to take part in operations against the Ottomans (*‘Ālamārā*, ii, 604, 657). Mihrāb Khān Kādġār became governor of Marv in 1017/1608-9; his son, Murtaḡā Kulī Khān, who was governor of Marv on behalf of Šhāh Šaffī in 1042/1632-3 (*Dhayl-i ta’riḫ-i ‘ālamārā-yi ‘abbāsi*, 103), became *sipahsālār* to Šhāh ‘Abbās II in 1057/1647-8. (See further K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 33-7, 40-2).

Kādġār historians attribute the dispersal of the Kādġārs in the frontier areas of the empire to the deliberate policy of Šhāh ‘Abbās, aimed on the one hand at reducing their power because they had by this time become very numerous in Karābāgh, and on the other at protecting the empire against inroads made by the Uzbegs and Tatars. By the end of the 11th/17th century the main concentration of Kādġārs appears to have been in Astarābād, and they played a prominent part in the struggles for power in northern Persia on the fall of the Šafawids. They were divided in Astarābād into two main groups, the Koyunlū, who were flock-keepers, and the Develū, who were camel-herders. According to Riḡā Kulī Khān the Koyunlū, ‘Izz al-Dīnlū, Šhāmbayātī (whose name suggests that some sections of the Kādġār had sojourned for a period in Syria), Karā-mūsālū, Iṣhlū, and Ziyādīlū had pastures below the Mubārakābād fortress of Astarābād and so were called *Ashākābāsh*, while the Develū, Šipānlū, Kuhanlū, Khazīnādārlū, Qiyāqlū and Karlū had pastures above the fortress and were therefore called

Yukhārlbāsh. He adds that according to another tradition the origin of these terms is to be sought in the period before the Kādġār were settled in Astarābād (ix, 7-8, 49). In the 12th/18th century the *Ashākābāsh* and the *Yukhārlbāsh* were split by internecine strife.

During the reign of the Šafawid Šhāh Sulṭān Ḥusayn, Muḥammad Khān, a Turcoman from Kazwīn, was appointed governor of Astarābād. He was induced by the Yukhārlbāsh to seize Faṭḥ ‘Alī Khān, the leader of the *Ashākābāsh*, who lived in the Mubārakābād fortress, and his brothers, Faql ‘Alī and Muḥammad ‘Alī Beg. Faṭḥ ‘Alī subsequently escaped but his two brothers were killed. He took refuge with the Yamūt of Šā‘īn Khānī and in due course recovered possession of Astarābād (*ibid.*, ix, 7-8; Mīrzā Mīhdī, *Djāhāngushā-yi nādīrī*, ed. Sayyid ‘Abd Allāh Anvar, Tehran 1963-4, 58-9). The sources vary in their account of the activities of Faṭḥ ‘Alī Khān during the last years of Šafawid rule. According to most Kādġār historians he went to the help of Šhāh Sulṭān Ḥusayn during the Afghan invasion, though the precise circumstances in which he did this are not clear. Being denounced by some of the shah’s officials as dangerously ambitious, he left Iṣfahān. Subsequently after an engagement with the Afghans near Varāmīn, he joined Ṭahmāsp II, who had come to Māzandarān, brought him to Astarābād, and assumed the title of *nā‘ib al-salṭana* and *wakil-i dawla*. Mīrzā Mahdī, however, gives a less favourable account of Faṭḥ ‘Alī’s actions, and alleges that Ṭahmāsp, who had appointed Faṭḥ ‘Alī governor of Šimnān, ordered him to relieve Tehran, which had fallen into the hands of the Afghans. After an inconclusive battle with the Afghans near Varāmīn, Faṭḥ ‘Alī took Dāmghān, and then turned his arms against Ṭahmāsp, defeating him in May 1726 near *Ashraf* and taking him captive (Lockhart, *The fall of the Safavi dynasty and the Afghan occupation of Persia*, Cambridge 1958, 280; see also Muḥammad Ḥāshim Rustam al-Ḥukamā’, *Rustam al-tawāriḫ*, ed. Muḥammad Muṣṭafī, Tehran 1969, 122 ff., 142 ff., 174 ff.; Riḡā Kulī Khān, ix, 12).

Faṭḥ ‘Alī Khān and Ṭahmāsp subsequently set out for Khurāsān. Nādir Kulī (afterwards Nādir Šhāh), with whom Ṭahmāsp had entered into communication, joined them at Khābūshān with a force of Afghans and Kurds. They reached Khwādġa Rabi‘ outside Maṣḥhad in the autumn. By this time acute rivalry had developed between Faṭḥ ‘Alī Khān and Nādir Kulī, who succeeded in persuading Ṭahmāsp that Faṭḥ ‘Alī was plotting against him. Accordingly on 14 Šafar 1139/11 October 1726 Ṭahmāsp had Faṭḥ ‘Alī put to death (Lockhart, *Nadir Shah*, Cambridge 1938, 25-6).

Faṭḥ ‘Alī had two sons, Muḥammad Ḥasan and Muḥammad Ḥusayn, the second of whom died in youth. Rustam al-Ḥukamā’ alleges that Muḥammad Ḥasan was, in fact, a son of Šhāh Sulṭān Ḥusayn, the latter having given to Faṭḥ ‘Alī Khān, when he came to Iṣfahān about the time of the Afghan invasion, a woman from the royal *haram*, a daughter of Ḥusayn Kulī Ākā, a descendant of Ya‘qūb Sulṭān Kādġār, who had served Šhāh ‘Abbās I, and whose mother was the niece of Bikānġi Khān Bahādūr, the leader of the Yamūt and Guklān. This woman, according to Rustam al-Ḥukamā’, was pregnant by the shah, and in due course gave birth to Muḥammad Ḥasan (139, 157, 266, 399-400; see also Khān Malik Šāsānī, *Siyāsatgarān-i dawra-i Kādġār*, Tehran 1959-60, introduction). After the death of Faṭḥ ‘Alī Khān, Muḥammad Ḥasan, because of the enmity of Nādir

and the intrigues of Muḥammad Ḥusayn Khān Develū, who had been appointed *beglerbegi* of Astarābād, retired to the Turcoman steppe. Muḥammad Ḥusayn Khān was later responsible for the murder of Ṭahmāsp and his two sons in or about Dhu 'l-Ka'ḍa 1152/February 1740 during Nādir's absence in India (Lockhart, *Nādir Shah*, 177-8). Muḥammad Ḥasan Khān in due course gathered together a force of Yamūt Turcomans, Kādjārs and others and in Dhu 'l-Hidjia 1156/January 1744 took Astarābād from Muḥammad Ḥusayn Khān (see J. Hanway, *An historical account of the British trade over the Caspian Sea*, London 1762, i, 129 ff., for an eyewitness account of this event). Nādir Shāh ordered Bihbūd Khān, the *sardār* of the Atak, to punish Muḥammad Ḥasan Khān. An engagement took place to the east of Astarābād. Initially the Kādjār army had the advantage, but after defections to Bihbūd Khān, Muḥammad Ḥasan Khān fled. Some months later he appeared in Khwārazm with Yamūt allies. In a battle with Nādir's forces under the latter's nephew, 'Alī Kulī Khān, and Bihbūd Khān, during which Muḥammad Ḥasan Khān engaged Bihbūd Khān in single combat and wounded him, the Kādjār forces were defeated a second time and Muḥammad Ḥasan forced to flee for his life (Lockhart, *Nādir Shah*, 243-5). After the death of Nādir in 1160/1747, Muḥammad Ḥasan Khān appears to have joined Shāhrukh and subsequently to have been appointed *beglerbegi* of Astarābād and Gurgān and leader of all the nomadic groups of Kādjār in the province by Sulaymān II, who was crowned on 21 Muḥarram 1163/31 December 1749, and occupied the throne for forty days. Muḥammad Ḥasan Khān took possession of Astarābād and Gurgān and on the deposition of Sulaymān became virtually independent. He extended his power to Māzandarān and Gilān. He moved down towards Kirmānshāh to aid 'Alī Mardān in 1164/1751 but retired to Astarābād on receiving news of the latter's defeat. Karīm Khān marched on Gilān, pursued him to Astarābād in 1165/1751-2 and besieged him there (Muḥammad Khalil Mar'ashī, *Madjma' al-tawārikh*, ed. 'Abbās Iqbāl, Tehran 1949-50, 120, 149; Muḥammad Sādiq Nāmī, *Tawrikh-i gilgushā*, ed. Sa'īd Nafīsī, Tehran 1938-9, 25-6). The Zand army was unable to make headway and finally Muḥammad Ḥasan Khān reinforced by Guklān and Yamūt defeated Karīm Khān's army, after which he was joined by, or took possession of, Ismā'il III, the Ṣafawid puppet, who had been with Karīm Khān.

In 1168/1754-5 Aḥmad Shāh Durrānī, who had taken possession of Mashhad, made a bid to extend his power over northern Persia, but was defeated by Muḥammad Ḥasan Khān near Sabzavār in the summer of 1169/1755. The Kādjār leader, after taking Kazwīn and reasserting his power in Gilān, marched on Iṣfahān and in 1169/1756 inflicted a second defeat on Karīm Khān, who retired to Shīrāz. At this point Muḥammad Ḥasan Khān was forced to return to the north to deal with the incursion of Āzād Khān, the Afghan holder of Ādharbāydzjān, who had seized the opportunity to march on Gilān and Māzandarān. Āzād Khān's army was defeated near Lāhīdzjān in the winter of 1170/1756. Muḥammad Ḥasan Khān then seized the initiative, marched on Ādharbāydzjān and decisively defeated Āzād Khān near Urūmiyya in the summer (1170/1757). In the spring of the following year, he set out for Karābāgh, which, together with Mughān and Arrān submitted, and the local Kādjār khāns, in particular the Ziyādoḡhlū khāns of Gandja, joined him. He left his eldest son Ākā Muḥammad

(whose mother was a daughter of Sulaymān Khān Koyunlū and who, as a child, had fallen into the hands of 'Adil Shāh about 1161/1748 and been castrated by him), then aged about sixteen, as his deputy in Tabriz and returned himself to Māzandarān (Riḍā Kulī Khān, ix, 39-40). If, however, Sir John Malcolm's statement that Ākā Muḥammad Khān was aged sixty-three at his death is correct, he would have been about twenty-two at this time. (See *History of Persia*, London 1829, ii, 203). From there Muḥammad Ḥasan Khān set out for Iṣfahān and Shīrāz, where he besieged Karīm Khān in 1171/1758. After about a month, the Kādjār force encamped round Shīrāz experienced difficulty in provisioning itself and many of their livestock were captured by the enemy (Riḍā Kulī Khān, ix, 48-9).

The internecine strife between the Ashākabāsh and the Yukhāribāsh, which had been temporarily checked after Muḥammad Ḥasan Khān had established his authority and included khāns from both factions among his followers, broke out again, and when a group of Afghans defected in Shawwāl 1171/June-July 1758, disorders ensued and the army began to disperse. Meanwhile Muḥammad Ḥusayn Khān Develū, who had remained in Iṣfahān, seized the opportunity offered by the absence of Muḥammad Ḥasan Khān in the south to return to Astarābād and take possession of it, but evacuated it when the latter returned. He retired to Dāmghān, where Muḥammad Ḥasan Khān besieged him. Karīm Khān, hoping to benefit from the renewal of internecine strife among the Kādjārs, sent an army under Shaykh 'Alī Khān Zand to Māzandarān, where several of the local tribes joined him. Muḥammad Ḥasan Khān raised the siege of Dāmghān and proceeded to Māzandarān to meet this new threat. Disorders among the Turcomans and Kādjārs in the neighbourhood of Astarābād, however, forced him to return there, and he took with him the Ṣafawid, Ismā'il III, who was then living in Sārī (*ibid.*, ix, 58). Muḥammad Ḥusayn Khān Develū now joined Shaykh 'Alī, while Karīm Khān himself advanced from Tehran towards Astarābād. Muḥammad Ḥasan Khān, who had been joined by Ākā Muḥammad Khān (who had failed to maintain himself in Ādharbāydzjān), and also by some Shādillū Kurds from Khurāsān, Giraylis and Hadjdzjilars, joined battle with Karīm Khān near Ashraf. Victory went to the Zand army and Muḥammad Ḥasan Khān was killed in flight in 1172/1759 (or according to some sources 1171). Muḥammad Khān Koyunlū, who had been made *beglerbegi* of Astarābād by Muḥammad Ḥasan Khān, escaped with Ākā Muḥammad, his full brother Ḥusayn Kulī Khān and various other members of the family to the Gurgān steppe to the *awba* of Murād Khān Dja'farbāyla of the Yūmūt (*ibid.*, ix, 75).

Shaykh 'Alī Khān Zand reappointed Muḥammad Ḥusayn Khān Develū governor of Astarābād. These events further exacerbated relations between the Ashākabāsh and the Yukhāribāsh, and in due course Muḥammad Ḥusayn Khān captured Muḥammad Khān Koyunlū and the sons of Muḥammad Ḥasan Khān who were with him. Later he persuaded Karīm Khān to take Ākā Muḥammad Khān and various of his brothers and relations to Shīrāz to prevent any attempt by them to reassert the supremacy of the Ashākabāsh, though keeping with himself Ākā Muḥammad's halfbrothers, Murtaqā Kulī and Muṣṭafā Kulī, whose mother was his sister (*ibid.*, ix, 77-8). In 1176/1762-3 Muḥammad Ḥusayn Khān Develū died of plague and was succeeded as *beglerbegi*

of Astarābād by his younger brother Muḥammad Ḥasan.

Ākā Muḥammad Khān and his brothers, together with other local leaders, were held by Karīm Khān in Shīrāz as hostages for the good behaviour of their respective tribes. Khādīja Begum, Ākā Muḥammad's paternal aunt, was married to Karīm Khān. His brother, Husayn Kulī Khān, was made governor of Dāmghān in 1182/1769, and from then until his death in 1191/1777 he had a turbulent career in northern Persia (hence his title *Djahānsūz*). Seeking revenge for the death of his father, he made war on the Develū and also on the Zand governors of Māzandarān, Bisṭām and elsewhere, in spite of Ākā Muḥammad's advice to him to adopt a peaceful policy. Astarābād changed hands several times but remained, for the most part, in Develū hands. In or about 1188/1774, Husayn Kulī sent his son Fath 'Alī (born in 1173/1759-60 of an 'Izz al-Dīnlū Kādjar mother and known as Bābā Khān) [*q.v.*] to Shīrāz to conciliate Karīm Khān. He was well received and sent back to his father and given Dāmghān as a *suyūrghāl* (Riḍā Kulī Khān, ix, 90 ff.).

Ākā Muḥammad Khān appears to have been treated with favour and consulted by Karīm Khān on affairs of state ('Abd al-Razzāk, *Ma'āthir-i sulṭāniyya*, entitled *Dynasty of the Kajars*, tr. by Sir Harford Jones Brydges, London 1838, cxi ff.; Riḍā Kulī Khān, ix, 78; Rustam al-Ḥukamā', 338; Malcolm, ii, 176). He was not, however, reconciled to captivity, and the death of Karīm Khān in 1193/1779 enabled him to escape. He proceeded to Māzandarān, where he was occupied for some years in contests with rival khāns of the Ashākābāsh and the Yukhāribāsh, the latter of whom held Astarābād and the country extending from there to Khwār and Varāmin. Various of the khāns, including Ākā Muḥammad's half-brothers, Murtaḍā Kulī Khān and Riḍā Kulī Khān, co-operated with the Zand forces in the north (Riḍā Kulī Khān, ix, 127 ff.; Rustam al-Ḥukamā', 444 ff.; Malcolm, ii, 93 ff.). In 1194-5/1780-1 Ākā Muḥammad Khān came into conflict with the Russians, who had established a settlement in Ashraf, and expelled them (J. McNeill, *Progress and present position of Russia in the East*, 2nd ed. London 1836, 33-4).

By 1199/1785 Ākā Muḥammad Khān had made himself master of Gurgān, Māzandarān and Gilān, and on the death of 'Alī Murād Khān in that year, he set out for Isfahān, which Dja'far Khān Zand had seized. He defeated a Zand force near Kūmm and entered Isfahān. Reappointing as governor Bākīr Khān Khurāskāni (whom Dja'far Khān had turned out), he retired again to the north. In 1200/1786 he made Tehran his capital (cf. Riḍā Kulī Khān, who wrongly states that he was crowned in Tehran in that year, ix, 200). From this time onwards Tehran continued to be the capital, and the importance of northern Persia relative to southern Persia for strategic and economic reasons and because of its more numerous population increased.

In 1201/1786-7 Dja'far Khān recovered possession of Isfahān, but was again dispossessed by Ākā Muḥammad, who on this occasion appointed his half-brother Dja'far Kulī Khān governor before retiring to the north again (Riḍā Kulī Khān, ix, 188 ff.; Rustam al-Ḥukamā', 448 ff.; Malcolm, ii, 102-3). Luṭf 'Alī Khān succeeded Dja'far Khān Zand in 1203/1789-90 and in the following year Ākā Muḥammad made another expedition to the south. Luṭf 'Alī fled to Shīrāz. Ākā Muḥammad besieged the city, but raised the siege after about three months and returned to Tehran. In the following year Ākā Mu-

hammad was occupied in asserting his authority in Ādharbāyḍjān, where a number of local leaders had been virtually independent since the death of Karīm Khān. In 1205/1791 Luṭf 'Alī Khān made an abortive attempt to recover Isfahān, leaving Hādīdjī Ibrāhīm, the *kalāntar*, together with one of the Zand khāns, in charge of Shīrāz. During the absence of Luṭf 'Alī, Hādīdjī Ibrāhīm seized the city. Luṭf 'Alī turned back but failed to regain possession and retired to the south. Hādīdjī Ibrāhīm meanwhile entered into negotiations with Ākā Muḥammad Khān, who, after a Kādjar force had suffered a reverse at the hands of Luṭf 'Alī, marched in person on Shīrāz. A surprise attack near Persepolis by Luṭf 'Alī failed, and Shīrāz was handed over to Ākā Muḥammad Khān. Renewed disorders by the Guklān and Yamūt, however, forced him once more to return to Tehran and Astarābād. Luṭf 'Alī who had fled to the east, after various vicissitudes, took Kirmān in 1208/1794. Ākā Muḥammad set out once more for the south and laid siege to Kirmān. The city fell after some months and large numbers of the inhabitants were massacred. Luṭf 'Alī, who escaped before the city actually fell, was eventually captured near Narmāshīr and sent to Ākā Muḥammad, who killed him (Malcolm, ii, 110 ff. Hādīdjī Mirzā Ḥasan Fasāṭī, *Fārsnāma-i nāshiri*, lith., Tehran 1894-6, i, 232 ff.).

Having thus disposed of his Zand rivals and established his authority over the greater part of Persia except Khurāsān, Ākā Muḥammad Khān planned to restore to Persia Georgia, the ruler of which, Heraclius, had placed himself under Russian protection in 1783, renouncing all dependence on Persia. He reached Ardabil in the spring of 1209/1795 and on Heraclius' refusal to return to the status of a tributary of Persia (which had been Georgia's position under the Šafawids), he invaded Georgia and sacked Tiflis. He spent the winter in Mughān and then returned to Tehran, where he was crowned in the spring of 1796 (Riḍā Kulī Khān, ix, 273-4). His next step was directed to the reimposition of Persian control over Khurāsān, which was nominally ruled by Shāhrukh, the blind grandson of Nādir Shāh, and to the prevention of raiding by the Uzbegs, whose leader Dījāni Beg ruled Bukhārā. Mashhad was entered without fighting. Missions were sent to Dījāni Beg demanding the release of all Persian prisoners who had been taken by raiding parties, and to Zamān Shāh, the ruler of Kābul, proposing co-operation for the conquest of Bukhārā. A Russian force meanwhile marched against Persia in retaliation for the sack of Tiflis. Although this was withdrawn on the death of the Empress Catherine in the same year, Ākā Muḥammad abandoned his Khurāsān plans, returned to Tehran in the autumn, and in the spring of 1211/1797 set out again for Georgia. Crossing the R. Aras, he took Shūsha. A few days later, on 21 Dhu 'l-Hijjā 1211/19 June 1797 he was murdered in camp by two slaves, who, although under sentence of death for some misdemeanour, had been left free overnight. His nephew, Fath 'Alī Khān (Bābā Khān), who at the time of his uncle's death was governor of Fārs, succeeded as Fath 'Alī Shāh.

Ākā Muḥammad Khān, realizing the weakness brought about by internecine strife, had been much concerned to heal the breach between the Koyunlū and the Develū. Accordingly he married Fath 'Alī to one of the daughters of Fath 'Alī Khān Develū, and laid down that the crown should pass to 'Abbās Mirzā (b. 1203/1789), Fath 'Alī's third son, and the eldest of his sons born to Fath 'Alī Khān Develū's daughter (Nādir Mirzā, *Ta'rikh wa āiughrāfiyā-yi*

*dār al-saltāna-i Tabriz*, Tehran lith., 1905, 190-1; Riḍā Kulī Khān, ix, 226). ‘Abbās Mirzā, however, pre-deceased Faṭḥ ‘Alī Shāh in 1249/1833-4 and the succession passed in 1250/1834 to his son Muḥammad Mirzā (b. 1222/1807), whose mother, Āsiyā Khānum, was also a Develū, being the daughter of Muḥammad Khān Develū and granddaughter of Faṭḥ ‘Alī Khān Develū. Malik Djahān Khānum, the mother of Nāsir al-Dīn (b. 1247/1831-2), who succeeded his father Muḥammad Shāh in 1264/1848, was a granddaughter of Sulaymān Khān Koyunlū, Aḳā Muḥammad Khān’s maternal uncle. Nāsir al-Dīn’s son and successor Muẓaffar al-Dīn (b. 1269/1853, reg. 1896-1907) was the son of Shukūh al-Saltāna, the daughter of Shu‘ā al-Saltāna b. Faṭḥ ‘Alī Shāh. Although not all of Nāsir al-Dīn’s sons who were successively declared to be his *walī ‘ahd* were the sons of Kādjār mothers, the normal convention was for the mother of the *walī ‘ahd* to be a Kādjār. One of the arguments raised against the possible succession of Zill al-Sultān, the eldest son of Nāsir al-Dīn, who became for a period the virtual ruler of southern Persia, was that his mother, ‘Iffat al-Saltāna, was not a Kādjār. The mothers of Muḥammad ‘Alī Shāh (b. 1289/1872, reg. 1907-9) and his son Ahmad Shāh (b. 1314/1898, reg. 1909-25) respectively were Kādjārs. Failure to establish a stable system of succession proved a weakness and led to repeated intrigues over the appointment of the *walī ‘ahd*, and Faṭḥ ‘Alī, Muḥammad Shāh and Nāsir al-Dīn all faced some degree of armed opposition by various Kādjār princes when they severally assumed the throne.

On the death of Aḳā Muḥammad, Hādjījī Ibrāhīm, his chief minister, put himself at the head of the troops and returned to Tehran, where Muḥammad Khān Kādjār had closed the gates pending the arrival of Faṭḥ ‘Alī from Fārs. The new shah had to contend with a number of rebellions, including one led by his brother Ḥusayn Kulī Mirzā, but none of them were of any magnitude. He continued the practice of appointing princes of the royal house to the provincial governments which the Šafawids had abandoned but the Zands had largely resumed. In 1799 ‘Abbās Mirzā, then aged about fourteen, was made governor of Ādharbāyḍjān, and from 1818, when he was appointed *walī ‘ahd*, the province was normally held by the *walī ‘ahd*. Its good order and security was considered crucial to the safety of the Persian state because of the critical nature of Perso-Russian relations and the fear that disorders would invite Russian intervention. From 1810 onwards Faṭḥ ‘Alī Shāh entrusted foreign relations to ‘Abbās Mirzā and for that reason foreign envoys resided from then until his death at Tabriz and not Tehran. Ādharbāyḍjān was one of the largest and richest of the Persian provinces, and its capital Tabriz rapidly became politically and commercially the second city of the empire. There were, however, certain disadvantages in making Tabriz the seat of the *walī ‘ahd*: on the one hand he became more vulnerable to Russian influence and on the other the faction between Turk and Persian was heightened, since his entourage in Tabriz tended to be composed largely of Ādharbāyḍjānī Turks, many of whom accompanied him when he came to Tehran to assume the crown.

When ‘Abbās Mirzā was made governor of Ādharbāyḍjān his eldest brother Muḥammad ‘Alī Mirzā, whose mother was a Georgian, was confirmed as governor of Kirmānshāh. This province was also of considerable importance in view of the repeated disputes between the Persian and Ottoman empires.

Ḥusayn ‘Alī Mirzā Farmān-farmā, whose mother was the daughter of an Arab chieftain of Khurāsān, was made governor of Fārs, Muḥammad Walī Mirzā governor of Khurāsān, and Muḥammad Kulī Mirzā governor of Māzandarān. In due course several other princes, too young to administer their governments themselves, were sent to other provinces accompanied by viziers who carried on the administration for them, much as had the atabegs for their wards in Saldjūq times. The Kādjārs never succeeded in establishing family solidarity, and this in view of the numerous progeny of each of the shahs is, perhaps, not surprising. Rivalry between the sons of Faṭḥ ‘Alī Shāh, especially Muḥammad ‘Alī Mirzā and ‘Abbās Mirzā, several times threatened to break into open conflict. When ‘Abbās Mirzā died in 1833, Faṭḥ ‘Alī delayed until June in the following year before he declared Muḥammad Mirzā *walī ‘ahd*, for fear that a nomination would give rise to civil war.

Under the Treaty of Gulistān the way to the intervention of foreign powers in the matter of the succession to the throne was opened. By Art. 4 the Russian tsar undertook for himself and his heirs to recognize the prince who should be nominated as heir apparent and afford him assistance in case he should require it to suppress an opposing party.

When Faṭḥ ‘Alī nominated ‘Abbās Mirzā in 1818 he took steps to secure the agreement of the tsar to his nomination because he suspected that Yermolov, the Russian viceroy of the Caucasus, was preparing to intrigue with Muḥammad ‘Alī Mirzā. Faṭḥ ‘Alī, to assure ‘Abbās Mirzā’s accession, also granted him the revenues of Gilān as well as Ādharbāyḍjān for the support of his army, placed the governors of Khamsa and Kazvin, through which he would have to pass on his way to Tehran, under his orders, and sent a battalion of ‘Abbās Mirzā’s troops to Tehran to garrison the capital. In 1828, under Art. 7 of the Treaty of Turkomāncāy, the Russian tsar recognized ‘Abbās Mirzā as successor to the throne and undertook to consider him the legitimate sovereign from the moment of his accession. This limited Faṭḥ ‘Alī’s freedom of action, raised the possibility of ‘Abbās Mirzā succeeding to the throne with the support of Russian troops, and endangered his personal and political independence. The appointment of Muḥammad Mirzā as *walī ‘ahd* was recognized by the British and Russian governments in an exchange of notes expressing their mutual desire to act together over the matter of his succession and in the maintenance of the internal tranquility, independence and integrity of Persia.

So far as the provincial governments were not held by Kādjār princes they were, for the most part, entrusted to tribal leaders, though Faṭḥ ‘Alī, in so much as he was able, decreased the power of the tribes apart from the Kādjārs [see ILĀT]. There was, however, no clear dividing line between the provincial governor, the tribal leader, the landowner and the military commander. This facilitated rebellion and made the shah’s control almost always precarious. The provincial governors were required to remit to the central government annually a definite sum, based on the tax assessment prepared by the *mustawfi*’s office in the capital together with a new year present (*piškash*) and to provide troops when called upon to do so. The cost of the provincial administration in addition to the regular assessment was collected locally. At each major provincial capital there was a replica of the court at Tehran. This, in the absence of financial control, imposed an added burden upon

the local people. Ambitious princes, moreover, were encouraged to use the provincial resources to rebel.

The remission of provincial taxes was frequently in arrears, and their collection often necessitated a military expedition. Fath 'Alī Shāh had, in fact, set out on such an expedition to collect arrears from Husayn 'Alī Mirzā Farmān-farmā, the governor of Fārs, when he died, en route for Shirāz, in Isfahān on 23 October 1834. Husayn 'Alī Mirzā thereupon read the *khūba* in Shirāz in his own name and marched on Isfahān. Muḥammad Mirzā was in no state to set out from Tabriz. His treasury was empty and his troops mutinous. The means to make the troops march were collected largely owing to the initiative and energy shown by the British envoy, Sir John Campbell. On 10 November a force set out, and Muḥammad Mirzā followed shortly afterwards. Tehran, where 'Alī Mirzā Zill al-Sultān had proclaimed himself shah, was taken in December, and an expedition despatched to the south. Farmān-farmā's forces, led by his brother Hasan 'Alī Mirzā and his three sons, Riḍā Kull Mirzā, Taymūr Mirzā, and Walī Mirzā, were defeated near Kumīsha. Farmān-farmā surrendered and later died. Hasan 'Alī Mirzā was blinded and imprisoned at Ardabil. Farmān-farmā's sons escaped, finding their way via the Ottoman Empire to England, whence they returned in 1836 to the Ottoman Empire and spent the rest of their lives there in exile (see Riḍā Kull Mirzā, *Safar-nāma-i Riḍā Kull Mirzā, nava-i Fath 'Alī Shāh*, ed. Aṣghar Farmān Farmā'i Kādjār, Tehran 1963-4; J. B. Fraser, *Narrative of the residence of the Persian princes in London, in 1835 and 1836*, 2 vols., London 1838).

Several other Kādjār princes were seized by Muḥammad Shāh and kept in captivity in Ardabil, lest they become rebels, while some, fearing for their lives, placed themselves under foreign protection. In 1835 Muḥammad Shāh nominated his son, Nāṣir al-Dīn, then a child of four, as *walī 'ahd*. In view of his youth he was not made governor of Ādharbāyḍjān, which had been given to Qāhramān Mirzā, Muḥammad Shāh's full-brother. In January 1842 another full brother, Bahman Mirzā, was made governor of the province. In the same year Muḥammad Shāh's health gave rise to anxiety, and it seemed unlikely that Nāṣir al-Dīn would be able to establish his claim against Bahman Mirzā in the event of the shah's death. The latter, however, recovered, to fall ill again in 1845. Once more it seemed likely that Bahman Mirzā, who was a successful and popular governor of Ādharbāyḍjān, might press his claim to succeed, or to establish himself as regent. The shah again recovered. Bahman Mirzā, meanwhile, fell foul of Hādīdī Mirzā Āḳāsi, the *ṣadr-i a'zam*, and resigned his government under pressure in 1847. It was now that the question of succession became confused with that of protection. On 1 March 1848, Bahman Mirzā, alarmed for his safety, took sanctuary in the house of the Russian envoy and was subsequently granted asylum in Russia. The incident caused anger, alarm and consternation in Tehran. On 15 May Bahman Mirzā left Tehran and took up residence in Tiflis.

The shah died on 4 September. Riots and disorders broke out in Tehran. The queen mother took charge pending the arrival of Nāṣir al-Dīn, who had been sent to Ādharbāyḍjān as governor in February. Funds having been provided for his march by the merchant community of Tabriz, he set out and arrived in Tehran on 20 October. He took possession of the capital without difficulty, but there were disorders in Isfahān and Kirmān, and a prolonged rebellion in Khurāsān. Aṣaf al-Dawla, Muḥammad

Shāh's maternal uncle, who had been at one time Fath 'Alī's *ṣadr-i a'zam*, and governor of Khurāsān for some twelve years under Muḥammad Shāh, had, with his son Sālār al-Dawla, been driven into rebellion by the enmity of Hādīdī Mirzā Āḳāsi. In 1847 he was recalled to Tehran and exiled to Turkey. Sālār al-Dawla continued the rebellion and was not finally overcome until 1850, when, together with his brother, he was captured and executed.

During the early years of the reign of Nāṣir al-Dīn, consideration was given to the question of a regency in the event of the shah's death and again in 1858 when the child he had proclaimed *walī 'ahd* died, and the claims of Bahman Mirzā, who was then residing at Tiflis, and 'Abbās Mirzā Mulk-ārā were canvassed. The latter's mother, a Kurdish lady, Khādīdīja Begum, Muḥammad Shāh's favourite wife, had appealed on Muḥammad Shāh's death, to Colonel Farrant, the British *chargé d'affaires*, to protect her son, because she feared for his safety at the hands of the queen mother. 'Abbās Mirzā finally went in 1853 to Baghdād where he lived under quasi-British protection. The shah was equally suspicious of both. The question, however, remained academic: no regent was appointed and Nāṣir al-Dīn survived until 1896.

In the later years of Nāṣir al-Dīn's reign the rivalry of the *walī 'ahd*, Muẓaffar al-Dīn, governor of Ādharbāyḍjān, and his two half-brothers, Zill al-Sultān, who became governor of Isfahān in 1874 and was the virtual ruler of most of southern Persia from 1881 to 1887 when he was deprived of all his governments except Isfahān, and Kāmūrān Mirzā, the Nā'ib al-Saltāna, Nāṣir al-Dīn's favourite son, who was commander-in-chief of the army, threw the question of succession into doubt. In the event, Muẓaffar al-Dīn's succession was uncontested. During the reign of Muḥammad 'Alī and Aḥmad Shāh, various Kādjār princes took part in the struggles against the constitutional government, notably Shu'a' al-Saltāna and Sālār al-Dawla, Muḥammad 'Alī's half-brothers, while Muḥammad 'Alī, who, after his deposition in 1909, lived in Russia under the protection of the tsar, made an abortive attempt, with Russian connivance, to regain the throne in 1911.

The Kādjārs, having established themselves as the rulers of Persia, ceased to be tribal leaders and, like earlier rulers, became absolute monarchs. To impress their subjects with their power, they sought to emphasize the high, almost sacred, character of their rule. The pomp and circumstance of the royal court after the reign of Āḳā Muḥammad Khān rapidly increased and great attention was paid to ceremony, though the shah, it is true, was still, in theory at least, accessible to the lowest of his subjects. Similarly, after the death of Āḳā Muḥammad, the administration, based on the pattern of the Šafawid empire, became more elaborate. All officials were the shah's deputies, elevated and degraded at his pleasure. He was the sole executive. In circumstances in which intrigue and corruption were rife, and the exercise of power called forth the enmity and intrigues of rivals, bribery and nepotism were almost inevitable.

The chief minister was the *ṣadr-i a'zam* (sometimes known as the Mu'tamid al-Dawla). His functions were much the same as the *wazīr-i diwān-i a'lā* of Šafawid times [see *DIWĀN*]. His main duty was to provide money for the administration and defence of the state. The three chief officials under him were the *mustawfi al-mamālīk*, the *wazīr-i laṣṣḳar* and the *munshī al-mamālīk*. The minister for foreign affairs (*wazīr-i khārijī*), because of the increasing import-

ance of Persia's foreign relations, also became an influential official. From the reign of Nāṣir al-Dīn onwards various attempts were made to modernize the administration [see *ḤUKŪMA*].

Ākā Muḥammad Khān was well served by Hādjdjī Ibrāhīm, who became *ṣadr-i a'zam* in 1209/1794. He was also joint vizier with Mirzā Shāfi' to Faṭḥ 'Alī. His power and nepotism led to intrigues, which aroused Faṭḥ 'Alī's suspicions against him, and he was blinded and killed in 1801. Many of his relatives were also seized and his estates confiscated. Various ministers subsequently attempted without success to assert control over Faṭḥ 'Alī. 'Abbās Mirzā as *wali 'ahd* was served with distinction by Mirzā Isā Mirzā Buzurg (d. 1822), who was succeeded by his son, Abū'l-Kāsin Kā'im Maḳām, also a talented man. He later became minister to Muḥammad Mirzā, over whom he established his ascendancy. When Muḥammad Mirzā succeeded to the throne, Kā'im Maḳām became *ṣadr-i a'zam*. His rule, reputedly corrupt, was extremely unpopular and he fell from power in 1835 and was executed on 26 June 1835. Hādjdjī Mirzā Ākāsi, a Georgian from Erivan, who had been Muḥammad Mirzā's tutor in Ādharbāydzān, succeeded him. He, too, eventually concentrated power in his own hands, holding a number of offices in addition to that of *ṣadr-i a'zam*. This also brought unpopularity upon him, and on the death of Muḥammad Shāh, in fear for his life, he took refuge in Russia.

Nāṣir al-Dīn on his accession made Mirzā Taḳī Khān Amīr Nizām, who had been deputy-governor of Ādharbāydzān since 1843, *ṣadr-i a'zam*. He, partly because of the youth and inexperience of the shah, also concentrated power in his own hands, and treated his royal master with a certain measure of contempt. An able man, he perhaps attempted too much at once. His severe rule and vigorous attempts to reform abuses met with opposition, and in 1851 he was overthrown and murdered. The queen mother, among others, played a prominent part in his overthrow (see further Firaydūn Ādamiyyat, *Amīr Kabīr wa Irān*, 3 vols., Tehran 1956-7). He was succeeded by Mirzā Ākā Khān Nūrī, whose energies were largely taken up in defeating the machinations of numerous rivals and in a contest with the shah for the sole exercise of power. Corruption, which placed every office within reach of the highest bidder, was his weakness and rendered him accessible to the attacks of his enemies. He was deprived of the office of *ṣadr-i a'zam* in 1853 when the government was reorganized [see *ḤUKŪMA*].

By the middle of the century, the resurgence of the bureaucracy, after its relative eclipse under the early Kādjārs, was becoming evident. In the second half of the century its influence continued to grow. The position of officials, however, was still fundamentally insecure. This was why they so often sought support for their schemes from outside sources, in particular the British and Russian missions. It also explains in part the apparently equivocal behaviour of ministers such as 'Alī Aṣghar Khān Amīn al-Sultān, who, until the fiasco of the Tobacco Regie, worked for the modernization of Persia in close co-operation with the British minister, Sir Drummond Wolff, but later fell under Russian domination.

During the Kādjār period there was a contraction in the area over which Persia claimed sovereignty, but within the frontiers as they were eventually established the control of the central government gradually became more effective. Ākā Muḥammad Khān's attempt to regain Georgia proved abortive. Hostilities with Russia in the Caucasus, which had been inter-

mittent from about 1805, were resumed in 1811, and the Persian army was decisively defeated at Aslāndūz on 31 October/1 November 1812. In the following year a preliminary treaty was signed at Gulistān on 13 September 1813 by which Persia ceded Georgia, Darband, Baku, Shīrvān, Shāki, Gandja, Qarābāgh, Mughān and part of Tālīsh to Russia. Neither side regarded the peace as permanent and the war was eventually resumed in 1827. The Russian advance was rapid. Tabriz fell and a treaty of peace was signed at Turkomāncāy on 21 February 1828. Erivan and Nakhjdjivān were ceded by Persia and the cessions made under the Treaty of Gulistān confirmed (for texts, see C. U. Aitchison, *A collection of treaties, engagements and sanads*, Calcutta 1933, xv ff. and xxiii ff.).

The Perso-Turkish frontier, which was broadly as laid down in the Treaty of Zuhāb of 1049/1639 (which was in turn based upon the earlier settlement of 962/1555), also gave rise to many disputes. The Kurdish section, some 700 miles, in particular, was difficult country to settle and control. Like Qarābāgh, Mughān and Tālīsh, it was inhabited by semi-nomadic tribes. These moved to and fro between the Pashalik of Baghdād and Persia, while the frontier authorities of both countries were in the habit of giving asylum to marauders and refugees from the other. Relations with Turkey were also embittered by Shī'ī-Sunnī strife and, in 'Arabistān, by Perso-Arab antipathies.

In 1804 and 1805, the Ottoman Sultan Selim III had allowed Russian forces to use the south-eastern coasts of the Black Sea in their operations against Persia. Muḥammad 'Alī Mirzā, governor of Kirmānshāh, subsequently engaged in intermittent hostilities with Turkey. War was declared in 1821 and continued until 1823 when hostilities were concluded by the Treaty of Erzerum (for text see Aitchison, xix ff.). A series of major incidents between 1833 and 1842, including the burning of Muḥammara by the pasha of Baghdād in 1837 and the temporary occupation of Sulaymānī by Persia in 1840, again brought the two countries to the brink of war. In 1843 an Anglo-Russian offer of mediation was accepted. The proceedings were nearly wrecked at the outset by a massacre of Shī'īs at Karbalā'. A second Treaty of Erzerum was finally signed on 31 May 1847, by which the lowlands of Zuhāb were ceded to the Ottoman Empire and the highlands to Persia (for text see Aitchison, xlvi ff.). The latter gave up all claim to Sulaymānī while the Ottoman Empire recognized Persian sovereignty over Muḥammara. The two parties further agreed to appoint commissioners to delimit the frontier. The commission consisting of four commissioners, one each appointed by Persia, Turkey, England and Russia, met in 1849. Its proceedings were interrupted first by the Crimean war (1854-6) and then the Anglo-Persian war (1856-7). In 1869 a protocol was signed, laying down a band of territory twenty-five to forty miles wide within which the commissioners considered the frontier ought to be found. Repeated disputes between Persia and Turkey and acts of armed aggression bedevilled the work of the commission, and the frontier was not finally delimited until 1914 shortly before Turkey's entry into World War I (see further C. J. Edmonds, *Kurds, Turks and Arabs*, London 1957, 125 ff.).

When Ākā Muḥammad Khān left Khurāsān in 1796 Persian control had not been fully restored. The reconquest of Harāt, which had formed part of the Ṣafawid empire in its heyday, together with the reassertion of Persian power up to the Oxus remained

the aim of Fath 'Alī Shāh, Muḥammad Shāh, and, in the first part of his reign, Nāṣir al-Dīn Shāh. In the event, the reincorporation of Harāt into the Persian Empire was largely frustrated by British actions, and Persia and Britain were brought to the brink of war in 1838-9 (see *Correspondence relating to the affairs of Persia and Afghanistan*, London 1839; J. W. Kaye, *History of the war in Afghanistan*, 3 vols., London, 1857; J. A. Norris, *The first Afghan war 1838-1842*, Cambridge 1967, 82 ff.), and to actual war in 1856 (G. H. Hunt, *Outram and Havelock's Persian campaign*, London 1858; J. B. Kelly, *Britain and the Persian Gulf 1795-1880*, Oxford 1968, 452 ff.). By the Treaty of Paris (4 March 1857) which brought the war to a close, Persia recognized the independence of Afghanistan (for text see Aitchison, 81 ff.). In 1870, the shah proposed that the boundaries between Persia and Kalāt should be settled. Commissioners nominated by Persia, Kalāt and Britain met and their proposals were accepted in the following year. The rival claims of Persia and Afghanistan to Sistān, which more than once threatened to rupture their friendly relations, were also settled by British arbitration in 1872.

The subjugation of the Guklān, Yamūt, and Tekke Turkomans, who were in the habit of raiding deep into Persia and kept the Turkoman steppe in a state of permanent disorder, also proved beyond the power of the Persian government, and opened the way to a Russian advance to Marv and the Akhal. Persia was forced to abandon her claim to sovereignty over the area and in 1869 Nāṣir al-Dīn Shāh signed an agreement with Russia for a new frontier along the Atrak River, which was later superceded by the Akhal-Khurasān boundary convention of 1881 (for texts see Aitchison, liv ff. and lxxi ff.).

Persia's geographical situation on the frontiers of Russia on the one hand and of India and the Persian Gulf on the other, if nothing else, would have involved her in the political rivalries of Napoleonic France and England (with both of whom treaties were signed; for texts see J. C. Hurewitz, *Diplomacy in the Near and Middle East*, New York 1956, i, 77 ff., and Aitchison 45 ff.) and later in the struggle between Russia and Britain, even if she had not herself, at first, sought to use these rivalries to regain some of the territories which she had held at the height of Ṣafawid power. Fath 'Alī Shāh and 'Abbās Mirzā quickly realized that if Persia was to resist the Russian drive through Georgia, she must have modern weapons and adopt modern military methods. Modernization, thus, first began in the military field. But neither Fath 'Alī nor 'Abbās Mirzā understood that modernization, whether in the military field or any other, to be successful, demanded a fundamental change in the finances and administration of the country. The result of this failure, which was equally marked in the case of the later rulers, was that the material resources to carry out the desired changes were not made available.

As in earlier times, the army was largely formed by provincial contingents, irregular cavalry and infantry, and a small body of regular troops. Under Fath 'Alī Shāh there was a considerable expansion in numbers, the most numerous contingents coming from Ādharbāyājān and 'Irāk-i 'Aḍjām, while the Kādjār tribe furnished a large proportion of the standing army. Pay was often in arrears and while on campaigns the army lived on the country. Partly because there was no proper provision for the pay of the troops and partly for climatic reasons, campaigns were seasonal. Some knowledge of European

tactics was brought by Russian deserters and renegades, but the first serious attempt at military reform was made under the guidance of French officers who accompanied General Gardane's mission, which reached Persia in December 1807 under the Treaty of Finkenstein (4 May 1807). The treaty was rendered null and void by the Peace of Tilsit (1 July 1808) and the mission was withdrawn.

The next attempt to introduce European discipline and methods was made by a number of English officers who came to Persia with the mission of Sir John Malcolm in 1810 and passed into Persian service (see further J. Morier, *Second journey through Persia, Armenia and Asia Minor to Constantinople between the years 1810 and 1816*, London 1818, 211 ff.). Under the Anglo-Persian treaty of 1814 the British government continued to supply officers for drill and discipline, arms and munitions, but most of the officers were withdrawn in 1815 consequent upon a dispute over the subsidy to be paid under the treaty. After Napoleon's reverses in 1814 various officers came to the east, some of whom were engaged by 'Abbās Mirzā and Muḥammad 'Alī Mirzā, but in the years between the peace of Gulistān and the renewal of the Russian war in 1826 the army was neglected. In the last years of Fath 'Alī Shāh's reign renewed efforts were made to reorganize the army and a detachment of officers and sergeants from India arrived shortly before his death and were employed in various parts of the country raising and drilling troops. They withdrew in 1836 on the rupture of Anglo-Persian relations over Harāt. A number of French officers were subsequently engaged but achieved nothing. By the end of the reign of Muḥammad Shāh the army, including the artillery, which Ḥādīdī Mirzā Ākāsi, in spite of his complete ignorance of military arts, had taken under his personal supervision, was in a state of decay.

Mirzā Takī Khān, after he became *ṣadr-i a'zam* to Nāṣir al-Dīn, began to reorganize the army as part of his policy to extend the power of the central government. Recruitment was reorganized and based on a system of quotas to be furnished by each village, district and tribe. In practice, however, the system was somewhat irregularly applied. Officers for the new army were to be trained in a new school, the *Dār al-Funūn*, which was opened in 1851, and had on its staff a number of Austrian and other foreign military and civil instructors. These various steps, however, had little immediate success, and the emptiness of the treasury after the Harāt campaign of 1856-7 precluded more radical reform. Subsequent efforts at military reform made during the ministry of Mirzā Husayn Khān Mushīr al-Dawla were also unsuccessful.

Nāṣir al-Dīn was not unmindful of the advantages of an efficient military force to maintain his own position, if nothing else, and on his second European journey, he asked the emperor of Austria for the loan of a number of instructors. A mission arrived in January 1879, to be followed shortly afterwards by a Russian mission to reorganize the cavalry, for which the shah had similarly applied to the tsar. The Austrian mission failed to achieve any results and left in 1881. The Russian officers remained and organized the Cossack Brigade, which became the most efficient regiment in the Persian army. It was a ready instrument for the Russians in the furtherance of their aims in Persia and was used by Muḥammad 'Alī Shāh in his struggles against the constitutionalists (see further G. N. Curzon, *Persia and the Persian question*, London 1892, i, 571 ff.; F. Kazem-

zadeh, *The origin and early development of the Persian Cossack Brigade*, in *The American Slavic and East European review*, xv (Oct. 1956), 351-63).

The disparity in power between Persia on the one hand and Russia and Britain on the other had been demonstrated by the Russian wars and the disputes over Harāt. Efforts at military reform, even if successful, would have done little to redress the balance between them, but would have contributed to the stability of the government and the maintenance of order, and so limited the intervention of Russia and Britain in internal affairs. As it was, both increasingly intervened in internal affairs because of the prevailing insecurity and maladministration, though their motives in doing so were different. Neither could regard with equanimity the prospect of civil war. Britain was not prepared to see the *walī 'ahd*, or another Persian prince, riding down to Tehran supported by Russian troops and the establishment of a puppet government, since this would have meant the establishment of Russia on the frontiers of India, while Russia could not afford civil war for fear that it might lead to a British occupation of southern Persia which would have blocked a Russian advance to the Indian Ocean. Persia, for her part, had no wish for subservience to either, but her dependence upon them grew, and in these circumstances it was natural that society should become divided into those who looked to Russia and those who looked to Britain.

Nāṣir al-Dīn probably had a clearer appreciation of Persia's weakness than his predecessors. Realizing that foreign intervention could not be prevented, he adopted a policy of encouraging foreign powers to invest in Persia in the hope that they would contribute to its development and prosperity, but he too did not recognize the need for radical financial and administrative reform if this policy was to be successful. It failed largely because of the disunity of Persian society, the rivalry of the powers, and the greed of the various parties concerned in the scramble for commercial monopolies and concessions. Thus, while the intrusion of France, Russia and England acted first as a stimulus to modernization, from the middle of the 19th century onwards, if not earlier, it added to the prevailing insecurity and intrigue, and so discouraged, rather than stimulated, progress and, in effect, contributed to the maintenance of the *status quo*.

The key to Persian independence was financial reform, which in turn presupposed administrative reform. Successive *ṣadr-i a'zams*, particularly in the second half of the 19th century and in the early 20th century, were harassed by demands for more money. In the reign of Āḳā Muḥammad Khān the revenue was small, but broadly speaking expenses were met. Even in the time of Fath 'Alī Shāh, in spite of the depletion of reserves by the Russian wars, the revenue from ordinary taxes (land revenue, cattle taxes, taxes on real estate in towns, and duties on merchandise), and extraordinary taxes (revenue from fines, new year presents, *ad hoc* presents, and public requisitions) balanced expenditure, though the pay of officials and of the army was frequently in arrears. During his reign there was, however, a constant drain of specie. This trend continued under Muḥammad Shāh and resulted in a heavy depreciation in the value of the *tūmān*, a rise in prices, and a general shortage of money, though conditions varied greatly from place to place and year to year. In the last three or four years of the reign of Nāṣir al-Dīn Shāh an excess of copper coinage caused much distress among the poorer sections of the population

and almost paralyzed small trade. This was withdrawn after the accession of Muḥaffar al-Dīn Shāh at great loss to the government.

By the middle of the 19th century government offices were being sold in an attempt to secure ready money, and there were signs of a financial breakdown comparable to that which had prevailed in Būyid times, prior to the emergence of the land assignment (*iḥfā'*) as the dominant political and economic institution of the state. Scarcely any provincial revenue was reaching Tehran and payments by the government were almost entirely in the form of bills, whose value was nominal. At the beginning of the reign of Nāṣir al-Dīn Shāh, Mīrzā Taḳī Khān made an abortive attempt to effect financial reform. Venality and corruption in the tax administration thereafter continued unrestrained.

Various expedients, notably the grant of monopolies and concessions to foreign concerns, were adopted by Nāṣir al-Dīn and Muḥaffar al-Dīn to provide themselves with funds. Muḥaffar al-Dīn also sought foreign loans to pay for the growing extravagances of the court, the allowances and pensions of the Kādjār princes and others, and general expenses (see further R. L. Greaves, *British policy in Persia, 1892-1903*, in *BSOAS*, xxviii (1965), I, 34-60, II, 284-307, on the question of Anglo-Russian loans). Both policies gave rise to great discontent on the grounds that Persian resources were being sold and placed under the control of foreigners.

The first major concession was the concession granted in 1872 to a British subject, Baron Reuter, providing *inter alia* for railway and road construction, irrigation works and the establishment of a national bank. There was much criticism of this concession both inside Persia and abroad, and it was cancelled as a result of heavy pressure from Russia in 1873. It was finally remodelled and signed in January 1889, Baron Reuter being accorded for a term of sixty years the grant of the Imperial Bank of Persia, which was established under a British Royal Charter in September of that year. This was the beginning of a modern banking system in Persia. In 1890 a Russian subject obtained a concession for a loan bank, which some years later became an agency of the Russian State Bank.

In March 1890 a monopoly for the sale and export of tobacco was acquired by a British subject. This was the occasion for the open expression of popular discontent. The protest against the monopoly led by the religious classes resulted in the cancellation of the monopoly (see further A. K. S. Lambton, *The Tobacco Regie: prelude to revolution*, in *St. Isl.*, xxii, 119-157, xxiii, 71-90; N. Keddie, *Religion and rebellion in Iran. The tobacco protest of 1891-2*, London 1966). The compensation paid to the Imperial Tobacco Corporation was provided by a loan contracted with the Imperial Bank of Persia in 1892.

A third concession of outstanding importance was granted in 1901, namely the concession to Mr. William Knox d'Arcy for the exploitation of natural gas, petroleum, asphalt and ozokerite throughout the Persian empire, with the exception of the five northern provinces, for sixty years. In 1909 the Anglo-Persian Oil Company was formed to operate the concession. In due course the exploitation of Persian oil resources transformed the economy of the country and profoundly affected her relations with Britain, but these developments did not reach their climax until after the fall of the Kādjārs (see further Aitchison, 23 ff.).

In the course of the 19th century there were

changes in the direction and sources of Persian trade (see further M. L. Entner, *Russo-Persian commercial relations, 1828-1914*, Florida 1965). Customs duties, which were farmed, by the end of the 19th century, formed an increasingly important proportion of the revenue. Because of the provisions of the commercial agreement concluded under Art. 10 of the Treaty of Turkomāncāy, Persia's hands in the matter of fixing the rate of duty were tied. The connexion between the customs and Persia's foreign relations was reinforced when the various foreign loans which Persia contracted were secured on the customs revenue. In 1899 Belgian officials were appointed to reorganize the customs administration. Greater efficiency in the collection of customs dues under the Belgian administration, coupled with new tariff charges secured by the Russian and British governments by agreements concluded in 1901 and 1903 respectively, aroused discontent among the merchant classes. This was an important factor in the support of these classes for the constitutional movement.

An arrangement of a rather different character from the normal concessionary agreements, but one which also emphasized Persia's weakness, was the secret agreement made with Russia in 1887 by which the shah pledged himself not to give permission for the construction of railways or waterways to foreign governments before consulting the tsar, and in 1890 a railway agreement was signed with Russia placing a ten-year embargo on railway construction (for text see Aitchison, lxxxi). There were still no railways by the end of the Kādjār period except for a few miles between Tehran and Shāh 'Abd al-'Azīm and a line from Dījlfā to Tabriz made in 1916. Lack of communications were an obstacle to trade and to the assertion of the control of the government in the provinces. In 1889 Persia had only two carriageable roads of any extent, namely from Kāzvin to Tehran and Tehran to Kūmm (Curzon, i, 486 ff., 613 ff.). Various concessions for road construction were given in the last decade or so of the 19th century, but little progress was made in road-building. In 1888 the Kārūn River was opened to international navigation (see further R. L. Greaves, *Persia and the defence of India, 1884-1892*, London 1959, 161 ff.).

Insecurity, misgovernment, poverty, and the usurpation of power were not new to Persia, and there is plenty of evidence of unrest in the Kādjār period — of rebellions by tribal leaders and others, such as the revolt of Ākā Khān Maḥallātī in 1840 (which also disturbed Anglo-Persian relations), mob violence in the towns, and movements of protest led by the religious classes, one of the most serious of which was the Bābī movement led by Sayyid 'Alī Muḥammad, who declared himself to be the long awaited *mahdī* in 1260/1844 [see BĀB]. This movement was primarily a messianic movement, the intellectual bases of which went back to mediaeval Islamic movements of revolt and heresy, and like these earlier movements was provoked largely by a sense of injustice and frustration at the shortcomings of the government.

In spite of outbreaks of unrest the control of the central government by the middle of the reign of Nāṣir al-Dīn Shāh was more firmly settled. It was weakest in the tribal and frontier areas. An important factor contributing to the extension of government control was the establishment of the telegraph under a series of conventions, the first of which was concluded in 1863 (see Aitchison, 25 ff.; Curzon, ii, 609 ff.). Both Nāṣir al-Dīn and Muẓaffar al-Dīn felt

sufficiently secure to undertake extensive European journeys, the former in 1873, 1878 and 1889 and the latter in 1900, 1902 and 1905.

Although the government had succeeded in making its influence more widely felt by the last quarter of the 19th century, the increasing dominance of non-Muslim nations over Persia, which was a marked feature of the century had, by the turn of the century, given a new dimension to internal unrest [see also *IMTIYĀZ*]. Hostility to the government began to be expressed in terms of a nationalist movement, which was at once pro-Islamic and anti-foreign. The fact that Russia could at almost any moment send troops into Persia made the Persian government increasingly reluctant to resist Russian pressure, while at the same time Persia's subservience to Russia gave rise to growing resentment. Similarly, Britain's failure to give Persia the support to which she had felt she was entitled under the various treaties which had been concluded in the reign of Fatḥ 'Alī Shāh and her refusal during the reign of Nāṣir al-Dīn to give a clear commitment to come to Persia's aid in the event of a Russian attack had created annoyance, which was added to by the Harāt question, measures to suppress slavery and piracy in the Persian Gulf, and the British presence there, which, from time to time, was felt to threaten Persian independence.

New intellectual currents coming through diplomacy, travel, trade, Islamic modernist movements outside Persia, and education (though apart from the *Dār al-funūn* there were few modern schools until the end of the 19th century) also contributed to this development, and to the progressive dissolution of the old institutions of government and society. Little by little a new system of government was worked out and the people who were to work it came to the fore. In the last ten years or so of the 19th century these trends were accelerated and reached their climax with the grant of the constitution in 1906 and the Supplementary Fundamental Laws in 1907 [see *DUSTŪR* and *DJĀM'ĪYYA*]. In the first instance it was members of the Ministry of Foreign Affairs who first began to seek the reasons for Persia's backwardness *vis-à-vis* Europe and remedies for her ills. Among those who played a leading part in this respect were Ḥusayn Khān Muṣṭafī al-Dawla, who had served in consular posts in India and the Ottoman Empire, Malkam Khān, a Persian Armenian from Iṣfahān, who had been educated in Paris and was Persian minister in London from 1872 to 1889, Mīrzā Yūsuf Khān Muṣṭafī al-Dawla, Mīrzā Muḥammad Khān Maḥdī al-Mulk Sīnakī (d. 1881), Amīn al-Dawla, and others. Persians living abroad, or who had travelled abroad, such as Mīrzā Ākā Khān Kirmānī, who lived in Constantinople, and Ākā Mīrzā Furṣat Shīrāzī, who travelled in India, and merchants engaged in foreign trade also contributed to the spread of new ideas. An important part was also played in this by the Persian press published abroad (there were no newspapers apart from the official gazette in Persia until after the death of Nāṣir al-Dīn Shāh), such as *Akhtār* founded by Mīrzā Ākā Kirmānī in Constantinople in 1875, *Kānūn* founded by Malkam Khān in London in 1890, and *Habl al-Maṣīn* first published in Calcutta in 1893 (see also *KAWMĪYYA*, Persia).

The 'ulamā' also played a prominent part in the events leading up to the constitutional revolution and largely provided its leadership. This was not due only, or even chiefly, to the influence of the pan-Islamic movement led by Djāmāl al-Dīn Afghānī [*q.v.*], though this had a considerable effect, but rather to the position of the 'ulamā' in society. Under

the Kādjārs the religious institution once more stood over against the state and was not wholly incorporated into it. The 'ulamā' fulfilled certain functions for the government and many of them received allowances and pensions from the government, which to some extent compromised them, but on the whole they were listened to with respect, both by the government and the people. From time to time they were able to exercise restraint upon the government and to act as peacemakers, though they were also sometimes associated with movements leading to outbreaks of violence in the cities. In the last resort, they provided a refuge for the people against injustice, and the people looked to them for protection and the fulfilment of their aspirations.

Fath 'Ali Shāh took pains to win the favour of the 'ulamā'. Later rulers were more concerned to limit their power. Muḥammad Shāh, although he gave pensions and allowances to the religious classes, was more inclined to the Ṣūfīs than to orthodox Islam and he attempted to bring the 'ulamā' under closer control. At the outset of the reign of Nāṣir al-Dīn Shāh, Mīrzā Taqī Khān continued this policy and alienated the religious classes by reducing their salaries and pensions. He also attacked the practice of asylum [see BAST], which Bahman Mīrzā, when governor of Ādharbāyjdān on behalf of Muḥammad Shāh, had also sought to limit. Tentative efforts to control *wakf* revenue, the spread of secular education with the setting up of the Dār al-Funūn, and attempts at judicial reform by Ḥusayn Khān Mushīr al-Dawla when he was *sadr-i a'zam* also created disquiet among the 'ulamā', who began to feel their position menaced by the actions of the government. They also felt Persia's traditional way of life and national independence threatened by the intrusion of foreigners. Partly for these reasons, when dissatisfaction at increasing internal misgovernment and hostility to growing foreign intervention came to a head in the early 20th century, it was expressed in a nationalist movement, articulated paradoxically largely in terms of Islam and led mainly by the 'ulamā' (see further A. K. S. Lambton, *The Persian 'ulama and constitutional revolution*, in *Le Shi'isme imamite*, Paris 1970, 245-70; eadem, *The Persian constitutional revolution of 1905-6*, in *Revolution in the Middle East*, ed. P. J. Vatikiotis, London 1972). It was not, as such, a revolutionary movement, and the understanding and aims of the various groups supporting it varied. In essence it was a protest against tyranny. So far as there was a demand for the adoption of modern techniques of government, its purpose was to restrain the arbitrary exercise of power by the shah in order to limit tyranny and to secure the country from foreign influence and intervention. So far as there was a demand for freedom, the freedom envisaged was seen strictly within the limits set by Islam and did not involve a revolutionary concept. The underlying intention of the majority of people who supported the movement was to carry out the Islamic duty of enjoining the good and forbidding the evil in such a way that the ruler would be duly warned and restore just government. Their aim was the restoration of "good" government. Since it followed from the traditional dichotomy between Islamic, *i.e.*, just, government and usurpation, *i.e.*, *zulm*, that the reassertion of just government meant "good" government by a just ruler, they did not demand a reformulation of the theory of government such as would provide for checks and balances in the exercise of power.

The victory of the constitutionalists in 1906 was

shortlived. There was little to hold the various groups together once they had overthrown the despotism. Their confidence, moreover, was shaken by the conclusion of the 1907 Anglo-Russian agreement, which roused great resentment (see further R. L. Greaves, *Some aspects of the Anglo-Russian Convention and its working in Persia, 1904-14*, in *BSOAS*, xxxi (1968), I, 69-91, II, 290-308). Muḥammad 'Ali's counter attack against the constitution was, nevertheless, defeated and he was forced to abdicate. His son, Aḥmad Shāh, succeeded him with a regency. By 1911, however, when the constitution was suspended under Russian pressure, the leadership of the constitutional movement had passed into the hands of the bureaucracy and the landowning classes.

During the First World War of 1914-18 Persia proclaimed her neutrality but this was violated variously by herself, the central Powers and the Entente. At the end of the war a chronic state of disorder prevailed and the country once more seemed on the point of dissolution. In an attempt to forestall this, the abortive Anglo-Persian agreement, which recognized the independence and integrity of Persia, provided for military advisers, a loan, and co-operation in the improvement of communications, was signed in 1919. In the following year the Bolsheviks invaded Enzeli and occupied Rasht, and a revolutionary government was set up in Gilān under Kūčik Khān.

The last phase of Kādjār rule began with the *coup d'état* organized by Sayyid Diyā' al-Dīn and Riḍā Khān in 1921. The first action of the new government was to conclude the Perso-Soviet treaty of 1921, by the terms of which the Soviet government declared all treaties and conventions concluded with Persia to be null and void, but made it a condition that these concessions should not be ceded by Persia to a third power. The measures taken by Sayyid Diyā' to create an orderly administration quickly aroused opposition. He quarrelled with Riḍā Khān and was overthrown. The latter, as minister of war, then began to reassert the authority of the central government. The movement led by Kūčik Khān collapsed owing to internal dissension and the withdrawal of Russian support. In 1923 Riḍā Khān became prime minister. Some two years later, in 1925, Aḥmad Shāh was deposed and the crown of Persia conferred by a Constituent Assembly upon Riḍā Khān as Riḍā Shāh Pahlavi.

Although Persia, at the close of the Kādjār period, was once more in a state of disorder and weakness, and Riḍā Shāh like Ākā Muḥammad was faced, in a rather different form, with the problem of reimposing the authority of the central government and reasserting Persian independence against foreign powers, Persia had been transformed during the Kādjār period from a mediaeval into a modern state. At the beginning of the Kādjār period the theoretical purpose of the state had been to secure a temporal framework within which the individual Muslim could live the good life according to the precepts of the *shari'at*, from which it followed that the stability of the state and good government were bound up with right religion. The functions of government had been confined broadly to defence against external aggression and the maintenance of internal order. Political power had lain in the hands of the military classes, consisting primarily of the tribal leaders. The land assignment (*ikhṭā'*; *tuyūl*; *su-yūrghāl*) was still one of the most important political and economic institutions of the country. The functions of the bureaucracy had been mainly limited to the provision of the financial means to enable the government to carry out its duties. The 'ulamā', on the whole, had been a sta-

bilizing force, while the merchants had played an important part in the transmission and provision of funds for the state. By the end of the period Persia had become a modern territorial secular state, drawn into and affected by international politics. She had acquired a constitution and modern forms of government (though the spirit in which the new institutions were worked had not been transformed to the same extent as had been the outward forms). The functions of government had been greatly extended, and political power had become more widely based.

**KADR** [see KADĀ, RAMADĀN].

**KADRĪ**, Persian poet born at Shīrāz, who flourished in the first half of the 11th/17th century (and is not to be confused with his namesake Kadri Shīrāzī, active in India during the reign of Akbar). The account of his early years is given by Taḳī al-Dīn Kāshī in the *Khulāṣat al-ash'ār*. He is known for two short epic poems, *Djāngnāma-yi Kīshm* and *Djārānnāma*, commemorating the conquest of the island of Kīshm and the town of Hormūz by Imām Kūllī Khān of Shīrāz during the reign of 'Abbās I in 1032/1623.

A manuscript of the first, brought to Italy by Pietro della Valle, was published by L. Bonelli in *Rend. Lin.*, vi; the second is preserved in a British Museum Ms, Add. 7801 (copied in 1109/1697).

(M. MOHAGHEGH)

**KĀF**, 22nd letter of the Arabic alphabet, transcribed *k*, numerical value 20, according to the eastern order [see ABḩĀḩ].

Definition: *occlusive, postpalatal, surd*; postpalatal, the medial position of *k* in the variations that it can be subjected to, according to the vowel with which it is in contact (see H. Fleisch, *Traité*, § 2 b). According to the Arab grammatical tradition: *shādāda, mah-mūsa*, in *makhhrādj*: the region a little less further back than that of *kāf*, the furthest back in the mouth (Sibawayhi, ii, 453, l. 6-7, ed. Paris; al-Zamakhshārī, *Mufaṣṣal*, 188, l. 17, 2nd ed. Broch); the region in question is the postpalatal or prevelar region, but the Arab grammarians are not specific; al-Khalīl describes the *kāf* as *lahawiyya*, like the *kāf* (al-Azhārī, *Le Monde Oriental*, xiv (1920), 45, l. 7-8; *Mufaṣṣal*, 190, l. 19-20); this is placing the *makhhrādj* of the *kāf* too far back.

Remark: H. Blanc (*The "sonorous" vs. "muffled" distinction in old Arabic phonology*, in *To honor Roman Jakobson*, The Hague-Paris 1967, 306) sees in the pronunciation of Arabic in the time of Sibawayhi, in 'Irāḩ in the eighth century, two occlusives, *aspirated*, *surd* and probably strong: *k* and *t*; he adduces (*ibid.*, 298) the researches and reconstructions of I. Garbell in *Remarks on the historical phonology of an East Mediterranean Arabic* (*Word*, xiv (1958), 303-37) and also his own documentation, with reference to his communication: *The fronting of Semitic g and the Qāl-gāl dialect split in Arabic*, in the *Proceedings of the International Conference on Semitic Studies* (Jerusalem 1969). A correct interpretation of Sibawayhi's doctrine, in phonetics, does not, in our view, allow us to see in *k* and *t* *aspirated* occlusives; moreover, the reconstructions of I. Garbell depend on the basic principles that she has provided for herself (*Word*, 306-9, Stage 1) (see the presentation of H. Blanc, *loc. cit.*, 298).

The articulation described is a phoneme; for the phonological oppositions that define the phoneme *k* see J. Cantineau, *Esquisse d'une phonologie de l'Arabe classique* (in *Mémorial J. C.*, Paris 1960, 173); for the incompatibilities see *ibid.*, 201.

*Kāf* in classical Arabic is a continuation of *k* of common Semitic, preserved in ancient Semitic, but subject to spirantisation (*k* > *kh*) in Aramaic and Massoretic Hebrew, when it is immediately preceded by a vowel, however short.

Alterations: Sibawayhi (ii, 452, l. 13-4) mentions a faulty pronunciation of *k*: *kāf* between *djīm* (in fact *gʷim* [see *ḐĪM*]) and *kāf*; this is, in our view, very probably a *g* pronunciation (cf. M. Bravmann, *Materialien*, 49). According to Ibn Durayd (Ibn Ya'īsh, *Sharḩ al-Mufaṣṣal*, 1463, l. 11-2, ed. G. Jahn), it was a dialectal pronunciation of the Yemen, widespread among the people of Baghdād, e.g.: \**gamal* for "camel", \**ragul* for "man". J. Cantineau considers that it must be an affrication of *k*: *k* > *č* (*Cours de Phonétique arabe*, in *Mémorial J. C.*, 64-5), an unconditional alteration. *Kashkasha* and *kaskasa* were known among certain Arab tribes. These phenomena caused *k* to become, respectively, *č* (or even *sh*) and *ts* (or even *s*), see H. Fleisch (*Traité*, § 11 d and the references)—final *k* of a word may be assimilated to initial *k* of the following word, thus: *-k k* > *-kk* (see *ibid.*, § 12 o).

For the conditional and unconditional alterations of *k* in the modern Arabic dialects see J. Cantineau, *Cours* (in *Mémorial J. C.*, 66-7) and the references of D. Cohen (*Le dialecte arabe Hassāniya de Maurétanie*, Paris 1963, 31, n. 1).

*Bibliography:* Apart from the references in the text: H. Fleisch, *Traité de Philologie arabe*, i, Beirut 1961, § 44, c. j. § 45 g, § 46 a, § 49 i, k; M. Bravmann, *Materialien und Untersuchungen*

zu den phonetischen Lehren der Araber, Göttingen 1934, 47, for aspirated *k*. (H. FLEISCH)

**KĀF**, 21st letter of the Arabic alphabet, transcribed *k*, numerical value 100, according to the eastern order [see **ABJAD**].

Definition: *occlusive, uvulovelar, surd*. According to the Arab grammatical tradition: *ṣhadida, madj-hūra*, in *makhraj*: the rear-most part of the tongue and the highest part of the upper palate (Sibawayhi, ii, 453, l. 5-6, ed. Paris; al-Zamakhshari, *Mufaṣṣal*, 188, l. 16-7, 2nd ed. Broch), that is to say: the root of the tongue is in contact with the very lowest part of the soft palate and the uvula and the latter disappears during the retention in the articulation: al-Khalil correctly says *lahawiyya* "uvular" (al-Azharī, *Le Monde Oriental*, xiv (1920), 45, l. 7-8; *Mufaṣṣal*, 190, l. 19-20).

The Arab grammarians place *kāf* not among the *muḥbaka* "velarised" (emphatics), but among the *musta'liya*, which prevent *imāla* [q.v.] (Sibawayhi, ii, 285, l. 17-20; *Mufaṣṣal*, 190, l. 8). *Kāf*, in fact, is not an emphatic in Arabic: thus, in the form *ista'ala*, a *k*, as the 1st radical consonant, has no effect upon the *i* with which it is in contact, unlike the emphatics. So we find, for example: *iktatala*; it is its velar articulation that may involve the velarisation of *s* (*s* > *ṣ*), a consonant of the same root (Sibawayhi, ii, 279, l. 18; H. Fleisch, *Traité*, § 11 c). However, like the emphatics, it has the peculiarity of provoking a movement of the glottis: a constriction, which may become an occlusion and convert the *kāf* into *hamza*.

Remark: there exists currently, among populations that have preserved the pronunciation of *kāf* by living tradition, a deeper articulation: an occlusion against the wall of the pharynx, which causes the uvula to appear spread out on the tongue during the retention (see H. Fleisch, *Études de Phonétique arabe*, in *MUSJ*, xxviii (1949-50), 242, n. 2).

Arab grammarians since Sibawayhi (ii, 453, l. 17) have placed *kāf* among the *madj-hūra* (voiced); "but the traditional pronunciation of classical Arabic makes a surd of it" (J. Cantineau, *Cours de Phonétique arabe*, in *Mémorial J. C.*, 67). A voiced pronunciation of *kāf* must certainly have existed, at least in an important part of the ancient Arab world, otherwise it would be difficult to explain precisely how the manner of pronouncing this ancient *kāf* should have become at present a principle in discriminating between the vernaculars of nomads, in which it is *voiced*, and those of sedentary populations, in which it is a *surd* (see H. Fleisch, *Traité*, § 46 h and the references; J. Cantineau, *Cours, ibid.*, 68 and the references). See (*ibid.*, 68-9) the vernaculars that have a *surd kāf* or one reduced to *hamza* and (69-70) those that have a *voiced kāf*, a *gāf*.

The *kāf* is a phoneme; for the phonological oppositions that define it, see J. Cantineau (*Esquisse d'une phonologie de l'arabe classique*, in *Mémorial J. C.*, 174); for the incompatibilities (*ibid.*, 201).

The *kāf*, which is not an emphatic in classical Arabic, is the continuation of a common-Semitic *kāf* that was emphatic (J. Cantineau, *Le consonantisme du sémitique*, in *Mémorial J. C.*, 287; M. Cohen, *Essai comparatif sur le Vocabulaire et la Phonétique du Chamito-sémitique*, Paris 1947, 123); but it is difficult to indicate precisely the nature of this emphasis (see J. Cantineau, *ibid.*, 291), and, according to M. Cohen (*ibid.*) it cannot be determined whether the Hamito-Semitic phoneme had a *surd* or a *voiced* articulation, but it can be confidently stated that its quality of *surd* or *voiced* was of secondary importance in comparison to its emphasis.

Alterations: final *k* of a word can be assimilated to initial *kāf* of the following word, thus: *-k k-* > *-kk-* (see H. Fleisch, *Traité*, § 12 o). Arab sources speak of an unconditional change: *k* > *k* among some tribes; this fact is difficult to interpret (see *ibid.*, § 9 h).

In modern dialects, we have seen above the transfer of *kāf* to *hamza* and the question of *voiced kāf*. J. Cantineau (*Cours, ibid.*, 70) suggests a possible dissimilation of *k* into *k* before a *t*, in oriental as well as North-African vernaculars. The explanation involving a dissimilation seems an inadequate solution to D. Cohen (*Le dialecte arabe Hassāniya de Maurétanie*, Paris 1963, 35). There are examples of the change of *kāf* into *ghayn*: in Syria (G. Bergsträsser, *Sprachatlas von Syrien und Palestina*, in *ZDPV*, xxxviii (1915), 216 (§ 95) and *Karte* 37; J. Cantineau, *Cours, ibid.*, 70-1); in certain "North-Arabian nomad" vernaculars, in the majority of the vernaculars of the Algerian, and, apparently, Moroccan, Sahara (J. Cantineau, *ibid.*, 72); in *Hassāniyya* (D. Cohen, *ibid.*, 35-7 and the references).

*Bibliography*: Apart from the references in the text: H. Fleisch, *Traité de Philologie arabe*, I, Beirut 1961, § 2 c, § 44 c, j, n, § 46 a, § 48 b, § 49 i; M. Blanc, *Ibn Durayd on the Qāf of the Banū Tamim*, in *Proceedings of the International Conference on Semitic Studies*, Jerusalem 1969, 33-4; see also, *ibid.*, 15-16, 28-32. (H. FLEISCH)

**KĀF**, in Muslim cosmology, the name of the mountain range surrounding the terrestrial world. There is little doubt that this conception is borrowed from Iranian traditions. These make the Alburz [q.v.] the mythical mountain at the edge of the world, and the home of the gods. All the other mountains in the world have come from the Alburz by underground ramifications. This mountain (the high mountain: Hara-berezayti) surrounds all the world, but also a lake with the name of Wurukasha; however, according to the *Bundahishn*, this lake itself, although confined to the edge of the world, does not form a circular moat around it. The same work, talking of the geography of these mythical regions, gives the name of a mountain: *Kāf* (cf. Windischmann, *Zoroastrische Studien*, Berlin 1863, 7, 73, 75, n. 1).

This geography interlocks with another, again an Iranian one, but with horizons limited to those of the Iranian world itself, and not the universe taken as a whole. Here the Alburz is the mountain rampart which bounds the Iranian world to the north. This is doubtless what makes Yākūt say (iv, 18) that the *Kāf* was formerly called Alburz; cf. also Mustawfi, *Nuzhat al-kulūb*, GMS, xxiii, i, 191-2. Geiger (*Ostiranische Kultur im Altertum*, Erlangen 1882, 42-3) thinks that Lake Wurukasha originally referred to a definite place (Aral or Caspian Sea), but that since then, from the time of the *Avesta*, it has been relegated to the realm of myth. On the Alburz - Hara-berezayti system and Lake Wurukasha (Vārukasha), cf. Ritter, *Die Erdkunde oder allgemeine vergleichende Geographie*, Berlin 1822-9, viii, 42-3; F. Spiegel, in *ZDMG*, vi, 85, and *Eranische Altertumskunde*, i, Leipzig 1871, 191 ff.; W. Gieger, *op. cit.*, 42-3; F. v. Adrian, *Der Höhenkultus asiatischer und europäischer Völker*, Vienna 1891, 287-8.

Iranian cosmology has fairly close links with that of the Hindus. In their writings, particularly in the *Purāṇas*, they deal with the question of the fabled

mountain chain of Lokāloka, which separates the visible from the invisible world, and which rises above the utter darkness. On the Lokāloka, cf. Spiegel in *ZDMG*, vi, 86, J. Dowson, *Classical dictionary of Hindu mythology*, London 1879, 180. According to the doctrine of the Jaina, the circular mountain of Mānūṣottara, which is situated in the midst of the continent of Puṣkarawara, forms the frontier of humanity: cf. Jacobi, in *ZDMG*, ix, 312.

In general terms, the idea of a mountain-boundary of the world, situated in the north, as it appears in the Indo-Iranian tradition, was very widespread among the peoples of the ancient Orient. Perhaps, in the last analysis, the origin of this could be sought in Babylonian cosmology; cf. F. Delitzsch, *Wo lag das Paradies?*, Leipzig 1881, 29, 117-8; F. Hommel, *Aufsätze und Abhandlungen*, ii, Munich 1900, 345-6; Zimmern, *Die Keilinschriften und das alte Testament*, Berlin 1903, 353, 355, 620. Traces of the same conceptions are also to be found among the ancient Hebrews: cf. W. Gesenius, *Kommentar über den Jesaia*, ii, Leipzig 1821, 316-7 (where analogous opinions found outside the Bible are also examined in detail); Dillmann-Kittel, *Der Prophet Jesaia*, Leipzig 1898, 134. Lastly, to return to the Hindus, the Meru which in ordinary Buddhist thought is considered to be the centre and navel of the earth (cf. W. Foy, in *Festschrift E. Windisch*, Leipzig 1914, 213-4; E. W. Hopkins, *Epic Mythology*, Strasbourg 1915, 253, index; Roscher, *Neue Omphalos-Studien*, Leipzig 1915, 72), is at times thought to be the mountains of the Himalaya bounding the Hindu world to the north. In this connexion it may be remembered that for the Greeks too, Olympus, the home of the gods, marked the frontier of their world to the north, in Thessaly.

Already Gesenius (*op. cit.*, 317) and Rosenzweig (in his edition of the *Yūsuf u-Zalīkha* of Džāmi, Vienna 1824, 185) realized that the Muslim conception of the mountain Kāf had precedents, the most ancient being those Indo-Iranian traditions we have mentioned. But these legacies have connexions with the cosmological traditions of Islam itself as they are presented in the *Qurʾān* and *Hadīth*; an account of these themes can be found in T. Fahd, *La naissance du monde selon l'islam, in Sources orientales. La naissance du monde*, Paris 1959, 237 ff.

The general tendency of the classical Muslim world, apart from learned theories, is to consider the world as a flat disc. This manner of looking at it, which seems to result from certain *Qurʾānic* passages (cf. e.g., *Qurʾān*, XV, 19, LXXIX, 30: God spread out the earth), is found in the traditions and consciousness of the people. The mountain of Kāf is separated from the terrestrial disc by a region which men cannot cross, a dark area which would stretch for four months walking, according to a saying of the Prophet (cf. the Persian version of Ṭabarī-Balʿamī, tr. Zotenberg, i, Paris 1867, 33). But the mountain of Kāf does not only surround the earth: it also encloses the Ocean which forms a girdle around the earth.

According to the descriptions, in particular those of Muṭahhar b. Ṭāhir al-Maḳḳīsī, Yāḳūt, Kazwīnī and Ibn al-Wardī, the mountain of Kāf is made of green emerald, of which the sky reflects the colour. But others say that only the rock on which Kāf rests is of emerald. This rock (*al-ṣakḥra*) is also called a stake (*wataḍ*); God made it to support the earth, which without it would not be able to stand up by itself. That is why the Persian version of Ṭabarī affirms that if Kāf did not exist, the earth would shake constantly, and no creature would be able to

live on it: this latter idea can be compared with the role assigned to mountains in the architecture of the world by the *Qurʾān* (XIII, 3 and *passim*).

The existence of Kāf combines with other conceptions relating to the supports of the earth. A tradition contained in *Ḳazwīnī*, i, 146, tells how in the first ages, since the earth was oscillating in all directions, God created an angel who took it on his shoulders and grasped it with his hands (compare with the myth of Atlas); the angel had as his support a rectangular rock of green hyacinth, itself borne upon a giant bull which rests upon a fish swimming in the water. Ibn al-Wardī, who repeats these details (p. 12, 15-6), specifies that the mountain Kāf has as its base the rock of hyacinth. Elsewhere the same author (13, 17-8) increases the number of the supports of the earth, with the exception of the angel, and varies the hierarchy of elements already quoted. Other variants are pointed out by A. J. Wensinck, *The Ocean in the literature of the western Semites*, in *Verh. Ak. Amst.*, Phil. Sect., new series, xix/2 (1918), 18 and n. 2, and J. Meyer, *Die Hölle im Islam*, Basle 1901, 46. The Muslim Iranians describe the animal supporting the earth now as a bull (cf. Džāmi, *op. cit.*, 13; Rosenzweig, *op. cit.*, 190b; Vullers, *Lex. Pers.-Lat.*, ii, 946a), now as a hybrid of bull and fish (cf. Firdawsī, *Šāhnāma*, ed. Vullers-Landauer, Leiden 1877-84, 38, 444; Vullers, *Lex. Pers.-Lat.*, ii, 947a). Similarly, popular belief in Baghdād long talked of a bull and a fish as supports for the earth (cf. H. Petermann, *Reisen im Orient*, ii, Leipzig 1861, 30r). Amongst the inhabitants of the countries round the Red Sea, there reigned the belief that the earth rests on the back of gigantic bulls (cf. E. Rüppel, *Reise in Abyssinien*, i, Frankfurt-am-Main 1838, 256). *Ḳazwīnī* gives for the bull and the fish the names of the biblical monsters Leviathan and Behemoth, proving in that way that these conceptions, taken over by the tradition of the Muslim world, are connected with ancient biblical ideas, which themselves go back to the Babylonian tradition of the chaos. But, on the other hand, the theme of the bull carrying the earth is also found in India, and the rock from which the mountain Kāf springs can doubtless be identified with the stone *Šetiyya* in which Jewish legends see the umbilical stone of the earth, which God cast down into the depths of chaos or of the Ocean as the support of the earth (cf. for this legend Feuchtwang in *MGWJ*, liv (1910), 724-5; W. H. Roscher, *op. cit.*, 73-4). It must be noted, however, to end the theme of the supports, that one tradition (*Ḳazwīnī*, i, 144) maintains that God placed the earth in the universe without anything surrounding it or supporting it.

Kāf is thought to be the mother-mountain of all the mountains of the world. They are linked to it by subterranean ramifications; when God wants to punish a people, or to destroy a country, He sets one of these ramifications in motion, thereby causing an earthquake. Others believe that the earthquakes are due to the fact that the bull, wearied by his burden, kicks, thus shaking the earth. However it might be, Kāf plays an essential role in the cosmos: it is the primary mountain, the one which sees the sun pass on its course, and it is given a certain human appearance with a head and a face.

Inaccessible to men, it marks the edge of the world; therefore its name is used metonymically with this latter meaning (cf., e.g., Džāmi, *op. cit.*, 1). No-one knows what lies beyond; but some, while maintaining that this beyond belongs to the realm of eternal life, undertake to describe it: the country would be white like silver, stretching over forty days'

walk, and inhabited by the angels; stretching beyond Kāf there would be a land of gold, seventy of silver, and seven of musk, each one stretching in each direction over ten thousand days travelling, and each one populated by angels. Kāf with all the countries beyond can also be given as the home of the *djinn*s. But above all, Kāf is thought to be the haunt of the fabulous bird Simurgh, a sort of griffon with characteristics similar to those of the 'Ankā, [q.v.] of the Arabs. Existing since the beginning of the world, this marvellous bird then withdrew to Kāf in complete solitude, and lives there contented as a wise counsellor consulted by the kings and heroes of old. Kāf, its home, on account of this has been given the name, especially in poetry, of "mountain of wisdom", or "mountain of contentment". In the *Manẓūḥ al-Ṭayr*, the Persian poet Farīd al-Dīn 'Aṭṭār [q.v.] describes the pilgrimage of the Ṣūfī by way of the seven stations through which the soul must pass before it loses itself completely in God, by means of the allegory of a very difficult journey filled with adventures, accomplished by a bird, traversing the seven valleys, until it reaches the mountain Kāf, where their very wise king Simurgh is enthroned.

Kāf also plays a certain role in the literature of tales; this mountain is found in the *Thousand and One Nights* (486th, 624th, and 778th Nights). On their side some exegetes of the Qurʾān interpret the letter *kāf*, which stands at the head of Sūra L, as referring to the mountain Kāf (references in R. Blachère, *Introduction au Coran*, Paris 1959, 147).

In purely terrestrial geography, no longer cosmological, Kāf at times denotes the part of the high Asiatic chain of mountains which borders the Muslim world to the north, especially the Caucasus and the mountains of northern Persia; that is why the Dāmarwānd [q.v.], celebrated in the *Shāhnāma* as the scene of the wonderful deeds of the sovereigns, rulers and heroes of ancient Iran, is also given as the country of Simurgh. These conceptions naturally assumed less importance with the progress of geographical knowledge, but the Caucasus in particular remained as the stage for stories "of the far ends of the earth", for example the one in the Qurʾān of the rock of Moses and the spring of life (cf. Ibn Khurrādādhbih, 124, Ibn al-Fakīh, 287, Muḥaddasī, 46, *Hudūd al-ʿālam*, 449; on the Caucasus from this viewpoint as border-mountain, cf. B. Munkácsi, *Der Kaukasus und Ural als "Gürtel der Erde"*, in *KS*, i, 236 ff.).

Let us note finally the connexions between the Muslim conception of Kāf and that of the Mandaean. According to them (cf. H. Petermann, *op. cit.*, 452), the earth in the shape of a disc is bathed by the Ocean except on the northern side, where the Ocean is separated from it by a great mountain made of the purest turquoise, whose reflection constitutes the blue of the sky. Despite the opposite opinion of de Goeje (cf. Tabarī, *Intr.*, CDXXXVII), it is probable that the Madaeans drew this cosmology from Islamic sources.

AL-KĀF (EL-KEF), a town in Tunisia (pop. 18,000), capital of an administrative district with a population of 306,000 (census of 3 May 1966), situated in the region of Haut-Tell about 30 km. from the Algerian border; the altitude varies from 700 to 850 m. Since 1962, an effort has been made to replace the traditional cereal cultivation with a greater agricultural diversification, although the attempt at co-operative collectivization of the land was abandoned in September 1969. The town has also benefited from a degree of urbanization and cultural promotion. To this end, since September 1967 an annual festival has been held in honour of Jugurtha, promoted to the rank of a local hero.

The site of al-Kāf has been inhabited since the Paleolithic era, but when the town itself was founded is unknown; it was probably a Libyan or Punic foundation. The name first appears in texts dated 241 B. C. relating to mercenaries sent there by Carthage after the First Punic War to fend off the threat to the capital. The Romans called it Sicca Veneria after a Punic goddess who was identified with Venus. There seems to be no doubt that ritual prostitution was practised at her sanctuary. Under the Empire the town was called Colonia Julia Cirta Nova; it later came under Muslim control under the name of *Shiḳka Banāriya* (a corruption of Sicca Veneria) and continued to be referred to as such in Arab texts until the end of the Middle Ages. Ibn Khaldūn (d. 808/1406) knew it under no other name. The name al-Kāf appears for the first time in the works of Ibn Abī Dīnār, who wrote around 1110/1698-9, and al-Wāzīr al-Sarrādjī (d. 1149/1736-7). The latter, citing Ibn Shabbāṭ on *Shiḳka Banāriya*, found it necessary to add, "which is the town now called al-Kāf" (*Hulal*, i/2, 525), indicating that the old name had been completely forgotten. The change of name must have begun at the beginning of the period of Ottoman control (1574), which marked a new stage in the life of the town. Around a score of sites in Tunisia bear names containing the vocable al-Kāf (R. Vaufrey, *Préhistoire de l'Afrique*, index to vols. i and ii; L. Baulout, *Préhistoire de l'Afrique du Nord*, index; J. Ganiage, *Les origines du protectorat*. . . , 35, 62; *Guide Bleu de la Tunisie*, index). An al-Kifān (pl. of al-Kāf) is noted in the vicinity of Fez (Leo Africanus, *Description de l'Afrique*, i, 229 n. 270), and Yāqūt (*Buldān*, iv, 431) mentions a fortress in Syria bearing the name al-Kāf, undoubtedly the same one which Ibn Khaldūn called al-Kahf (*Ibar*, v, 842) and which Zāhir Baybars (658/1260-676/1277) captured from the Ismāʿīlis. It is apparent that the toponym al-Kāf is very widespread. No doubt a corruption of the Arabic word *al-kahf* ("cave") through the dropping of the unvoiced spirant *h*, it was used to denote any agglomeration occupying a cavernous site, particularly one that was raised up. In this respect, al-Kāf merits its name. "Standing on one of the main shoulders of a massif which can be considered as a natural citadel, the town dominates the great plains of Sers, Zanfour, Lorebus and Oued Mellègue, and at the same time commands the main routes from Tunis to Algeria" (Tissot, *Géographie comparée*. . . , ii, 378).

This "natural citadel" was frequently mentioned during the Jugurthine war, and he made it one of his bastions. When it came under Roman control, it was

raised to the status of a colony and enjoyed real prosperity under the Empire, reaching some eminence when the celebrated rhetor Arnob of Sicca (d. c. 327) taught there. Numerous vestiges of its ancient past remain in al-Kāf (the basilica of Dār al-Kūs, dedicated to St. Peter, vast cisterns, various statues, epigraphic texts, mosaics, etc.) and recent excavations have led to new discoveries (a Byzantine basilica, public baths, etc.), details of which have not yet been published. The town's great mosque is in fact an ancient building slightly altered by the addition of a minaret and a *mihrab*.

During the Muslim expansion in the Maghrib, al-Kāf was conquered (about 69/688-9) along with other places in the region by Zuhayr b. Ḳays al-Balawī after the rout of Kusayla at Mams (al-Mālikī, *Riyāḍ*, i, 30; Ibn al-Shabbāt, *Ṣilat al-Simf*, Ms. 3208, Nat. Lib. of Tunis, fol. 82 v.—83 r.). From then on and throughout the Middle Ages al-Kāf gave way to Laribus, which became the most important fortress in the region. In the middle of the 10th/16th century Leo Africanus could still sing the praises of Laribus, now no more than a few ruins 30 km. east of al-Kāf and totally eclipsed by the latter. No Arab geographer mentioned al-Kāf again until al-Bakrī (d. c. 461/1068) and he only incidentally in the course of relating a legend concerning a Berber deacon who was martyred in Christian antiquity. Yāqūt (574/1178-626/1229) reveals his ignorance of it when he says (*Buldān*, iii, 354): "Shiḳka Banāriya: a number of places in Ifrikiya (*amākin bi-Ifrikiya*)". The first and only description of mediaeval al-Kāf comes from the pen of Ibn al-Shabbāt (618/1221-681/1282). It is significant that this author is concerned solely with the town's old monuments, the evidence of its former grandeur.

Despite its eclipse, al-Kāf figures from time to time in mediaeval history. In 171/788 the Ibādī Khāridjīs suffered a crushing defeat there during the rule of the Muballabid Dāwūd b. Yazīd. Its fall, without a single blow having been struck, into the hands of the Fātimid *dā'* was a preliminary to the definitive defeat of the Aghlabid troops at Laribus. Under the Zīrids, the town played some part in the conflict between Bādīs (386/996-406/1016) and his uncle, Ḥammād, and during the Hilālī invasion (443/1052) a certain 'Ayyād (or 'Abbād or 'Imād) b. Naṣr al-Kilā'ī led a band of adventurers and founded a little kingdom there, successfully resisting all invaders. In 554/1159 the Almohads drove out his descendants and united the Maghrib. Al-Kāf is not mentioned under the Ḥafṣids, except for a battle which raged in the vicinity in the summer of 724/1324.

The town did not regain its former importance until the Ottoman era. Facing Constantine, its task was to defend the Regency of Tunis against invasion from Algeria. It was involved in the successive conflicts between Algiers and Tunis (1628, 1685, 1694, 1705, 1746, 1756, 1807) and in the squabbles among the various pretenders to the throne of Tunis. A *ḳasba* was built in 1675, and remained fortified. In 1739-40 'Alī Paṣha built a rampart around the town. The bey Ḥammūda Paṣha (1782-1813) restored the *ḳasba* in 1806 and consolidated the enceinte. During his reign al-Kāf, alongside Tunis, Ḳayrawān and Bādja, was one of the four main fortresses of the kingdom, permanently endowed with a strong garrison of at least 500 men under the command of an *agha*. Yet the town lost its strategic value: the installation of the French in Constantine in 1837 made its fortifications henceforth useless.

From then on, its decline began. V. Guérin, who

visited the town between the 8th and 10th of June 1860 observed: "Two quarters are almost in ruins and barely inhabited, which means that the town contains less than half the number of people one at first imagines. The total population consists of 4,500 Muslims, around 600 Jews, a few Maltese, and the employees of the French post-office" (*Voyages*, ii, 53-4). In 1864 it was taken in the insurrection of 'Alī Ibn Ghadhāhum, and was hit by the famine and cholera of 1867. The railway linking Tunis and Suḳ el-Arba (now Djandūba), built in 1878, accelerated its decline by depriving it of its traditional role as a commercial station between Algeria and Tunisia. The population of the town continued to decrease. In 1881 "its 45 hectares, which could have accommodated 8,000 people, contain no more than 3,500" (Monchicourt, *La région du Haut-Tell* . . . , 408). When the French protectorate was established in Tunisia, General Logerot took the town without a struggle on 26 April 1881. Three years later, in June 1884, the first French school in the interior was opened there; on July 8 in the same year it was raised to the status of a commune and from 1886 it was made the seat of a civil controller who governed alongside the caid. The municipal census of 1911 indicates its new composition, revealing also the resurgence it had begun to enjoy. Its 6,312 inhabitants comprised 4,462 Muslims, 269 of them Algerians, 650 Jews, and 1,200 Europeans, 800 of them Italians and 340 French. During the Second World War it became a vice-residency, administering that part of Tunisia which was not occupied by the Axis forces.

Al-Kāf, formerly one of the centres of Maraboutism, still possesses many *zāwiyas*, but the political influence of the brotherhoods, in the past of some importance, is now practically nil.

(M. TALBI)

**KAFĀ** [see KEFE].

**KAFĀ'A** (A.), a term which in common usage signifies at one and the same time equality, parity and aptitude, but in the terminology of *fiqh* designates equivalence of social status, fortune and profession (those followed by the husband and by the father-in-law), as well as parity of birth, which should exist between husband and wife, in default of which the marriage is considered ill-matched and, in consequence, liable to break-up. In fact, in *fiqh*, *kafā'a* works in a single direction and protects only the wife who must not marry beneath her station; it matters little, on the other hand, if the man marries a woman of socially inferior status except in two cases. The scope of the theory of *kafā'a*, which varies from school to school, and the sanctions provided for by them in regard to an ill-matched marriage are discussed in the article نِكَاح. Here, we shall restrict ourselves to a consideration of the historical, sociological, and practical factors which have contributed to the elaboration of this theory, and its social effect through the centuries.

In pre-Islamic Arabia, it was obligatory that a married couple be well-matched on a racial and tribal level, as well as in social status. It was difficult to reconcile this pre-Islamic custom, if not with the letter of the Qur'ān, at least with that spirit of relative equality between men which is inherent in it. However, from the very beginnings of Islam, the rule was generally accepted that there could only be misalliance, lack of *kafā'a*, for the woman, the misalliance of the man being of no consequence with two exceptions. On the method of interpreting this lack of *kafā'a*, always limited to the woman, there were two tendencies amongst the *fuḥahā'*; on the one hand that of the scholars of Medina, who reduced *kafā'a* to almost nothing, simply forbidding a pious woman to marry a libertine, and on the other hand the tendency of the jurists of Kūfa, from which the exacting theory of the Ḥanafī school has arisen, according to which a husband is well-matched with his wife only if he is of the same lineage, the same social status, of the same seniority in Islam, and of the same morality. In addition, in Ḥanafī law, it is required that he exercise a profession at least as honourable as that of his father-in-law; from this

arises a comparative table of the different professions, which is found in most Ḥanafī works. The conflicts between these two interpretations may be explained by the influence of the social climate in which each was developed. At Kūfa there was a population in which Arabs and non-Arab Muslims lived in close proximity, and which in the past had been marked by the idea of social class so deeply rooted in the Sasanid empire, an influence which the inhabitants of Medina had escaped. Consequently, one might think that during the succeeding centuries considerations of social hierarchy and equal standing of the families of husband and wife, which have played and continue to play such a large part in the concluding of marriages in the Ḥanafī and Shāfi'ī East, were unknown in the areas which had adopted Mālikī law. In actual fact, *i.e.*, on the plane of social realities, scarcely any difference is to be seen in this respect between the East and the Mālikī Maghrib. Here, as there, questions of social, family and economic parity have retained all their importance, even though as in the Maghrib, inequality of status is not the object of judicial sanction.

One must therefore resign oneself to explaining the importance attributed to *kafā'a* by the Ḥanafī system, not by sociological reasons, but by the fact that in this school the woman who had reached the age of puberty was permitted to conclude her own marriage without the assistance of a *wālī* [*q.v.*], even though such a proceeding was considered blameworthy. In these countries therefore the risks of misalliance were much greater for the wife's family than in countries under Mālikī law where the indispensable assistance of the *wālī* gave an important guarantee to the wife's family. This explains the tendency in certain Mālikī countries (Morocco for example), counterbalancing the relative freedom at present enjoyed by the woman to arrange her own marriage, to introduce in their recent code of personal status attenuated forms of *kafā'a*, unknown to classical Mālikī law.

**KAFĀLA** (*ḍamān* in all but the Ḥanafī school), an institution corresponding to some extent to the surety-bond in Western juridical systems, with the difference that the *fuḥahā'* distinguished two types of surety-bond. On the one hand there is the type for which the surety (*kafīl*) is binding to secure only the appearance in court of the debtor (*aṣīl* or *makḥūl*); this, known as the *kafāla bi'l-nafs*, is an institution peculiar to Muslim law. There also exists the *kafāla bi'l-māl*, by means of which the surety stands as a pledge to the creditor (*makḥūl lahu*) that the obligation of the principal debtor will be fulfilled. Moreover, the two types of surety bond may well cover a number of things.

Conditions of validity common to both types of surety-bond. Ḥanafī law insists on a formal agreement between the surety and the creditor, except according to Abū Yūsuf (whose opinion, however, has not prevailed), who regarded the

surety-bond as a unilateral commitment on the part of the surety. This conception was adopted by the other schools in which the surety-bond is an action that is valid solely through the will of the surety. The surety-bond being seen as an act of generosity on the part of the surety, it was deduced that the latter must be able to dispose of it freely; that is he must be in full enjoyment of his capacities, and must not be a minor, madman, nor "prohibited". On the other hand, the creditor being in the position of a donee profits, in Hanafi law (where his acceptance is insisted upon), from the same facilities as any other donee. Only debts and obligations which are capable of being fulfilled by the security in place of the principal debtor may be the object of a surety-bond. Therefore penal obligations and talion (*kiṣās*) are excluded, except in the case of *kafāla bi'l-nafs*, in which circumstances the surety-bond only guarantees the debtor's appearance in court.

a) *Kafāla bi'l-nafs*. This original form of surety-bond underwent a lengthy evolution in all works of *fiḥh* no matter to which school they belonged. The first *Shāfi'ī*s and the Imam al-*Shāfi'ī* in his second teaching were opposed to it: later the *Shāfi'ī* school, "influenced by public opinion and the pressure of necessity", finally permitted it. This surety-bond assumes that judicial proceedings may be instituted against the debtor; it is therefore invalid when the debtor has disappeared after the conclusion of the agreement and it is not known where he may be reached (except in *Shāfi'ī* law, in which trial by default is permissible). For the same reason the bond no longer holds good when the debtor dies, and of course the death of the surety has the same effect.

The schools deal differently with the defaulting surety, that is someone who fails in his obligation to make the debtor appear in court. In the view of the Hanafi school if, after a certain period of grace has been accorded him (for his failure may be due to the temporary absence of the debtor), he is still unable to fulfil his obligations then he is to be imprisoned, at the decision of the *qāḍī*. In these circumstances the Mālikis and Hanbalis give to the surety the benefit of the same waiting period as the Hanafis; if the debtor has still not appeared in court after this period the surety is sentenced to pay the debt of the debtor. *Shāfi'ī* law is less precise on this point, but it does not, under any circumstances, provide for the imprisonment of the defaulting surety.

b) *Kafāla bi'l-māl*. All debts may be bonded, even though their exact total is not known by the surety at the time when he enters into the contract or it is a question of an advance credit in the patrimony of the creditor (except in *Shāfi'ī* law). It is sufficient if the obligation can be fulfilled by a third for the account of the debtor, excluding (as we have seen above) obligations pertaining to the person of the debtor (*ḥadd*, *kiṣās*, fee for contractual release, etc.).

The surety bond is subject to the same restrictive clauses as those attending the principal obligation. From this it is deduced that if the creditor concedes a limit to the surety, the debtor, who has firmly pledged himself, benefits from it also. Nevertheless, in Hanafi law (in which the surety-bond assumes an agreement between creditor and debtor), the creditor is allowed to consent to a limit to the surety and to make the express stipulation that the debtor may not benefit from this. The creditor's release of the surety from his bond does not free the debtor but, in the reverse case, the release of the debtor frees the surety. If, instead of guaranteeing the payment of the debt, the surety takes over the debt this is not

*kafāla* but *ḥawāla* [*q.v.*], that is conveyance or assignment of the debt.

The moment that the debtor's obligation falls due, the creditor has the right to proceed against the principal debtor or the surety as he pleases, or both at once. Therefore in Muslim law there is no benefit of discussion on behalf of the surety as there is in Western law, where the surety can constrain the creditor to begin his proceedings with the debtor, unless there is legal and conventual liability. Only the Mālikī school allows the surety the opportunity of obliging the creditor to begin his proceedings with the debtor when the latter is solvent; the same is true when the debtor is absent, as long as the existence and stability of his goods can be established without difficulty. These conditions hold good in the absence of any contrary stipulations made by the parties concerned. The surety who has paid the reckoning of the debtor has no remedy at law unless the latter asked him to guarantee him and, this being so, he is able to dispose of his goods. In default of one of these conditions, the surety is bereft of any remedy, except in Mālikī law where he always retains his right of legal remedy provided that the discharge of the debt is established.

*Bibliography*: All works of *fiḥh* contain a chapter on *kafāla*. For Hanafi law see particularly Marghinānī, *Hidāya*, Cairo 1936, iii, 64-73. For the comparison between the schools: Ibn Kudāma, *Mughnī*, Cairo 1368, iv, 534-66; Ibn Rushd, *Bidāyat al-Muḍīṭahid*, Cairo 1952, ii, 291-4; Dimashkī, *Rahmat al-Umma*, ed. Halabi, i, 194-6; Shirāzī, *Kitāb al-Tanbih*, Fr. tr. Bousquet, Algiers, n.d., ii, nos. 136-7; Khallī b. Ishāk, *Mukhtaṣar*, Fr. tr. Bousquet, Algiers 1961, iii, nos. 218-20; J. Schacht, *Islamic Law*, Oxford 1964, 158-9. (Y. LINANT DE BELLEFONDS)

AL-KAFF ('ilm-), a divinatory process which belongs to the realm of physiognomy [see *FIRĀSA*], and designates more specifically chiromancy, or the art of deducing the character of a person according to the shape and appearance of the hands, whereas chiromancy proper is designated by '*ilm al-asārīr* (lines of the hand) or *khūṭūṭ al-yad*. One can also say *naẓar fi 'l-yad*, *firāsat al-kaff*, '*alāmāt asārīr al-kaff* (cf. T. Fahd, *Divination arabe*, 393 ff.). But the use of the term '*ilm al-kaff* has become general, and this has supplanted the others. It covers both chiromancy and chiromancy; it also includes dactylo-mancy (prognostications drawn from the observation of the finger joints) and onychomancy (divination from the finger nails).

Although this form of divination, considered by the Chinese to be the first step in the science of the occult, has been and continues to be very widespread, literature on the subject remained rare until the Middle Ages (cf., for example, the recent collective work entitled *La divination*, studies collected by A. Caquot and M. Leibovici, Paris 1968, where chiromancy, mentioned only twice, appears to play a very minor rôle in the divinatory tradition).

In the West, a pseudo-*Ciromantia Aristotelis* (cf. L. Thorndike and P. Kibre, *A catalogue of incipits of Mediaeval scientific writings in Latin*, revised and augmented edition, London 1963, The Mediaeval Academy of America, no. 29, pp. 225, 303, 830) seems to have been at the origin of several short treatises or pamphlets on chiromancy attributed to Albertus Magnus (*op. cit.*, 282, 350), Michael Scott (*ibid.*, 531) and other scholastic theologians. This *Ciromantia*, said to have been translated (from the Greek?) by John of Seville and Adelard (of Bath?), appears to

have been unknown to the Arab translators of the writings of Aristotle. This pseudo-Aristotelian tradition arrived rather late in the Christian East, through the medium of mediaeval Latin works, as can be seen from three Christian manuscripts known to us: a) Beirut, Fac. Or. 271 (no. 579), entitled *Firāsāt al-kaff*, dealing, in a first section of twenty-four chapters, with the nature of the hand and its aspects (with rough drawings), and a second section, also of twenty-four chapters, concerned with the mysteries of life according to the hand; b) Aleppo, P. Sbath, 529, with the same title, done in the 19th century by a monk in Jerusalem (41p.); c) Berlin, Cat. Ahlwardt, 4255, an anonymous work of 55 fol., citing Aristotle, Thomas Aquinas and Albertus Magnus, among others.

This Christian tradition, based on Aristotle, was illustrated by numerous authors in the West, such as Antiochus Tibertus, *De chiromantia*, ed. from 1494, Andrea Corvo, *De chiromantia*, frequently ed. since 1513, Jean Indagine, *Introductio in chiromantiam*, published at Lyons in 1582, Jean Belot, Curé of Mil-Monts, teacher of divine and celestial sciences, *Traité de la chiromance*, Joh. Meteham, *Treatise on chiromancy from the Latin of Aurelian*, Joh. Montroy, *Libellus de chiromantia*, Laur. Mendelkern, *Chiromancie*.

In the East, where for once Aristotle was not invoked as the initiator of this art, two traditions come together in Arab divination: the Indian tradition represented by an anonymous work now lost, which was quoted by Ibn al-Nadim (*Fihrist*, 314), *K. Khuṭūṭ al-kaff wa 'l-naẓar fi 'l-yad li 'l-Hind*, and the Hellenistic tradition starting with Polemon of Laodicea (d. 144), the famous sophist of Smyrna, author of the  $\Phi\upsilon\sigma\iota\gamma\gamma\omicron\mu\omicron\nu\lambda\iota\alpha$ , of which the original Greek is lost, but which has come to us through an Arabic translation made in the middle of the 3rd/9th century (cf. details and references in *Divination arabe*, 384 ff.).

This Islamic tradition, based on the Indian and the Hellenistic, is represented by a very small number of writings. In addition to the Arab Polemon, who devotes a paragraph to chiromancy (cf. Chap. 4 of the Leiden Ms., ed. and Latin tr. G. Hoffmann, in R. Förster, *Scriptores physiognomonici Graeci et Latini*, i, 201), there are two paragraphs in a *madj-mū'a* of writings on physiognomy from Bursa, of which the first treats "of the signs which result from the measurements of the fingers of the hand" (Hüsayn Celebi 882, fol. 64r-66r) and the second with "signs relative to the large or small number of children which one will have, drawn from the examination of the front face of the thumb" (*ibid.*, fol. 66r-67r; cf. *Divination arabe*, 395, n. 1., where the added *min* should be deleted). If to this are added a folio (99v-100) of Vatican 938, 14 (other references in Brockelmann, I, 508, SI, 924), attributed to Fakhr al-Dīn al-Rāzī, and a page (fol. 240v) of the Ms. 1601 of the Köprülü collection at Istanbul, this constitutes all that has been discovered of this literature. In order to know more about it, we must await the re-discovery of *al-Sab' al-sayyār*, a document dealing with several divinatory techniques, amongst which are *al-kaff* and *maḳādīr al-aṣābi'* (titles reminiscent of the two Bursa texts: the author lived in this town), attributed to the historian Muṣṭafā b. Ḥasan al-Djannābī (d. 999/1590) by Ḥādīdī Khalfā, iii, 576.

Meanwhile, in order to gain a clear idea of the object of this art according to the Arab authors, we have at our disposal two definitions: the first is found in the *K. al-firāsa* by Fakhr al-Dīn al-Rāzī (ed. and tr. Y. Mourad, Paris 1939, 11; cf. the fol. quoted

above) and the second in Ḥādīdī Khalfā, i, 236. From this it appears that chiromancy allows the prediction of the length or brevity of a man's life, his destiny, happy or unhappy, his wealth or poverty, etc., based on the lines of the hand or the sole of the feet by observing whether they are close or far apart, long or short, whether the spaces which separate them are wide or narrow, and by looking at the patterns which they form.

Finally, as in the case of the *Firāsa*, *ʿIlm al-aṣārīr* was applied in medical prognostication. Hippocrates and Galen practised it, as they practised physiognomy (cf. *Divination arabe*, 381 ff.; cf. R. Labat, *Traité akkadien de diagnostics et pronostics médicaux*, Leiden 1951, where an appendix is devoted to the "pronostics akkadiens et pronostics grecs", pp. xxxv-xlv). In this respect it would be useful to verify the contents of the *K. Asrār* (= according to al-Rāzī, *loc. cit.*: lines of the hand and of the sole of the foot) *al-nisā'* and the *K. Asrār al-riḳāḳ*, attributed to Galen and translated by Hunayn b. Iṣḥāq (cf. AS 4838, resp. fol. 57v-74v, and 76v-105v; Baḡdatli Vehbi, 1409, fol. 19r-26r and 26v-32v).

*Bibliography*: Apart from the sources mentioned in the text, see T. Fahd, *La divination arabe*, Leiden 1966, 393-7; Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, 370; Osman Bey, *Les Imams et les derviches*, Paris 1881, 132. (T. FAHD)

**KAFF**, term used in prosody [see 'ARŪḌ]; term with politico-religious meaning [See ḲŪ'ŪḌ].

**KAFFA** [see KEFE].

**KAFFĀRA**, an expiatory and propitiatory act which grants remission for faults of some gravity. This technical term, which is only employed four times in the *Kur'ān*, is said to have been borrowed from Hebrew *kappārā* (A. Jeffery, *Foreign vocabulary of the Qur'an*, 250; D. S. Margoliouth, art. *Expiation and atonement (Muslim)*, in *Hastings Enc.*) For the reasons set out below, this thesis should be considered as unproven. On the other hand the root *k f r* is undoubtedly Arabic.

Speaking strictly etymologically, *kaffāra* "covers" sins rather than wipes them out. The root, which is frequently used in the *Kur'ān*, in fact means "to cover", "to cover a thing or person so that it is hidden from view". The renegade is called *kāfir* [*q.v.*] because his heart is wrapped in blasphemy; the same word refers to the night, for then things are shrouded in shadow (*LA*, root *k f r*). Thus the *kaffāra* is intended to cover wicked deeds with a veil so that they are concealed. From this point of view, fault and expiation are regarded in a material sense, the moral content developing rather later.

Comparison with other Semitic languages leads to a closer understanding of the original meaning of the root *k f r*. In Syriac, *kefar* means to wipe, and the fault would seem to be seen as a stain which must be removed. Similar conceptions lie behind *kapāru* in Assyrian, for it has the meaning of to wipe, to remove, to clean. The form *kuppuru* expresses the idea of a magico-medical operation by means of which an illness is driven away or a demon expelled. In Hebrew, *kippēr* appears to be close to the Arabic meaning. According to Ed. König, "cover" is the only appropriate translation. True, this scholar's opinion has been criticized and *kippēr* can also have the meanings of to rub, to blot out and to wipe. The dominant idea is of expiation. Thus the *kōfer* is simply a ransom, the expiatory sum of blood; the *kappō-reth* is the region of the Ark which acts as a lid and serves as the instrument of expiation; finally,

*kaffārā* is specifically the expiation of a fault and wiping out of a blemish by means of a victim whose blood is used to rub or sprinkle the person or thing that is to be purified.

It is tempting, therefore, to consider that the ancient Arabs held a material conception of the remission of sins. It should be noted here that other Arabic words currently used to signify pardon also conjure up the image of an object to be hidden or a stain to be wiped away. This is true of the Qur'anic terms *ghafara*, 'afā and *ṣafaha* (XXIV, 22, LXIV, 14), which have the sense of to cover, to efface, to smooth away; in the same way *maḥā*, to erase by rubbing or covering, has the meaning of to pardon. Furthermore, according to al-'Umarī the Arabs sought pardon for their misdeeds by confessing them before an assembly and requesting those whom they had wronged to bury their misdemeanours. This act, known as *dafn al-ḥunūb* [see *ḤUNŪB*, *DAFN AL-*] was enacted physically.

Although etymologically *kaffāra* may be understood as "that which covers" sin, it should be noted that this meaning figures least in the Qur'an, where essentially the root has the sense of to repudiate, to redeem, to pardon. In addition, the verb *kafara*, to be a renegade or infidel, often appears alongside *āmana*, apparently its antonym (III, 156, IV, 137, XXIX, 12); the form *kaffara* is employed with the sense of to erase (III, 195, IV, 31, V, 12, 65); *kufrān* expresses forgetfulness (XXI, 94) and annihilation (while demolishing the sanctuary of al-'Uzzā, Khālid b. Walid says: "Your annihilation and no longer your glory", *kufrānaki lā subḥānaki*). It is therefore hardly surprising that *kaffāra* is employed essentially in the sense of atonement: the *kaffāra* for perjury and violating the ban on hunting when in a state of *ihrām* is the manumission of a slave, fasting or the distribution of food or clothing to the poor (V, 89<sup>a</sup> and 95). Yet this is also a propitiatory act from which the idea of expiation seems lacking: "If a man grants pardon [for talion, this] will be a *kaffāra* for him" (V, 5).

Therefore it is evident that *kaffāra*, in its Qur'anic conception, is obtained without the help of a blood sacrifice, unlike the levitical system, where the means of expiation is usually blood. We have thus eliminated the notion that this is a borrowing from Hebrew in spite of the similarity of pure form.

Other instances where the sinner must do penitence are dealt with in the Qur'an: an attack on the physical integrity of the person (IV, 92), pronouncing the *ṣiḥār* oath (LVIII, 4), breaking the rules of fasting during Ramaḍān (II, 183 f.), violating the prohibitions of the pilgrimage (II, 195; V, 94, 95). In fact there are no grounds for claiming that these were cases of *kaffārāt stricto sensu*, and it is by analogy that *fiḥh* applies this term to acts (fasting, liberation of a slave, feeding the poor, sacrifice) on whose exact nature the Qur'an is silent (is it a case of redemption, expiation or propitiation?). It is also advisable to stress that *fiḥh* tends to regard *kaffāra* as a punishment ('iḳāb, *ḍjazā'*; cf. Ibn Ruṣḥd, *Bidāyat al-mudjītahid*, Cairo 1335, i, 212; al-Bukhārī, *Ṣaḥīḥ*, *kitāb al-ḥudūd*), which is not exactly the position of the Qur'an, where there is a distinction between *ḍjazā'* and *kaffāra* (V, 95) and the latter is even considered a propitiatory act (V, 45). Following the standpoint of the legal schools, as is obligatory, the acts by which *kaffāra* can be obtained include blood sacrifice, to be exact the *ḥady* for complete infringement of the rules of the pilgrimage, particularly those of *ihrām*.

The expiatory nature of Islamic sacrifice is brought out especially by the rôle of the blood redeemer (J. Chelhod, *La sacrifice chez les Arabes*, 59, 174 f.). The Bedouins too believe that the blood of a victim gives protection against epidemics, averts ill fate, banishes the wrongdoer and casts out chthonian spirits. Such beliefs were widespread among ancient Semitic peoples. In Babylonian ritual, purification and atonement are obtained through blood sacrifice. As we have seen, the same means were used to obtain expiation in the levitical system. The Mineo-Sabians confessed their sins publicly and atoned for them by offering a bleeding victim (G. Ryckmans, *La confession publique des péchés en Arabie méridionale préislamique*, in *Le Muséon*, lvi, 1-14).

**KĀFILA** [see *TIDJĀRA*].

**KĀFĪL** [see *KAFĀLA*].

**KĀFIR** (A.), originally "obliterating, covering", then, "concealing benefits received" = "ungrateful"; this meaning is found even in the old Arab poetry and in the Qur'an, Sūra XXVI, 18. In the Qur'an the word is used with reference to God: "concealing God's blessings" = "ungrateful to God", see Sūra XVI, 57 and XXX, 33: "That they are ungrateful for our gifts"; cf. also Sūra XVI, 85. The next development—probably under the influence of the Syriac and Aramaic where the corresponding development took place earlier—is the more general meaning of "infidel" which is first found in Sūra LXXIV, 10 and is henceforth very common; plural *kāfirūn* or *kuffār*, once (Sūra LXXX 42) *kafara*. The term is first applied to the unbelieving Meccans, who endeavour to refute and revile the Prophet: Sūra L, 2 and elsewhere. The subject of incredulity is sometimes more nearly defined with added *bi-*, e.g., Sūra XXXIV, 33: "We do not believe in your mission"; Sūra VI, 89. In the early Meccan period a waiting attitude towards the unbelievers is still recommended (Sūra LXXXVI, 17; LXXIII 10 f.; see also Sūra CIX entitled *al-Kāfirūn*), but later the Muslims are ordered to keep apart from them (Sūra III, 114, also 27), to defend themselves from their attacks and even to take the offensive against them (Sūra II, 186 and elsewhere). In most passages the reference is to unbelievers in general, who are threatened with God's punishment and Hell [cf. the article *DIJAHANNAM*].

In the literature of Tradition also the *ḥadīths*—with minute elaboration in details—deal partly with the fate of the *kāfir* on the day of judgement and his punishment in hell, and partly with the believer's attitude towards him. For the rest they reflect the great controversy in early Islam on the question whether a Muslim should be considered a *kāfir* for committing a "major sin" (cf. al-Bukhārī, *Kit. al-Imān*, Bāb 22). Thus we find *ḥadīths* such as: "If a Muslim charges a fellow Muslim with *kufr*, he is himself a *kāfir*, if the accusation should prove untrue"; or "The reproach of *kufr* is equivalent to murder" etc. Nevertheless, *kāfir* in theological polemics is a fairly frequent term for the Muslim protagonist of the opposite view (see further *TAKFIR*).

Eternal damnation for the *kāfir* has remained an

established dogma in Islam. In the dogmatic controversies of the early centuries the reasons were discussed for which a Muslim could be identical with a *kāfir* and have to suffer eternal punishment. The most tolerant is the view of the Murdji'a that all the *Ahl al-Kiḥla*, even if they commit a mortal sin (*ḥabīra*) are to be considered believers and their ultimate fate is to be left to God. The most striking contrast to this is the strict view of *Khāridjis* (and *Ibādīs*) that every Muslim who dies with a mortal sin—and this means with them every sin which has not been repented of—on his conscience is to be considered just a *kāfir*. For this special case the Mu'tazila assume an intermediate position between believer and unbeliever, the so-called "rejected" *fāsīk* [cf. the article *IMĀN*]. According to Nallino, in the *Riv. degli Studi orientali*, vii, 436 ff., the names Mu'tazila, Murdji'a, etc. [q.v.] are probably closely connected with their attitude on this point.

According to the *Lisān al-ʿArab*, vi, 459 f., the following kinds of unbelief are distinguished: 1) *kufr al-inhār* = neither recognizing nor acknowledging God; 2) *kufr al-dīhūd* = recognizing God, but not acknowledging Him with words, that is remaining an unbeliever in spite of one's better knowledge; 3) *kufr al-muʿānada* = recognizing God and acknowledging Him with words but remaining an unbeliever (obdurate) out of envy or hatred; 4) *kufr al-nifāḥ* = outwardly acknowledging, but at heart not recognizing God and thus remaining an unbeliever, that is being a hypocrite [cf. *MUNĀFIK*]. Cf. the modernist Muḥammad ʿAbduh's opinion on *kufr al-niʿam*, *kufr khāṣṣ*, *al-Kufr dīhūd al-ḥakḥ*, etc. in his *Tafsīr*, ii, 49, 102, iii, 20, iv, 11.

In the systematic *Fīḥ* books the *kuffār* are discussed in the following passages: 1) in the *Kitāb al-Taḥāra*. For the opinion deduced from Sūra IX, 28 that the unbeliever is unclean, we find all views represented, from the strictest to the most tolerant; just as on all questions of purity, the strictest is the *Shiʿa* which reckons the unbeliever among its *dah naḡīasat*; but on this point al-Nawawī, for example, was particularly lenient; he considers the believer and unbeliever equal as regards purity. The *Ahl al-Kitāb* [q.v.] are usually regarded more leniently than other *Kuffār*; for their benefit for example the questions of the *ahabāʾīk* and of *munākaha* with Muslims are discussed.—2) In the *Kitāb al-Djihād (wa'l-Siyar)*. The *djihād* [q.v.] against the unbeliever inhabitants of the *Dār al-Ḥarb* [q.v.] is a *farḍ ʿala l-kifāya*. The *Ahl al-Kitāb* again occupy a special position as by paying *dizya* and *ḥharāḡi* [q.v.] they become *dhimmīs* [see *DHIMMA*] and can receive *amān* [q.v.] These categories of unbelievers in the *Dār al-Islām* called *dhimmī* and *mustaʿmin* have a legal claim to protection. Another class also distinguished from the mass of the *kāfirūn* are the renegades [see *MURTADD*] for whom the law prescribes death, with the opportunity first of obeying a demand to return to Islām. The others, the unbelievers proper, who in this sense are also called *kāfirūn aṣṣhiyyūn* (or *mushrikūn*, in the narrower sense) have only to expect death or slavery [see ʿABD] if they fall as prisoners of war into the hands of Muslims; if they are fortunate, they may be exchanged or released. (In many cases, e.g., in the gradual advance of Islam into Africa, the distinction between renegades and pagans was difficult to ascertain and there are writings extant which deal specially with this question, cf. Ibn Ḥaǧǧar al-Haytamī, *al-Islām bi-Ḳawāḡi al-Islām*, lith. 1293).—3) In several further points the law discriminates between *kuffār* and believers; the very strict interpretation

of the law is however in practice only held by a small minority.

To understand the historical development in the attitude of Islam to the unbeliever, it should be observed that it was settled in the early centuries not so much by religious as by political and social conditions. Even down to the time of the Crusades there prevailed in Islam a tolerance towards the unbeliever, especially the *Ahl al-Kitāb*, such as is impossible to imagine in contemporary Christendom. We find for example Christians in the highest official positions. In this early period there is no question of any religious fanaticism towards unbelievers. It was only aroused and nourished by the repeated wars with unbelievers (Crusades, wars with the Turks). War-psychology, on the other hand, at the time of the wars between Persia and Turkey could even bring it about that the Persians were called *kuffār* in Turkish *setwās* etc. (see Pečewi, i, 311, 319), a name which the Turks themselves had applied to them in the proclamations of the Mahdī of the Sūdān.

Since in the modern period the trend of affairs has apparently been quite in the opposite direction, and Muslims have been more and more impeded in carrying out measures against the *kuffār* by the political decline of Islam and the rise of the unbelieving nations (pressure of the Powers, capitulations, etc.), the very feeling of impotence in face of these facts may have contributed not a little to the strengthening of hatred and to periodical manifestations of it (in massacres etc.). This also explains the grotesque caricature of the *kāfir*, which has sometimes been found in the popular imagination at the present day (see Snouck Hurgronje, *Mekka*, ii, 48 f.) and which is connected with the ideas of the Arch-Kāfir, *Daǧǧal* [q.v.] who bears *k-f-r* on his forehead (cf. I. Goldziher, in *Der Islam*, xi, 178).

It may also be due to the hatred of the Franks (and to dogmatic squabbles) that *kāfir* had developed into a term of abuse, so frequent in the Turkish form *gʿawr* (the Persian *geber* [see *DIĀBIR*] is said to be the same), although in theory it is (*ZDMG*, lviii, 562) affirmed that the Muslim commits a punishable offence if he says to the Christian or Jew: "Thou unbeliever". From the Turkish the word *kāfir* has entered into most Slavonic languages. The Spanish *cafre* and the French *cafard* also go back to *kāfir* or *kuffār*. (Cf. Erwin Rosen [i.e. Erwin Carlé], *Cafard, Ein Drama aus der Fremdenlegion in 4 Akten*, Munich 1914). In two cases *kāfir* has actually become a proper name, the name of a people, the Kaffirs, and of a country, Kāfiristān [q.v.].

*Kāfir* and *kufr* underwent a special development of meaning in the terminology of mysticism. Compare, for example, the well-known verse of Abū Saʿīd [q.v.]: "So long as belief and unbelief are not perfectly equal, no man can be a true Muslim", with the various explanations given in Muḥammad Aʿlā, *Dict. of Technical Terms* (ed. Sprenger, etc.), s.v., according to one of which *kufr* is just the equivalent of *imān-i ḥakīkī*.

(W. BJÖRCKMAN)

**KĀFIRISTĀN** ("land of the unbelievers"), the name of a mountainous region of the Hindu Kush massif in north-eastern Afghānistān, until 1896 very isolated and politically independent, but since the Afghān conquest of that date and the introduction of Islam known as Nūristān ("land of light").

Some older European writers mentioned what might be termed a "greater Kāfiristān", comprising such regions as Kāfiristān in the restricted sense (see below), Laghmān, Čitrāl, Swāt, Badjāw, Gilgit, etc. This corresponds roughly with the mediaeval Islamic region of Bolūr (the Po-lo of the Chinese Buddhist pilgrims, Bolor of Marco Polo), which seems to have extended as far as Baltistān on the borders of Kashmīr and Tibet; the *Hudūd al-'ālam* (end of the 4th/10th century), tr. Minorsky, 121, 369-70, describes Bolūr as a vast country ruled by the Bulūrīn-Shāh who was a Child of the Sun. Modern usage restricts Kāfiristān to the region lying roughly between latitude 35°-36° N. and longitude 70°-71°30' E., bounded on the west by the Panđhīr River valley;

on the east by the mountain range separating the Kunar-Bashgali valley from Čitrāl (sc. the modern Afghān-Pakistani border); on the north by the mountains forming the watershed between the rivers of Kāfiristān draining southwards and those of Mindjān and Badakhshān draining northwards to the Oxus; and on the south by the Kābul River valley. This last southern fringe of Kāfiristān, the regions of Laghmān and Kunar (called by the Afghāns *Kāfiristān-i suflā*), is ethnically Afghān and Pashto-speaking and forms the hinterland of Djalālābād. It is the more northerly region (*Kāfiristān-i 'ulyā*) which is Kāfiristān proper, comprising from west to east the basins of the Alishang and Alingar, of the Pēč or Praisun and the Waigal, and of the Bashgal; above these steep-sided river valleys the Hindu Kush mountains rise almost to 20,000 feet. The inaccessibility of the region had made it a refuge area for a very old group of Indo-European peoples, probably mixed with an older substratum, and for a distinctive group of Indo-Iranian languages, the Kāfirī ones, which form part of the wider Dardic group [see AFGHĀNISTĀN, ii, Ethnography, and DARDIC AND KĀFIR LANGUAGES].

The enduring paganism of the local peoples and their imperviousness to the Islam which came largely to surround them, account for the name Kāfiristān, although an influence from the district names within Kāfiristān of Katwar or Kator and the ethnic designation Kati has been suggested. The distinction of "wearers of black" (Pers. *Siyāh-pūsh*, Pto. *Torkāfir*), comprising five sub-tribes speaking Kati, and "wearers of white" (Pers. *Safid-pūsh*, Pto. *Spinkāfir*), comprising the Prasungeli, Wangeli, Wamais and Ashkuns, is an old one, but does not seem to have any scientific or ethnological basis. Anthropologically, the Kāfirs are dolichocephalic, with abundant, usually dark, hair, but with a noticeable strain of blue-eyed blonds. Whence popular tales that the Kāfirs are descendants of Alexander the Great's troops; a deputation came to Sir William Macnaghten in 1839 at Djalālābād during the First Afghān-British War, claiming kinship with the British troops.

Parts of Kāfiristān were in pre-Christian times probably part of the Greek satrapy of Paropamisā and inhabited by a people called the Kambođjas, mentioned in the Aśokan inscriptions. Alexander the Great campaigned in the Kunar valley en route for India (see Sir Thomas Holdich, *The gates of India*, London 1910, 202-4). Then, in early Christian times, it came within the Kushan kingdom and the Buddhist province of Kapiśa, so that southern Kāfiristān, the region known as Lamakān, later Lamghān, was strongly Buddhist, as the survival there of stupas attests (see L. Edelberg, *Fragments d'un stūpa dans la vallée du Kunar en Afghanistan*, in *Arts Asiatiques*, iv/3 (1957), 199-206). It is probable that at this time the ethnic Kāfirs occupied a wider geographical area than in more recent times, but were pushed northwards into the mountain fastnesses.

The Muslims only reached the borders of Kāfiristān through the extension of Šāffārid rule to the Kābul and Panđhīr River valleys (later 3rd/9th century), and then through the establishment of the Ghaznawid sultanate in eastern Afghānistān. It is in the Ghaznawid historian Bayhaḳī that the occurrence of the name Kator/Katwar seems first to arise, when Sultān Mas'ūd b. Maḥmūd is mentioned in connection with the *Kutr* (424/1033 or 425/1034) (*Ta'rikḥ-i Mas'ūdi*, ed. Ḡhanī and Fayyāḍ, Tehran 1324/1945, 407, tr. Arends, *Istoriya Mas'uda*<sup>1</sup>, Moscow 1969, 504).

Mas'ūd's father, the great Maḥmūd of Ghazna, had previously led an expedition in 417/1020-1 against the lion-worshipping infidels of what Gardtzi calls the Nūr and Kīrāt valleys, the first name possibly to be connected with the modern place-name Nūrgal in the lower Kunar valley, i.e., southeastern Kāfiristān (*K. Zayn al-akhbār*, ed. Nāzim, Berlin 1928, 78-9, tr. Bosworth, in *East and West*, N.S. xvi (1966), 341-2; cf. Nāzim, *The life and times of Sulṭān Maḥmūd of Ghazna*, (Cambridge 1931, 74-5, and Beveridge's Appendix X to her tr. of the *Bābur-nāma*, xxiii-xxiv).

Marco Polo mentions the land of the Pasciai idolators, ten days' journey south of Badakhshān, which may refer to the Kāfirs as much as to the Pashā'īs proper of the south-western fringes of Kāfiristān; a 10th/16th century source, the account of the Muslim expedition of 990/1582 (see below), shows that some of the so-called Kāfirs of that time were in fact Pashā'ī speakers. It is clear, however, that Marco Polo never visited this area himself, but must have relied on reports of the Mongol general Nekūder's march from Badakhshān to Čitrāl and Kašmīr across the Kāfiristān mountains in c. 658/1260 (see Yule, *The book of Ser Marco Polo the Venetian*, London 1871, i, 155; Cordier, *Notes and addenda to Sir Henry Yule's edition*, London 1920, 23, 25).

En route for his Indian campaign in 800/1398, Tīmūr acceded to the complaints of the people of Andarāb about the depredations of the pagan "Kators and Siyāh-pūsh", and led an expedition via the Khāwak Pass into western Kāfiristān. Some of the Kāfirs are said to have accepted Islam, but this can only have been a temporary conversion; an important part of his troops was ambushed, and he finally retreated (*Malḡūbāt-i Timūri*, in Elliott and Dowson, *The history of India as told by its own historians*, London 1866-77, iii, 400-8). The Tīmūrid Maḥmūd Mirzā b. Abī Sa'īd (d. 900/1495) is said to have campaigned twice in Kāfiristān, gaining thereby the title of Ghāzi, and Muḥammad Haydar Dughlāt, the future conqueror of Kašmīr, led a raid in 934/1527-8 into what he calls "Bulūristān" (*Bābur-nāma*, tr. A. S. Beveridge, London 1912-21, i, 46; Muḥammad Haydar, *Tārīkh-i Rashīdī, a history of the Moghuls of Central Asia*, tr. E. Denison Ross and N. Elias, London 1895, 384-6). Bābur gives a valuable geographical description of southern Kāfiristān, with emphasis on its rich fruits and on the wine produced by the Kāfirs, who exported it to Badjāwr. He also speaks of Muslim *nimṭas* or half-breeds, who were probably converted Kāfirs and who still mixed with the Kāfirs, living at Čaghānsarāy at the confluence of the Kunar and Pēč Rivers (*Bābur-nāma*, tr. i, 210-14, 371-2). Bābur himself made various incursions via the Lamghān district into the southern fringes of Kāfiristān. In the winter of 913/1507-8 he crossed the Bād-i Pišh or Bād-i Pakht Pass linking the lower Alishang and Kābul River valleys, causing an inscription to be carved above the pass commemorating his transit (the existence in modern times of this inscription has been noted by several observers, but it has not so far been scientifically described); in 926/1520 at the Bād-i Pišh Pass again, he received the submission of certain Kāfiri chiefs, who brought gifts of wine (*Bāburnāma*, tr. i, 209, 343-4, 421-3).

In the Mughal period, the *Ṭabaḡāt-i Akbarī* laconically mentions that in 990/1582 the Emperor Akbar, whilst at Djalālābād, sent an expedition against the infidels of Katwar (Elliott and Dowson, *op. cit.*, v, 425). This detail can now be amply supplemented by

the account in 16 *dāstāns* or epic narratives of the Kāḡl Muḥammad Sālim, who accompanied this expedition as a preacher and encourager of the Muslim troops; Kāḡl Muḥammad's work has been edited by G. Scarcia as the *Ṣifāt-nāma-yi Darvīš Muḥammad Ḥān-i Ġāzi, cronaca di una crociata musulmana contro i Kafiri di Lagmān nell' anno 1582* (Rome 1965). The leader of the expedition, Muḥammad Ḥākim (d. 992/1584 or 994/1586), was Akbar's younger brother and governor of Kābul, and was also a strong adherent of the missionary-minded Naqshbandiyya Šūfi order. The area attacked was the south-western part of Kāfiristān, including the lower basin of the Alishang and Alingar Rivers, where the Muslim forces established various strongpoints against the Kāfirs.

After this period, there is substantially silence until the 19th century, when British travellers and officials began to take an interest in Kāfiristān as a still-independent buffer-zone between British India and the emirate of Afghānistān. Thus Mount Stuart Elphinstone described the topography of the land of the "Seapoosh Caufirs, a strange and interesting people", and gave the pioneering account of the Kāfirs' customs and social organization, based on the reports of a Muslim envoy to Kamdesh in the Bashgal valley (*An account of the kingdom of Caubul, and its dependencies, in Persia, Tartary, and India*, London 1842, i, 130-2, ii, 373-87). D. Masson also wrote on Kāfiristān in his *Narrative of various journeys in Balochistan, Afghanistan and the Punjab*, London 1842. Col. J. Biddulph, like these previous writers, did not know Kāfiristān at first-hand, though he was familiar with the adjacent regions of Čitrāl, Hunza, Gilgit, etc., and had received deputations of Kāfirs in Čitrāl in 1878. In his *Tribes of the Hindoo Koosh* (Calcutta 1880), he devoted a chapter to the "Siah Posh", in which he included the Kalash of southern Čitrāl, still today pagan in part, with considerable ethnological comment, and gave specimens of the Bashgali (i.e., Kati) language (*op. cit.*, 126-33, cxlv-cliii). The first European to penetrate deep into Kāfiristān personally was Col. Lockhart, who was heading a mission in 1885-6 to examine the Hindu Kush passes and who spent some days amongst the Katis of the upper Bashgal valley. Soon afterwards, Capt. (later Sir) George Robertson, later British Agent in Gilgit, spent almost a year (1890-1) amongst the Katis at Kamdesh in the upper Bashgal valley adjacent to Čitrāl; his account of the Kāfirs still in their pre-Muslim phase of existence, *The Kāfirs of the Hindu-Kush* (London 1896), remains a classic of ethnology.

The paganism of the Kāfirs was a mixture of polytheism and animism. The *Ṣifāt-nāma* of Kāḡl Muḥammad Sālim mentions three of the gods whom the Kāfirs invoked against the Muslims, sc. Pāndād, Sh.r.w.y. and Lāmandī, and Scarcia has suggested a possible connexion with the cult of Śiva, in view of the long exposure of the Kābul River valley to Indian cultural and religious influences (*op. cit.*, cll ff.). Robertson says that the Kāfir pantheon was headed by Imra the creator god, from whom sprang other gods such as Gīsh the war god, the goddess Dīzanē and many lesser ones; there was also much emphasis on demons and evil spirits who needed constant propitiation. The politico-social system was locally-based, tribal and oligarchical. Tribal affairs were directed by a council of senior clan headmen (*jasts*), and 13 magistrates (*ur, urir*) were elected annually for the actual conduct of government. Status was measured by wealth, symbolized

by the giving of feasts and potlatches, and by prowess in warfare, especially when the killing of Muslims was involved. As well as the full tribesmen, there was a class of poor freemen, mainly herdsmen; a class of artisans, the *baris*; and a small slave class, who were captives from warfare and who were considered to be ritually impure. The status of Kāfirī women was low, with polygamy as the norm; marriage was exogamous outside the clan. Note-worthy as part of the material culture of the Kāfirs was the carving of wood into images and into the characteristic stools and chairs. Specimens of these may be seen in the Kābul Museum and in western ones like the Linden-Museum of Stuttgart; and see on the craft, R. Henkl, *The wooden sculptures of Kāfiristan*, in *JRAS Bengal*, Letters, xvi/1 (1950), 65-72, and J. Auboyer, *The art of Afghanistan*, London 1968, Pls. 134-40.

In the 1893 Kābul agreement between Sir Mortimer Durand and the Afghān amir 'Abd al-Rahmān Khān [q.v.], Kāfiristān was left outside the British Indian territory, and the amir in 1895-6 led an expedition into Kāfiristān, bringing the territory under Afghān sovereignty and implanting Islam amongst the pagan Kāfirs (see Mir Munshi Sultan Mahomed Khan, *The life of Abdur Rahman*, London 1900, i, 199-202). Today, most of Kāfiristān, now Nūristān, falls administratively within the provinces or *wilāyats* of Laghmān and Kunar, with Mirtalam in the lower Alingar valley as an important centre; the population of the region has been estimated at between 40,000 and 60,000.

**Bibliography:** Most of the detailed studies have been cited within the article. Scarcia's edition of the *Ṣifat-nāma* of Kāḏī Muḥammad Sālim, CVI-CLVI, contains an extensive account of the early history of Kāfiristān. For geography and topography, see W. Barthold, *Istoriko-geograficheskiĭ obzor Irana*, St. Petersburg 1903, 56-7; M. Voigt, *Kāfiristan*, Breslau 1933; and J. Humlum *et alii*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 91-2, 107-10. For a synthesis of the information of Robertson and the earlier writers with recent ethnological and anthropological fieldwork in Kāfiristān, see P. Snoy, *Die Kāfīren, Formen der Wirtschaft und geistigen Kultur*, diss. Frankfurt a/M 1962 (with detailed bibliography on all aspects of the region), and also A. R. Palwal, *History of former Kāfiristan*, 10 parts in *Afghanistan*, xxi-xxiv (Kabul 1968-71). Snoy, *Nuristan und Munḡan*, in *Tribus, Veröffentlichungen des Linden-Museums*, no. 14 (Stuttgart 1965), 101-48, repr. in *Sonderdrucke der Mitglieder der Südasien-Institut der Universität Heidelberg*, no. 8, deals with the material culture and artifacts of these two regions and their economic relations. Amongst historical and general works on Afghānistān which include sections on Kāfiristān or refer to the region, see V. M. Masson and V. A. Romodin, *Istoriya Afganistana*, Moscow 1964-5, index; D. N. Wilbur *et alii*, *Afghanistan, its people, its society, its culture*, New Haven 1962, 50-2; M. Klimburg, *Afghanistan, das Land im historischen Spannungsfeld Mittelasiens*, Vienna 1966, 133-4; and W. K. Fraser-Tytler, *Afghanistan, a study of political developments in Central and Southern Asia*<sup>3</sup>, London 1967, 5, 57-60.

(C. E. BOSWORTH)

**KĀFIRKŪB**, which is recorded only in the plural form *kāfir-kūbāt*, is formed from the Arab word *kāfir* [q.v.] (impious, unfaithful) and the present participle of the Persian verb *kūbidan* (to strike, to crush). It

denotes a club, literally a "heathen-basher". The term is testified, in 'Irāq, from the end of the 2nd/8th century, by Arab writers and chroniclers: al-Djāhīz, Abū Hanīfa al-Dīnawarī, etc. (see *Bibl.* below), but al-Ṭabarī already cites it when describing the incidents arising in 66/685 during the revolt of al-Mukh-tār [q.v.], and his Shī'ite followers, al-Khashabiyya [q.v.], who were given the name because they fought with *khusḥub* (clubs; see De Goeje, *Glossary to al-Ṭabari*, CCXXI, CDLV); however, other interpretations of the name of this sect have been put forward (see *TA*). According to Abū Hanīfa al-Dīnawarī, *al-Akḥbār al-ṭiwāl*, 343, the appellation *kāfir-kūbāt* originated on the contrary in the uprising of Abū Muslim's [q.v.] followers in Khurāsān: *indjafal al-nās 'alā Abi Muslim min Harāt . . . fa-lawāfaw djami'an musawwi'di 'l-thiyāb wa-had sawwadū ansāfa al-khusḥub allatī ma'ahum wa-sammawhā kāfir-kūbāt*: "the men converged on Abū Muslim from Herāt. . . they arrived dressed entirely in black and had also blackened the short clubs they called *kāfir-kūbāt*".

It should be noted that this term does not appear in such Arab dictionaries as the *LA*, *Kāmūs*, *TA*, etc., nor in Desmaison's French-Persian dictionary. Nor does it seem to have been used outside the 'Irāqī sphere. It is not to be found in the works of Egyptian writers such as al-Makrīzī or al-Kalkāshandī, who use the term *dabbūs* for a club; Ibn Khaldūn does not employ it nor does Dozy mention it. It would thus seem to be a term born of a particular period and in a relatively circumscribed area which swiftly became obsolete.

**Bibliography:** Djāhīz, *Bayān*, ed. Sandūbl, i, 142 (in an anonymous verse); idem, *Rasā'il*, ed. Hārūn, Cairo 1384/1964, i, 20 (in a list of arms carried by the Turks); Abū Hanīfa Dīnawarī, *al-Akḥbār al-ṭiwāl*, ed. Cairo 1330, 343, \*Cairo 1960 (in connection with the uprising of Abū Muslim's followers); Ṭabarī, ii, 694, i. 15 (the year 66/685, in connection with al-Khashabiyya), iii, 1686, l. 13, 1587, l. 4, 1689, i. 17 (the year 251/865, in connection with the war waged by the pro-al-Amīn 'Ayyārūn of Baghdād against al-Ma'mūn); Mas'ūdī, *Murūdj*, vi, 114 = ed. Pellat, iv, § 2328 where *kāfir-kūbāt* has been substituted in an anecdote concerning Umm Salama, the wife of Caliph al-Saffāh; *Aghānī*, ed. CHOUÉMI)

**KĀFIYA** (A.), plur. *ḥawāṣin*, term in prosody, meaning "rhyme". Goldziher (*Abh. zur Arabischen Philologie*, Leiden 1896, i, 83-105; cf. R. Blachère, *Deuxième contribution*, in *Arabica* vi (1959), 141) has shown that the word meant originally "lampoon", then "line of poetry", "poem" and, that these earlier senses survived in Islamic times after the word had also come to be used in the technical sense of "rhyme". He derives *kāfiya* from *ḥafan*, "nape of the neck" (and the corresponding verb *ḥafā*, "to hit the nape of the neck") and draws attention to passages in which lampoons and curses are compared to dangerous missiles wounding the head or other parts of the body. The native lexicographers connect the term in various ways with the verb *ḥafā* in the sense of "to follow" (e.g., it "follows upon every line of poetry"). They believe that "rhyme" is the original meaning and that "line of poetry", "poem" are secondary (see Freytag, *Darstellung*, 296-7).

The theory of the *kāfiya* is usually considered a special science distinct from the 'ilm al-'arūd or

"science of metre" [see 'ARŪP]. It teaches how verses should end as regards consonants and vowels and which letters can be used as rhyme consonants and which not.

Many authorities attribute to Khallī b. Aḥmad [q.v.] a definition according to which the *kāfiya* comprises the group of consonants beginning with the vowelised consonant (one version says: the vowel of the vowelised consonant) immediately preceding the last two quiescent consonants of the verse, but various other definitions are attributed to him as well as to later authorities (Ibn Kaysān, *K. talḥīb al-ḥawāfi*, 48, 54, asserts that Khallī b. Aḥmad used the term *kāfiya* in the sense of "rhyme consonant"). According to the Arab view a verse always ends in a quiescent consonant, since they also consider as such the *alif wāw*, and *yā* of prolongation. A distinction is made, however, between a *kāfiya* in which the rhyme consonant is not followed by a letter of prolongation, called *kāfiya muḥayyada*, "fettered *kāfiya* (as in *yaktul*), and a *kāfiya* to which such a letter of prolongation is attached (as in *yaktulā*, *yaktulī*, *yaktulā*). In the case of *ū* and *ī* the *wāw* and *yā* of prolongation are usually not written and their presence (in a vowelised text) is marked only by a *ḍamma* or *kasra* added to the rhyme consonant. This type of *kāfiya* as well as the various types where the rhyme consonant is followed by a short vowel and a vowelised or quiescent *hā* is called *kāfiya muḥlaḥa*, "loose *kāfiya*" (some speak of the *rawī muḥayyad* and the *rawī muḥlaḥ*, the "fettered rhyme consonant" and the "loose rhyme consonant").

The consonants of the *kāfiya* are six in number: (1) the *rawī* or rhyme letter which, since it occurs in every type of *kāfiya*, is considered its principal consonant after which famous poems are often named, e.g., the *Lāmiyya* of al-Shanfarā, the *Tā'īyya* of Umar b. al-Fāriḍ; (2) as an annex to the *rawī*, the *waṣl* or *šila*, i.e., a letter of prolongation following the *rawī* (as noted above the *alif* is the only one that is always written in this capacity). The *waṣl* can also consist of a vowelised *hā* preceded by a short vowel (as in *yaktuluh*, *yaktulih*, *yaktulah*) or a *hā* followed by a letter of prolongation and preceded by a short vowel; (3) the *ḥhurūḍī*, the letter of prolongation following the *hā* as *waṣl* (as in *yaktuluhū*, *yaktuluhū*, *ta'šihī*, etc.). Being a letter of prolongation it is considered quiescent, but indicated only in the case of *alif*; (4) the *riḍf*, i.e., the *wāw* and *yā* immediately preceding the *rawī* as letters of prolongation or to mark the diphthongs *aw* and *ay*, and the *alif* as letter of prolongation in the same position; (5) the *ta'sis*, an *alif* of prolongation placed before the *rawī* and separated from it by a consonant, the *dakḥīl*, which may be changed at will. In case the *ta'sis* and the *rawī* belong to different words, the second word should be a separate pronoun or a preposition with a pronominal suffix (as in "annahā *hiyā*, *badā liyā*, but cf. *Luzūm*, 11-2; Tanūkhī, *K. al-Ḳawāfi*, 84-5); (6) the *dakḥīl* just mentioned.

The vowels of the *kāfiya* are likewise six in number: (1) the *maḍīrā* or *mudīrā*, the vowel of the *rawī*; (2) the *naḥādīh*, the vowel of the *hā* serving as *waṣl*; (3) the *tawḍīh*, the vowel before the quiescent *rawī* (according to others also before the vowelised *rawī*); (4) the *ḥaḍhw*, the vowel immediately before the *riḍf*; (5) the *ishbā'*, the vowel of the *dakḥīl* (there is some confusion over this term since it is sometimes limited to the vowel of the *dakḥīl* in a *kāfiya muḥlaḥa*, and is also reported to have been applied to the short vowel preceding the *rawī* in a *kāfiya muḥlaḥa* with out *ta'sis*); (6) the *rass*, the vowel immediately

before the *alif* of the *ta'sis* (always *a* of course).

The two quiescent consonants of the *rawī* may be separated by as many as four vowels. Thus five different types can be distinguished: (1) the *mutakāwis* in which the two quiescent consonants are separated by four vowelised consonants (as in *faw[ḥa ḥadami]h*); (2) the *mutarākīb* in which three vowelised consonants stand between the two quiescents (as in *fī[ḍjabali]y*); (3) the *mutadārīk* in which two vowelised consonants separate the two quiescents (as in *ḥad[fa'a]l*); (4) the *mutawātīr* in which there is one vowelised consonant between the two quiescents (as in *bā[li]y*); (5) the *mutarādīf* in which the two quiescent consonants come in immediate succession. This happens in principle only in *kāfiyas* with a *riḍf* (*ḥāl*, *layl*, etc.) and forms like *al-naḥr* are rare and not considered permissible by some scholars.

Two different types of *kāfiya* may not be used in one and the same poem, except in certain forms of the metres *sarī* and (rarely) *ḥāmil* where *fa'ilun* may alternate with *fā'ilun*. Nor are any changes allowed in five of the six consonants mentioned above (the *dakḥīl* being the exception), and, generally speaking, in the vowels (see the exceptions noted below). Violations of these rules were designated at an early date by special terms on the meaning of which considerable uncertainty existed at first (see Bonebakker, *The Kitāb naḥd al-shi'r*, Leiden 1956, Intro., 20-2, 25-6, 34-5; *Blachère, op. cit.*, 137-40, 149-50): (1) the *ikwā'*, the change of the vowel *maḍīrā*. The older poets occasionally allow themselves to alternate *u* with *i* (see J. Fück, *Arabiyya*, Paris 1955, 41; al-Aḥfash al-Awsaṭ [q.v.]; *K. al-Ḳawāfi*, 42, suggests that this change was very common), and less frequently *u* or *i* with *a*. If, however, the *rawī* is followed by the letter *hā* as *waṣl*, the *ikwā'* seems to be rare (*Luzūm*, 32-3; but cf. *Ḳd*, v, 508); (2) the *ikfā'*, the substitution of a cognate letter for the *rawī*, e.g., *nūn* for *mīm*, the substitution of a letter that is unrelated being sometimes designated by the special term *idjāza* or *idjāra* (for other interpretations of these terms see *Umda*, i, 132-3, 143-4; Tanūkhī, *K. al-Ḳawāfi*, 134); (3) the *sinād*, a violation of rules applying to vowels and consonants that precede the *rawī*, namely (a) the *sinād al-tawḍīh*, the changing of the vowel immediately preceding the quiescent *rawī*, though the interchange of *u* and *i* is generally allowed and even the alternation of the *a* with the two others occurs frequently; (b) the *sinād al-ishbā'*, the changing of the vowel of the *dakḥīl*, the alternation of the *u* with the *i* being a less serious defect than that of the *a* with the other two (especially in the case of a *kāfiya muḥayyada*, see *Luzūm*, 25-7, 31 and *Umda*, i, 138); (c) the *sinād al-ḥaḍhw*, the changing of the vowel immediately preceding the *riḍf*. The *ḥaḍhw* and the *riḍf* together form the long vowels *ū* and *ī* and the diphthongs *aw* and *ay*. One can alternate *ū* with *ī* and *aw* with *ay* (undesirable in the case of a *kāfiya muḥayyada* according to *Luzūm*, 28-9; cf. also Aḥfash. *K. al-Ḳawāfi*, 15; Tanūkhī, *K. al-Ḳawāfi*, 90, 110-11), but other combinations, e.g., *ī* with *ay* constitute a *sinād*; (d) the *sinād al-riḍf*, the rhyming of a line that has a *riḍf* with one that has not (though occasionally this happens with *aw* and *ay*, the *wāw* and the *yā* being considered consonants in such cases; see *Luzūm*, 21-2 and *Freytag, op. cit.*, 313-4); (e) the *sinād al-ta'sis*, the rhyming of a line that has *ta'sis* with one that has not (though again it may happen that such a line is introduced in a poem without *ta'sis*, especially in cases where the vowel of the *dakḥīl* is *faḥa*; see *Luzūm*, 20-1; Tanūkhī, *K. al-Ḳawāfi*, 130-1; and cf. Aḥfash, *K. al-Ḳawāfi*, 15-6).

It should be noted, however, that no uniformity of opinion exists on the extent to which alternations of vowels are permissible (somewhat different rules apply to strophic poetry, see W. Hoenerbach, *Die vulgärarabische Poetik... des Šaḥīyaddīn Hillī*, Wiesbaden 1956, Intro., 22-3), and that the short vowel immediately preceding the *rawī* in a loose *kāfiya* (for which some adopt the term *ishbā'*) may alternate freely.

Two further defects of the rhyme should be mentioned here, the *īā'* and the *taḍmīn* or *taḥmīm*. The *īā'* occurs when the same word in the same meaning is repeated in the *kāfiyas* of lines belonging to the same poem, though this repetition is permissible in cases where more than seven lines intervene, there is a change of theme, or cases where one of the two words has the article and the other not (for further details, including a stricter interpretation of what constitutes an *īā'* attributed to *Khallī*, see *Akhfash*, *K. al-Kawāfi*, 55-64; *Iḥd*, v, 508; *Wāfi*, 242-3). The *taḍmīn*, "enjambement", occurs when one line runs into another in such a way that the end of the line only gives a complete sense when we add the beginning of the next (for further details see *Ṭaḍmīn*).

The above by no means covers all the defects of the rhyme and the terms for these defects listed by the critics. It also makes no mention of the various defects connected with the common practice of rhyming the first two hemistichs of a poem (see below). For further details see especially *Akhfash*, *K. al-Kawāfi*, 64-8; *Tanūkhī*, *K. al-Kawāfi*, 65-8, 123-4, 135-6; *Umda*, i, 149-54; *Wāfi*, 250-3.

In general the letters *alif*, *hā'*, *wāw*, and *yā'* cannot be used as *rawī*, unless they belong to the root of a verb or noun, important exceptions being the pronominal suffixes *-hu* (*-hi*) and *-hā'* following a long vowel or a *sukūn*, the *wāw* and the *yā'* in the diphthongs *aw* and *ay*, and the *yā'* that is preceded by a long vowel or is itself vowelled, and the *yā'* marking long *i* in a shortened *nisba* ending ('*Adī* for '*Adīyy*'). Thus, for instance, the *hā'* in '*aṣāhū*, the *wāw* in *ramaw*, and the *yā'* in *irḍay* and in *fu'ādiyā* can be *rawī* though these letters are not part of the root, but the *alif* in *daḥḥalā* (inflexion of the dual of a verb), the *yā'* in *uḫṭulī* and *kitābī* (inflexion of the feminine of a verb and pronominal suffix of a noun respectively), the *wāw* in *ḥatalū* (inflexion of the plural of a verb), and the *hā'* in *kitābuhū* (pronominal suffix of a noun) and in *rahmah* (where the *hā'* replaces the feminine ending *t* of a noun) are *waṣl*. The *nūn* of the *tanwīn* and the second energetic form of the verb cannot be used either as *rawī* or as *waṣl*. But there is no agreement on these rules. Exceptions occur and letters belonging to the root, e.g., the *hā'* in *ablah* from *b-l-h* and the *wāw* in *yaḥlū* from *ḥ-l-w*, can also be *waṣl*. Some prefer adopting the pronominal suffixes *-ka* and *-ki* of the second person singular and the *tā'* of the third person fem. sing. of the perfect tense as *waṣl* rather than as *rawī*, so that for instance *ḍarabat* rhymes with *katabat*, but not with *wazanat*. Where the poet doubles the rhyme consonant, adopts a second rhyme consonant, or imposes upon himself some other rule that is not prescribed by the theorists we have the figure *luṣūm mā lā yalzam* [q.v.], also called *illizām*, *i'nāt*, or *tashdīd*.

In the *kāfiya* the final syllables of word are often subject to changes, the most important of which are the following: (1) final short vowels are dropped or lengthened, the *tanwīn* disappearing at the same time (*zayd* or *zaydū* for *zaydun*, *al-nār* or *al-nārū* for *al-nāru*) (2) the *tā'* of the feminine ending may be

changed into *hā'* and in that case the ending is dropped (*rahmah* for *rahmatun*); (3) in the *kāfiya muḥayyada* the vowel of the final letter may be transferred to the penultimate letter if it is unvowelled (*al-naḥur* for *al-naḥru* to avoid the unacceptable form *al-naḥr*); (4) a quiescent *hā'* may be added to verbal forms from which the last letter of the root has disappeared (*iktādih* for *iktādī*) and to the pronominal suffix of the first person singular; (5) the *hamza* at the end of a word may be replaced by a *wāw* or *yā'* of prolongation which may serve as *waṣl* (*hāzi* for *hāzī*). Ibn Kaysān, *Talkīb*, 53-4, 60-1, draws attention to the musical qualities of the *ta'sis*, the *riḍf*, the *ṣila*, and the *khurūdj* as vowels that can be lengthened in recitation and singing, thus marking clearly the end of a metrical unit. Others discuss in detail the practice of *tarannum*, i.e., the lengthening of the final vowel in the *kāfiya muṣṭaḥa* in singing, and three alternate modes of solemn recitation: (a) the method followed by the Ḥijāzīs who pronounced these vowels as long even when there was no *tarannum*, (b) the practice of the tribe of Tamīm (according to *Akhfash*, *K. al-Kawāfi*, 105, also of *Qays*) who pronounced the final vowel with *tanwīn*, and (c) the rejection of final vowels, apparently even in cases where one of these three methods would violate the metrical pattern of the verse (see also *Akhfash*, *K. al-Kawāfi*, 12-3, 34-7; Freytag, *op. cit.*, 323-4, where specific terms for the long vowels are mentioned).

In all classical forms of poetry the same rhyme is maintained throughout the poem. Moreover, the rhyme also appears at the end of the first hemistich of the first line (except in the metre *radīat*[q.v.] where there are no hemistichs), resulting often in a shortening or lengthening of its last foot to make it conform to the pattern of the last foot of the second hemistich. This practice is called *taṣrīf* and the critics note that some of the older poets omit the *taṣrīf* in the first line, but use it in some other line of the poem. They also quote early examples of the use of internal rhyme (see *Kudāma*, *Naḥd*, 14-9; for the possible connections between these examples and the post-classical forms of strophic poetry see E. García Gómez, *Una "pre-Muwaššaha"* in *Al-Andalus*, xxi, 1956, 406-14; E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 227 ff.). The common term for internal rhyme is *taṣrīf*, but a number of other terms was introduced by later theorists to distinguish different and sometimes complicated patterns (see A. F. M. von Mehren, *Die Rhetorik der Araber*, Vienna 1853 [repr. Hildesheim 1970], 168-9, for definitions and examples of some of the most important terms). Other devices include the repetition at the beginning of the line of the rhyme word of the preceding line and the use of a double *kāfiya* throughout the poem, each *kāfiya* marking the end of a metrical pattern (see Mehren, *op. cit.*, 165, 173).

In keeping with the critics' view that each line of poetry should, as far as possible, contain a complete statement, all treatises on rhetoric give attention to questions of style and figures of speech that affect the choice of the rhyme word. Besides formulating some obvious conclusions on how to avoid stopgaps, the critics recommend structuring the line in such a way that the listener can almost predict the *kāfiya*. This may be achieved, for instance, by leading the hearer to anticipate the repetition of a word that has occurred earlier in the line or one of its paronyms, or by making some rhetorical device depend on the last word of the line, e.g., *ḥarām*, "forbidden", in the *kāfiya* to create an antithesis with *muḥallaḥ*, "declared lawful", earlier in the line (*tashīm*, *tawshīh*,

*irsād*, see Mehren, *op. cit.*, 102-3; cf. also 161-4). Some authorities recommend basing the line, if possible, on a *kāfiya* one has selected in advance and Šafadī[*q.v.*] holds that in the *double entendre* (*tawriya*) the effect of the figure will be more striking if the homonym on which it depends comes only at the end (see Bonebakker, *Some early definitions of the tawriya*, The Hague 1966, 97). The *kāfiya* should not contain any expression from which an evil omen could be drawn.

**Bibliography:** Discussions of the *kāfiya* appear in almost every work on literary theory and criticism and it is impossible to offer a comprehensive bibliography. The following list, moreover, does not mention treatises and special monographs that have already been summarized in Western handbooks or in the article 'ARŪP.

Akhfāsh, *K. al-Kawāfi*, ed. 'Izzat Ḥasan (Damascus, 1390/1970) (fundamental); Kudāma, *Naḥd al-shi'r*, ed. Bonebakker (Leiden, 1956), 2, 7-9, 19-23, 96-9, 108-11, 140-2; Ibn Kaysān, *K. Tal-kīb al-kawāfi*, ed. W. Wright in *Opuscula Arabica* (Leiden, 1859); Ibn Ṭabāṭabā, *'Iyār al-shi'r*, Cairo 1956, 5, 102-11, 127-8; Ibn 'Abd Rabbih, *al-'Iḥd al-farīd*, ed. Aḥmad Amin et al., v (Cairo, 1365/1946), 496-508; 'Abd al-Bākī al-Tanūkhī, *K. al-Kawāfi*, ed. 'Umar al-As'ad and Muḥyiddīn Ramaḍān (Beirut, 1389/1970); Abū Hilāl al-'Askarī, *K. al-Šinā'atayn*, Cairo 71/1952, 375-88, 445-51; Marzūqī, *Sharḥ diwān al-ḥamāsa*, ed. Aḥmad Amin and 'Abd al-Salām Ḥārūn (Cairo, 1371/1951-1373/1953), i, 9, 11; Abu 'l-'Alā' al-Ma'arrī, (*Sharḥ*) *Luxūm mā lā yalsam*, ed. Ṭahā Ḥusayn and Ibrāhīm al-Abyārī (Cairo, n.d.), i, 5-51 (fundamental); Ibn Rashīk, *al-'Umda*, Cairo 1353/1934, i, 129-58, 164, ii, 3-5, 25-33, 54-7, 69-70, 292-3; 'Abd Allāh b. Muḥ. al-Khafādī, *Sirr al-faṣāḥa*, Cairo, 1372/1953, 180-1, 183, 186-8, 210-5, 217-25; Tibrīzī, *al-Wāfi fi 'l-'arūd wa-'l-kawāfi*, ed. 'Umar Yaḥyā and Faḥr al-Dīn Qabāwa (Aleppo, 1390/1970); Usāma b. Munqidh, *al-Badi' fi naḥd al-shi'r*, Cairo 1380/1960, 63-72, 116-20, 127-8; Ḍiyā' al-Dīn Ibn al-Aṭhīr, *al-Maṭhal al-sā'ir*, Cairo 1358/1939, i, 242-6, 264-78, ii, 348-53, 359-61; Ibn Abī 'l-Iṣba', *Tahrīr al-Tahbīr*, Cairo 1383/1963, 116-8, 224-41, 263-7, 295-308, 316-20, 386, 391-2, 517-24, 527-31; idem, *Badi' al-Kur'ān*, Cairo 1377/1957, 36-7, 89-93, 100-2, 108-9, 227-38; Ḥāzīm al-Qarṭādījānī, *Minḥādī al-bulaghā*, Tunis 1966, 206-7, 271-84, 285-6; Ibn Hidīdīa, *Khiṣānat al-adab*, Cairo 1304/1886, 78-9, 100-2, 114-6, 119-21, 126-31, 169-70, 173, 234-5, 366, 370-1, 374-5, 422-3, 434-5, 438-9; Ibn Ma'ṣūm, *Anwār al-rabi'*, Naḍīaf 1388/1968-1389/1969, ii, 149-58, iii, 32-8, 45-51, 71-108, iv, 336-55, v, 181-4, 271-5, 333-7, vi, 93-100, 151-2, 162-5, 190-203, 249, 310-3 (the works by Ibn Abī 'l-Iṣba', Ibn Hidīdīa, and Ibn Ma'ṣūm supplement Mehren's *Rhetorik*); G. W. Freytag, *Darstellung der Arabischen Verskunst*, Bonn, 1830 (reprint Osnabrück 1968), 296-318 (etymologies of technical terms); Silvestre de Sacy, *Grammaire arabe*, Paris 1831, ii, 651-61; D. (S. A. BONEBAKKER)

AL-KĀFIYADĪJĪ, MUḤYĪ AL-DĪN MUḤAMMAD B. SULAYMĀN AL-ḤANAFĪ, 9th-15th century scholar and prolific writer on many subjects. Born in, or rather, after, 788/1386-87 in Šarūkhān [*q.v.*] in a place called Kōkḍjeḳī, apparently situated near Bergama as indicated by the additional *nisba* al-Barghamī, he came to Egypt after 830/1427 and was soon welcomed into the leading scholarly circles there. Çaḳmaḳ appointed him a professor in the Zāwiyat al-Aṣhrāf Ša'bān and later promoted him to the academic deanship (*mashyakhāt al-tadris*) of Ša'bān's Turba. The identical post at the Šaykhūniyya was given him by Ināl in 858/1454. He was a successful teacher as indicated by the names of his students and also by the affection and esteem shown to him by al-Sakhāwī and al-Suyūṭī. He died on Friday morning, 4 Ḍjumādā I 879/16 September 1474.

His *nisba*, Kāfiyādījī or Kāfiyādījī, was earned by his fondness for the *Kāfiya*, the famous grammatical treatise by Ibn al-Ḥāḍijib [*q.v.*]. A grammatical work, a commentary on the *Kawā'id al-i'rāb* of Ibn Hiṣhām (Brockelmann, II, 29, S II, 18), was praised by al-Kāfiyādījī's biographers as his most important publication. But his interests were unusually wide, comprising, in addition to points of law and religion, the full range of the linguistic disciplines, history, the mathematical sciences and astronomy, and, above all, logic. His basic work on logic is a commentary on the *Tahdhīb* of al-Taftāzānī (Brockelmann, II, 278, also mss. Laleli 2592 and Bursa Haraḳçı 1378). His numerous treatises (often carrying the date of their composition at the end) are preserved to a large part but, with one exception, have been neither edited nor studied. Most of them are brief essays that focus on specific problems and try to organize the subject matter along general lines based on formal logic. As was noted by al-Sakhāwī, al-Kāfiyādījī thereby founded, or gave the impression of founding, new disciplines as in the case of his treatise on historiography (cf. Bibliography) or, for instance, in a little essay entitled *al-Rawḥ fi 'ilm al-ruḥ* (ms. Atif Ef. 2828, 167a-169b, also Berlin or. fol. 4249, cf. M. Weisweiler, *Der islamische Bucheinband*, Wiesbaden 1962, 83), which defines a mystically tinged knowledge of the spirit as a special discipline. His sense of brevity ran in a way contrary to the dominant scholarship of the time, so that his treatment of Kur'ān science, *al-Taysīr fi ḳawā'id 'ilm al-tafsīr* (written for Abū Sa'īd Timurbughā in 856/1452) provoked words of dissatisfaction by the otherwise well-disposed Suyūṭī in the introduction of the *Iḥān*. But in sum, it would seem that al-Kāfiyādījī's writings deserve recognition and study for their author's effort to be interesting and original.

**Bibliography:** al-Sakhāwī, *Daw'*, vii, 259-61; 'Alī b. Dāwūd al-Djāwharī, *Inbā' al-ḥaṣr*, Cairo 1970, index; al-Suyūṭī, *Bughya*, 48 f., and *Ḥusn al-muḥādara*, Cairo 1299, i, 317 f.; Ibn Iyās, in *Bibliotheca Islamica*, 5c, 94 f.; Brockelmann, II, 138-140, S II, 140 f.; F. Rosenthal, *A history of Muslim historiography*, Leiden 1968, 245-62, 547-80, containing the text and translation of the *Mukhtaṣar fi 'ilm al-ta'rīkh*. (F. ROSENTHAL)

KAḤIZ [see KAYL].

KAḤSA (GAḤSA), a town in Tunisia 360 km. south-west of Tunis, 200 km from Kayrawān, and 100 km from Gabès [see KAḤBIS], population 30,000; the chief town of an administrative region with a population of 300,000 whose principal mineral resour-

ces consist of the phosphate deposits of M'Dilla, Metlaoui, Redeyef, and Moularès, which were discovered in 1885. The oasis of Kaḥsa contains about 100,000 palm trees producing dates of second-rate quality, to which must be added orchards of orange trees, lemon trees, apricots and figs, vineyards and, very recently, olive groves and attempts to grow pistachio trees. Irrigation is supplied by copious springs which arise in the heart of the town itself, and also by the sinking of artesian wells. As it is the first oasis on the road from Kayrawān towards the region of the Chotts, and is moreover likely to detain the visitor on account of its prehistoric and classical remains, the town has begun to take an interest in tourism and has therefore been able to take advantage of some recent improvements such as that of the road system and equipment of hotels; development of parks; the restoring of the "Roman baths", the Kaḥaba and the Great Mosque; the partial reconstruction of the Byzantine city wall etc. Handicrafts, consisting mainly of the fabrication of brightly coloured blankets and carpets decorated with simple motifs, are also making some progress.

**History:** Kaḥsa is the Arabic form of the classical name of the city called Capsa, the toponym from which J. Morgan, in 1909, created the term "Capsian" to designate the Upper Paleolithic or Mesolithic type of civilization of which this region was one of the most important centres, as can be seen from the numerous "snaileries" and other traces of prehistoric industries.

When we come to historical times, the past of Kaḥsa is less clear. In particular, it is not known precisely when, nor by whom, the city was founded. It is reputed to have been founded by a god, the Lybian or Phoenecian Hercules, which together with other indications suggests a Punic origin. However no archaeological discoveries have been found to confirm this hypothesis. According to the Arabs, the founder of the city was Shantiyān, the slave (*ghulām*) of Nemrod (al-Bakrī, *Masālik*, 47/100), the legendary king of Chaldea. In fact the foundation of the city, whose origin is unknown, can be explained by the topography of the site. As S. Gsell says (*Histoire*, v, 279): "there was there a junction of natural routes leading to the oases of the Chotts, to Gabès, to the Byzacena, to Maktar and to Tébéssa". It is by no means impossible that a Punic town should have been established at these crossroads, of benefit to their trade.

In later years the town was part of the Numidian kingdom of Jugurtha who treated it well, even going so far as to exempt it from taxes, in order to keep it in his power. It paid a high price for these privileges, and their corollary, fidelity to the Numidian king. In the course of a daring campaign, Caius Marius, whom Rome had given the task of subduing Jugurtha, took it by surprise and set fire to it (107 B.C.). But it was reborn from the ashes and at the time of Trajan (98-117) became a commune administered by *suffetes*, which gives some indication of an earlier Punic organization which was retained under the Empire. Then came the reign of Diocletian (284-305). The Berbers became more aggressive, and Rome had to resign itself to the gradual evacuation of the area. This withdrawal continued under the Vandals and on the death of Genseric (428-77) Capsa became the capital of a Berber kingdom. Then it returned to the fold of Byzantium in the reign of Justinian (527-65), who had recreated the unity and greatness of the Empire. For a time Capsa even became the chief town of the province of Byzacena.

About the year 540, Solomon built a new city wall, and it received the name of Capsa-Justiniana.

Kaḥsa has now few traces of its sumptuous, ancient past: the "Roman baths", a few columns and capitals, and other remains of lesser value, largely re-used, mainly in the Great Mosque, but also in other buildings of the old town. Yet right up to the 6th/12th century, the town retained the appearance of a classical city, even to the use of a Romanic language unique in Ifrikiya, and the profession of the Christian religion by a large part of the population. Al-Bakrī (*Masālik*, 47/100), who was writing in the middle of the 5th/11th century, noted that "the town was entirely built on columns (*asāfin*) and arches of marble (*ihkām*)", and that its ancient wall was so well preserved "that it seems as if it was only finished yesterday". A century later al-Idrīsī (*Nuzha*, 75) specified further that "it was inhabited especially by Berbers and that the majority of them spoke Ifrikiyan Latin (*al-lisān al-laḥimī al-ifriki*)"; cf. T. Lewicki, *Une langue romane oubliée de l'Afrique du Nord*, in *RO*, xvii (1953), *passim*.

The first waves of the Muslim conquest swept past the ramparts of Kaḥsa as early as the year 27/647, after the victory of Sbeitla (Sufetula) and the death of the Patrician Gregory. Twenty years later the town was taken by 'Uḫba b. Nāfi', and then, after breaking free of the Arabs with the whole of Ifrikiya, was definitely recaptured by Ḥassān b. al-Nu'mān about 78/697-8.

At the end of the 2nd/8th century and the beginning of the 3rd/9th, the region was largely inhabited by *Khāridjīs*—Luwāta, Zuwāgha and Miknāsa. In 224/839 they took part in the revolt of the district of Kaḥtiliya and were severely punished by the Aghlabid amir Abū 'Ikāl. According to al-Shammākhī (*Siyar*, 203), the imām 'Abd al-Wahhāb (168/784-208/823) had an *'āmil* there; by this is to be understood a tax collector who raised the *ḥur'ānic* taxes from the Ibāḍis and sent them more or less secretly to Tāhart, for the town had never been politically a part of the Rustamid kingdom.

After being under the authority of the Fātimids and then the Zirids, for more than a century Kaḥsa became the capital of a real independent little state including the whole of the land of Kaḥtiliya, present day Djērid, (445/1053-554/1159). The Hilālī invasion had profoundly modified the political context and the ethnic equilibrium of the area. The authority of the central government collapsed, and anarchy reigned everywhere. The Zirid governor of the town, 'Abd Allāh b. Muhammad b. al-Rand, in common with others proclaimed himself independent (445/1053-465/1073) and, by paying tribute to the Arab nomads—above all the Riyāh—with whom he formed an alliance, he strengthened his authority and the security of his realm, attracting to his court poets and *ṣuḥabā'*.

The rule of the Almohads, who united the whole of the Maghrib, put an end to the independence of Kaḥsa. The town was taken in 554/1159 by 'Abd al-Mu'min b. 'Alī after a quite difficult siege. From that time, like all the south of Ifrikiya, it had a troubled existence. There were attempts to take it from the Almohads by an adventurer of Armenian origin, *Qarāḳūsh*, and above all by the Banū Ghāniya [*q.v.*]. The Banu 'l-Rand on their part would not admit they were defeated. This dynasty was restored by Ibn al-Mu'izz at the request of the inhabitants, dissatisfied with their Almohad governor, whom they had put to death. The caliph Abū Ya'qūb Yūsuf came from Marrakesh to lay siege to the town in person

(575/1180), but its submission did not last long. In fact it soon fell into the hands of the Banū Ḥhāniya. It was then the turn of al-Manṣūr to besiege it with a powerful army (583/1187-8). This time Kaḥsa was severely punished: its ramparts were completely razed, and the inhabitants were permitted to retain their lands only as sharecroppers.

During the Ḥafṣid period, the life of the city was no more tranquil. It was taken by the pretender—or usurper—Ibn Abī 'Umāra (681-3/1282-4) in 681/1282. Then it regained its former independence under a local dynasty, that of the Banu 'l-'Ābid who were in favour of Arab predominance. The Ḥafṣid Abū Bakr (718/1318-747/1347), whose very turbulent reign was marked at the beginning by the loss of the southern provinces, besieged it in 735/1335, retook it, and handed it over to be governed by his son Abu 'l-'Ab-bās. At the same time, by grants of land to needy inhabitants, he tried to make it more attached to his rule. However, following the brief Marīnid hegemony (748-50/1348-50), it was not long before it recovered its autonomy once more under the rule of Aḥmad b. 'Umar b. al-'Ābid, then that of his son Muḥammad. Abu 'l-'Abbās (772/1370-796/1394) had to reconquer his kingdom. In 780/1378 he came to lay siege before Kaḥsa, ravaging its oasis in order to force the inhabitants to capitulate, and left his son Abū Bakr there as governor. Thanks to the disturbances which followed the death of the governor al-Turayki (793/1391), a certain al-Dunaydin restored the dynasty of the Banu 'l-'Ābid for his own ends. Abu 'l-'Abbās had to intervene once again. About the middle of 795/spring 1393, he again laid siege to the town, again laid waste the palm grove, experienced some failures, and with considerable difficulty at length succeeded in gaining control of the situation a few months before his death. This lasted for a short time only. The Banu 'l-'Ābid again arose in the town under his successor Abū Fāris (796/1394-837/1434) who was in his turn obliged to capture it (802/1400), and raze its ramparts, eliminating definitively the rebel dynasty. Some decades later Abū 'Abd Allāh Muḥammad al-Muntaṣir (837-9/1434-5) paid a visit to the town and improved the Kaḥaba endowed by his predecessor.

From this time on Kaḥsa is rarely mentioned in history. After a fruitless attempt in 957/1550, Dragut [see TURGHUD], made governor of Tripoli by the sultan Sulaymān the Magnificent (1520-66), succeeded in taking it on 17 Ṣafar 964/20 December 1556. The Turkish occupation failed to restore prosperity. Subsequently, under pressure both from the nomads and a central government incapable of protecting it, it continued to decline until it became merely a minor town of little importance, which was occupied without difficulty by the French (20 November, 1881), when the protectorate was established.

Historical geography. — Kaḥsa is a steppe town which rises between the Orbata mountains in the south-east, and the Assalah and Ben Younès mountains in the north and north-west, on a high point at an altitude of 345 m. in a position which, in historical times, has always had a rather desolate appearance. It was a typical example of a fortress-town depending for its importance on its water reserves in an otherwise arid region, and its position which made it, according to Ch. Tissot, "both one of the gateways to the Sahara and one of the keys to the Tell" (*Geographie*, ii, 668). Sallust (86-35 B.C.) while describing it as a "large and strong city", already stressed the vast and lonely deserts which isolated it and made access to it difficult for invading armies.

Thanks to these advantages, Kaḥsa was able to maintain its importance and prosperity right up to the end of the Classical era, despite the decadence of Byzacena. After the Arab conquest its importance grew even greater. We have noted that it kept the appearance and style of a Classical city for many years. About the end of the 3rd/9th century, al-Ya'qubī, who is the first Arab geographer to leave some detailed personal observations about this town, described it thus: "A fortified town, surrounded by stone walls. There are springs in the interior of the town; the streets are paved. The suburbs are very prosperous, and the fruit there is famous" (*Les Pays*, 212). In the middle of the 4th/10th century, Ibn Ḥawqal—who was at Kayrawān in 336/947 (*Ṣūrat al-Arḍ*, 94, tr. Kramers-Wiet, 92)—informs us that Kaḥsa was an "autonomous (*mustakilla*)" town, and that "its prosperity was perfect (*fi ghāyat al-kamāl*)" before 330/942, at which date it was devastated by Abū Yāzīd [q.v.] (*Ṣūrat al-Arḍ*, 92, tr., 93). It must have recovered quickly from these devastations. In fact, towards the end of the 4th/10th century, al-Muḥaddasi (d. 378/988) counts it among the great centres of Ifrikiya. In the middle of the 5th/11th century, al-Bakrī (d. about 461/1068), who had not visited the country and in general reproduces the Ifrikiyan al-Warrāḳ (d. 363/973-4), gives us a very favourable description of it. This description, which is one of the most detailed we possess of the mediaeval stronghold, lays emphasis on the Classical monuments, still in an excellent state of repair, its gushing springs, providing an abundant supply of water for its orchards, which produced, among other things, large quantities of pistachios exported to all parts of Ifrikiya, and even to Egypt, to Sidjilmāsa and to Spain. There were also to be found, he adds, dates as big as pigeons' eggs. In the surrounding area there were no less than two hundred villages, called *Kuṣūr Kaḥsa*, all flourishing. Lastly, and the final uncontrovertible indication of wealth, he informs us that the taxes raised there furnished no less than 50,000 *dinārs* to the Treasury. It is certain that this description related to the highest degree of prosperity attained by the town, probably at the time of al-Warrāḳ, that is the end of the 4th/10th century. This prosperity was doubtless maintained during the following century, that of al-Bakrī, despite the invasion of the Hilālīs with whom the Banu 'l-Rand succeeded in finding a *modus vivendi* which, though costly, was at least acceptable. The town continued to flourish until the middle of the 6th/12th century, when al-Idrisī was writing, and he described it as "a fine town (*madīna ḥasana*)", with its walls still intact, its abundant water supply, its well stocked markets, its numerous traders, its industries in full expansion (*sinā'a kā'ima*), its vast palm grove producing dates of magnificent quality (*ʿadḥīb*), its populous villages, its gardens, its orchards, and its varied plantations providing, amongst other things, henna, cotton and cumin, all of which were highly prized in the Middle Ages.

From the time of the Almohads, the scene changed. The town, jealous of its independence, rebelled frequently, and paid a high price for its excessive love of freedom. Several times over, as we have seen, its ramparts were razed and its palm grove laid waste. Its economic decline can be traced back to that time. In the 7th/13th century, Yāqūt (574/1178-626/1229), though he recounts its former splendours, mentions it at the time only as "a small town (*balda ṣaḥīra*) on the borders of Ifrikiya. . . in the middle of a sterile saline region" (*Buldān*, iv, 382). Its sur-

rounding villages, which were the most exposed to devastation, disappeared. In the time of Ibn al-Shabbāḥ (618/1221-681/1282), reproduced by al-Wazīr al-Sarrāḡī (*Hulal*, i, 437), "only a few of them survived". In the middle of the 10th/16th century, Leo Africanus, after reporting the destructions ordered by al-Manṣūr, wrote: "Today Caphsa is completely repopulated, but its buildings are only small, with the exception of a few mosques. Its streets are very wide and paved all over with black stone like those of Naples and Florence. The population is under control, but poor on account of the taxes by which they are burdened by the king of Tunis" (*Description de l'Afrique*, ii, 444). He continues, pointing out that its climate is unhealthy, and praising its cloths, its pottery, its dates, its orange trees and its olive trees, which gave "an oil as perfect in taste as in colour". After this it is not until the 19th century, that is in the accounts of travellers such as Guérin, Zaccane and Mayet, that we have other descriptions of the town, which in fact was then no more than a wretched village.

**KĀḤTĀN** [see LIBĀS]

**KĀḤŪR** (also *kāḡūr*, *kaḡ(f)ūr*, see the dictionaries; from Hindu *kaḡpūra*, *kappūra*, Malayan *kapur*), camphor, the white, translucent substance which is distilled together with camphor oil from the wood of the camphor tree (*Cinnamomum camphora*) indigenous to east Asia (China, Formosa, Japan); it is to be distinguished from the Borneo camphor derived from *Dryobalanops aromatica* coming from Indonesia (Sumatra, Borneo). Both kinds were used as perfumes and medicines, but the latter, according to the Muslim sources native to Faḡūr (Kaḡūr, Faḡūr, and variants) in Sumatra, production of which must have been greater in the Middle Ages than today, was much more expensive and efficacious than the East Asian variety; according to Marco Polo it was worth its weight in gold.

Camphor seems to have been unknown to Greek and Roman antiquity, but in the Near East, by Sāsānid times at the latest, it was used as spice and perfume; when the Arabs conquered Ctesiphon in 16/637, they found there rich stores of camphor, which they thought was salt (Balādhuri, *Futūḡ*, 264; Ibn al-Aḡḡir, *Kāmil*, ii, 401). It was also known in ancient Arabia, for according to Kur'an LXXVI, 5, devout Muslims are refreshed in paradise with a drink flavoured with camphor. Camphor was known to ancient Arabic poets, at least by name; it is often put metonymically with musk (*misk* [q.v.]) as a symbol of the opposition of white and black, e.g., 'Umar b. Abī Rabī'ā, ed. Schwarz, 10, 16; 16, 14; 32, 1; 115, 12; 171, 6; 183, 3; Imru 'l-Kays in Hamdānī, *Djazira*, ed. Müller, 198; anon. in Yāqūt, *Mu'djam*, ed. Wüstenfeld, iv, 747. Cf. further A'shā, ed. Geyer, 80, 6; Akḡḡal, ed. Šālḡānī, 35; Ibn al-Rūmī in Ibn Abī 'Awn, *Taḡḡbihāt*, ed. 'Abd al-Mu'īd Khān, 323, etc. On the whiteness of camphor, see further Dozy, ii, 447a and A. Dietrich, *Zum Drogenhandel im islamischen Ägypten*, Heidelberg 1954, 30.

The technology of camphor, its provenance, extraction, preservation, utilisation etc., is fairly comprehensively described by the geographers and cosmographers. The camphor tree grew on river banks and became so large that it could give shade to a hundred men. In general it was dealt with as follows: the bark was cut so that the resin ran out. It was collected in large vessels and kept cool. In so far as the camphor tree was usually in areas infested by tigers (*numūr*, several mss. mistakenly *nusūr*, "eagles"), the resin could only be obtained at fixed times of the year when the tigers had dispersed. The wood is described as white, soft and very light. After the drawing off of the resin, the tree dies off. The diverging descriptions in the sources imply no contradiction, but only different procedures existing side by side. Cf. Ibn Khurrādādhbih (*BGA*, vi), 65; Mas'ūdī, *Murūḡī*, i, 338, 340, iii, 49, 56 = ed. and tr. Pellat, §§ 371, 375, 892, 899; Kazwīnī, *Kosmographie*, ed. Wüstenfeld, i, 262 f. = tr. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, ii, new impression Hildesheim 1970, 379; Dimashḡī, *al-Iḡḡāra ilā maḡāsin al-tiḡjāra*, tr. Wiedemann, *loc. cit.*, 9; Nuwayrī, *Nihāya*, tr. Wiedemann, *loc. cit.*, 231 f.; Yāqūt, *Mu'djam*, ed. Wüstenfeld, iii, 456; Ibn Baḡḡūḡa (Paris), iv, 141.

The main significance of camphor lay however in its officinal uses. Already al-Kindī (*The Medical Formulary or Aqrābādīn*, tr. M. Levey, 1966) brought together a series of camphor recipes useful for swollen liver, complaints of the larynx, inflammations of the mucous membrane of the mouth, and so on (nos. 11, 24, 61, 77, 89, 91, 104, 152). The same author, or one of his pupils, composed a document about the production of fragrant oils and salves by means of "heightenings" (*taš'idāt*, primitive distillations), in which camphor played an important part: *Kitāb Kimiyā' al-'iṣr wa 'l-taš'idāt*, ed. K. Garbers, Leipzig 1948, 242-6. Camphor is useful as a source of perfume, as a compress for acute fevers, headache, etc.: Ibn al-Kuffī, *Ḍiṣāḥa*, see H. G. Kircher, *Die "Einfachen Heilmittel" aus dem "Handbuch der Chirurgie" des Ibn al-Quff*, Diss. phil., Bonn 1969, no. 214; Ibn Rabban al-Ṭabarī, *Firdaws al-ḥikma*, see W. Schmucker, *Die pflanzliche und mineralische Materia medica im Firdaws al-ḥikma des 'Alī ibn Saḥl Rabban al-Ṭabarī*, Diss. phil., Bonn 1969, no. 610; Ibn Hubal, *Mukhtārāt*, Hyderabad 1362, ii, 109; al-Mu'izz b. Bādīs, *Umdat al-khitāb*, see M. Levey, *Mediaeval Arabic bookmaking and its relation to early chemistry and pharmacology* (*Transactions of the American Philosophical Society*, N.S., Vol. liii/4 (1962), 17 f., 47 f.; *Tuḥfat al-aḥbāb*, ed. Renaud and Colin, Paris 1934, no. 212. By far the most exhaustive description, together with a statement of his sources, is provided by Ibn al-Bayṭār, *al-Diāmī*, Cairo 1291, iv, 42-44 = tr. Leclercq, iii, 127-31. On camphor in Syriac literature see Brockelmann, *Lex. Syr.* <sup>2</sup>, 341b, 686a.

The same word *kāfūr* (variants *kufurrā*, *kifirrā*, *djufurrā*, et al., Lane 2622b; *Lisān* (Beirut), v, 149 f.) also designates the integument of the palm leaf or of the grapevine. The word came through the Aramaic *gōparrā* probably from the Akkadian. Cf. Ašma'ī, *al-Naḥḥl wa 'l-karm*, ed. Haffner, Beirut 1908, 6; Ibn Sida, *Mukḥaṣṣas*, xi, 119 f.; Maimonides, *Sharḥ asmā' al-'uḳḅār*, ed. Meyerhof, no. 206; Fraenkel, *Aram. Fremdw.*, 147; Brockelmann, *Lex. Syr.* <sup>2</sup>, 129a.

**KÄFÜR**, ABU'L-MISK, a black eunuch (the name al-Lābī, given to him by al-Mutanabbī, suggests his origin from Lāb in Nubia) became the dominant personality of the Iḳḥshīdīd [q.v.] dynasty in Egypt. Sold to its founder, Muḥammad ibn Tuḡḡdī al-Iḳḥshīdī [q.v.], Kāfūr so impressed his new master that the latter sponsored his rise to positions of political and military influence. As a field commander Kāfūr participated in the Egyptian expedition of 333/945 to Syria; he was also involved in the diplomatic exchanges between al-Iḳḥshīdī and the Caliph of Baghdad. Of great significance was his appointment as the supervisor of the princely education of the two sons of al-Iḳḥshīdī. Upon the death of Ibn Tuḡḡdī Kāfūr safeguarded the interests of his master's dynastic legacy by securing a formal succession of the Iḳḥshīdīd princes, Abu'l-Kāsim Anūdjūr (Unūdjūr) in 334/946, and 'Alī ibn al-Iḳḥshīdī in 349/961. Although during that period Kāfūr enjoyed complete executive authority, he found it expedient to operate behind the façade of the Iḳḥshīdīd establishment. Only in

355/966, following the death of 'Alī, did Kāfūr publicly declare himself as the sole master of Egypt. This declaration was justified because of the minority of another prospective Iḳḥshīdīd successor, Aḥmad b. 'Alī, and was sanctioned by an official diploma of investiture allegedly received from the Caliph of Baghdad. Until his death on 21 Djuḡmādā I 357/23 April 968, the name of Kāfūr replaced the Iḳḥshīdīd names in the Egyptian *ḫuḫba* [q.v.]. His official title was *al-ustādḥ* [q.v.]. There is no evidence, however, that his exalted political status included the prerogatives of *sikka* [q.v.] or *ḫirāz* [q.v.].

The main significance of Kāfūr in Islamic history lies in the fact that during the twenty-two years of his government he successfully protected the Iḳḥshīdīd establishment against dangerous outside pressures (the Fāṭimids, the Karmatians, the Nubians and the Ḥamdānids). All this he accomplished in spite of internal political complications (rebellion of Ḡhalbūn in 335/947-336/948; an abortive coup d'état by Anūdjūr in 343/954; persistent spread of subversive Ismā'īlī propaganda) and serious economic setbacks (a devastating fire in the business section of Fustāṭ in 343/954; major earthquake in Egypt in 344/955; recurrence of famine, food-price inflation, and consequent civil disturbances, in 338/949, 341/952, 343/955, 352/963-357/968). His effective military and diplomatic measures helped secure an advantageous agreement with the Ḥamdānids in 335/947 concerning the Iḳḥshīdīd hold over Damascus. Above all, Kāfūr was able to delay the Fāṭimid expansion to Egypt. "The black stone (i.e., Kāfūr) stands between us and thee (i.e., the Fāṭimid Caliph)" complained frustrated Ismā'īlī agents in Egypt. (Cf. al-Maḳrīzī, *Itti'āz al-ḫunafā'*, Cairo 1948, 147).

In spite of economic adversities and heavy government expenditure, Kāfūr's administration refrained from extortionate fiscal practices. Its gold coinage, though fluctuating in weight, displayed a remarkable stability as to the standard of fineness. Kāfūr's domestic accomplishments must be partially attributed to his ability to enroll the services of competent administrators, one of them the famous Ya'qūb ibn Killis [q.v.].

Kāfūr also gained popularity in Islamic history because of his patronage of scholars and writers. The most celebrated of them was the great poet al-Mutanabbī [q.v.], who immortalized the black ruler in a number of panegyrical and satirical verses. Kāfūr has been credited with the construction of a number of sumptuous palaces, of two mosques (in Gīza and on al-Muḳaṭṭam), of a hospital, and of the Kāfūriyya gardens in the capital. No archaeological traces of his architectural contributions have been discovered.

(A. S. EHRENKREUTZ)

**KĀFÜR**, MALIK, known as 'IZZ AL-DAWLA, TĀDĪ AL-DĪN and HAZĀR-DĪNĀRĪ, eunuch general and minister of Sultan 'Alā' al-Dīn Muḥammad Shāh Khildīl [q.v.] of Dihli, is stated to have been of Marhat't'a (Marāt'ha) origin (see 'Iṣāmī, p. 319). In youth he was the slave of a wealthy Khwādja ("Khodja"—sc. Nizārī Ismā'īl) of Kanbhāyat (Cambay). In the Muslim conquest of Guḡjarāt of 698/1299 he was taken by the commander Nuṣrat Khān and presented to Sultan 'Alā al-Dīn in Dihli. Ibn Baṭṭūṭa (iii, 187) may be in error in stating that the epithet *Alfī* (= *Haṣār-dīnārī*—"the thousand guinea man" acc. S. Lane Poole, p. 113) refers to a sum paid by the sultan himself for Kāfūr. Kāfūr was evidently of great physical beauty and Baranī refers in coarse terms to passive homosexual practices as well as to the Sultan's infatuation with him. His advance through the following few years is undocumented and he next appears as an outstandingly successful military commander. Ca. 705-6/1305-6 he commanded an army which in the Panḡjāb defeated the Mongol invader Kebek/Köpek/KNK (identification with the future Çaḡhatāyid ruler poses difficulties, as Indian sources are unanimous in stating that he was put to death in Dihli). Kāfūr is now referred to as *Nā'ib-i Bārbak*, "assistant master of ceremonies", whence his name Malik Nā'ib, thought by some historians to refer to the more important role of *Nā'ib-i Sultān* (see Tripathi, p. 180). He was next sent as commander of a series of great military raids into the Deccan, which laid the foundations of Muslim power there. On the first of these he arrived at Devgīr (Devagiri) on 19 Ramaḡān 706/24 March 1307: Rāḡija Rāmādeva (Rāmācandra) of Devgīr was taken to Dihli with rich spoils. On 25 D̄jumādā I 709/2 October 1309 Kāfūr was again despatched to the Deccan and besieged the Kākatiya ruler, Pratāpa Rudraveda of Warangal, until the latter surrendered spoils and agreed to pay tribute: Kāfūr arrived back at Dihli on 11 Muḡarram 710/9 June 1310. On 24 D̄jumādā I 710/19 October 1310 he was despatched upon his third great expedition, which reached the extremity of peninsular India. On 5 Shawwāl/25 February 1311 he arrived at Dhorasamudra, where the Hoysala Vira Ballāla III surrendered and joined Kāfūr's army on its way to plunder the southernmost Indian kingdom of the Pānd'yas. From there great quantities of gold and elephants were taken by Kāfūr, but the hostile ruler Vira Pānd'ya eluded capture. Camp was struck from Madura on 4 Dhu 'l-Hiḡidja/24 April; Kāfūr reached Dihli in triumph on 4 D̄jumādā II 711/18 October 1311. At court Kāfūr now appears to have excited the enmity of a faction headed by Māhrū Malika-yi D̄jahān, second wife of 'Alā' al-Dīn, her brother Alp Khān and Khidr Khān, the sultan's eldest son by her. Probably at his own request, Kāfūr was sent south once more ca. 713/1313-14 to displace Singhana, son of Rāmādeva, from Devgīr and to consolidate Muslim rule and settlement in the northern Deccan. He performed this task ably until he received an urgent summons to Dihli, where 'Alā' al-Dīn's health was deteriorating. After his swift return there and at any rate with 'Alā' al-Dīn's acquiescence, Kāfūr had Alp Khān murdered and Khidr Khān exiled from the presence. 'Alā' al-Dīn died on 6 or 7 Shawwāl 715/ 3 or 4 January 1316:

contemporary rumour accused Kāfūr of hastening his end. Kāfūr secured the recognition as sultan of Shihāb al-Dīn 'Umar, the six-year-old son of 'Alā' al-Dīn by Čit'ā'l, daughter of Rāmādeva of Devgīr: some sources state that Kāfūr also married this lady. In the struggle for power he succeeded in having Khidr Khān blinded and two other elder sons of 'Alā' al-Dīn imprisoned, but failed in the case of a fourth, the future Sultān Kuṭb al-Dīn Mubārak. About 35 days after the death of 'Alā' al-Dīn, Kāfūr was murdered by four *pā'iks*, palace bodyguards: in consequence Sultān Shihāb al-Dīn 'Umar was by stages set aside in favour of Kuṭb al-Dīn Mubārak, who later put to death Kāfūr's murderers.

**KĀGHAD**, KĀGHID (from the Persian *kāghadh* perhaps of Chinese origin), paper. In the early period of development of Muslim culture the east was acquainted only with papyrus (*hīrtās*) as writing-material. It was Chinese prisoners of war brought to Samarkand after the battle of Aṭlakḡ near Tālās who first introduced in 134/751 the industry of paper-making from linen, flax or hemp rags after the method used in China. The various kinds of paper then made were the following: *fīr'awānī* ("Pharaonic"), a kind which was to compete with papyrus even in the land of its origin (the oldest paper with Arabic writing on it found in Egypt dates from 180/796-200/815); *sulaymānī*, from Sulaymān b. Rāshīd, the treasurer of Khurāsān under Hārūn al-Rashīd; *d̄ja'fārī*, called after D̄ja'fār b. Yaḡyā b. Khālid al-Barmakī, vizier of Hārūn al-Rashīd (d. 187/803); *ṭālḡī*, from Ṭālḡa b. Ṭāhīr, the second ruler of the Ṭāhīrid dynasty; *ṭāhīrī*, from Ṭāhīr II of the same dynasty; *nūḡī*, after the Sāmānid Nūḡ I, 331/942-343/954.

To judge from these names it must be supposed that paper achieved some importance as early as the second half of the 2nd/8th century. About that time or at the beginning of the 3rd/9th century paper had, according to al-D̄jahīz, the same importance for the east as papyrus had for the west, especially since Hārūn al-Rashīd had ordered the use of paper as a writing material in the government offices because it was not possible to erase a text written on paper, or to scratch it out without this being noticed. In the first half of the 3rd/9th century paper made in Samarkand had already replaced papyrus as well as parchment in Baghdād, although we do not know precisely when the manufacture of paper began in Baghdād or in Cairo. According to al-Tha'ālibī (350/961-429/1038) the paper made in Cairo was especially fine and smooth, but on the other hand it is stated that the Ikhshīdid vizier, D̄ja'fār b. Ḥīnzāba (d. 391 or 392/1001), had brought the paper which he used directly from Samarkand.

Paper-mills were erected elsewhere on the plan of those in Samarkand; al-Faḡl, brother of D̄ja'fār al-Barmakī, who had been governor of Khurāsān in

178/794, probably founded the paper-mill in the Dār al-Ḳazz quarter in Baghdad. Soon afterwards others arose in the Tihāma, Yemen and Egypt, where paper ultimately drove out papyrus, also in Damascus, Tripoli, Hamāt, Manbijī, Tiberias, the Maghrib, Spain (at Jativa), Persia and India. *Kāghadh-kunān*, the "paper-makers", was the name taken by the people of the village of *Khūnadjī* or *Khūna* in *Ādharbāydiyyān*, two days' journey from *Zandjān*, on account of the excellent paper made there. The place was destroyed by the Mongols, who, however, founded a colony, *Mughuliyya*, there (Barbier de Meynard, *Dict. de la Perse*, 219; *Hādijīl Khālifa, Dihānnumā*, Istanbul 1145/1732-3, 298, tr. Norberg, i, 365).

On the preparation of paper and the different methods of colouring it, interesting details are given by J. von Karabacek, *Neue Quellen z. Papiergeschichte*, in *Mitt. aus der Samml. der Papyrus Ersh. Rainer*, iv, 75 ff. The raw material for paper-making consisted of rotten linen or hemp ropes, cut into small pieces, cleaned and bleached. It was then pounded in mortars, stampers or paper-mills, and water was added to make a pulp which was dressed with glue made of wheat starch (*nashā*). The pulp was then led off into a pulp-vat (*ḡasriyya*), water was added, and the pulp drawn through a deckle (*ḡalīb*) and shaken. It was smoothed by hand, left on the deckle as long as seemed necessary, then laid on a table, attached to a clean, even wall and left to dry. Then each side of the sheet was rubbed with a concoction of flour and starch, left to dry and polished. The fineness of the paper depended on the nature of the deckle, the finest, like our vellum, coming from a very fine wire sieve.

In the rubbish heaps of the old towns in Egypt (e.g., al-Ushmunayn, Madinat al-Fayyūm, al-Fuṣṭāt), great masses of ancient paper of different kinds and colours have been discovered. Besides very white and off-white papers, artificially coloured ones—yellow, pale blue, violet, pink, green and red, have been found. Paper was much cheaper than papyrus; according to a 4th/10th century document in the collection of Archduke Rainer in the National Austrian Library, 6 2/3 dinars were paid for 125 sheets. The price naturally depended on the quality and kind. That made in Baghdad (*al-waraq al-Baghādī*) was considered the best.

The paper used in the east is now almost entirely of European manufacture. In Persia we still find a Chinese paper called *Khān Ballḡ* (Turkish name of Peking), a scarce paper, sought after for its durability. The Cairo printers prefer a strong yellow-coloured paper called *nabāṭī* (Pers. *nabāt*, sugar-candy).

A paper-mill long ago destroyed (*Kāghad-Khāna*, popularly *K'at-Hāne*) gave its name to the Imperial Kiosk and the public promenade of the "Sweet Waters of Europe" in Istanbul.

**AL-KĀHĪĀL** [see 'ALĪ B. 'ISĀ].

**KĀHIN**, a term of controversial origin (cf. T. Fahd, *Divination arabe*, 91 ff.), belonging to Canaanite, Aramaic and Arab traditions. At the earliest stage known to us it appears to have been used by the "Western Semites" to designate the possessor of a single function with related prerogatives, that is to say, the offering of sacrifices in the name of the group, the representing of this group before the deity, the interpretation of the will of the deity, and in addition the anticipation and communication of his wishes. The evolution of this function and these prerogatives follows the social evolution of these three groups themselves; with their transition from a pastoral to an agricultural civilization, their conception of the deity and of the service due to him changed to suit the conditions of daily life. As the pre-Islamic Arabs were the last followers of the pastoral way of life, their conceptions of the priesthood probably reflect more or less faithfully the earliest stage of the priestly function, so far, of course, as the post-Islamic data at our disposal have remained faithful to their oral or written sources.

In this respect, although the accounts in which the *kāhin* appears may be fanciful and tendentious, it remains true that, in order to recreate a proper context for these stories and to avoid anachronisms, the people who told them and the people who used them must have tried to reconstitute and preserve the original terminology. For those who know the Semitic theodicy in particular, the importance of the names and epithets given to the deities in polytheism and to God in monotheism in the elaboration of theology is obvious, bearing in mind above all that the true Muslim theodicy is to be found in the treatises of the *asmā' al-husnā* [q.v.] rather than in those of the *mutakallimūn*.

We are of the opinion that the same reasoning applies to the terminology designating the personnel and the accoutrements of the cult. Therefore we have chosen as our point of departure the various names and attributes designating the function and prerogatives of the *kāhin*, in the hope of gaining a clearer picture of his characteristics as they must have appeared in the religious outlook of the greater part of the Arabs, since we lack documents of sufficiently established authenticity that deal with the conception of the *kāhin* held by the élite of the people and the ruling class.

Like the Greek *ιερεὺς* and the Latin *sacerdos*, the Arab *kāhin* combined the functions of sacrificer and guardian of the sanctuary, and those of the *μαρτυρὴς* and the *augur*; hence it is possible to render the word *kāhin* by "priest", in the sense of agent of the official cult. But the predominance of nomadism, where it was usually the head of the family or tribe who offered sacrifices, after the manner of the patriarchs in the Old Testament, and in which frequent migra-

tions prevented the establishment of an official form of worship and fixed places of worship, weakened the first role of the *kāhin* while favouring the development of the second, more in keeping with the expectations of most of his fellow-tribesmen. Thus it is virtually necessary to translate *kāhin* as "diviner" (since we lack an exact equivalent) with the dual meaning of the Latin *divinus*, that is to say "one inspired" and "prophet", without excluding his strictly priestly role in places where social conditions allowed it, such as at Mecca and al-Ṭā'if, and near a few important holy places of Arabia (Dhu 'l-Khalāṣa, al-Djalsad, al-Fals, for example; cf. details in T. Fahd, *Le Panthéon de l'Arabie centrale à la veille de l'Hégire*, Paris 1968).

The oracular, mantic and augural role of the *kāhin* is for all practical purposes the only one recognized in the evidence we possess, which derives essentially from folklore. The numerous special divinatory functions which he exercised are known to us only through the various names which designated the exercise of these functions, illustrated by a few examples. These names, frequently used as synonyms for *kāhin* (as are for example for "diviner and the female equivalent: "augur", "haruspex", "magus", "pythoness", "sybil", "seer", etc.), are: *afkal*, *hāst*, *dhū*, *ilāh*, *sādin*, *arrāf*, *ā'if*, *sādjir*, *kā'if*, *nāshid*, etc. Our knowledge of the *kāhin* amounts in practice to no more than the significance of those names and the deductions to be drawn from the stories which illustrate them.

To begin with the term *kāhin* itself: its etymological origin is obscure (possibilities are the Semitic root *k w n*, "to be, to stand up", and the Akkadian root *k' n*, giving the idea of prostration; but the unusual permutation of the consonant *k* is still unexplained). However, it seems to have been part of the earliest religious vocabulary of the Western Semites, after the manner of the *bārū* at Mari and in Akkad. Like the *bārū*, he combined the functions of guarding the holy place, transmitting the oracle, offering sacrifices, and interpreting signs by divination. These were the functions of the Hebrew *kōhēn* before the institution of the Monarchy, as described in the Bible (cf. H. Ringgren, *Israelite Religion*, 1966).

The Arab *kāhin* had not developed beyond this stage when the advent of Islam brought about his disappearance because of the absence, in the nomadic environment in which he lived, of a permanent stable kingship which, as in neighbouring kingdoms and elsewhere, would have organized the priesthood if only to keep it under control. This lack of organization resulted in making the *kāhin* the sole repository of supernatural knowledge, dispensed in Israel by the *kōhēn* and the *nabī*, and this led them to the practice of both divinatory and ecstatic techniques. Thus, like the *bārūm* of Mari (cf. A. Finet, *La place du devin dans la société de Mari*, in *La Divination en Mésopotamie ancienne et dans les régions voisines*, Paris 1966, 93), the *kāhin* of ancient Arabia held in his hands the fate of the entire tribe, in both peace and war.

The oracular and ecstatic aspects of his functions appear more overtly in the *kāhina*, who like the "ecstatic prophetess" of Mari (*muhhutum*, cf. G. Dossin, *Sur le prophétisme à Mari*, *ibid.*, 80) had visions and was in charge of an oracle (*rabbat bayt*: cf. examples and references in *Divination arabe*, 98 ff.). The most famous of these women was Ṭ(Z)arifa.

As far as the *kāhin* is concerned, these aspects are revealed more particularly by two names borne by certain of their numbers: *afkal* ('Amr b. al-Djū'ayd, the *sayyid* of the Rabī'a) and *hāst* (Zuhayr b. Djanab,

the *sayyid* of the Kalb). In fact *afkal*, from the Sumerian-Akkadian *aphallu* and preserved in several Semitic languages with the meaning of high priest (cf. *Divination arabe*, 103 f.), seems to have acquired an ecstatic character among the Arabs (*loc. cit.*); in the same way the *hāst*, a term of Aramaic origin comparable to the Hebrew *ro'eh*, the forerunner of the *nabī*, must have been originally a "seer", as is indicated by his name; but he became increasingly an observer of omens, and the term became a generic one covering different divinatory and magical practices (*op. cit.*, 112 f.). (On the oracular utterances of the *kāhin* and the *kāhina* see *SAP* [7]).

The aspect of guardian and sacrificer in holy places and places of worship appears in the following names given to the *kāhin*: *rabb*, who like the *r b* of Ugarit and the Kaṭabānī *r b y* had to manage the affairs of the holy place (territories and entrances); *dhū ilāh*, caretaker of the betel, the "sacred stone" itself entrusted to his keeping during the movements of the tribe, expressing at the same time the close link arising from the proximity between the deity and his servant (compare with *'abd*, *taym*, *imru*), and their Semitic equivalents); *sādin* and *hādīb*, which properly speaking designated the function of guardian in the holy places and the *cellae* where the *sacra* of a tribe or a group of tribes were deposited. This presupposed, therefore, a measure of settlement and all that this implied with respect to institutions, organizations and established customs. The observation of what was happening in other temples of the world around (compare for example the reforms introduced by 'Amr b. Luḥayy [q.v.] after a stay in a Hellenistic spa, and the institutions founded in the 5th century by Kuṣayy [q.v.], who came from a Byzantine area where ecclesiastic and monastic organization were highly developed) aided the development of the office of the *sādin*, and stability made possible the creation and preservation of traditions, myths and legends. But the function of the *sādin* was not restricted to the guardianship of the holy place; he took the place of the *kāhin*, and like him performed sacrificial and divinatory rites, as did the Ugaritic *n k d* (compare Hebrew *nōkedh* from the Meshā' stela) who also bore the titles *r b* and *k h n* (see *Divination arabe*, 111).

The divinatory aspect of the function of the *kāhin* is covered generically by the term *arrāf*, and specifically by names derived from the divinatory specialities which he practised, such as *ā'if* and *sādjir* [see 'YĀFA], *kā'if* [see KĪYĀFA], *nāshid* and several other secondary designations for particular occasions, such as *hakam* (arbitrator on the occasion of a *munāṣara*), *khātib*, (spokesman and messenger), *shā'ir* (incantator and inciter to battle), *ṭabīb* (medicine man), *khābir* (valuer).

The *arrāf* is the *kāhin*, even though the former occupies a lower rank than the latter in the hierarchy of seers because he does no more than exercise the divinatory prerogatives of the *kāhin*; however, since in a nomadic society these predominated, *arrāf* and *kāhin* were eventually applied to the same person.

*Irāfa* is the knowledge of things unseen or of things to come, on the basis of things visible or present. It implies a gnostic knowledge (compare *ma'rifa* in relation to *'ilm*), and consequently a knowledge restricted to the initiated, an implication contained in the Akkadian and Hebrew equivalents of *arrāf*: *mūdū* and *iidd'o'ni*. Therefore *irāfa*, while belonging essentially to the realm of divination, comes close to that of enchantment and magic.

*Arrāf* and *arrāfa* are inspired by a *tābī'* or *tābī'a*

(familiar spirit) or a *ra'īyy* or *ri'īyy* (inspirer for particular occasions); therefore the *'arrāf* is called *malbū'* (flanked by a demon), and *'irāfa* is at times assimilated to sorcery and to *sha'badha* (legerdemain, conjuring). The lowest stage of the function of the *'arrāf* and the *kāhīn* is rendered by the term *nāshīd*. This epithet refers both to his role as exorciser (*munāshada*) and to his role as finder of lost animals and other objects. It is often in this guise that the *kāhīn-'arrāf* appears in the apologetic folktales of primitive Islam.

Before Islam, the *kāhīn* in central Arabia was the spiritual and intellectual guide of the tribe, a role filled by all agents of a cult in underdeveloped societies at every period and every place. By reason of the geographic, historic and social circumstances in which he practised, he was an independent holy man, like his Greek counterpart, even though at times connected with an oracle, rather than an official in the service of a centralizing state, like his Assyro-Babylonian and Roman counterparts.

AL-KĀHĪNA ("the Sorceress") was the guiding spirit of Berber resistance to the Arab invaders led by Ḥassān b. al-Nu'mān [q.v.] after the collapse of Byzantine power marked by the fall of Carthage (73/692-3).

Her true personality—which must have been highly complex—is very difficult to discern, for only the distorted reflections of her real features can be detected behind the legend. There is no agreement even on her real name, for al-Kāhīna is only a nickname given to her by the Arabs. It is said that she was named Dihya—Ibn Khaldūn (tr. de Slane, *Berbères*, i, 172) mentions a Berber tribe known by this name—of which Dahyā, Dāhiya, Damya, Dāmiya, or Dahya could be merely variant spellings. There is the same doubt about her descent; she is said to be the daughter of Tālit, or again of Mātiya (= Matthias, Matthew) son of Tīfān (= Theophanus). If this means that al-Kāhīna was descended from those Berbers of mixed blood, the issue of mixed marriages, it would help to explain her authority, not only over her compatriots but also over the Byzantines. Several other indications confirm this hypothesis. Al-Kāhīna herself is said to have married a Greek. We are told that she had two sons: the one of Berber descent, the other of a Greek father (*Yūnānī*). She was also, contrary to general belief, Christian by religion rather than Jewish. Her tribe, the nomadic and pastoral Djarāwa, a subdivision of the Zanāta, themselves related to the Buṭr, had indeed first adopted Judaism, but like many other tribes, such as the Nafūsa, had afterwards been converted to Christianity. When al-Kāhīna appeared on the scene of history she was a widow, and was certainly very old. Legend relates that she lived for 127 years, 35 of them as "queen" (*malika*) of the Aurès, where in 477, following a successful rebellion against the Vandals, a first independent Berber kingdom had already been set up, governed by Iabdas. Like those "Arab queens" cited by T. Fahd (*Divination arabe*, 98), she was clearly an "ecstatic". At the moment of inspiration she became wildly excited, let her hair stream out, and beat her breast. She also practised more orthodox techniques of divination, such as reading the future in gravel, and there is no doubt that she owed a large part of her power to her prophetic gifts.

Al-Kāhīna took up the challenge thrown down by Kusayla, who had mobilized in particular the settled Barānis. At first she was victorious. After taking Carthage and destroying the organized Byzantine forces, Ḥassān turned towards the Aurès, the stronghold of Berber resistance. He regrouped his forces on the banks of the Meskiana and attacked. Al-Kāhīna did likewise, after demolishing Bāghāya, which was probably her capital and which she wished to avoid falling into the aggressors' hands. The decisive confrontation took place on the banks of the Oued Nīnī, probably not far from the railway station of the same name which today is situated 16 km. to the south of Aīn-Belda on the railway line to Khenchela. The battle was so disastrous for Ḥassān that for many years afterwards the Arabs called the *oued* where it took place *Nahr al-Balā'* ("river of trials"), or, for less apparent reasons, *Wādi 'l-'Aḥārā* ("valley of the virgins"). This campaign, Ḥassān's first setback, had an epilogue in the territory of Gabès in the course of a final battle which drove the invaders out of Ifrīkiya.

Ḥassān was ordered to halt his retreat four stages to the east of Tripoli, where he established his camp (Kuşūr Ḥassān) and bided his time. Al-Kāhīna enlarged the area of her authority, but her power certainly did not spread over the whole Maghrib, nor even the whole of Ifrīkiya, as is stated in some sources (Ibn 'Iḍhārī, *Bayān*, i, 36; al-Nuwayrī, *Nihāya*, in de Slane, *Berbères*, i, 340). She treated the Arab prisoners well; she had adopted one of them according to the Berber rite of simulated suckling, an influential chief,

**Khālid b. Yazīd** (sometimes called Yazīd b. **Khālid**), who was regarded as a spy from Hassān's camp. Perhaps she wished to establish good relations with the Arabs and bring them to renounce their designs, of which she was doubtless informed, by means more reliable than divination. It was probably the failure of this policy which forced her in despair to devastate the country, adopting in the face of a stubborn enemy a "scorched earth" policy, which Solomon had already employed in 539 against King Iabdas when he was entrenched in the Aurès (Ch.-E. Dufourcq, *Berberie et Ibérie*, . . . in *Rev. Historique*, fasc. 488, p. 300, citing Procopius). These alleged devastations have been a matter of controversy for many years. Some modern historians deny them altogether. The Arab chroniclers exaggerated them to an enormous extent. In fact, it seems that they cannot be denied completely, but nor should they be seen as a cataclysm. They could not have extended beyond certain regions of Ifrīkiya, but they must nevertheless have been sufficiently serious to disaffect large sections of the settled population, who, when they did not seek refuge in the Mediterranean islands or even in Spain, were ready to beg Hassān to intervene.

Hassān, who had kept himself informed of the situation and had received reinforcements, once more invaded Ifrīkiya, probably in 78/697-8 (the chronology is not clear), this time probably with the support of some Berber contingents hostile to the policy of al-Kāhina. Henceforth the indigenous peoples no longer made common cause. From this moment an air of defeatism began to prevail in the Aurès, and this inspired Kāhina, her hair flowing, in ecstasy (*nāshirāt* <sup>as</sup> *sha'arahā*), to give voice in her desperate state to those alarming prophecies which were but the warnings of despair and have come down to us as so many oracles. The first clash took place in the Gabès region and was unfavourable to al-Kāhina. This is the logical moment to place the dramatic episode, unlikely yet probably true, in which the "queen", certain of her forthcoming destruction, advised her sons to change sides before it was too late. She herself, with Hassān on her heels, fled for refuge to the mountains of the Aurès. The final engagement took place in a place which al-Mālikī (*Riyāḍ*, i, 36) calls Ṭarfā: the form Tabarka given by al-Bakrī (*Masālik*, 57, trans. 121), Ibn Nāḡī (*Ma'ālīm*, i, 61), and Ibn Abī Dīnār (*Mu'nis*, 35) is surely a graphic corruption of this. Here, probably at the exit of *Djabal Neshshār* about 50 km. north of Tobna, al-Kāhina fought her last battle, which, we are told, both sides regarded as a fight to the death, before perishing beside a well which long bore her name. Her energy and determination made a considerable impression, and some modern historians have seen in her a sort of Berber Joan of Arc (de Lartigues, *Monographie*, 182).

AL-ĶĀHIR BI'LLĀH, 19th 'Abbāsīd Caliph, who reigned from 320/932 to 322/934 in succession to his brother al-Muḡtadir [*q.v.*]. He had previously been temporarily chosen as caliph after the abortive palace revolution in Muḡarram 317/March 929. Al-Muḡtadir's death followed after the sortie he made at the head of his troops against the *amīr* Mu'nis [*q.v.*] in 320/932. When the dignitaries came to nominate a new caliph, Mu'nis's judgement in favour of Aḡmad, the son of al-Muḡtadir, was ignored and Muḡammad, son of al-Muḡtaḡīd, was proclaimed on 27 Shawwāl 320/31 October 932. The headstrong and vindictive personality of the new caliph had an immediate effect on the extremely shaky political situation. Al-Ķāhir made his mark right from the beginning of his reign through his ignominious treatment of his mother, whose property he seized after having ill-treated her, and his conduct towards the sons and officials of the former caliph. The reins of government were held by the vizier Ibn Muḡla [*q.v.*] and the *amīr* Mu'nis, who encountered grave difficulties: the opposition of the former supporters of al-Muḡtadir and a financial crisis. The caliph himself tried to reinforce his authority; he succeeded in thwarting the schemes of the chamberlain, Ibn Yalbak, and had Mu'nis arrested, while the vizier took flight (*Šha'bān* 321/July 933).

The new vizier, Muḥammad b. al-Ķāsim b. 'Ubayd Allāh, supported the anti-Shī'ite policy of the caliph, who had Ibn Yalbak and Mu'nis put to death, declaring himself *al-muntaqim min a'dūdīn Allāh* and having this slogan engraved on the coinage. Al-Ķāhir wasted no time in ridding himself of his vizier and replacing him with Aḥmad al-Ķhaṣṣībī; but he too soon found himself in insurmountable financial difficulties, while the former vizier, Ibn Muḥla, plotted against the caliph and managed to stir up the Sāḍīf guard, who rising on 6 D̄jumādā I 322/24 April 934, seized the caliph and imprisoned him.

The son of al-Muḥtadir, taking the name of al-Rāḍī, was proclaimed the new caliph. Since al-Ķāhir had refused to abdicate, in spite of the pressure put upon him, the chief of the Sāḍīf guard, supported by al-Rāḍī, had him blinded. Al-Ķāhir was released only eleven years later, on the orders of the following caliph, al-Mustakfi, and he died in D̄jumādā I 339/October 950.

AL-ĶĀHIRA, capital of Egypt and one of the most important centres of religious, cultural and political life in the Muslim world. The city is situated on both banks on the Nile, at 30°6' Lat. N. and 31°26' Long. E. respectively, at ca. 20 km. south of the delta where the Muḥaṭṭam Mountain almost comes down to the river. This strategic point dominating the access to Lower Egypt had been inhabited since early times, but became of primary importance during the arab invasion in 22/643, when 'Amr b. al-'Āṣ established the foundations of a permanent encampment at al-Fuṣṭāṭ. The actual name of the city is derived from *Miṣr al-Ķāhira*, a town established in 359/970 by the Fāṭimid caliph al-Mu'izz, which gradually embraced the surrounding places. The remains of al-Fuṣṭāṭ are found in the quarter of modern Cairo called Maṣr al-'Aṭlika, Old Cairo. See also BABALYŪN, AL-FUṢṬĀṬ, MIṢR, AL-RAWḌA. (ED.)

#### MONUMENTS

Numbers in square brackets after monuments are those given in the *Index to the Mohammedan monuments in Cairo* (Survey of Egypt 1951). An asterisk after a monument indicates that it is dated by reference to a foundation inscription (often more than one).

*Nomenclature.* A considerable difficulty in the identification of monuments is orthographic, since current pronunciation of a name (Ṣarḡhatmiṣh) [218], the literary sources (Ṣarḡhitmiṣh [Budagov], Ṣuyurḡhutmuṣh [Moritz, *Arabic palaeography*]) and the inscriptions (Ṣirḡhitmiṣh, carefully pointed) often diverge markedly. For the sake of convenience, in reference to the standard art-historical authorities a modified form of the colloquial arabicized Turkish has been adopted (Kūṣūn [224] and not Kaṣṣawn, as it appears pointed on the porch of his mosque), except when popular etymology has so distorted the name (Tagḡribirdi/Taḡriwerdi [209] which has become Saḡriwardi) that the original is difficult to reconstruct.

*Topography.* The vast extent of the modern city of Cairo creates problems for the history of its monuments. Exceptionally among Middle Eastern cities, its development has been horizontal, rather than in terms of vertically superimposed layers, extensive rather than intensive. The original enceinte of al-Ķāhira, located well to the north of the agglomerations of al-Fuṣṭāṭ, al-'Askar and al-Ķaṭā'i', was intended essentially as a centre of government, well

outside the main habitation areas, containing a palace-complex, the barracks of the Fāṭimid armies and the new congregational mosque of al-Azhar [97]. For a time the walled city of old Cairo, Ḳaṣr al-Sham' Bābalyūn and al-Fuṣṭāṭ maintained their importance as industrial centres with the chief port installations on the Nile and the major blocks of tenements. However, the progressive westward deflection of the course of the Nile, and the attraction of al-Ķāhira as the centre of government led to a steady population movement northwards, so that the original mud (*labīn*) walls of D̄jawhar (358/969 onwards) had twice to be expanded, by Badr al-D̄jamāl [6, 7, 199] in 480/1087-484/1091\*, and by Bahā' al-Dīn Ḳarāḳūsh under Ṣalāh al-Dīn in 572/1176-589/1193. The 5th/11th-century expansion, allegedly motivated by fear of an attack by the Salḍiūk, Āṣlāz, was less extensive than the latter, which included large areas between the walls of D̄jawhar and the Nile (see Fig. 1), now commemorated only in the names of certain quarters of modern Cairo, the Bāb al-Lūḳ, the Bāb al-Ḥadd, the Bāb al-Ḳhalk (Ḳharḳ), etc. The steady northward population movement led to the desertion of large areas of al-Fuṣṭāṭ, which by the mid-6th/12th century had become abandoned (*ḡharāba*) and which in 572/1176 were partially connected to the inhabited areas by a wall, which remained incomplete at Ṣalāh al-Dīn's death.

From the Fāṭimid period onwards the areas of al-Ķaṭā'i' south of the mosque of Ibn Ṭūlūn became increasingly associated with the southern cemetery (the Ḳarāfa al-Kubrā', see below). The first major expansion outside the Fāṭimid enceinte was the Citadel built for Ṣalāh al-Dīn, 572-1176 onwards, not to fortify the city but as a place of refuge.

The Citadel was supplied with water from the Nile by means of an aqueduct [78] (*ḡhanāfir*) which in its present state dates only from the reign of al-Nāṣir Muḥammad (Creswell, *MAE*, ii, 255-9), who in 712/1312 (sic) built four *sāḡiyas* on the Nile to raise water to the aqueduct of the Citadel and in 741/1341 incorporated into it the remains of Ṣalāh al-Dīn's wall, which had been intended to enclose the *ḡharāba* of al-Fuṣṭāṭ. It was restored and lengthened at various times during the 9th/15th century and particularly in the reigns of Ḳā'it Bāy and Ḳānṣawh al-ḡhawri [99.v.], to whom the large water-tower, now known as the Sab'a Sawāḳī and still more or less on the Nile, must probably be attributed [78].

A second Ayyūbid fortress, no longer extant and destroyed and rebuilt several times during the Mamlūk period, was the Kal'at al-Rawḍa/Kal'at al-Miḡyās, erected on the Island of Rawḍa (Roda) by al-Malik al-Ṣāliḡ, though the island was almost exclusively a residential area, like D̄ilza (Giza), and very few monuments of any architectural importance now survive there.

Under the Baḡri [see AL-BAḡRIYYA] Mamlūks the expansion continued mainly outside the Fāṭimid walls, those foundations within being almost exclusively funerary and royal. The south-western slopes of the Citadel, which had remained unfortified in the Ayyūbid period, were walled by al-Nāṣir Muḥammad but were principally occupied by the sultan's palace and the houses of his high amīrs. In this period we see the creation of the great Mamlūk thoroughfares, the Darb al-Aḡmar leading from the Citadel to the Bāb Zuwayla [199]\*, the Sh̄hāri' al-Ṣalba leading from the Citadel towards the Mosque of Ibn Ṭūlūn, and the Ḳhalīdī, originally a canal (now the Sh̄hāri' Port Sa'īd). The expansion to the north of the walled city of al-Ķāhira was not so marked:

the only two remaining foundations of any importance are the Mosque of Baybars in the Maydān Dāhir (Zāhir) [1], 665-7/1266-9\*, built on one of the royal polo grounds (see Pls. 3, 3a, 3b) and Kubba-al-Fadāwiyya [5], dated by Creswell to 884-6/1479-81\*.

Under the Ottomans the expansion of Cairo appears to have taken a different direction, to the west of the walled city of al-Kāhira, particularly in the Būlāk area, which then became the principal port of Cairo. There are only two pre-Ottoman buildings surviving in this quarter, the mosque of the Kāḍī Yaḥyā [344], 852-3/1448-9, and the mosque of Abu 'l-'Ilā [340], c. 890/1485. By contrast, the quarter contains the mosque (*kullīyya*) of Sinān Pāshā [349], 979/1571\*, a large number of 17th- and 18th-century foundations and many less important but interesting *khāns* (*wikhālas*) as well as wooden houses of a distinctively Istanbul type. The area has been only cursorily surveyed and stands in need of a detailed study. The change of direction initiated by the Ottomans was continued with the development of residential quarters, at Dīlza and 'Imbāba on the west bank of the Nile, at Shubra, where a palace of Muḥammad 'Alī built by 1850 (E. Pauty, *L'architecture au Caire depuis la conquête ottomane*, 52-8) attracted a residential suburb, at 'Abbāsiyya, and ultimately in the development of Garden City and Heliopolis (see Pl. 8).

The history of settlement of al-Kāhira shows a secular northward movement continuing from that of al-Fuṣṭāṭ to al-Kaṭā'i'. Al-Kāhira itself, at least within the walled area enclosed by Ṣalāḥ al-Dīn, remained of central importance as the seat of government and in the 19th century, with the Europeanized town plan imposed upon the Ezbekiyya quarter, the centre of commerce as well. The same development, however, was not followed in the cemeteries which now virtually surround the city and which are perhaps the most remarkable architectural feature of Cairo to strike the visitor.

Cemeteries. The great southern cemetery (al-Karāfa al-Kubrā'), the principal burial place of Cairo since the invasion of 'Amr, remained in full use in the Fātimid period, when it was the centre of a considerable cult, which was made acceptable to Sunnī orthodoxy by the foundation of a *madrasa* at the tomb of the Imām al-Shāfi'ī soon after the Ayyūbid conquest of Egypt (the present mausoleum [281], 608/1211, was built by al-Malik al-Kāmil; see Pls. 2, 2a). At the south of the cemetery are a group of Fātimid *mashhads*, the most important of which is that of Yaḥyā al-Shabīḥī [285], c. 545-6/1151, the mausoleum of the Imām al-Layṭh [286] rebuilt by al-Ghawrī in 911/1505\* and restored in 1201/1786-7\*, the *khānkāh* and mausoleum of Shāhīn al-Khalawātī [212], 945/1538, and the mausoleum of Sīdī 'Ukba rebuilt by Muḥammad Pāshā Silāḥdār in 1066/1655-6\* and restored in 1099/1688 [608], better known as the Sādāt al-Wafā'iyya. Remains of the Mamlūk period in this area are now sparse, though a detailed survey would doubtless permit the location of many funerary foundations mentioned by Maḥrīzī and others. Behind the mausoleum of the Imām al-Shāfi'ī are the tombs of the late royal family, the Ḥawsh al-Pāshā.

The northern part of this cemetery contains a larger and more important group of Fātimid *mashhads*, including that of Sayyida Nafisa (of which only restoration inscriptions dated to the reign of al-Ḥāfiẓ now exist; the reconstruction proposed by D. Russell, *A note on the cemetery of the 'Abbāsīd caliphs and the shrine of Sayyida Nafisa*, in *Ars Islamica*, vi (1939), 168-74, is highly speculative), Sayyida Ruḳayya

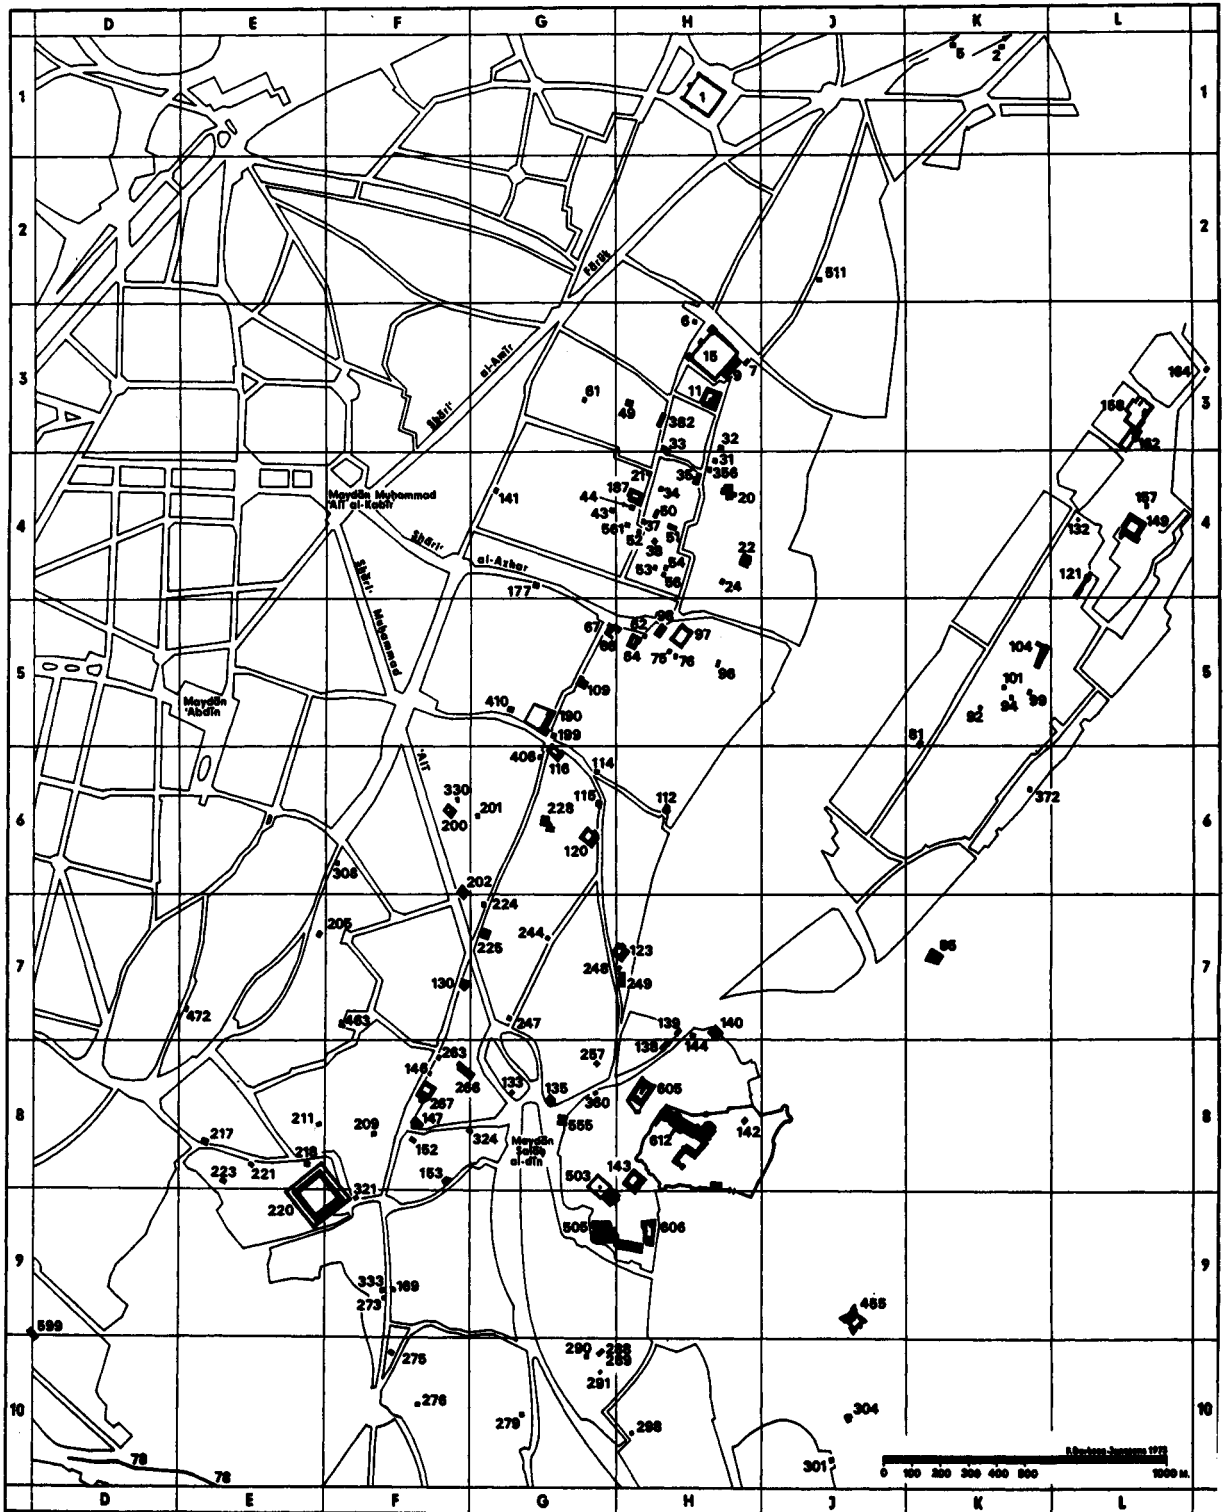

[273], 527/1133\*, and Sayyida 'Āṭiqa [333], c. 1125. The sequence continues almost without interruption with the mausolea of late Ayyūbid and Bahrī Mamlūk sultans or princesses, including Shāḍiār al-Durr [169], c. 648/1250, the *hawsh* and mausoleum of the 'Abbāsīd caliphs [276], possibly as early as 640/1242-3, and the mausoleum of al-Ashraf Khalīl [275], 687/1288\*, the last Mamlūk sultan to be buried in this area. Doubtless to be included within the same cemetery, in the area to the south-west of the Citadel, is a group of funerary foundations. The earliest of these is conventionally known as the mausoleum of Muṣṭafā Pāshā [279], (?) 666/1267-672/1273, and they include the mausoleum and *khānkāh* of Kūṣūn [290-1], 736-7/1335-7\*, and a remarkable mausoleum with minaret, the Sulṭāniyya [288-9]; by reason of its domes, which resemble superficially Timūrid domes at Samarḳand and Herāt, Creswell dates the latter to the mid-9th/15th century but it may well be a century earlier.

The fringes of the southern cemetery merit attention. The Christian cemeteries appear to have been located, as they are now, in the vicinity of Kaṣr al-Shām', though nothing of any antiquity remains there (those of the Djabal al-Aḥmar to the north-east of Cairo appear to date from the present century). The Jewish cemeteries were located even further south in the area of Basāṭīn al-Wazīr. The most puzzling of these fringe monuments, however, is the Maṣḥad al-Dīuyūshī [304], 478/1085\*, the mausoleum of Badr al-Dīamālī, which now stands completely isolated on the Muḳaṭṭam hills, though the literary sources refer to pavilions and other buildings (e.g., the Maṣḥid al-Tannūr built on the supposed site of the Tannūr Fir'awn) which no longer remain. It is, in any case, the only funerary monument in this area.

The cemetery of the Bāb al-Wazīr to the north and north-east of the Citadel lies immediately outside the northern walls of Ṣalāḥ al-Dīn. The most important, as well as the earliest, foundation there is that of Mandjak al-Yūsufī [138], 750/1349\*, described as a mosque in the *Index*, but, exceptionally, having a separate entrance gateway, and a tomb attached to the mosque in the form of a *madrasa*. The other monuments are also 8th/14th century, the *sabil* of Shaykhū [144], 755/1354\*, the earliest free-standing *sabil* in the architecture of Cairo, the *masḥid* and *khānkāh* of Shaykh Nizām al-Dīn [140], 757/1356\*, and the mausoleum and *khānkāh* of Tankizbughā, situated in an isolated position some distance away on a low spur of the Muḳaṭṭam [85], 764/1362\*. The latest of this group is the mausoleum of Yūnus al-Dawādār [139], pre-783/1382. None of the foundations is royal, and since the foundation of Mandjak is not significantly smaller than those of the Bahrī Mamlūk sultans, the creation of this small cemetery is an index of the pressure upon space created by the grand funerary constructions of the Mamlūk sultans *intra muros* and in the main streets leading from the Citadel towards the centre.

The great northern, or north-eastern, cemetery, known misleadingly as the Tombs of the Caliphs, though almost contiguous with that of the Bāb al-Wazīr and now apparently separated from it only by a recent road, the Shāri' Ṣalāḥ Sālim, would appear (al-Maḥrīzī, ii, 363) to be a separate development; the first tomb to be built in this area (known in his time as the 'Awāmid al-Sibāk) was that of Yūnus al-Dawādār [157], 783-4/1382, actually the burial place of Ānas\*, father of Barḳūq. There is a topographical problem here, however, since in the southern sector of this cemetery, contiguous to that of Bāb al-Wazīr,

1. Mosque of al-Zāhir Baybars (H1)
2. Mausoleum of al-Malik al-ʿAdil Tūmānbāy (K1)
5. al-Kubba al-Fadāwiyya (K1)
6. Bāb al-Futūḥ (H3)
7. Bāb al-Naṣr (H3)
9. *Khān* of Kāʾit Bāy (H3)
11. *Khān* of Kūṣūn (H3)
15. Mosque of al-Ḥākim (H3)
20. Musāfir<sup>khāna</sup> palace (H4)
21. *Sabil-kuttāb* of ʿAbd al-Raḥmān Kat<sup>khudā</sup> (H4)
22. *Zāwiya* of Āydumur al-Pahlawān (H4)
24. Mosque of al-Ākādār (H4)
31. *Madrasa* of Karā Sunḡur (H4)
32. *Khānkhāh* of Rukn al-Dīn Baybars al-Djāshenkr (H3)
33. Mosque of al-Akmar (H3)
34. Palace of Beshtāk (H4)
35. Mosque of Djāmāl al-Dīn al-Ustādār (H4)
37. Zāhiriyya *madrasa* (H4)
38. Mausoleum and *madrasa* of al-Šāliḥ Naḡim al-Dīn Ayyūb (H4)
43. *Madrasa* and *māristān* of al-Manṣūr Kalāʾūn (G4)
44. *Madrasa* of al-Nāṣir Muḡammad (H4)
49. Mosque of the *khāḍi* Abū Bakr Muḡhir (H3)
50. *Kāʾa* of Muḡammad Muḡibb al-Dīn (Waḡf ʿUḡmān Kat<sup>khudā</sup>) (H4)
51. Maḡʿad Māmāy (Bayt al-Kāḍi) (H4)

Both the numbers of the monuments, and the numbers and letters of the sections of the map correspond with those of the *Map of Cairo showing Mohammedan monuments*, Survey of Egypt, 1950 (enclosed in K. A. C. Creswell, *The Muslim architecture of Egypt*, i, Oxford 1952), and the *Index of Mohammedan monuments in Cairo*, Survey of Egypt, 1951.

are three important Bahrl foundations, of Taṣhtīnūr [92], 735/1334\*, Ṭaybughā al-Ṭawīl, pre-768/1366 [372]\* and Khwānd Tuḡhāy [81], known locally as Umm Anūk, pre-749/1348 (al-Maḡrīzī, ii, 66-7), a mausoleum and *khānḡāh* with remains of rich stucco decoration and some interesting faience mosaic at the base of the surviving dome. North of this group all the surviving monuments are Burdjī (in spite of all the maps which indicate, without numbering, Bahrl remains); all are on a larger scale and many are royal. These include the *khānḡāh* complex of Farajī b. Barkūk [149], 803/1400-813/1411\*, the funerary complex of Kā'it Bāy [94, 99, 101, 104], 877-9/1472-4\* (see Pl. 6) and the combined foundations of Sultan Ināl [158], 855/1451-860/1456\*, and of the amīr Kurkūmās [162], 911-3/1506-7\*. Once again, it is easy to ascribe the growth of this cemetery to the pressure upon building space within the city, all the more so since expropriation was discouraged and substitution (*tabdīl*) of *wakf* property generally required a special *fatwā*, the practice only becoming general, according to Ibn Iyās, in the 9th/15th century. However, the larger royal foundations of this cemetery included elements like the *rab'* (plural *rubā'*) of a decidedly commercial nature, and there is evidence (Van Berchem, *CIA*, 316-31) that Farajī b. Barkūk hoped to transfer the Sūkh al-Ḥarīr to the neighbourhood of his *khānḡāh*. The area has only recently been colonized and was for much of its extent isolated from Cairo itself by the line of rubbish heaps known as the Barkīyya. Access to the cemetery would appear, therefore, to have been not from the Bāb al-Wazīr but from the Bāb al-Barkīyya, remains of which, dated 480/1087 by an inscription, were discovered late in the 1950s (G. Wiet, *Une nouvelle inscription fatimide au Caire*, in *JA*, ccxlix (1961), 13-20).

The cemetery to the north of the walls of Cairo, now known as the cemetery of Bāb al-Naṣr, now contains only one monument of any antiquity, the Kubbat Shaykh Yūnus [511], c. 487/1094. Maḡrīzī (ii, 414) states that the quarter was particularly frequented after 700/1300 and that Mamlūk notables even built houses there: it was deserted under al-Aṣḡraf Sha'bbān (776/1375-6) when prices rose and the Sūkh al-Līf was forced to move. This emphasis upon habitation, reinforced by the lack of monuments, shows that the area was of very minor significance as a cemetery, and that its chief period of growth has been during the last hundred years. With this cemetery should perhaps be associated two isolated Burdjī Mamlūk mausolea, al-Kubba al-Fadāwiyya [5], probably the mausoleum of Yuṣḡbak al-Dawādār, an amīr of Kā'it Bāy, 884-6/1479-81\*, and that of al-Malik al-ʿĀdil Ṭūmānbāy [2], 906/1501\*, in the quarter of Ḥusayniyya. They are both so far north of the walls of al-Kāhira that they cannot easily be attributed to any cemetery, but the former is so influential in the architecture of the Ottoman period in Cairo that mere eccentricity of location is irrelevant to their architectural importance.

With the Ottoman conquest the chronological development of the cemeteries comes to an end. The Istanbul custom of having small cemeteries attached to pious foundations within the city was not adopted in Cairo; most of the Turks who happened to die in Egypt were buried in the *ḡawḡs* of Mamlūk cemeteries already in existence. No collection of Ottoman funerary inscriptions has ever been made. There are moreover few mausolea to show for 300 years of occupation, and the only remarkable building dating from this period is the tomb of Sulāymān Pāṣḡhā (Colonel de Seves), Commander in Chief of the

Khedive Ismā'īl's troops, who is buried in a cast-iron pavilion on the east bank of the Nile just opposite the southern tip of Rawḡa.

## History.

### FĀTIMIDS

*Palace.* The Fātimid palace, the political, religious and administrative centre of al-Kāhira from the 4th/10th-6th/12th centuries, has completely disappeared, though a tolerable reconstruction based upon al-Maḡrīzī's description has been made by Ravaisse (see Bibliography). It almost certainly consisted of various quite separate abodes, each with a central *ḡā'a* (an elongated hall with two axial *iwāns* [A. *iwān*]) and a sunken central area, usually square, known as the *durḡā'a* and their appurtenances. Remains of one of these, most probably to be identified with the Dār al-Ḳuṭbiyya, have recently come to light in the course of excavations in the courtyard of the *madrasa* of Ḳalā'ūn. The *ḡā'a* also appears to have been an element of the domestic architecture of Fātimid Cairo, as witness the Ḳā'at al-Dardīr (Creswell, *MAE*, i, 261-3), which exceptionally has vaulted *iwāns* instead of the more usual flat roof. The *iwāns* could sometimes be closed off from the *durḡā'a* by palatial doors, as in the case of a *ḡā'a* (Dayr al-Banāt) in the Greek Orthodox monastery of St. George at Old Cairo (Ḳaṣr al-Sham'), a construction of indeterminate date but with such doors of the Fātimid period, and as in the case of a similar pair of doors in the Museum of Islamic Art in Cairo found in excavations at the mausoleum of Ḳalā'ūn (Inventory No. 554 [Pauty, *Bois sculptés*, Plate lx]).

*Fortifications.* The mud-brick *labīn* fortifications of Dīawhar had disappeared by al-Maḡrīzī's time, the result not of the instability of the material but of the population pressure on the compound of al-Kāhira, in spite of all attempts to exclude the public from its precincts. (There is an unrecorded mud-brick *muṣaīllā* or *masḡīd* in the al-Ḳarāfa al-Kubrā' near the Sādāt al-Wafā'iyya which is almost certainly Fātimid in date). The present Fātimid fortifications of al-Kāhira, therefore, date from the time of the Caliph al-Mustanṣīr and even before their extensive repair by Ṣalāḡ al-Dīn in various sectors were much more characteristic of North Syrian than of Cairene architecture, being of squared stone and strengthened with transversely placed columns. The chief remaining elements of the north wall, in which the wall and the north porch of the mosque of al-Ḥākim are embedded, are the Bāb al-Futūḡ and the Bāb al-Naṣr [6, 7], 480/1087\* [see BΛB]; on the east is the Bāb al-Barkīyya of the same date\* (not marked on the monuments map) and on the south the Bāb Zuwayla, 484/1091 (al-Maḡrīzī, i, 381). For a precise reconstruction of the walls of al-Kāhira, showing the fortifications of Dīawhar, Badr al-Dīamālī and Ṣalāḡ al-Dīn, see Fig. 1.

*Mosques.* The earliest of the mosques of al-Kāhira was that of al-Azhar [97], situated to the south of the palace, dated 359-61/970-2 (al-Maḡrīzī, *Khīṣṣat*, ii, 273) and built very much on the lines of the mosque of Ibn Ṭūlūn with a *ṣaḡn* and *riwāḡs* surrounding it which are multiplied in the *ḡibla* side (see MASḡĪD). Very little of the building is original (for a reconstruction see plan in Creswell, *MAE*, i, 58-60, Fig. 20). It was not originally founded as a teaching institution though little more than a year after its foundation it had become the centre of the propagation of the Fātimid *da'wa*. It was this change of function, as much as the population increase within the enceinte of al-Kāhira, which doubtless explains

the foundation soon afterwards of the mosque of al-Ĥākīm [15], founded by al-ʿAzīz in 380-1/990-1 and completed by al-Ĥākīm no later than 403/1012, outside the walls of *Djawhar*, to the north. Creswell has deduced that those parts of the stucco facing of the *ḵibla riwāḵs* of al-Azhar which are not 19th-century inventions may go back to the original date of foundation; but the courtyard façades and the domed pavilion at the entrance to the raised crossing on the axis of the *miḥrāb* cannot be earlier than the reign of al-Ĥāfiẓ li-Dīn Allāh, 526/1131-534/1149. For the Ayyūbid period there is only the testimony of ʿAlī Pāshā Mubārak (iv, 16) that any upkeep of the mosque at all was attempted, al-Malik al-Kāmil being said to have erected a *ḵibla ṣaḡhira min ḵhashab bi-ḵurb riwāḵ al-Sharḵāwiyya* in 627/1230. With the exception of this dubious period, however, al-Azhar was reorganized, restored and added to by almost every important ruler of al-Ķāhira from al-Ĥāfiẓ to Kāʿit Bāy, who added a *miḥrāb* and a minaret (both undated) as well as a monumental porch (*bawwāba*), and al-Ḡhawri, who added its second minaret, also undated. The adjacent *madrasas* of Ṭāybars and Āḵbuḡhā (709/1309-10 and 734/1333-4 to 740/1339\*) were enclosed within the complex when the *bawwāba* (the Bāb al-Muzayyinīn) was added by Kāʿit Bāy (873/1469\*), though the present entrance is Ottoman, 1167/1753-4\*, probably the work of ʿAbd al-Raḥmān Katḵhudā, who considerably enlarged the mosque at this time.

The mosque of al-Ĥākīm was even more traditional in that it boasted a *ziyāda* or *temenos* on at least one side (identified by Creswell, *MAE*, i, 115-7 and dated by him 411/1021-427/1036), though it added two minarets based on great salients at the north-west and south-west corners and adopted the plan of three monumental entrances, the northern one being subsequently embedded in the wall of Badr al-Djamālī. The mosque suffered badly in the earthquake of 702/1303 but was restored immediately by Baybars al-Djāshenḵr (Cāshnegīr)\*, who added pyramid-like casings to the two stone minarets and a *mabḵhara* or pepperpot-like top to each. In spite of a further restoration attributed by al-Maḵrīzī (*Ḷhiṭat*, ii, 277) to Sultan Hasan the mosque is now in a ruinous condition and the decoration judged so important by S. Flury (*Die Ornamente der Hakim- und Ašhar Moschee*, Heidelberg 1912, 9-26, 43-50) can scarcely now be made out.

The other two extant Fāṭimid mosques of Cairo, both modifications of the *ṣaḡn* plan, merit attention. Al-Aḵmar [33], 519/1125\* (see Pls. 1, 1a), the work of the vizier Maʿmūn al-Baṭāʿihī, has the earliest decorated façade in Cairo, with a rich complement of foliate and epigraphic ornament, but is equally significant because although the mosque is *ḵibla*-oriented (at least approximately) the façade follows the street, which is not parallel to the *ḵibla* wall: this is the first case of what was to become a standard Cairene practice. The mosque of the vizier al-Šāliḥ Ṭalāʿīc [116], 555/1160\*, the last dated Fāṭimid building of Cairo (misleadingly restored in the present century), also combines architectural interest—a colonnaded narthex or loggia as façade and a basement of shops (*dakḵkīn*)—with rich interior stucco decoration, partly restored by the amīr Bektimūr al-Ķūkāndār in 699/1300\* or 702/1302\*. This mosque, situated injudiciously outside the walls of Badr al-Djamālī immediately opposite the Bāb Zuwayla, had been intended as a shrine for the head of al-Ḥusayn. This was placed in a mosque-shrine inside al-Ķāhira on a site now occupied by the mosque of Sayyidnā

al-Ḥusayn, the work of an unidentified 19th-century architect under the influence of the railway station architecture of the Gothic revival in Europe.

*Tombs, Mashhads.* The tombs of the Fāṭimid caliphs were inside the palace in the actual region of the Khān al-Ḷhallī [53-4, 56] and were thus destroyed on the fall of the dynasty. (A fragment of the only remaining inscription has been published in *RCEA* 2104; see G. Wiet, *Inscriptions historiques sur pierre* 34-5, no. 51.) Many other funerary inscriptions have been published (see Bibliography), most from the typical Cairene *ḵawṣḥ*, an unroofed burial enclosure, which may be provided with one or more *miḥrābs* in the *ḵibla* wall, which contains graves covered by cenotaphs, or sometimes one or more domed mausolea, usually *ḵibla*-oriented but following no clear chronological sequence. Some domed mausolea of private persons survive, among which may be the Sabʿa Banāt, four mausolea, not all with *miḥrābs*, to the south of the ruins of al-Fuṣṭāṭ and identified by Creswell on the basis of *Ḷhiṭat*, ii, 459 with the mausolea of those members of the family of the vizier Abu ʿl-Kāsim al-Ḥusayn b. ʿAlī Maḡrābī put to death by al-Ĥākīm in 400/1010. More characteristically Cairene are the *mashhads* of the late 11th-12th centuries built over supposititious ʿAlid graves in the southern cemetery in various groups. Among the best conserved are the *Iḵhwān* (*Iḵhwāt*) Yūsuf [301], c. 500/1100, Sayyida ʿĀṭika [333], c. 520/1125, Sayyida Ruḵayya [273], 527/1133\*, the only precisely dated member of the group, Yabyā al-Šhabḥī [285], c. 545/1150 and Umm Kulḥūm nearby (not marked on the monuments maps), pre-550/1155. Small constructions, sometimes with a central courtyard, the *mashhads* consisted of sanctuary chambers covered by domes on squinches, with richly decorated carved stucco friezes and *miḥrābs*, often in threes, and containing one or more cenotaphs, which were perhaps surrounded by a *maḵṣūra*. These were conceived essentially as centres of pilgrimage (*ziyārāt*). Not all Fāṭimid funerary monuments take these forms, however: the “Ḷabr Luʿluʿ bint al-Muḵawḵis”, among the mysterious remains of al-Ḷarāfa al-Kubrā, is a three-storey construction, each storey with a *miḥrāb*; and it has yet to be explained why the *Mashhad* al-Djuyūṣḥī on the Muḵaṭṭam [304], 478/1085\*, the mausoleum of Badr al-Djamālī with very rich stucco decoration, should be in the form of a *mashhad* rather than a *ḵubba*. The cave in the Muḵaṭṭam directly below it, the Maḡhawri or Kaḥf al-Sudān, which has been associated by Massignon (see Bibliography) with the cult of the Aṣḥāb al-Kaḥf [*q.v.*] and which appears on the Arabic version of the *Special 1:5000 scale Map* as containing Fāṭimid remains, has been a military area for so long that it has not been possible to check the suggestion that it also may have been a *mashhad* of a sort.

#### AYYŪBIDS

*Fortifications.* The Citadel and the walls of Šalāḥ al-Dīn have been authoritatively described and analysed in detail by Creswell (*MAE*, ii, 1-40 ff.). The former, the largest Ayyūbid fortification ever undertaken, occupies a spur of the Muḵaṭṭam Hills on its north-west side: the south side is an artificially built up terrace. The Ayyūbid remains are confined to the more or less rectangular northern enceinte, which had four gates, the Bāb al-Mudarraḡī built by the Amīr Ḷarāḵūḡh in 579/1183-4\*, two gates at the Burḡī al-Maṭar and the Burḡī al-Imām and the Bāb al-Kulla. To this first period may also be assigned a long stretch of curtain wall with fairly uniformly spaced half-round towers which starts at the east of

the Burđi al-Muqaṭṭam and runs round the south, east and north sides of the enceinte. The ramparts were connected by a *chemin de ronde* and had rounded crenellations. These fortifications which, Creswell judges, must have been virtually complete at the time of Ṣalāh al-Dīn's death, were strengthened by al-Malik al-ʿAdil in 604/1207-8, when he added three great square towers, the Burđi al-Ṣuffa, the Burđi Kerkyalān and the Burđi al-Ṭurfa, all built athwart the southern sector of the walls, cutting the *chemin de ronde* so as to form individually defensible redoubts in case of need. The Bāb al-Karāfa at the Burđi al-Imām was also reinforced, and, among other works, two towers on the eastern sector, the Burđi al-Ḥaddād (Ḥadid?) and the Burđi al-Raml were converted into circular bastions. On the completion of these works al-Malik al-ʿAdil took residence in the palace there. Makrīzī states that the Citadel was built with stone from the pyramids at Dīza; most of it is, however, of soft Muqaṭṭam limestone which was quarried on the spot. In Creswell's view the rusticated masonry is easily attributable to al-ʿAdil since he employed it for fortifications at Buṣrā, Damascus and elsewhere.

The purpose of the Citadel was internal defence, against the possibility of a Fāṭimid counter-attack or an insurrection of the populace of al-Kāhira. A second Ayyūbid fortress with the same purpose, a secure palace complex, the Kalʿat al-Rawḍa, was built on Rawḍa by al-Ṣāliḥ Nađīm al-Dīn Ayyūb, 638/1240-1. It contained a *ḥāʿa* (Creswell, *MAE* ii, 84-7) with an enlarged *durḥāʿa* to take a free-standing dome, probably wooden. It also had a Gothic doorway, doubtless carved on the spot by some of the Frankish prisoners taken by al-Ṣāliḥ on his Syrian campaign. Although nothing now survives of this fortress of sixty towers, it remains of interest, for it was here that al-Ṣāliḥ installed the garrison of Mamlūks known, from their station on the Nile (Baḥr al-Nīl), as Baḥrī, which eventually supplanted the Ayyūbid dynasty (al-Makrīzī, *Sulūk*, Ziyāda i, 341).

*Mosques.* There are no surviving Ayyūbid mosques in Cairo, and no Ayyūbid restoration inscriptions from either the mosque of Ibn Ṭūlūn or the mosque of ʿAmr, which under their occupation was the only mosque in which the *ḥayḍa* was permitted, in an attempt to eradicate the importance of al-Azhar as the centre of Fāṭimid propaganda. More curiously, the restoration of the mosque of Ibn Ṭūlūn by the Fāṭimid vizier al-Afḍal, who added a *miḥrāb* c. 487/1094\*, appears to have been respected, since the ʿAlid *shahāda* which appears on it has never been defaced.

*Madrasas.* It would appear probable that the Ayyūbids relied more upon the institution of the *madrasa* to combat the Fāṭimid *daʿwa*. Time has dealt harshly with these foundations however. One of the first foundations of Ṣalāh al-Dīn's occupation of Egypt was a *Shāfiʿī madrasa* near the grave of the Imām al-Shāfiʿī in the southern cemetery (begun 572/1176-7). Of this nothing remains but the magnificent teak cenotaph of al-Shāfiʿī dated 574/1178-9\* and the work of the *nađībīyār* ʿUbayd b. Maʿall. The combination of venerated tomb with *madrasa* was an interesting exploitation of the principle of the Fāṭimid *mashhads* for orthodox Sunnī ends. Elements of the *madrasa* probably survived until the late 12/18th century, but the tomb of the Imām underwent one great transformation, under al-Malik al-Kāmil, who in 608/1211 [281] built an enormous wooden-domed mausoleum, which has been frequently restored since but is still arguably the most impressive mausoleum-shrine of Cairo (see Pls. 2, 2a).

(For the chronology see G. Wiet, *Les inscriptions du mausolée de Shāfiʿī*, in *BIE*, xv (1933), 167-85.) Remains of a *madrasa* in the Sūḥ al-Naḥḥāsin attest a second foundation of al-Kāmil, the Kāmiliyya [428], 622/1225 (*Khiṭāṭ*, ii, 375), but the best preserved of all is a double two-*iwān madrasa* on the Kaṣaba, the main street of Fāṭimid Cairo, by al-Ṣāliḥ Nađīm al-Dīn Ayyūb [38], 641/1243-4\*, with a single minaret crowned by a *mabḥara* above the porch in the centre of the façade and a street between which separates the two buildings. Apart from a decorated street façade which depends for its ornament on the tradition of the courtyard façades of al-Azhar, the *madrasas* are almost in ruins, though the crown of the vault of the west *iwān* of the left-hand *madrasa* has inserts of stone vaulting in the brick substructure, which are executed without centring as in Upper Egypt, an architectural practice which has attracted little attention from archaeologists working on Cairo but which is fairly frequent in the 7th/13th-8th/14th centuries. The most significant feature of the foundation, however, is the mausoleum of al-Ṣāliḥ [38], 667/1249\* but completed (*Khiṭāṭ*, ii, 374) 648/1250. One of the last post-mortem funerary constructions of Cairo, it is also the first conspicuous funerary foundation, the *ḥibla*-oriented mausoleum essentially forming part of the street façade and thus one of the most conspicuous features of the building. This approach was to become so much a standard feature of the architecture of Mamlūk Cairo that where a choice between a *ḥibla* orientation and a street façade arose it was often the latter which prevailed.

*Tombs.* A funerary construction of a more traditional type is the "Tomb of the ʿAbbāsīd Caliphs" [276] near Sayyida Naḥsa, possibly as early as 640/1242-3, with very rich decoration of carved and painted plaster, which contains the cenotaphs of many of the caliphs who lived in Egypt as Mamlūk puppets after the fall of the caliphate of Baḥdād. The domed mausoleum is enclosed in a vast *ḥawṣh* with seven *miḥrābs* in the *ḥibla* wall and the remains of a monumental entrance. In the post-Ayyūbid period such isolated mausolea without appurtenances are very much the exception.

Few public works of the Ayyūbid period survive. The Ayyūbid elements of the aqueduct which supplied the Citadel with water were incorporated into the works of al-Nāṣir Muḥammad. Two bridges on the Dīṭza road remain, however, with inscriptions from the time of Ṣalāh al-Dīn in the name of Karākūsh (Van Berchem, *CIA*, 465 ff.) and restoration inscriptions of al-Nāṣir Muḥammad, 716/1316, Kāʿit Bāy, 884/1479 and Husayn Pāshā, 1087/1676.

#### MAMLŪKS

*Fortifications.* There are no considerable Mamlūk fortifications extant in Cairo. The Kaṣr al-Rawḍa was restored under Baybars and the restoration inscriptions of al-Nāṣir Muḥammad on the Citadel relate principally to the building of an irregular southern enceinte and to the construction of a new aqueduct connecting the Citadel with the Nile and incorporating into it part of the wall of Ṣalāh al-Dīn which had been intended to connect the *ḥarāba* of al-Fuṣṭāṭ with al-Kāhira but was never completed. The aqueduct was begun as early as 712/1312 (*Khiṭāṭ*, ii, 229; Casanova's translation erroneously has 711/1311, cf. Creswell, *MAE*, ii, 255-9 also for the later history of the aqueduct). The buildings of al-Nāṣir Muḥammad on the Citadel included a large mosque on the *ṣabn* plan [143] with a

foundation inscription of 718/1318\*, which was considerably modified in 735/1335 (*Khiṭāṭ*, ii, 212, 325—when the large wooden dome over the *miḥrāb* supported on ten columns of Aswan granite was doubtless added. The mosque also has two minarets said to have been decorated by craftsmen from Tabriz: if this report is really to be believed the craftsmen appear to have forgotten their skill on the way to Cairo. The palace of al-Nāṣir Muḥammad, the *Qaṣr al-Ablak* (so called from its use of bi-coloured voussoirs for the arches of the main *ḥā'a*), also known as the Bayt Yūsuf Ṣalāḥ al-Dīn, was destroyed in 1824. It has been possible to reconstruct it, however, from descriptions given by Shihāb al-Dīn al-ʿUmarī, *Masālik al-abṣār* (Bibliothèque Nationale MS arabes 583, folio 190a) and al-Maḥrizī (*Khiṭāṭ*, ii, 209-10, which gives the date of construction as 713-4/1313-5). The palace consisted of a great *iwān* (cf. Creswell, *MAE*, ii, 260-4) and a central *ḥā'a*, which appears to have had flat-roofed *iwāns* and a central dome on wooden pendentives. The palaces of the amirs which in Maḥrizī's time covered the southern slopes of the Citadel have now entirely disappeared, those which still remained doubtless being destroyed when the palace of al-Dīawhara [505] was built by Muḥammad ʿAll in 1229/1814.

*Mosques.* The earliest of the Bahrī Mamlūk mosques is that of Baybars in the Maydān Dāhir [1], 665/1266\* (see Pls. 3, 3a, 3b), completed two years later, on a polo-ground well to the north-west of the Fāṭimid walled city. Built very much on the plan of the mosque of al-Ḥākim, though without the *siyāda* and without the two minarets, it has three monumental entrances, the decoration of which is a curious blend of North Syrian motifs and the ornament of the Fāṭimid mosque of al-Aḥmar (see above). The building has been largely gutted; the wood and marble brought for it by Baybars from Dīaffa has disappeared and only fragments of the rich stucco decoration of the window frames remain. Its most conspicuous feature is the large square *maḥṣūra* in front of the *miḥrāb*, doubtless originally covered with a wooden dome and unparalleled in scale in the mosque architecture of Cairo. With the exception of Lāḍjīn's restoration of the mosque of Ibn Ṭūlūn (see *Restorations* below), the principal period of mosque construction in Cairo would appear to be from 715/1315 onwards, partly following on the foundation of the mosque of al-Nāṣir Muḥammad on the Citadel and partly taking rather belated advantage of the relaxation of the restriction of the *ḥuṭba* to a very limited number of mosques inside Cairo. The foundations, often on a large scale, are all of amirs, not of sultans, and are chiefly on the main arteries to the south and south east of the Fāṭimid walls leading towards the Citadel. They include Ālmalik (?) al-Ḥūkāndār [24], 719/1319\*, Aḥmad al-Miḥmāndār [115], 725/1324-5\*, Ālmās [Yilmāz, less probably Ölmez] [130], 730/1329-30\* (*Khiṭāṭ*, ii, 307), Kūṣūn [202], 730/1329-30\*, which has a monumental porch on the east at some distance from the mosque itself, Beṣṭāk [205], 735/1335, and Altinbuḡā al-Marīdānī [120], 739-40/1339-40\*, the grandest and most inventive of the lot, with many columns of Aswan granite complete with Ptolemaic capitals, glazed ceramic window-grilles, carved wooden *maṣṣabiyya* screens separating the *ḥibla riwāḥs* from the *ṣaḥn*, and a very curiously indented façade on the Darb al-Aḥmar. There are three further mosques of this period, Aṣlam al-Bahāʾī [112], 745-6/1344\*, Aḳsunḳur [123], 747-8/1346-8\*—better known from its restoration by Ibrāhīm Aḡḡā Mustabfiẓān in 1062/1652\*, who

covered part of the interior with (bad) blue and white tiles and made it known as the Blue Mosque, and Shaykhū al-ʿUmarī [147], 750/1349\* (*Khiṭāṭ*, ii, 312-3 has 756/1355-6). These foundations vary considerably in their dimensions, but their façades always follow the line of the street in which they are built, any divergences from the *ḥibla* orientation which this might entail being reconciled by setting the interior plan askew. None are primarily funerary constructions and some are quite definitely not, for example the mosques of Kūṣūn, who built a mausoleum and *khānkāh* [290-1] in the southern cemetery 736/1335 (*Khiṭāṭ*, ii, 425), and of Shaykhū, whose *khānkāh* and mausoleum are directly opposite [152], 756/1355\*—.

The Cairene mosques from the time of Sultan Ḥasan onwards, if even grander in scale, are fewer in number and, even in the case of royal foundations, usually form part of a more complex institution. This is reflected in the terminology of the literary sources, which becomes steadily more diverse. The mosque of Sultan Ḥasan [133], 757/1356-754/1363\* (see Pl. 4), described in its *wakfiyya* as *hādha'l-masjid al-ḡiāmi' wa'l-madāris*, is variously described by al-Maḥrizī as *madrasa* and *ḡiāmi'*. Its central feature is indeed a vast cruciform *madrasa* for the four *madḥhabs* with an open courtyard containing a domed fountain (*fawwāra*). The principal *iwān*, allotted to the Hanafīs for teaching purposes, contains a marble *minbar* and a monumental *miḥrāb*, leaving no doubt that the functions of *madrasa* and *masjid ḡiāmi'* were not exclusive. Remarkably, the *ḥibla iwān* gives on to a palatial tomb-chamber, originally covered with a wooden dome. The *madrasas* occupy each corner of the main courtyard and consist of many storeys of cells disposed round a small interior courtyard. Annexed to the construction are still to be found a *miḍāt* or ablution courtyard (in Cairene architecture it is unusual for fountains in the courtyards of mosques or *madrasas* to be used for ablutions before the late Ottoman period), a high water-tower, a *ḥayṣariyya* with the remains of shops, and a *rab'*, which may also have served as a hospital. Complete specification of the appurtenances, many of which have disappeared in the last hundred years, must await publication of the *wakfiyya* of the institution. In the architecture of 8th/14th-century Islam as a whole, not only of al-Kāhira, the mosque of Sultan Ḥasan is outstanding for the vastness of its conception and scale and is particularly remarkable for its height. The interpretation of its architectural history has not significantly advanced since the publication of Max Herz Bey's monograph (see Bibliography), except that unconfirmed speculations that the porch might be of Anatolian inspiration have now been confirmed by comparison with the two-minaret porch of the Salḡūḡ Gök Medrese at Sivas (see SALDJÜKS: ARCHITECTURE] 670/1271-2 (J. M. Rogers, *Seljuk influence on the monuments of Cairo*, in *Kunst des Orients*, vii/1 (1972), 40-68). The building, which remained unfinished at the time of Sultan Ḥasan's death, had an eventful history under the early Burḡī Mamlūk sultans and its vast scale made it rather unsuitable for general imitation. The façade was, however, imitated by al-Muʿayyad Shaykh in his mosque, with its other dependencies, including two minarets placed on top of the Bāb Zuwayla [190], 818/1415-823/1420 (*Khiṭāṭ*, ii, 328-30), and he paid the mosque of Sultan Ḥasan the further compliment of appropriating the great bronze doors from its entrance and a bronze chandelier from the interior for his own construction.

The mosque of al-Muʿayyad, the last considerable mosque of Mamlūk Cairo, is built on the *ṣaḥn* plan,

and the remains of its courtyard façade show it to have been also the last imitation of the blind arcading and rosettes which were taken over by al-Ḥāfiẓ li-Dīn Allāh from the mosque of Ibn Ṭūlūn for his refection of the courtyard of al-Azhar. Polychrome marbles on a vast scale were expropriated for the decoration of the *ḥibla* wall, and the mausoleum even contains fragments of an Ikhshīdid cenotaph; decoration of such richness, or rapacity, was not subsequently possible in the architecture of the Mamlūk period. The later 9th/15th century mosques of Cairo, even royal foundation like that of *Ḍiḡmaḡ* in the Darb Sa'āda, 853/1449\*, are comparatively on a very small scale indeed. Their plans become progressively more similar to those of *madrasas*, chiefly of the two-*iwān* type with a reduced *ṣahn*, which eventually becomes roofed with a wooden lantern, and the approximation of plan is doubtless due to the fact that the mosque became simply a minor element of complex foundations. Kā'it Bāy, the most considerable builder of the Burjī Mamlūks, built no mosques which were not primarily some other institution, and the chief interest of those few buildings of his reign which might be classified as primarily mosques, like that of Kidīmās (Kačmāz) al-Ishākī [114], 885-6/1480-1\*, is not their scale or comprehensiveness but the architectural problems they solve. In the last case an island site is used, and the ablution courtyard, the *ṣhayḡh*'s house and a *sabil-kuttāb* (see below, *Ottomans*), which lie across a street, have to be connected by a bridge. The elements of the foundation are remarkably compressed, and the maximum use is made both of the street façades and of their symmetrical decoration. However, pressure on space inside the city, and doubtless a sufficiency of mosques in the various quarters of al-Kāhira, made the lavish foundations of the Bahrī Mamlūks either impossible or unnecessary.

*Madrasas*. With the probable exception of al-Azhar itself and the *madrasas* associated with it—those of Ṭāybars, 709/1309-10, Aḡbughā, 734-40/1333-39\*, Gawhar (*Djawhar*), 844/1440\* (Wiet *CIA* 118 No. 572), and possibly the Ḡhannāmiyya [96], 774/1372-3\*—the *madrasas* of Cairo in the Mamlūk period had no comparable function to the metropolitan *madrasas* of Ottoman Istanbul, which served as schools for those of the 'ulamā' destined to hold the highest administrative positions in the empire. They are almost invariably funerary constructions, to which the mausoleum of the founder was attached, well before his death if possible, and in fact provided an excuse for the erection of a conspicuous tomb, prejudice against which still existed among the orthodox 'ulamā' in the 7th/13th-8th/14th centuries. Moreover, at least with royal foundations, where more land for building might be available, the prime consideration was that the mausoleum should face on to the street in order to be as conspicuous as possible, preferably at the *ḥibla* side of the foundation, which explains the preponderance of royal mausolea on the west side of the Kaṣaba. The reconciliation of the conflicting demands of *ḥibla*-orientation, a façade on the street for the mausoleum, symmetrically disposed windows and doors for the attached foundation and so far as possible a symmetrical internal disposition, partly explains the labyrinthine convolutions of the entrance to the *ṣahn* of the *madrasa* of Taghrībirdī [209], 844/1440\*, or the bizarre assemblage of passages and closets against the *ḥibla* wall of that of the Kādī Abū Bakr Muẓhir [49], 884/1479-80\*. In principle the *ḥibla* came first, and in the Burjī period a certain revival or rigorism led to the correction of defectively

oriented buildings, for example a 9th/15th-century *mīhrāb* built into the *ḥibla* wall of the mausoleum of the Imām al-Ṣhāfi'ī; however, in cases of conflict the symmetry of the street façade in funerary foundations generally took first place.

The exceptional character of the independent, non-funerary *madrasa* is shown by the fact that in the Burjī period only two *madrasas*, both founded by Kā'it Bāy (on the Ka'at al-Kabṣh [223], 880/1475\*, and on the Island of Rawḡa, described also as a mosque by Ibn Iyās (text ii, 205, 211, 271, 301) and completed by 896/1491, the only standing monument of any antiquity on the island), can be considered as non-funerary foundations. One funerary *madrasa* did not exclude the possibility of other funerary foundations either. The amīr Karāsunḡur, who built a *madrasa* [31] in 700/1301 in Cairo, built a tomb at Aleppo when nā'ib of that town and is buried in a tomb, the Gunbadh-i Ḡhaffāriyya, at Marāḡha [q.v.] in N.W. Iran, whither he had fled in 712/1312. The amīr Tankizbughā actually built two foundations inside Cairo, one in the southern cemetery [298], c. 760/1359 (Creswell's dating), and one on a spur of the Muḡaṭṭam to the east of the Citadel [85], 764/1362\*, which contains a canopy mausoleum (*ḡahār fāḡh*) completed four years after his death. Even Barḡūḡ, who had founded a funerary *madrasa intra muros* [187], 786-8/1384-6\*, is reported to have asked on his deathbed to be buried in a *ḡubba* near the graves of various venerated *ṣhayḡhs*, which is one of the motives given by al-Maḡrīzī (*Khīṭāṭ*, ii, 464) for the location of the *ḡhānḡāḡh* of Farādī in the desert [149], 803/1400-813/1410\*, where Barḡūḡ is indeed buried. This suggests that whereas institutionally speaking *madrasa* and *ḡhānḡāḡh* are not exclusive terms, the latter were preferred as places of burial; in any case Barḡūḡ's reported wish is curiously similar to the Timūrids' motives for the development of *Ṣhahr-i Sabz* (Kīsh, Kīshsh) and the *Ṣhāh-i Zinde* at Samarḡand [q.v.] as their family cemeteries.

Regarding the evolution of the plans of Cairene *madrasas*, in particular of the cruciform *madrasa*, an authoritative account has been given by Creswell (*MAE*, ii, 104-34). The institution was imported from Syria by the Ayyūbids, but no surviving Ayyūbid monument in Egypt or Syria is cruciform in plan and the lists of the known *madrasas* of Damascus up to 695/1295 and of Cairo up to 639/1242, mostly *Ṣhāfi'ī* or *Ḥanafī*, show few to two rites and none at all for four. The *Madrasa al-Mustanṣiriyya* at Baḡhdād (631/1233) was intended for four rites, but Creswell has shown (*MAE*, ii, 126-7), that it was not cruciform, whereas the first Cairene cruciform *madrasa* built by Baybars, the *Zāhiriyya* [37], 660/1262\*, does not appear to have been intended for all four rites. This is also untypical in that it does not appear to have been a funerary construction, Baybars having built his tomb in the *Madrasa al-Zāhiriyya* at Damascus [see *DIAMASHQ*]. The cruciform plan was not immediately adopted for the *madrasa*, that of Kalā'ūn [43], 683-4/1284-5\*, having one *iwān* only and a sanctuary three bays deep. The first cruciform *madrasa* in Cairo for all four rites was that of al-Nāṣir Muḡammad [44], 695/1295-703/1304\*, and only two others appear to be recorded by Maḡrīzī, those of Sultan Ḥasan (see above) and *Djamāl al-Dīn al-Ustādār* (*Khīṭāṭ*, ii, 401) [35], 811/1408\*. The cruciform plan was, of course, more widely employed, for mosques as well as for *madrasas*, though always with a tendency for the axial *iwāns* to enlarge at the expense of the side ones. It was, however, most conspicuously employed in the two surviving hospitals (*māristāns*) in Cairo,

that of Ǧalāʾūn [43], 683/1284, and that of al-Muʾayyad [257] (see Pls. 5, 5a), 821-3/1418-20 (*Khīṭat*, ii, 408), the façade of which suggests some direct acquaintance with the Mengüdjikid hospital at Divriği in Central Anatolia (626/1228 onwards). The hospital of al-Muʾayyad was, however, turned into a mosque in 825/1421-2.

The great majority of the Mamlūk *madrāsas* of Cairo are modifications of the two-*iwān* type. Even if we cannot accept Creswell's suggestion that the plan of such *madrāsas* was entirely determined by that of the domestic architecture of Cairo, in particular the *ḥāʾa*, we may readily admit that domestic architecture and the *madrāsas* of the Mamlūk period developed *pari passu*. There are even two *madrāsas* which bear inscriptions proving that they were originally houses, al-Ǧhannāmiyya [96], 774/1372-3\*, and that of Khūshqadam al-Aḥmadī, formerly the palace of Taṣhtimūr al-Dawādār [153], 768/1366-7 or 778/1376-7. The dates of their conversion to *madrāsas* are curiously late: the former must have been a *madrāsa* by 827/1423 when the *Khīṭat* was completed, but according to Ibn Iyās the first *khūṭba* was pronounced in the latter only in 801/1486. The conversion was, of course, simple: it required only the hollowing out of a *mihṛāb* on the *ḥibla* side and the construction of a minaret, both essential features of the Cairene *madrāsa*.

**Khānḳāhs.** Mamlūk Cairo is rich in religious foundations of a quasi-monastic type, *sāwiyyas*, *khānḳāhs* (pl. usually *khawānikh* or *khānḳāhāt*) and *ribāṭs*. The first of these were generally small constructions housing a *shaykh*, with room for students to group informally round him. They are rarely of architectural importance, and were often not endowed at the express request of the *shaykh*. Of the only two mentioned in Creswell's *Brief Chronology*, the Zāwiyyat al-ʿAbbār [146] (c. 684/1285-6, *Khīṭat*, ii, 420) consists of two domed mausolea and is equally well known as the *Khānḳāh* al-Bundukdāriyya, and the Zāwiyyat ʿAydimur (ʿAydemir) al-Pahlawān [22], the date of which is disputed (see Van Berchem, *CIA*, 125), was almost certainly a *madrāsa*. Where the sources speak of other *sāwiyyas* they may say no more than that they consisted of a *rukn* or a *ruwāk*: they are, therefore, extremely difficult to identify architecturally.

The earliest *khānḳāh* founded in Egypt was Ayyūbid (569/1173-4), in the palace of Saʿīd al-Suʿadā, a freed slave of al-Mustansīr (*Khīṭat*, ii, 415-7, 422). The site may still be identified, but the building has been so often changed that no idea of its original disposition can be formed. Curiously enough, throughout the period up to the Ottoman conquest, only seven buildings are named, or implied, in their foundation inscriptions as *khānḳāhs*: those of Baybars al-Djāshenkīr [Čāshnegīr] [32], 706-9/1306-9\*, *Shaykhū* al-ʿUmarī [152], 756/1355, Niẓām al-Dīn Iṣḥāk [140], 757/1356\*, Muḳbil al-Zimām al-Dāʾūdī [177], 797-8/1395\*, and three in the eastern cemetery, Farāǧ b. Barkūk [149], 803/1400-813/1410\*, al-Aṣhrāf Barsbāy [121], 835/1432\*, and al-Aṣhrāf Ināl [158], 854-60/1450-6\*. The conception of a *khānḳāh* as an independent construction, with kitchens, a bath and living quarters either disposed round a central courtyard or in separate blocks, as in that of Farāǧ b. Barkūk, is well established by Maḳrīzī, Ibn Taghribirdī, Ibn Iyās and al-Sakhāwī; but the extreme divergence in the numbers of *khānḳāhs* they give, from twenty-nine in the first case to a mere four in the last, and the fact that each gives a slightly different list shows that the term, like *madrāsa*, is far from having an exclusive sense in the architectural history of Cairo. The general

tendency in the Burdjī period is for *khānḳāhs* to be subsumed in epigraphy under *madrāsa* or *djāmiʿ*, though reference may be made to a *mashyakhat taṣawwuf* or *mashyakha ṣūfiyya*, and, as in the case of the foundation of al-Aṣhrāf Barsbāy [121] above, the "*khānḳāh*" of the inscription may become "*madrāsa*" in the *wakfiyya* (A. Darrag, *L'Egypte sous le règne de Barsbay*, Damascus 1961, 50). Up to the end of the reign of al-Nāṣir Muḥammad, which coincides with the foundation of most of the *khānḳāhs* mentioned in the sources, it seems to have been the rule for Ṣūfīs to live in *khānḳāhs*, in cells either grouped round a courtyard, as in the foundation of Rukn al-Dīn Baybars al-Djāshenkīr [Čāshnegīr] [32] above, and of Salār and Sandjar al-Djāwīlī [221], 703/1303-4\*, on the Djabal Yaṣḥkur, or in an annexe, usually of cruciform plan, or, finally, as in the foundations of Ināl, Kāʾit Bāy and Qurḳumās, in a *rabʿ* or block of living-units set within the main enclosure but structurally independent of it. In the latter two types there is no necessary resemblance between the annexe and the main construction.

By the first quarter of the 9th/15th century living quarters were being suppressed from new foundations within the city, though whether this was for lack of space or of Ṣūfīs is unclear. A condition of residence within the *khānḳāhs* of the Bahrī period often stipulated in their *wakfiyyas* (cf. ʿAbd al-Laṭīf Ibrāhīm ʿAlī, *Dirāsāt taʾriḫiyya wa ʾāḥrīyya fī wathāʾiq min ʿaṣr al-Ǧhūrī*, unpublished doctoral thesis, University of Cairo, 168-9, for the *wakfiyya* of Baybars al-Djāshenkīr was that Ṣūfīs, as well as taking vows of poverty and piety, were obliged to relinquish salaried appointment within the administration or in any other religious institution. Non-residential *taṣawwuf* was permitted in the Bahrī period under some circumstances, e.g., to married Ṣūfīs, but *khānḳāhs* founded at this time were seen as essentially places for private *dhikr* to which non-residents were in principle not admitted. From the time of al-Muʾayyad *Shaykh* onwards (*wakfiyya* quoted by ʿAlī Pāshā Mubārak, v, 128) the emphasis changed to the communal *dhikr*, the previous restrictions on alternative employment for Ṣūfīs were less rigorously enforced, and the important element of *taṣawwuf* became daily attendance at the *ḥudūr*. The later Burdjī *khānḳāhs* were dependent parts of complex funerary foundations, and were sometimes no more than *makhāds*, iike that of al-Ǧhūrī [66-7], 908-10/1503-4\*, a large oriented hall where the daily *dhikr djāmāʿī* or *ḥudūr waṣīfat al-taṣawwuf* was celebrated at certain specified hours.

Much more work is required on the development of the *khānḳāh* in Mamlūk Egypt (for a survey see S. Mehrez, *The Ghawriyya in the urban context, an analysis of its form and function*, IFAO Cairo, forthcoming). It has been suggested that the change from residential to non-residential Ṣūfī centres was at least partly the result of the decadence of the *ṭariḳas* in 9th/15th century Egypt; this may be true, but the sources are extraordinarily silent on the precise *ṭariḳa* for which a given *khānḳāh* was intended or which eventually took control of it. Divergences in the practices of the *ṭariḳas* led in 8th/14th-9th/15th century Iran and in Ottoman Turkey to profound modifications in the architecture of the *khānḳāh*, and it would not be reasonable to suppose that Cairo was any different in this respect. The only hope of clarifying this question appears to lie either in the publication of the Mamlūk *wakfiyyas* of Egypt (e.g. the *wakfiyya* of Barsbāy (Aḥmad Darrādī, *Hudūdīyat wakf al-aṣhrāf Barsbāy* 72, 74) tells us that he founded,

to the west of his *khānkhāh* in the desert, a *zāwiya* for the benefit of the *Ṣūfis* (*Rifā'īs*) or in a prosopographic analysis of the *shaykh*s of the various *khānkhāh*s during the 8th/14th-9th/15th centuries.

*Ribāṭ*s. *Ribāṭ*s (used always in the religious sense and not in the sense of *khān*) are rare foundations in Cairo and the only foundations named as such in inscriptions are Burdjī, that of Yaḥyā Zayn al-Dīn [141], 856/1452\* (*CIA*, 746, No. 270), and two of al-Ashraf Ināl, one attached to his mausoleum in the desert [158], 854/1450-860/1456\*, and one inside al-Kāhira in the *Khurūnfiṣh* [61], 857/1453-865/1461\*. There is little evidence that the foundations were intentionally associated with the early Islamic *ribāṭ*s for the *muḍāhidūn* [see RIBĀṬ], and the occurrence in the *ribāṭ* of Ināl [158] of a second foundation inscription describing it as a *khānkhāh* (Van Berchem, *CIA*, 399 No. 274) suggests that the two terms were by this period virtually synonymous.

*Tombs*. The most splendid of the mausolea of the Mamlūk period are, of course, those "attached" to the great funerary foundations—of Ḳalā'ūn, al-Nāṣir Muḥammad, Barḳūḳ *intra muros* and of Faradj b. Barḳūḳ on to Ḳā'it Bāy in the eastern cemetery, though, as C. Kessler has observed, it was really the foundation which was attached to the mausoleum, providing its justification, so that, as the prejudice against monumental mausolea gradually waned, the tombs took over a progressively greater part of the foundation or became even more central to its plan. On the other hand there are a number of smaller mausolea from this period, if not exactly isolated then certainly worthy of remark. That of Kūḍūk\*, for example, incorporated into the mosque of Aḳsunḳur [123], 747-8/1346-7\*, is exceptional in being neither oriented nor having a *miḥrāb*. That of Azbak (Özbek) al-Yūsufī is simply one of the side niches of his two-*iwān* *madrasa* [211], 900/1494-5\*, with a wooden *mashrabiyya* grille to separate it from the *durḳā'a*. The Kubbat 'Asfūr [al-'Asfūr?] in the eastern cemetery [132], post 913/1507, is attached merely to a *sabīl*. So concerned was al-Ḡhūrī that his mausoleum [67], completed 909/1504\*, should be on the Ḳaṣaba that the dependencies are almost eliminated and the mausoleum reaches right from the street to the *ḳibla* wall. The mausoleum of Ḳhayr Beg is attached to his palace, [249], pre-910/505, and the space between filled by a mosque or *muṣallā* with a *miḥrāb* which deviates 28° with reference to the *ḳibla*. There are a few Mamlūk canopy tombs (*ḳahār jāḳs*), notably those of Tankizbughā [85], 764/1362\*, and a mausoleum within the *khānkhāh* of al-Ashraf Barsbāy in the desert [121], 835/1432\*, though most Mamlūk tombs are domed chambers (hence the general use of the term *ḳubba* for mausoleum). Most interesting of these isolated constructions is al-Ḳubba al-Fadāwiyya at 'Abbāsiyya [5], a vast domed edifice datable to 884-6/1479-81\* on a high basement, part of which serves as a *muṣallā*, but which has no ground floor porch and which is reached by a grand staircase on the exterior.

*General considerations*. It is often asserted that the architecture of Cairo shows a progressive decline from the Bahrī to the Burdjī periods. There was certainly a change of taste in the later period with an elaboration of surface ornament on both exterior and interior surfaces, in marble veneer, glass paste or simply carved stone, the exterior surfaces of the domes of the larger royal foundation, from that of Faradj b. Barḳūḳ onwards, being carved with elaborate tracery in high relief. Wood was scarce and an expensive import, no marble appears to have

been quarried after the Byzantine period, and despite all expedients the supply of antique material had almost dried up by the mid-9th/15th century. The devices resorted to to supply this deficiency, for example the use of bitumen or red paste to fill in grooved designs on white marble and thus create the illusion of polychrome marble veneer (*Madrasa* of the *ḳāḍī* Abū Bakr Muḥbir [49], 884/1479-80\*; Kidjmās [Ḳaḍ-māz] al-Ishāḳī [114], 885-6/1480-1\*; funerary *madrasa* of Ḳā'it Bāy [99] completed 879/1474\* (see Pl. 6); *madrasa* of al-Ḡhūrī [66] completed 910/1504\*), show technical inventiveness rather than decadence. Pressure on space within the confines of al-Kāhira doubtless explains the smaller size of funerary foundations, in order to accommodate the standard appurtenances, and there is a tendency for the proportion of height to ground area to increase. There also does seem to have been a misguided preconception among Mamlūk builders that a plan or elevation could be reduced by a factor of two or four without losing in effectiveness, and this smaller scale naturally makes all-over surface decoration even more conspicuous. However, where space was freely available, as in the eastern cemetery, the Burdjī monuments of the whole of the 9th/15th century remain architecturally imposing. This period also saw a tremendous development in the technology of stone work. The few stone domes of the Bahrī period are small and mainly experimental constructions: where a large area was to be covered the dome had necessarily to be wood (as in the mausoleum of the Imām al-Shāfi'ī or of Sultan Ḳasan, both incidentally restored in their original material by Ḳā'it Bāy) or of brick, as in the mausoleum within the *madrasa* of Sarghatmish [218], 757/1356\*. In the Burdjī period the enormous span of the domes of the *khānkhāh* of Faradj b. Barḳūḳ represents perhaps the apogee of Mamlūk stone-work in Egypt, but the technique was maintained right up to the fall of the Mamlūks, in the tomb and palace of Ḳhayr Beg [248-9], 906-8/1501-2\*. These are scarcely grounds for speaking of decadence.

*Domestic Architecture*. In the discussion of the Cairene *madrasa* the central rôle of the *ḳā'a* in the grand domestic architecture of al-Kāhira has already been stressed. In many cases a *salsabil* in the wall of an *iwān* emitted a trickle of water which flowed down into a pool in the centre of the *durḳā'a* (*ḳā'a* of Muḥammad Muḥibb al-Dīn [50], otherwise known as the *wakf* of 'Uḥmān Katḳhudā, dated 751/1351\* not 651/1253 as in Creswell, *Brief Chronology*). Ventilation was assured by wind-funnels or towers (*malḳaf*, plur. *malāḳif*), facing north to catch the evening breeze, and these also occur in some religious buildings (the mosque of al-Ṣāliḥ Ṭalā'ī [116], 555/1160\*, where the shaft inconveniently issues at the top of the *minbar*, and in the *khānkhāh* of Baybars al-Djāshenḳir [32], 706-9/1306-9\*). The main *ḳā'a* may not be on the ground floor, and as in the case of the palace of Beṣḥtāk [34], 738 or 740/1337 or 1339, the *piano nobile* is reached by an exterior staircase up the side of a basement which contained the stables as well as a street façade of shops incorporating a *masdjīd* of Fātimid foundation, the Masdjīd al-Fidjīl. In the storeys above the *ḳā'a* were the private apartments, often looking on to it through wooden *mashrabiyya* screens: the result was to make some of the great houses of Cairo extremely high. Of most of these palaces the chief remains are the monumental porch giving on to the street (Mandjak al-Silāhdār [247], 747-8/1346-7\*; the Amīr Ṭāz [267], 753/1352, on the Shāri' al-Suyūfiyya), but one palace, of the amīr Yuṣḥbak, who to judge from an inscrip-

tion of 880/1475-6 was the last owner of the building, has been preserved almost in its entirety [266]. Its other current name, the Ḥawsh Bardak, suggests that it should be identified with the *iṣṭabl* (both stables and residence) built by Kūsūn as an enlargement of a palace of Sandjar and pillaged in 742/1341-2. After Yushbak's death in 887/1482 the palace was given by Kā'it Bāy to yet another amir, Ākbardī, the last recorded occupant, who died in 904/1498-9. The sequence of owners suggests that this palace, and possibly others as well, may have been an official residence, but this is so far undemonstrable and its continued use may simply be due to the lack of suitable housing for amirs holding high positions. It became customary, indeed, to incorporate earlier palace buildings within later structures, or to amalgamate adjoining buildings, so that they came to form rambling complexes of *ḥā'as* and *maḥ'ads*, north-facing loggias generally at mezzanine level on a basement of storerooms or servants' quarters (e.g., that of Mamāy [51], 901/1496\*, now known as the Bayt al-Kāḍī), disposed round irregular courtyards. The Rab' Raḍwān Bey [406] near the Bāb Zuwayla and the Bayt al-Kirīliyya, adjoining the mosque of Ibn Ṭūlūn [321], both 11th/17th-century constructions, incorporate earlier elements, and the same would appear to be true of the 9th/15th century, for example, the "palace" of Kā'it Bāy [228], 890/1485\*, in the Darb al-Aḥmar.

This tradition of appropriation of earlier houses and the resultant constructions rambling round a *ḥā'a* probably changed little from the Fāṭimid period onwards. It was certainly little affected by the Ottoman occupation, and Turkish influence on the architecture of al-Kāhira was probably at its least in this sphere. The Musafirikhāna palace [20], 1193/1779-1203/1788, is arguably more of an Istanbul-type construction, and Muḥammad 'Alī's palace of al-Djawhara [505], 1229/1814, shows much French influence. But the less elaborate houses of Ottoman Cairo continued the local tradition.

*Commercial Architecture.* The tenement houses or *rab's* of Cairo have never been studied architecturally as a group (most appear on the *Index* as "house-*wakhs*"). The Mamlūk baths of the city, numerous as they once were, scarcely survive. The entrance to the bath of Beshṭāk [244], pre-742/1341\*, and the central hall of a bath which formed part of the endowments of the mosque of al-Mu'ayyad Shaykh [410] (cf. 'Alī Pāshā Mubārak, v, 35-6, vi, 71) are the only important remains of the Mamlūk period. The *khāns* of the Mamlūk period are slightly better preserved, though, given the lavish documentary evidence from the Fāṭimid period onwards for *khāns* in which foreign merchants lodged and the fact that many of the high Mamlūk amirs engaged in trade, it is surprising that there should be only one surviving *khān* of the Bahrī Mamlūk period, the earliest in Cairo, that of Kūsūn [11] in the Djamāliyya quarter, pre-742/1341, the date of his death. Two *khāns* founded by Kā'it Bāy are preserved (the inscriptions use the word *khān*, though the literary sources almost invariably use the word *wakāla/wikāla*), one at al-Azhar with a *sabil-kuttāb* attached [75-6], 882/1477\*, and one [9] at Bāb al-Naṣr, 885/1481. The best preserved, however, is the Wikālat al-Nakhla [64]\*, which bears the cartouches of al-Ghūrī, 906/1501-922/1516. It consists of a courtyard approached through a monumental entrance surrounded by a ground floor of booths (*dakākin*) or depôts (*makhāzin*) with two upper storeys of rooms for lodging and, possibly, originally another storey as well. The plan

differs little from that of contemporary *khāns* in Aleppo and Damascus, though the building is much higher in proportion to its ground area, and the street façade has windows for each storey above the ground floor. These late Mamlūk *wikālas*, organized, as in Syria, according to trade as well as to the nationality of the merchants who inhabited them, changed very little after the Ottoman occupation, most of the surviving *khāns* being 10th/16th-12th/18th century in date.

Al-Ghūrī also built a *ḥaysāriyya* [53-4, 56] (undated), now known as the Khān al-Khallī, which was in fact a *khān* of 8th/14th century date ('Alī Pāshā Mubārak, v, 90, 301). It has been assumed that al-Ghūrī merely restored the *khān*, but the incomplete foundation inscription in his name (Van Berchem, *CIA*, 596, No. 406) leaves no doubt that it was a new foundation.

#### OTTOMANS

Most assertions of the disruptive effect of the Ottoman conquest upon the architecture of Cairo are based on prejudice or on superficial acquaintance with the monuments. The Mamlūk tradition as it had evolved under the Burjī Mamlūks was extraordinarily persistent, and, in contrast to Damascus, the Ottoman metropolitan tradition of architecture made itself felt only sporadically. Changes of various sorts did take place. The *Irsāliyye Khazīnesi*, a tax first fixed under Khādīm Sulaymān Pāshā (931/1524-941/1534) [see *IRSĀLIYYE*], left the Ottoman *wālis* with little money for building, and most of them left Egypt with heavy debts. In the later 11th/17th and 12th/18th centuries, when the Mamlūk beys prevented its remission to Istanbul, larger foundations were undertaken, like the mosque and dependencies of Muṣṭafā Shurbagī [Ābādī] Mīrzā at Būlāk [343], 1110/1698\*, the extensive restoration of al-Azhar, 1167/1753, and the mosque, *hawḍ* (drinking trough) and *sabil* of Muḥammad Bey Abū Dhahab [62, 98], 1187/1774\*. The changes however, were by no means entirely the result of economic pressure. The Ottoman governors, generally in Egypt *en poste* for short periods, preferred to endow large funerary *kullīyyas* [*kullīyes*], complex foundations, in Istanbul, where large areas of land were still freely available for building in the central districts of the city. They did not intend, if they could help it, to die in Egypt; they did not have the Mamlūk tendency to build more than one mausoleum (the last Mamlūk to do this in Cairo was Kānsūh Abū Sa'īd with two mausoleums [360, 164] both dated 904/1499\*), and the discovery on their arrival that Cairo was almost entirely built up already and that land was too difficult, or too expensive, to expropriate must have greatly contributed to their lack of enthusiasm for large-scale foundations there. However, two early governors appear to have been exceptional in building in Egypt and not in Istanbul, Khādīm Sulaymān Pāshā (*wālī* 931/1524-941/1534), who built a mosque of Ottoman plan but Mamlūk decoration on the Citadel [142], 935/1528\* (chronogram), with a very curiously planned *tekke* behind it, and Iskandar Pāshā (governor 963/1556-966/1559) whose mosque, *tekke* and *sabil* at the Bāb al-Khalk (Khark) have all disappeared. The former is exceptional in having continued to build in Egypt after relinquishing his official duties: he is credited with a *wikāla* at Būlāk [539], 948/1541, and a *tekke intra muros*, al-Sulaymāniyya [225], 950/1543-4\* (but described in the foundation inscription as a *madrasa*).

*Sabils.* The distinction between Ottoman and Mamlūk architecture in Cairo is perhaps best shown

by considering the history of the *sabil*, the earliest surviving example of which is that in the name of al-Nāṣir Muḥammad [561] at the porch of the foundation of Kalā'ūn. The cistern cannot be located, and the later elements of Cairene *sabils*, a carved stone *salsabil* or *shādhirwān* down which the water flowed into an interior pool and bronze grilles through which the water could be taken with a dipper, do not survive. The date is disputed: *Khiṭāf*, ii, 97 (followed by Creswell, *M.A.E.*, ii, 274-5) gives 726/1326, but there are clear signs of a subsequent restoration, when a *kuttāb* (Kur'ān school) may have been added above. One free-standing Bahrl *sabil*, that of Shaykhū [144], 755/1354\*, appears to be without a *kuttāb*, but by the early Burdjī period the joint construction, generally at the corner of a façade so that it might be accessible from two or three sides, becomes a feature of larger foundations, for example that on the façade of the *khānkāh* of Shaykhū [152], later than the foundation of 756/1355\*, and the pair at either end of the façade of the *khānkāh* of Farajī b. Barḳūk in the desert [149], 803/1400-813/1411\*. However, where a site at an important street junction could be employed, the *sabil-kuttāb* might become free-standing in the later Burdjī period, for example, that of Kā'it Bāy [324], 884/1480, with a magnificent revetment of marble veneer and a complex of small rooms behind.

In the Ottoman period the *sabil-kuttāb* became the most frequent of all commemorative foundations, doubtless for reasons of economy. It was almost invariably an independent foundation, even when built up against some earlier building. That of *Khusraw* [v.] (Husrev) Pāshā [52], 942/1535\*, is both typical of the genre and symptomatic of general Ottoman practice. Governor of Egypt from 940/1534 to 942/1536, he had built mosques at Diyārbakr (925-35/1519-29), Sarajevo (actually a *kullīyya* (*kullīyye*); cf. Mayer, *Architects* . . ., 50) (938/1532) and Van (975/1567), a mosque and double *madrasa*, the *Khusrawiyya*, at Aleppo (953/1546-7), and a *türbe* in Istanbul, all these three built by Sinān, a canopy tomb at Van (989/1581) and a *khān* on the Van-Bitlis road. His architectural activities are by far the most flagrant example of the Ottoman governors' neglect of Cairo, although his case is paralleled by that of Sinān Pāshā, twice governor of Egypt, whose numerous constructions in Syria and at Istanbul are represented in Cairo now only by his mosque at Bülāk [349], 979/1571\*. If (improbably) sheer poverty was *Khusraw Pāshā's* excuse, the habit of founding *sabil-kuttābs* in Cairo persisted throughout the period of Ottoman domination. The best known is that of 'Abd al-Rahmān Katkhudā [21], 1157/1744\* (see Pl. 7), an elegant Mamlūk pastiche which fully exploits the advantages of its situation at an important street junction. Architecturally, however, it is far from untypical; the *teshimes* of 11th-12th/17th/18th century Istanbul do not appear to have been copied at all, and the typically bow-fronted wooden-eaved Istanbul *sabils* (known as *ṣibyān mektepleri*) are not imitated in Cairo until the 19th century (mosque of Sulaymān Āghā Silāhdār [382], 1255/1839).

**Fortifications.** The Ottoman fortifications of the Citadel cannot ever have served much purpose. The Bāb al-'Azab [555], 1168/1754, a premature revival of romantic Crusader architecture, was restored by Muḥammad 'Alī when he occupied the Citadel and built there the Mint [606], 1227/1812, two palaces, the *Djāwhara* and the *Ḥarīm* [505, 612], 1229/1814 and 1243/1827, the Archives [605], 1244/1828, and ultimately the mosque of Muḥammad 'Alī [503], 1265/1848, the plan of which, in spite of frequent

assertions to the contrary, is based on that of the *Yeḥi Djamī'* at Istanbul. The Citadel was no longer a fortress in any strict sense of the word, and an earlier fortress of Muḥammad 'Alī on the Muḥaṭṭam Hills [455], 1225/1810, connected to the Citadel by a ramp, is so disposed that it cannot ever have had more than decorative value. Various gates of quarters (*ḥarāt*) datable to the Ottoman period remain within the walls of al-Kāhira, for example that of the *Ḥarāt al-Mabyaḍa* in the *Djamāliyya* [356], 1084/1673. There is no reason, however, to posit a revival of fortification within the city in the Ottoman period. The existence of such gates is well documented in the Mamlūk period, though none dating from this time has yet been identified.

**Mosques.** Although the principal religious foundations of Cairo in the Ottoman period are mosques, not *madrasas*, there is only one royal foundation, that of Malika Ṣafiyya [200], 1019/1610, though it is royal only by error in that its founder, 'Uṭmān Āghā, the Dār al-Sa'adet Āghā, had not been manumitted, so that the foundation was judged to revert to his owner, Malika Ṣafiyya. Although the masonry and much of the decoration is Cairene, the mosque plan comes closer to the metropolitan mosques of Istanbul than any other Ottoman building in Cairo. It is set in a walled enclosure of which one gateway [330], 1019/1610\*, still stands, on a high basement without shops and consists of a courtyard surrounded by domed arcades leading to a sanctuary with a dome on a hexagonal base which goes back in plan to that of the Üç Şerefeli mosque at Edirne. The next mosque in order of size is that of Sinān Pāshā at Bülāk [349], 979/1571\*, which was subsequently imitated by that of Muḥammad Bey Abū Dḥāhab [98], 1187/1774\*. The use of a dome similar to that of al-Kubba al-Fadāwiyya [5], 884-6/1479-81\*, rather than one of the dome types evolved in Istanbul, as a model for both mosques appears at first sight remarkable, though Ḥasan 'Abd al-Wahhāb (*Ta'rikh al-masājid*, i, 671) has adduced evidence that by the late 11th/17th century at least this Mamlūk mausoleum had become one of the sights for visitors to Cairo. Both mosques, like others of the 10th/16th-11th/17th centuries, introduce certain features which are more characteristic of the Ottoman architecture of Istanbul: a narthex with *mihrābs*, allegedly for late-comers to prayers, and, inside, a balcony above the entrance (it is not always clear whether a royal box or a gynaeceum was intended), and a sunken transverse passage across the sanctuary, a reconciliation, perhaps, of the Istanbul practice of entry into the sanctuary directly from the street rather than via a *ṣahn* or a *miḍāi*, as in Cairo. The balcony above the entrance first occurs in the architecture of Cairo in the mosque of al-Nāṣir Muḥammad on the Citadel, when it may actually have been a royal box; there appears to have been a gynaeceum right from the start in the mosque of Aṣlam al-Bahā'ī [112], 745-6/1344-5\*, and the sunken passage across the sanctuary occurs in various Burdjī monuments, including the mosque within the *khānkāh* of al-Aṣḥraf Barsbāy in the desert [121], 835/1432\*. Such Ottoman modifications, therefore, were mainly ritual rather than architectural.

This general point also applies to other Ottoman mosques of Cairo, for example the Maḥmūdiyya [135], 975/1568, very much a Burdjī Mamlūk building in construction but based on the mosque of Sultan Ḥasan opposite, even to the tomb-chamber behind the *ḫibla* wall, though the choice of a steep hill as a site makes the whole idea rather ineffective. The mosque of Dā'ūd Pāshā [472], 955/1548, combines an

irregularly shaped *muṣallā* of late 9th/15th-century type with an entrance more like a *ḥā'a* with a staircase incongruously occupying it; and the Ribāṭ al-*Āḥār* [320], 1073/1662-1224/1809, a much restored building which is now in part a basilical mosque, has a *ḥubba* attached which is no mausoleum but a repository for two limestone feet of Pharaonic workmanship, now revered as the *āihār al-nabawiyya* [see *QADAM SHARIF*] (For earlier restoration, in the name of Farādī b. Barḳūḳ and Kānshūh al-*Ghūrī*, see Wiet, *Inscriptions historiques sur pierre* 79-80, nos. 107, 129). There is a general tendency for basilical mosques, sometimes with a central lantern, like that of Muṣṭafā *Shurbagī* [Corbaḡī] Mirzā, [343] 110/1698\*, to replace those with an open *ṣahn*, the last of which is the mosque of al-Fakahānī [109], 1148/1736\*; but this again is the continuation of a Burḡī development. In general, the continuity of Mamlūk plans and materials is striking, and while, to judge from the extant remains, tile revetments of low quality were employed in some Ottoman buildings, when a flashy marble mosaic was required it could easily be executed by local craftsmen (mosque of al-Burdaynī [201]\*, 1025/1616-1038/1629\*).

*Madrasas and tekkes.* The Cairene *madrasas* of the Ottoman period are conspicuous only by their absence. The Takkiya Sulaymāniyya [225], 950/1543-4\*, and the *takkiya* and *sabil* of "Sulṭān Maḥmūd" [308], 1164/1751\*, which closely follows it in plan, are both described in their foundation inscriptions as *madrasas*, but there are scarcely any others known and a complete survey of the Ottoman epigraphy of Cairo is required to determine the question. Both these buildings follow the plan of an Istanbul *madrasa* with a raised courtyard surrounded by arcades with cells and a projecting axial *iwān* (*dars-ḥāna*): unlike their Istanbul counterparts they are oriented, so that the *darsḥāna* also serves as a *masḡid*. If they were also *tekkes* we have no information regarding the *ḥarīka* which occupied them. The situation is little better regarding the foundation of *ḥānḳāhs* in the Ottoman period. There is a *tekke* of the Mawlawiyya (Mevlevī) order attached to the tomb and *madrasa* of Ḥasan Ṣadaḳa (Sunkur Sa'ḏī) [263], 715/1315\*-721/1321\*, with a late 12th/18th-century wooden *semā'ḥāne* on an upper floor, and there is also a *tekke* of the Rifā'iyya [442], 1188/1774. Yet a third extant *tekke* of the Ottoman period is a Bektāshī convent at the foot of the Muḳaṭṭam, an early 10th/16th-century foundation of considerable potential interest but which has long been totally inaccessible and has never been surveyed.

*Commercial architecture, etc.* It has already been remarked that the commercial and domestic architecture of Cairo appears to have changed little from the Mamlūk to the Ottoman period: almost all the major architectural changes in these spheres have been from the time of Muḥammad 'Alī onwards. This impression remains to be confirmed, however, and on this, as on the architecture of the 19th-century city, the basic work remains to be done.

*Restorations.* Any account of the architecture of al-Qāhira would be incomplete without some reference to the major restorations which the monuments have undergone. Almost all those still standing have undergone generally accurate major restoration at the hands of the *Comité de conservation des monuments de l'art arabe* over the past ninety years. By no means all earlier restorations are commemorated by inscriptions (for example those of Kā'it Bāy in Sultan Ḥasan and the Imām al-Shāfi') or thought worthy of record by the literary sources: much of

the Islamic architecture of the city owes its relatively well preserved state to the fact that for most of the time *wakf* revenues must have been adequate for the upkeep of the foundation. Where this was not the case, in the Mamlūk period at least, money available for building was usually spent on a new foundation to commemorate the individual donor rather than on the repair of another's monument. Only this can explain the rarity of inscriptions commemorating major restorations in the architecture of al-Qāhira: it was, ultimately, more glorious to demolish a dilapidated building than to restore it.

The major restorations, therefore, are generally explained by special considerations. The Fāṭimid restorations of the mosques of 'Amr, Ibn Ṭūlūn and al-Azhar had a political motive, the propagation of the *da'wa*, as well as the necessity of coping with a population increase, and the Mamlūk and Ottoman restorations of the Citadel, the aqueduct and the main bridges extant in the Cairo area are readily comprehensible in terms of the necessity of maintaining public, or royal, utilities. The continuous series of inscriptions attesting additions to or restorations of al-Azhar by the Bahri and Burḡī sultans are an index of its importance in the 8th/14th-9th/15th centuries as a teaching institution; while the restoration of the mosque of Ibn Ṭūlūn [220] by Lāḡīn, 969/1296-7ā, the most considerable of the whole period involving two *mīhrābs*, a domed fountain (*ḥawwāra*) in the centre of the courtyard, a sundial and the virtual rebuilding of the minaret as well as, doubtless, unspecified structural repairs, was in prompt fulfilment of a vow, as is shown by the dating of the *minbar* he also erected there a fortnight after his accession, 696/1296. The earthquake of 702/1303 was evidently destructive enough to demand widespread repairs, of the mosque of al-Ḥākim by Baybars al-Dīshenḳīr, of the mosque of al-Ṣāliḥ Ṭalā'i [116] by Bektimūr al-*Čükāndār*, and the mosque of 'Amr by the amīr Salār, who probably built the *mīhrāb* on the outer wall by the main entrance.

The other recorded Mamlūk restorations appear capricious in the extreme: a further restoration of the mosque of al-Ḥākim by Sultan Ḥasan, 760/1359 (*Khiṭāṭ*, ii, 277), a restoration of the mosque of al-Aḳmar [33] by Yilbughā al-Sālimī, 799/1397\*, a *minbar* in the name of Sultan Dīaḳmaḳ in the *madrasa* of Barḳūḳ *intra muros* [187], a *minbar* in the name of Kā'it Bāy in the *ḥānḳāh* of Farādī b. Barḳūḳ in the desert, 888/1483, and a re-endowment inscription of Barsbāy, 838/1435, in the *ḥawṣḳ* of *Dhu 'l-Nūn* al-Miṣrī (Wiet, *CIA*, 70, No. 565). Why they should be so few or so various is beyond the state of our knowledge.

In the light of this general lack of concern for older buildings without special importance, however, the scarcity of Ottoman restoration inscriptions becomes much less scandalous. Some restorations certainly appear capricious: for example that of the mosque of Aḳsunḳur by Ibrāhīm Aḡnā Mustahfīzān, 1062/1651-2\*, or that of Sultan Ḥasan by Ḥasan Aḡhā, 1082/1671-2\*, the latter of which may in any case refer only to the rebuilding of the fountain in the courtyard. Other Ottoman restoration inscriptions indicate a curious revival of interest in Fāṭimid *maṣḥads*: the *Maṣḥad* al-Dīyūshī to which are attached the remains of an undated Ottoman *tekke*, Sayyida Nafisa, which was apparently burned down at the Ottoman conquest, by 'Alī Pāshā Hekimoghlu, twice pāshā of Egypt (1170/1757); the Imām al-Layḥ (1201/1786-7); the mausoleum of Sīdī 'Uḳba, by Muḥammad Pāshā Silāḥdār (first rebuilt 1066/1655-6\* and

now known as al-Sādā al-Wafā'iyya [463]); and the shrine of Zayn al-Ābidīn [599], which bears a somewhat defective Ottoman copy of a foundation inscription dated 549/1154, restored by 'Uthmān Āghā Mustahfiẓān (1225/1810, cf. 'Alī Pāshā Mubārak, v, 4). Two earlier Fātimid buildings were completely rebuilt: a mosque founded by the amīr Abū Manšūr Kuṣṭah, 535/1141 (Sīdī Sāriya), in the Citadel, which re-appears as the mosque of Khādīm Sulaymān Pāshā [142], 935/1528\*, and the mosque al-Zāfir ibn Naṣr Allāh, 543/1148, rebuilt by Aḥmad Katkhudā Mustahfiẓān Kharpūtlū, 1148/1735, as the mosque of al-Fakahānī [109], into which the wooden doors of the Fātimid mosque were incorporated.

The Ottoman inscriptions of al-Azhar (given in Mehren, ii 59, see Bibliography) chiefly coincide with the substantial enlargements of the mosque undertaken by 'Abd al-Raḥmān Katkhudā. The only other inscriptions which demonstrate a concern for public utilities are those of the Great Aqueduct, restored by 'Abdī Pāshā, 1139/1727, with a chronogram also giving the date 1140/1728 (Van Berchem, CIA, 591).

This brief account of restoration work in al-Ķāhira over a period of seven hundred years or so is based mainly on the published inscriptions: if suggestive in certain respects, it is clearly lacunary. It is more than possible that not a few inscriptions which claim to refer to the founding of a building are really recording pretentious restorations. However, if the record of restoration under Ottoman dominion is poor, it is scarcely worse than in the earlier history of al-Ķāhira. Concern for the monuments of others, one may conclude, was not a pronounced Cairene characteristic.

*Bibliography*: (apart from references cited in the text): The bibliography of the monuments of al-Ķāhira is so scattered that no complete survey of the source material can be attempted. Much work remains to be done before even a corpus of the Islamic architecture of Cairo can be assembled, and the present brief account demonstrates the extent to which generally received opinions are based upon a *priori* generalizations rather than detailed publication. The most recent and complete bibliographical work is K.A.C. Creswell's *A bibliography of the architecture, arts and crafts of Islam to 1st January, 1960* (American University in Cairo Press 1961); *Supplement, to 1st January 1970*, in the press. The monuments of al-Ķāhira up to 726/1326 have full chronological bibliographies in idem, *The Muslim architecture of Egypt*, abbr. as (MAE), i, Oxford 1952, ii, Oxford 1959, those for monuments founded before 358/969 being found in *Early Muslim architecture*, (EMA), ii, Oxford 1940, which gives details of repairs and additions to them subsequent to the foundation of al-Ķāhira. The latest general bibliography of Cairo by 'Abd al-Raḥmān Zakī, *A bibliography of the literature of Cairo*, Cairo 1964, is to be consulted for recent articles in Arabic, though in general it supersedes none of Creswell's works cited above.

The material available falls into six classes: (1) maps; (2) primary sources and accounts based directly upon them, rather than upon the monuments; (3) detailed publication of the monuments themselves; (4) epigraphy; (5) general studies, including less pretentious works which aim to be partly guide books; (6) guide books proper. Work in hand will be indicated at the end of the account.

(1) Maps. For the whole period 358/969-1272/1856 the *Special 1:5,000 scale maps of Cairo*, 2 sheets (Survey of Egypt 1951), published in English and

Arabic versions with numerical, chronological and alphabetical *Indexes* of the Muslim monuments in each language, are a necessary source and supersede the earlier monuments map of Cairo by Max Herz Bey (Egyptian Department of Antiquities 1914). They do not indicate monuments declassified before 1950, and buildings destroyed since 1856 are not shown. For this reason, certain quarters of Cairo which have become built up during the present century, for example the island of Rōḍa (Rawḍa), appear as misleadingly unimportant, and for a more accurate impression of their constitution in the post-mediaeval period the maps in M. Jomard, *Description de l'Égypte. État moderne*, 1809-22, ii, 579-788, should be consulted.

There are many differences of detail between the 1951 maps and those attached to MAE, i-ii: in cases of divergence the latter are generally the more reliable. The *Indexes* do not correspond exactly in their Arabic and English versions, showing discrepancies of orthography or even classification; and, particularly for the Ottoman period, some monuments numbered on the maps do not appear in the *Indexes*. The basic work of their collation and revision is at present being undertaken by a seminar of the American University in Cairo under the direction of C. Kessler.

(2) Primary sources. For the reign of al-Nāṣir Muḥammad ibn Ḳalā'ūn, D. P. Little, *An introduction to Mamlūk historiography*, Wiesbaden 1970, is a useful guide to the material available. It is regrettable that no similar survey has yet been attempted for any other period of the history of al-Ķāhira. Of all the primary sources, al-Maḳrīzī, *Mawā'iz (Khīṭat)*, for the period up to the reign of al-Mu'ayyad Shayḳh is by far the most useful and is often a first-hand source (ed. Būlāḳ 1270/1853; ed. G. Wiet, in MIFAO, xxx, xxxiii, xlvi, xlix, liii (Cairo 1927- ), covering i, 1-322 of the Būlāḳ edition; tr. U. Bouriant, in MMAF, xvii, fascicules 1-2 (Paris 1895-1900), covering Būlāḳ ed. i, 1-250; tr. P. Casanova, in MIFAO, iii (Cairo 1906), covering Būlāḳ ed. i, 251-347). This should be supplemented by al-Maḳrīzī, *Sulūk*, ed. M. Ziyāda, i-iii, Cairo 1934-70; tr. E. Quatremère as *Histoire des Sultans mamlouks*, i-ii, Paris 1837-44; continued by Muḥammad ibn 'Abd al-Raḥmān al-Sakhāwī, *al-Tibr al-masbūḳ fi dhayl al-Sulūk*, ed. A. Zeki Bey, *Revue d'Égypte*, ii-iii, Būlāḳ 1896-7; E. Gaillardot (Cairo 1897), also al-Sakhāwī, *Tuhfat al-albāb*, i, Cairo 1937. Among other sources of primary importance are Ibn Duḳmaḳ, *Kitāb al-intiṣār li-wāṣitat 'iḳd al-amṣār*, Būlāḳ 1309/1891-2; Ibn Taghribirdī, Cairo [see ABU 'L-MAḤĀSIN]; Ibn al-Zayyāt's guide to the Ḳarāfa, *al-Kawākib al-sayyāra fi tarīḳ al-ṣayāra fi 'l-Ḳarāfatayn al-kubrā wa 'l-ṣuḡhrā*, Cairo 1325/1907; and Ibn Iyās, *Badā'i' al-zuhūr*, Būlāḳ 1311-14/1893-7 [for other editions see IBN IYĀS], translated G. Wiet as *Histoire des Mamlouks circassiens*, IFAO, Cairo 1945, covering the period 1467-1500, and as *Journal d'un bourgeois du Caire*, i, Paris 1955-6, covering the period 1500-16; ii, Paris 1960, covering the period 1516-22.

For the Ottoman period the chief source remains 'Alī Pāshā Mubārak, *al-Khīṭat al-tawfiḳiyya al-djādida*, Cairo 1306/1888-9 (new edition, Cairo 1969- ). With the exception of Aḥmad Darrādī, *L'Acte de waqf de Barsbay (Huḍūdīyat waḳf al-ashraf Barsbay)*, Cairo 1963 and of L. A. Mayer's valuable study, *The buildings of Qāyṭbāy as described in his endowment deed*, Fascicule i (all pub-

lished), London 1938, the substantial collections of *wakfiyyas* in the Ministry of Waqfs in Cairo remain largely unexploited, nor does any published catalogue of them exist. Extracts from a number of *wakfiyyas* are given by al-Maqrizī, 'Alī Pāshā Mubārak and other historians, but the only studies of the *wakfiyya* material relating to Cairo are by 'Abd al-Laṭīf Ibrāhīm, *al-Waṭḥā'ik fi khidmat al-āthār*, in *al-Mu'tamar al-thāni li āthār al-bilād al-'arabiyya*, Cairo 1958; idem, *Silsilat al-waṭḥā'ik al-tārikhiyya al-ḥawmiyya I. Wathīkat Amir al-Akhūr al-Kabir Karākhūdiya al-Ḥasani*, in *B. Fac. Ar.*, xviii/2 (1959), 183-251; idem, *al-Tawḥīka al-shar'īyya wa'l-ishhādāt fi zuhr wathīkat al-Ḥūrī*, in *B. Fac. Ar.*, xix/1 (1960), 293-420. These two articles cite documents dated 846/1442-3 and 911/1505 (Awkāf No. 853) respectively.

Among topographical works which draw mainly upon the literary sources should be mentioned first C. H. Becker, *CAIRO* in *EI*<sup>1</sup>, and A. Breccia and E. Kühnel, *Cairo*, in *Enciclopedia italiana*, viii, 281-7. More detailed works of this type are A. R. Guest and E. T. Richmond, *Miṣr in the fifteenth century*, in *JRAS* (1903), 791-816; G. Salmon, *Etude sur la topographie du Caire, le Kal'at al-Kabsh et la Birkat al-Fil* in *MIFAO*, vii, Cairo 1902; P. Ravaisse, *Essai sur l'histoire et la topographie du Caire d'après Maqrizi*, in *MMAF*, i/3, iii/4, Paris 1887-90; P. Casanova, *Histoire et description de la Citadelle du Caire*, in *MMAF*, vi, Paris 1891-2. W. Popper's *Systematic notes to Ibn Taghribirdī's Chronicles*, i, *The Cairo Nilometer*, Berkeley 1951, and ii, *Egypt and Syria under the Circassian Mamlūks*, Los Angeles 1957, contain much valuable topographical material. Mention should also be made of L. Massignon's *La cité des morts au Caire (Qarāfa Darb al-Aḥmar)*, in *BIFAO*, lvii (1938), 25-79. Much hitherto unpublished material, not all, obviously, of equal relevance to the city of Cairo, is to be made available in a series of translations (general editor S. Sauneron) by the IFAO (Cairo) of the accounts of foreign travellers to Egypt, which it is hoped to turn into a corpus, *Collection des voyageurs occidentaux en Égypte*. The following are to appear: Pierre Belon (1547), Jean Palèche (1581), Jean Coppin (1638), two anonymous Florentine and Villanovan accounts (1589-90) and Lichtenstein, Kiechel, Fernberger, Von Teufel, Lubenau and Miloite (1587-8).

(3) Detailed publication of monuments. For its detailed publication of the monuments up to 726/1326, K. A. C. Creswell's *EMA*, ii, and *MAE*, i-ii, the latter two volumes incorporating the author's earlier publications of isolated monuments or types of architecture in Cairo and presenting his most recent views on the problems he had earlier considered, are basic works. For plans and descriptions of monuments no longer extant, M. Jomard, *Description de l'Égypte. État moderne* (cited (1) above) is sometimes useful. For the period 726/1326-923/1517, K. A. C. Creswell, *A brief chronology of the Muhammadan monuments of Egypt to 1517*, in *BIFAO*, xvi (1919), 39-164, has still, for the majority of the monuments it catalogues, not been superseded. Monographs, some of them no more than preliminary studies, devoted to monuments not treated in *MAE*, i-ii, include: Ḥasan 'Abd al-Waḥhāb, *Masājid Aṣlam al-Silāḥdār*, in *al-Handasa*, xvi (1937), 469-80; idem, *Madrasat Abi Bakr Muḥbir*, in *al-Handasa*, xv (1935), 17-23; M. Herz Bey, *La mosquée du Sultan Hassan au Caire*, Cairo 1899; idem, *La mosquée de*

*l'emir Ganem al-Bahlaouan au Caire*, Cairo 1908; Franz Pasha, *Die Grabmoschee des Sultans Kait-Bai bei Kairo* (= *Die Baukunst*, i/3), Berlin/Stuttgart 1897; R. L. Devonshire, *Abu Bakr Muḥbir et sa mosquée au Caire*, in *Mélanges Maspéro*, iii (*MMAF*, lxviii), Cairo 1940, 25-31; and Saleh Lamei Mostafa, *Kloster und Mausoleum des Farag ibn Barqūq in Kairo* (= *Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe*, ii, Glückstadt 1968), cf. review by K. Brisch in *Kunst des Orients*, vi/2 (1970), 182-3, the only detailed contribution up to the present to the study of the growth of the Eastern cemetery in Cairo. To these should be added M. Meinecke, *Das Mausoleum des Qalā'ūn in Kairo. Untersuchungen zur Genese der mamlukischen Architekturdekoration*, in *Mitteilungen des Deutschen Archäologischen Instituts. Abteilung Kairo*, xxvii/1 (1971), 47-80, the first serious attempt to broach the problem of the origins of Mamlūk architectural decoration.

With the exception of an unpublished doctoral thesis by Kamāl al-Dīn Sāmih (good plans, poor text) on the work of the 18th-century patron and builder, 'Abd al-Rahmān Katkhudā (Faculty of Engineering, Fouad I University, Cairo 1947) and A. Raymond, *Les constructions de 'Abd al-Rahmān Katkhudā au Caire*, in *Mélanges Islamologiques de l'IFAO*, x, 1973, the period after 923/1517 remains largely untreated, except in general accounts of the architecture of Cairo (see (5) below). For this period, and for other periods as well, the *Comptes rendus du Comité des monuments de l'art arabe* (Cairo 1882 onwards: most recent volume, covering the years 1954-61, Cairo 1963 [since 1956 reports have been in Arabic]; *Index* up to 1914 edited by M. Herz Bey, Cairo 1915; list of contents by volume, 1882-1940, in K. A. C. Creswell *Bibliography* (cited above), columns 89-96) remains an important source. For the 19th century onwards, with the exception of E. Pauty, *L'architecture du Caire depuis la conquête ottomane* (see (5) below), there appear to be only two useful studies, 'Abd al-Rahmān Zakī, *Mabāni al-Kilā' fi 'aṣr Muhammad 'Alī Pāshā*, in *al-'Imāra*, iii/3-4 (1941), 89-98; and J. Fleming, *Cairo Baroque*, in *Architectural Review*, xvii (1945), 75-82.

Archaeological investigation of the mediaeval domestic architecture of al-Kāhira has in recent years been on a minor scale and has remained largely unpublished. Of primary importance, however, are G. T. Scanlon's preliminary reports of five seasons of work at al-Fuṣṭāt, *Journal of the American Research Centre in Egypt* (1964 onwards), for the considerable revisions they entail of the conclusions advanced by A. Bahgat and A. Gabriel, *Fouilles d'al-Foustat*, Paris 1921, and A. Gabriel, *Les fouilles d'al-Foustat et les origines de la maison arabe en Égypte*, Paris 1921. Owing to the unfortunate fact that the rebuilding operations within mediaeval Cairo have rarely been accompanied even by salvage excavations, the curious apparent incongruity between the Ṭūlūnid-Fāṭimid-Ayyūbid domestic architecture of al-Fuṣṭāt and the Mamlūk architecture of al-Kāhira *intra muros* has remained so far unexplained, though it is to be hoped that the forthcoming publication by R. Mantran and the late A. Lézine, under the general title, *Étude scientifique des palais et maisons du Caire et de Rosette (XVIe-XVIIIe siècles)*, will throw light on this problem. E. Pauty's, *Les palais et les maisons d'époque musulmane au Caire*, *MIFAO*, lxii (Cairo 1932), and *Les hammams du Caire*, *MIFAO*, lxiv

(Cairo 1933), are poorly documented general studies with few plans and give little idea of the history of the domestic architecture of Cairo.

For the Coptic architecture of Cairo in the Islamic period, A. J. Butler, *Ancient Coptic churches of Egypt*, i-ii, Oxford 1884; reprinted with Butler's corrections, Oxford 1970, is to be supplemented with discretion by M. Simaika Pasha, *A brief guide to the Coptic Museum and to the principal ancient Coptic churches of Cairo*, Cairo 1938. On the architecture of the other non-Muslim minorities, all of which is apparently 18th century or later, there appears to be nothing published at all.

(4) Epigraphy. The epigraphy of the monuments of Cairo, the most valuable source for their history, should be approached with the caution that, especially in the Burdjī [q.v.] Mamlūk period, a foundation inscription may specify only one of the buildings of the complex to which it applies. This custom partly accounts for the misdescriptions or inconsistencies in the Arabic and English *Indexes* to the *Special 1:5,000 scale maps of Cairo* (see (1) above). The still incomplete *RCEA*, a secondary compilation, has not superseded M. Van Berchem's *Matériaux pour un Corpus Inscriptionum Arabicarum (CIA)*. *Première partie, Egypte*, i, Paris 1903; ii (continued by G. Wiet), *MMAF*, lii, Cairo 1929-30. The two volumes contain only a selection of the inscriptions from the Ottoman period. *CIA*, i-ii, supersedes Van Berchem's *Notes d'archéologie arabe*, in *JA*, 8e série, xvii (1891), 411-95; xviii (1891), 46-86; xix (1892), 377-407. The *CIA* should now be completed with G. Wiet, *Inscriptions historiques sur pierre (Catalogue général du Musée de l'Art Islamique du Caire)*, Cairo 1971. Some volumes of the *Catalogue général du Musée Arabe du Caire* are also relevant, particularly because of the striking rôle which wood plays in the architectural decoration of all periods in Cairo: J. David-Weill, *Bois à épigraphes*, i, *Jusqu'à l'époque mamlouke*, Cairo 1931; ii, *Depuis l'époque mamlouke*, Cairo 1936; E. Pauty, *Bois sculptés d'églises coptes (époque fatimide)*, Cairo 1930, and idem, *Les bois sculptés jusqu'à l'époque ayyoubide*, Cairo 1931. The volumes of the *Catalogue général* dealing with the tombstones in the Islamic Museum in Cairo, *Stèles funéraires*, i-ix, Cairo 1932 onwards, to which Ḥasan al-Ḥawwārī, Ḥusayn Rāshid and G. Wiet have all contributed, are of less value, partly because in most cases the tombstones have only the vaguest provenance and partly because of the common Cairene practice of building earlier stelae into a mausoleum of later date. C. Prost, *Les revêtements céramiques dans les monuments musulmans de l'Égypte*, i (all published), in *MIFAO*, xl (Cairo 1916), is a preliminary study of the curious problems, epigraphic and technological, raised by the scanty use of ceramic revetment in Mamlūk and Ottoman architecture. Ḥasan 'Abd al-Wahhāb *Tawḥī'āt al-ṣunnā' 'alā āthār Miṣr*, in *BIE*, xxxvi (1955), 533-58, gives craftsmen's signatures, generally of workers in the minor arts and not of architects proper, on the monuments of Cairo, with comment upon their exceptional rarity for Islamic architecture. It is on this work that Mayer, *Saracenic heraldry*, Oxford 1933, includes occurrences of Mamlūk blasons on the architecture of Cairo: the list is no longer complete but it is still a basic adjunct to the epigraphic material relating to al-Kāhira.

On the difficult problems raised by Mamlūk

names there is a preliminary study by J. Sauvaget, *Noms et surnoms des Mamelouks*, in *JA*, ccxxxviii (1953), 31-58. On the Turkish side this may be supplemented by P. Pelliot, *Notes sur l'histoire de la Horde d'Or*, Paris 1949, and by L. Rásonyi, *Sur quelques catégories de noms de personnes en turc*, in *Acta linguistica Academiae Scientiarum Hungaricae*, iii (Budapest 1953), 323-51, though many Mamlūk names of Turkish origin remain problematic. Further enlightenment may be obtained from G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, i-iii, Wiesbaden 1963, 1965, 1967, which is all the more important since the studies of the Mongol and Circassian Mamlūk names, by L. Hambis and G. Dumézil respectively, announced by Sauvaget (*art. cit.*), do not appear to have been published.

(5) General works. Apart from C. H. Becker's still useful short account *CAIRO* in *EP*<sup>1</sup>, there is no adequate, comprehensive work on the architecture of Cairo. Of those so far attempted that of Ḥasan 'Abd al-Wahhāb, *Ta'riḫ al-masājid al-āthāriyya allatī shallā fihā fariḫāt al-djum'a ḥaḍrat sāhib al-djalāla al-Malik al-Sāliḫ Fārūḫ al-awwal*, i-ii, Cairo 1946, which, as its title indicates, is selective, is the most useful compilation of historical, epigraphic and architectural information. L. Hauteceur and G. Wiet, *Les mosquées du Caire*, Paris 1932, volume of text with album of plates, is a premature attempt to order the monuments, hastily compiled and with some prejudices which have evoked little sympathy (cf. review by K. A. C. Creswell in *JRAS* (1934), 199-203). Nevertheless, while many of their generalisations have turned out to be unjustified, some chapters on technology, particularly the Mamlūk taste for marble revetment, contain much valuable, if not precisely documented, information. The lavishly illustrated production of the Ministry of Waḳf, *The mosques of Egypt from 641 to 1946*, i-ii, Giza 1949, has a text which is too brief to be informative. Ahmad Fikrī, *Masājid al-Kāhira wa-madārisuhā*, i-ii, Cairo 1965-9, in fact covers only the Fātimid and Ayyūbid periods. D. Brandenburg, *Islamische Baukunst in Ägypten*, Berlin 1966, despite its title chiefly devoted to the monuments of Cairo, is somewhat arbitrary in its selection of monuments and relies heavily upon *MAE*, i-ii, thus giving insufficient weight to the period after 726/1326, and upon a not always critical reading of Hauteceur and Wiet. The most recent general work on Cairo, 'Abd al-Rahmān Zakī, *Mawsū'at madīnat al-Kāhira fī al-'ām*, Cairo 1969, gives much information, particularly relating to the architecture of Cairo in the 18th-19th centuries, which is not otherwise available, but the work is too short for completeness and the treatment of the earlier monuments is highly selective. It is, indeed, a significant comment on the paucity of recent published work on the monuments of Cairo that for the period after 726/1326 two of the best general works should still be A. F. Mehren, *Cāhiraḥ og Kerāfat: i, Gravmonumenter paa Kerāfat eller de Dodes Stad udenfor Cāhiraḥ*; ii, *Religieuse Monumenter i Cāhiraḥ*, Copenhagen 1869-70, which record many otherwise unpublished monuments, and M. S. Briggs, *Muhammedan architecture in Egypt and Palestine*, Oxford 1924.

Recent collections of essays dealing in general with the history or archaeology of Islamic Egypt contain some material directly related to the architecture of Cairo, in particular, *Mélanges Maspero*, iii, = *MMAF*, lxxvii (Cairo 1940), and *Studies*

in *Islamic art and architecture in honour of Professor K. A. C. Creswell*, Cairo 1965. However, it is noteworthy that in the most recent collections of essays on Cairo to appear, *Annales Islamologiques*, viii, *Volume commémoratif du Millénaire du Caire 969-1969*, IFAO Cairo 1969, and *Colloque international sur l'histoire du Caire*, Ministry of Culture of the ARE, Berlin 1973, the emphasis of recent research—following the lead established by M. Clerget, *Le Caire, Etude de géographie urbaine et d'histoire géographique*, i-ii, Cairo 1934, a work which can still be consulted with profit—has been upon the problems of urbanism in Cairo and the extent to which the architecture of the mediaeval city was successful in resolving them. The most recent work of this kind, best for the late 18th-20th centuries, is J. Abu Lughod, *Cairo. One thousand and one years of the City Victorious*, Princeton 1972. In the light of the unbalanced publication of the monuments such a shift of emphasis may appear premature, but it is to be hoped that it will lead to a revival of interest in the basic archaeological problems.

Among what may be best described as informative guide books to the monuments of al-Ķāhira, D. Russell, *Mediaeval Cairo*, London 1962, is the most detailed and to a considerable extent succeeds in overcoming its defects of organization (into tourist itineraries rather than historical periods or coherent quarters), occasional inaccuracies, lack of plans and a perhaps excessive prejudice in favour of the monuments of the Fāṭimid period. Other useful works of the same type, though they aim to cover more limited areas of Cairo, are Maḥmūd Akkūsh, *Ta'rikh wa-waṣf al-djāmi' al-Tūlūnī*, Cairo 1346/1927; R. L. Devonshire, *Rambles in Cairo*<sup>3</sup>, Cairo 1931; E. Pauty, *La mosquée d'Ibn Touloun et ses alentours*, Cairo 1936; Maḥmūd Aḥmad, *Concise guide to the principal Arabic monuments in Cairo*, Būlāk 1939; and Ḥasan 'Abd al-Wahhāb, *Djāmi' al-Sulṭān Ḥasan wa-mā ḥawlahu*, Cairo 1962.

For much of the Ottoman architecture of Cairo these general works remain the only source, though they may with discretion be supplemented by E. Pauty, *L'architecture au Caire depuis la conquête ottomane, Vue d'ensemble*, in *BIFAO*, xxxvi (1936), 1-69, a general work in spite of its apparently promising title. The author's lack of acquaintance with Metropolitan Ottoman architecture and the small number of Cairene monuments he considers in detail have contributed to the generally held, though highly misleading, impression of the Ottoman period in Cairene architecture as one of decadence and inactivity. It remains for subsequent research to correct this. See A. Raymond, *Artisans et commerçants au Caire au XVIII<sup>e</sup> siècle*, 2 vols., Damascus 1973, and G. Wiet, *Cairo, city of art and commerce*, Norman, Okl. 1964.

(6) Guide books. The text of the *Guide Bleu*, which has not substantially changed for the mediaeval monuments of Cairo since its first edition (compiled by M. Baud Paris 1950), is of little use for all but the most obvious of the Islamic monuments. *Murray's Handbook for travellers in Egypt* (many editions: I cite the 10th edition edited M. Brodrick, London 1900) depends largely upon the work of S. Lane-Poole and other late 19th-century authors and, despite its literary bias, is both more complete and less misleading, containing much information on no longer extant buildings of the 18th-19th centuries. K. Baedeker, *Handbuch*

*für Reisende, Ägypten und der Sudan*, 8th edition 1928, with preface on the monuments by K. A. C. Creswell, is particularly useful for its description of monuments on the outskirts of Cairo, which do not always appear on the *Special 1:5,000 scale maps of Cairo* and for its directions for reaching them.

Work in progress. Apart from works mentioned above, in particular G. T. Scanlon's *Final Report* on his excavations at Fuṣṭāṭ and the publication of Cairene houses and palaces by R. Mantran and the late A. Lézine, work in hand includes a major publication of the funerary architecture of Cairo, Fāṭimid to Mamlūk periods, by C. Kessler, to appear as a volume of the *Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe*, with contributions by Layla 'Alī Ibrāhīm on the Mamlūk foundations of the 14th century. The work of these authors, to which should be added that of M. Meinecke, Ṣhahira Mehrez (Muhriz), J. Raghib and M. Keane, may be expected in the course of the next few years to advance substantially the present state of knowledge on the monuments of al-Ķāhira and their history. (J. M. ROGERS)

#### THE MODERN CITY

General outline. Modern Cairo took shape under Muḥammad 'Alī (1805-49), from whose reign date the first beginnings, modest as yet, of new institutions. Once begun, the movement could no longer be stopped. So far as town-planning, the press, and the birth of Egyptian nationalism are concerned, the reign of Khedive Ismā'īl ([q.v.] 1863-79) was a watershed. During this period, Cairo began to take on the appearance of a modern city. Owing to a fall in the production of cotton in the United States following the American Civil War (1861-5), Egypt easily found markets for her crop and money poured in. Besides this, the opening of the Suez Canal in November 1869 drew the eyes of the world to Egypt; control of this area appeared even more of a decisive element in the struggle for worldwide power. For this reason the debts of the Khedive were made the pretext for the first stages of foreign intervention and in due course this was also the reason for the British occupation (1882).

Throughout all these events the city developed and public services such as gas, water and tramlines were laid on. Foreigners as well as migrants from other Ottoman territories settled there. The First World War marked the definitive separation of Egypt from the Ottoman Empire. With the Cairo demonstrations which followed immediately after the armistice in 1918, Egyptian nationalism became a genuinely popular movement, given concrete expression in the Wafd Party. Political pressure was still held to be the best means of achieving liberation, and the importance of economic factors on the road to freedom was given but scant recognition through the establishment of the Bank of Egypt in 1920, and that within the framework of a national capitalism. A measure of independence was proclaimed under the aegis of King Fu'ād (1922). The opening of the first state university in Cairo in 1925 was a significant moment, and indeed, in his novels Naḍīf Maḥfūz presents this event as the dawning of a new era in the history of the Egyptian middle classes.

One after another the institutions characteristic of a large modern city were set up. The Free Officers' revolution (23 July 1952) brought in its train the abolition of the monarchy and the eviction of the old ruling classes. The new political orientation was

demonstrated in the city even at the level of urban development through the opening up of thoroughfares, the establishment of schools, workers' housing, institutions and factories and by the development of radio, the building of new mosques, etc. The Anglo-French military intervention of October to December 1956 led to wholesale nationalization of French and British enterprises. With the ending of the three-year long union with Syria in 1961, the country clearly took the path of Arab socialism, with the stress on the essential economic struggle facing the Third World. Finally, the Palestine war of 1967, on both the political and the military fronts, continued to impose a burden on Cairo which remained very heavy.

Today Cairo is undoubtedly one of the liveliest capitals in the world. The city has a dual aspect, truly Egyptian and yet at the same time cosmopolitan, the latter arising from her geographical situation.

The genuinely Egyptian aspect is revealed in the drama of a people rudely forced into changing their way of life by demographic pressures. Thanks to modern medicine, both pressure and change have led to the disappearance of many ancient customs and the proletarianization of a section of the population. The efforts of the present-day authorities to create a new Egypt are a response to this demographic challenge. As for the cosmopolitan aspect of the city, this is partly related, as in former days, to the presence of students and teachers who come from all over the world. It also arose because of the succession of foreign rulers (Mamluk, Turkish and British). Now that Cairo is governed by Egyptians, the foreign element is confined to tourism, technical aid and "co-operation".

Town planning. The map drawn up by Bonaparte's expedition depicts the city as bounded in the west by the Ezbekiyya, with fields lying between it and Būlāk. "The great builder and earth-mover", Muḥammad 'Alī, embellished and cleared façades and drained the Ezbekiyya but built very little apart from a palace and mosque in the citadel (between 1830 and 1848) and a large palace at Shubrā (1808, rebuilt in 1823); he had a road built across the fields so that there was a direct route to the latter (now Shāri' Shubrā). A few institutions were set up in the city, such as the School of Medicine, founded in 1827 at Abū Za'bal and transferred in 1837 to Shāri' Kaṣr al-'Aynī. The *sikka dīadīda* was constructed in 1845 to clear congestion in the al-Azhar quarter. Workshops were opened in Būlāk [q.v.]. "Despite this progress", writes M. Clerget, "the boundaries, area and general appearance of Cairo around 1850 were the same as in the 18th century". P. Marthelot also observes that "a second city was born in the second half of the 19th century".

The eccentric 'Abbās, grandson of Muḥammad 'Alī, pasha, then viceroy, from 1849 to 1854, gave his name to the al-'Abbāsiyya district, originally a small township composed of quarters for military personnel.

Under the viceroy Sa'īd (1854-63) the *Bāb al-Ḥadīd* railway was constructed (1856), linking the city with Alexandria; in 1858 it was continued to Suez. From 1857 British troop reinforcements sent to suppress the Indian Mutiny crossed Egypt from Alexandria to Suez, completing the last part of the route on foot. The barracks and viceregal palace of Kaṣr al-Nīl were built on the river in 1863 (destroyed in 1947 after the British withdrawal).

The reign of Viceroy (later Khedive) Ismā'īl (1863-79) saw the construction of the palace 'Ābādīn, begun in 1863; from 1874 the ruler took up residence there, finally quitting the citadel, which was

formerly the seat of the Turkish pashas. A canal, al-Tira' al-Ismā'īliyya, was dug between the Nile and the Khālīdī, passing between Būlāk and the Ezbekiyya, then to Bāb al-Ḥadīd and finally to Ḡhamra (it was filled up shortly after 1897). The Kubba palace dates from 1863. In 1867 Khedive Ismā'īl saw Haussmann's Paris. He too had new quarters laid out: the streets of the Ismā'īliyya district, south of the road from the Ezbekiyya to Būlāk, have the same layout today (cf. the 1873 plan of Cairo). For the celebrations which marked the opening of the Suez Canal (1869), the Opera House (destroyed by fire in 1972) was built near the Ezbekiyya; a building was added to the Khedive's palace on the island of Gezīrah (al-Dījazīra) which later became the 'Umar Khayyām Hotel. The road from Gīzā (al-Dījazīra) to the Pyramids was transformed into a splendid boulevard. In 1871-2 a modern bridge spanned the Nile (the Kaṣr al-Nīl, now the Kūbrī 'l-tahrīr, which was rebuilt in 1931), with another over the other arm of the river (rebuilt in 1914). In 1872 two large arcaded thoroughfares were laid out: Clot Bey street from the station to the Ezbekiyya and Muḥammad 'Alī street from al-'Ataba al-khaḍrā' to the Citadel.

The establishment of modern means of transport played an essential part in the development of both suburban and peripheral areas. Relatively central districts like Tawfīkiyya (named after Khedive Tawfīk, 1879-92) or Faggala (Faḍḍjāla), which began around 1880, or residential areas like Garden City (which dates from 1905) could be populated without the need for trains and tramlines. But Zaytūn and Maṭariyya in the suburbs could only come into being after the construction of the railway from Pont Lemoun (Kūbrī Linūn) to Maṭariyya and al-Mardī (1889-90). The same was true of the tramlines which were laid in 1896 and linked al-'Ataba al-khaḍrā' with 'Abbāsiyya (1896), via Faggala, or with Shubrā in 1903 (the first large-scale development in Shubrā took place in 1898). The Khālīdī seems to have been filled in on the 1897 plan of Cairo; the process was completed in 1899 and the tramline from Ḍāher (al-Zāhir) to Sayyida Zaynab made use of it in 1900.

The Zamalek district (al-Zamālik, from a word for the huts where the soldiers on guard duty camped near the palace) began to be inhabited around 1905-10. A plan made in 1910 shows the layout of all the present-day streets. The Abu 'l-'Alā' bridge linking the island with Būlāk dates from 1912. In the desert to the north-east of the city, Heliopolis (Miṣr al-dīadīda) arose in 1906 following the granting of a concession to a Belgian company in 1905. An express tramline, called the "metro", connected Heliopolis to Cairo (cf. the commemorative album published by the company, nationalized since 1960, *Dāhiyat Miṣr al-dīadīda, māḍīhā wa mustakbaluhā*, 1969). On the southern suburban line to Helwan (al-Ḥulwān), which is 27 km. long, the area of present-day Maadi (al-Ma'ādī) 11 km. from the city began to be developed by a company in 1907. Only Helwan was undeveloped, and so it remained until the 1952 revolution when it became an industrial centre with iron and steel works, armaments factories, etc.

Apart from those already mentioned, notable bridges are the Embabeh (Imbāba) railway bridge (1890-91, rebuilt in 1925); the Giza bridge (formerly 'Abbās: 1907, rebuilt in 1966-7); and the bridge from Zamalek to west bank (1912). The University Bridge, constructed in 1958, should be added to this group.

All these developments in Cairo were brought

about by companies, especially foreign ones, who were given contracts for the work. Public services were also carried out by non-Egyptians: the post office in 1843, water in 1865, gas and then electricity, run by the Le Bon company from 1873 to 1948, telephones in 1881, trams in 1896, etc. Much later the Egyptian government recovered these concessions, some when they expired and others through buying them back or through nationalisation. The part played by foreign architects can be seen in a number of façades in the Italian style. Telegraphic communications began with the railways, and Cairo was connected by submarine cables with Bombay, Aden, Malta, Gibraltar and Great Britain as early as 1870.

Health services, types of housing and a study of the population have been covered by Clerget. The various groups of citizens moved to different districts: thus the Greek minority could be found in the south and south-west of al-Azhar, the Jews south of Khorfonish and later at Sakākīnī, the Europeans around the Rossetti Garden and Muski, where the different Catholic churches also sprang up, and later in Garden City or Zamalek, and the Copts around the patriarchate at Clot Bey and later in *Shubrā*. The Syro-Lebanese Christians were particularly attracted to the new district of Faggala, where churches and schools were to be found (the Jesuit school opened there in 1885); later many moved to Heliopolis and Zamalek and the Copts settled there. In the heart of the city the Muslim bourgeoisie still lived in the palaces and traditional dwelling houses, the exodus to *Hilmiyya* or to cooler districts not yet having become general. The *Gamaliyya* quarter is the subject of a special study by J. Berque.

After the 1914-18 war the expansion of the town continued. Gardens and villas made way for large modern blocks. Around 1926-8 two large thoroughfares were built connecting al-ʿAtaba with al-Azhar (*shārīʿ* al-Azhar) and al-ʿAtaba with al-ʿAbbāsiyya. The widening of *Khalidj* street, decided upon in 1937, was not effected until after the revolution, in 1956. On the west bank of the Nile, Giza was developed between the world wars although the bank opposite Zamalek was still fields in 1945. But in 25 years (1945-70) a veritable town grew up on these open spaces, notable for its districts developed entirely for various classes of officials, so that there is a teachers' estate, an engineers' estate, etc.

On the east bank of the Nile the withdrawal of the British (1946) and the destruction of *Kaṣr al-Nīl* barracks made possible the construction of a large and beautiful square, which from 1952 has been called *Mīdān al-Tahrīr* and which encompasses the old *Is-māʿiliyya* square. Here an enormous government and administrative block has been erected, the *Mogammaʿ* (al-*Mudjammaʿ*, c. 1950), and the meeting place of the League of Arab States (1961). The revolution realised the old dream of a corniche on the Nile: for the first time the city has a façade on the river-side.

Blocks of apartment buildings at reasonable rents of a type new to the country sprang up here and there after the Revolution: at the foot of *Muḳaṭṭam*, at *Shubrā* and elsewhere, but especially on the waste ground of *Tilul Zeinhom* to the south of the *Ibn Tūlūn* quarter, where there is nowadays a veritable town.

Developments in civil aviation, evident especially from 1930 on, made Cairo a staging point for the big international airlines. After being in use for many years, *Almāza* airport, which was too close to Heliopolis, was superseded by an international airport situated in the desert further to the north-east.

It was equipped with a new air terminal in 1963.

To relieve the pressure on the over-crowded city, the revolution established new housing estates, such as *Naṣr*, which lies between Heliopolis and ʿAbbāsiyya on military land turned over to civilian use and to which it is hoped to move the greater proportion of governmental departments. A stadium holding 100,000 people has been built here. A large trunk road joins the airport and the citadel via *Naṣr* then links up with the Nile corniche at *Fuṣṭāṭ*. An attempt to set up a semi-touristic estate was made in 1954-6 at *Muḳaṭṭam* on the flat area to the south of the tomb of al-*Djuyūshī*, but the date was inopportune and the enterprise stagnated.

In which directions will the present-day city develop? Committees are discussing this problem at this very moment. But in the meantime the lack of suitable legislation has caused historic sites to be swamped by ugly housing and the splendid buildings of the past are vanishing, gutted or abandoned. Some determined Egyptians are fighting to ensure that the necessary expansion respects some of the legacies of the past. The public services face problems which grow daily more complex in the realms of transport, sewage and the road network posed by the ever-increasing number of inhabitants.

Population and occupations. Clerget (i, 241) estimates that Cairo had 245,000 inhabitants at the end of the 18th century. The census figure he gives for 1882 is 396,683 and for 1907, 678,433. His remarkable study has been completed by P. Marthelot (*Le Caire, nouvelle métropole*, in *Annales Islamologiques*, Cairo, IFAO, viii (1969), 189-221). From his work we learn that there were 1,070,857 inhabitants in 1927 and 3,348,799 in 1960, the latter figure covering the whole metropolitan area of Cairo, including Helwan and *Maṭariyya*. In 1947 Cairo had two million inhabitants, discounting the population of the outlying suburbs but including the people of *Dokki* and ʿAgūza in the *ḥiṣm* of ʿAbidin (cf. Janet Abu-Lughed and Ezz el-Din Attiya, *Cairo Fact Book*, Cairo, The American University in Cairo Social Research Center, 1963). Taking into consideration the whole of Greater Cairo, the correct figure for 1965 would be around four million. By 1970 it had passed five million, a rapid increase due to the strong tendency towards immigration from the countryside.

To the craftsmen and workshops described by M. Clerget must be added the newly founded factories noted by P. Marthelot. One of the aims of the 1952 revolution was industrialization to achieve eventual economic independence. Noteworthy in this respect is the role played by the Cairo banks and their nationalisation in 1956-61. As well as the already existing textile factories in the northern suburbs, the cement works at *Tūrā*, electrical industries in the centre and various assembly-works, new enterprises were founded, especially in the southern suburbs around Helwan: a car assembly plant, an armaments factory, blast-furnaces and steelworks, an airplane works, a factory producing fertilizers, a porcelain works, etc.

Tourism was also envisaged as a source of revenue. The hotel infrastructure had been in private hands for many years; now numerous hotels have been nationalised. According to the 1965 statistics (as noted by P. Marthelot), 66.8 % of the active population of Cairo was employed in some undefinable activity; 23.5 % held regular jobs in the administration; and only 7.5 % was employed in industry. From such figures we can only guess at the number of underemployed, a considerable proportion, though only a minority are totally unemployed.

The question of accommodation has always been difficult. With the initiation of Arab socialism in 1961 and the creation of the Ministry of Housing and Utilities in 1965, the state became a builder on a large scale. But private activity also continued in this sphere, facing, with considerable difficulty, the influx into the capital.

"The same is true of Cairo as of many cities in the so-called Third World", writes P. Marthelot (p. 197), "which stand out against a rural background subject to demographic tension or marked by structural flaws: the city is the receptacle in which are concentrated all those whose lives tend to be disturbed because of this, whether or not it is able to answer to the demands made on it. But this is at the price of the stagnation at a very low standard of living of a very important section of the population".

In both Clerget and Marthelot there are numerous data about town planning—the density of the inhabitants varying a great deal according to district (cf. *al-Tālī'a*, February 1970, 70, pointing out that in Būlāk over 60 % of families live in one room)—the expansion of the city, transport, etc. They are based on statistics compiled by the governmental department concerned. As far as health is concerned, Cairo has one doctor per 910 inhabitants, as opposed to one per 3,420 in Lower Egypt and one per 2,990 in Upper Egypt. Similarly, the city has one hospital bed for every 233 people, as against one in 584 and one in 636 in Lower and Upper Egypt. There is one telephone for every 27 inhabitants, while in Lower and Upper Egypt the figures are one in 362 and one in 301 respectively (cf. *al-Tālī'a*, *ibid.*, 74-5). The government is making a determined effort to remedy this state of affairs and to this end has enacted new socialist laws.

Culturally speaking, Cairo has two aspects, on the one hand the development of national institutions—schools, universities, specialised institutes—and on the other the holding of international meetings and congresses. A large number of schools have been opened. Around 1950 only 40 % of children in Egypt received a primary education; by 1970 the number had risen to over 75 % for the country as a whole and was said to exceed 90 % in Cairo (cf. *Cairo Fact Book*; education in 1947 listed by *shiyākha*, a subdivision of the *khism*). Examples from higher education are the Dār al-'Ulūm [q.v.], the Free University of Cairo (1908; converted in 1925 into Fu'ād al-Awwal University and now the University of Cairo), and 'Ayn Shams (1950), the former a religious educational establishment attached to al-Azhar [q.v.]. Since the publication of the article AL-AZHAR in *EI*<sup>3</sup>, considerable changes have been wrought by a law of 1961, with a remodelling of curricula and the creation of new faculties of secular studies—medicine, polytechnic, etc.—in addition to the three formerly in existence. There are a number of advanced institutes in Cairo (see 'Abd al-Rahmān Zakī, *Mawsū'a*, s.v. *ma'had*) which are devoted to the sciences, art, theatre, cinema, etc. The majority are Egyptian [see FU'AD AL-AWWAL, INSTITUT D'EGYPTE], but a few are foreign (one example of these is the Institut Français d'Archéologie Orientale, founded in 1880). The Arabic Language Academy (*Madjma' al-lughā al-'arabiyya*, established in 1932, maintains surveillance over the language.

There are over 20 museums in Cairo (cf. the list of the major ones in 'Abd al-Rahmān Zakī, s.v. *maḥaf*). The famous Museum of Egyptology founded at Būlāk by Mariette has occupied its present home

in Midān al-Taḥrīr since 1902. Other important collections are the Coptic Museum (founded as a private collection in 1910, it has been a national museum since 1931), the Museum of Islamic Art (which has been in its present building at Midān Bāb al-Khalk since 1903), the Museum of Agriculture, the Military Museum, etc.

Especially since 1952, new mosques have been built in Cairo itself. Outstanding among many are the mosque of 'Umar Makram in the Midān al-Taḥrīr, where most official funeral prayers are usually held, and the mosque of Kūbrī 'l-Kubba, which contains mausoleum of Djamāl 'Abd al-Nāshīr (Nasser, died September 28, 1970).

*Bibliography*: M. Clerget, *Le Caire, étude de géographie urbaine et d'histoire économique*, 2 vols., Cairo 1934, a work of major importance for both text and bibliography; 'Abd al-Rahmān Zakī, *A bibliography of the literature of the city of Cairo*, Cairo (Egyptian Geographical Society), 1964. Apart from these two basic works and those already cited in the text: *Annales Islamologiques*, viii, the commemorative volume of the Cairo millennium (969-1969), Cairo (IFAO) 1969; *The Millennium of Cairo, 969-1969*, Ministry of Culture, Cairo 1969 (an album with a collection of photographs of ancient and modern art, views of the city and of its institutions, commerce, industry, etc., published in six editions, which differ only in their text but have the same photographs, in Arabic, English, French, German, Russian and Spanish); J. W. McPherson, *The Moulids of Egypt*, Cairo 1941; 'Abd al-Rahmān Zakī, *Mawsū'at madīnat al-Kāhira fī al-f'ām*, Cairo 1969; J. Berque, *L'Égypte, impérialisme et révolution*, Paris 1967 (Eng. tr., *Egypt, imperialism and revolution*, London 1972); M. Berger, *Islam in Egypt today; social and political aspects of popular religion*, Cambridge 1970; G. Baer, *Egyptian guilds in modern times*, Jerusalem 1964; P. J. Vatikiotis, *The modern history of Egypt*, London 1969; Anouar Abd el-Malek, *Egypte, société militaire*, Paris 1962. For particular aspects of the cultural life of Cairo since 1954, see the publications in the series *MIDEO*, Cairo.

(J. JOMIER)

**KAHRAMĀN-NĀMA**, or *Dāstān-i Kahramān*, a popular romance in prose, several versions of which are known in both Persian and Turkish. It belongs to a series of prose works which develop themes from the Iranian epic tradition, embellishing them with fabulous touches borrowed from folk literature. Like the *Hūshang-nāma*, the *Tahmūraṭh-nāma* and the *Kiṣṣa-i Djamshīd*, the story takes place in the earliest period of the legendary history of Iran, the times of the *piṣdādīyān*. The central hero is Kahramān, nicknamed Kātil, "the slayer". His name is in fact a common noun, the arabicized form of an Iranian word, probably of Median origin, the Middle Persian counterpart of which is *kārframān*, meaning "manager, superintendent" (cf. W. B. Henning, *Handbuch d. Orientalistik. Iranistik. Linguistik*, Leiden 1958, 49, n. 2). This meaning was also attached to the word in classical Arabic (cf. Dozy, *Suppl.*, s.v.) and in mediaeval Persian (cf., e.g., Nāṣir-i Khusraw, *Diwān-i ash'ār*, Tehran 1355 sh., 5; Sanā'ī, *Diwān*, Tehran 1341 sh., 20; Abu 'l-Ma'ālī Naṣr Allāh Munshī, *Tarjama-i Kalīla va Dimna*, ed. M. Minowī, Tehran 1343 sh., 132, 155). In modern Persian and Turkish, however, the word *kahramān* has acquired the meaning of "hero, champion", a semantic change which might very

well have resulted from the existence of the romance. It is also not unlikely that the name of the hero was derived from the rôle of superintendent which he seems to play with regard to the shah of Iran, Hūshang. On behalf of this king, Kaḥramān subdued *divs* and sorcerers and acted as the leading champion of the Iranian army when Hūshang invaded India in order to complete an empire comprising the seven climes of the world. The story varies greatly in its particulars in the existing manuscript and printed versions of the romance, a confusion undoubtedly resulting from the long history of its development in popular literature. A few versions, all in Turkish, have been summarized in a more or less detailed form (cf. H. O. Fleischer, *Catalogus libr. manuscr. qui in Bibl. Senatoria Civitatis Lipsiensis asservantur*, Grimaë 1838, 522 f.; Th. Menzel, in *ET*, s.v. *Kaḥramān-nāma*; E. Blochet, *Catalogue des manuscrits turcs de la Bibliothèque Nationale*, Paris 1932-3, i, 137-8, 144-5, 356, ii, 23).

According to some of these, Kaḥramān (or a another person called Kaḥrām, who sometimes takes over part of his functions) was the king of the man-eaters living in Sīstān who at first opposed the king of Iran. But he is also represented as a prince of royal Iranian blood who as a youngster had been carried off by the *divs* to the mountain Kāf. Through his enormous strength he is able to master the demons. When he returns to the world of human beings he rides a monstrous creature which he has caught and tamed himself. Woven into the main plot of the romance is a tale about the king and queen of the fairies and their son Bahrām-i Djabali, as well as a series of picaresque stories of the *‘ayyārūn* [q.v.]. The origin and early history of the *Kaḥramān-nāma* is still obscure. A reference to Kaḥramān as the guardian of the treasures of Hūshang in the *Diwān* of ‘Unsurī (ed. Y. Karīb, Tehran 1323, 129; ed. M. Dabīr Siyāki, Tehran 1342, *bayt* 2416) proves that at least the kernel of this romance already existed in the time of Firdawsī. It would seem that elements of the legends about Hūshang [q.v.] and Rostam have been used to build up a new epic cycle. The composition of a voluminous version in Persian is attributed to Abū Ṭāhir Ṭarsūsī (see *ABŪ ṬĀHIR*). Of this only some manuscripts of a Turkish translation are known, the oldest dating from the 10th/16th century. Much more condensed versions are known in both Persian and Turkish. In the Ottoman empire the romance became very popular and was incorporated into the repertoire of the *meddah* [q.v.]. It has been printed several times in Turkey and Iran and has inspired modern writers in Kazakh and Uzbek (cf. *Philologia Turcicae Fundamenta*, ii, Wiesbaden 1966, 744; A. A. Semenov, *Sobranie vostočnikh rukopisey AN Uzbekskoy SSR*, ii, Tashkent 1954, 440, no. 1875).

**KAHRUBĀ** (also written as *kāhrabā*’; for other forms see *Wörterbuch der klass. arab. Sprache*, s.v. *كهربا* and W. Schmucker, *Die pflanzliche und mineralische Materia Medica im Firdaus al-Hikma des Tabari*, Bonn 1969, 414), yellow amber. The word is of Persian origin (for Pehlevi quotations see G. Jacob, *ZDMG*, xliii (1889), 358) and means “a straw-attracting substance”. It occurs in the Arabic translation of Dioscorides, ed. E. Teres, Tetuan 1952-Barcelona 1957, p. 84, s.v. *αἰγερρος* (Greek text, ed. Wellmann, i, 82); but since this text, originally translated by Stephanos B. Basileios, was revised by Hunayn b. Ishāq [q.v.] and, moreover, there is no indication whether the edited text takes into consideration the well-known additional translations of names made for ‘Abd al-Raḥmān III in Cordoba (see M. Meyerhof, *Die Materia Medica des Dioskurides bei den Arabern* [*Index Islamicus*, No. 5351]), we cannot be sure whether this mention of the word is the oldest known. Anyhow, two Arabic authors of the 3rd/9th century use the word: ‘Alī b. Sahl Rabban al-Ṭabarī, *Firdaws al-hikma*, written 236/850 (see for a full list of references *Wörterbuch*, *loc. cit.*, and for a relevant discussion Schmucker, *loc. cit.* [“Qurt.” means Maimonides, *Sharḥ asmā’ al-‘uḥḥār*, ed. Meyerhof, 1940!]) and al-Kindī, *Aḥrābādīn* (see M. Levey, *The medical Formulary*, 1966, no. 224 and p. 320). Today the word is also used for “electricity” (ἤλεκτρον).

The very name of the substance, the only one used in Islamic sources, points to the lands from which the knowledge of amber reached Islam. Al-Muḥaddasī includes it in a list of goods imported from *Kh’arāz* via the *Bulghars* [q.v.]; this corresponds to Scythia mentioned by Theophrastus and Pliny. The origin of the amber imported from there is the shore of the Baltic Sea.

Most Islamic sources are well aware of the botanical nature of amber. Al-Bīrūnī, in his *K. al-Djamāhir fi ma’rifat al-djawāhir*, 210-212, says that he deals with this substance because it is popular among the eastern Turks, who store it like various kinds of horn (*khutū*). He mocks at authors who do not know of its non-mineral origin, as if they had not observed leaves and insects enclosed in the pieces. The resemblance between amber and sandarac is always stressed.

Apart from its use in gems, jewellery and for talismans, amber is also employed as a drug: when pulverized, it is administered as a hemostatic and astringent. The amber trade routes have been studied by Jacob, *loc. cit.* and vol. xlv (1891).

**KAḤṬABA** B. SHĀBIB B. KHĀLID B. MA’DĀN, ABU ‘Abd al-Ḥamīd al-Ṭā’ī of Banū Nabhān (*Djamhara*, 178; *Aḥḥbār al-‘Abbās*, 216), an Arab general and one of the most prominent leaders of the ‘Abbāsīd *da’wa* in *Khurāsān*. According to Balādhurī, his real name was Ziyād, Kaḥṭaba being

a nickname derived from the verb *k-h-t-b*, which means, *inter alia*, "to strike with a sword" (*LA*, s.v.). In one place his *kunya* is given as Abū Hamza (*Muḥabbar*, 465); it is quite possible that he had two *kunyas*, like some other leaders of the *da'wa* who took the precaution of adopting a new one on becoming active in the movement.

Practically nothing is known about Kaḥṭaba before his appearance as one of the 'Abbāsīd emissaries in Khurāsān. Some information, however, exists about his grandfather, Khālid b. Ma'dān, which may explain the origins of Kaḥṭaba's connections with a Shi'ite movement. Khālid b. Ma'dān supported 'Alī in the Battle of the Camel and was on that occasion the standard-bearer of his tribe, the Banū 'Amr b. al-Ṣāmit (*Djamhara*, loc. cit.). Later, in the year 38/658, he was commander of 'Alī's army at the battle against the Khawāriḍj at Nahrāwān (Ṭabarī, i, 3431; Ibn al-Aṭhīr, iii, 309). He took the field against the Khawāriḍj once more in 43/663-4 (Ṭabarī, ii, 54), but this time he refused to pursue them after they had been expelled from Kūfa, asserting that his sole responsibility was the defence of his *miṣr*. It can thus be deduced that Kaḥṭaba's family settled in Kūfa at least as early as in 'Alī's time. An isolated apocalyptic tradition in Ya'qūbī mentions that as a young man Kaḥṭaba was also resident in Kūfa (Ya'qūbī, ii, 411). As such he must have been familiar with the 'Alid ideas and Shi'ite activity in the town. His name, however, does not feature in the detailed list of Abū Hāshim's supporters in Kūfa which appears in *Akḥbār al-'Abbās* (183-4, 191-2). The list is mentioned on the occasion of Abū Hāshim's death, in 98/716-7, and it is highly likely that by that time Kaḥṭaba was already in Khurāsān, although there is no mention of this in the sources.

That Kaḥṭaba was familiar with the Hāshimiyya and its ideology, and that in Khurāsān he actually joined the clandestine movement, is demonstrated by his election as one of the *nuḥabā'*, the twelve most prominent leaders, when the movement organized its leadership in Marw. According to the tradition transmitted by al-Ṭabarī (ii, 1358), the 'Abbāsīd *da'wa* in Khurāsān was inaugurated by the visit there of the emissary Abū 'Ikrima and his nomination of the *nuḥabā'* in the year 100/718-9. In later Islamic tradition this acquired apocalyptic significance through the messianic expectations associated with the beginning of a new century—an association somewhat similar to the millenarian hopes in Christianity. It was thus politic of the 'Abbāsīds, after they had come to power, to link the inception of their *da'wa* to the year 100, stressing that the new order brought to Islam by their *dawla* was the embodiment and fulfilment of the messianic hopes attached to the turn of the century.

The discovery and publication of the *Akḥbār al-'Abbās* has permitted a detailed reconstruction of the history of the *da'wa*. From the unique traditions contained in this source it is quite clear that the Hāshimiyya movement in Khurāsān pledged itself to the 'Abbāsīd cause only around the year 126/743-4. Until then it had been organized in secret, mainly in Marw and in Nišāpūr, in the form of small, clandestine groups. Towards the year 111/729, Marw took the lead with the arrival there of Khidāsh [q.v.], the competent Hāshimite leader from Nišāpūr, who was undoubtedly responsible for the creation of a strong organized leadership of the movement in Marw. To him too the movement owed the formulation of its ideology, basically an 'Alid one, which explains why later 'Abbāsīd tradition went out of its way to

blacken Khidāsh's name. Although the leaders in Marw, Kaḥṭaba amongst them, were aware that the *imāma* of Abū Hāshim had been formally transferred in an unprecedented legal act to Muḥammad b. 'Alī b. 'Abd Allāh b. 'Abbās [q.v.], they were not inclined to accept him as their sole leader and for a long time refrained from any communication with the new *imām* and with the mother-centre of the movement in Kūfa. The suppression of the revolt of Zayd b. 'Alī [q.v.] in Kūfa in 125/742-3 and the crucifixion of his son Yaḥyā [q.v.] in Khurāsān a year later was a severe shock to the Shi'a. Remorseful and disappointed, the Hāshimiyya in Khurāsān was drawn to the *imām* in Humayma [q.v.], who emerged as the only hope for the cause of *Ahl al-Bayt* [q.v.].

When Bukayr b. Māhān [q.v.], the 'Abbāsīd emissary from Kūfa, was sent to Khurāsān in 125 or 126/742-4 to organize the movement according to the *imām's* specifications, he must have ratified the organization that had existed there from the time of Khidāsh. This included a supreme council of twelve *nuḥabā'* in Marw and a great number of *du'āt* (formally 70), 40 of whom were in Marw and its vicinity and the rest scattered throughout the main urban centres of Khurāsān. At the end of 125 or 126, soon after the death of Muḥammad b. 'Alī and the succession of his son Ibrāhīm [q.v.], a delegation of three *nuḥabā'*, Kaḥṭaba amongst them, met the new *imām* during the *Ḥadīdī* in Mecca and swore allegiance to him in the name of their Khurāsānī *shi'a*. Henceforward Kaḥṭaba was the chief link between Khurāsān and the *imām*. The stringent secret measures, undertaken by the *da'wa* in order to keep the identity of the *imām* hidden from the movement's followers as much as from most of its leaders, demonstrated the importance of his role. A later tradition, attempting to legitimize the status of Abū 'l-'Abbās al-Saffāḥ [q.v.] as the first 'Abbāsīd caliph, made Kaḥṭaba the man who met Ibrāhīm before his death in the prison of Marwān II and received from him his testimony in favour of the *imāma* of Abū 'l-'Abbās (*Frag.*, 190-1; cf. Ibn Khaldūn, iii, 251).

Kaḥṭaba's real genius was revealed when he served as general in the army of the *da'wa*. When Abū Muslim [q.v.] was sent to Khurāsān in 128/745-6 to organize the movement for the decisive campaign against the Umayyads, Kaḥṭaba was appointed to lead his army. His son Ḥasan was his lieutenant. In the middle of Djumādā II 129/March 747, Kaḥṭaba accompanied Abū Muslim in a tour of the *da'wa* centres in western Khurāsān in preparation for the revolt, which was to begin in Muḥarram 130/August-September 747. When they reached Kūmis, Abū Muslim returned to the vicinity of Marw and Kaḥṭaba continued westwards at the head of a small delegation in order to meet the *imām* during the *Ḥadīdī* of that year. After meeting the *imām* in Mecca and informing him of the detailed plans for the revolt, he returned to Khurāsān, having been formally nominated by Ibrāhīm as head of his armies.

Meanwhile the plans for open revolt in Khurāsān received a setback through some unforeseen development in the province. The black banners of the *da'wa* were hoisted on 25 Ramaḍān 129/17 September 747, but military activity was delayed until after the coming of winter, affording ample time for Kaḥṭaba to return from Mecca and for Abū Muslim to recruit large numbers of warriors (mainly the *muḥātīla* of the Yamānī tribes) and thoroughly organize the army. In Rabī' II 130/January 748, Abū Muslim entered Marw and drove out Naṣr b. Sayyār [q.v.],

the last Umayyad governor of *Khurāsān*, who fled to the west (*Akhbār*, 315 f.). Soon afterwards *Kaḥṭaba* returned to *Khurāsān* and took over from his son *Ḥasan* as the head of the army. He was accompanied by a group of military commanders, most of whom were Arabs, and by two competent administrators, *Khālid* b. *Barmak* [q.v.] and *Djahm* b. 'Atiyya, whose task was the organization of the campaign, including the regular payment of the troops, and the administration of the occupied territories.

The winter over, the campaign opened in *Sha'ban* 130/April 748 (*Akhbār*, 321). *Kaḥṭaba* marched on *Sarakhs*, there encountering his first adversary, the *Khāridjite* *Shaybān*, whom he defeated and slew. After the fall of *Sarakhs*, *Kaḥṭaba* advanced swiftly westwards, revealing his military genius in the strategy he adopted. One of his main strategic principles was to keep the flanks of his advancing army constantly protected and free. By chosing to advance on the main route of northern *Khurāsān*, which passed from *Marw* through *Ṭūs*, *Dāmghān* and *Rayy*, he ensured that his left flank was protected by the great desert of central Iran while making his way through old-established centres of *da'wa*. As we shall see, *Kaḥṭaba* had to deviate from this route twice, once in *Gurgān* and the second time when he reached *Rayy* and had to turn southwards to *Iṣfāhān* and *Nihāwand* instead of continuing on the short way to 'Irāk.

The main campaign started out from *Abiward*. Advancing on *Ṭūs*, *Kaḥṭaba* met an Umayyad army led by *Tamīm* b. *Naṣr* b. *Sayyār*. Defeating and killing his adversary, he captured *Ṭūs* then swiftly pressed on to *Niṣhāpūr*, which he took at the end of *Sha'ban* 130/4 May 738. Meanwhile a strong Umayyad army, commanded by *Nubāta* b. *Ḥanzala* al-*Kilābī*, captured *Gurgān* and endangered *Kaḥṭaba's* right flank. At once *Kaḥṭaba* diverted the whole of his army northwards. He met *Nubāta* on 1 *Dhu 'l-Hidjja* 130/1 August 748, defeated and killed him, and dispersed the remnants of his army. Having secured his right flank, *Kaḥṭaba* resumed his original route and captured *Kūmis* in the beginning of 131/September 748. A grave danger now emerged from the south. 'Amir b. *Ḍubāra* al-*Murri* assembled a huge army in *Iṣfahān* ('*ashkar al-'asākīr*, Ṭabari, iii, 4). Leaving *Rayy*, which had fallen without a struggle, *Kaḥṭaba* turned with the main body of his army against this new threat. At the same time his son *Ḥasan* was sent with a strong contingent to engage the garrison of *Nihāwand* and cover his father's right flank. On 23 *Radjab* 131/18 March 749, *Kaḥṭaba* engaged *Ibn Ḍubāra* in battle at *Djābalk* and there secured the greatest victory for the *da'wa*. The battle of *Djābalk*, which resulted in the death of one of the best Umayyad generals and the destruction of one of their most illustrious armies, proved to be fatal to the Umayyad cause.

The remnants of the shattered Umayyad legions retreated to *Nihāwand*, where the defence of the town was organized by *Malik* b. *Adham* al-*Bāhilī*. The original garrison of the city had consisted of troops of the *Ahl al-Shām* but a strong contingent of *Khurāsānī* warriors who opposed the *da'wa* had also found refuge there. Soon tension was apparent between the two groups. When *Kaḥṭaba* joined his son in the siege of the city and began bombarding it with *mandjaniqs*, *Malik* b. *Adham* entered into secret negotiations with the 'Abbāsīd general. Securing safe conduct for his Syrian troops, he opened the city gates to *Kaḥṭaba*. Adhering to the terms of the *amān*, *Kaḥṭaba* allowed the Syrians to go free, but captured the *Khurāsānīs*

and put most of them to death (131/749). *Yazid* b. 'Umar b. *Hubayra*, the Umayyad governor of 'Irāk, alerted by the defeat of *Ibn Ḍubāra* and the fall of *Nihāwand*, left *Kūfa* in haste to block *Kaḥṭaba's* approach to al-Madā'in. *Kaḥṭaba* moved to *Khānikīn*, arriving there in *Dhu 'l-Ka'da* 131/July 749. Danger then threatened his northern wing from the direction of the *Djazira*. *Marwān* II, alarmed by *Kaḥṭaba's* successes, sent a strong force to impede his progress at *Shahrazūr*. Adhering to his original strategy, *Kaḥṭaba* dispatched a contingent under *Abu 'l-'Awn* 'Abd al-Malik b. *Yazid* al-*Azdī* to deal with this new danger. *Abu 'l-'Awn's* venture was crowned with success: he defeated 'Uthmān b. *Sufyān*, the commander of the Umayyad army in *Shahrazūr*, and captured the city.

As a result, it seems that *Marwān* decided to organize his forces for the defence of the *Djazira*. His decision not to join forces with *Ibn Hubayra* had fateful consequences, but it was apparently based on the assumption that *Kaḥṭaba* was aiming to strike at the heart of the caliphate in the *Djazira* and *Syria* rather than in 'Irāk.

Meanwhile *Kaḥṭaba* prepared his last move into 'Irāk. From *Khānikīn* the shortest route to al-Madā'in was blocked by *Ibn Hubayra*, who assumed that *Kaḥṭaba* would take the direct route to *Kūfa*. Outwitting him, *Kaḥṭaba* planned a swift and daring move that took him into the heart of 'Irāk. He marched out of *Khānikīn* in a north-westerly direction, leaving the highroad and outflanking *Ibn Hubayra's* camps in *Daskara* and *Djalūlā'*. Crossing the *Kāṭūl* canal near *Bādjiisrā*, he assembled his army near *Awānā* and crossed the *Tigris* there on a bridge of boats. Once safely on the right bank of the *Tigris*, he hastened to *Anbār*, captured it and crossed over the *Euphrates* at *Dimimmā*. *Ibn Hubayra*, too late to intercept these swift moves, had to retreat with speed towards *Kūfa*. Meanwhile *Kaḥṭaba* advanced southwards along the western bank of the *Euphrates*. On reaching the eastern bank, *Ibn Hubayra* moved simultaneously opposite him. A few miles to the south of *Fam* al-*Furāt*, *Kaḥṭaba* caught sight of a shallow stretch of the river which he decided to ford. During the night of 8-9 *Muharram* 132/27-8 August 749, he mounted a surprise attack on *Ibn Hubayra* and defeated him, forcing him to relinquish *Kūfa* and retreat with the remnants of his army along the *Nil* canal to *Wāsiṭ*.

In the confusion of the battle, *Kaḥṭaba* was either slain or drowned. His place was immediately taken by his son *Ḥasan*, who led the victorious army into *Kūfa* on 10 *Muharram* 132/29 August 749.

KAḤṬĀN, according to the consensus of opinion among Muslim genealogists, historians, and geograph-

ers, and in popular tradition, the ancestor of all the South-Arabian peoples [see YAMAN], whence he is sometimes known as "father of all Yaman", the Yamanis themselves being called *banū Kaḥṭān*, *habā'il Kaḥṭān*, or simply *Kaḥṭān*. He thus corresponds to 'Adnān [*q.v.*], the common ancestor of the northern Arabs, though some authorities prefer to contrast him with one or other of 'Adnān's descendants, *e.g.*, his son, Ma'add (al-Dinawari, 281; al-Ṭabari, ii, 1056, 1084; al-Mas'ūdi, *al-Tanbih*, 88), or his grandson, Nizār (al-Mas'ūdi, *Murūdi*, v, 223, vi, 42 f., 46, 143, 150; Ibn al-Aṭhīr, iv, 273). The normal genealogy given for Kaḥṭān is Nūh—Sām—Arfaḥshadh—Shālakh—'Ābar—Kaḥṭān, and he is also credited with a brother, Fālagh. In this we may see an adaptation of the Yahwist tradition in the Table of the Nations (*Genesis*, X, 21-5; *I Chronicles*, I, 4, 17-9); Noah—Shem—Arphaxad—Shelah—Eber—Peleg + Joktan, and this is confirmed by the Arab insistence on the identity of Kaḥṭān with Joktan (Yaḳṭan), who was the ancestor of several peoples of patent South Arabian reference. Some genealogists do admittedly make Yaḳṭan a brother or son of Kaḥṭān (*e.g.*, Ibn Kutayba, 14; al-Mas'ūdi, *Murūdi*, i, 79 f.; al-Ṭabari, i, 217), but this is certainly a confusion on their part. The claim, however, that Kaḥṭān is an Arabicized form of Yaḳṭan (*e.g.*, *Tāḍī al-'Arūs*, s.v.) is phonologically hazardous and need not be pressed. Hebrew *Yokṭān* is rather to be related to the verb *kāhan* "to be small, weak", thus "the younger (brother)", and one might compare the occurrence in Old South Arabian of the term *qtn* to denote collateral descent from a clan-head. Kaḥṭān, on the other hand, is now attested as a tribal name even before Islam. An inscription of the time of the second century Hamdānid ruler, Š'R m 'WTR (Jamme 635/26-7) alludes to campaigns in the country to the north of Naḍīrān against a king of Kinda and Kaḥṭān (*mlk/hdt/wqhtn*), and this may provide additional support for the identification of Ptolemy's *Καταῦραι* (*Geogr.*, book vi, chapter 7, §§ 20, 23) with Kaḥṭān. Though virtually nothing is known of the rôle of this people in pre-Islamic times, it seems reasonable to suppose that the apparent similarity of the name with Yaḳṭan led the Arab genealogists to make the identification in order to provide the South Arabian peoples with a respectable biblical ancestry, just as the Northern Arabs, under the influence of the Bible and the Qur'ān, had been linked with Ishmael, son of Abraham, through the fictitious 'Adnān.

The tribal confederation of the Kaḥṭān is subdivided into two groups, the smaller of the Ḥimyar and the larger of the Kahlān. The two were officially regarded as brothers and their descent from Kaḥṭān was established by the interpolation between biblical Joktan and his son Sheba of two further generations represented by Ya'rub and Yaḥḍjub. The Ḥimyar, as progenitors of the great pre-Islamic kingdoms of South Arabia, were probably settled, while the Kahlān were essentially nomads (cf. Landberg, *Arabica*, v, 116 ff.). Most, indeed, of the Southern tribes which had settled in North Arabia, Syria, and 'Irāk by the advent of Islam claimed descent from Kahlān.

The hostility between the Kaḥṭān and the Ma'add seems to go back to pre-Islamic times and may find its origin in the opposition between the desert and the sown. This enmity was intensified by the repeated raids of the Yamanis into the lands of the Ishmaelites as well as by the later antagonism between the Anṣār (Medinans) and the Quraysh, which came to a head after the death of the Prophet and influenced the

history of the first two centuries of Islam in the most baneful fashion. It was perhaps this feud that first linked the Yamanī tribes on the one side and the Ishmaelites on the other into closer ethnological unities. One of its more innocuous results was the *mufaḥḥara*, the struggle for rank and glory, which continually prevailed between the two rivals. The Kaḥṭān, in view of the splendour of the ancient South Arabian kingdoms, had the more right at first to feel the more distinguished. But the mission of Muḥammad and the primacy of the Quraysh brought the Ma'add a tremendous superiority. The Yamanis endeavoured to counterbalance this by creating a South Arabian saga, which pictured their past greatness in the most splendid colours. They then made Kaḥṭān son of the prophet Hūd [*q.v.*], whom they next partly identified with 'Ābar. (The present-day Kaḥṭān still regard Hūd as Kaḥṭān's father, though they are unaware of his shrine in the Wādī Ḥaḍramawt.) Finally they tried to connect themselves with the 'Adnān genealogy, partly by making the ancient Djuhurum [*q.v.*], the brothers-in-law of Ismā'il, to be direct descendants of Kaḥṭān, but especially by giving Kaḥṭān a genealogy direct from Ismā'il, who thus became "father of all the Arabs". They may also be responsible for the theory that the Kaḥṭān, together with the so-called "lost Arabs" (*al-'Arab al-bā'ida*), represent the genuine (primary) Arabs (*al-'Arab al-'ariba* or *al-'arabā'* etc.), while the Ma'add were Arabicized (secondary) Arabs (*al-'Arab al-muta'arriba*). Another theory makes the "lost Arabs" *al-'Arab al-'ariba*, while the Kaḥṭān are *al-'Arab al-muta'arriba*, and the Ma'add *al-'Arab al-musta'arriba* (cf. Lane, *Lexicon*, s.v. *al-'Arab*).

The Kaḥṭān at present are for the most part beduin and form a very large group of tribes covering the area between Bīṣha in 'Asīr and Ḥawṭa in Central Arabia. Those that Doughty met in Ḥā'il claimed descent from Hūd and traced their ancestral home back to the mountainous country around al-Ṭūr in 'Asīr. Perhaps because of their isolated habitat on the northern fringe of the great southern desert, strange tales were reported of their customs and way of life and they acquired a reputation, perhaps justified, for savagery and cruelty. They are said to be Ḥanbalī Sunnis and derive their livelihood from camel breeding. The Kaḥṭān of 'Asīr differ from their nomadic relatives by living well-conducted lives and prospering in trade and agriculture. They form a federation of six autonomous tribes in the region just east of Abhā, living independently of one another and uniting only in times of crisis. Although al-Hamdāni knew of the individual tribes, he was apparently unaware of their description as Kaḥṭān. It is not improbable, however, that they are survivals of the pre-Islamic tribe. Al-Muḥaddasī, writing some fifty years after al-Hamdāni, mentions a district of Kaḥṭān between Zabīd and Ṣan'ā' and alludes also to a clan, the Āl Kaḥṭān, northwest of Naḍīrān, whom he describes as "the oldest princes of Yaman".

(A. FISCHER[—A. K. IRVINE])

**KAHWA**, an Arabic word of uncertain etymology, which is the basis of the usual words for coffee in various languages. Originally a name for wine, found already in the old poetry (see Landberg, *Études* ii, 1057 and *al-Aghānī*, 1st ed., vi, 110<sup>7</sup>, viii, 79<sup>10</sup>, xx, 180<sup>9</sup>), this word was transferred towards the end of the 8th/14th century in the Yemen to the beverage made from the berry of the coffee tree. The assumption of such a transference of meaning is not, it is true, accepted by some who consider *kahwa*—at least in the sense of coffee—as a word of African origin and seek to connect it with the alleged home of the coffee tree, Kaffa, although they also assume contamination with *kahwa* “wine” (see Ritter, *Erdkunde*, xiii, 566; Vollers, in *ZDMG*, i, 657; *Hobson-Jobson*; Landberg, *op. cit.*, ii, 1057-66). On the other hand, it should be noted that the holders of this view do not prove that coffee was exported from Kaffa as early as 1400, and do not quote a similar word in the languages of Ethiopia and adjoining lands, while the usual word for coffee there (*būn* for tree, berry and beverage; see Armbruster, *Initia Amharica*, ii, Cambridge 1910, 58; Coulbeaux and Schreiber, *Dict. de la langue tigrāī*, Vienna 1915, 408; I. Reinisch, *Die Kafa-Sprache* etc., ii, in *Sitzungsber. der Kais. Akad. der Wiss. zu Wien*, phil.-hist. Cl., cxvi, 1888, 273; see also Landberg, *op. cit.*, ii, 1055 f.) has passed in the form *bunn* (in rhyme also *būn*) as a name of the tree and berry into Arabic. But as it is probable that the drinking of coffee spread in the Yemen out of Šūfī circles and a special significance was given to wine in the poetical language of the mystics, a transference of the poetic name for

wine to the new beverage would not be at all impossible.

The coffee tree was not indigenous to South Arabia and was probably introduced from the highlands of Ethiopia, where it is found in profusion growing wild, notably in Kaffa. But there is no trace of authority for the assertion (Deflers and *Handbook of Arabia*) that the coffee tree was already introduced into Yemen in the period of the Ethiopian conquest and of the fall of the Ḥimyar kingdom, about a century before the Hidjra. In this case the older literature would hardly have left it unnoticed.

The earliest mention of coffee so far found is in writings of the 10th/16th century. According to (Aḥmad) Ibn 'Abd al-Ḡhaffār, quoted by 'Abd al-Ḳādir al-Djazīrī in his essay (see below, *Bibliography*), the popularity of *kahwa* as a beverage in the Yemen was first known in Cairo in the beginning of the 10th/16th century. It was there taken especially in Šūfī circles, as it produced the necessary wakefulness for the nightly devotional exercises. According to this authority, it had been brought to Aden by the jurist Muḥammad b. Sa'īd al-Dhahbānī (died 875/1470-1), who had become acquainted with it during an involuntary stay on the African coast and on his return devoted himself to mysticism; it soon became popular.

Another reference in al-Djazīrī, however, ascribes the introduction of the beverage to 'Alī b. 'Umar al-Šhādhillī. Abu 'l-Ḥasan 'Alī b. 'Umar of the family of Da'sayn died in 821/1418 according to al-Šardjī. He also might have become acquainted with coffee in Ethiopia, for after entering the Šhādhilliyya order, he lived for a period in the entourage of the king Sa'd al-Dīn (*i.e.*, between 788/1386 and 805/1401-2 or 807/1404-5, cf. al-Makrīzī, *al-Ilmām bi-Aḥḥbār man bi-Arā' al-Ḥabash min Mulūk al-Islām*, ed. Rinck, Leiden 1790, p. 24; Paulitschke, *Harar*, Leipzig 1888, 504 *infra*), who gave him his sister to wife. Even after he had founded his *zāwiya* in al-Maḥḥā (to follow al-Šardjī) gifts continued to reach him from admirers in Ethiopia.

In the treatise by 'Abd al-Ḳādir (Ibn) al-'Aydarūs (see below, *Bibliography*), 'Alī b. 'Umar, the saint of al-Maḥḥā, alone is mentioned as the introducer of the beverage *kahwa* (*muhdīth al-kaḥwa*, fol. 341b; *wāḍi'uhā*, fol. 347b, in a verse by Šhayḫ b. 'Abd Allāh al-'Aydarūs, died 990/1582). His claim to fame is, it is true, qualified by the note “that, before he prepared the beverage, only the kernel of the husk, *i.e.*, the *bunn*, was used and the husks were thrown on the dung-heaps (fol. 342a). In a verse attributed to him, however, he praises the *kahwat al-bunn* as a dispeller of sleep and aid to devotional exercises (fol. 342b). While al-Šardjī says not a word of his connection with coffee, 'Abd al-Ḳādir al-'Aydarūs numbers the introduction of the beverage among his miracles (*karāmāt*, fol. 342a).

The legend as given by Ḥādīdjī Khalīfa seems to have made two individuals out of 'Alī b. 'Umar, of whom Alī represents the founder of the Šhādhilliyya order, Abu 'l-Ḥasan 'Alī b. 'Abd Allāh (d. 656/1258; see al-Ša'rānī, *Lawāḥiḫ al-Anwār*, Cairo 1299, ii, 5) and his disciple 'Umar the saint of al-Maḥḥā (Muḥḥā). The latter was ordered to settle, by command of his teacher who had appeared to him at his own funeral, at the place where a wooden ball which he gave him should come to rest. This is how he came to Muḥḥā. On the charge of having misconducted himself with the daughter of the king who was staying with him for a cure, he was banished into the mountains of Uṣāb (Wuṣāb, N.E. of Zabīd).

He and his disciples, who followed him into exile, are said to have sustained themselves with *kahwa* (here the berry) and finally to have made a decoction from it. His visitors were cured of an itch, epidemic in Mukhā, by taking coffee and this procured the saint an honourable return.

The third person who is given credit for the introduction of coffee is Abū Bakr b. 'Abd Allāh al-'Aydārūs. An essay by 'Alawī al-Sakḳāf (see below, *Bibliography*) contains a statement from the *Ta'rikh al-al-Nadīm al-Ghazzī* (i.e., apparently *al-Kawākib al-sā'ira bi-manāḳib 'ulamā' al-mi'a al-'āshira* by Nadīm al-Dīn al-Ghazzī, Brockelmann, II, 376), according to which the Šūfi, who is called here a *Shādhīlī*, once came upon a coffee tree in his wanderings and ate the berries. As he noticed their stimulating effect he took them as a food and recommended them to his disciples, so that they became known in different countries. The reference here is probably to the Šūfi of this name who died in Aden in 914/1508-9 (Abū Maḳhrama, Leiden Ms. 1956, fol. 188; al-Nabhānī, *Djāmi' karāmāt al-awliyā'*, Cairo 1329, i, 263), whose grave is still honoured there. 'Abd al-Ḳādir (Ibn) al-'Aydārūs only mentions his fondness for coffee and quotes his *ḥasīda* in praise of it. On the other hand, Abū 'I-Ḥasan Muḥammad al-Bakrī in his treatise *Iṣṭifā' al-ṣafwa li-taṣfiyat al-Ḳahwa*, fol. 2b mentions Abū Bakr al-'Aydārūs as the introducer (*munshi'*) of *kahwa*.

According to Glaser (*Mitt. der Geogr. Gesellsch. in Wien*, xxx, 25), it is stated in a Turkish source (which he does not name) that in the 10th/16th century the *wālī* Özdemir (cf. Aḥmed Rāshid, *Tārikh-i Yemen ve San'a'*, i, 83 ff.) transplanted coffee from Africa to Yemen.

The fact that the merit of introducing coffee as a beverage is given to different individuals, suggests that we have to deal with various local traditions. The tradition of Mukhā is the most firmly established and most widely known; therefore 'Alī b. 'Umar al-Shādhīlī—who is frequently confused with the founder of the *Shādhīliyya* order (d'Ohsson, von Hammer, Rinn)—has become the patron saint of coffee-growers, coffee-house keepers and coffee-drinkers (cf. Goldziher, *Abhandl. zur arab. Philologie*, ii, p. lxxxviii). In Algeria coffee is also known as *shādhīliyye*, after him (Beaussier, *Dict. pratique arabe-français*, Algiers 1871). He is popularly regarded as the founder of Mukhā, which is, however, already mentioned by al-Hamdānī (74<sup>18</sup>, 87<sup>3</sup>, 119<sup>18</sup>), although it owed its rise to coffee. A well, a gate and the mosque over his grave preserve the memory of al-Shādhīlī in Mukhā (Niebuhr, *Reisebeschreibung nach Arabien*, i, Copenhagen 1774, 438-40; cf. also the legend in Hādīdīlī *Khallifa*, and 'Abd al-Karīm Kashmīrī, *Bayān-i Wāḳi'*, French tr. by Langlès entitled *Voyage de l'Inde à la Mekke par Abdoūl Kérym*, Paris 1797, 202 f.).

Al-Shādhīlī and al-'Aydārūs (probably not Ḥaydar, as de Sacy, *Chrest. Arabes*, i, 461, thinks) have become Christian monks named Sciadli and Aidrus in the legend given by Naironi. The motif of the camels or goats on which the enlivening effects of coffee were first noticed has so far not been found in Oriental sources. According to a popular legend, the coffee tree shot up from goat's dung sown by the saint (Snouck Hurgronje, *The Atchinese*, Leiden 1906, i, 260).

The legends are probably correct in saying that the taking of coffee in Arabia first began among Yemenī Šūfis. They were particularly fond of the beverage because its effect facilitated the

performance of their religious ceremonies. They therefore considered this as its original "destination" (*mawḳū' aṣli*) and found that it incited to good and hastened on the mystical raptures (*fath*) (*Safwat al-Ṣafwa*, fol. 342b). The pious intention with which it was taken made the drinking of coffee a good work (*ḥā'a*). It received a ceremonial character, being accompanied by the recitation of a so-called *rātib*. This *rātib* consisted in the repetition 116 times of the invocation *yā ḥawī*. This usage is based—apart from the similarity in sound between *kahwa* and *hawī*—on the fact that the numerical value of *ḥwh*, i.e., 116, is the same as that of *ḥwy*, i.e., *hawī*, "strong", one of the most beautiful names of Allāh [see AL-ASMĀ' AL-ḤUSNĀ]. According to *Shaykh* b. 'Abd Allāh al-'Aydārūs, the recitation of the *fātiḥa* [q.v.] should precede it. *Shaykh* b. Ismā'īl Bā 'Alawī of al-Shihr, however, prescribed the fourfold repetition of the *Sūra Yā-Sīn* (*Sūra XXXVI*) with a hundredfold *taṣliya* on the Prophet as *rātib* (*Safwat al-Ṣafwa*, fols. 344b *infra* f., 345b, 347a). Thus when taken with a righteous intention and devotion and genuine religious conviction, coffee-drinking leads to the enjoyment of the *kahwa ma'nawīyya*, the "ideal *kahwa*", also called *kahwat al-Ṣūfiyya*, which is explained as "the enjoyment which the people of God (*Ahl Allāh*) feel in beholding the hidden mysteries and attaining the wonderful disclosures (*mukāshafāt*) and the great revelations (*futūḥāt*)" (*op. cit.*, fols. 341b, 345a *supra*, 345b *infra* f.).—'Alī b. 'Umar al-Shādhīlī is reported to have said that coffee, like the water of Zamzam, serves the purpose for which it is drunk (*op. cit.*, fol. 348a, cf. above ii, 588a, *infra*), and the saying has been handed down of Aḥmad b. 'Alawī Bā *Dījahdab* (d. 973/1565-66; cf. al-Nabhānī, *op. cit.*, i, 330), who in his last years is said to have lived on nothing but coffee:—"He who dies with some *kahwa* in his body enters not into hell-fire" (*Safwat al-Ṣafwa*, fol. 344b).

Coffee was probably not known as a beverage in South Arabia much earlier than the turn of the 8th/14th century. Whether the tree was introduced long before this is doubtful. Ibn Ḥadjar al-Haytamī [q.v.] speaks in his *I'āb* (commentary on *al-'Ubbāb*, probably by 'Alī b. 'Umar al-Sayfī; cf. Brockelmann, II, 531) of a beverage which appeared (viz. in Mecca) shortly before the 10th/16th century and was prepared from the husk of the *bunn*, a tree introduced from the region of Zayla<sup>c</sup>, and called *kahwa* (quotation in 'Alawī al-Sakḳāf, p. 9). Among the jurists who gave an opinion in favour of coffee, the oldest is *Djamāl al-Dīn Muḥammad* b. Sa'īd b. 'Alī b. Muḥammad Kabbin al-'Adanī (died in Aden 842/1438, cf. Abū Maḳhrama, fol. 149b f.; according to al-Nabhānī, *op. cit.*, i, 155 f.: 829/1425-6).

An *urḍūsa* of *Sharaf al-Dīn al-'Amrīṭī* gives the year 817/1414-5 as the date at which coffee became domesticated in Mecca (Pertsch, *Die Arab. Handschr. zu Gotha*, iv, no. 2107). According to the *'Umdat al-ṣafwa*, however, the drinking of a decoction of coffee husks first appeared towards the end of the 9th/15th century, while previously only the eating of the fruit as a delicacy (*naḳl*) was known. The drinking of coffee dropped out of use again for a time, but it finally established itself and soon people drank coffee even in the sacred mosque and regarded it as a welcome tonic at *dhīkr* and *mawlid*. Coffee-houses (*buyūt al-ḳahwa*) were soon opened, where men and women met to listen to music or where they played chess or a similar game for a stake. This and the custom of handing round the coffee in the manner of wine naturally aroused the indignation of the ultra-

pious, many of whom had from the first set their faces against the beverage as an objectionable innovation. They found a champion in Khā'ir Bey, who was appointed chief of the police in Mecca in 917/1511 by Kānshūh al-Ghawrī [q.v.]. He carried through the proclamation of coffee as forbidden (*ḥarām*) in the same year, in an assembly of jurists of the different schools in which the unfavourable judgment of two well-known physicians and the evidence of a number of coffeedrinkers regarding its intoxicating and dangerous effects ultimately decided the issue. The *ḥādīs* signed the protocol of the assembly. Only the then *muftī* of Mecca dared to decline his co-operation and became therefore the object of damaging suspicions. By putting the questions in a clever way they were at the same time able to get an opinion condemning coffee from the *faḳīhs* of Cairo. The rescript which Kānshūh issued in reply to the protocol sent to Cairo did not completely fulfil the hopes of the opponents of coffee as it contained no absolute interdiction but only allowed measures to be taken against any concomitant features contrary to religion. Ibn Ḥaḍjar al-Haytamī, as late as about 950/1543, had a vigorous discussion, at a wedding feast (*walimat 'urs*) where coffee was offered to the guests, on the new beverage with a prominent *muftī*, who declared it intoxicating and forbidden. Ibn Ḥaḍjar refers to the assembly above-mentioned and cannot find words strong enough to condemn its decision and the manner in which it was reached (*ṣafwat al-ṣafwa*, fols. 352b-356a, quotation from the *Mu'dīam Mashā'ikhīhi*).

In accordance with this verdict, Khā'ir Bey forbade the taking and sale of coffee and had a number of vendors punished and their stocks burned, so that coffee husks (*kishr*) disappeared from the market. But Kānshūh's rescript again gave the coffeedrinkers courage and when in the next year one of the leading opponents of coffee was subjected to disciplinary punishment by a high official from Egypt and Khā'ir Bey was replaced by a successor who was not averse to coffee, they were again able to enjoy with impunity the beverage, to which these measures had only attracted the attention of wider circles. Only occasionally do we read of action being taken thereafter against disgraceful proceedings in coffee-houses. An edict forbidding coffee issued by the Ottoman sultan during the Ḥaḍḍī in 950/1544 was hardly respected at all.

In Cairo coffee was first made known in the first decade of the 10th/16th century in the Azhar quarter by Ṣūfīs from Yemen, who held their *dhikrs* in the mosque with their associates from Mecca and Madina while partaking of coffee. After it had been publicly sold and drunk there for a time, the *faḳīh* Aḥmad b. 'Abd al-Ḥaḳḳ al-Sunbāṭī, famous as a preacher, declared it forbidden in 939/1532-3. Two years later in a meeting for exhortation in the Azhar mosque he so incited his hearers against the beverage that they fell upon the coffee-houses, made short work of their contents and maltreated the occupiers. The difference of opinion thus emphasized caused the *ḥādī* Muḥammad b. Ilyās al-Ḥanafī to take the opinions of prominent scholars; as a result of personal observation of the effects of coffee he confirmed the opinion of those who considered the beverage a permitted one. Although in the following years coffee was from time to time for brief periods forbidden in Cairo, the number of its devotees, even among the religious authorities, steadily increased.

Several notable theologians had given *fatwās* in favour of coffee, for example, Zakariyā al-Anṣārī

(died 926/1520), Aḥmad b. 'Umar al-Sayfī (d. 930/1523-4), Abu 'l-Ḥasan Muḥammad al-Bakrī al-Ṣiddīkī (died between 950 and 960/1543-1553), who in verses in praise of coffee also gives the advice that the opinion of Ibn 'Abd al-Ḥaḳḳ should be set aside and the *fatwā* of Abu 'l-Ḥasan followed (*Ṣafwat al-ṣafwa*, fols. 349a, b; cf. also al-Ṣiddīkī's verses in Bahā' al-Dīn al-ʿĀmilī's *al-Kashkūl*, Būlāk 1288, i, 19), 'Abd al-Raḥmān b. Ziyād al-Zabīdī (d. 975/1567-8) and others (*Ṣafwat al-ṣafwa*, fol. 348b).—Gradually the view came to prevail that coffee was in general permitted (*mubāh*), but that under certain circumstances the other legal categories could be applied to it also.

Intercourse with the holy cities and with Egypt brought coffee to Syria, Persia and Turkey. Rauwolf in 1573 found the beverage widely known in Syria (Aleppo). In Istanbul and Rūmilī coffee first appeared in the reign of Sulaymān I (926/1520-974/1566). In 962/1554 a man from Aleppo and another from Damascus opened the first coffee-houses (*kahwe-khānc*) in Istanbul. These soon attracted gentlemen of leisure, wits and literary men seeking distraction and amusement, who spent the time over their coffee reading or playing chess or backgammon, while poets submitted their latest poems for the verdict of their acquaintances. This new institution was jokingly called also *mekteb-i 'irfān* (school of knowledge). The coffee-house met with such approval that it soon attracted civil servants, *ḥādīs* and professors also (*Tārīkh-i Pccvī*, i, 363 ff.; English translation in B. Lewis, *Istanbul and the civilization of the Ottoman Empire*, Norman, Oklahoma 1968, 132 ff.; Kātīb Čelebi, *The balance of truth*, tr. G. L. Lewis, London 1957, 60-2). Poets like Māmiya al-Rūmī (cf. Bahā' al-Dīn al-ʿĀmilī, *op. cit.*, p. 147) and later Belīghī sang the praises of coffee, and the opinion expressed in 928/1522 by Sulaymān's court physician, Badr al-Dīn al-Kūṣūnī (Leiden Ms. 945, fol. 58) was not unfavourable. The coffee-houses increased rapidly in number. Among the servants of the upper classes were *kahweḍī*, whose special task was the preparation of coffee, and at the court they were subordinate to a *kahweḍībashi* (Gibb-Bowen, i/x, index). In religious circles, however, it was found that the coffee-house was prejudicial to the mosque, and the 'ulamā' thought the coffee-house even worse than the wine-room. The preachers were specially eager for the prohibition of coffee and the way was paved for them by the *muftīs* (according to d'Ohsson: Abu 'l-Su'ūd) with an opinion that (roasted) coffee was to be considered as carbonized and therefore forbidden (the same argument is found in the treatise by Muḥammad ('Alī?) Dede, Leiden Ms. 682, i, fol. 4b). The fact that current politics were discussed in the coffee-houses, the government's acts criticized and intrigues concocted, was the principal cause for the intervention of the authorities. Edicts issued in the reigns of Murād III (982/1574-1003/1595) and Aḥmad I (1012/1613-1016/1617) were not strictly enforced and still less obeyed. The religious authorities met public opinion by declaring coffee legal, if it had not reached the degree of carbonization.

Murād IV 1032/1623-1049/1640 issued a strict prohibition of coffee (and tobacco). He had all the coffee-houses torn down and many forfeited their lives for the sake of coffee. Under Meḥmed IV (1058/1648-1099/1687), while the sale of coffee in the streets was allowed, the prohibition of coffee-houses was at first renewed by the Grand Vizier Köprülü for political reasons. This prohibition could not possibly be kept in force permanently, and later we even read of measures taken by the government to lower the high

price of coffee. From Sulaymān's time a tax was levied on coffee which was at a rate of 8 aspers per *okka* for Muslim buyers and 10 for Christian; in 1109/1697 there was added an extra tax of 5 paras the *okka*, which was called *bid'at-i kahwa*, for both.

According to Hammer-Purgstall, *GOR*, v, 713, the question of the correct spelling of *kahwa* with *h* or *k* has been disputed in Turkey. *Kahwa* is actually found in several manuscripts e.g., in the opinion of al-Kūšūnt above mentioned.

The coffee tree flourishes in south-western Arabia and does best on the western side of the Sarāt at a height of 1100 to 2200 m., where it finds in the depths of the valleys and on the slopes a fertile, moist soil and the uniform warm temperature necessary for it. The plantations on the slopes arranged in terraces (see the picture in *Handbook of Arabia*, Pl. xiv), however, needed regular watering; in addition, the mist (*'imā*, *sukhaymānī*) that rises in thick clouds out of Tihāma brings them moisture. To protect the trees from the heat of the sun and from locusts they are surrounded by shady trees like carob trees, tamarinds, etc. The tree, which is raised from seed (or propagated from layers), reaches a height of 2 to 5 m. with a diameter of 5 to 6 cm. and yields berries in the fourth year. It is an evergreen and throughout the year bears both blossom and berries in various stages of ripeness so that there is really no fixed harvest-time. The main harvest, however, varying with kind and locality, usually falls in the months from March to June. After the berries have been carefully gathered and allowed to dry they are shelled in a mill. The beans and the husks are then dried in the sun a second time.

The coffee tree is found as far north as 'Asir [g.u.] where it is said to flourish exceedingly on mount *Sh-dh-y* (*Shadhā*?) in the land of the Zuhrān (north of the Wādī Dawka, Doka on Stieler's map). (*Sharaf 'Abd al-Muhsin al-Barakātī, al-Rihla al-Yamāniyya*, Cairo 1330, 16; cf. J. L. Burckhardt, *Travels in Arabia*, London 1829, ii, 377; for other places in 'Asir see *Handbook of Arabia*, 136, 137). The most southern areas of coffee cultivation are Bilād al-Ḥudjriyya, Wādī Warazān and Wādī Banā. To the east we find coffee grown in the land of the Yāfi' and in the *Djāwf*. But it is the Ḥarāz mountains, the valley of al-Farḥ belonging to the land of the Banū Maṭar, the *Djābal Rayma* and the district round 'Udayn that are particularly celebrated for their excellent coffee. (For further information see Grohmann's book in the *Bibliography* where, too, the varieties are detailed.)

It has always been the custom in Yemen to drink preferably a decoction of the husks, which like the latter is called *kishr*, and is to be obtained in numerous coffee-houses (*mikhāya*). To *kishr* as well as to the coffee made from beans, flavourings such as cardamom, ginger, cloves, etc., are often added.

The fresh ripe fruit is pleasing to the taste and nourishing. The eating of the *bunn*—it is not stated whether fresh or dried—is particularly recommended in a *ḥasida* by Ḥamza b. 'Abd Allāh al-Nāshirī (*Safwat al-safwa*, fol. 358b f.) on account of its various health-giving virtues. No information is available as to whether the custom usual among the Galla and in Kaffa of eating ground coffee mixed with butter is also usual in South Arabia. In Persia the eating of dry ground coffee is not unusual.

For Arabic and Persian works on coffee in addition to those quoted above and in the *Bibliography*, see Ahlwardt, *Verzeichn. der arab. Handschr. . . zu Berlin*, nos. 5476-5480; Pertsch, *Die arab. Handschr.*

. . . zu *Gotha*, nos. 94(9), 2105-2109, 2777; *Cat. Cod. Orient. Bibl. Acad. Lugduno-Batavae*, iii, no. 1401; Brockelmann, II, 414 and 437, no. 16.

*Kahwa* is also the name of the room in which coffee is served and thus comes to mean "reception-room" and "coffee-house". The word is also used in the sense of "tip" and "present".—On coffee-houses in the East, see the works mentioned below by Olearius, Chardin, Russell, von Hammer, Snouck Hurgronje.—On coffee-vessels see Lane, Snouck Hurgronje, von Oppenheim, Socin, Euting, Landberg.

#### TRADE WITH EUROPE

The arrival of European merchants in Mukhâ and the Red Sea in general was significant for the coffee

trade in more than one way. Hitherto, the southern Yemen together with some areas of Ethiopia had supplied the entire Islamic world with coffee beans. Indeed, the Yemeni rulers passed stringent rules against any attempts made by foreigners to export coffee seeds and seedlings (see Ellis, 29). But with the rapid spread of the habit of coffee drinking in Europe and other parts of the world during the 17th and 18th centuries and the consequent rise in demand, the monopoly enjoyed by the coffee growing areas of the Red Sea was broken for ever, and its cultivation extended to Ceylon, Java, the Caribbean and South America (*India Office Records*, London, letter of 22 August 1732; *Factory Records Egypt*, vol. 2, no. 301, 160). Another unlooked-for consequence was the greater availability of documentation on the volume and structure of trade, which the purely Islamic sources seem to lack. The descriptions left by European travellers and traders and the records of the English and Dutch East India Companies not only provide general accounts of the trading conditions at Mukhâ and Bayt al-Faikh, the chief centres of the coffee trade, but also detailed information on exports of various nations, prices, methods of purchase, commercial regulations, the areas of coffee growth, and the economics of marketing. There can be little doubt that coffee was one of the most valuable commodities entering the international trade of the Middle East and played a vital part in the flow of silver specie it ins eastward journey from Europe to India, bringing in the process considerable prosperity to regions that had few alternative sources of wealth.

The existence of coffee as a plant and a beverage became known in Europe towards the end of the 16th century. Jean de La Roque, who wrote the first scholarly historical treatise on the origins of coffee both in the Near East and Europe, attributed its first botanical reference to Prosper Alpinus, whose book was published in Venice in 1592. The work of Alpinus went through several editions in the 17th century and was followed by the treatises of Philip-Sylvester Dufour, Nicholas de Blegny and John Ray. The interest aroused by the Arabian coffee among the scientific world of Europe was matched by its economic and commercial prospects as seen by merchants. As early as 1609-10 the ships of the English East India Company were sent to Mukhâ to inquire about trading possibilities, and the commander of the Sixth Voyage, Sir Henry Middleton, succeeded in making a journey to San'a' (*The First Letter Book*, 240). In 1616, the Dutch merchant, Pieter van den Broecke, learned about coffee at Mukhâ and managed to obtain very favourable commercial terms from the *imâm*, much to the surprise and annoyance of Arabian, Persian and Indian merchants at San'a' (F. de Haan, *Priangan*, iii, 804; K. Glamann, 183; E. Macro, 37). But it was not until the middle of the century that coffee appears to have been regularly imported into Europe by the Cape route. In the 1660s coffee was sold under the name of "coho seeds" in the public sales of the English East India Company in London, while the first reference to "cauwa de Mocha" in the Amsterdam auctions of the Dutch Company occurs in 1661-62 (*A Calendar*, 27; Glamann, 183).

Although the servants of the Dutch East India Company were perfectly aware of the economic importance of coffee in Middle East trade and often exported it from Mukhâ to other Asian ports, they made little effort to import it to Europe on a regular basis before 1690 (*Dagh-Register 1664*, 311). In contrast, the English imports were much greater during this period and there were few years between

1664 and 1700 when coffee was not imported and sold in London. In 1664 the total quantity listed in the account books amounted to 44,912 lb. valued at £ 1,138, while in 1690 there was a peak import of 298,816 lb. worth £ 9,821 (*India Office Records*, London, vols. 26 etc.). In the first half of the next century the average annual imports were well over a million lb., the peak being reached in 1724 when the total imports were 2.67 million lb. The English sources also provide interesting information on the total exports of coffee from Yemen and the share of the different trading groups in the total. In 1726, for example, out of a total estimated export of 19,267 bales (each bale containing approximately 280 lb.), the Arab and Turkish merchants handled 10,330 bales or 54 per cent. The next largest exports were those of the English, both the Company and private, with 5020 bales (26 per cent), followed by the Dutch with 2000 bales (10 per cent), the French (1300 bales or 7 per cent), and the Persian and Indian merchants with 617 bales (3 per cent). However, it is probable that these figures were either underestimated or the season for this year was exceptionally bad. For in 1731 the chief merchant of the English factory stated that in good years the quantity of coffee exported varied between 60,000 and 70,000 bales, although in none of the actual reports sent home by the servants of the East India Company do the exports ever exceed 40,000 bales (*Factory Records Egypt*, vol. 1, no. 201, p. 518; vol. 2, no. 261, pp. 79-80). A possible explanation for the discrepancy lies in the difference between the weight of coffee in an English bale and in an indigenous bale, the latter being much smaller. (For the weights and measures of Mukhā, see *Factory Records Egypt*, vol. 2, no. 209, p. 11, no. 311, p. 106). It is evident from these and other figures that even at the height of the European trade in Yemen, the share of the Middle East as a consumer of coffee was overwhelmingly large. But with European demand at 40 per cent, its effect was both a rapid increase in cultivation and a progressive rise in the price of coffee. In 1672, a year of high demand, the price of coffee in Mukhā was 45 Spanish dollars per bahar (approximately 450 lb.). In the 18th century coffee was frequently sold at 100 dollars and in years of short harvest the price could rise to well over 170 dollars per bahar (*Factory Records Surat*, 16 Sept. 1672, vol. 3, fol. 16; Ovington, 271; *Factory Records Egypt*, vol. 1, no. 29, p. 56; vol. 2, nos. 334, 342, 344, 348 pp. 302, 324, 330, 342; *Abstract*, vol. 449, p. 496). The Turkish and Arab merchants seem to have purchased their coffee exclusively in the great inland mart of Bayt al-Fakih [q.v.] and seldom used Mukhā. Coffee was brought down to the coast by camels and shipped off through the ports of Luḥayya and al-Ḥudayda. According to Ovington, Luḥayya came into prominence when the trade of Mukhā was disrupted by English warships during the short war with the Mughal emperor in 1687-88 (Ovington, 273). But it is also possible that the proximity of al-Ḥudayda and Luḥayya to Djudda, which was the main intermediate market for coffee in the Middle East, was the reason why these ports were used by the Muslim merchants in preference to Mukhā. Coffee was distributed in the Ottoman Empire through two separate routes. The most important one was through the Djudda, Suez, and Cairo, but substantial quantities also went through Baṣra and up the Euphrates. The demand in India and Persia was small and seldom exceeded 500 bales unless the Sūrāt merchants were especially commissioned by the European trading companies in western India to purchase coffee on

their behalf. However, with the increase in the consumption of coffee in Europe towards the end of the 17th century, the chartered companies fell into the practice of buying coffee directly in Mukhā. The Dutch Company re-opened its factory in Mukhā in 1696 after previously closing it in 1684 (Glamann, 186, 188). The English East India Company had sent their servants from Sūrāt to Mukhā during the trading season and had also despatched ships direct from London with supercargoes who had the responsibility of purchasing coffee in Yemen. But in 1716 the Bombay Council decided to establish a permanent factory in Mukhā with the aim of buying coffee all the year round and thus avoiding the high prices of the main trading season (*Bombay Public Proceedings*, 6 February 1716, vol. 4; *Abstract*, vol. 449, para. 49, p. 229). From Mukhā it was only a short step to Bayt al-Fakih, and during the early 18th century English, Dutch and French merchants regularly made their appearance alongside the Arab, Turkish and Indian traders in the coffee market of the inland town.

One of the reasons why the directors of the English East India Company had hesitated before opening a regular trading post at Mukhā was the fear of religious intolerance and on one occasion it was definitely stated that the Muslim pilgrims on the Ḥajj considered it a meritorious deed to insult and abuse any Christians they met with in the Red Sea area (Court of Directors' letter to Bombay Council, 17 April 1701, Despatch Book, vol. 93, para. 56, p. 223). But the Company's servants who had closer acquaintance with the actual conditions in Yemen took a different view and considered that the treatment of Europeans there was in no way different from the treatment of the Christians in Europe (*Factory Records Egypt*, vol. 1, no. 5, p. 23). Indeed, the commercial terms on which the Europeans were allowed to trade in Mukhā and Bayt al-Fakih were consistently more favourable than those given to the indigenous or Indian merchants. The export duty paid by the former was only 3 per cent *ad valorem* while the latter paid 5 per cent (Hamilton, i, 36). In addition, after the civil war of the late 1720s in Yemen, the new *imām* allowed the European companies to export 500 bales of coffee duty-free each year (*Factory Records Egypt*, vol. 2, no. 211, p. 19). It is true that the formal commercial capitulations given out at Ṣan'ā' were often violated by the local governors who demanded additional payments for themselves, and the sellers of coffee to some extent had to make up the fiscal loss in the shape of a special levy on coffee sold to the Europeans. In 1721, for instance, it was reported from Mukhā that very little coffee had come onto the market that season because the normal excise duty of one dollar per bahar had been suddenly raised to five dollars (*Abstract*, vol. 449, para. 8, p. 406). In Bayt al-Fakih, according to La Roque, the tax was paid only by the seller (La Roque, 105). That the coffee trade yielded to the local rulers a lucrative source of income is shown by the high transit duty imposed on it by the governors of Mecca and Djudda and the paṣha of Egypt, who raised the duty to 12 1/2 per cent in 1699 (Alg. Rijksarchief, The Hague, Koloniaal Arch. Oost-Indië en de Kaap, no. 1810, 7 and 10 July 1719; Glamann, 192). There was also evidence that the Porte was alarmed by the effect of European competition on the trade of the Turkish merchants and sent several diplomatic missions to Yemen to try to persuade the *imām* to prohibit the export of coffee by the Europeans. The missions ended in failure when the *imām* demanded a compensatory income equal to the duty and the total purchase

value paid by the Europeans (*ibid.*). It is no exaggeration to state that the place formerly occupied by pepper and spices in the Levant trade was in some measure taken by coffee.

The international demand and the commercial expertise of the visiting merchants were responsible for creating a fairly sophisticated organization in the coffee trade. Very little information is available on the economic structure of its cultivation, but it seems that coffee was grown mostly by smallholders who brought the ripened and dried berries to the market themselves, although there were also large growers who employed the big merchants of Bayt al-Faḳīh to market their products (*Factory Records Egypt*, vol. 1, no. 166, p. 481). The markets of Mukhā and Bayt al-Faḳīh were served by distinct and separate growing areas, the supplies coming to Mukhā being from villages to the south. The areas supplying Bayt al-Faḳīh were much more extensive and varied from one and a half day's journey from the latter to six days. The best coffee came from Wosab and Saffal, but the output of this type was generally small. The next grade purchased by the Europeans was grown in Harrass, Rimah, Himmah and Doran, while coffee from Selba, Sinan and Aden was brought to the market in a very dirty condition and seldom bought for Europe (*Factory Records Egypt*, vol. 1, no. 19, p. 42). The beans were nearly always cleaned and given an initial degree of processing before being sold, although in years of high demand they could be offered "ungarbled" and protests made by the English and the Dutch against such practices met with the rejoinder from the governors that they could not compel their subjects to sell coffee only in a particular state if the Turkish and other merchants were prepared to buy what was offered (*Factory Records Egypt*, vol. 2, no. 319, p. 227).

The main trading season in Mukhā and other ports extended from March to August, when ships from Suez, Djudda, Baṣra and Sūrāt arrived to buy coffee and exchange their cargoes of foodstuffs and Indian piece goods as well as European woollen goods. The coffee market was particularly sensitive to the timing of the ships' arrival and departure, and the mere rumour of the sighting of a European or Turkish merchantman at sea could send up the price at Bayt al-Faḳīh or lead to the withholding of supplies from the market in the hope of higher prices. On several occasions the Dutch servants made competitive bids, but each time gave way before the higher bids of other Europeans and ended up without purchasing any coffee. It was only later that the servants of the English Company discovered that this was a deliberate plan in order to keep up the price of Yemen coffee, so that the product of their own plantations in Java could be sold more advantageously in the home market (*Factory Records Egypt*, vol. 2, no. 216, p. 9). But in general the most important influence governing the price at Mukhā or Bayt al-Faḳīh was the wholesale price obtaining at Djudda and Cairo, the Yemeni merchants keeping themselves fully informed by a system of local correspondence. One of the by-products of the coffee trade was a very large influx of precious metals, largely silver, into the Red Sea area, which enabled the traders to import luxury goods from India and elsewhere, and the Indian ships returning to Sūrāt mostly carried specie. There was also an active banking system and the European companies frequently supplemented their import of treasure with funds obtained by purchasing bills of exchange in the local capital market, which were later repaid in Sūrāt.

(K. N. CHAUDHURI)

**KAHYĀ** (KETKHUDĀ) or **DJENĀZE HASAN PASHA**, Ottoman grand vizier under Sultan Selīm III. A slave of Circassian origin, he served different Ottoman dignitaries until he became *kaḳyā* (*ketkhudā* [q.v.]) of Melek Mehmed Pasha [q.v.], thus being known later as Ketkhudā Hasan Pasha. His military skill first became evident during the Greek rebellion in Morea, when as *mütesellim* of Tripolitza he defeated the rebels besieging the town on 23 Dhu'l-Ḥij̄d̄j̄ā 1183/19 April 1770. He was appointed commander of the fortress Vidin with the title of vizier in Muharram 1202/November 1787 while Melek Mehmed Pasha became *ser'asker* of Vidin. On the latter's dismissal in Rabi' II 1202/January 1788, Hasan Pasha succeeded him. During the Russian and Austrian war his victories in the summer of 1788 at Orsova, Mehadiya and Sebes against the Austrians won him such a reputation that the new sultan, Selīm III [q.v.], appointed him grand vizier on 3 Ramaḍān 1203/28 May 1789. As he was ill, he arrived at the army headquarters in Rusūck on a stretcher, thus acquiring his second nickname of *Djenāze* (corpse). His grand vizierate proved to be unhappy. Indeed an Ottoman army under the command of Kemānkes̄h Muṣṭafā Pasha was beaten by the Austro-Russian allies at Fokshani on 9 Dhu 'l-Ḳa'ḍa/1 August. Furthermore, the main army under his own command was defeated at Martineshti, near the Rimnik River, on 2 Muharram 1204/22 September 1789. With the ensuing capture of Belgrade and Bucharest by the Austrians and that of Akkerman and Bender by the Russians, Hasan was dismissed from the grand vizierate on 5 Rabi' I/23 November and replaced by *Djezā'irli Ghāzī Hasan Pasha* [q.v.], who had success-

fully defended Ismā'īl against the Russians. Nominated commander of Rusčuk, he was exiled to Bozdja-Ada (Tenedos) in Djumādā I/January 1790. Two years later, in Dhū'l-Kā'da 1206/June 1792, he was appointed governor of Silistre, but was later transferred to Crete. He was governor of the Morea when the French landed in Alexandria on 1 July 1798. After a period of retirement in Yefī-Šehir (Larissa), he later became commander of Bender, but a sudden attack by the Russians obliged him to surrender it on 27 Ramaḡān 1221/8 December 1806 and he was taken to Russia as a prisoner-of-war. After being released, he lived in Yefī-Šehir until his death around 1225/1810. Although a brave soldier, he possessed the qualities neither of a military leader nor of a statesman.

(E. KURAN)

**KĀ'ID** (A.), an imprecise term, but one always used to designate a military leader whose rank might vary from captain to general. Semantically, it is the equivalent of the Latin *dux*. The plural most frequently employed by historians is *kuwwād*.

For the army in Muslim Spain, this title corresponded to general or even commander-in-chief. In the navy, *kā'id al-ustūl* (= *kā'id 'ala 'l-ustūl*) or *kā'id al-baḡr* (= *kā'id 'ala 'l-baḡr*, *kā'id fi 'l-baḡr*) was equivalent to "admiral". But Ibn Khaldūn intimates that the term current among sailors of his day was *al-milān* (pronounced with a back *lām*), a Catalan loan-word (*luḡhat al-Ifrānḡia*) which is evidently related to the Castilian and Portuguese *almirante*. The *kā'id al-asāfil* was the admiral-in-chief. On a warship the *kā'id* commanded the fighting men on board (*mukātilān*) while the *ra'īs* directed the actual handling of the ship by the sailors (*baḡriyyūn*).

In Morocco under the Sa'dids, *kā'id* denoted a general, and *kā'id al-'aḡar* or *kā'id al-kuwwād* was used for commander-in-chief.

After the establishment of the tribal *djish* [see *ḡAYSH*, III], the commander of each of the militarized tribes was given the title of *kā'id* or *bāshā*. Beneath him were the *kā'id raḡā*, who led a unit of 500 men (*makhāziniyya*) and the *kā'id mi'a*, who commanded 100 men. In large cities a military governor, called *kā'id al-madīna* or *kā'id al-ḡaḡaba* (*al-ḡāḡim* is also found), was responsible for dealing with cases of murder, theft and offences against public morality (cf. the Spanish *alcáide*). The *kā'id al-dawr* or "chief of the watch" was responsible for keeping watch at night; under his command were the *dawwāra* (sing. *dawwār*).

At the court of the 'Alawid sultans, the *kā'id al-maḡḡwar* directed the external administration of the palace (the internal administration was the responsibility of the chamberlain, *ḡāḡīb* [q.v.]). He performed the duties of a master of ceremonies, putting into the appropriate hands correspondence addressed to the sultan and admitting to his presence those ambassadors and dignitaries who had been granted audience. Under his command was a troop of horsemen, called *maḡḡawiriyya*, whom he employed as couriers on confidential missions.

Each of the departments of the palace (*ḡā'ifa*, pl.

*ḡawā'if*; *ḡanḡa*, pl. *ḡanā'if*), internal and external, was directed by a special *kā'id* (dialect pl. *ḡuyyād*).

The non-militarized tribes, who were liable to a land-tax known as *nā'iba*, were governed by a *kā'id*, usually one of the notables of the tribe. The office went to the most open-handed candidate, who was chosen by the *kā'id al-maḡḡwar*. Appointed for an indeterminate period, the *kā'id* of a tribe risked dismissal if a more generous candidate were to make an offer to the palace. The new *kā'id* was given a warrant (*ḡaḡir*) of investiture, a horse, a tent of state (*ḡubba*) and a round seal (*ḡāba'*) made of silver. On its top half was inscribed *ḡhadīm* (or *waḡif*) *al-maḡām al-'ālī bi 'llāḡ*, and on its lower half, under a horizontal line, the name of the *kā'id* followed by *waffaḡahu 'llāḡ*. Since the letters were cut into the seal, when it was smeared with greasy ink the text stood out in white on the paper.

The *kā'id*'s duties were of three types: fiscal, judicial and, in a subordinate sense, military. He was responsible for allotting and collecting the normal and special taxes. He had to ensure public security and pass judgment in all cases which did not come under the jurisdiction of the *ḡāḡī*. Finally, it was he who had to raise the auxiliary troops demanded of the tribe to make up the strength of the regular army. As they were sent in a *ḡarḡa* (= classical *ḡaraka*), these militiamen were called *ḡurrāḡ* (sing. *ḡāriḡ*).

The *kā'id* was assisted in his duties by a lieutenant (*ḡḡalīfa*), who was frequently a member of his family. To carry out his orders, arrest offenders, etc., he had at his disposal a number of mounted policemen (*makhāziniyya*). He also nominated a *ḡayḡḡ* to take charge of the concerns of each section of the tribe.

Whenever a powerful *kā'id* was removed from office and the government deemed it dangerous for him to dwell within his native tribe, he was compelled to live at court, with the honour due to his rank. Such a powerless *kā'id* was known as a *kā'id ra'siḡ* (dialect *ḡāid rāso*), "governor of himself".

(G. S. COLIN)

**KĀ'IF** [see *KIYĀFA*].

**KĀ'IM ĀL MUḤAMMAD**, "the Kā'im of the family of Muḡammad", in *Ši'ī* terminology commonly denotes the Mahḡī [q.v.]. The term *kā'im*, "riser", was used in *Ši'ī* circles at least from the early 2nd/8th century on in referring to the member of the family of the Prophet who was expected to rise against the illegitimate regime and restore justice on earth, evidently in contrast to the *ḡā'id*, or "sitting", members of the family, who refused to be drawn into ventures of armed revolt. The term thus was often qualified as *al-Kā'im bi 'l-sayf*, "the one who shall rise with the sword". It also appears frequently qualified as *al-Kā'im bi-amr Allāḡ* meaning both "the one who shall rise by the order of God" and "the one who carries out the order of God". With the latter connotation the term could be applied to any *imām*. Thus some Imāmi *ḡadīth*s stress that every *imām* is the Kā'im of his age (*Kā'im aḡl zamāniḡi*). In its specific sense the term meant, however, the eschatological Mahḡī, who as such was sometimes called *Kā'im* (more commonly: *ḡāḡīb*) *al-samān*, "the Lord of the (final) age". Various early *Ši'ī* sects expected the return of the last *imām* recognized by them, whose death they usually denied, in the role of the Kā'im. In Imāmi and Ismā'īli usage the term Kā'im has widely replaced that of Mahḡī.

Among the Imāmiyya, whose *imāms*, especially

from *Dja'far al-Šādiq* [q.v.] on, made it a principle to refuse involvement in revolutionary activities, numerous traditions were related concerning the rising (*kiyām*) of the expected Kā'im *imām*, the signs (*'alāmāt*) indicating his appearance, his acts and his conduct. After the death of the eleventh *imām*, the twelfth, Hidden *Imām* was identified with the Kā'im who on his appearance will fulfill the predictions about his actions and miracles. Imāmī doctrine distinguishes between inevitable (*mahtūma*) signs for the coming of the Kā'im and conditional (*muštarafa*) ones which may be cancelled by God. The traditions do not fully agree as to which signs are inevitable. Most often mentioned are: 1. The coming of the Yamāni who shall appear in the Yaman calling for the support of the Kā'im; 2. the appearance of the Sufyāni [q.v.] who will rise in the Dry Wādī (*al-Wādī al-Yābis*) in the month of Radjab in the same year as the Kā'im and will seize Damascus and the five provinces of Syria before being killed by the Kā'im; 3. a voice (*nidā'* or *šayha*) from heaven calling the name of the Kā'im; 4. the swallowing up (*ħhasf*) of an army sent by the Sufyāni against the Kā'im in the desert (*al-baydā'*); and 5. the killing of the Pure Soul (*ħall al-nafs al-zakiyya*), whom the Kā'im will send to Mecca as a messenger, by the Meccans between the *Rukn* and the *Maħām*. Connected with the coming of the Kā'im in Imāmī doctrine is the *radī'a* [q.v.], the return to life of some of the wicked and the righteous of earlier generations, giving the latter the chance of taking revenge for the injuries they had previously suffered. The Kā'im is expected to proceed from Mecca where he will reside and rule the world. His reign, according to a well-attested tradition, will last seven years, each of which will be like ten years of the normal time scale. According to another tradition he will rule nineteen years. Although some traditions speak of the reign of a son of the Kā'im, the majority affirm that there will be only forty days of turmoil after the passing of the Kā'im until the Resurrection and the Judgment.

Ismā'īlī doctrine added a further dimension to the concept of the Kā'im describing him as *Kā'im al-ħiyāma*, "the Kā'im of the Resurrection", who shall act as the Judge of mankind, and attributing a cosmic rank to him above that of prophets and imāms. For details see ISMĀ'ILYYA, *Doctrine*. Druze doctrine recognizes Ĥamza b. 'Alī as the *Kā'im al-samān*. See DURŪZ.

(W. MADELUNG)

AL-KĀ'IM BI-AMR ALLĀH, 26th 'Abbāsīd caliph, whose rule lasted from 422/1031 to 467/1075, corresponding with the end of the Buwayhid period and the beginning of the Salđjūk period in 'Irāk. Born in 391/1001, the son of an Armenian concubine, he was named heir shortly before the death of his father, al-Kādir [q.v.] and succeeded to the throne unopposed. The usual oath of allegiance was taken on 13 *Dhu' l-Ĥidjja* 422/12 December 1031.

At this period, although the caliph had only very limited personal resources at his command, he had recovered a measure of freedom, to the extent that he was able to arbitrate in the rivalry between the Buwayhid amīrs. The *amīr al-umarā'* *Djalāl al-Dawla*

[q.v.] was in fact threatened by his nephew, Abū Kālīdžār [q.v.], ruler of Fārs, and was trying to impose his authority. As early as 423/1032, al-Kā'im entrusted the jurist al-Māwardī with a confidential mission to Abū Kālīdžār, refusing to grant the latter any title but that of Malik al-Dawla; soon after, *Djalāl al-Dawla*, who had incited the Turks against the caliph, was reconciled with al-Kā'im and even agreed, after an incident which cast doubt on the morality of the amīr, to apologize to him. A few years later, in 428/1032, *Djalāl al-Dawla* had Abū Kālīdžār recognized as his delegate, then requested new titles, those of *šāhānshāh al-a'zam* and *malik al-mulūk*; in spite of hostile public opinion, the caliph awarded these exceptional titles to the amīr after he had obtained the consent of the principal *fukahā'* (429/1038). The situation remained tense, from a political as much as from a religious point of view, and in 432/1091 al-Kā'im thought it opportune to give a new reading of his father's profession of faith, *al-risāla al-ħādīriyya*. Then in 434/1043 he had to make a vigorous protest against *Djalāl al-Dawla's* wish to take from him the collection of taxes paid by tributaries or *đjāwālī*; after having threatened to leave the capital and have the mosques closed, he managed to make the *amīr al-umarā'* capitulate on this point.

The following year, when the authority of the caliph of *Bagħdād* was once again recognized in *Ifrīkīya* by the Zīrid sovereigns, who had been formerly Fātimīd vassals, and when the town of Aleppo similarly escaped from the control of the rulers of Egypt, a new problem arose through the approach of the Salđjūk amīrs. In 435/1044 *Ṭuħrīl Beg* seized the town of Rayy, and the caliph sent al-Māwardī to him as ambassador. The object of this embassy is explained in different fashions by the chroniclers, but it seems that the caliph, while bestowing the title of *mawlā Amīr al-Mu'mīnin* on *Ṭuħrīl Beg*, wished at the same time to protest against the pillage of the recently captured town. However, the policy of keeping a balance between the Buwayhid amīr and the Salđjūk amīr which the caliph initiated was speedily compromised by various events.

The death of *Djalāl al-Dawla* in 435/1044 brought the fulfilment of Abū Kālīdžār's ambitions; proclaimed *amīr al-umarā'*, he received the title of *Muħyi 'l-dīn* and applied himself to limiting the caliph's freedom of action. After first opening hostilities with *Ṭuħrīl Beg*, he made peace with him in 439/1048; he died soon after and was replaced by his son, who received the title of al-Malik al-Raħīm [q.v.]. Until 444/1052-3, *Ṭuħrīl Beg*, after having seized *Išfahān* and approached 'Irāk, remained at the borders of the country, where troubles multiplied: incidents between Sunnīs and *Šhi'īs*, agitation by the *'ayyārūn* [q.v.], and Fātimīd propaganda. When the Turkish amīr al-Basāsīrī [q.v.] accused the caliph's vizier, Ibn al-Muslima, of summoning the Salđjūks to defend the caliphate, the vizier denounced him as a Fātimīd agent; whereupon the caliph was informed that al-Basāsīrī was preparing to overthrow him. Then, according to some chroniclers, the caliph himself or his vizier Ibn al-Muslima decided to appeal to *Ṭuħrīl Beg* for help. In fact, the outcome of these events suggests that the caliph, who never willingly accepted the advent of the Salđjūk amīr in *Bagħdād*, was not responsible for this action, which in any case was inevitable, whatever the vizier's true attitude might have been.

At the end of *Ramađān* 447/December 1055, *Ṭuħrīl Beg* entered *Bagħdād*, though declaring that he was simply passing through, and the *ħuṭba* was

proclaimed in his name. A few days later, on 2 Shawwāl/25 December, he took up residence in the "royal palace" and received from the caliph the titles of *rūkn al-dīn*, *shāhānshāh*, and *sultān*. The caliph also consented, despite himself, to give Ṭuġhrīl Beg the hand of his own daughter. Only two years later, in 449/1057, was he received in solemn audience by the caliph, who conferred on him the new title of *Malik al-mashriq wa 'l-maghrib* and gave him authority over the lands controlled by the Fāṭimid caliphs.

The rebellion of al-Basāsiri broke out in 450/1058; for a few months the rebel succeeded in having the *khufba* pronounced in the name of the Fāṭimid caliph while Ṭuġhrīl Beg was occupied in Iran in suppressing a revolt by his brother. Though first choosing to stay in Baghdād, al-Ķā'im was exiled on the order of al-Basāsiri and forced to stay for around a year at 'Āna, while the rebel attempted to negotiate with Ṭuġhrīl Beg and make use of his hostage to obtain various assurances from the Saldjūk sultan. Finally Ṭuġhrīl Beg made a direct approach to the amīr who was guarding al-Ķā'im: he secured the freedom of the imprisoned caliph, and the death of al-Basāsiri soon after enabled him fully to exercise his powers as sultan once again. The caliph could therefore no longer continue to play off rival amīrs one against the other and found himself confronting Saldjūk sultans as he had earlier confronted Buwayhid amīrs. The only difference, though that an important one, was that the new controller of the reins of military power supported a policy of Sunnī restoration that was closer to the caliphal position than Buwayhid policy had been.

In spite of appearances, relations between the caliph and Ṭuġhrīl remained no less strained. The sultan's reign was dominated in this respect by his marriage with the caliph's daughter; not only did he succeed in marrying her, he also managed to take her far from Baghdād in spite of her father's opposition.

The death of Ṭuġhrīl Beg on 8 Ramaḍān 455/3 September 1063 inaugurated a somewhat confused period during which Alp Arslān [q.v.] was mainly concerned with eliminating his rivals and fighting the Byzantines. Al-Ķā'im smoothed matters for him by opposing the ambitions of the 'Uḳaylid amīrs and refusing the offer of the Kurdish amīr, Hazārasb, governor of al-Ahwāz. For his part, Alp Arslān showed himself desirous of gaining the favour of the caliph by returning his daughter to him and having imprisoned, then put to death, al-Kunduri, the former vizier of Ṭuġhrīl Beg who had been held responsible for the intrigues leading up to the marriage. Alp Arslān was thus recognized as *āmīr al-umarā'* and sultan in Rabī' II 456/March-April 1064. He never lived in Baghdād and died in Rabī' I/January 1073. After receiving the privilege of the *khufba* from the month of Rabiab, his son Malik Shāh [q.v.] obtained the official investiture from the caliph a few months later. The latter died on 12 Sha'bān 467/March 1073, having in the usual way named as his heir his grandson 'Ubayd Allāh, who was to take the name of al-Muḳtadi [q.v.]. Religious strife was a particular feature of this latter period. The foundation of the Niẓāmiyya *madrassa* in 459/1067, which was put under the direct protection of the sultan and aimed at the diffusion of Shāfi'i law, triggered off the hostility of the Ḥanbalīs. Various incidents took place in the capital and the caliph, who hesitated to make a stand without consulting the sultan, was unable to control them.

Thus al-Ķā'im, who had followed in his father's

footsteps, was unable either to restore the power of the caliph or to impose the doctrine defined in the *Risāla ḥādīriyya*; all the same, the caliphal concept had been successfully defended in his day by the first authors of treatises on public law, al-Māwardī [q.v.] and Ibn al-Farrā' [q.v.]. It was up to his successors to try to pursue his policy.

(D. SOURDEL)

AL-ĶĀ'IM (BI-AMR ALLĀH), second caliph of the Fāṭimid [q.v.] dynasty. One of the less illustrious members of the dynasty, his name evokes the memory of grave defeats and is eclipsed by that of the "man on the donkey", the famous Abū Yazīd [q.v.].

As a ruler, however, al-Ķā'im does not appear to have been inadequate for his task nor to have lacked energy in exercising authority. Before his accession to power in 322/934, he had already had long experience of public affairs since from his youth he had been entrusted by al-Mahdī [q.v.] with a share in governing Ifrīkiya.

While still a child, Abū 'l-Ķāsim Muḥammad, the future al-Ķā'im, along with his "father" al-Mahdī, then *imām* of the Ismā'īli community, had to endure the long and dangerous emigration which took them in 289/902 from Salamiyya in Syria to Sidjilmāsa, the capital of the Midrarite Berber principality of Tāfilet, in the remotest part of the Maghrib. Then, in 299/912, aged 20 and only recently appointed heir presumptive to a caliphate that had just arisen from the ruins of the Aghlabid emirate, he was immediately compelled to undertake certain military commitments, leading the Fāṭimid armies into Lesser Kabyliya, into Tripolitania, and then into the central Maghrib. The two Egyptian expeditions which al-Mahdī hastened to place under his command, more or less in rapid succession, in 301-2/914-5 and again in 307-9/919-21, won him some renown, even though their outcome did nothing for his reputation as a soldier. Thus, at his accession he had already been put to the test, both as heir to the throne and as general.

On becoming *imām* and caliph, al-Ķā'im restricted himself to governing the powerful and prosperous realm he had inherited in conformity with the rules laid down by his "father", and to pursuing the same policy of hegemony in regard both to the 'Abbāsids and to the Umayyads of Spain. For most of his reign Ifrīkiya enjoyed a period of peace, passed over in silence by the chroniclers, who gave special prominence to bloody deeds and revolts, until the *Khāridīlī* threat burst upon him, darkening his last two years.

It would be impossible to trace the career and achievements of al-Ķā'im, in however summary a way, without briefly raising the thorny question of his ancestry. A comparative study of the Ismā'īli and the Sunnī sources led B. Lewis to put forward an original interpretation based on spiritual paternity and the theory of the *mustaharr* and *mustawda* *imāms*. According to this theory, there was, after the death of Ismā'īl, a true *imāmate* in the line of descent from al-Ḥusayn and a tutelary *imāmate* in the line of descent from al-Ḳaddāh, the former ending with al-Ķā'im, the latter with al-Mahdī, the first Fāṭimid caliph. The latter is thus, B. Lewis argued, merely

the tutor, the spiritual father of al-Kā'im, the *mustaḥarr imām*, to whom he handed over the imāmate of which he was the "trustee". The first genuine Fātimid caliph was thus al-Kā'im, and the Fātimids' *nasab* can be traced back from al-Kā'im to Fātima, through her son al-Ḥusayn.

Criticised by Ivanov in his *Rise*, discussed in detail by S. M. Stern in *Heterodox Ismā'ilism* and again in the present author's (unpublished) thesis *Le Califat faṭimide au Maghreb*, the idea put forward by B. Lewis remains attractive. The notion of *istiḍā'* would correspond to an established fact: the persecutions endured by the Fātimid pretenders, under the 'Abbāsids, compelled them to act in a clandestine manner and to entrust the imāmate during the period of occultation (*satr*) to their "trustees" (*mustawda'*) or "proofs" (*ḥudūdīa*).

On his death, al-Mahdī had left a critical situation in the remotest part of the Maghrib, caused by the volte-face of the lord of the Miknāsa, Mūsā b. Abi 'l-Āfiya, who had transferred his allegiance to the Umayyads of Spain. Immediately after his accession to the throne, al-Kā'im launched an expedition aimed at re-establishing his power in Morocco and extirpating the influence of his rival, the Umayyad al-Nāṣir. The Fātimid army, under the command of the slave Maysūr, crossed the Maghrib in a single thrust and reached Fez. Another of al-Kā'im's officers, the slave Ṣandal, had meanwhile descended upon Nakūr, which he captured, killing the local Ṣāliḥī ruler in Shawwāl 324/September 936. He then rejoined Maysūr outside the gates of Fez, which at that time was under siege. Finally the city surrendered, and the Fātimid general re-established the authority of the Idrisid Banū Muḥammad, who had remained loyal to the Fātimids, before returning victorious to Ifrīkiya.

In order to restrain the hostile Berber tribes who had settled on the frontiers of his kingdom, al-Kā'im took steps to strengthen the authority of 'Alī b. Ḥamdūn, an Arab of *Djudhamī* origin and ruler of Masīla [q.v.], over the territory of the Kamlān who, during the Ifrīkiyan campaign, had been moved to the south-east of Kayrawān. To counter the Maghrawa, a powerful branch of the indomitable Zanāta, he procured an alliance with the Ṣanhādīja of Zīrī b. Manād, whom he helped to found the city of Aṣḥir [q.v.], in 324/936, in the heart of the Algerian Atlas. The Huwwara of the province of Tripoli, who had risen in revolt under the leadership of a *Qurashī* named Ibn Ṭālūt, a pseudo-*imām*, were swiftly brought to heel.

His authority being thus re-established in the south of his realm, al-Kā'im at once considered a resumption of hostilities against the 'Abbāsids in their Egyptian province. As it is recorded under the year 323/935, this campaign against Egypt appears to have been organized by al-Mahdī himself shortly before his death. In fact, as soon as he succeeded to the throne, al-Kā'im must have resolved to employ the troops stationed at the base at Barqa, reinforced with elements from Ifrīkiya, to attack Egypt, where he had already suffered two successive defeats. It was therefore in his reign, as al-Kindī states categorically, that the third raid on Egypt took place, again without success. This time, however, the Fātimid attack was made at an unpropitious moment. Having rebelled against the *Ikhshīdīd* governor Muḥammad b. Ṭuḡḡdī [q.v.], the officers commanding the fleet, 'Alī b. Badr and Baḍīkam, and also the commander of the garrison of Alexandria, Ḥabashī, fled to Barqa where they placed themselves under the authority and in the service of al-Kā'im. To re-

inforce them, al-Kā'im sent troops under the command of his freedman Zaydān and his officer 'Āmir, known as al-Maḍjīnūn. The Kutāma occupied Alexandria on 6 *Djumādā I* 324/1 April 936, but Ibn Ṭuḡḡdī, reacting swiftly, succeeded in freeing the town and forcing the Fātimid troops to withdraw towards Barqa.

In the year of his accession, al-Kā'im resolved to resume naval operations against the Christians. A strong squadron of twenty sailing vessels, under the command of an Arab officer from the *djund* of Tripoli, Ya'qūb b. Ishāk b. al-Ward, left Mahdiyya on 7 *Raḍiāb* 322/23 June 934 and sailed towards Italy. Ya'qūb intercepted a number of Christian merchant-ships on their way from Spain and proceeded as far as Genoa, which his men captured after a fierce siege. Having sacked the town and carried off much booty, the Fātimid admiral set sail for Mahdiyya, arriving on 25 *Ramaḍān* 323/28 August 935. In addition to this attack, al-Kā'im endeavoured to intensify the *djihād* in the Byzantine territories in eastern Sicily and Calabria. To Palermo he sent a new governor, Khalīl b. Ishāk, the brother of the admiral Ya'qūb and a talented poet and his favourite general, who subjected the island to a reign of terror. For four years, from 325/937 to 329/941, Khalīl made himself notorious by his tyranny over Muslim and Christian alike. Some Arab elements who had settled there under Aghlabids were forced to flee to Christian territory, and a number of them were constrained to adopt Christianity. Native Sicilians were dispossessed of their lands and compelled to settle in forts situated along the frontiers of the Christian territories. The cadastral register [see *ḳānūn*] was burnt, thus rendering the verification of land taxes impossible in certain regions such as Agrigento.

After his accession al-Kā'im proved particularly anxious to increase his military strength and to consolidate his authority in the interior of the kingdom. For this reason, from the time of his reign the internal policy of the new rulers of Ifrīkiya became more severe. Under al-Kā'im, the country seems to have suffered to a greater extent from excessive taxation and religious persecution, and the *Ḳhārīdījī* agitation which sprang up in the Aurès and *Ḳaṣṭīliya* thus found suitable soil.

However, al-Kā'im's attitude towards this agitation seems strangely passive. He allowed the rebellion to take root among the hostile tribes of the Aurès whom the garrison of Baghāya were unable to hold in check and, when the Berbers poured through the valley of the Oued Mellegue under the banner of their *Nukkārī* leader, Abū Yazīd [q.v.], capturing in succession Tebessa, Marmāḍjanna, Laribus, Sbiba and Dougga (Tugga Terebinthina), in 332/944, he limited himself to a static defensive strategy. His reaction was lacking in both energy and foresight. Yet he had at his disposal large numbers of troops (70,000 men, according to al-Nu'mān), well equipped and well organized. Instead of launching a vigorous counter-offensive and sending his powerful forces directly against the enemy, he adopted the unfortunate idea of dividing his troops among different strategic points, thus compelling them to remain stationary and to await the invaders, and also dividing his own effort, while leaving the enemy free to take the initiative in operations. In this way, a body of troops under the command of the slave Buṣhra took up their position at Béja, another at Kayrawān under the command of Khalīl b. Ishāk, and a third was on the road between Kayrawān and Mahdiyya, led by the slave Maysūr. Abū Yazīd had no difficulty in defeating each of these

three adversaries in turn, and in *Djumādā I* 333/January 945 he began a siege of the capital, Mahdiyya. Al-Ḳā'im, however, succeeded in arousing vigorous resistance to Abū Yazīd in this maritime stronghold. Repeated attacks by the rebels were checked at the gates of Mahdiyya, which remained impregnable despite the rigours of the siege. The ardour of the rebels ultimately evaporated, and many tribal contingents returned to their mountains since there was nothing more in Ifrīkiya to pillage. Harrassing operations were successfully conducted by Fātimid troops outside Tunis and Sousse, at Cape Bon in particular, and on Abū Yazīd's rearguard, and his threat to the capital was reduced considerably. Thus, when al-Ḳā'im died there in *Shawwāl* 334/May 946, the moment had already come for his son and successor Ismā'īl, the future al-Manṣūr, to pass over to the offensive and to spend many months on the task of crushing the revolt.

(F. DACHRAOUI)

**ḲĀ'IME** (τ., originally α.; cf. ḲĀ'IM), the name formerly used for paper money in Turkey, an abbreviation for *Ḳā'ime-i mu'tebere*. The word *Ḳā'ime* was originally used of official documents written on one large, long sheet of paper; the first paper money was also manuscript on large sheets, and was also known as *sehim Ḳā'imesi*, *Ḳā'ime-i naḥdiyye*, *eurāk-i naḥdiyye*, and *eurak-i mu'tebere*. Although in the 20th century bank notes have been called *Ḳā'ime*, this term was not used for notes of the Imperial Ottoman Bank, a private bank under government charter, but only for paper issued by the government itself.

The early *Ḳā'ime* were interest-bearing treasury notes; they are, however, to be distinguished from

the many other kinds of short and long-term interest-bearing paper issued by the Ottoman government or its individual departments and known variously as *Ḳhasīne tahwīlāt*, *sergi*, *eshām-i dīdīd*, *eshām-i mūm-lāz*, etc. [see *ASHĀM*], and also from the Ottoman bonds sold principally to European investors from 1854 on. The *Ḳā'ime* became paper money, while the other sorts of paper did not, since from the start *Ḳā'ime* were intended to circulate on a par with coin and to be accepted as such by state offices and tax collectors. When, in addition to forced circulation, later issues of *Ḳā'ime* were in low denominations and without interest, it became even more obvious that this was paper money.

The first issue of *Ḳā'ime* probably occurred in July or August of 1840, in the crisis period, as 'Abd al-Maḍjīd [q.v.] began his second year as sultan. (*Taḳ-wīm-i Weḥāyi'*, 15 *Raḍjāb* 1256; *London Times*, 18 September 1840). These handwritten treasury notes had a face value of 500 piastres, matured in eight years, and bore interest payable semi-annually to the bearer. Modern Turkish scholars uniformly put the interest rate at 8%, but it appears that the first issues bore 12½%. The total value of the first issue amounted to 160,000 Turkish pounds. Other larger issues followed in September and October in denominations of 50, 100, 250, 500, and 1,000 piastres; the format was somewhat reduced for convenience of circulation. These series were unnumbered and easy to counterfeit, although in the second issue indelible ink was used and the *tughra* [q.v.] and seals of the finance minister and ministry were affixed.

As a further measure against the growing counterfeiting, new printed *Ḳā'ime* were decreed in 1841 (though perhaps not issued until 1842) and the holders of manuscript issues were given three months to exchange theirs for the new. Circulation of the *Ḳā'ime* was now restricted effectively to Istanbul, since provincial officials were unable to distinguish the counterfeit from the genuine. These issues were popularly called *Ṣā'ib Pasha Ḳā'imesi* after the then finance minister. When the printed *Ḳā'ime* were also counterfeited, a new printing (1844?) was done in *ta'īlīk* letters. Interest was reduced in 1844 to 6%.

Interest was regularly paid in the 1840's, and some holders simply kept the *Ḳā'ime* as an investment. But new issues included smaller denominations, down to 10 and 20 piastres at the time of the Crimean War (known as *ordu Ḳā'ime*), that bore no interest. An estimated 1,750,000 pounds of *Ḳā'ime* circulated at the start of the war. During the war this amount was more than tripled, and the value of *Ḳā'ime* declined seriously. Three efforts to retire the *Ḳā'ime* after the war, through two foreign loans and a capital levy on the Istanbul populace, narrowly failed. A very large issue of 12,500,000 pounds to meet current needs in March/April 1861 produced chaos. On December 12 of that year, when the *Ḳā'ime* had depreciated to one-third or less of face value, merchants refused it, shops were sacked, and panic gripped Istanbul. Fu'ād Pasha, newly appointed grand vizier, drew up a plan involving a new foreign loan to retire the *Ḳā'ime*, government economies, the institution of a central government budget, and the creation of the Imperial Ottoman Bank. With English backing, the loan of 1862 sufficed to retire all *Ḳā'ime*, which were redeemed 40% in coin and 60% in so-called *Ḳonsolide* (Consols) or *eshām-i dīdīd*, government bonds at 6% interest.

No further *Ḳā'ime* were issued until the crisis period initiated by the revolt in Bosnia-Herzegovina: two million pounds on 13 August 1876, one million

on 11 November, seven million on 5 January 1877, and six million on 3 September. Denominations ranged from 100 piastres down to five and later one piastre; none bore interest. Only about two million were retired as intended, and the value plummeted rapidly to a bottom of 1200 piastres *kâ'ime* for one gold pound. Though legally valid in all provinces except the Hıdı̇z, the Yemen and Tripoli, circulation was largely in Istanbul as provincials distrusted and refused the paper. The government redeemed the outstanding 14 million pounds of *kâ'ime* in 1879-80 at one fourth its value in gold.

Again, the critical years of World War I brought further issues of paper money. When the Ottoman government pressed Germany for gold shipments to meet war expenses, the German government urged the Turks to issue paper money instead. This they refused to do without gold cover. The solution contrived was that the Ottoman Public Debt Administration acted as a bank of issue for seven issues of *kâ'ime*, 1915 to 1918, totalling 160 million Turkish gold pounds. Each issue but the last was covered either by gold or by treasury certificates deposited by the German government in Berlin under the seal of the Ottoman Public Debt. The paper money, which bore no interest, ranged from 1,000 pounds down to five piastres. This paper also depreciated greatly and was refused in the provinces. With Germany's defeat the gold backing was lost to the Allies. The paper money, nevertheless, continued to circulate.

The Turkish Republic inherited this same paper currency, which was not increased in amount after 1918, but decreased somewhat through wear. After 1923 the value remained relatively stable. Worn bills were replaced in 1927. From the 1930s to the present (1973) the Türkiye Cumhuriyeti Merkez Bankası has issued paper money, earlier referred to as *evrak-ı nakdiye* and now usually just as *kâğıt para* or *banknot*; the term *kâ'ime* has become obsolete.

**KÂ'İM-MAKÂM** In the Ottoman Empire the title of *Kâ'im-makâm* was borne by a number of different officials, the most important of whom was the *şadâret kâ'im-makâmı* or *kâ'im-makâm paşha* who stayed in the capital as deputy when the grand vizier had to leave for a military campaign. The appointment of a *kâ'im-makâm* seems to have begun in the 10th/16th or even in the 9th/15th century and it lasted until the end of the Empire. The *kâ'im-makâm* enjoyed almost all the authority of the grand vizier, issuing firmans and nominating functionaries, but he was not allowed to intervene in the area where the army was operating. He was especially influential in the administration of the capital. Selected earlier from among the viziers, he often intrigued against the grand vizier with the aim of succeeding him. A *kâ'im-makâm* was also appointed at the removal of a grand vizier when the successor had to travel from some provincial governorate. In this case the tenure of the *kâ'im-makâm* lasted only for a short period without having much distinction. During the last decades of the Ottoman Empire a cabinet minister or the *şaykh al-Islâm* [q.v.] was usually nominated *kâ'im-makâm* upon the grand vizier's illness or his absence from the capital.

The reform movement in the Empire added new meanings to the term. The position of a *kâ'im-makâm* was now instituted as a military rank corresponding to lieutenant-colonel in the *‘Asâkir-i Mansûre-i Muhammediyye* Army, established by Mahmûd II in 1241/1826. The term remained in common use until the 1930s, to be replaced then by that of *yarbay*. The governor of a *sandjâk* [q.v.] was equally called *kâ'im-makâm* when the Ottoman civil administration was reorganized in the first years of the *Tanzimat* [q.v.]. By the law of 8 November 1864 revising Ottoman provincial government, the *kâ'im-makâm* became the governor of a *kađâ* [q.v.], appointed by the sultan. The republican regime maintained in essence the 1864 law, and thus the *kâ'im-makâm* (“*kaymakam*”) still continues to be the administrator of a *kađâ*.

IN OTTOMAN EGYPT, while possessing in general the sense of “lieutenant” of a higher official, *kâ'im-makâm* had a number of specific usages.

(a) Before Muḥammad ‘Alî Paşha, the term was applied (i) to the acting viceroy, who held office between the death or removal from office of one viceroy and the installation of the next. After 1013/1604, the office seems invariably to have been held by a bey, hence, in practice, by a member of a Mamlûk household. The deposition of a viceroy and the appointment of a *kâ'im-makâm* became, particularly in the 12th/18th century, a device by which a

Mamlūk faction would legitimize its ascendancy. The term was also used in this period, (ii) for the general agent of a *multasim* in the administration of his *iltisām*; he would usually be a member of the *multasim*'s Mamlūk household; (iii) for the agent of a naval commander (*ḥapūdān*), administering his master's financial assignments in *emānet*.

(b) Under Muḥammad 'Alī Paṣhā, the old usages of the term became obsolete, and it was applied to specific grades in the military and administrative hierarchies: (i) In the reorganized and westernized army, the rank of *ḥā'im-makām* was equivalent to lieutenant-colonel; (ii) in the administration the *ḥā'im-makām* was in charge of a *nāhiya* (sub-district) and had special responsibility for the maintenance of the irrigation-system. His immediate superior was the *ḥākim al-khuṣṣ* (district officer).

(P. M. HOLT)

**KĀ'IM-MAKĀM-I FARĀHĀNĪ.** In the early *Kādjār* [q.v.] period the title of *Kā'im-makām* [see above] was held by two statesmen, Mirzā 'Isā Farāhānī, better known as Mirzā Buzurg (b. ca. 1167/1753-4 d. 1237/1822), and his son Mirzā Abu 'l-Kāsim-i Farāhānī (1193/1779-1251/1835), both of whom were ministers of the crown prince 'Abbās Mirzā [q.v.]. A quasi-official title, *Kā'im-makām* signified the representative of the *Ṣadr-i a'zam* [q.v.] at the petty court of the crown prince in *Ādharbāyḍjān*. Both father and son were of energetic and incorruptible character, but the latter was more remarkable, not only as a poet, but also as "a true Persian diplomatist, acute and far-sighted", to use J. B. Fraser's words. Mirzā Abu 'l-Kāsim succeeded to his father's office in 1238/1822, and served the crown prince with much loyalty and zeal. He accompanied the crown prince in battle and was the instigator of his attempts at reform. 'Abbās Mirzā died (1249/1833) before his father, but the political skill of *Kā'im-makām-i Farāhānī* secured the throne for Muḥammad Mirzā, 'Abbās's son, when Fath 'Alī Shāh died shortly after. At Muḥammad Shāh's accession, Mirzā Abu 'l-Kāsim became prime minister of Persia, but his accurate budgeting of court expenditure, together with his haughty and disdainful attitude towards the court grandees, earned him powerful enemies who brought about his arrest, followed by his tragic death.

Mirzā Abu 'l-Kāsim was an outstanding prose-writer and also wrote poetry. His style is distinguished and is still considered a model of good writing. Numerous editions of his works exist, the best of which is the *diwān*, *Shi'r Kā'im-Makām*, ed. H. Waḥīd Dastgirdī, Tehran 1926, and the *Munsha'āt Kā'im-Makām*, ed. *Djahāngīr-i Kā'im Makāmī*, Tehran 1337 s.

*Bibliography*: Biographical data concerning the two *Kā'im-makāms* are to be found in most of the historical and anthological works of the *Kādjār* period. See, for instance, Storey, ii, 2, 332 ff. Among other references the following deserve special attention: Maḥmūd Mirzā *Kādjār*, *Safinat al-Maḥmūd*, ed. A. *Khayyāmpūr*, 2 vols., Tabriz 1968, i, 74-6; Riḍā Kūli Mirzā, *Safar-Nāma*, ed. A. **KĀ'IT BĀY**, AL-MALIK AL-AṢḤRAF ABU 'L-NAṢR SAYF AL-DĪN AL-MAḤMŪDĪ AL-ZĀHIRĪ, sultan of Egypt and Syria (872/1468-901/1496), was purchased by Barsbāy [q.v.], manumitted by Sultan *Djakmak*, became a life-guard, then *Dawādār Saḡhīr*, i.e., assistant *dawādār* in the office of the Grand *Dawādār* [see *DAWĀDĀR*], then amīr of 10 Mamlūks under Ināl [q.v.], *Ṭablahkhāna* (i.e., amīr with the right to have a band accompanying him), under Sultan *Khushkadam* [q.v.], inspector of houses of refreshment and shortly afterwards commander of a thousand (*Muḥammad Alf*). In 872/1467-8 he became *Ra's nawbat al-Nuwwāb* (i.e., Commander of the Mamlūks of the guard).

When *Temirboghā* ascended the throne in *Djumādā I* 872/Dec. 1467, he appointed his friend *Kā'it Bāy atābek* but the sultan had no real power, as he had very few supporters among the Mamlūks under his command. He had not the money to win over new followers; the treasury was empty. After an unsuccessful rising by the *Ustādār Khā'ir Bey* the crown was offered in the month of *Radjāb* of the same year (Feb. 1468) to *Kā'it Bāy*, who accepted it after some hesitation. *Temirboghā* retired into private life to *Damietta*, to which he was not taken as a prisoner but travelled in perfect liberty accompanied by some friends. Unlike other Mamlūk sultans, *Kā'it Bāy* treated deposed sultans or descendants of former sultans throughout his reign with magnanimity and honour, frequently invited them to polo tournaments in *Cairo*, allowed them to make the pilgrimage to *Mecca* and even allowed them to visit the capital in his absence without any suspicion or fear of conspiracies.

*Kā'it Bāy*'s chief political problem was his relations with the Ottomans. The rivalry between them and the Egyptians found expression in the fighting among their vassals in *Asia Minor*. The ruler of *Albistān* [q.v.], *Shāh-suvār* [see *DHU 'L-KADR*] was at war with *Egypt* [see *KHUSHKADAM*] and was secretly supported by the Ottomans, while *Kā'it Bāy* assisted prince *Aḥmad* of *Ḳaramān* in his war with *Meḥemmed II*. The first two expeditions sent against *Shāh-suvār* (872 and 873) ended disastrously through the carelessness of the Egyptian commanders and more especially the lack of discipline among their troops and the rivalry between the Egyptian and the Syrian corps. *Kā'it Bāy* later succeeded in depriving *Shāh-suvār* of the help of the Ottoman sultan by agreeing to cease assisting *Aḥmad* of *Ḳaramān*. Thus weakened, *Shāh-suvār* was decisively defeated in 876/1471 by the *Atābek Ezbek*. *Shāh-suvār* fell back to *Zamanṭū*. Besieged there, he capitulated on condition that he was allowed to remain in possession of his kingdom as vassal of the sultan; but he was taken prisoner, brought to *Cairo* and executed contrary to the laws

of war. The prince of the Aḳ-Ḳoyunlu, Uzun Ḥasan, the ruler of Diyār Bakr and a part of Persia, was a dangerous rival to Kā'it Bāy, and advanced from triumph to triumph; in 872/1468 he defeated the sultan of the Ḳara-Ḳoyunlu and in 873 the sultan of Samarḳand, but when in 876/1471 he declared war on Meḥemmed II he was defeated and thus became less dangerous for Kā'it Bāy. He died in 880/1475 and was succeeded by Ya'ḳūb Bey. A quarrel arose between Bayindir, the latter's governor in al-Ruhā (Edessa), and the sultan's general Yeṣḥbek, because Bayindir had given shelter to Sayf, the rebel chief of the Beduins of Ḥamā. Yeṣḥbek advanced on al-Ruhā and, although satisfaction was offered in every respect, he insisted on besieging the town, but was defeated during a sortie and killed with several of his staff; other Egyptian notables were taken prisoner. Kā'it Bāy could not wipe out this defeat and had to make peace, as he was threatened with a struggle with the new Ottoman sultan Bāyazid [q.v.]. Apart from continual friction regarding the ownership of Albistān, Bāyazid felt himself threatened, because Kā'it Bāy had given a friendly welcome to his brother Djem [q.v.], the pretender to the throne, and had even encouraged him to fight against Bāyazid. An embassy sent to Bāyazid to endeavour to maintain peace was unsuccessful. The Ottomans invaded Cilicia in 891/1485 and occupied Ṭarsūs and Adana; other Ottoman troops besieged Malaṭya. The Egyptian forces operated with success against both armies especially as Kā'it Bāy had won over 'Alā' al-Dawla, prince of Albistān. In 893/1488 the Ottomans were no more successful. An endeavour to land a considerable body of troops in the bay of Iskandarīn [q.v.] failed. In 895/1490 the Atābek Ezbek inflicted a decisive defeat on the Ottomans at Ḳayşariyya in Asia Minor, where several generals were captured. Kā'it Bāy showed a wise moderation in maintaining his inclination for peace, recognizing the enormous resources of the Ottomans, and peace was concluded in 896/1491. The rest of the reign of Kā'it Bāy was peaceful but the domestic situation did not improve. It is true that he succeeded by his authority alone in preventing a fight between the hostile Mamlūk factions, but he could not permanently restrain their outbursts and he did not succeed in introducing a sound financial system.

Kā'it Bāy's reign stood out above those of the other Circassian Mamlūks because of its duration but also because of his initiative and effectiveness. Kā'it Bāy was well disposed towards the trading nations. While many of his predecessors, Barsbāy in particular, had put obstacles in the way of the activities of Italian merchants, Kā'it Bāy granted them new privileges and made no attempt to monopolize the spice trade. It is quite probable that trade between the sultan's lands and Christian Europe did in fact make great strides during his reign; but Kā'it Bāy also introduced measures to protect the interests of native merchants, taking appropriate action in relation to the governments of other states. His understanding of the economic interests of his country is also attested by the many inscriptions, which have recently been published, dealing with his abolition of certain taxes that weighed heavily on various branches of industry. Moreover, he spent considerable sums of money in construction work, such as the new buildings in the citadel of Cairo, his mausoleum, a Ṣūfi monastery (at *Khānḳāh*, near Cairo), the repair of the mosque of Medina and the aqueduct supplying water to the mosque at Jerusalem.

It was his military activities above all, however,

which swallowed up his financial resources. According to Ibn Iyās, for the conduct of all his wars Kā'it Bāy spent more than 7 million *dīnārs* (*aṣḥrafī*), discontinuing the gratuities he had to pay to his troops when they returned to Cairo, which was also an enormous sum. This information is borne out in the accounts of other writers. To this must be added his expenses connected with fortifications, such as the repair of the fortresses of Alexandria, Aleppo and other towns. Since the Mamlūk sultans had never succeeded in establishing a regular system of taxation, Kā'it Bāy was obliged to extort arbitrary contributions, known as *muṣādara*, from his subjects. When he was in need of money and the treasury was empty he levied contributions from leading citizens, from merchants, from the non-Muslim communities and even imposed new taxes on various branches of commerce and property in mortmain. Such measures reinforced the economic recession which had long marked industrial and commercial development in Egypt and Syria. In spite of the increase in international trade and the great efforts of the sultan, who embarked on tours of inspection in all the provinces (though not before his old age), the seemingly rich and powerful Mamlūk state under Kā'it Bāy was heading for disaster. When he abdicated, one day before his death, the Mamlūk kingdom was so impoverished and enfeebled that it was no match for Ottoman Turkey.

(SOBERNHEIM—[E. ASHTOR])

AL-ĶĀ'ĶĀ', Arabic term for a man whose foot-joints can be heard cracking when he walks, but often found as a proper name in the first days of Islam and particularly among the Tamīmīs; the last to bear this name seems to have been al-Ķā'Ķā' b. Dirār al-Tamīmī, chief of police for 'Isā b. Mūsā [q.v.], governor of Kūfa from 132/750 to 147/764 (Ibn al-Kalbī-Caskel, ii, 465; al-Ṭabarī, iii, 131, 347). Among those who bore this name, apart from al-Ķā'Ķā' b. 'Amr [see the following article] and the poets cited by al-Marzubānī (*Mu'djam*, 329-30), especially noteworthy was the Companion of the prophet al-Ķā'Ķā' b. 'Abd Allāh b. Abī Ḥadrad, who took part along with his father in the events at Wādi Iḍam in 8/629 [see ḤAMD], after which was revealed the ḳur'ānic verse IV, 96/94, a warning and even a reprimand (*Sīra*, ii, 626-7; see also Ibn 'Abd al-Barr, *Istī'āb*, iii, 263; Ibn Ḥadžjar, *Iṣāba*, nos. 7126, 7342).

Another Companion was al-Ķā'Ķā' b. Ma'bad b. Zurāra al-Tamīmī, the nephew of Ḥādġib b. Zurāra [q.v.] and *sayyid* of the Dārim, who made common cause with Saḍġāh [q.v.]; he was renowned for his generosity and nicknamed Tayyār al-Furāt (see Ibn al-Kalbī-Caskel, ii, 465; al-Ṭabarī, i, 1913; al-Dī'āhīz, *Bayān*, iii, 88; idem, *Ḥayawān*, index; *Naḳā'id*, 258, 771; Ibn Hishām, *Sīra*, ii, 621; Ibn Ḥabīb, *Muḥabbar*,

141; Mubarrad, *Kāmil*, 265, 419; Ibn 'Abd al-Barr, iii, 263; Ibn Ḥadjar, *Iṣābah*, no. 7128).

Also worthy of note are the names of al-Ḳa'Ḳā' b. 'Aṭīyya al-Bāhili, who lived in Ḳhurāsān and was taken prisoner by the Ḳhārīdītes (Mubarrad, 996); and al-Ḳa'Ḳā' b. Ḳhulayd al-'Absī, who was secretary to al-Walid b. 'Abd al-Malik between 86/705 and 96/715 (al-Djāhshiyārī, 47; al-Ṭabarī, ii, 837, 1300, 1312; Ibn al-Kalbī-Caskel, ii, 465; Ya'ḳūbī, ii, 373). A *tābi'ī*, whose generosity became proverbial, thanks to two verses in his praise, al-Ḳa'Ḳā' b. Ṣhawr b. 'Iḳāl al-Dhuhli, is cited among the associates of 'Ubayd Allāh b. Ziyād [q.v.]; he is numbered among the witnesses against Ḥudjir b. 'Adī [q.v.] in 51/671 and among the officers who took part in the action against Muslim b. 'Aḳil [q.v.] at Kūfa in 60/680 and that against al-Mukhtār b. Abī 'Ubayd [q.v.] (al-Djāhiz, *Bayān*, index; idem, *Ḥayawān*, vi, 327; idem, *Tarbi'*, 85; Mubarrad, *Kāmil*, 152; al-Ṭabarī, ii, 133, 256-7, 272, 523; Ibn al-Kalbī-Caskel, ii, 465; Ibn 'Abd Rabbih, *Iḳā'*, iii, 311; al-Marzubānī, 330; Ibn Durayd *Ishṭihāk*, 211; Ibn Ḳutayba, *Ma'ārif*, 99; Ibn Ḥadjar, *Lisān al-Mizān*, iv, 474-5). Lastly, there is another belated *tābi'ī*, al-Ḳa'Ḳā' b. Ḥakim al-Azdī, who settled in Baṣra and was a contemporary of al-Mahdī, (Ibn Ḥabīb, *Muḥabbar*, 407; Ibn Ḳutayba, *Ma'ārif*, 66; al-Mas'ūdī, *Murūdj*, vi, 257; al-Nawawī, *Tahdhīb*, 513-4). (ED.)

**AL-ḲA'ḲĀ' B. 'AMR B. MĀLIK AL-TAMĪMĪ**, a warrior of the early Islamic period who, after the death of the Prophet, joined Saḍjāh [q.v.] for a time and became the lieutenant of Ḳhālīd b. al-Walid [q.v.], taking part in the battle of Buzāḳha [q.v.] as early as 11/632. After the capture of al-Hira, he commanded a detachment which won a victory over the Persians in the region of al-Anbār, probably in 12/633. In Rādjab 13/August-September 635, he took part in the conquest of Damascus and the following year led a troop of cavalry at the battle of Yarmūk [q.v.]. He fought with distinction at al-Ḳādisiyya [q.v.], where his intervention was timely. He is cited among the brave warriors who captured al-Madā'in [q.v.] and he must have commanded the vanguard at the battle of Djalūlā' (16/637 [q.v.]) and established a garrison at Hulwān [q.v.]. He also took part in the capture of Nihāwand (21/641-2). Before the battle of the Camel [see AL-DJAMAL] 'Alī sent him to Baṣra to negotiate with Ṭalḥa and al-Zubayr. Later he settled at Kūfa. Al-Ḳa'Ḳā', a much-loved heroic figure, was also known as a poet; a few of his verses celebrating his military exploits are extant.

**KAKHTĀ**, a fortress, now an imposing ruin, which stands on a precipitous ridge dominating the ancient site of Arsaneia in Commagene, recently identified by F. Dörner; the name does not appear before the 6th/12th century. The region, of which Gerger, on the upper reaches of the Euphrates at the mouth of the gorges, was in reality the chief centre, played only a minimal role in the Arab-Byzantine wars during the first centuries of Islam, since the main passes lie further to the west or north, and there was

no need for the fortress of Kakhtā, which commanded the outlet of a valley in the eastern Taurus, to be built and developed until the time of the Armenian immigration, followed by the Turkish conquest and the short-lived Frankish conquest (by the County of Edessa). The land was then relatively fertile, and upstream from Kakhtā was situated the monastery of Mar Barṣawma, one of the principal residences of the Patriarchate of the Christian Monophysite (Jacobite) Church. It was only after the fall of the County of Edessa that Kakhtā became a Muslim fortress, at first in the hands of Artukids [q.v.] of Āmid and Ḳhanzī (545/1150) and then of the Saldjūqs of Rūm (623/1226), who made it one of the bases for their power in the eastern Taurus and for expansion into Upper Mesopotamia. For a short time it had a more important role, during the struggles between the Mongols and the Mamlūks for possession of the borderland between Syria, the Djazīra and Anatolia. Aided by the Turkomans, the Mamlūks arrived in the 8th/14th century, and thrust a wedge between the Mongol protectorates as far as Malatya. The occupation of Kakhtā by the Mamlūk sultan al-Manṣūr Ḳalāwūn [q.v.] (1280) marked one of the principal stages in this advance, and it is to the participation in this expedition of his private secretary, the historian Ibn 'Abd al-Zāhir, that we owe the valuable description of the fortress and its condition at that time, which the author inserted in the biography of his master. Considerable work in rebuilding and enlarging the fortress was begun on Ḳalāwūn's orders, and completed by his son al-Nāṣir Muḥammad; some fine inscriptions bear witness to this work (it is hard to see why Ḥamdī Bey, quoted in *EI*<sup>1</sup>, attributed to an al-Manṣūr in 525 an inscription which is clearly from 685/1286), and its full extent will be revealed by the excavations and studies being made at the present time under the direction of F. Dörner. However, the decline of the İlkhānid empire caused the eastern Taurus to become an isolated area once again; the wars left only Kurds and Turkomans in the region, and after the final episodes, in which Kakhtā passed alternately into the hands of the Aḳ-Ḳoyunlu and of the Mamlūks, it ultimately disappeared when the Ottomans became the sole rulers of all the neighbouring countries. Today, at the foot of the ruins, there is nothing more than a poor hamlet in the middle of the heaps of stones.

ruins in about 1890 in Humann und Puchstein, *Reise in Kleinasien*, 1890, 186. (CL. CAHEN)

**KĀKŪYIDS**, or KĀKWAYHIDS, a dynasty of Daylamī origin which ruled over part of *Djibāl* or west-central Persia during the first half of the 5th/11th century as virtually independent sovereigns, and thereafter for more than a century as local lords of Yazd, tributary to the Saldjūks. The rise of the Kākūyids is one aspect of the "Daylamī interlude" of Iranian history, during which hitherto submerged Daylamī and Kurdish elements rose to prominence. Under the dynamic leadership of the greatest member of the dynasty, 'Alā' al-Dawla Muḥammad, the Kākūyids played an important rôle in the politics of western Persia at a time when three great powers, the Būyids, the Ghaznawids and then the Saldjūks, were striving for power there.

i. *Political and dynastic history.*

The founder of the line, 'Alā' al-Dawla Abū *Dja'far* Muḥammad b. *Dushmanziyār* (thus in most of the literary sources: Kākūyid coins invariably have *Dushmanzār*, lit. "afflicting the enemy [through his military prowess]", cf. Justi, *Iranisches Namenbuch*, 88), was the son of a Daylamī officer, *Rustam Dushmanziyār*, who was in the service of the Būyids of Rayy and *Djibāl*. Muḥammad often appears as "Ibn Kākūya" or "Pisar-i Kākū" in the historical texts. These sources generally explain *kākūya* as a hypocoristic from Daylamī *kākū* "maternal uncle", *Dushmanziyār* being the uncle of the famous *Sayyida*, mother of the Būyid amir of Rayy, *Maḍjīd al-Dawla Rustam b. Fakhr al-Dawla* (387-420/997-1029), cf. the modern Luri use of *kākā* = "uncle" in a jocular, friendly sense. *Sayyida* was thus Muḥammad's first cousin. *Dushmanziyār* was granted *Shahriyār* in the Elburz Mts. region by *Maḍjīd al-Dawla*. The date of his death is uncertain, but in about 398/1007-8 we find his son Muḥammad governing *Iṣfahān* on behalf of the Būyid amir; and thus begins the Kākūyid hold on that city which was to endure substantially down to the Saldjūk conquest of *Iṣfahān* at the beginning of 443/1051. The internal weakness of the local Būyid amirate, with *Maḍjīd al-Dawla* dominated by his forceful mother, enabled Muḥammad to constitute himself as the military defender of the Būyids. In 411/1020-1 we find him suppressing a revolt of Turkish soldiers in *Hamadhān* for *Maḍjīd al-Dawla's* brother *Shams al-Dawla*; in 414/1023-4 he seized *Hamadhān* from the Daylamī garrison there and went on to attack the Kurdish 'Annāzids [q.v.]; in 417/1026 he put down unrest among the Kurds of *Djūrakān* or *Gūrān*; and in 418/1027 he repelled the concerted invasion of *Djibāl* by the *Bāwandid Ispahbadh* of *Ṭabaristān* and the *Ziyārid Manūčīr b. Kābūs*, who had come to the aid of local Daylamī rebels. Whilst still acknowledging Būyid overlordship on his coins, Muḥammad was now largely undisturbed in his control of western *Djibāl* and the adjacent parts of *Kurdistān*. There are extant coins of his from *Iṣfahān*, *Hamadhān*, *Asadābād*, *Ḳirmīsīn*, *al-Ḳaṣr*, *Buruđjird*, *Djurbādhkān*, *Shābūr-Ḳhwāst*, *Dīnawar*, *Karādī* in the *Rūdhrawar* district, *Rayy* and *Yazd*; their legends show how he gradually acquired an impressive string of *alkāb* or honorific titles, comprising those of 'Alā' al-Dawla, 'Aḍud al-Dīn, *Fakhr al-Milla* and *Tādī al-Umma*.

When *Mahmūd* of *Ghazna* occupied *Rayy* in 420/1029 and overthrew the Būyids there, 'Alā' al-Dawla Muḥammad's position was threatened by the efforts of *Mahmūd's* son *Mas'ūd* to extend *Ghaznavid* control over north-western Persia, and shortly afterwards, the appearance of *Oghuz* raiding bands further complicated the situation. On more than one occasion,

he lost *Iṣfahān* and *Hamadhān* to the *Ghaznawids*, fleeing for refuge to the Būyids of *Khūzistān* or to the *Musāfirids* of *Ṭarum*. But the *Ghaznawids* always regarded "Pisar-i Kākū" as their implacable opponent, as *Bayhaḳī's* history shows. His statesmanship and pertinacity were such that he was always able to recover his position after reverses. On two occasions he even held *Rayy*, and it was probably in 421/1030 that he captured *Yazd* and minted coins there, the farthest outpost in the east of Kākūyid power. Possession of the rich towns of *Djibāl* enabled him to hire mercenaries, Daylamī and Kurdish, for his army, and also to recruit *Oghuz* *Türkmen* fleeing westwards from the *Ghaznawids* in *Khurāsān*. The historian of *Iṣfahān*, *Māfarrukhī*, praises 'Alā' al-Dawla Muḥammad for his care to maintain all fortresses in his territories, his ingenuity in planting spies in neighbouring regions, and his sense of realism, knowledge of when resistance was possible and when conciliation and yielding were wisest.

GENEALOGICAL TABLE OF THE  
KĀKŪYIDS

With the collapse of *Ghaznavid* authority first in the west and then in *Khurāsān*, 'Alā' al-Dawla Muḥammad was for a brief period completely independent and acknowledged no suzerain on his coins. The increasing strength of the Saldjūks and the relentless extension of his power westwards by *Ṭoḡhrīl Beg* were, however, bound to press on the Kākūyids. In 429/1037-8 'Alā' al-Dawla Muḥammad built a protective wall around *Iṣfahān*, but he died in 433/1041-2. His eldest son, *Zahir al-Dīn Shams al-Mulūk Abū Manšūr Farāmūrz* had already discerned the trend of events; he was present with *Ṭoḡhrīl* on the battlefield of *Dandānkān* in 431/1040, when the victorious Saldjūk leader granted to him *Rayy* and *Iṣfahān*. When 'Alā' al-Dawla Muḥammad died, there ensued a struggle amongst his sons over the Kākūyid inheritance. *Farāmūrz's* succession in *Iṣfahān* was contested by his brother *Abū Ḥarb*, who secured help from the Būyid amir of *Fārs* and *Khūzistān*, *Imād al-Dīn Abū Kālidjār*, but nevertheless failed to capture *Iṣfahān*. From 438/1046-7, when *Ṭoḡhrīl* besieged him in *Iṣfahān*, till 433/1051, *Farāmūrz* acknowledged on his coins *Ṭoḡhrīl* as suzerain. In *Muḥarram* 433/May-June 1051 *Ṭoḡhrīl* finally captured *Iṣfahān* after a year's siege, razed its walls and moved his capital thither from *Rayy*. *Farāmūrz* received in compensation the towns of *Yazd* and *Abarḳūh* in northern *Fārs*, and ended his days as a faithful vassal of the Saldjūks; thus he was a member of the delegation led by

Kundurl in 453/1061 to seek the hand of the caliph al-Kā'im's daughter for Toḡhrīl, and of the sultan's retinue when he went to Baghdād two years later to meet his wife.

A further brother of Farāmūrz, 'Alā' al-Dawla Abū Kālīdjār Garshāsp, had been governor of Hamadhān and Nihāwand, i.e., the western part of the Kākūyid dominions, during his father's lifetime, and had defended Hamadhān against the so-called "Irā-ki" Türkmēn when they besieged it in 420/1029. In 430/1038-9 the town was again attacked by the Oghuz, suffering a frightful sacking, but the Türkmēn were soon afterwards repulsed by 'Alā' al-Dawla Muḥammad himself. When the latter died, Garshāsp succeeded him in Hamadhān and Nihāwand, recognizing Farāmūrz as his overlord. But Garshāsp soon clashed with Toḡhrīl Beg, and tried to get help from the Büyid Abū Kālīdjār; in exasperation, Toḡhrīl in 437/1045-6 sent his half-brother Ibrāhīm Ināl to seize first Hamadhān, and then, two years later, Kanguwār. Unlike Farāmūrz, Garshāsp remained hostile to the Saldjūks down to his death in exile in Khūzistān in 443/1051-2; just before this, he had been in Iṣfahān and had been in touch with Mawdūd b. Mas'ūd of Ḡhazna, who was endeavouring to organize a grand anti-Saldjūk coalition.

The descendants of Farāmūrz lived out their lives as provincial *muḳtā's* under the Great Saldjūk sultans, honoured as former minor rulers and now closely linked by marriage to the Saldjūk royal family. References to these later Kākūyids are very sparse in the general chronicles, and the main source for them is the local history of Yazd by Dja'far b. Muḥammad Dja'fari. They do not seem to have exercised minting rights; at least, no Kākūyid coins are extant after those of Farāmūrz.

Mu'ayyid al-Dawla or 'Alā' al-Dawla 'Alī b. Farāmūrz, ruler of Yazd, married Ḡaḡrī Beg's daughter Arslan Khātūn in 469/1076-7. He spent much of his time in Iṣfahān at Malik-Shāh's court, as is shown by the anecdote in Niẓāmī 'Arūḍī Samarḳandī's *Čahar maḳāla* (ed. Browne, 41-3, revised tr. 46-8), where Amīr 'Alī commends the poet Mu'izzī to the sultan's patronage. Eventually he died in battle near Rayy fighting for the claimant Tutuṣh b. Alp Arslan against Sultan Berk-yaruḳ (488/1095). 'Alī's son 'Alā' al-Dawla 'Aḳud al-Dīn Abū Kālīdjār Garshāsp also held Yazd and was high in the favour of Sultan Muḥammad b. Malik-Shāh and then in that of his son Maḥmūd. According to Anūshīrwān b. Khālid, Maḥmūd at first regarded Garshāsp like a brother, but he fell from grace and was imprisoned by the sultan; henceforth he became a fierce partisan of Sandjār (he had married the sister of Muḥammad and Sandjār), and in 513/1119 urged him to invade western Persia and join battle with Maḥmūd at Sāwa. There is mentioned in Muḥammad b. Ibrāhīm's history of the Saldjūks of Kirmān a dispute within the Kākūyid family in Yazd during the later years of the Saldjūk amīr Arslan-Shāh b. Kirmān-Shāh (495-537/1101-42), in which the amīr intervened to restore the dispossessed party; this incident must have fallen within Garshāsp's time, but no further details are known. A somewhat confused later source implies that Garshāsp was killed fighting at Sandjār's side at the battle of the Kaṭwān Steppe in 536/1141 against the Kara Khitāy. The last decades of the Kākūyid family are very obscure. Garshāsp seems to have left no male heir and during the reign of the penultimate Great Saldjūk sultan, Arslan b. Toḡhrīl (556/1161-571/1176), his two daughters governed Yazd. The Sultan decreed that one of the commanders of the

Yazd garrison should become Atabeg for them. In this way, there begins the line of Atabegs of Yazd, that of Rukn al-Dīn Sām b. Lankar and his brother 'Izz al-Dīn Lankar. These Atabegs were at the outset linked by marriage to the last Kākūyids, since Rukn al-Dīn married one of Garshāsp b. Alī's daughters; the Atabeg 'Alā' al-Dawla Ata-Khān, who was killed in 624/1227 fighting for the Kh'arazm-Shāh Djalāl al-Dīn against the Mongols, was their offspring. The line of Atabegs persisted in Yazd throughout the 7th/13th century, after which Yazd eventually came under the control of the Muẓaffarids [q.v.].

## ii. Cultural.

By the time of the Kākūyids' rise to power, the Daylamī rulers of Persia had emerged from their pristine barbarism and grossness, and we find 'Alā' al-Dawla Muḥammad assuming the responsibilities of the paternalistic Islamic ruler in his principality. The cost of the walls which he built around Iṣfahān, their circuit running to 15,000 paces not counting the defences of the outlying suburbs, was a burden on the local population, but in such troubled times the walls were regarded as a great benefit. One of 'Alā' al-Dawla Muḥammad's special claims to fame is that he gave refuge to Ibn Sīnā (Avicenna), after the latter had been in the service of the Büyid Shams al-Dawla of Hamadhān; the great scholar wrote his Persian encyclopaedia of the sciences, the *Dānīsh-nāma-yi 'Alā'i*, for the Kākūyid amīr, and he died in 428/1037 whilst accompanying his patron from Iṣfahān to Hamadhān.

The Kākūyid governors of Yazd did much to beautify the town and to make it a centre of intellectual life, and under them and their epigoni, the Atabegs, Yazd enjoyed one of its most flourishing periods. The local historian of Kirmān, Afḍal al-Dīn Kirmānī, says in his *Ikḍ al-'ulā* that "'Alā' al-Dawla ['Alī b. Farāmūrz], who was the ruler of Yazd, continually sought to attract the eminent men of both Khurāsān and Irāq, encouraged them with all sorts of promises and expressions of favour, and brought them to Yazd" (ed. 'Amīrī, Tehran 1311/1932, 102). 'Alī was particularly noted as an early patron of the outstanding poet of the Saldjūks, Mu'izzī, and several of the latter's odes are dedicated to the Kākūyid. The *Ta'riḳh-i Yazd* and the other local histories deal at length with the many palaces, mosques, *madrasas*, caravanserais, libraries and mausoleums constructed in the town by the Kākūyid amīrs; of prime value in Yazd, situated as it was on the edge of the central desert, was their extensive construction of *kanāts*.

*Bibliography:* i. Primary sources. The history of the dynasty can only be pieced together from scattered notices in general histories like that of Ibn al-Aṭhīr and Mustawfī's *Ta'riḳh-i ḡuzīda*, from Ḡhaznawid sources like Bayhaḳī, and from Saldjūk ones like Bundārī and Muḥammad b. Ibrāhīm's *Ta'riḳh-i Saldjūkiyān-i Kirmān*. The local histories supplement these, in particular, Ibn Isfandiyār's *Ta'riḳh-i Ṭabaristān* (on Rukn al-Dīn Dushmanziyār b. Marzubān and the antecedents of the dynasty); Māfarrukhī's *Kitāb Maḥāsīn Iṣfahān*, ed. Djalāl al-Dīn Tehrānī, Tehran 1312/1933, cf. E. G. Browne, *Account of a rare manuscript history of Iṣfahān*, in *JRAS* (1901), 23, 42, 50 of offprint; Dja'far b. Muḥammad Dja'fari's *Ta'riḳh-i Yazd*, ed. Irāḍī Afshār, Tehran 1338/1960; Ahmad b. Ḥusayn b. 'Alī Kātib, *Ta'riḳh-i dījadī-i Yazd*, ed. Afshār, Tehran 1345/1966; Muḥammad Muḥīd Mustawfī Bāfḳī, *Djāmi'-i Muḥīdī*, i, iii, ed. Afshār, Tehran 1340-2/1961-3.

ii. Secondary sources. For the general back-

ground to the rise of the Kākūyids, see V. Minor-sky, art. DAYLAM, and idem, *La domination des Dailamites*, Paris 1932, also in *Iranica, twenty articles*, Tehran-London 1964, 12-30; and for their place in the general history of Persia, see C. E. Bosworth, in *Cambridge history of Iran*, v, *The Saljuq and Mongol periods*, Cambridge 1968, 37-40. On the chronology of the dynasty, see Zambaur, *Manuel*, 216-17, and Bosworth, *The Islamic dynasties*, 97-8. A detailed history of the dynasty is given by Bosworth, *Dailamis in Central Iran: the Kākūyids of Jibāl and Yazd*, in *Iran, Jnal. of the British Institute of Persian Studies*, viii (1970), 73-95.

iii. Numismatics. The coinage of the Kākūyids has been well covered. See Zambaur, *Nouvelles contributions à la numismatique orientale*, in *Wiener numismatische Zeitschrift*, xlviii (1914), 142-7; G. C. Miles, *The coinage of the Kākwayhid dynasty*, in *Iraq*, v (1938), 89-104; idem, *Notes on Kākwayhid coins*, in *American Numismatic Society Museum Notes*, ix (1960), 231-6; idem, *A hoard of Kākwayhid dirhems*, in *ANS Museum Notes*, xii (1966), 165-93. (C. E. BOSWORTH)

AL-KĀL'Ā [see KĀL'ĀT BANĪ HAMMĀD].

ĀL-KĀL'Ā-I SEFĪD [see KĀL'Ā-I SEFĪD].

KĀL'Ā-I SULTĀNIYYA [see ĀNĀK-KĀL'Ā BOGHAZĪ].

KĀL'Ā [see ĀGĀDIR, BURĪD, HĪṢĀR, HĪṢN, KAṢĀBA].

AL-KĀL'Ā (A.), castle, fortress. a word which has passed into Spanish in the simple form Alcalá, and as Cala—or Calat—in compounds, occurs as a place-name throughout the entire peninsula—e.g., Alcalá de Henares, Alcalá la Real (also named after Ibn Zayd), Alcalá de Guadaíra, or Calahorra (castle of Hurra), Calatrava (Kālat Rabāh [q.v.] = 'Alī b. Rabāh?), Calatayud (Kālat Ayyūb [q.v.]), Calatorao (from *turāb* = land, as in *Madīnat al-turāb* = Valencia), Calatañazor (Kālat al-nusūr, the site of the alleged defeat of al-Manšūr). The diminutive Alcolea (from the Arabic *al-kūlay'a*) is also the name of various places of less importance, such as Alcolea in the neighbourhood of Cordoba, Alcolea del Cinca, etc. The northern zone of Old Castile and the Alava region were known by the Muslims as al-Kilā', "the castles", a term comparable with the names Castilla and Cataluña = regions of castles.

AL-KALĀBĀDHĪ, ABŪ BAKR MUḤAMMAD B. IṢḤĀK, author of one of the most celebrated manuals on Šūfism. In spite of the fame of his work, he himself is practically unknown. He is believed to have died in 380/990 or 384/994; his *nisba* indicates that he lived in Kalābādh, a district of Bukhārā, according to Yāḳūt [s.v.], and manuscript sources (see Arberry, *India Office Catalogue*, no. 1218) confirm that he died in Bukhārā, where "his tomb is visited and revered". Of the five or six works by al-Kalābādhī, two have come down to us, one of them unpublished and without any great merit: *Ma'ānī 'l-akhbār* (for other titles of this work see Sezgin, *GAS*, i, 669), a kind of brief ethical commentary on some of the Prophet's *ḥadīths*. The other is *Ta'arruf li-madhhab ahl al-taṣawwuf*, a basic work for the understanding of Šūfism in the first three centuries of Islam (tr. A. J. Arberry, *The doctrine of the Sūfis*, Cambridge 1935). The work is divided into three parts. The first, historical, section defines the meaning of the word *šūfi* and gives a swift survey of the most important figures of Šūfism; the second part is apologetics, going back to the articles of the creed *al-Fiḳh al-*

*Akbar II* to demonstrate the accord between the doctrine of the Šūfis and Ašh'arism (see Arberry, *Sufism*, 69); through using quotations from the Šūfis and commenting on them, the third part sets out the major stages on the mystic path. The author frequently quotes al-Ḥallādī, indicating that he lived in an environment favourable to mysticism but one in which Šūfism had begun to deteriorate. According to the introduction, the book was written in response to this decay and with the intention of delineating true Šūfism.

*Bibliography*: In the article. (P. N.WYIA)

KALABAND (Ottoman) [see NAFY].

KALAH (KALĀH, KALĀ, KILĀ, KILLĀH), the mediaeval Arab geographers' name for an island or peninsula (*djazīra*) which played an important intermediary role in commercial and maritime relations between Arabia, India and China. It was particularly well-known for its tin mines, and the Arabic word *kal'ih/kala'* [q.v.] for this metal derives from Kalah; the place was also portrayed as the centre of trade in camphor, bamboo, aloes, ivory etc. Its capital also was named Kalah (cf. e.g., al-Dimashkī, *Cosmographie*, 152, 170); so too the sea which washed its shores and was very difficult to navigate was called the Baḥr Kalah (e.g., al-Dimashkī, *op. cit.*, 152, 169).

The identification of Kalah, of no small importance for the history of trade in the Indian Ocean, has engendered a vast bibliography. Various clues, the production of tin in particular, have suggested the Malacca peninsula; Walckenaer (*Nouvelles Annales des Voyages*, Paris 1852, 19) was the first to identify Kalah with a town whose name is written as Quedah in the Portuguese sources, but is pronounced Kēdah; this town lies on the west bank of the Malacca peninsula (6° Lat. N.). The province of Kēdah, watered by the Kalang River (see Ritter, *Erskunde*, v, 20-1), is still of importance in this region of Malacca because of its brisk trade in tin; the town itself, though a flourishing port in the past, has declined considerably.

Walckenaer's identification was accepted by L. A. van der Lith (ed. of *K. 'Adjā'ib al-Hind*, index), De Goeje (in *De Gids*, Amsterdam 1889, iii, 297), Tomaschek (*Die topogr. des indischen Seespiegels Mohlt*, Vienna 1897, 86) and G. Le Strange (tr. of Hamd Allāh Mustawfi's *Nuzhat al-kulūb*, 194). Quatremère (in *Journal des Savants*, 1846, 734) and Yule and Burnell (*Hobson-Jobson*, 145) think it likely; the latter believe that Kalan should also be identified with Ptolemy's Kōλι, but this town seems to have been situated elsewhere (cf. Pauly-Wissowa, art. *Koli*, xi, 1073). J. Sauvaget (*Relation de la Chine et de l'Inde*, Paris 1948, 43) favours this identification but points out that Kēdah, Kērah (Kra isthmus) or even Kēlang, north of the town of Malacca, are all possibilities. Although the Malay *d* is pronounced in such a way that an Arabic speaker might hear *l*, the Chinese transcribed the name as *Ko-lo* and the vocalization of the first syllable of *K-lah* is in fact unknown (P. Pelliot, *Deux itinéraires de Chine en Inde à la fin du VIII<sup>e</sup> siècle*, in *Bull. de l'École fr. d'Extrême-Orient*, iv (1904), 351 n. 6).

Moreover, it must be noted that G. Ferrand (in *JA*, 2nd series, xiv (1919), 214-33) came to reject the possibility of identifying Kēdah with Kalah and to conclude: "geographically, between Qara = Kra, about 10° latitude North, and Kara, near Kēdah, I prefer the first of these ports as the site of Kalah and its variants in the Arabic texts"; Ferrand's study giving the reasons for his preferences has not been published, and the claims of Kēdah and Kēlah (Kra)

cannot be considered as settled. Other reasonable suggestions for the site of Kalah are: in Ceylon (the port of Ghālī, Galle, Galle Point; e.g., Reinaud, *Relations des voyages* . . . Paris 1845, i, pp. lxi-lxii and Abu 'l-Fidā', *Geographie*, i, cdxiv, cdxviii-cdxix; Dulaurier, in *JA*, 4th series, viii, 209), Malabar (Reinaudot, cf. Ouseley, *Travels* . . ., i, London 1819, 53 n.) and Coromandel (Gildemeister, *Script. Arab. de rebus Indicis loci*, Bonn 1838, 57-8).

Alongside Kalah, Arab geographers use the compound word Kalāh-bār (e.g., *Rel. de l'Inde et de la Chine*, § 15; al-Mas'ūdī, *Murūdj*, i, 330, 340 = tr. Pellat, §§ 361, 374), where bār is explained as deriving from the Sanskrit *vāta*, from which come *vād* and *vār*, "district". However in Sanskrit and in Tamil *pāram* (= *bāram* in compounds) designates "the opposite coast" and is used by sailors from another country for the coast to which they usually travel; *Relation* (§ 15) gives two explanations ("kingdom" and "coast"), the second being the correct one, so al-Mas'ūdī (i, 340-374) was wrong when he took bār to mean "sea".

(M. STRECK\*)

AL-KALĀ'Ī, ABU 'L-RABĪ' SULAYMĀN B. MŪSĀ B. SĀLIM AL-ḤIMYARĪ AL-BALANSĪ, often known as IBN SĀLIM AL-KALĀ'Ī, a Mālikī scholar, historian, orator and poet from al-Andalus who traced back his genealogy to the Ḥimyarite family of Dhū 'l-Kalā'. Born in Ramaḡān 565/May-June 1170, in the neighbourhood of Murcia, he was still a child when his family moved to Valencia, where he began his studies, pursuing them in other Spanish cities, especially Cordoba. A pupil of Ibn Maḡjā' [q.v.], Ibn Ḥubaysh, Ibn Zarḡūn and a number of other celebrated teachers, he discharged the office of *khafīb* at the Great Mosque of Valencia, and probably also that of *ḥāfi*; his reputation, however, rested on his numerous works and on the eulogies bestowed on him by his disciples, principally Ibn al-Abbār [q.v.], who was indebted to him for advice and assistance in undertaking the sequel (*Takmila*) to the *Ṣīla* of Ibn Bashkuwāl [q.v.]. Another of his pupils was al-Ru'aynī [q.v.], who maintained an unbroken correspondence with him and devoted a long notice to him in his *Barnāmadj*. When forced to leave Valencia in 587/1191, al-Kalā'ī composed an elegy on his exile which attests to his technical skill; the surviving fragments of his *dīwān* also reveal his talent as a poet. On his eventual return to Valencia, despite his advanced age he played an active part in the battle of Anīṣha (El Puig de Cebolla) which preceded the capture of the town by James I of Aragon (16 Šafar 636/28 September 1238) and there lost his life (20 Dhū 'l-Hidjja 634/15 August 1237). Ibn al-Abbār mourned his death in a *marthiya* of about 100 verses (see H. Massé, intro. to the *Iktifā'*, 16-23, 40).

Al-Kalā'ī was the author of more than a score of works, but the only one which has been preserved is the *Kitāb al-Iktifā' fī maḡhāzi 'l-Muštāfā wa 'l-*

*thalātha 'l-khulafā'* (Vol. i (all published), ed. H. Massé, Algiers-Paris 1931, *Bibliotheca arabica*, vi); this *Sira Kalā'iyya*, a history of the *maḡhāzi* of the Prophet and of the first three caliphs only, is based on sources many of which are now lost. The volume published by H. Massé covers the Prophet's mission, the conversion of Ḥamza b. 'Abd al-Muṭṭalib and the emigration to Abyssinia. Some quotations from *al-Iktifā'* are to be found in al-Diyārbakrī's *Ta'rikh al-khamis* (Cairo 1283, 1302); Khurshīd Ahmad Fārik has published in Delhi (Indian Institute of Islamic Studies, 1970) from a Ms. preserved in Dar al-kutub (Cairo), as *Ta'rikh al-riḍā*, the passages in *al-Iktifā'* relating to the *Riḍā* [q.v.].

Most biographers of al-Kalā'ī agree on the list of his works; these reveal that this *muḥaddith*, celebrated for his erudition and fine handwriting, was particularly concerned with the Companions of the Prophet (notably *Kitāb Maydān al-sābiḡin*, etc.; *al-Mu'djam fī dhikr man wafaḡat kunyatuh kunyat zawḡih min Ṣahābat al-Muštāfā*) and the transmission of *hadīth* (in particular, *Ruwāt al-Buḡhārī wa-akhbārūh*, in 4 vols.; *Arba'ūn*, etc.). Independently of his masters' *Mu'djam*, he collected his poetical works in a *dīwān*, as well as his correspondence and his *khufbas* (numbering about 80). Finally, we should note two imitations of al-Ma'arrī and a selection of proverbs. Although it is difficult to form a judgment on the sole basis of titles which are not always explicit, it would appear that posterity did no injustice to al-Kalā'ī in preserving from his voluminous output only the *Iktifā'*, a work which deserves some attention.

*Bibliography*: H. Massé has reproduced in his intro. to the *Iktifā'* the bibliographical accounts contained in: Ibn al-Khaṡīb's *Ihāfa*, al-Baṡhtakī's abridgement of the *Ihāfa* (Ms.), Ibn al-Abbār's *Takmila* (708, no. 1991 and additions, 540), Dhahabī's *Tadhkira* (Ḥaydarabād, iv, no. 14), Suyūṡī's *Ṭabakāt al-huffayṡ* (Göttingen 1833, iii, 56), Ibn Farḡūn's *Dībādj* (Fez 1316, 125), Maḡḡarī's *Analectes* (ii, 502, 655, 768), Nāṡirī's *K. Zahr al-afnān* (Fez 1314, i, 307), al-'Arabī al-Maṡhrāfi's *Fath al-Mannān*. To this list should be added: Ru'aynī, *Barnāmadj*, ed. I. Šhabbūh, Damascus 1381/1962, 66-72; M. Bencheneb, in *Actes du XIV<sup>e</sup> Congrès des Orient.*, Paris 1907, iv, no. 334; Ibn al-'Imād, *Šadhḡarāt*, v, 164; Pons Boygues, 283-4, no. 239. See also Ibn al-Abbār, *Ḥulla*, ed. H. Mu'nis, ii, 102, 215, 267; Ḥimyarī, *Rawḡ mi'tār*, 32; Nubāhl, *Marḡaba*, 119; Hādjīdjīl Khālifa, i, 388, v, 579; R. Basset, in *Bull. Corr. Afr.*, 1884, 375; F. C. Seybold, in *Homenaje a D. Fr. Codera*, Saragossa 1904, 115 ff.; Brockelmann, I, 371, S I, 634; F. Rosenthal, *Muslim Historiography*, index. (CH. PELLAT)

KALĀM, in the sense of *kalām Allāh* the Word of God, must here be distinguished from 1) *kalām* meaning 'ilm al-kalām [q.v.], "defensive apologetics", or "the science of discourse" (on God); and 2) *kalima* [q.v.] which, in the expression *kalimat Allāh*, means "a" (single) divine utterance.

*Kalām Allāh* is found at least three times in the *Qur'ān* (II, 75, IX, 6, XLVIII, 15). God spoke to the prophets (II, 253); He spoke "clearly" to Moses (IV, 164, VII, 143), who had been chosen to transmit His messages and His Word (VII, 144); God does not speak to men "except by revelation or from behind a veil" (II, 118); but He has never spoken to the ungodly (II, 174, III, 77); and an idol made by man, such as the Golden Calf, cannot speak (VII, 148; cf. Ps. 115, 135).

In the list of "the most beautiful (divine) names" (cf. AL-ASMĀ' AL-ḤUSNĀ), neither *kalām* nor *mutakallim* is found. God speaks, but the Qur'ān does not "name" Him as "speaker". *Kalim Allāh*, "God's spokesman", is the name of Moses. Yet in the treatises on "God, His existence and His attributes", God is described as *mutakallim* ("speaking"), since He possesses *kalām*.

Two groups of questions arise: 1) on the basis of the Qur'ānic texts, *kalām*, Word, is attributed to God and "theologians" were quick to examine the question of *kalām* as a divine attribute (*ṣifa*); and 2) God having addressed His word to the prophets (II, 253), by antonomasia *kalām Allāh* designates the Qur'ān, which gave rise to the problem of the relationship between the Qur'ān and the Word as attribute. Throughout the centuries, this was to remain one of the most controversial questions.

I.—*Kalām*, a divine attribute. This problem is directly linked to reflections and debates on the nature of the Qur'ān (created or uncreated). Did such discussions come into being, as has been frequently stated (by C. H. Becker, for example), through the wish to reply to the Christian theologians of Damascus, who proclaimed that the Logos, the Word of God, was both uncreated and creator? No doubt this influenced the way in which the problem was posed in some instances, but the Qur'ānic source of the question is no less evident.

If there is a Word of God, there is therefore a divine attribute of the Word, according to the most customary process of scriptural "determination" (*tawḥīf*). But of what sort is this attribute? And what relationship does it have to the divine Essence?

a) The Mu'tazilites (and the Ḍjahmiyya) denied that there was an uncreated Word subsisting in God, for "it cannot be established that there subsists in the soul an entity which could be called 'word' (*kalām*)" said the *ḥādī* 'Abd al-Ḍjabbār (*Mughnī*, vii, *Kḥalḥ al-Qur'ān*, Cairo 1380/1961, 179). The expression "Word of God", which should be retained, in fact signifies that God created in contingent beings phrases and words so that He could communicate His law to men.—b) The Falāsifa and various related groups understood it to mean a divine, eternal Idea, a necessary emanation of the flux (*ḥayā*) which is bound to flow from the Prime Being, is received by the separate Intellects, transmitted to men by the illumination of the single Active Intellect and is broken down into words on account of the structure of mankind's passive intellect (*bi'l-kuwwa*).—c) According to the Karrāmiyya, the Word of God is not strictly speaking eternal: God becomes the agent and speaker by producing within Himself (*iḥdāth fi 'l-dhāt*) the Act and the Word. It is therefore proper to speak of "an attribute of the Essence", but one which has "begun".—d) The "pious Forefathers" and the Ḥanbalite tradition affirm the absolute eternity of the Word, subsisting in God and revealing Him, communicated as and when God wishes in His co-eternal mystery.—e) Finally, the Aṣḥ'arites (and apparently also the Kullābiyya) affirm this same co-eternity: the *kalām Allāh* is *ḥadīm*, uncreated and without beginning. But they distinguish (cf. II below) between the Word subsisting in the divine Essence, which is without speech (*ḥawl*), and its expression by means of letters and sounds. In itself, *kalām* is not an "attribute of action" (*ṣifat al-af'āl*), like the Creation or the Decree; it is, like Will, Knowledge, Life, an attribute that is *ma'ānī*, "which adds a concept to the Essence" but itself subsists within the essence by the

very existence of God. Thus al-Ḍjuwaynī, after having argued at length against the Mu'tazilites, teaches that the Word is eternal, it is "an attribute of the Essence", and has always the nature of a commandment, a prohibition, or information. Therefore it applies to things which arise within time, without itself having begun in time (cf. *Iṣḥād*, text and Fr. tr., J. D. Luciani, Paris 1938, 73/120). On this point the Ḥanafi-Māturīdī theses differ only in minor respects from the Aṣḥ'arī view.

No doubt in order better to underline the *bilā kayf* of the Word of God in comparison with human speech, later treatises make the following distinction: while the unity of divine attributes is said to be dependent on the *'akliyyāt* [*q.v.*], meaning that which human reason, illuminated by the Law, is fitted to substantiate, the *kalām* attribute of God—like Hearing, Sight and Visibility—is dependent on the *sam'iyāt*, knowledge which is available to man only *ex auditu*, through the teaching of the prophets. The very existence of these four attributes falls outside the scope of reason.

II.—The Qur'ān, Word of God. While everyone acknowledged the identification Qur'ān = *kalām Allāh*, the various schools interpreted this according to different principles, which are outlined above. Logically, therefore, the arguments concerning the created or uncreated Qur'ān are an application of the teaching on attributes, but in fact the positions adopted on the subject of the Qur'ān took precedence and influenced developments relating to the attribute of the Word.

a) The Mu'tazilite theory of the created Qur'ān is based on the concept of word as speech, presuming articulation and movement, which would be incompatible with pure divine immutability. All prophetic utterances, above all the Qur'ān, may be called the "Word of God" in that they express what God wishes to communicate to mankind; but this Word is created on the lips of prophets or reciters, or on the pages where they are recorded. In the same way, when God spoke to Moses in the "burning bush", strictly speaking it was the bush which spoke, through sounds and words directly created within it by God.

b) It is not easy to define to its ultimate consequences the thinking of the "pious Forefathers", especially that of Ibn Ḥanbal. The affirmation that the Qur'ān is the uncreated Word of God is absolute. The definitive thinking of Ibn Ḥanbal is that the Qur'ān pertains not to the world of creation (*ḥalḥ*) but to the world of commandment (*amr*). Now, nothing appertaining to *amr* can perish. "The Qur'ān went out from God and will return to Him" (*Aḥīda*, v, 313; quoted by H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 84, n. 3); according to Ibn Baṭṭa, this applies to each word, each letter of the Book (*ibid.*, 51/86). And anyone who asserts that the Qur'ān is created, or reserves any doubt on this subject, or simply refuses to make a pronouncement (*wuḥūf*), is impious (*ḥāfir*); so too is anyone who refuses to condemn such a man as an unbeliever (*takfir*). When God makes His Word appear in a body, said Ibn Taymiyya (*Fatāwa v. Tis'iniyya*, Cairo 1329, 265), He does not create anything in that body; it is He Himself who speaks, as He did in the bush which revealed to Moses: "I am God and there are no other gods but Me".

H. Laoust has made an excellent summary of Ibn Taymiyya's thinking on this point, which is in itself an echo Ḥanbalite tradition (*Essai sur les doctrines sociales et politiques de Taḥī-d-Dīn Ahmad B. Taymiyya*, Cairo 1939, 171 and ref.). The attribute of

the Word is subordinate to the attribute of the Will (*irāda*). God speaks or (in opposition to the Salāmiyya) ceases to speak when and how He wishes. His Word is at the same time "an idea, sounds and letters organized with an end in view (*maḥṣūd*)" (H. Laoust, *ibid.*). It may convey information (*ikhbār*) or ordain a command (*inshāʾ*). In this last case, it will either bring about a creation (*takwīn*: e.g., the five ḡurʾānic *kun*) or formulate a law (*taḥrīf*). The Word is therefore multiple in its formulation. It is also hierarchically graded: the best of the *sūras* is the *Fātiḥa*, followed by the *sūrat al-Ikhḫlās*; Ḳurʾān, Tawrāt and Inḡīl are indeed the Word of God, but the Ḳurʾān is superior to the Tawrāt, which itself is superior to the Inḡīl.

Are the pronunciation (*lafẓ*) and reading (*tilāwa*) of the Ḳurʾān by the faithful also uncreated? The professions of faith of Ibn Ḥanbal declare that to assert that its pronunciation and reading are created, when the book is *kalām Allāh*, is the mark of the condemned sect of the *Djahmiyya* (*ʿAḫīda* I, 21, 32). Al-Barbahārī makes the same assertion, adding that it is also *djahmi* to opt for *wukūf*, a deferment of judgment, on this precise point.

But there is a Ḥanball tradition which tends to qualify—or at least make more exact—the position of Ibn Ḥanbal. It is said that he protested vigorously against those who averred that pronunciation and reading were created; but he never adds that they were definitely uncreated. Ibn Taymiyya came to the following conclusion: those who hold that the pronunciation and reading of the Ḳurʾān are uncreated are in fact similar to the *Djahmiyya* and thus to be condemned; but, also according to Ibn Ḥanbal, those who support the opposite view are guilty of "blame-worthy innovation" (*bidʿa*). It was Abū Ṭālib al-Makkī, remarks H. Laoust (*Essai* . . . 172, n. 2), "who attributed to Ibn Ḥanbal the dogma that recitation of the Ḳurʾān is uncreated". Was this in fact a position of reserve (*tawakkuf*) which Ibn Ḥanbal adopted for fear that such an uncreated recitation would lead to the acceptance of *ḥulūl*, an "infusion" of divine substance in the reciter? Ibn Taymiyya avoided saying that the *lafẓ* was uncreated and confined himself to asserting: "The Word (*kalām*) is the Word of God, and the voice (*ṣawt*) is the voice of the reciter" (*ibid.*, 172), and again: "When men recite the Ḳurʾān, or when they write it down on paper, the Ḳurʾān remains in reality (*ḥaḳīqat*) the Word of God. A word, in fact, can be attributed only to him who first formulated it and in no respect to him who transmits it or spreads it abroad" (tr. H. Laoust, *Ibn Baṭṭa*, 85, note referring to *Wāsiyya*, 22).

c) The *Ashʿarites* and *Ḥanafites-Māturīdites* preferred a compromise to this prudent *tawakkuf*. Their solution was presented, especially by the earliest scholars, as the middle way between the *Muʿtazilites* and those whom they called *Ḥashwiyya*: according to the latter, the Ḳurʾān was uncreated, not only on the lips and in the hearts of the faithful but also in so far as it was reproduced in writing on paper; following a *ḫabar* attributed to ʿĀʾiṣḥa, whatever lies between the two covers of the book is the Word of God (and thus uncreated).

The thesis of the Ḳurʾān as the Word of God, eternal and uncreated, was forcefully proclaimed in the professions of faith of al-*Ashʿarī* (*Ibāna*, ed. Cairo 1348, 10; *Maḳālāt al-Islāmiyyin*, ed. Cairo 1369/1950, I, 321); and also in the *Wāsiyyat Abī Ḥanīfa* (article 9) and the *Fīḫ Akbar* II (article 3) and III (article 16). Al-*Ashʿarī* cites the authority of Ibn Ḥanbal. Throughout the centuries, the schools remained faithful to this total affirmation.

But what part of the *kalām Allāh* is communicated by the prophets and recited or read by the faithful? Al-*Ashʿarī*'s professions of faith are silent on this point; yet on the other hand the problem is posed in basic *Ḥanafī-Māturīdī* texts. The Ḳurʾān, says the *Wāsiyyat Abī Ḥanīfa* (article 9), the uncreated Word of God, inspired and revealed by Him, "is not He, nor other than He, but His real Attribute, written in the copies, recited by the tongues, preserved in the breasts, yet not residing there. The ink, the paper, the writing are created, for they are the work of men. The word of God on the other hand is uncreated, for the writing and the letters and the words and the verses are manifestations (*dalāla*) of the Ḳurʾān for the sake of human needs. The word of God on the other hand is self-existing in His Essence, and its meaning is understood by means of these things. Whoso sayeth that the word of God is created, he is an infidel (*kāfir*) regarding God . . . His speech being recited or written and retained in the heart, yet never dissociated from Him" (tr. Wensinck, *The Muslim Creed*, 127). *Fīḫ Akbar* II (article 3) goes further as far as this distinction is concerned: "Our pronouncing, writing and reciting the Ḳurʾān is created, whereas the Ḳurʾān itself is uncreated."

What exact relationships can be established between the divine attribute of the Word and the Ḳurʾān, read, written or recited? A venerable tradition distinguishes between the heavenly Ḳurʾān, written for all eternity on the "protected table" (*lawḥ mahfūz* [q.v.]) and the earthly and created books. Burning one of these earthly Ḳurʾāns would not destroy the Word of God. Certain later writers, such as al-Fuḍālī, wondered if the words which "descended" on the Prophet were the very words of God (those of the *lawḥ al-mahfūz*) or the words spoken by the Angel.

*Ashʿarī* answers were usually more elaborate. In an analysis reproduced by Ibn Ḥazm, al-Bāḳillānī explains that the Ḳurʾān is the Word of God in the sense that it is an "expression" (*ʿibāra*) of it (see A. J. Wensinck, *The Muslim Creed*, Cambridge 1932, 151, and *ET*, D. B. Macdonald, s.v. *KALĀM* and refs.). He says further: "The *kalām* is an entity (*maʿnā*) subsisting within the soul (*ḫāʾim bi ʾl-nafs*) which sometimes expresses itself in audible sounds" (*Tamḥīd*, ed. R. J. McCarthy, Baghdad-Beirut 1957, 251).

This distinction led to the famous theory of the *kalām al-nafs* or *kalām nafsi*, the internal word, which, as we have seen, was rejected by the *Muʿtazilites*. Al-*Djuwaynī* stresses this point forcefully (*Irshād*, 58-78/98-131; see also his *Lumaʿ*). We have a brief and clear account of it in al-*Ḡhazālī*'s *Iḫtiṣād* (ed. Cairo, n.d., 80). It is not true that there can be no speech without letters and sounds. Internal speech, "the discourse of the soul", *kalām al-nafs*, is a reality. The attribute of the Word, subsisting in the divine Essence, is first and foremost this internal Word in God, which is eternal and uncreated, without future or past, without multiplication or division. It is in no way impossible that God makes it manifest *ad extra* by created sounds and letters. It is essentially in this that prophetic revelation resides. Contrary to the belief of the *Muʿtazilites*, it is not a matter of words created in certain bodies. It is indeed God who speaks, but through sounds and letters belonging to the world of creation which manifest and express His single and immutable Word. Later *Ashʿarī* and *Māturīdī* manuals take up these points again with greater or lesser felicity (e.g., al-Bādīūrī,

*Hāshīya* . . . 'alā *Djawharat al-tawhīd*, ed. Cairo 1352/1934, 43).

Finally, it should be noted that if "the Word of God is one attribute without multiplicity" (al-Bādjūrī, *ibid.*), its manifestation through verbal words allows us to make a distinction in the Qurʾān between information and commandment as the Ancients insisted (cf. above, the Ḥanbalī doctrine). In turn, commandment may be divided into prohibition, promise and threat; but these are "distinctions made by reason" (*akṣām iʿtibāriyya; ibid.*).

d) In the modern period, Muḥammad ʿAbduh emphasized the Ashʿarī distinctions to the extent of presenting an answer which seems an attempt at a synthesis between Ashʿarism and Muʿtazilism (see *Risālat al-tawhīd*, Cairo 1353, 44 ff.): the Word is an eternal attribute of the essence; the Qurʾān is the Word of God without any intermediary, but in as much as it is expressed in words that are uttered or written down, recited or read, it belongs to the world of creation. In this sense it can be said that God created the Qurʾān, but without the intervention of any creature.

*Bibliography*: As well as references within the article, all manuals on *uṣūl al-dīn* and *ʿilm al-kalām* and all works in European languages devoted to these disciplines contain a chapter or some paragraphs on *kalām* as an attribute of God.

(L. GARDET)

**KALĀM**, theology [see ʿILM AL-KALĀM].

**KĀLAM** (καλαμος, reed), the reed-pen used for writing in Arabic script. It is a tube of reed cut between two knots, sliced obliquely (or concave) at the thicker end and with the point slit, in similar fashion to the European quill and later the steel pen. The reed has to be very firm so that it does not wear away too quickly; the best kind comes from Wāsiṭ and grows in the marshes (*baṭāʾiḥ*) of Irāk, but those from the swamps of Egypt (al-Muḥaddasī, *BGA*, iii, 203, l. 13) or from Fāris were also recommended. Those from a rocky ground were called *ṣukhrī*, those from the seashore *baḥrī* (Ibn ʿAbd Rabbihi, *al-ʿIḥd al-Farīd*, Bülāk 1876, ii, 221, l. 18 ff., al-Kalkāshandī, *Ṣubḥ al-aʿshā*, ii, 441, l. 7 f.). It is allowed to steep like hemp and is kept in the water until its skin has taken on a beautiful dark brown colour. Its fibres should be quite straight so that the slit may also be even. After the nib of the *kalām* has been cut, it is laid on a long, flat piece of ivory or bone *miḳaṭṭa*, which is specially used for this purpose; the point is then slit with a sharp transverse cut with a special very sharp knife with a long handle (penknife, Turkish *kalāmīrāsh*). The length of the reed-pen should be, according to Ibn Muḳla, 12-16 finger-breadths or a span, but could not exceed this by more than the length of the *djūlfa* (nib). The width should be that of the index and the little finger (al-Kalkāshandī, *op. cit.*, ii, 444, ll. 14-16), but a medium thickness—not too long or short, not bent or curved—would be the best one (al-Kalkāshandī, *op. cit.*, ii, 440, ll. 16-19). The internode should not be too long. The pen should also not be dry, although well-ripened; it should be browned by the sun, golden, shining like a pearl and silvery on the sides.

Each kind of script needed a special pen, and the cutting of the nib (*djūlfa*) was an art in itself. It was the prime necessity for good handwriting, and excellent cutting was considered as "half the script". It is worth noting that in the Fātimid period a kind of "fountain-pen" was invented in Egypt.

The part of the point to the left of the incision is called *insī*, "human", because it is turned towards the

writer, and the right *wahshī*, "savage". If the former is slightly softer than the latter so much the better. It became a rule that in the kinds of writing called *naskḥ*, *thuluth* and *riḳāʿ* the *wahshī* side ought to be twice as broad as the *insī* side; in the kinds called *dīwānī* and *ḥirma*, it is the other way about. The *nastaʿlīq* is written with a pen slit exactly down the centre.

To protect the *kalām* from damage it is kept in a holder (*miḳlama*). These are of two kinds: 1) a metal box in the form of a long flat tube closed at one end by a lid with hinges and often adorned with arabesques. Attached to it is an inkwell (*dawāt*, popularly *dawāya*). This kind of holder is peculiar to the Arabs. In Ottoman Turkish it is called *dīwī* (from Ar. *dawāt*); at an earlier period it was also called *ḥubūr* (strictly, plur. of *ḥabr* "grave") by the Ottoman Turks, a word which is found as early as Abū Yūsuf, *Kitāb al-Kharājī* (Cairo 1302, p. 17), with the meaning of "holder", "case"; 2) a papier-mâché box adorned with lacquerwork. In it is a drawer which also holds an inkwell. This kind is used particularly in Persia and is called *kalāmḍār*, "pen-box".

Sūra LXVIII of the Qurʾān (*Sūrat Nūn*) is sometimes called *Sūrat al-Kalam* from its opening: "N.—By the pen and what they write. . .". According to the traditions quoted by al-Ṭabari (*Tafsīr*, Bülāk 1323-30, xxix, 107) the *kalām* was the first thing created by God so that He could write down events to come. Two explanations have been given of this *kalām*: 1) the implement used for writing, a divine gift like the latter; 2) a *kalām* of light, as long as the distance from heaven to earth, which wrote down all things that are to happen until the last judgment (cf. Fakhr al-Dīn al-Rāzī, *Mafāṭīḥ al-Ghayb*, Cairo 1278, vi, 330; Muṭahhar b. Ṭāhir al-Maḳdisī, *Kitāb al-baḍʿ wa ʿl-tāʾrīkh*, ed. Huart, i, text 161 f., tr. 149).

The *kalām* is the emblem or symbol of the administrative services as opposed to the *sayf*, which marks the military officer. Ibn al-Wardī (d. 749/1349) wrote a *Mufaḥḫharat al-sayf wa ʿl-kalām* and Ibn Nubāta (d. 768/1366) a work with a similar title; *Djalāl al-Dīn Muḥammad b. Asad al-Dawānī* (d. 907/1501), ʿAlī b. ʿAbd al-ʿAzīz Umm al-Walad-zāde (d. 920/1514) and *Ḳinall-zāde* (d. 979/1572) each wrote a *Risāla Kalāmiyya* on the same subject (Brockelmann, II, 140, 211, 430, 433).

*Bibliography*: Al-Kalkāshandī, *Ṣubḥ al-aʿshā*, ii, Cairo 1331, 434-5; A. P. Pihan, *Notice sur les divers genres d'écriture . . . des Arabes*, etc., Paris 1856, 47 f.; Cl. Huart, *Les calligraphes et miniaturistes de l'orient musulman*, Paris 1908, 13, 16, 17 (with pictures); L. Th. Bogdanow, *Persia* (in Russian), St. Petersburg 1909, 81; F. Sarre and F. R. Martin, *Die Ausstellung von Meisterwerken muhammedanischer Kunst in München*, 1910, Munich 1912, ii, Plate 152; A. Grohmann, *Arabische Paläographie*, I. Teil (Denkschr. Akad. d. Wissenschaften), Vienna 1967, 117-23.

(CL. HUART—[A. GROHMANN])

**KĀLAM**. In Ottoman usage the word *kalām*, pronounced *kalem*, was used figuratively to designate the secretariat of an official department or service, and then came to be the normal term for an administrative office. This usage has survived in modern Turkish, and is also current in Arabic. (Ed.)

**KĀLAMDAN** [see KĀLAM, KITĀBA].

**KĀLAMKĀRĪ** (from Persian *kalām*, "pen", and *kār*, "work"), the hand-painted and resistdyed cottons of India, also known as chintz (from the Western Indian vernacular word *chitta*, "spotted

cloth"). In true *ḵalamkārī*, printing-blocks are not employed. The design is sometimes drawn free-hand, but more commonly "pounced" (*i.e.*, applied by rubbing powdered charcoal through a perforated paper stencil), after which the mordants (fixing-agents), some of the colours themselves, and the wax-resist which protects parts of the fabric during red and blue dyeing operations, are applied by hand, with *ḵalams* made of reed or bamboo. The *ḵalams* incorporate a cotton wad or hair ball impregnated with the colour or with wax. Although India had understood the principles of mordant-dyeing for at least 2,000 years (there is some evidence that is was even practised in the Harappa civilization, c. 2000 B.C.) there are no surviving specimens of the work earlier than about 1600 A.D. The finest *ḵalamkārīs* of that period were made in the hinterland of Masulipatam (Golconda), the craftsmen being Hindus who worked mainly under the patronage of Muslims and Europeans, although some were also produced as temple-hangings. Throughout the 17th and 18th centuries, large quantities were shipped to Europe by the Dutch, English and French East companies and had an important influence on the decorative arts of the West. Laws were introduced in France and England to forbid importation in the interests of home industry, but they were often defied. When the laws were relaxed in the second half of the 18th century, the fate of the trade was already sealed by advances in European technology, and in particular by the application of the copperplate process to fabric-printing. Henceforth the standard of the craft in India declined.

(J. IRWIN)

AL-KĀLAMMAS, appellation bestowed on the man who, according to tradition, was the first *nasī'* [*q.v.*] of the Arabs, Ḥudhayfa b. 'Abd b. Fuḵaym b. 'Adī, of the Banū Mālik b. Kināna; al-Marzubānī (*Mu'djam*, 250), however, echoes a tradition according to which al-Ḵalammas al-Akbar was 'Adī, great-grandfather of Ḥudhayfa, and al-Ṭabarī (*Tafsīr*, Būlāk 1327/1909, x, 2) states that three men were the first to be designated *nasī'*, but he does not mention Ḥudhayfa by name. However he does mention him in this respect in *Annales*, I, 1134. According to al-Mas'ūdī (*Murūdj*, iii, 116 = § 965), the latter bore the *kunya* of Abu 'l-Ḵalammas, while biographers of al-Djāhīz [*q.v.*], a *mawlā* of this family (see *Milieu*, 51 and *biblio.*), attribute this *kunya* to a *nasī'* by the name of 'Amr b. Ḵal', who does not appear in the current lists (much later it was borne by 'Uḥmān b. 'Ubayd Allāh b. 'Abd Allāh b. 'Umar; see al-Ṭabarī, *index*; Abu 'l-Farajī, *Maḵṭūb al-Ṭālibīyyin*, 296). It is probable that al-Mas'ūdī's Abu 'l-Ḵalammas derives from a confusion with the *kunya* of the last of the *nasa'a*, Abū Ṭhumāma, a contemporary of the Prophet. The function of *nasī'* was handed down from father to son for several generations (Caussin, *Essai*, I, 244, who dates the institution from 412 A.D.) until the aforesaid Abū Ṭhumāma. The latter's genealogy differs according to the various writers: Ibn al-Kalbi-Caskel (Tab. 47) called him Djunāda b. Umayya b. 'Awf b. Ḵal' b. Ḥudhayfa, and in the *Sira* (I, 44) he appears as Djunāda b. 'Awf b. Umayya b. Ḵal' / Ḵala' b. 'Abbād b. Ḥudhayfa; Ibn Ḥabīb (*Muḥabbar*, 157) and al-Bīrūnī (*Chronology*, 12) add another Ḵal' / Ḵala' between 'Abbād and Ḥudhayfa. On the other hand, however, Ibn Nubāta (*Sarkh*, 406) makes al-Ḵalammas a contemporary of Hind bint al-Ḵhuss [*q.v.*], who was thought to be responsible for intro-

ducing taboos relating to certain domestic animals which Allāh denies having introduced (Ḵur'ān, V, 102/103).

The direct descendants of Ḥudhayfa were known collectively as al-Ḵalāmīs, the plural of *ḵalammas*, the meaning of which is not clear; Arabic dictionaries give the meaning of the word as "sea, copious well" (cf. *ḵalammas* in *LA*, s.v.) and, by extension, "a generous, able man" etc. It may be related to *ḵāmūs* (*oceanos*) and perhaps also to *calendas*, as A. Moberg has suggested (*An-Nasī' in der islam. Tradition*, Lund-Leipzig 1931, 44, 53-4).

*Bibliography*: in the article. (CH. PELLAT)

KĀLANDAR, name given to the members of a class of dervishes which existed formerly, especially in the 7th/13th century, in the Islamic world, within the area extending from Almalk in Turkestan in the east to Morocco in the west; they resembled, with some minor differences, the "hippies" of today, distinguishing themselves from other Muslims by adopting Malāmatiyya [*q.v.*] doctrines and by their unconventional dress, behaviour and way of life. The origin of the term has not yet been established: it is first encountered in a *rubā'ī* of Baba Ṭāhir 'Uryānī (*JA*, 8th series, 1885, vi, 516) and in a short treatise entitled *Ḵalandar-nāma* (ed. Sulṭān Ḥusayn-i Ṭābanda-i Gunābādī, Tehran 1319, pp. 87-95) by the well-known *ṣūfī* 'Abd Allāh-i Anṣārī (d. 481/1088-9).

It passed into Arabic in the form *karandal* (see Ṣafādī, *al-Wāfi bi 'l-wafayāt*, Berlin, Westdeutsche Bibliothek, Ms. Orient, fol. 3145, f. 3a f.; Dozy, *Suppl.*, ii, 340) and *ḵalandar* (al-Nu'aymī, *Tanbih al-ḵālib wa irshād al-dāris*, al-Ṭandjī's Ms., f. 368b f.). The suggestions put forward that the word derives from Persian *kalandar* ("ugly and ungainly man"; "a whittled piece of wood put behind a door to stop it opening", *Burhān-i ḵātibī*, ed. M. Mu'īn, Tehran 1342, ii, 1680a), Persian *kalāntar* (from *kalān*, "large, great") (*ibid.*), or from Greek *kaletor*, from the root *kaleo* (Ivanov, *Truth-workers*, p. 60, note 1) are still no more than hypotheses (cf. *Burhān-i ḵātibī*, iii, 1540, editor's note 3). In Turkish, it came to mean "a dervish who has withdrawn from the world and who wanders about like a vagabond; a man who has renounced all worldly things and who has seen the truth, a philosopher" (see Sāmī, *Kāmūs-i Türkī*, Istanbul 1318, ii, 1081; cf. J. W. Redhouse, *Turkish-English dictionary*, Istanbul 1921, 1471).

There exists, especially in Turkish works, vivid and detailed information concerning the *kalandar's* outward appearance: they are depicted in the chapter on them in the *Ḵh'wāḡya-i Djihān wa natīḡya-i ḡlān*, by the 10th/16th-century Turkish writer Wāhidī (Istanbul University Library, Ms. TY 9504, f. 31b), as clean-shaven, with shaven eyebrows and heads, wearing a conical hat of woven hair and a yellow or black shawl, and carrying a drum and a standard (*'alam*); to this should be added the information concerning the appearance of the dervishes connected with the Abdālān-i Rūm and the Ṣamsī groups (cf. Wāhidī, *ibid.*, ff. 20a-21b).

In an illustration to Nicolas de Nicolay's *Les navigations* . . . (Lyons 1567) and reproduced in Blaise de Vigenère's translation (Paris 1612) of Chalcondyles, the *kalandar* is wearing a coarse garment of horse-hair which reaches only to just below the hips; his hair and face are completely clean-shaven; on his head is a felt hat with a horse-hair brim of one hand's length! He is wearing rings in his ears, on his wrists and on his genitals.

There were great similarities between the *kalandars* and the Ḥaydarī, Djāmī and Bektāshī sects,

which differed to some extent in their appearance and dress but had adopted the same way of life (Wāhidī, ff. 43a, 57b ff., 60a ff.; cf. *Türk halk edebiyatı ansiklopedisi*, no. 1, p. 52b; Fakiri, *Ta'rifāt*, Ist. Un. Lib., Ms. TY 3051, f. 13b). In Old Ottoman texts, the words *ışık* and *torlak* are used as equivalents of *kalandar* (*Türk halk edebiyatı ansiklopedisi*, p. 34a).

In the Punjab, the word *kalender* usually means "a trainer of performing monkeys" (see Rose, *Glossary of the tribes of Panjab and N. W. Frontier*, iii, 257).

*Bibliography*: In the text. (TAHSİN YAZICI)

**KALANDARIYYA**, name of a Muslim *ṭarīqa* and, earlier, name given to a (not strictly organized) movement, which probably began after the appearance of the Malāmītiyya [q.v.] (3rd/9th century) and whose adherents, holding in general to Malāmī doctrines, gave them a different interpretation; as manifested in the 7th/13th century, the movement was strongly under Buddhist influence (see M. Habib, *Chishti mystics* . . . in *Med. Ind. Qly.*, i/2 (1950), n. 1). The existence of the movement in *Khurāsān* in the 5th/11th century is clearly attested; its adherents then may have been Buddhist ascetics maintaining their Buddhist beliefs and way of life under a Muslim guise; alternatively, the (earlier) Malāmīs had been inspired by such Buddhist ascetics. Since the *kalandars* looked with envy at the way of life of these Indian ascetics (see *Khatib-i Fārisī*, *Manāḳib-i Camāl al-Dīn-i Sāwī*, ed. T. Yazıcı, Ankara 1972, 12), the second alternative is more likely. The movement was at first confined to individuals and to the eastern Islamic world (*Khurāsān*, *Turkestan*, etc.); its spread westward, in the early 7th/13th century, is due to the activities of *Djamāl al-Dīn al-Sāwī* (d. ca. 630/1223-3). Until his day the movement, like the Malāmītiyya, possessed general basic principles, but remained no more than a corpus of ideas; al-Sāwī, systematizing and adding to this corpus, produced in effect a new movement—so new, that in some sources (e.g., Muḥammad b. Muḥammad al-*Khatib*, *Fuṣṭāt al-ʿadāla*, ed. O. Turan, in *Fuad Köprülü Armağanı*, Istanbul 1953, 555 ff.) he is represented as the founder not of the *Kalandariyya* but of the *Djawlaḳiyya* branch of the *Kalandariyya*. The history of the movement must therefore be treated in two phases, before and after al-Sāwī.

In the first phase, the basic principles of the movement consisted of a kind of existentialism. Whereas the Malāmātīs, without boasting or ostentation, carried out scrupulously God's commands, the *Kalandaris* sought to destroy all custom and tradition and to conceal their actions from public view (*Djāmī*, *Nafahāt*, Turkish tr. by Lāmiʿi, Istanbul 1289, 20; cf. al-Suhrawardī, *ʿAwārif*, Cairo 1358/1939, 56-7, partial Eng. tr. in J. S. Trimmingham, *The Sufi Orders in Islam*, Oxford 1971, 267). Al-Suhrawardī's description is supported by the statements of *kalandars* in 'Abd Allāh-i Anṣārī's *Kalandar-nāma* (ed. Sultān Ḥusayn-i Ṭābanda-i Gunābādī, Tehran 1319 s., 87 ff.), which presents a system of thought advocating inner contentment, the unimportance of learning, the avoidance of all display, and contempt for the transient world and everything in it (*op. cit.*, pp. 88 f.).

In practically any society some individuals, naturally enough, will adopt such ideas; but their systematization was probably due to the influence of Indian ascetics. In the 3rd/9th century there were to be found in Mesopotamia and adjacent regions wandering non-Muslim ascetics, practising poverty, seeking uprightness (*ṣiḳk*), purification and sanctity, traveling in pairs and never spending two nights in

the same place (*Djābīz*, *Ḥayawān*, iv, 147; cf. I. Goldziher, *Le dogme et la loi de l'Islam*, Paris 1920, p. 133). It is very possible that Muslim ascetics, impressed by these holy men, looked for, and found, in the *Kurʿān* (e.g., X, 112) and in *ḥadīth* the authority to imitate them.

Apart from Anṣārī's *Kalandar-nāma*, no work is known which treats of the movement before the beginning of the 7th/13th century, the time when it attracted the attention of the whole Muslim world, no doubt because of the appearance of *Djamāl al-Dīn al-Sāwī*, with his unusual style of dress, and his attraction of adherents. He and his followers shaved the beard, the moustache, the eye-brows and the head; they wore a hair-cloth garment; and they regarded any action as licit. Such distinctive behaviour provoked reaction in some, attracted others, and caused them to be mentioned in several literary works. Al-Sāwī probably died in about 630/1232 (the birthdate 382/992-3 given in his *Manāḳib* (ed. T. Yazıcı, Ankara 1972, intr. p. iv, text p. 5; cf. M. F. Köprülü-zāde, *Andolu'da islāmīyet*, offprint from *EFM*, p. 52) is to be rejected). The name *djawlaḳiyya* presumably arose from the founder's distinctive garb (Pers. *djawlaḳh*, "sack-cloth"). The *Djawlaḳiyya* (under that name) had penetrated into Anatolia in the first half of the 7th/13th century (see O. Turan, *loc. cit.* above; cf. *Djalāl al-Dīn al-Rūmī*, *Mathnawī*, ed. Nicholson, i, 18). Convents of the movement were found principally in Anatolia and Egypt, but the movement itself spread as far as the *Maghrib* and India (see Fakhr al-Dīn 'Irāḳī, *Ushshāḳ-nāma*, ed. and tr. A. J. Arberry, Oxford 1939, 2-26; cf. Dawlat-shāh, pp. 215 f.; *Djāmī*, *Nafahāt*, Turk. tr., p. 671).

*Kalandars* were numerous in Syria and Egypt in the 7th/13th and 8th/14th centuries, and their unconventional behaviour occasionally produced a reaction from the authorities: thus in 761/1360 the Mamlūk sultan al-Malik al-Nāṣir obliged them to adopt normal dress. They were found in Anatolia in the first half of the 7th/13th century (cf. Aflākī, *Manāḳib al-ʿarīfīn*, ed. T. Yazıcı, ii, 596; Fr. tr. Huart, ii, 100; cf. O. Turan, *op. cit.*, p. 561), and in the Ottoman period (they were active until the 12th/18th century) are referred to also under other names: *Abdālān-i Rum*, *Shamsiyyān*, etc. "*Abdālīs*" are recorded from the early 8th/14th century (see, e.g., the *Vildiyetnāme* of Hādīdjī Bektāsh, ed. A. Gölpınarlı, Istanbul 1958, 46). In the 10th/16th century, attacks on such dervish-groups began: a certain Wāhidī wrote his *Khawādja-i Dihān wa Natidja-i Djān* (in the press, ed. T. Yazıcı) as a condemnation of the adherents of ten *ṭarīqas* of this type; and in the next century, when they were still active, Karakāsh-zāde 'Umar Ef. produced a modernized redaction of Wāhidī's work (*Nūr al-hudā li-man ihtadā*, Istanbul 1286). When later authors (e.g., Harīrī-zāde Kemāl al-Dīn, *Wasā'il al-hakā'ik fi bayān salāsīl al-ṭarā'ik*, Ms. Fatih 432, ff. 74 v. ff.) allege that the *Kalandariyya* derives from the Mawlawiyya, they are misled by the fact that the dress of the *Shamsiyya*, a branch of the Mawlawiyya, resembled that of the *Kalandars*. In Anatolia *Kalandars* are also called *ışık* and *torlak*.

In Iran the usual name was *Kalandar* (*Türk halk edebiyatı ansiklopedisi*, p. 34). In the *Şafawid* period they were numerous, especially around Ardabil (A. Olearius, *Vermehrte . . . Reisebeschreibung*, n. p. 1656, 685).

The movement was firmly established in India as early as the reign of *Iltutmush* (607/1210-633/1236) see M. Habib, in *Med. Ind. Qly.*, i/2 (1950), 3). In the 7th/13th century *Kalandar*-type dervishes came

to Delhi, and aroused curiosity by their odd behaviour (Diyā' al-Dīn Baranī, *Ta'rikh-i Firuz-shāhī*, Calcutta 1860-2, 202); especially in the Punjab and in Sind they influenced such personalities as Fakhr al-Dīn 'Irāki (d. 686/1287-8), Amīr Husaynī (d. 718/1318-9) and Shāhbāz Kalandar ('Uthmān-i Marandī, d. 724/1324). They had convents in the neighbourhood of Delhi. They flourished particularly in the 7th/13th and 8th/14th centuries (Baranī, *op. cit.*, p. 560), but were later absorbed into other orders (C. A. Storey, *Persian literature*, i/2, 1036).

Doctrines. Influenced by Hindu and Buddhist (especially Mahayana and Sangha) traditions, the Kalandariyya were distinguished from other Muslim orders by the following features: (1) The shaving of the head, eye-brows and face (especially after the time of al-Sāwī) in order fully to reveal the beauty of the face. (2) The wearing of a *khirka*; in India the usual garb was a blanket over the body and a blanket or a cotton sash round the waist (*Khayr al-maǧālīs*, no. xxxviii; *Siyar al-ʿarifin*, p. 119; *Manāḥib-i Khwādja-i Dihān*, quoted in *Manāḥib-i Camāl al-Dīn-i Sāvī*, intr. p. xi); (3) The wearing round the neck and on the arms of iron rings called *ḥaydariyya* (*Fawā'id al-fuwād*, 25 *Djumādā* I, 708). (4) Austerities and seclusion were not considered important, and they were lax in following the obligatory precepts and practices of Islam, usually refraining from engaging in worship (Maḳrīzī, *Khīṭāṭ*, iv, 301), or at least in corporate worship (*Siyar al-ʿarifin*, p. 97). (5) They usually subsisted on charity, owned nothing but a few personal possessions, and did not marry. They were notorious for their coarse behaviour (Maḳrīzī, *loc. cit.*). The adherent should remain unmoved by any ill-treatment and never feel sorrow or grief; he should be satisfied with one morsel of food and one garment; he should absolutely eschew hypocrisy (*riyāʿ*); he should despise all precious objects; he should remain aloof from the mass of the population and always be on the move; and he should always love a beautiful countenance (*Manāḥib-i Camāl al-Dīn-i Sāvī*, intr. pp. xii f.). In spite of the obligation to keep on the move, some *kalandars* did settle in convents, in Egypt and Syria and (e.g., in the 7th/13th century) in Konya (Aflāki, *loc. cit.*).

(TAHSİN YAZICI)

**KALANSUWA** [see **LIBĀS**].

**KALĀNTAR** (Pers. *kalān*, "big, great") is used in the 8th/14th and 9th/15th centuries to mean "leader" (cf. Hāfiẓ Abrū, *Cinq opuscules de Hāfiẓ-i Abrū concernant l'histoire de l'Iran au temps de Tamerlan*, ed. F. Tauer, Prague 1959, 7; Mu'īn al-Dīn Natanzī, *Muntakhab al-tawārikh-i mu'īnī*, ed. J. Aubin, Tehran 1957, 257, 258, 261), and occurs especially with reference to the tribal and military classes. The phrase *il va ulūs va kalāntarān va sar khaylān va aʿrāb va aḥshām va farīḥ-i Balūḥ* is found in a document dated 874/1470 issued by Uzun Ḥasan for the

government of Khurāsān and Transoxania (*Asnād va mukātabāt-i ta'rikhī-i Irān*, ed. 'Abd al-Ḥusayn Navā'ī, Tehran 1962, 322), in which *kalāntarān* clearly means tribal leaders (cf. also the phrase *kalāntarān va iūshmalān va sar khaylān-i il va ulūsāt* in a farman of Shāh Ṣafī dated 1043/1634, *Yak ṣad o pāndjāh asnād-i ta'rikhī*, ed. D. Jahāngīr Kā'im-maḳāmlī, Tehran 1969, 44). From the late 9th/15th century onwards *kalāntar* designates (i) an official belonging to the "civil" hierarchy in charge of a town or district or the ward of a town, (ii) the head of a guild, and (iii) the head of a tribe or sub-tribe. In its first sense, which is now obsolete, the term *kalāntar* sometimes overlapped or was synonymous with *ra'īs*, *dārūgha* [q.v.], and *hadkhudā*. The use of the term *kalāntar* for the head of a guild is rare, but is attested in two documents, one dated 928/1522 for the *kalāntar* of the singers and musicians of the empire (Hādīdī Ḥusayn Nakhḍiāvānī, *Dhayl-i Ḥabīb al-siyar ta'līf-i Maḥmūd b. Ghīyāth al-Dīn Khwāndamīr*, in *Nashriyya-i dānishkada-i adabiyāt-i Tabriz*, x/3 (1958), 246-7), and the other for the *kalāntar* of the *nakhkārakhāna* in the *Sharafnāma* of 'Abd Allāh Marwārid (H. R. Roemer, *Staatsschreiben der Timuridenzeit*, fol. 20b ff.). As a tribal term *kalāntar* is still current and is common among the tribes of Fārs and Kūhgīliya, and among the Bakhtiyārī.

As the head of a town or district the *kalāntar* held a position of respect similar to that of the *ra'īs* in the Saldjūq period, though it must not be assumed that the *kalāntar* necessarily carried out the same functions everywhere or that his status was always the same. He was, like the earlier *ra'īs*, the link between the government and the taxpayers and his main duty was to reconcile the interests of the two parties. In some cases he received his appointment from the ruler (cf. the appointment of a village *kalāntar* by Timūr mentioned by J. Aubin, *Un santon Quhistānī de l'époque Timouride*, in *REI* (1967), 211). The analogy between the *kalāntar* and the *ra'īs*, however, must not be pressed too far. Under the Ṣafawids, the *kalāntar* was more fully integrated into the official hierarchy than had been the *ra'īs* in Saldjūq times. In the case of Iṣfahān and some of the major towns, the *kalāntar* received his appointment from the shah. Iskandar Beg, referring to the appointment of a certain Adham Beg as *kalāntar* of Tabriz in 1015/1606-7, states that this office was "among the most important affairs" (*az mu'zamāt-i umūr*) (*Ālamārā-yi 'Abbāsī*, Iṣfahān 1956, ii, 725). Muḥammad Muḥfid also mentions that the office of *kalāntar* was "among the high offices" (*az manāḥib-i 'aliyya*) (*Djāmi'-i Muḥfidī*, ed. Irādī Afshār, Tehran, iii, 244).

In Ṣafawid times the *kalāntar* of Iṣfahān held a position of eminence and was reckoned among the notables (*ashraf wa a'yān*). Together with the *wazīr* of Iṣfahān, he was authorized to designate the heads of the districts, subject to the agreement of two-thirds of the population concerned, and the heads of the craft guilds (Mīrzā Rafī'ā, *Dastūr al-mulūk*, ed. Muḥammad Taḳī Dāniṣh-pazhūh in *Rev. de la faculté des lettres et sciences humaines, Univ. of Tehran*, xvii/4, 421-2). His functions were primarily concerned with the assessment and collection of taxes. In the first three months of the year, he would appoint a tax collector (*muḥassīl*), assemble the heads of the craft guilds and the heads of the districts or wards of the city and send them to the *nakhīb al-ashraf*, who would transmit to them a statement of their tax quota. After the members of the different guilds and the inhabitants of the different districts had, with the

approval of the *kadhūdās*, allocated this among their members and the inhabitants of the districts respectively and the documents recording this had been signed by the *naḥīb*, these would be brought to the *kalāntar* for his signature and would be registered by the *muḥaṣṣis-i mamlakat*, who kept a register of the break-down of the taxes among the individual taxpayers belonging to the guilds and districts. The *muḥaṣṣis-i mamlakat* was, in effect, the *kalāntar*'s clerk and appointed with his approval. The seal of the *kalāntar* was required on orders for the payment of drafts made on the taxes of the guild or districts.

It was also the duty of the *kalāntar* to investigate and decide any disputes which might occur between the guilds or the inhabitants of a district concerning their trade, business, or activities and to prevent them exercising tyranny or oppression against one another. A number of attendants belonging to the *diwān* (*mulāzimān-i diwān*) were allocated to him to act as his subordinates to perform the various tasks which were referred to him by the *diwān* (*Dastūr al-mulūk*, xvi/4, 421-2, 427, xvi/5-6, 549; see also *Tadhkirat al-mulūk*, tr. and explained by V. Minor-sky, GMS, 1943, Persian text, fol. 76a ff.). He received wages, allocated on the taxes, and dues which he collected annually from the guilds according to custom (*Dastūr al-mulūk*, xvi/4, 422). Dues levied for the *kalāntar* (*Kalāntārī*, *rusūm-i kalāntārī*, *marṣūm-i kalāntār*) are also attested in Āḳ Ḳoynulū documents (see text of a *suyūrghāl* granted by Rustam Beg dated 902/1496 and a grant of immunities from Aḥmad Beg dated 903/1497, given by J. Aubin in *Arch. persanes commentées 12, Note préliminaire sur les archives du Takya du Tchima-rud*, Tehran 1955, 6, and A. K. S. Lambton, *Landlord and peasant*, Oxford 1953, 103, for a document dated 904/1498-9 for a *suyūrghāl* from Amīr Alvand Āḳ Ḳoynulū).

The *kalāntar* of Iṣfahān had certain functions in connection with the reception of foreign envoys, and was consulted by the *mihmāndārbāshī* and the *wazīr* over the designation of their lodgings (*Dastūr al-mulūk*, xvi/4, 427; cf. also a document dated 1130/1717 from Shāh Sulṭān Ḥusayn, instructing the *diwānbeḡi*, vizier, *kalāntar*, and officials of Iṣfahān to hand over to a certain Frenchman the house in which he was to live, H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 229). When Humāyūn, the Great Moghul, came to Ḳazwīn during the reign of Tahmāsp he lodged with the *kalāntar* *Khwādja* 'Abd al-Ghanī *Djalādātī* (Iskandar Beg, *Ālamārā-yi 'Abbāsī*, i, 98). Tavernier, when he arrived in Iṣfahān in 1664, was met by the *kalāntar* of the Armenians, who was ordered to provide him with men to transport the presents he had brought for inspection at the court (*Voyages en Perse*, Geneva 1970, 116).

The duties which the *kalāntar* performed on behalf of the government were only one aspect of his functions. He was also, in the words of the *Dastūr al-mulūk*, the representative of the people (*wakīl-i ra'āyā*). As such, it was his responsibility to present their affairs to the shah and others in authority, to remove tyranny and oppression which might afflict them, and to see that the orders and regulations issued by the guilds concerning their business and work were carried out. Similarly, he was required to be present on occasions when measures were taken affecting the interests of the people, as, for example, when claims for a reduction of taxation after some natural calamity were examined by the *rayyā'* (surveyor), or when disputes over the use of the water

of the Zāyandarūd were investigated (*Dastūr al-mulūk*, xvi/5-6, 552).

The population probably had greater influence on the appointment of the *kalāntar* in the provinces than in the capital. A document dated Rabī' I 1107/1695 for the dismissal of a certain *Khwādja* Muḥammad Taḳī, the *kalāntar* of Gilān-i Biyā Pas (Rašt and its dependencies), and the appointment of *Khwādja* Muḥammad Sa'īd as his successor, states that the *wazīr*, deputy *wazīr* and *mustawfī* of Gilān-i Biyā Pas, the local *shaykh al-islām* and the *wazīr* of the *buyūtāt-i khāṣṣa* had investigated the dissatisfaction of the *kadhūdās*, taxpayers (*arbāb-i bunīca*), and people of the province with *Khwādja* Muḥammad Taḳī and their wish that *Khwādja* Muḥammad Sa'īd, the former *kalāntar*, should be reappointed. The document records that they had reported that only 469 persons had expressed their satisfaction with *Khwādja* Muḥammad Taḳī as *kalāntar*, while 2,127 persons had signified their desire for the reappointment of *Khwādja* Muḥammad Sa'īd; of these 983 had complained against *Khwādja* Muḥammad Taḳī, while the rest had merely stated their support for the appointment of *Khwādja* Muḥammad Sa'īd. In the light of this, the latter was reappointed *kalāntar* and the population of the province were instructed not to oppose him in anything which he considered would contribute to the ease of the people or increase the revenue of the *diwān*. The document states that the *wazīr* and *mustawfī* were not to make allocations on the revenue or interfere without his knowledge or permission (or that of the officials he might appoint). It was his responsibility to make charges on the revenue in accordance with the details received from the *diwān* and to send to the *diwān* at the end of the year a statement of these charges and of the taxes and dues and their allocation among the individual taxpayers together with the relevant documents and receipts duly sealed. He was also given general oversight of the purchase of silk from Gilān by the royal administration, and had a watching brief over matters connected with law and order: disputes between the people were to be decided by the *dārūgha* in his presence or that of the officials he appointed (*Bar-rasīhā-yi ta'rīkhī*, Tehran, iii/2, 80-2; also in *Yak šad o pandjāh sanad-i ta'rīkhī*, op. cit., 54). An undated *farmān* issued by Shāh Sulṭān Ḥusayn in favour of Amīr Muḥammad Zamān b. Amīr Muḥammad Ḥusayn, after establishing the hereditary claim of Amīr Muḥammad Zamān to the office of *kalāntar* of some of the provinces (*walāyāt*) of Sīstān and mentioning that the claim of his grandfather Mīr Muḥammad Mu'min had been recognized in Ramaḡān 1068/June-July 1658, subject to two-thirds of those whose names were on the tax-roll (*bunīca*) being agreeable to his holding the office of *kalāntar*, appoints him to that office, provided his appointment is also supported by two-thirds of the people. His duties were similar to those of the *kalāntar* of Gilān-i Biyā Pas, except that he did not have special duties in connection with the silk trade (*Asnād-i khāndān-i Kalāntārī-i Sīstān in Barrasīhā-yi ta'rīkhī*, Tehran, iv/5-6, 12-14). Cf. also two diplomas for the office of *kalāntar* of Tabrīz issued by Karīm *Khān* Zand, dated 1764 and 1773 respectively, which show that the wishes of the inhabitants were considered in the appointment of the *kalāntar*, at least in theory. Nādir Mīrzā, *Ta'rīkh va Djuḡhrāfiyā-yi dār al-saltāna-i Tabrīz*, Tehran lith., 1905, 291 ff.)

In the smaller towns also the *kalāntar* was the spokesman of the people and could sometimes make his voice heard. For example when the *kalāntar* of

Sāva and the people of that region complained to Shāh 'Abbās in 999/1590-1 of the tyranny and exactions of Shāh Kūlī Sulţān, the Turkoman governor, he was replaced by Gandī 'Alī Khān (Kāfī Aḥmad Kūmmī, *Khulāṣat al-tawārīkh*, ed. H. Muller, Wiesbaden 1964, Persian text, 90). Several European observers in the 17th century state that the *kalāntar*'s function was to defend the people against the injustice and extortion of the government (cf. Du Mans, *Estat de la Perse en 1660*, Paris 1890, 36; Tavernier, *Voyages en Perse*, 260; Corneille le Brun, *Voyages de Corneille le Brun par la Moscovie, en Perse, et aux Indes orientales*, Amsterdam 1718, i, 209).

The *kalāntar* of the Armenians of New Djuġfā outside Isfahān, where Shāh 'Abbās established an Armenian colony, was an important and influential official in Şafawid times. He was normally an Armenian. His functions were similar to those of the *kalāntar* in other towns or districts of towns (see further H. Busse, *Untersuchungen zum islamischen Kansleiwesen*, 138 ff.; J. Carswell, *New Julfa*, Oxford 1968, 78). An official known as the *kalāntar* was also well-known in Georgia in the 17th and 18th centuries and his functions seem broadly to have corresponded to those of the *kalāntar* in Persian towns (cf. Joseph Karst, *Le Code de Vakhtang VI, Commentaire historique-comparatif*, in *Corpus Juris Ibero-Caucasici*, Strasbourg 1937, iii, 564).

Usually, the *kalāntar* was a local man, and as with many other local officials there was a strong hereditary tendency in his office. Occasionally the *kalāntar* of one city might be transferred to another, but this was rare. Sometimes the *kalāntar* held some other office as well (cf. the case of Muḥammad Şāliḥ Beg, a Tabrizī, who died in 1031/1621-2, after having been at one time *waṣīr* of Şhīrwān and later *waṣīr* and *kalāntar* of Kūmm; Iskandar Beg, *Ālamārā-yi 'Abbāsi*, ii, 991).

The fact that the *kalāntar*, while acting as the spokesman of the people, was also integrated into the official hierarchy made it easy for him, as soon as the hand of the central government was removed, to use the power and influence which he held as a government official to assert his independence. In the 18th century the *kalāntars* and *kadhkhudās* of the cities and towns often emerged as local leaders in times of crisis. One such was Ḥādīdī Ibrāhīm, whose father Ḥādīdī Ḥāshim had been *kadhkhudābāshī* of the Ḥaydarī quarters of Şhīrāz under Nādir Shāh. He became *kalāntar* of Şhīrāz after the death of 'Alī Murād Khān Zand and continued to hold this office under Luţf 'Alī, and in 1205/1791, when the latter absented himself from Şhīrāz in an abortive attempt to seize Isfahān, took possession of the city, to surrender it in due course to Ākā Muḥammad Khān Kādjār, whose *şadr-i a'zam* he later became. Amīn al-Dawla, one of Faţḥ 'Alī Shāh's first ministers, was also, at the beginning of his career, *kadhkhudā* of one of the districts of Isfahān and later *kalāntar* of the city.

Sir John Malcolm, writing in the early 19th century, states that "the Kalantar, or chief magistrate of the city, and the Kut-khodahs, or magistrates of the different wards, though nominated by the king, must be selected from the most respectable inhabitants. . . Although these officers are not formally elected, the voice of the people always points them out: and if the king should appoint a magistrate disagreeable to the citizens, he could not perform his duties, which require all the weight he derives from personal consideration to aid the authority of office" (*History of Persia*, London 1829, ii, 324-5). James

Morier, about the same time, states that a *kalāntar* besides "the real governor resides in every city, town and village and superintends the collection of the tribute". His account shows that there was a marked continuity of practice in the office of *kalāntar*. He states, "The *Kelounter* is a man of consequence wherever he presides; he is an officer of the crown, and once a year appears before the Royal presence, an honour which is not permitted to the *Ket Khoda*. He also receives wages from the King's treasury, which the *Ket Khoda* does not. The *Kelounter* is the medium through which the wishes and wants of the people are made known to the King: he is their chief and representative on all occasions, and brings forward the complaints of the *Rayats*, wherever they feel oppressed. He also knows the riches of every *Rayat*, and his means of rendering the annual tribute: he therefore regulates the quota that every man must pay; and if his seal is not affixed to the document which the *Rayat* brings forward in the time of the levy, the assessment is not valid, and the sum cannot be received" (*A journey through Persia, Armenia and Asia Minor to Constantinople in the years 1808 and 1809*, London 1812, 235-6).

From about the middle of the 19th century, as the central government extended its operations, the office of *kalāntar* lost its importance. Its financial functions were largely taken over by officials of the ministry of finance. The *kalāntar* continued, however, under the governor, to have some responsibility for local affairs, the guilds, and, to some extent, public order, but his duties and influence varied from place to place (cf. E. Aubin, *La Perse*, Paris 1908, 37, 38, 51). With the grant of the constitution in 1906 and the adoption of modern forms of government, the office of *kalāntar* lapsed, its various surviving functions being taken over by municipal and police officials. During the reign of Riḍā Shāh, the term *kalāntari* became the official designation of a police-station.

*Bibliography*: see further A. K. S. Lambton, *The office of kalāntar under the Safawids and Afshars*, in *Mélanges Massé*, ed. 'Alī Akbar Siyassi, Tehran 1963, 206-18; W. M. Floor, *The office of kalāntar in Qājār Persia*, in *JESHO*, xiv, iii (1971), 253-68; Mirzā Muḥammad Kalāntar-i Fārs, *Rūznāma*, ed. 'Abbās Ikbāl, Tehran 1946. (Mirzā Muḥammad was made *kalāntar* of Fārs by Karīm Khān (54). The *Rūznāma* contains a number of references to *kalāntars* in southern Persia between the years 1142/1729-30 and 1199/1784-5).

AL-KALAŞĀDĪ, ABŪ 'L-ḤASAN 'ALĪ B. MUḤAMMAD B. 'ALĪ AL-KURASHĪ AL-BASTĪ, Muslim mathematician, jurist and scholar, born in Baza (Basta) in Spain, at the beginning of the 9th/15th century. He studied in his native town, following 'Alī b. Mūsā's courses in law, Qur'ān exegesis, *belles-lettres* and the science of the fixed shares in an estate (*farā'id* [q.v.]). Afterwards he settled in Granada, where Abū Ishāk Ibrāhīm b. Futūḥ and the *imām* 'Abd Allāh al-Sarakuṣṭī were his teachers. The specialised teachings of the former were oriented towards philosophy, science and philology, while the latter's courses introduced him further in Muslim law. From Granada he set out on a pilgrimage to Mecca, sojourning in the most important cities of the Maghrib and Egypt, where he met the outstanding authorities in *belles-lettres* and science. In his *Riḥla*, some extracts of which are preserved in Aḥmad Bābā's [q.v.] *Nayl al-ibtihādī*, he gives a list of these scholars, together with interesting biographical and bibliographical

information: thus at Tlemcen he met al-Kāsim b. Sa'īd al-ʿUqbānī (d. 854/1450) and Muḥammad b. Aḥmad Ibn Zāghū (d. 849/1445), both of whom had a great influence on him and acquainted him with the methods of arithmetic and their application to the problems of the *farā'id*. In Egypt he attended the lectures of Ibn Ḥaǧǧar al-Asḳalānī (in 852/1448). Having returned from his pilgrimage, al-Kalāshādī settled in Granada, consecrating his life to teaching and editing his numerous works. Of his pupils, Abū ʿAbd Allāh al-Mallālī, Abū ʿAbd Allāh al-Sanūsī, and Aḥmad b. ʿAlī al-Balawī may be mentioned. The political and military situation was, however, deteriorating: the united houses of Aragon and Castile decided to launch the final attack against the last Muslim stronghold in Spain. Courageously, al-Kalāshādī exerted himself in trying to organize resistance, but he was soon forced to join the Andalusian hordes of refugees that were spreading over the Maghrib. He died in Ifrīkiya at Bedja, on 15 Dhū 'l-Hiǧǧidja 891/10 December 1486.

Al-Kalāshādī was a prolific author on widely-varying topics, some of whose works enjoyed considerable renown both in East and West. He was certainly a compiler, but distinguished himself by the carefulness of his composition and the multiplicity of personal examples. In his mathematical works, one notices the first use of a symbolization which he uses quite extensively in the presentation and writing down of equations, sc. the use of the letter *sh* (abbreviation of *shay'*) to represent the unknown (*x*), of the letter *m* (for *māl*) =  $x^2$ , of *k* (for *ka'b*) =  $x^3$ , of *l* (for *ta'dīl*) to represent the symbol =, of *dj* (for *djadhr*) =  $\sqrt{\quad}$ . Al-Kalāshādī's commentary on Ibn al-Bannā' al-Marrākūshī's [q.v.] *Talkhīṣ* contains a fairly advanced formula for finding the approximate square root. Finally, attention may be drawn to a rational classification of the fractions by him and an exhaustive study of arithmetical procedures [see AL-KASR]. Here follows a list of his works:

Arithmetic and algebra: 1. *Ghūnyat dhawī 'l-albāb fī sharḥ Kashf al-djilbāb*, MS. Tunis 14554; 2. *Inkīshāf al-djilbāb ʿan funūn al-hisāb*, MSS. Alex. Hisāb, 4; Br. M. 418, 903<sub>2</sub> (see M. Ben Cheneb and É. Lévi-Provençal, in *R. Afr.*, 1922); 3. *Kānūn al-hisāb wa-ghūnyat dhawī 'l-albāb*, MS. Berlin 5995, lx. 8534; 4. *Kashf al-asrār (astār) ʿan ʿilm (hurūf) al-ghubār*, MSS. Paris 2473, 5350; Tunis 168 R, 402 R, 3292, 2934, 4775; Algiers 399, 17, 1448, 9; Rabat 455, 456; Brill 295, 532; Beirut 239; several MSS. in the collection of the author. The text has been published in Cairo (1309/1891) and Fez (1315/1897); 5. *Kashf al-djilbāb ʿan ʿilm al-hisāb*, MSS. Paris 2463, 13; Cairo I v, 178; Esc. 2853, 4; Br. M. 418, 903<sub>12</sub>; Woepcke, in *JA*, I (1854); Tunis 2054; Tetouan, 227; 6. *Risāla fī maʿānī 'l-ḥasr wa-'l-basf*, MS. Tunis, 2039; 7. *Risāla fī maʿrifat istiḥrāḍi al-murakkab wa-'l-basf*, MS. Tunis 2043; 8. *Sharḥ al-Urdjūza al-yasminīyya*, MS. Br. M. 621; another MS. in the collection of the author; 9. *Sharḥ dhawāt al-asmāʿ*, MS. Rabat 456; several MSS. in the collection of the author; 10. *Sharḥ Talkhīṣ Ibn al-Bannāʿ*, MS. S. 331; Paris 2464; 11. *Tabṣīrat al-mubtadī bi-'l-ḳalam al-hindī*, MS. Rampur, I, 409, 3; Tunis 2043 (copy, dated 1020); 12. *Al-Tabṣīra al-Wādīḳa fī masāʾil al-aʿdād al-laʾiḳa*, MS. Tunis 2049.

The fixed shares: 1. *Bughyat al-muhtadī (sic) wa-ghūniyat al-muntahī*, *Mard.* 340. Published in Fez. No doubt one should read *al-mubtadī*, as is clear from a copy in my private collection; 2. *al-Darūri fī ʿilm al-mawārith*, quoted in *al-Aʿlām*, V, 163; 3.

*al-Kullīyyāt fī 'l-farā'id*, with commentary, MS. Tunis 418; 5. *Lubāb Taḳrīb al-mawārith wa-muntahā 'l-ukūl (ḳawl) al-bawāḥith*, MS. in the coll. of the author; 5. *al-Mustawfi li-masāʾil al-ḳawfi*, quoted in the *Nayl*, 208; 6. *Sharḥ al-farā'id* of Ibn Ḥaǧǧib, of al-ʿAttābiyya, of the *Talkhīn*, of the chapters regarding the *farā'id* of *Ḳhallī's Mukhtasar*, quoted in the *Nayl*, 208; 7. Two *sharḥs* of the *Tilīm-sāniyya*, S. I, 666; 8. *Taḳrīb al-mawārith wa-tanbīh al-bawāʿith*, quoted in the preface of the *Bughyat al-mubtadī*.

Mālikī law, ḥadīth, apologetics concerning the Prophet. The *Nayl al-ibtihādī* gives a long list of works, the greater part of which has not come down to us: 1. *Ashraf al-masālik ilā madhhab Mālik*, quoted in *al-Aʿlām*; 2. *Hiḍāyat al-ānām fī sharḥ Kawāʿid al-Islām*; 3. *Sharḥ al-Burda*; 4. *Sharḥ Hikam Ibn ʿAtāʾ Allāh*; 5. *Sharḥ al-Anwār al-saniyya fī 'l-ḥadīth*; 6. *Sharḥ Lubb al-ashār*, MS. Br. II, 378; 7. *Sharḥ Mukhtasar Khalīl*; 8. *Sharḥ Radjāz Ibn Barri*; 9. *Sharḥ Radjāz Abi ʿAmr b. Manzūr fī asmāʾ al-Rasūl*; 10. *Sharḥ Radjāz al-Ḳurtubī*; 11. *Sharḥ al-Risāla*.

Grammar, prosody, etc.: 1. *Ghūnyat al-muḥāt*, with commentary; 2. *Sharḥ al-Djarrūmiyya*; 3. *Sharḥ al-Djūmal* (of Zaǧǧidjādī); 4. *Sharḥ Mulḥat al-iʿrāb*; 5. *Mukhtasar fī 'l-ʿarūd*; 6. *Sharḥ al-Khazradjīyya*; 7. Commentary on the *Eisagoge*; 8. *Sharḥ* of the *urdjūza* of Ibn Futūḥ on the constellations; 9. *Rihla*.

*Bibliography*: Brockelmann, S II, 378; Ibn Maryam, *Bustān*, 141-3; Ibn al-Kādi, *Durrat al-ḥidāi*, II, 445; Maḳḳārī, *Nafḥ al-ṣīb*, II, 684; Sakhāwī, *Al-Daw al-lāmiʿ*, 5, 14; Sarkīs, *Muʿdjam al-maḥbūʿāt*, 1519; Suyūṭī, *Naẓm al-ʿiḳyān*, 131; Aḥmad Bābā, *Nayl al-ibtihādī*, 208; Ziriklī, *al-Aʿlām*, V, 163.—S. #### KALĀT [see BALŪCISTĀN].

**KAL'AT AYYŪB**, now Calatayud, a fortress town in the Upper March (*al-Thaḡhr al-aʿlā*) to the south-west of Saragossa, built near the site of the ancient Bilbilis (Laba in Yāḳūt); it took its name from the tābiʿ Ayyūb b. Ḥabīb al-Lakhmī, a wālī who succeeded ʿAbd al-ʿAziz b. Mūsā b. Nuṣayr. Situated 25 miles from Tudela and 50 miles from Medinaceli and Saragossa, the town possessed fertile, well-watered lands with orchards of figs and many fruit trees, yielding a wide variety of produce which was sold at moderate prices. According to al-Bakrī, the local mountains produced a gum-resin (*murr*) of good quality. A type of ceramic with a golden glaze was manufactured in the town and exported. Al-Idrīsī included the *balad* of Kal'at Ayyūb in the *iklīm* of Arnedo (Arnit), along with Daroca, Huesca, Saragossa and Tudela, but in al-Bakrī's opinion it must have come under the last-named place for administrative purposes; according to al-Maḳḳārī, Molina was its *madīna*. The territory of Kal'at Ayyūb suffered from incidents arising from the behaviour of two powerful families who were not always subject to Cordoba, the Banū Ḳasī (*muwallad*) and the

Banu 'l-Muhâdjir or Tudjibis (Arab). According to al-'Udhri, the amir Muḥammad rebuilt Kal'at Ayyüb in 248/862. Under the domination of the Tudjibis, it was compelled on several occasions to submit to Cordoba during the caliphate. In the 5th/11th century it was ruled by Sulaymân b. Hüd who, on his death, left the town to his son Muḥammad, but the latter swiftly handed it over to his brother Ahmad, lord of Saragossa. It is reasonable to suppose that Kal'at Ayyüb was under the control of the Almoravids at least from 503/1109, and it remained in their possession until 25 Rabi' I 514/24 June 1120, when it was captured by Alfonso I of Aragón. The Muslims who stayed on in Calatayud after the Christian conquest formed a community living alongside Christians and Jews; they must have been far superior in numbers. The Jalón valley, where Calatayud is situated, was one of the regions of Aragón where there was a strong concentration of Moriscos.

(J. BOSCH-VILÀ)

**KAL'AT BANİ 'ABBÄS**, a town in Algeria in the Bîbân mountains, about 35 km. northwest of Bordj Bû 'Arridj. Situated at an altitude of about 1050 m., the town stands in a strategic position on a plateau surrounded on three sides by sheer ravines from about 500-600 m. in depth, its only link with the surrounding country being a narrow strip of ground bordered by precipices. The town is divided into four quarters which in the past were frequently in conflict with one another, and one of these is now almost in ruins. It is the most important centre of the Banü 'Abbäs tribe, whose ill-defined territory extends from the Oued Sahel to the Medjana. Its inhabitants were once renowned for the making of woollen burnouses which they used to sell throughout Algeria and Tunisia; in the Tell towns, another occupation was embroidering burnouses. At the present day, many of the inhabitants are leaving their homes, mainly to go to France.

Kal'a was founded in the second half of the 9th/15th century by the marabout Sidî 'Abd al-Rahmân, who is said to have established a *sâwiya* on the rock of Kal'a and to have placed himself at the head of the Banü 'Abbäs in their rising against the Zwâwa, of whom they had hitherto been tributaries. His son Ahmad erected a *ḥaṣba*, proclaiming himself sultan, and extended his authority over the country lying between the Hoḍna and the sea (the kingdom of Labès, of Marmol). 'Abd al-'Aziz, his successor,

further increased his power with the aid of the Turks, whom he supported against the Kabyles of Kükü and helped in their expeditions against the Moroccans and the people of Tuggürt and Wârgla. The breakdown of this alliance (1552) led to fighting between the Turks and the Banü 'Abbäs which continued until the end of the 10th/16th century. Though besieged on various occasions during this period, Kal'a could never be taken. After the death of 'Abd al-'Aziz, who was killed while defending his capital, his son Amokkrân took power. The latter defended his territory as far as the Sahara, repulsed several attacks by the Turks, and died while fighting against them (1600); his son Sidî Nâsir, a man of the *sâwiya* rather than a warrior, aroused the displeasure of the Banü 'Abbäs, who assassinated him. At this, the kingdom of Kal'a ceased to exist and the town became no more than the family citadel of Sidî Nâsir. By the 12th/18th century, the town had declined swiftly: "the country is without a master", wrote al-Warṭhîlânî, "the people are in revolt against God, His Prophet and His laws". Protected by its unassailable position, it remained independent until the French conquest. It served as a place of refuge for opponents of the Turks and for members of the great Muslim families who, in time of war, brought their grain and their valuables there for safe keeping, entrusting them to private persons. The honesty of these trustees was proverbial. Thus, amidst the disorders which laid waste the land, Kal'a enjoyed the benefits of a real neutrality. The tomb of Sidî Ahmad, the son of 'Abd al-Rahmân and ancestor of the Ūlâd Muḥkrân, was an object of veneration in the 18th century. It was also in Kal'a that Muḥkrânî, the leader of the 1871 revolt, was buried.

**KAL'AT BANİ HAMMÄD**, a mediaeval town in the Central Maghrib, situated in the Maadid mountains, capital of the Banü Hammäd dynasty [see HAMMÄDIDS]. It is also known as Kal'at Abî Ṭawîl (al-Bakrî, *Istibṣâr*, etc.). The site of the town, now a mass of ruins, is in the form of a vast amphitheatre opening out onto the plain of the Hodna which it dominates from a height of about 550 m. The average altitude of the old city is 990 m. above sea level. To the north of it rises the massive truncated cone of Taḥarbüst (1418 m.), an arid mountain whose contorted slopes are marked by projecting spurs where the folds of rock are inverted; to the west is the Gorein range, which can be transversed in the direction of Msila only by a pass at the foot of the peak, which rises to 1190 m.; to the south, the Djabal Rahma largely bars the view, except over its eastern flank, which is cut by the narrow valley of the Oued Fradj, running from north to south, a gap revealing in the distance the plain with the glittering Chott

Hodna. The same torrent, flowing down from the mountain through narrow gorges with steep sides, runs past the eastern part of the town. Beyond its deeply embanked course rise various mountains ranging from 1000-1400 m. in height.

Well protected against any possible attacks from the plain, which can easily be watched, and situated only a short distance from the most usual east-west routes, the site has doubtless been occupied from the earliest times. Ruins dating from antiquity—not yet investigated scientifically and including the remains of some baths—indicate Roman occupation, though it is impossible to estimate either its extent or its character. In 335/947-8, the place may have seen the tragic end of Abū Yazid [*q.v.*], the "Man on the donkey", since Mount Kiyāna, still called the mountain of the 'Adīlsa, seems to tally closely with the modern Taḡarbūst on whose summit some ruins are to be seen. There can be no doubt that the strategic value of the place was well known to the Ṣanhādīja; the reasons motivating Ḥammād, son of Buluggīn, son of Zīrī, in his partial abandonment of the ancient capital Aṣhīr are thus apparent. By choosing the Kal'a site, he secured for himself a second base that was strong and particularly well protected against the ambitions of the Zanāta in the plain; but also and above all, by building a stronghold there, he made clear his desire for independence from Bādīs, the Zīrid of Ḳayrawān. Kal'a was to appear as a spear-head directed towards the East. Some years later (405/1015), Ḥammād raised "the standard of revolt" and "proclaimed the sovereignty of the 'Abbāsīd caliphs". A new dynasty was born, and Kal'a became the capital of an independent state.

If Ibn Khaldūn is correct, the town was built and populated by the forced transfer of the inhabitants of Msila and Sūḵ Ḥamza (Bouira); other elements of the population, particularly the Djarāwa, settled there themselves. Ḥammād's first care was the building of strong ramparts, a palace, "several mosques, caravanserais and other public buildings". It is hard to believe, however, that as early as 401/1010, Kal'a "attained a high degree of prosperity" and that "artisans as well as students flocked there from the remotest regions and the furthest points of the empire". In fact, at this period Ḥammād still seems to have been closely attached to Aṣhīr, regarding Kal'a as merely a secondary town. Bādīs, who had reacted vigorously against his uncle's initiatives, attacked Kal'a in 406/1015; it seemed that the town could not resist his assault, when the Zīrid suddenly died.

The very short-lived apogee of the town came during the reign of al-Nāṣir, son of 'Alannās (454/1062-481/1089) and his son and successor al-Manṣūr (481/1089-498/1105). The sudden prosperity of Kal'a is due to the misfortunes of Ifriḳiya when it was invaded by the Arab nomads. The towns in the interior, Ḳayrawān in particular, were depopulated, while Kal'a, according to al-Bakrī, became the metropolis after the ruin of Ḳayrawān: "the inhabitants of Ifriḳiya flocked there to settle... the town is a trading centre which attracts caravans from 'Irāk, the Ḥidjāz, Egypt, Syria and all parts of the Maḡrib". However, from the beginning of his reign al-Nāṣir sought an emergency outlet to the sea; he had the little port of Bougie put into order, and there his son built al-Manṣūriyya, where he later took refuge. The Hilālīs [see HILĀL] held the whole Hodna plain as well as that of Sétif, as far as the Iron Gates; despite a treaty, the Athbaḍī made the city's existence more and more difficult, subjecting it to a veritable

blockade. In the 6th/12th century, the power of Kal'a declined continuously, to the advantage of Bougie, and in 543/1148-9 Yaḥyā the son of al-'Azīz removed all articles of value and transported them to Bougie. Shortly after 547/1152, Kal'a was taken by storm by the Almohads, who "destroyed it utterly". However, the armies of 'Abd al-Mu'min installed themselves there and formed a garrison, restoring various ruined buildings and reconstructing a small oratory in the remains of the Great Mosque. The Banū Ghaniyya occupied the town for a time, but they were dislodged by the Almohads after a three month's siege (1185). After this date, nothing more was heard of the former capital of the Ḥammādid.

The population consisted firstly of the Ṣanhādīja, kinsmen of Ḥammād who probably constituted a privileged class, secondly of the citizens of Msila and Sūḵ Ḥamza, whose origin was complex, and finally of the Djarāwa, whose quarter, to the east of the town, seems to have been walled off from the other quarters of the town. There stood the Ḳaṣr al-Manār and its keep, the top of which commanded a view over the whole city and its environs. This situation corresponds so very closely to the text of Peter the Deacon that it is tempting to see in the Djarāwa the famous Christians cited in the *Chronique du Mont Cassin* who were said to have had a church dedicated to the Virgin. Towards the end of the 5th/11th century the population was augmented by new arrivals from Ḳayrawān, heterogeneous ethnic elements who included some Jews (there is in fact a record of the presence in Kal'a of the Jewish scholar Isaac Alfāsi, who apparently left for Spain at the end of the 11th century).

The topography of the town reveals an almost rectangular enceinte facing the south (approximately 950 by 500 m.), enclosing on three sides the town which is built upon the last ridges of Taḡarbūst; despite the natural defence afforded by the precipitous flanks of this massif, to the north of the town, the wall climbs high up the mountain, runs across its peak and comes down on the east to rejoin the quarter of the Djarāwa. Similarly, on the west it follows the summit ridge of Gorein and climbs up to the peak, descending sharply to the bed of the oued, beyond which is the gate known as Bāb al-Djanān, leading to Msila. An almost rectilinear axis connects this gate with Bāb al-Aḳwās, leading to Burḍī Redir, to the north-east of the city, at the edge of the Djarāwa quarter; a third gate, to the south-east, Bāb al-Djarāwa, opens towards the Hodna valley. To the south of the east-west axis stand the ruins of the Great Mosque whose minaret still rises to a height of more than twenty metres. To the north of the same axis, on ridges fairly well isolated from one another, towards the west, can be seen the ruins of the Ḳaṣr al-Salām and then, further to the east, the Ḳaṣr al-Kawkab and the Ḳaṣr al-Mulk, better known as Ḳaṣr al-Bahr because of the large sheet of water lying to its south, upon which nautical jousting (*istibṣār*) probably took place. Finally, towards the east, in the Djarāwa quarter can be seen the ruins of the Manār keep and those of the palace of the same name.

Identified by Méquesse in 1886, the old Ḥammādid city was investigated by P. Blanchet and A. Robert in subsequent years. Excavations on a quite considerable scale were undertaken by General de Beylié; they concentrated upon the Manār keep, the Ḳaṣr al-Bahr and the mosque. From 1951 to 1962, new excavations were conducted by L. Golvin, particularly on the

Kal'at Bani Hammād

[After V. Huot]

Kaşr al-Manār and the Kaşr al-Salām; numerous silos were discovered in the latter group of buildings, appearing to confirm al-Idrīsī's statement: "There were . . . stores of such excellence that it (corn) could be kept for one and even two years, without fear of the least deterioration". Still more recent excavations, which are being undertaken at the present time under the direction of R. Bourouiba, have succeeded in isolating the Kaşr al-Manār completely, and in enabling a far more convincing plan of the mosque than that given by Beylié to be drawn up.

The art of Kal'a reveals some originality, particularly in the deeply cut vertical niches in the façades of the Manār, and above all in its system of square, superimposed rooms, forming a central hub around which ramps are placed, roofed over with cradle vaulting, a foreshadowing of the great Almohad minarets at the end of the 6th/12th century (Kutubiyya, the Ḥassān Tower, the Giralda). The minaret of the mosque, square in shape, is much closer to those in Muslim Spain than to those in Ifrīkiya; on its south face it is ornamented with a rich decoration of deeply cut recesses set with polychrome tiles, the antecedents and continuation of which are little understood, while lobed interlaced arches, sometimes bordering shell-shaped semi-domes, call to mind Fāṭimid Egypt. To Egypt should be attributed the hanging honeycomb vaulting (*Mukarnas*), probably the earliest in the Muslim West. Elsewhere, decorations of carved plaster may be compared with those in Sāmarrā, but here also is a reminder of Egyptian craftsmanship; and very beautiful carved marble water channels (*ṣhadirwān*) recall those at Fuṣṭāt. Several painted frescoes, numerous ceramic fragments of the most diverse techniques—pottery with engraved or painted decoration, polychrome tiles, tiles with metal lustre, impressed tiles, tiles known as "a cuerda secca"—worked bronzes, jewels of gold and silver, coloured glassware, cut crystal, many sculptures of marble, stone and plaster, all these objects testify to a varied and sometimes scholarly craftsmanship which reveals the twofold influences of the Orient and of Spain.

The wealth of the city, much vaunted by historians and geographers, doubtless explains this artistic flowering. Though there is little information about intellectual life in Kal'a, the name of one of its scholars is known, the ascetic Abū Faql, son of al-Naḥwī, whose mausoleum stands in a small hamlet bearing his name near the Bāb al-Djanān. Other personages who brought renown to Bougie were born in Kal'a and no doubt were given their earliest education there. Here too, without question, the heritage from Kayrawān was of particular value.

**KAL'AT DJA'BAR** [see DJA'BAR].

**KAL'AT HUWWĀRA**, a town in Algeria in the wilāya of Mostaganem, a *dā'ira* of Ighil Izane (Relizane), about 30 km. north-east of Mascara, on the Wādī Kal'a. Population: 12,332 (1966 census). This Kal'a was founded in the 6th/12th century by a chieftain of the Hawwāra, Muḥammad b. Iṣḥāq. About a century later, the Hawwāra [*q.v.*] were supplanted by a tribe from the Djabal 'Amūr, the Banū Rāshid. The town came under the rule of the Banū 'Abd al-Wād, and following them under the Marinids and then the Turks; it was at this period that Leo Africanus described it as a fortified township with about forty houses belonging to artisans and merchants. Little by little it became inhabited by Kulughlis and even by Turks who came to take refuge there. The inhabitants were employed in agriculture, soap manufacture and carpet weaving. After 1830, the town recognised the authority of 'Abd al-Kādir, who drove out the Kulughlis, then it came under the authority of the French in 1845. At the present time, it remains a centre of several industries such as carpet-weaving (done by women), tanning, shoemaking, saddlery, metal-work and welding. The carpets of the Kal'a, in which Berber (Djabal 'Amūr), Spanish and eastern influences are combined, have enjoyed a measure of fame.

In the 11th/17th century, it was the birthplace of a celebrated marabout, Sidi Aḥmad b. Yūsuf, the author of satirical aphorisms of great popularity in Algeria (cf. R. Basset, *Les dictons populaires attribués à Sidi Ahmed ben Yūsuf*, Paris 1890).

**KAL'AT NAḌĪM**, a fortress in northern Syria, situated on the right bank of the Euphrates, which in the medieval period commanded the route from Halab to Harrān, in Upper Mesopotamia, via Manbidj. This fortress stood at a point where the Euphrates was relatively easy to cross, owing to the existence of two small islands which facilitated the construction of pontoon bridges. It is thought that the fortress stands on a Classical site, but the identification of this presents some problems: the most tenable hypothesis appears to be the identification of the site with the *Caeciliana* of Roman itineraries.

In the oldest Arab texts, the locality is called *Djisir Manbidj*, and these add that the bridge over the Euphrates, which had formerly existed, was constructed at the order of the Caliph 'Uḥmān. The name of Kal'at Naḍim was rarely mentioned before the 6th/12th century; it seems to derive from a certain *ghulām* called Naḍim who, in 300/912, re-founded the town. Certain maps and even texts are therefore mistaken when they give the name as Kal'at al-Naḍim. However, it seems that this name was deliberately adopted by these authors as more poetic, dubbing the fortress "the castle of stars".

The bridge of Kal'at Naḍim played an important role from the earliest years of Islam. The region was conquered in 18/639 and the bridge is mentioned in accounts of the struggle between 'Alī and Mu'āwīya. By this route the Umayyad armies won Mesopotamia. Subsequently, Kal'at Naḍim was part of the Ḥamdānid [q.v.] domain, then that of the Mirdāsids [q.v.], and the Banū Numayr [q.v.], before falling into the hands of Zankī, of Nūr al-Dīn [q.v.], and then of the Ayyūbids [q.v.]. Nūr al-Dīn restored the fortress (which twenty years later Ibn Djuḅayr called a "new castle"), placing an important garrison there.

Later, probably in 658/1260, Hülāgū had to give battle to secure the fortresses which commanded the Euphrates crossings; at that time Barhebraeus, bishop of Aleppo, made his way to the conqueror to seek mercy for the Christians and was imprisoned at Kal'at Naḍim.

The fortress of Kal'at Naḍim, which was described by many travellers of the 19th and the beginning of the 20th centuries, stands isolated on a rocky eminence at a height of about 50 metres. The castle itself comprised two storeys and certain parts were damaged when the castle, where a rebel Arab had taken refuge, was captured by the Ottomans in 1820. Three Arabic inscriptions mention works undertaken at the orders of the Ayyūbid al-Malik al-Zāhir, son of Ṣalāḥ al-Dīn, between 605/1208 and 612/1215. Of the little town which, according to the Arab geographers, lay along the bank of the river and at the foot of the fortress, no identifiable vestiges remain. The ancient bridge has also disappeared.

**KAL'AT RABĀḤ**, Sp. Calatrava, town of Muslim Spain, of which the ruins are to be seen at Calatrava la Vieja on the left bank of the R. Guadiana about 15 km. north-north-east of Ciudad Real. According to the *Rawḍ al-mi'fār* the town was founded in Umayyad times and peopled by the inhabitants of decaying Uriḫ (Oreto), about 40 km. to the south. The eponymous Rabāḥ is unidentified; the common belief that the place was named after the *tābi'* 'Alī (or 'Ulayy) b. Rabāḥ seems to be an unfounded conjecture. It was the capital of an extensive region divided into *djuz*', which word in Andalusian usage (says Yāqūt) was the equivalent of *ikhlim*. The *adjiā'* of Bakr, Lakhm and *Djudhām* are recorded. The marshy region to the north-east of Kal'at Rabāḥ was well known to topographical writers as the place where the upper Guadiana (under which name they confused several rivers, e.g., Gigiuela, Riānsares) disappeared underground and reappeared several times before emerging finally at Kal'at Rabāḥ [see WĀḌĪ YĀNA]. Dimashki says that red arsenic or realgar (*raḥjī al-ghār*) is found there.

Standing in Toledan territory on the main highway between Córdoba and Toledo not far from Christian lands, Kal'at Rabāḥ had an eventful history and is frequently mentioned in the literature, though without details. It fell into Christian hands for the first time in 478/1085 when Alfonso VI annexed Toledo, but this occupation came to an end with the arrival of the Almoravids (Battle of Zallāka [q.v.], 479/1086) though Toledo itself was not retaken and never again came under Muslim rule. With the erosion of Almoravid power Kal'at Rabāḥ was once more under Christian rule by 541/Jan. 1147 and remained so until the Muslims, in the shape of the Almohads, again reasserted their authority for a few years in 592/1196. (Alarcos, the scene of the celebrated Almohad victory in the previous year, is a short distance downstream from Kal'at Rabāḥ [see AL-ARAK]). It finally surrendered to Alfonso VIII in 609/1212 immediately before the battle of Las Navas de Tolosa [see AL-'IKLĀB]. It did not recover any measure of prosperity and in 1252 the capital of the region became Villa Real, newly founded by Alfonso the Wise. It was renamed Ciudad Real in 1420.

The religious order of the Knights of Calatrava was founded in 1158 during the second Christian occupation with the purpose of fighting the Moors. The name Calatrava still exists as an element in numerous toponyms of the region.

**KAL'AT AL-RŪM** [see RŪM KAL'ESĪ].  
**KAL'AT AL-SHAḲĪF** (the "Citadel of the Rock") is the Crusaders' castle of Beaufort. It is also known by the name of Shaḳīf 'Arnūn. On the testimony of the Arab authors, Yāqūt among others, it was long believed that 'Arnūn was the Arabic transcription of the name Arnould, a Frank said to have been lord of the region. In fact, it is a toponym which occurs even in the Bible (Joshua, XII, 1); its position to the west of the Jordan indicates that it corresponds to the present village of 'Arnūn which, in former times, marked the frontier of the land of Moab. From the earliest remains it may be supposed that a

military settlement existed on the site during the Roman period, beside the Leuctrum.

The castle, which was considered impregnable, is situated at an altitude of 670 m., high on a rocky crest, at the extreme southern end of the mountain range of Lebanon. To the east, standing above a sheer drop of 300 m., it dominates the deep and narrow valley of the Nahr al-Liṭānī, while to the west the mountain falls away in a fairly steep slope to the level of the plain where the village of 'Arnūn is situated. Below the castle, the Liṭānī changes direction sharply towards the west and then takes the name Nahr al-Ķāsimiyya, forming the dividing line between the mountains of Lebanon and the plateau of Galilee.

Kał'at al-ShaĶif stands in an important strategic position, for it effectually controls a two-arched bridge over the Liṭānī, the *Djisir al-Ķhardalī*, as well as several roads which meet at the bottom of the valley, including the roads from Bānyās to Ṣaydā' via Nabatiyya and from Bānyās to Beirut via *Djazzin* and Dayr al-Ķamar, and the road from Šūr (Tyre) to Damascus. The castle commands the entrance to Palestine; it guards the southern passage from the Biḳā', access to Syria from the south, and access from the coastal region of Šūr and Ṣaydā'. It is linked with several other fortresses, including Subayba to the south-east, Hūnīn to the south, Tibnīn to the south-south-west, Kał'at Marūn to the south-west and Ṣaydā' to the north-west.

The whole complex of buildings, constructed on two levels, follows the configuration of the ground and takes the form of an elongated triangle about 140 m. long, with its base (about 38 m. wide) at the southern end. A ditch 15 to 36 m. wide, cut out of the rock on the north, west and south sides, forms a barrier between the plateau and the site of the fortress, which is inaccessible from the east. Opposite the entrance, two piers about 4.30 m. apart made it possible to cross the ditch by means of a bridge which could be destroyed in the event of an attack, and to reach a small artificially levelled area on the south side of the crest. Today Kał'at al-ShaĶif is in a very ruined condition. It is divided into various sections surrounded by two enceintes constructed of courses of large blocks of stone, the surface of the stone-work being left rough: to the east, above the ravine, is a group of buildings in the lower courtyard defended by four round towers linked together by curtain walls, and to the west is the upper part, which forms a redoubt accessible by means of an interior ramp. Such is the fortress itself, which includes several sections built at different periods. For the mediaeval period we can distinguish five separate programmes of alterations and construction: 1139 to 1190 (Crusaders), 1190 to 1240 (Ayyūbids), 1240 to 1260 (Franks of Ṣaydā'), 1260-1268 (Templars), 1268 onwards (Mamlūks). When the Crusaders arrived, Kał'at al-ShaĶif formed part of the province of Damascus. In 533/1139, the atabeg *Šihāb al-Dīn* ceded the fortress to Fulk, king of Jerusalem, who entrusted it to Reynald, lord of Ṣaydā', since it controlled access to his territory. The irregularly shaped keep standing in the middle of the west front and typical of the Crusaders' earliest constructions dates from this period; it consists of two storeys and a terrace, the old curtain wall of the enceinte leaving it projecting; the rough surface of the stone-work and the narrow arrow-slits are characteristic features of the period. After the battle of *Ḥaṭṭīn* [q.v.] the Frankish castles still retained their garrisons, but through lack of man-power they no longer received any reinforcements or relief troops,

and one after another they fell into the hands of the Muslims. *Šalāḥ al-Dīn* [q.v.] prepared to lay siege to Kał'at al-ShaĶif on 17 Rabi' I 585/5 May 1189. Reynald of Sagette obtained a three months' truce, and took advantage of it to improve the castle's defences: the curtain walls were strengthened, and living-quarters were constructed in the courtyard. Stone-work with a more finished surface and stirrup-shaped arrow loops characterize this second period. In *Raĵjab/August*, the siege was resumed; in the end the fortress was starved out and surrendered on 15 Rabi' I 586/12 April 1190. Then began half a century of Muslim occupation (586-637/1190-1240). The Ayyūbid al-Malik al-Ķāḍil [q.v.] undertook various building operations, including some alterations to the first enceinte on the south side; he also constructed a new section of wall flanked by massive cylindrical towers with an entrance, to the east, giving access to an oblong armory leading to the terreplein of the castle.

In 637/1240 al-Šāliḥ Ismā'īl, prince of Damascus, was in conflict with his nephew al-Šāliḥ Ayyūb, the ruler of Egypt; to win the support of the Franks and Templars, he offered to restore to them the region of Ṣaydā', Kał'at al-ShaĶif, Tiberias and Ṣafad. The garrison of al-ShaĶif refused to surrender the fortress, and Ismā'īl was compelled to besiege it in order to gain possession and to hand it over to Balian of Sagette, the son of Reynald and a member of the Ibelin family. Balian died almost immediately, and his son Julian inherited the fortress, which he held until 1260. Crippled by debts and unable to strengthen the fortress to meet the threat from the troops of Baybars [q.v.], he sold it to the Templars and joined their ranks. The Templars improved its defences: on the east side, opposite the keep, they built a large hall with two vaulted bays over ogival windows and, about 245 m. to the south, the new castle, a small outwork destined to be destroyed eight years later.

On 19 *Raĵjab* 666/4 April 1268, the sultan Baybars appeared before al-ShaĶif and bombarded the fortress with 26 siege-engines for ten days. The garrison of Templars surrendered, the women and children were sent to Šūr, and the garrison itself, consisting of 480 men and 22 knights, was sent into captivity. The sultan appointed the amir *Šārim al-Dīn* *Ķaymaz* *Kāfūrī* as governor and the amir *Sayf al-Dīn* *Balabān* *Zaynī* as superintendent of works; the latter restored the fortress and placed on the walls the heraldic device of Baybars, a feline passant. In the Mamlūk period, Kał'at al-ShaĶif was the centre of one of the eleven districts of the *niyāba* of Ṣafad.

At the beginning of the 11th/17th century, when the amir *FaĶhr al-Dīn* *Ma'n* [q.v.] revolted against the Ottomans, he drove out the Ottoman garrison and tried to repair the citadel's defences, to withstand the troops sent by *Ḥāfiẓ* *Aḥmad* *Paṣḥa* from Damascus in 1022/1613. The fortress had stocks of water, oil and provisions for 500 men. Al-ShaĶif possessed three cannons for defence, while the attacking forces had only one which exploded at the second shot; the only damage suffered by the fortress was the destruction of an outer tower caused by the accidental explosion of a powder store. Eventually the troops from Damascus withdrew, after a siege lasting for 84 days. *FaĶhr al-Dīn* entrusted the fortress to a *Sukmānī* chief, *Husayn* *Ṭawīl*, with stocks of food for three years. Shortly afterwards, the *Sukmāniyya* betrayed the Ma'n and joined the *Ḥarfūsh*. Sappers sent from Damascus then dismantled the fortresses of Bānyās and al-ShaĶif in 40 days.

At the beginning of the 18th century, al-ShaĶif

became the centre of one of the three districts of *Djabal 'Amila*, a region inhabited by the Mutawālī, whose chiefs at that time belonged to the Yemeni section of the *Shī'ite* tribe of the Banū Ṣa'b. At the end of the 18th century, the fortress was included in the territories of the Druzes and came under the *pashalik* of Ṣaydā', while all around it, according to Volney, the best tobacco in Syria was grown. At the beginning of the 20th century al-*Shakīf* formed part of the district of Ṣaydā', on the borders of the districts of Ṣūr and Marjī 'Uyūn. In 1970 the castle was under the *kaḍā'* of Nabatiyya.

**KAL'AT SHARKĀT** [see ATHŪR, in Suppl.].

**KALĀṬA, GHĀLĀṬA** [see ISTANBUL].

**KALĀWDHIYA**, Claudias, a locality of ancient origin (the Claudiopolis of Pliny? cf. Pauly-Wissowa, s.v.), the exact site of which has not been determined but which almost certainly commanded the entrance to the Euphrates gorges below Malaṭya/Melitene, between the eastern Taurus and the *Khanzīt* [q.v.]. One of the fortified places on the frontier that were captured and re-captured by the Arabs and the Byzantines, it was restored by al-Manṣūr, but again fell into Byzantine hands, together with the province of Melitene, in the middle of the 4th/10th century. In fact, having become practically valueless, like the other fortresses in the same line of strong-points below the Taurus (*Hadatha*, etc.), it declined rapidly, and Michael the Syrian, writing in the neighbourhood, knew only of "the land of Claudias", but never says anything about the locality itself. From the end of the 5th/11th century the region was in the hands of the Turks, but the later authors who mention *Kalāwdhiya*/Claudias, from Mustawfī and Kaẓwīnī to Otter, do so solely on the strength of ancient literary sources.

**KALĀWRIYA** [see KILLAWRIYA].

**KALĀWŪN**, AL-MALIK AL-MANṢŪR SAYF AL-DĪN KALĀWŪN AL-ALFĪ AL-ṢĀLIḤĪ AL-NAḌĪMĪ AL-'ALĀ'Ī, the fifth Mamlūk sultan, ruler of Egypt and Syria from 678/1279 to 689/1290. One of the most eminent sultans of the Bahrī [q.v.] Mamlūk sultanate, he followed the policies of Sultan Baybars I [q.v.] especially in his campaigns against the Mongols and the Crusaders.

Kalāwūn was born in the country of the Kipčak Turks on the northern shores of the Black Sea. The date of his birth is unknown and the sources tell us nothing about his childhood. A slave-merchant eventually brought him to Egypt and sold him to the amīr 'Alā' al-Dīn Aḳ-Sunḳur al-'Ādil al-Sāḳī (the cupbearer), one of the *mamlūks* of the Ayyūbid Sultan

al-'Ādil [q.v.], for a thousand *dīnārs*; hence the nickname *al-Alfī* (the "Thousander"). After 'Alā' al-Dīn Aḳ-Sunḳur died in 647/1249, Kalāwūn and other *mamlūks* passed into the possession of the Ayyūbid Sultan al-Ṣāliḥ Naḍīm al-Dīn Ayyūb (637/1240-647/1249). He sent Kalāwūn together with other newly acquired slaves for military training (*furūsiyya* [q.v.]) in the military quarters which he had established on the island of al-Rawḍa in the Nile. When Kalāwūn had finished his training and proven his efficiency as a fully qualified soldier, he was manumitted and given the title of amīr. His master died in 647/1249 and was succeeded by his son Sultan Tūrān Shāh in the following year. The death of Tūrān Shāh—the last Ayyūbid sultan—inaugurated a period of confusion which led ultimately to the establishment of the Mamlūk sultanate.

During the reign of Aybak, the first Mamlūk sultan, Kalāwūn rose to a higher position among the Mamlūks, becoming one of their leading figures. In 652/1254 he fled with other Mamlūk leaders such as Baybars, Sunḳur and Baysara to Syria in order to escape the likely revenge of Aybak, whom they had tried to depose. He spent about three years in Syria in the service of al-Malik al-Nāṣir II Ṣalāḥ al-Dīn Yūsuf (648/1250-658/1260). In 655/1257 Kalāwūn and his fellow Bahrī Mamlūks fell foul of al-Nāṣir Yūsuf and were forced to leave him. They thereupon entered the service of al-Malik al-Mughīth Fakhr al-Dīn 'Umar in Karak. The amīr Ḳuṭuz, the deputy of the Mamlūk sultan Nūr al-Dīn 'Alī b. Aybak, sent an army to meet the fugitive Bahrī Mamlūks on their way to Karak. The Mamlūks were defeated and Kalāwūn was taken as prisoner to Egypt. He did not stay long in Cairo but disappeared and fled to Karak in the same year (655/1257).

Kalāwūn remained in Karak for about two years, until 657/1259, when he returned to Egypt accompanied by other exiled Mamlūks. They were welcomed by the new Sultan Ḳuṭuz, at that time preparing troops to meet the invading Mongols, who were defeated near Nābulus in 658/1260. Kalāwūn was among the Mamlūks who helped Baybars I in his attempt to kill Sultan Ḳuṭuz and seize the throne in the same year. Baybars trusted Kalāwūn and promoted him to the position of commander of a thousand (*amīr alf*). In 671/1272 Kalāwūn accompanied Sultan Baybars in a campaign against the Mongols. He distinguished himself as the first amīr to cross the Euphrates, thus gaining an advantage over the enemy. During the reign of Baybars, he became very close to the sultan, and in 675/1276 gave his daughter in marriage to Baybars' son, al-Malik al-Sā'īd Baraka Khān. Baybars celebrated the event with great festivity.

In 676/1277 Baybars died, and was succeeded by his son. Kalāwūn, as father-in-law of the sultan, became the most eminent and important of the amīrs. In 676/1277 Sultan Baraka Khān sent Kalāwūn on a campaign against the Armenians. During Baraka Khān's short reign of about two years, the older amīrs who had served under his father, resentful of his disregard of them, rebelled against him, and besieged him in the citadel of Cairo, forcing him to abdicate. The Mamlūks then asked Kalāwūn to accept the throne, but he refused because he foresaw opposition. Al-Malik al-'Ādil Salāmīsh, Baybars' seven-year-old son, was consequently chosen as sultan in 678/1279 and the Mamlūk amīrs appointed Kalāwūn his *atabak* [q.v.]. Sultan Salāmīsh reigned for only three months, during which time his *atabak* Kalāwūn was the real ruler. Kalāwūn's name was mentioned in the Friday

prayer and struck on the coins along with that of Salāmīsh. At last in 678/1279 Salāmīsh was deposed, and Qalāwūn was saluted as sultan, taking the title al-Malik al-Manṣūr.

As soon as he was acknowledged as sultan, Qalāwūn arrested a group of Ḍāhīrī amīrs, that is to say, amīrs belonging to the late Sultan al-Ḍāhīr Baybars. Prompted by purely political motives, Qalāwūn abolished certain taxes such as a war-tax which was collected whenever the sultan made preparations for a campaign. During the first year of his sultanate, Qalāwūn faced opposition from several of Baybars' amīrs who had their own claims to the sultanate. One of them, the amīr Sunḑur al-Aṣḑar ("the ruddy") proclaimed himself sultan in Syria with the name al-Malik al-Kāmil. Sunḑur gained the support of Baybars' Mamlūks, the Bedouin tribes of Syria and the Ayyūbīd amīr of Hamāh. Qalāwūn sent against him a strong army headed by the amīr Badr al-Dīn Bak-tāsh al-Fakhrī. The two armies met at al-Dīasūra near Damascus in 679/1280. Sunḑur was defeated and fled to the Bedouin Arabs, asking the Mongols for assistance. In the following year, when both sides learned about the advent of the Mongols, Sunḑur made peace with Qalāwūn.

Like Baybars I, Qalāwūn was successful in defending Syria against the Mongols, who had now taken advantage of the confusion in Syria resulting from Sunḑur's revolt. Led by Mangūtmūr, a brother of the Ilkhān Abāḑā, the Mongols, together with their Georgian, Frankish and Armenian allies, had managed to cross the Euphrates and invade Syria. Qalāwūn came to Syria with his army, which was augmented by additional troops from various parts of Syria. The two armies met at Ḥīmṣ in 680/1281. The Mongols were severely defeated and forced to withdraw from Syria. Both Mangūtmūr and Abāḑā died in the same year. Abāḑā's successor, Aḥmad Tegüder (Takūdār), was a convert to Islam. He tried to establish good relations with Qalāwūn, exchanging letters and embassies with him. In 683/1284, Aḥmad Tegüder was murdered and his brother Arḡhūn succeeded him. Arḡhūn, who remained a pagan and was very hostile toward the Muslims, attempted, unsuccessfully, to persuade the pope and the king of France to help him in a Crusade against the Mamlūks.

As for the Crusaders, Qalāwūn followed the example of Baybars I in pursuing the holy war against them in Syria. During the struggles with Sunḑur and the Mongols, Qalāwūn had made a truce with the Crusaders, which led to a temporary cessation of hostilities. Having brought these struggles to a successful conclusion, he broke the truce and conducted a series of raids into Crusader territory. In 684/1285 he attacked the fortress of the Knights Hospitallers at Marḑab and, after a siege of 38 days, succeeded in capturing it. The historian Abu 'l-Fidā (d. 732/1331), who was at that time 12 years old, was present at the siege of Marḑab, having accompanied his father on the expedition. The Knights Hospitallers retired to Tripoli. Bohemund VII of Tripoli wanted to appease Qalāwūn, so he handed over to him the coastal stronghold of Maraḑiya. In the same year (684/1285) Margaret of Tyre purchased peace with Qalāwūn for ten years on humiliating terms. The best fortified port and largest town taken by Qalāwūn was Tripoli. He took advantage of the quarrel over the throne of Tripoli after the death of Bohemund, and besieged the town in 688/1289. Although Tripoli received help from Cyprus, Qalāwūn with his strong mangonels ruined the walls of the town as well as its citadel and captured it by assault. Abu 'l-Fidā—then 16

years old—participated with his father and cousin in this battle. He reports that after the capture of Tripoli he crossed over to an island outside the port where he was oppressed by the foul smell of decaying corpses lying there. In the following year (689/1290) the people of 'Akkā (Acre) broke the truce by robbing and killing some Muslim merchants. Qalāwūn proclaimed a holy war, but as he was about to attack Acre, he died in his tent on the outskirts of Cairo. This task was therefore left to his son and successor al-Malik al-Aṣḑraf al-Khalīl, who captured the city in 690/1291.

Qalāwūn also took the offensive against the Christian Armenians. The Kingdom of Little Armenia was raided in 682/1283. After two years the Armenians were forced to conclude a truce for ten years. They agreed to pay an annual tribute consisting of a large quantity of Armenian silver coins, and to release all Muslim prisoners.

In order to extend Mamlūk rule in the south, Qalāwūn waged war against Nubia in 686/1288 and 688/1289. He sent two expeditions, headed by some of the ablest amīrs, to punish Ṣhamāmūn of Nubia. Ṣhamāmūn had been playing a kind of "hide and seek" with the Mamlūk army. At last he sent a delegation, bearing a gift and the normal tribute, *baḥḥ* [q.v.], to Egypt and begged forgiveness. These offerings were accepted and the delegation was kindly received. Nubia remained subordinate to the Mamlūk sultanate.

Qalāwūn preserved and strengthened the good diplomatic and trade relations established by Baybars I with foreign powers. He also maintained good relations with the Mongols of the Golden Horde, Andronicus II Palaeologus of the Byzantine Empire, King Alfonso of Castile, James of Sicily and Rudolf I of Habsburg. He concluded, further, a commercial treaty with the republic of Genoa. Hoping to attract merchants to Egypt as a means of encouraging Egyptian trade, Qalāwūn issued a charter of safe conduct (*amān* [q.v.]) to foreign merchants coming from China, India, Yemen and other countries which is preserved in Kalkāshandī's [q.v.] *Ṣubḥ al-A'ṣḥā*. As an encouragement to internal trade Qalāwūn abolished a subcategory of the *zakāt* tax, called *zakāt al-dawlaba*, which was payable by Muslim shopkeepers on their merchandise, realizing that it tended to impoverish the merchants.

Qalāwūn bequeathed the most important monuments of the Mamlūk period. He restored the citadels of Aleppo, Baalbek and Damascus. In Cairo, he erected a hospital (*al-bimāristān al-Manṣūri*), which is perhaps the most remarkable building of the Mamlūk era. It consists of many wards for various diseases, a lecture room, laboratories, a dispensary, baths, kitchens and store-rooms. This hospital was open to men and women, rich and poor, residents and transients from all countries and provinces, without distinction of origin or rank. Every patient leaving the hospital received a gift of money and clothing. The hospital was connected with a school mosque and a mausoleum which is decorated with remarkable arabesque tracery and fine marble mosaic. The school mosque, which was designed for the education of approximately 60 orphans, was equipped with a library containing a fine collection of medical, theological and legal books. Nuwayrī, who was the *nāṣir* of Qalāwūn's hospital and its *wakf*, provides in his book *Nihāyat al-arab* valuable data about the properties, shops, public baths, and farms which constituted the *wakf* assigned by Qalāwūn for the maintenance of his tomb, school and hospital.

Ḳalāwūn died on Saturday 7 Dhu 'l-Ḳa'da 689/11 November 1290. He had proved to be brave, patient, generous, just and mild. It is said that he could express himself in Arabic only with great difficulty. He was the only Mamlūk sultan who succeeded in founding a dynasty capable of holding the sultanate for several generations. All the Mamlūk sultans from 689/1290 until 784/1382 were his descendants, except those who were his Mamlūks; *i.e.*, Kitbughā, Lādjin, and Baybars II al-Djāshnikr. Ḳalāwūn established the Burdjī regiment of Mamlūks [see BURDJĪYYA], mostly Circassian slaves, whom he bought and quartered in the towers (Arabic sing. *burdj*) of the Cairo citadel. The Burdjī or Circassian Mamlūks, the second line of the Mamlūk sultans, ruled Egypt and Syria from 784/1382 until the end of the Mamlūk sultanate in 922/1517.

**Bibliography:** The important primary source for the life and career of Ḳalāwūn is the biography by Muḥyī al-Dīn b. 'Abd al-Zāhir (d. 692/1292), entitled *Tashrif al-ayyām wa 'l-uṣūr fī sirat al-Malik al-Manṣūr*, ed. (HASSANEIN RABIE)

**ḲALB** pl. *ḳulub* (A.), "heart".

#### I. — MYSTICISM

In Ṣūfi terminology the "heart" plays a large part, for it is viewed both as the source of man's good and evil aspirations and as the seat of learning or religious apprehension and of divine visitations. The *'ilm al-ḳulūb wa 'l-khawāṭir*, "science of hearts and movements of the soul", owes its origin to al-Ḳasim al-Baṣrī, one of the earliest writers on *taṣawwuf* (cf. L. Massignon, *La passion d'al-Ḳalāwūn*, Paris 1922, 468).

The role allotted to "heart" in the personality and understanding of man is in strict conformity with Semitic tradition, and the Ṣūfi "science of hearts" is firmly based on the Ḳur'ān. While *'aql*, "intellect", has no place in the vocabulary of the Ḳur'ān, *ḳalb* is very frequently employed. It is with his heart that man "understands", just as he sees with his eyes and hears with his ears (*e.g.*, *Ḳur'ān*, VII, 179, XXII, 46). Of those who neither understand nor hear (the

Word of God) it is said, "it is not their eyes that are blind, but the hearts in their breasts" (XXII, 46). Such blindness of the heart is a denial, the origin of ignorance. Thus God "seals the hearts" of "those who do not know" and does not guide them in the true way (VII, 101, X, 74, XXX, 59, etc.). God "sets a seal on the heart of every haughty tyrant" (XL, 35). In *tafsir* and *'ilm al-ḳalām*, the "seal affixed to the heart" was to become one of the most controversial questions in the consideration of man's freedom of action (*e.g.*, Faḳhr al-Dīn al-Rāzī, *Ma-fātiḥ al-ghayb*, on *Ḳur'ān*, XVIII, 23).

So it is from his heart that man's awareness or ignorance of God originates. But far from being merely an intellectual apprehension, this is a knowledge which demands the whole of one's life. So that the heart may be truly the seat of divine knowledge, it must be "assuaged by a remembrance of God" (XIII, 28), be pure (XXVI, 89; XXXVII, 84) and contrite (L, 33); it must be filled with *taḳwā*, reverential awe of the Lord (XXII, 32). It is the seat of the religious sciences; it is also the home of that mercy, that "faith above faith" which is the divine dwelling-place: God Himself "causes His Presence (*sakīna*) to descend to the hearts of Believers so that they may add faith to their faith" (XLVIII, 4). The hearts of those who are guilty, however (XV, 12; XXVI, 200), which are "marked out for severe punishment", and the hearts of "those who do not believe in the Hereafter" (XXXIX, 45), "shudder" (*ibid.*); terror will strike the hearts of the impious (*kuffār*, III, 151, VIII, 12).

Closely related to these texts is L. Massignon's comment (*op. cit.*, 489): "In sum, the Ḳur'ān made the heart the source of knowledge and conscience; since he can in no way 'hold back' the irreversible and irremediable dispersion of his resources (in movements and feelings), man can regain possession of himself only within his own self, in his *taḳlīb*, in his heart". This he does "against the grain of the countermanding fleshly lusts, which all Muslim writers locate in the liver and bile" (*ibid.*, n. 7).

Consequently, the deepening experience of faith and the search for union with God, which are the first and constant aims of *taṣawwuf*, become linked with the study of the "science of hearts", the *'ilm al-ḳulūb* to use al-Ḳasim al-Baṣrī's expression. The following distinctions were formulated: the seat of thought and awareness of self lay not in the brain but in the heart, a bodily organ (*djismi*), a morsel of flesh (*muḍgha*, *maḍiḡha*), situated in the hollow of the breast whose beats both gave life and indicated the presence of life. There in the heart lies the "secret and hidden (*sirr*) home of the conscience, who's secrets (*naḍiwā*) will be revealed on Judgement Day" (L. Massignon, *op. cit.*, 478). The role of the spiritual master (*shaykh*) regarding the novice (*murīd*) is to teach him this "science" of desires, thoughts and inner impulses, to teach him to recognize and overcome those aspirations which come from the "physical soul" (*nafs*), and to gather up and protect the inspirations from the "heavenly spiritual breath" (*rūḥ*) through which God reveals Himself to man. Everything that enables man to battle against cupidity and the passions, all that can strengthen his faith (*imān*) and foster his surrender to God (*islām*), becomes part of "the science of hearts". Thus the celebrated Ṣūfi treatise by Abū Ṭālib al-Makkī (4th/10th century), which covers ritual acts as well as revealing steps in the path to divine union, is called *Ḳūt al-ḳulūb* ("Food for Hearts", numerous eds., especially Cairo 1351/1932). In a closely related sense, Baḥya

ibn Paḳūda, an Andalusian Jew who wrote in Arabic in the 5th/11th century and was strongly influenced by Ṣūfī ideas, entitled his spiritual treatise "Introduction to the Duties of the Heart", *Hidāya ilā farā'id al-ḥulūb*.

This stress placed on the "heart", the organ of conscience and seat of religious knowledge and of life in the presence of God, is in no respect an emotionalization of religious values. It stems from an experimentally based anthropology in which understanding and will are united in an existential mode of behaviour which binds man and his destiny. It remains in complete harmony with one of the most dominant notes in ḳur'ānic teaching. Here, *ḳalb* comes close to the Ṣūfī idea of *ma'rifa*, the direct awareness of the "initiate" (*ʿārif*).

A great many works of *taṣawwuf* deal with the "science of hearts", but here we will restrict our enquiry to one of the most characteristic examples. One of the best, and most famous, expositions is that of Abū Ḥāmid al-Ḡhazālī, notably in his *Iḥyā' ʿulūm al-dīn*, which follows in the same tradition as Abū Ṭālib al-Makkī and in fact reproduces whole passages from the *Ḳūt al-ḥulūb*. However, the influence of Hellenic philosophy led al-Ḡhazālī to set out clearly the problem of the heart as one of the foundations of the human personality. While it may be legitimate to stress the ethical end of the "science of hearts", as does al-Ḡhazālī, for example, in *Bidāyat al-Hidāya* (cf. W. Montgomery Watt, *The Faith and Practice of al-Ḡhazālī*, London 1953), the close intertwining of knowledge and the moral life which is also affirmed there should not be forgotten. These are its presuppositions:

The first book of the third part of the *Iḥyā'* is called *Sharḥ ʿadā'ib al-ḳalb*, "A commentary on the wonders of the heart". The preliminary definitions where al-Ḡhazālī analyses the four concepts *ḳalb*, *rūḥ*, *nafs* and *ʿaql* are well known. For each concept al-Ḡhazālī distinguishes a "physical" and a spiritual meaning. In the first sense *ḳalb* is a bodily organ: *rūḥ* the "vital spirits" in the blood (cf. contemporaneous ideas of physiology); *nafs* is the sum of man's passions, the root of his "blameworthy qualities"; and *ʿaql* the faculty of knowing, which "has its seat in the *ḳalb*". In the second sense *ḳalb* is a "subtle, divine and spiritual" principle which is "the reality of man" (*ḥaḳīkat al-insān*); *rūḥ* is that spiritual substance in man that acts and understands; *nafs* is man in his reality but capable of being qualified by different attributes according to how his soul controls his carnal desires (*ammāra*, cf. *Ḳur'ān*, XII, 53) or chastises his passions and struggles to reform itself (*lawwāma*, *ibid.*, LXXV, 2), or is "at peace" (*muḳma'inna*, *ibid.*, LXXIX, 27), "pleased by and pleasing to" the Lord; *nafs* in that case corresponds to the "rational soul", the *nafs nāḥiqa* of the philosophers. Finally *ʿaql* in this second sense is "that which understands knowledge", in short "the heart itself". In their spiritual interpretation, these four terms designate man's "reality", but under four different aspects.

The Ḡhazālīan text *Risāla ladūmiyya* (in *Dīwān al-ḡhawālī*, Cairo 1353/1934, 23-7) lays greater stress on the synonymy of the terms: "By the 'rational soul' I mean that matter to which all schools give a special name. Philosophers call it the 'rational soul'; the *Ḳur'ān* calls it the 'soul at peace' and 'the spirit which descends from the Word of God' (cf. XVII, 87); the Ṣūfīs call it 'the heart'. These are simply differences in terminology, but they cover a single concept (*ma'nā wāḥid*): there are no conceptual differences. The heart, the spirit and the soul

at peace are all names for the rational soul, which is a substance endowed with life, action and perception. Wherever we speak of the 'spirit' in absolute terms, or of the 'heart', it is this substance we are discussing".

Thus it would be a mistake to take al-Ḡhazālī's stress on the heart as indicating his "subjectivity" in the western sense of the term (cf. J. Oberman, *Der philosophische und religiöse Subjektivismus Ghazalis*, Vienna 1921). If, as A. J. Wensinck observes (*La Pensée de Ghazzālī*, Paris 1940, 64), "the heart comprises reason and will", then rather than perceiving an emotionalization of rational values (see above), we should be aware of a total apprehension of what is distinctive of man according to an existential psychology common to biblical and ḳur'ānic traditions: "the heart in a Pascalian sense" indeed, but only to the extent that Pascal's statements are themselves inspired by the Bible. "The heart has two gates", said al-Ḡhazālī in the *Iḥyā'* (cf. Wensinck, *op. cit.*, 66-7), one opening on to the external world, the impressions of the senses, passions and desires and thus open to devilish whispers, and the other opening on to the "internal Kingdom". This second gate is "that of inspiration, of the breath of awe of God, and of revelation". Though the terminology is different, this is very close to the "two faces of the soul" found in St. Augustine and mediaeval Latin writers.

In the experience of *dhikr* [*q.v.*], increasingly intensified repetition of the Holy Name passes from the tongue to the heart (cf. *Iḥyā'*, iii, 17): the formula uttered, and thus the Object it evokes, are impressed first on the very organ of the heart (and the circulatory system) and then, by this means, on the spiritual heart, that is in the very depths of being. (N.B.: the "heart" plays a very similar role in Ṣūfī *dhikr* and in the hesychasm of Mount Athos or in the *Account by a Russian Pilgrim*). Al-Ḡhazālī appears to distinguish only two stages, "*dhikr* of the tongue" and "*dhikr* of the heart"; others add a third, "*dhikr* of the inmost heart of hearts (*sirr*)", which takes possession of the whole being of the man at prayer (cf. Ibn 'Aṭā' Allāh of Alexandria, *Miftāḥ al-falāḥ wa 'l-misbāḥ*, Cairo, n.d., 4-6).

To sum up: we have seen that for al-Ḡhazālī and Ṣūfī tradition as a whole, the bodily organ of the heart (and not the brain) is the seat of *ʿaql*, the faculty of knowledge. *ʿAql*, in the meaning of "the understanding of knowledge", is "in short the heart itself", and the heart is the home and source of *ma'rifa*. Now the "spiritual heart" is the province of the moralist (in man as in animals the "bodily heart" belongs to medicine). Thus while *ʿaql* may be identified with *ḳalb*, the reverse does not hold. *Ḳalb* is not only the faculty of knowing, it is also the seat of all moral impulses, both evil desires and instincts and the struggle to be free of them and attentive to divine teaching (cf. the analysis of texts of the *Iḥyā'* by H. Laoust in *La Politique de Ghazālī*, Paris 1970, 218-21). Salvation comes only from the heart's purified knowledge in its dual and inseparable aspects, speculative and actual. Thus it is a complete education of the "heart" that spiritual teachers must constantly develop and enrich in themselves and their disciples.

In Ṣūfism the analysis of the cardinal virtue *sidḳ* [*q.v.*], "sincerity" or "truthfulness", is wholly dependent on the "science of hearts"—see the *Kitāb al-Sidḳ* of al-Ḳharrāz (ed. and tr. A. J. Arberry, Oxford 1937). On Judgement Day the answer to the *su'āl al-sidḳ*, "the question of sincerity", will be revealed in two fashions by those prophets who are

also saints (*walī*): it will be stamped on the tongue, visible to the hearers, and on the heart, the seat of divine inspiration.

Al-Hallādjī, al-Tirmidhī and Ibn 'Arabī comment in this manner on Jesus' answer to the *su'āl al-ṣiḥk* (cf. L. Massignon, *op. cit.*, 686 and ref.).

*Bibliography*: in the article. (L. GARDET)

## II. — POETRY

Although accorded from the outset an important place in the *nasīb* of the *ḥaṣīda* [q.v.], the word "heart" is emphasized only rarely in the ancient literature of Arabia. This situation conditioned the evolution of the word in all subsequent poetic literature. It was rediscovered and re-assessed as the progressive development of feeling caused the word to be employed more and more freely in the traditional context of Arab poetry. It would appear that this represented the righting of a deliberate omission, the precise reasons for which have yet to be determined.

In fact, the old Arab *nasīb* contains hardly any mention of the heart as the seat of the passions, at least in the collections generally held to be the most Bedouin (one example in Zuhayr, two in the *Mufaḍḍaliyyāt*, 13 in Djarīr, who was influenced by the poetry of the cities). It is permissible to suppose that the rarity of the word "heart" in the works of the founders of the Arab lyric is related to the nature of the love which was celebrated in their *nasīb*, though it is true that the few examples found in their verse show that they did not neglect the affective meaning of the term. But for them "matters of the heart" had a social, even sociological, importance. In fact the *nasīb* reveals many of the features of the "Rites de passage" (Van Gennepe, Paris 1909). The poet is searching for a protector, a stronger or older "neighbour" whose intervention entails a new tribal affiliation, *nasīb* (cf. al-Buḥtūrī, *al-mawālī 'l-ṣarīḥu nasību*); the *ḥimā*, or "abandoned encampment", appears to be the place where the "binding" rites took place, in the ceremony perhaps called *'aḥīkā* (Robertson Smith, *Kinship and marriage in early Arabia*, 152); the poet becomes the bondsman of a new clan, the clan of the Lady who is presumed to hold him in captivity (*sabī*); he becomes a "hostage" (*raḥn*) of the Lady's clan (used in the sense of captive in *Futūḥ al-buldān*, 402; cf. al-Sarrādjī, *Maṣāri'ī*, 177, verse by Hilāl b. al-'Alāḍ). He is a captive (*asīr*) of the Lady's clan like the devotees of a god dwelling in the midst of a sanctuary in classical antiquity. Furthermore, for the *Lisān*, each child is called *rahīna*, pledge or captive in respect of the *'aḥīkā* he has undergone; the same root implies the idea of *ḥidāh*, the sacred sport of arrows, which is compared with the "arrows of the Lady". The same is true of the poet's she-camel; we know that in Arabic folklore (e.g., in al-Sarrādjī, *Maṣāri'ī*, 101) the lover is in search (*mishḍān*) of a stray she-camel, perhaps also *ṣalab al-ḥādīja*, the visit of the Lady being a sign that the poet's quest is crowned with success.

Like the *'aḥīkā*, the *nishḍān* is an old pagan rite (cf. *ḥadīth* on the prohibition on gleaning in the *ḥaram* of Mecca, the former *ḥimā*). The *munshid*, the pilgrim of the *ḥimā* and acolyte of the "visit", is searching for "signs", as the meaning of the root indicates. These signs are those provided by the *ṣadīr*: these become commonplaces in the classical *nasīb*. Sometimes the *munshid*'s quest is ended by the *'asā*, a term with clear sociological implications (the tribal affiliation being connoted by the 5th and 7th forms of the root). The visit to the Lady or pilgrimage of the *ḥimā* (*'i'imār*) seems to be linked to the season,

the spring equinox, *raḍjāb*, for the first encounters (the ideal month of the *'umra* or the *'i'imār*), after a visit had been made to the sanctuary of the Ka'ba; it is possible, on the evidence of the *Ḳur'ān*, that *wa'd* and *ikhḷāf* were related to the vicissitudes of this quest of the Arab lover, which in later literature became that of the "heart" as such.

From these fleeting but converging indications, we can speculate with some probability that "Arab love" corresponded to a "passage ritual", related, at least in the composition of its vocabulary, to the presence of a lady from another tribe who mysteriously bound the lover by a tie, the duration and exact nature of which remained imprecise because of the same "tabu" which affected "matters of the heart".

This "tabu" no longer operated where the Bedouin significance of the love poem had been completely obliterated, and when it had succumbed to the joint influence of the poetry of the cities, music and religious terminology. After the breakdown of tribal ties, those poets who preferred to turn to the past rather than to the future, with the exception of 'Umar b. Abī Rabī'a, transferred the main import of Bedouin love to the heart, but weakened it into mere metaphor. The following ideas were retained:

1) Now it is the heart of the poet which, always in straitened circumstances or abroad, "searches" for the Lady.

2) Having become the seat of passion, that is of the Memory and the Secret, the heart is for that very reason an indispensable part of courtly dialectic, at the same time confidant and actor. Naturally the latter is the element which we shall see emphasized when we turn from the poetry of Ḥiḍjāz to that of 'Irāq.

The heart is on a never-ending quest, journeying after the caravan in which his beloved rides (*Ḥamāsa* of al-Marzūki, i, 51; al-Sarrādjī, *Maṣāri'ī*, *ḥalbu man tayyamū*, 141; *Djamil's Diwān*, ed. Naṣṣār, 118; al-'Abbās, 232). This heart is called *murtahin* ('Umar, 179 and 295), for it is no longer clear where it dwells and the uncertainty condemns the poet to perpetual wandering. Dissociated from the person of the poet and his group, it is fragmented (*iṣṣada'a*), or else it flies through space, in the grip of such an intense emotion that it cannot recognize its true country (*marū'*, 185), a metaphor later employed by the mystic *Djunayd* (al-Daylamī, *'Atf*, 32).

Such an instability, arising from uncertainty about its home and where it really belongs, turns the heart into a nomad with no clearly defined pastureland, doomed to follow the whims of the seasons (*mitbā' al-waḥān*, 'Umar, 279). Strictly speaking, this situation is *tatayyum*, slavery in exile ('Umar, 192; cf. al-Daylamī for an analysis of the equivalent notion of *huyām*, 23). It is also the *ṣibā*, the call of passion (coming after the signs given to the *munshid*), flashes of lightning, the language of birds which set the heart on the right road. Vagabond and wanderer, the heart is at the same time imprisoned in the net of love which condemns it to strive unceasingly for the *waṣl* or *wiṣāl* (the Lady's favour, originally integration within the Lady's group; 'Umar, 295, a synonym: *mawadda*, Abū Nuwās, 704; cf. 'Umar, 222 and 326). During this *ṣalab*, this quest, the heart is truly the quarry (a gazelle of the sacred enclosure) hunted by the Lady and eventually tracked down by her and pierced by her arrows, perhaps like the animals that are no longer defended by the prohibition of the *ḥimā* ('Umar 319: *musayyad* coupled with *mulayyam*, *ibid.*, 360; the Lady hunts the heart though she herself has the appearance of a gazelle).

The heart which has been subjected to such harsh blows (*muṣāb*) is lovesmitten and dependent upon the Lady's pleasure (*mu'allāḡ, muwakkal*, 362). These metaphors are interchangeable between the lover, represented by his heart, and the Lady; the victim is endowed with the traits and attributes of his tormentor, and vice versa. Thus the poet is led to declare that the Lady occupies his heart (*ibid.*, 355), the heart itself having become the sacred enclosure where the Lady's whims are given free rein. The Lady occupies the best seat in the poet's heart, the "highest place" ('Umar, 190: *muḥtallan, rafī'an*). There she can do exactly as she pleases, knowing herself to be in a vanquished land (*abāḡat Umm Ḥazra min fu'ādī shi'āb al-ḡubb*, Djarir, 65; cf. al-'Abbās, 39, 191, and Abū Nuwās, 497). At the end of love's "quest", the heart can be possessed by the Lady through a variety of means (magic, the hunt, capture, captivity, chains, bonds, cords, nets, pledge, loan, deposit with every kind of alienation, the result of the departure for strange lands which is the "quest" inherent in the Arab concept of love).

Yet in still deeper fashion, by means of a psychology which endows the heart with many "membranes" (al-Hamadḡānī, *al-Af'āz al-ḡiābiyya, bāb ṣamīm al-ḡalb*; cf. Daylamī, 'Aḡf, 16 and al-Ṣarīf al-Murtaḡā, i, 86), it can be considered that the heart contains the Lady or her image (a trace of the encampment) in whole or in part.

Thus it is with a love which is more internal, more courtly or more normative that the poet from the cities of 'Irāḡ (*e.g.*, al-'Abbās b. al-Aḡnaf; fifty examples in the *Khazraḡī* edition; the pseudo-*diwāns* of the romantic heroes) must come to terms when he endeavours to look into his heart.

The heart is the seat of the Memory of Love (al-'Abbās, 182). This Memory is identical with Love (281: "I am astonished that a heart can love you"). To compare the lover to the Lady is to compare the respective state of their hearts (*ibid.*, 53: "if my heart were like yours"). The heart experiences the fires (*nīrān*) of passion (*ḡad aḡrakat nīrānuḡ ḡalbi*). The Lady rules the heart of the lover as absolute monarch (*ibid.*, 16). Little distinction is made between Memory and the image of the Lady which resides in a heart that can contain no other object (*ibid.*, 19). On the other hand, there is less insistence on the breaking or cracking of the heart (*sudū', fuḡūr*), that symbol of the restless life of the lover and his separation from his tribe.

Arab poetry henceforth invested the heart with an importance which remained characteristic of the courtly spirit. But the heart also had conflicts and problems which occupied theorists as well as poets. In the first place, since the heart seemed to be the principle of love, the question arose whether it shared this role with the eyes, whose act of looking had wounded the poet. This question brought to the forefront the related question of the "licentiousness of the glance" cast at the beloved object, which is the main object of courtly ethics. To recognize the priority of the glance is to uphold the imperative of a strict morality which condemns the lover and perhaps courtly love in the name of social order. To speak of the predominant if not determinant role of the heart (which can develop the image without the help of the eyes with the assistance of an intensive literary culture) is to admit the fatality of passion and its justification by the absurd, which was the gist of the *Zāhirite* scandal sparked off by Ibn Dāwūd. It is difficult to exaggerate the importance of this debate, the influence of which had already made itself felt

in the work of the 'Irāḡī "logographs" and storytellers in the 3rd/9th century.

It could well be that a number of narratives concerning the story of the heroes of romances reveal rather indirect stances relating to this central debate. It should be added that both mysticism and theology put the idea of the heart's vision in the forefront (al-Daylamī, 85). Finally, the Memory of the Lady engraved on the heart—a traditional image no doubt but a deeply felt one—was in this theophany assimilated to the divine face, "yearning" for which haunted Islamic thought, theological as well as philosophical (the *ru'yā* predominates: in the last chapter of al-Ḳuṣḡayrī's *Risāla, ru'yā ḡasana* is seated in the "heart", which in mystic *sālimīyya* is considered as being the "domain" of the Angel; Abū Ṭālib al-Makkī, i, 131). A vision of the heart and of yearning which are mutually linked and associated in the light of a new conception, or at least a broader one, of "heart" helps to confer on oriental courtly love that shadowy vagueness and dreamlike dimension which strikes the western observer.

Thus the heart begins by referring to a Bedouin love about which little is known except that it involved a change of status where the sacred element had already infiltrated tribal customs. In the poetry of the cities, the heart eventually seems to be the focus of poetic modes of expression; later, under other and still more complex influences, the heart becomes the authorized seat of the Memory of Love and the Vision of the Lady. To determine to what extent this "vision of the heart", the offspring of a highly elaborated civilization, remained faithful to the ideas of primitive Arab culture, is not one of the least of the problems posed by the appearance in the Arab language of a literature composed in a clearly courtly spirit.

*Bibliography*: Examples of the use of the word *ḡalb*: *Mufaḡḡalīyyāt*, ed. Ahmad Ṣḡākir, 93, 301; Zuhayr, ed. Ahlwardt, 91; Djarir, ed. al-Sāwī, 65, 91, 100, 147, 158, 159, 181, 210, 227, 240, 257, 300, 301; 'Umar b. Abī Rabī'a, ed. 'Abd al-Ḥamid, 67, 84, 105, 106, 160, 178, 179, 185, 190, 192, 195, 201, 203, 217, 219, 222, 225, 227, 229, 279, 295, 319, 323, 326, 355, 360, 362. For the relationship which may have existed between the condition of the poet and the heart's "captivity", see J. C. Vadet, *L'esprit courtois en Orient dans les cinq premiers siècles de l'Hégire*, Paris 1968, 61. For the role of the heart in "courtliness", see Vadet, *op. cit.* and Ibn Dāwūd; *I'ṡilāḡ al-ḡulūb*, Ms. Bursa 1535 and especially Ibn Ḳayyim al-Djawziyya, *Rawḡat al-muḡibbin*, ed. 'Ubayd, 104 (*munāḡara* between the heart and the eyes). For the original meaning of *munṣḡid* and *inṣḡād*, see the romance of 'Umar b. Abī Rabī'a in *Aḡḡānī*, i, 199, Daylamī, 'Aḡf, 88, the legal treatises on the relationship between *yamin* and *munāḡhada*. (J. C. VADET)

**KALB** (fem. *kalba*, pl. *kilāb, kalīb, aḡlub*, secondary pl. *kilābāt, aḡalīb*), the general name for the domestic dog (*Canis familiaris*) with no distinction of breed. A fundamentally unclean (*nadīas*) animal and therefore forbidden food according to *kuṣ'ānic* law, the dog is generally if not despised, then at least avoided, throughout Islam. This is particularly true of urban areas, at any rate insofar as the animal does not assist its master in the pursuit of a permitted activity. For Muslims this reservation is compounded by a superstitious caution arising from the belief that the dog is a demonic emanation belonging to the category of evil spirits (*min al-ḡinn wa'l-ḡinn*). In Arabic, as in most languages, the word "dog" is a biting insult and it appears pejoratively

in numerous proverbial sayings. In addition, throughout Asia and the Near East, and particularly in the cities, disdain for the animal was buttressed by the scourge of rapidly increasing packs of dogs, regarded as "maroons" (from Sp. *cimarron*, i.e., reverted to the wild state) by some cynologists and as "pariahs" by others. However, like that of the vultures, the presence of these constantly famished outlaws was tolerated to some degree for their indispensable services as scavengers. Istanbul was notorious for its hordes of pariahs; yet in the words of Xavier Marmier, writing in the mid-19th century: "disagreeable as these animals may be, in the State of Constantinople they are practically a necessary evil. Rectifying the lack of foresight of the city police, they cleanse the streets of a great quantity of matter which otherwise would putrefy and fill the air with pestilential germs". The same was true of Cairo and Alexandria; so prolific were the dogs that they became a disaster for the inhabitants, and in the 19th century the viceroy of Egypt, Muḥammad 'Alī (1769-1849), rounded up enough of them to fill a ship and drowned them. The Maghrib too suffered from this "invasion" and there the indefinable and particularly aggressive breed of "douar (gypsy) dog" or "kabye dog" was prevalent. Such a proliferation of carriers of the virus easily explains the endemic nature of rabies (*kalab*) in all Islamic countries at all periods. It is also obvious why the Prophet, faced with the problem of a plague of stray dogs in Medina in his day, at first took the implacable decision to exterminate "all dogs" (according to the *ḥadīths*), and then, mitigating his decree because the canine race were a race of Allāh's creatures (*inna-hā umma min al-umam*) and because man needed certain categories of dog, decided to exterminate the black-coated strays and particularly those with light patches (*ṣabībatān*) on each eyebrow, the undisputable mark of the devil in the eyes of all Arabs. It should be noted that this physical trait occurs frequently among black herd- and sheep-dogs of many occidental breeds and could be regarded by cynologists as an identifying mark of oriental pariahs. Freed from the Prophet's condemnation were all useful dogs who obeyed a master, i.e., trained hunting dogs (*kalb al-ṣayd*, *ḍāri*, pl. *ḍāwāri*) and watchdogs, whether they guarded houses (*kalb al-dūr*), alleys (*kalb al-darb*), flocks (*kalb al-ḍar*, *kalb al-rā'i*, *kalb al-ghanam*), or crops and vineyards (*kalb al-zar*). In the general opinion of the doctors of law and jurisconsults it was permitted to possess, maintain (*iktīnā*), buy, sell and bequeath such dogs, even black ones so long as their use could be justified. In addition, one who killed one of these dogs had to recompense the owner (*kālib*) at the rate of forty *dirhams* for a hunting dog, one ewe for a sheep-dog, one *farāḥ* (= 16 *raḥls*) of wheat for a crop-guarding dog and one *farāḥ* of good earth for a house watchdog.

Though socially useful dogs are tolerated, the animal remains unclean with respect to religious practices. Everything a dog touches or licks is rendered impure and the place where it has lain must be purified with water, following the practice of the Prophet on one occasion. A dog prowling close to a Believer in prayer makes void the *ṣalāt*, and its presence prevents angels from visiting a house. Finally, anyone who keeps a useless and vicious (*'aḳūr*) dog lessens his final reward by one (or two) *ḥirāf* [q.v.] each day. All these unfavourable dicta on the dog are derived from the standard collections of *ḥadīth* and commentaries on them are found in the major treatises of the four Sunnī legal schools: Mālik's *Muwaffa'*, al-Shaybānī's revised *Muwaffa'* and *Kitāb al-Asl*;

Sahnūn's *Mudawwana*, al-Shāfi'ī's *Kitāb al-Umm*, al-Sarakhsī's *Mabsūt*, al-Muzanī's *Mukhtaṣar*, Ibn Kudāma's *Mughnī*, etc. (in the chapters on *al-ṣayd*, *al-dhabā'ih*, *al-dhakāt*, *al-dahāyā*, *al-a'ima* and *al-buyū'* according to the individual writers); they are likewise found in works on the differences among jurists (*ikhtilāf al-fuḥahā'*) such as the *Bidāyat al-Muḍṭaḥhid* of Ibn Ruṣhd. An inventory, classification and analysis of the data on the dog in all these sources is clearly set out by Erwin Gräf in his detailed study of ritual slaughter in Muslim law (*Jagdbeute und Schlacht tier im islamischen Recht*, Bonn 1959).

Famine drove some Arab tribes in pre-Islamic days to eat the flesh of the dog; this was true of the Banū Asad [q.v.] and of one branch of them, the Banū Faḳ'as, among others. If we can believe some satirical verses written in the beginning of the Islamic period (see al-Djāhīz, *al-Bukhālā'*, Leiden 1900, i, 259; idem, *Ḥayawān*, i, 267), these people acquired a taste for such food. In the Maghrib, al-Muḳaddasī (ed. and tr. Pellat, Algiers 1950, 61, and the cited bibliography, 87) observes that the inhabitants of Kasṭīliya and Naḫṭa are cynophages and, in the 8th/14th century, al-Tiḍjānī accused the inhabitants of Tozeur, in the Djarf of Ifrikiya, of the same deplorable custom (*Riḥla*, Tunis 1927, 115). According to gourmets, however, the flesh of plump pups (*ḍīrū*, pl. *ḍīrā'*, *adīrā'*) is succulent, similar to that of pigeons (see *Ḥayawān*, ii, 169, iv, 42). Finally we may speculate that, for pre-Islamic Arabs, eating dog-flesh could have been a relic of old totemic rites, since the dog was "tabu" in the ancient civilizations of the East.

In spite of the unfavourable attitude towards the dog arising from Qur'ānic law and public opinion, nomadic and rural Muslims were not completely unaware of the high qualities of man's first companion, in the aspects both of usefulness and of devotion. As early as pre-Islamic times, the dog was the only domestic animal whose personality was sufficiently noticed for him to be given a proper name which had no connection with his external appearance, like Sa'd, Mas'ūd, Anīs, Murdjān or Samḥa, and the chroniclers recount a number of anecdotes illustrating the compassion shown to dogs. The Prophet himself promised a divine reward to an old woman for her act of charity to a thirsty dog. S. H. Leder (in *Veiled Mysteries of Egypt*, 1912) twice mentions wills or *wakfs* made in favour of dogs (cf. G. H. Bousquet, *Des Animaux et de leur traitement selon le Judaïsme, le Christianisme et l'Islām*, in *St. Isl.* ix (1958), 31-48). Nor does the Muslim forget the edifying and touching story of Kītmīr, the dog belonging to the Seven Sleepers (Qur'ān, XVIII, 17), the symbol of fidelity [see *اَشْهَابُ الْكَلْبِ*]; he will be the only dog allowed to enter Paradise. In the opinion of al-Bayḍāwī (*Anwār al-tanzīl*, Leipzig 1848, i, 557), Allāh gave this dog the gift of speech, while al-Ṭabarī (*Tafsīr*, xv, 141) believed him to be the reincarnation of a human being, a view that tallies with the Ismā'īlī belief that Kītmīr's doglike exterior hid the huntsman (*mukallīb*) Salmān (see al-Djāhīz, *Ḥayawān*, ii, 189, iii, 44; al-Damīrī, s.v. *kalb*, ii, 278-312; Massignon, *Les Sept Dormants d'Ephèse en Islam et en Chrétienté*, in *REI*, xxii-xxx (1954-62)).

It was al-Djāhīz who restored the dog to its just place in Muslim society in his remarkable treatise "On Animals" (*Ḥayawān*, i and ii). Pleading the case for the defence of the dog in a disputation between the supporter of the dog (*ṣāhib al-kalb*) and the supporter of the cock (*ṣāhib al-dīk*), he gathers together the Greek scientific data alongside Aristotle, whom he can, when necessary, refute, Arabic sayings in

prose and verse, travellers' tales and contemporary information, with the addition of his own observations on canine ecology and ethology. All this he examines critically in the light of a logic which in his case may owe more to an innate feeling for method than to his penchant towards the rationalist tendency of the Mu'tazilites. In any case, we may be grateful to al-Djähiz for not having contented himself with an apology for one type of hound, the "Saluki" (*salūki* [q.v.]) harrier, the noble hunter (*'itāk*) which was all that poets and writers on the hunt before and after al-Djähiz could do. Thanks to him, although we cannot speak of breeds, we are nevertheless able to distinguish the most common dogs of his day. Apart from the Saluki, there were the Kurdish sheep-dog (*kurdi*), a large animal introduced into Turkey in the 6th/12th century by the Kurds, probably the fore-runner of the Hungarian herd-dog, the Kuwatz. Since it had a keen sense of smell, the Kurdish sheep-dog was also used to track game and, when mated with a Saluki, produced a "cross" (*khilāsī*) with the qualities of both its parents. This, the first hound to hunt by smell and not by sight, was described succinctly by the poet 'Alī b. al-Djahm al-Sāmī (d. 249/863), the favourite of the caliph al-Mutawakkil (see *Aghāni*, x, 239). Half a century later, this verse portrait was summarized by Ibn al-Mu'tazz in two of his *ṭarīyyas* [q.v.] (see *Diwān*, Istanbul 1945, 26, no. 30; Damascus 1952, 297; Beirut 1961, 282-3), where this great hunting dog is described as *nayradīnawradī*, "a tireless tracker". The many subsequent crosses of this strain, which falconers used as "bird dogs" to flush small furred and feathered game for their birds of prey, led to a great many varieties of "mastiff hounds" or mongrels (*khāridī* and in the Maghrib *balhūt*, *barhūsh*). The pointer known as *zaghāri/zughāri* (pl. --*iyya*), from its old High German name, *zeigari*, "pointer", appeared in the 6th/12th century with the Crusades. It was imported into Islamic countries at great cost for use as a bird dog; quieter than the *khilāsī*, it was described as *kalb al-bandī*, "the bush dog". Because of its origins and its clear and light-coloured coat, the *zaghāri* pointer greatly resembles the present-day Italian pointer and Hungarian Vizsla, who are assumed to be the ancestors of all other breeds of pointer. From its pale beige coat, the *zaghāri* pointer was given the nickname *zabībī* (dry grape colour); thus named, it is listed among the presents set by the Byzantine emperor Michael VI Stratiotikos to the Fātimid caliph al-Mustansir bi'llāh in 444/1052 (see M. Hamidullah, *L'Europe et l'Orient musulman*, in *Arabica*, vii (1960), 289).

Among the smaller breeds, al-Djähiz mentions a basset sheep-dog, the *zi'ni/zini*, which is reminiscent of the Hungarian Puli and Pumi. He also mentions the *kalāfi*, the "stocky dog", which seems to belong to the same type as the Pomeranian, and the *ṣini*, "the Chinese", which corresponds to the pug or Pekinese. This dog was easily trained to perform tricks for ladies such as holding a lamp on its muzzle without moving or running errands in the market place with a basket round its neck (*Hayawān*, ii, 179). Mountebanks and travelling showmen made wide use of its skills as a performing dog (*mutalakkin*), putting it to work with monkeys in public performances.

Following the Greeks, the Muslims were not aware of any breeds of wild dog, believing the painted hyena or cynhyena (*sim*) and the aardwolf (*'isbār*) to be hybrids resulting from a cross between domestic dogs and wolves or hyenas. Al-Djähiz was the first to refute these errors (*Hayawān*, i, 183-5).

Rabies (*dā' al-kalab*) was widespread in Arab countries from the earliest days because of the hordes of pariah packs transmitting the virus. For a long time, a man smitten with the disease (*kalib*, *mahlūb*) was considered as one possessed by *djunūn* and treated accordingly by methods designed more for exorcism than therapy; drinking the blood of a king was held to be the supreme remedy and empirical treatments, which were kept secret, were passed on from father to son in some families. Driven by the urgent need to act against the growing scourge, Ziyād b. Abī Sufyān, governor of Baṣra (45/665-6), made public a form of treatment by having it posted up on the wall of the Great Mosque which he had restored (*Hayawān*, ii, 10-2); unfortunately we do not know the nature of this treatment, which appears to have produced good results. The clinical symptoms of rabies, especially hydrophobia, were known precisely; al-Djähiz describes them and, after him, so do Kūshādījm (*Maṣāyid*, Baghdad 1954, 138-9), al-Kazwīnī and al-Damīrī (s.v. *kalb*).

On the analogy of shape, the Arabs gave the name *kalb* to other animals; thus *kalb al-mā'* (fresh-water dog) is the name for the otter, and in the western Islamic world for the beaver. Greed was the analogy which led to the name *kalb al-baḥr* (dog of the sea) being given to the little shark which we too call the dog-fish and which Arab naturalists also call the *kawsadī* or *lakḥm*. It is from this "little shark" (*kuraysh*) that Muḥammad's tribe probably took its name, apparently through totemism. Finally, in the world of the invertebrates (*hasharāt*) we find the *kalb al-mayy*, the mole-cricket (*gryllotalpa vulgaris*), also called *hālūsh* and *harrāthā* by horticulturalists, while arboriculturalists call all wood-eating worms *kalb*. By a similar process of analogy, the word *kalb* and its derivatives were given to a large number of objects, instruments and tools, whose contours or functions were to a greater or lesser degree reminiscent of the animal (see Dozy, *Supplément*, s.v.).

The dog in astronomy. The ancient astronomers gave the name "dog" (κύων, *canis*) to a number of constellations and stars because of the allegorical figures which they believed they would perceive in

their dispositions in the sky. After the rise of Islam, the Muslims adopted the same principle and, translating the Greek and Latin terms, gave the name *kalb* to the following stars: a) *al Kalb al-akbar*, the Great Dog—also known as *Kalb al-ḡjabbār*, “the dog of the giant” (i.e., of Orion)—is a sub-zodiacal constellation lying to the east of the Hare, beneath and to the left of Orion, on the edge of the Milky Way. In the European Middle Ages it was called the *quelb alagbar* and *quelb elgebar*. There are seven stars in the constellation and one of these, Sirius the Dog ( $\alpha$  *Canis majoris*, magnitude 1,58) or *al-Shi'rā al-yamaniyya* (*Elschere aliemini*), rises soon after the summer solstice. b) *al-Kalb al-aṣghar*, “the Little Dog”—also called *Mukaddam al-kalb*, “the forerunner dog”—is a sub-zodiacal constellation lying under Gemini between Hydra and Orion. *Quelb alasgar* embraces two stars: Procyon ( $\alpha$  *Canis minoris*, mag. 0,48) or *al-Ḡhumaysā*/*Algomaisa* (= rheumy-eyed, a corruption of *al-ḡjumaysā*, the sycamore)—which is also known as *al-Shi'rā al-shāmiyya*, “Sirius of Syria”—and *al-Shi'rā al-'abūr*/*Alhabor*, “Sirius which has crossed” (the Milky Way). They rise in mid-July. c) *al-Kalbān*, “the Two Dogs” (of Aldebaran), in the zodiacal constellation of Taurus are two stars situated between the Hyades and the Pleiades, corresponding to  $\nu$  *Tauri*, mag. 4,5 and  $\kappa$  *Tauri*, mag. 4,6. d) *Kalb al-rā'i*/*Celbalrai*, “the Shepherd's Dog”, is a corruption of *Kiṭf al-rā'i*, “the Shepherd's Shoulder” (Arcturus) and corresponds to  $\beta$  *Ophiuchi*, mag. 2,9, in the Serpentarius constellation. e) *Kilāb al-shitā*, “the Dogs of Winter”, designates the four mansions of *al-Dhira'* (= Castor and Pollux,  $\alpha$ ,  $\beta$  *Geminorum*), *al-Nathra* (=  $\gamma$ ,  $\delta$ ,  $\epsilon$  *Canceri*), *al-Tarf* (=  $\alpha$  *Canceri* and  $\lambda$  *Leonis*) and *al-Djabha* (=  $\zeta$ ,  $\eta$ ,  $\theta$ ,  $\alpha$  *Leonis*) whose heliacal rising occurs successively from the end of June to mid-August and acronychal setting from the beginning of January to mid-February. Sirius ( $\alpha$  *Canis majoris*) rises at the same time as *al-Dhira'*. This long period covers the time of the Dog (*al-kalb*) or “Dog Days” (cf. Fr. *jours caniculaires*, Ger. *Hundstage*), which are characterized by heatwaves (*wagharāt*) and simooms (*samā'im*), and also the time of the hoar-frost (*kuḷba*, *kalab al-shitā*), with its “black nights” (*al-layālī al-sūd*). In antiquity this whole period was regarded as ill-omened and thus held in dread. At the time of the rise of Sirius the Romans sought to placate him by sacrificing a red dog. The maxims of the nomadic Arabs concerning the *anwā'* [q.v.] of these four mansions indicate their apprehension in the face of the torrid summer with its shortage of water and pastureland and their fear of the harsh winter with its meagre supply of food and fuel. The star *al-Dhira'*, “the Arm” (for *al-dhira'* *al-mabsūṭa*, “the outstretched arm” of Castor), which forms the seventh lunar mansion, is at its apogee at the beginning of October, and *al-Nathra*, “the Sneeze” (of Leo), the eighth lunar mansion, in mid-October. In the case of *al-Tarf*, “the Extremity” (of the southern rear claw of Cancer), the ninth lunar mansion, this occurs at the beginning of November, while for the tenth lunar mansion, *al-Djabha*, “the Forehead” (of Leo), it takes place in mid-November. Thus the “Dogs of Winter” is a most appropriate name for these four mansions; it reveals a trace of the old solar astrological calendar of the Bedouins, based on their observation of the meteorological changes and atmospheric precipitations which took place during the heliacal rise and acronychal setting of well-known stars.

**KALB B. WABARA**, the ancestor of the Banū Kalb, the strongest group of the Kuḏā'a [q.v.]. His mother, Umm al-Asbu', was so called because all her sons were named after wild animals (T. Nöldeke, *Neue Beiträge*, 75 ff.). The Kalb were, according to the genealogical system (Ibn al-Kalbī, *Djamharat al-nasab* etc.), of Yemenite descent, but sometimes they claimed for political reasons to belong to the Northern Arabs or even to Quraysh.

I.—Pre-Islamic period

Their greatest chieftain was Zuhayr b. Djanāb, who had great authority among the northern tribes; so he was sent by Abrahā [q.v.] to control the Bakr and Taghlib (*Aghānī*, ed. Brünnow, 95; Ibn Kutayba, ed. de Goeje, 233). This cannot be the Abrahā of the year in which the prophet Muḥammad was born, but is probably an earlier viceroy of the Yemen. Descendants of Zuhayr are enumerated in *Aghānī*, ed. Brünnow, 102 ff., amongst them a contemporary of Yazīd b. al-Muhallab (d. 102/720). Zuhayr was later represented as one of the “long-lived” (*mu'ammār*), who in his verses deplored his lost youth (Abū Hātim in I. Goldziher, *Abhandlungen*, ii, 24 ff.; al-Sayyid al-Murtaḏā, *Amāli*, ii, 172-6).

The grazing grounds of the Kalb (they were famous camel-breeders, see, e.g., *Aghānī*, vii, 109, l. 4) were in the steppe between Syria and 'Irāq (see map in vol. i, 891) called *samāwat Kalb* (Yāqūt, iii, 131 etc.); here their centres were the oases in the low-lying valley (*al-khabī*) formed by the Dījawf [q.v.] and the Wādī Sirhān [q.v.] which opened to them the way to Syria long before the Muslims conquered it (see the verses in *Hamāsa*, Freytag, p. 659 and Wellhausen, *Das arab. Reich*, 83, n. 2). Thus, they had settled in Salamiyya, Palmyra, Damascus (especially in the Ḡhūta and al-Mizza), in Dījawlān, al-Suwaydā', and in the region of Ḥarrān; there were small numbers of them in Ḥims, Aleppo, Ḥamāt and Manbiḡ. They had also settled in Fadak, Dūmat al-Djandal, Taymā', and al-Ḥira, and, according to al-Kalkāshandī (*Kalā'id al-ḡjumān*, 47) and Ibn Khaldūn (*Ibar*, ii, 521), there were many of them in “the Gulf of Constantinople” (*al-khalīḏj al-kustanīnī*), as well as in Shīrāz in Persia, and in Manfalūṭ in Egypt. In Syria the Byzantines had placed them under the command of the Ḡhassānids [q.v.], their phylarchs, to defend the Syrian *Limes* against the Sasanids and al-Ḥira. In this way the Kalb became accustomed to military discipline and to law and order. Like the Ḡhassānids they became converted to Christianity in its Monophysite form.

The Kalb clashed with the Muslims for the first time when Muḥammad sent, c. 6/627, an expedition against Dūmat al-Djandal [q.v.] which led to the conversion of al-Aṣbagh b. 'Amr and a treaty (Ibn Sa'd, i/2, 36; see J. Sperber in *MSOS As.*, xix (1916)). There were already some converted Kalb in Mecca, e.g. Muḥammad's step-son Zayd b. Ḥāritha [q.v.] and Dihya [q.v.]. In 8/639 the Kalb sent a deputation to Muḥammad to announce their conversion; it seems however that the majority stood aside, taking no part in the conquest of Syria.

## II.—Islamic Period

The relations between Kalb and the Umayyads go back to the time of the caliph 'Uthmān b. 'Affān (see above). Owing to their importance and strength in Syria, Mu'āwiya, who had married Maysūn [q.v.], whose father, Unayf [q.v.], belonged to the Kalb aristocracy, chose to rely on the Kalb in order both to secure his position at home, and to prepare himself to face 'Alī b. Abī Ṭālib in war. Thus the Yamanites in general and the Kalb in particular became the most influential of the tribes in Syria during the reigns of Mu'āwiya and his son, Yazīd, who also had married a wife from the Kalb, and during that of Mu'āwiya II [q.v.].

Conflicting interests led Kalb and Ḳays [q.v.] to support opposing political groups. In the period of political trouble that followed the death of Yazīd I, the support given by Kalb to the Umayyads was due to the favourable economic and political position which they had enjoyed under them. On the other hand, Ḳays gave their full support to Ibn al-Zubayr [q.v.], less because of their attachment to his cause, than because of their hatred for the Kalb and the Umayyads who supported them. Mas'ūdī reports (*Murūdj*, v, 200) that al-Yaman, headed by the Kalbī Hassān b. Mālik b. Baḥdal, stipulated before giving their full support to Marwān [q.v.] that they should be given the same concessions as they had enjoyed under Mu'āwiya I, Yazīd I and Mu'āwiya II. These were that two thousand of them should receive two thousand *dirhams* for their support each year, and, if a recipient died, his son or cousin should receive the payment. Kalb should take precedence at court, and should be consulted on every important matter. To all these terms Marwān gave his consent. Not unnaturally, therefore, Ḳays gave their full support in the battle of Mardi Rāhiṭ [q.v.] (64/683) to Ibn al-Zubayr, while Kalb and others of Yaman took the side of Marwān. This battle, however, ended with a crushing defeat for Ḳays, a defeat which they never forgot and which deepened still further the conflict between themselves and Kalb. This was one reason for the feuds between them in the reign of 'Abd al-Malik [q.v.], for Ḳays found in the political disturbances at the time of his accession an opportunity to revenge themselves.

One such opportunity came in the battle on the *Khāzīr* (67/686) when 'Umayr b. al-Ḥubāb al-Sulamī, who was with those Ḳays serving in the Syrian army, deserted the field as soon as battle was joined, thus bringing about the victory of the 'Irākīs. Following this treason, 'Umayr took refuge with the leader of Ḳays, Zufar b. al-Ḥārith al-Kilābī, who had been holding out against the Umayyads in Ḳarḳīsyā' since the battle of Mardi Rāhiṭ. Thenceforward there began the armed conflict between Kalb and Ḳays, which took the form of raids, called '*Ayyām*' ("days"), each of which usually bore the name of the place in which it had occurred.

Both Zufar and 'Umayr began to make a series of raids on those Kalb who were living in the Samāwa desert between Syria and 'Irāk, and these raids were met by retaliation from the Kalb under Ḥumayd b.

Ḥurayth b. Baḥdal. However, these constant Ḳaysi raids eventually caused the Kalb to leave the area and emigrate to al-Ḡhawr in Palestine. Thus Ḳays achieved unchallenged supremacy in the area.

However, the Kalb-Ḳays feud broke out in a different area. The raids of Ḥumayd b. Ḥurayth on the Ḳays in the *Djazīra* had stirred up the Banū Fazāra [see FAZĀRA] in 'Irāk, who complained to the caliph 'Abd al-Malik. This led to another series of raids, the most celebrated of which was that of Banāt Ḳayn in which the Ḳays was victorious. As a result of the wise measures taken by 'Abd al-Malik, the raiding ceased, and the day of Banāt Ḳayn was the last of the famous "days" between Kalb and Ḳays.

During the military struggle between the Umayyads and the 'Abbāsids (132/750) 2,000 Kalb originally sent to help Salm b. Kutayba—the Umayyad governor of Baḡra—defected and took the side of the 'Abbāsids. This may have been due to the fact that Marwān II relied almost exclusively on Ḳays; or the Kalb may have realized by this time that the Umayyad cause was lost and therefore have tried to win favour with the new regime. However, in the same year the Kalb, with others of Yemen, took part in the revolt of Abu 'l-Ward against the 'Abbāsīd army led by 'Abd Allāh b. 'Alī [q.v.]. This might have been a result of their disappointment with the new régime.

Under Ḥārūn al-Rashīd [q.v.], Damascus was the scene of a tribal feud between the two factions of Yemen and Muḍar. It lasted with short intervals from 174/790 to 180/796. The chief reason for this feud was the Syrian Arab tribes' sympathy for the Umayyads, and it was fostered by the policies of the 'Abbāsīd governors, who supported one faction against the other. This feud emerged once more under al-Ma'mūn [q.v.] (213/828) in connection with the Yaman in Egypt.

In the later 'Abbāsīd period, the history of the Kalb was of less importance and took the form of Bedouin (*a'rāb*) attacks on the central authorities. The following are the main events. The Kalb under 'Uṭayf b. Nī'ma took part in the revolt of Ḥimṣ against the governor al-Faḍl b. Ḳārin and killed him in 250/884. But al-Musta'īn's general, Mūsā b. Bughā al-Kabīr, was able to defeat the rebels and capture Ḥimṣ. In the year 294/906, the *a'rāb* of Kalb, together with al-Nimr b. Ḳāsiṭ [q.v.] and Asad, defeated al-Ḥusayn b. Ḥamdān, the governor of Mosul, and pursued him to the gates of Aleppo. In the same year al-Ḥusayn b. Ḥamdān succeeded in defeating the *a'rāb* of Kalb and Ṭay' [q.v.], but he was eventually captured. Under al-Mustashīd, the Kalb took part in the dispute between the ruler of Damascus and Dubays b. Ṣadaqa, the ruler of Aleppo [see MAZYADIDS], by betraying the latter, who took refuge with them, to the former.

It is interesting to note that Carmathian propaganda found a response among some of the Kalb and especially the Banu 'l-'Ulayb b. Ḍamḍam and their *mawālī*, who were living in the Samāwa desert. In 289/901 they paid homage to Yaḥyā b. Zakrawayh, the Carmathian propagandist, calling him *shaykh*. Banu 'l-Aṣḡabagh—another branch of Kalb—also joined Ibn Zakrawayh, and seem to have believed so sincerely in his mission that they called themselves "Fāṭimids". Taking by surprise al-Mu'ṭaqid's army, which was pursuing them, they managed to kill its leader, Sabuk al-Daylamī. Then they pushed on to Damascus, burning the mosque of al-Ruṣāfa and surprising all the villages they passed through. Ibn Zakrawayh and his followers harassed Ṭughdī b. Ḍjuff [q.v.], the ruler of Damascus, and imprisoned

him within his city. It was not until the Egyptians sent an army under Badr al-Kabīr, Ibn Ṭūlūn's slave, that the Carmathians were defeated and their leader Ibn Zakrawayh was killed. It is significant that one reason suggested for his death was the egalitarian policy he adopted towards his *mawālī* followers.

The death of Yahyā led Banu 'l-'Ulays and Banu 'l-Aṣḡagh to follow his brother al-Ḥusayn b. Zakrawayh. The latter was able to defeat the Egyptian force and the troops of Ḥimṣ and of other Syrian provinces sent against him. He also made his authority felt to such an extent that he was recognized as Amīr al-Mu'minīn in the Friday *khutba* all over Syria in 289/901-2. However, the caliph al-Muktafi was able to have him seized and put to death in 291/903.

Following the death of al-Ḥusayn b. Zakrawayh, the Banu 'l-'Ulays, Banu 'l-Aṣḡagh and Banū Ziyād (all from Kalb) joined another Carmathian *dā'ī*, Abū Ḡhānim Naṣr. They made several attacks on Buṣrā, Adhri'āt, Damascus and Ṭabariyya. In Ṭabariyya, where some of the troops of Damascus joined them, they defeated and killed Ibrāhīm b. Bughāmardī, the deputy governor of Jordan, impelling the caliph al-Muktafi to send an army against them under al-Ḥusayn b. Ḥamdān. They then moved on to Samāwa and Hit, which they devastated. Another army, under Muḥammad b. Ishāq b. Kundādīk, took the field against them. Finding themselves unable to face this joint army, the Kalb betrayed the Carmathian leader Naṣr, and killed him. By taking his head to the caliph as a sign of their loyalty, they averted any action against themselves.

The Kalb were also the most enthusiastic supporters of all the Sufyānī [*q.v.*] rebels. The revolt of Abu 'l-Ward (132/750) and that of 'Alī b. 'Abd Allāh b. Khalid b. Yazīd b. Mu'āwiya (195/810) are good examples. This support is clearly reflected by the tradition that the Kalb would be the last adherents of the Sufyānī.

### III.—In Muslim Spain

The army of Mūsā b. Nuṣayr [*q.v.*] included Kalbī and Ḳaysī elements, among whom the memory of Mardjī Rāhiṭ aroused an antagonism which showed itself in North Africa and particularly in Spain throughout most of the 2nd/8th century. The troops sent by Hishām b. 'Abd al-Malik to suppress the Berber revolt launched by Maysara [*q.v.*] were composed of Syrians; Balḍī [*q.v.*], commander of their van, who was a member of the Ḳaysī aristocracy, took refuge at Ceuta, appealing for assistance to the governor of Spain, 'Abd al-Malik b. Ḳaṭan, a Medinan opposed to the Syrians. After refusing to help for some considerable time, 'Abd al-Malik finally allowed Balḍī to enter Spain, where the Berbers were also in revolt. Discord between Kalb and Ḳays soon broke out, and Balḍī succeeded in supplanting 'Abd al-Malik, whom he caused to be tortured. Balḍī's pro-Ḳays policies provoked disturbances. His successor roused the wrath of other elements of the population and the Umayyad caliph in Damascus then sent to Cordoba the Kalbī Abu 'l-Khaṭṭār al-Husām b. Dirār [*q.v.*], who adopted a policy which favoured his fellow-tribesman. His partiality earned him the hostility of a Ḳaysī chieftain, al-Sumayl b. Hātim [*q.v.*], who exerted considerable efforts and opened hostilities against the governor, allying himself even with some Yamanīs (Lakḥm and Djudhām) against Kalb. The revolt launched in 127/745 was successful; Abu 'l-Khaṭṭār, defeated and taken prisoner, was replaced by Thabāba b. Salama al-Djudhāmī, who died in 129/746. Yūsuf b. 'Abd al-Rahmān al-Fihri [*q.v.*] was then chosen as governor of Spain. The Kalbī supporters of Abu 'l-Khaṭṭār, who had fled, were defeated at Secunda (Shakunda) in 130/747 by the Ḳaysī party, and in time passions cooled, especially since enduring famine encouraged the cessation of hostilities. In coalition with the Berbers, the Yamanīs moved to attack al-Sumayl, governor of Saragossa, but the Ḳaysīs succeeded in delivering him (137/755), with the aid, notably, of emissaries from the future 'Abd al-Rahmān I [*q.v.*]. Negotiations having broken down, the Kalb and other Yamanīs assisted the Umayyad pretender to come to Spain and establish himself there.

Subsequently, the hatred between Ḳays and Kalb diminished as the Andalusian personality took shape, but even in the 3rd/9th century the fires of fanaticism still flared up (e.g., a war begun in 207/822 which lasted seven years in the region of Murcia, sparked off on some flimsy pretext).

*Bibliography:* E. Lévi-Provençal, *Hist. Esp. Mus.*, index. (E.D.)

AL-KALBĪ, the name of a prominent family from Kūfa. Bishr al-Kalbī and his sons al-Sā'ib, 'Ubayd and 'Abd al-Rahmān took part in the Battle of the Camel [see AL-DJAMAL] on 'Alī's side (36/656); al-Sā'ib b. Bishr embraced the cause of Muṣ'ab b. al-Zubayr and, despite numerous defections in the

ranks of the Kūfans, was slain beside him at Dayr al-Djāhlik [q.v.] in 71/690 by Warḳā' al-Nakha'ī (al-Ṭabarī, ed. M. Ibrahim, Cairo 1964, vi, 103, seems to date his death to 67/686 and places it during the battle between Muṣ'ab b. al-Zubayr and al-Mukhtār; whatever the facts of the matter, al-Sā'ib was not killed at Siffin in 36/657, as Ibn Ḥazm states, *Djamhara*, ed. Hārūn, Cairo 1962, 459). Muḥammad b. al-Sā'ib (and not b. Mālik as in the *Fihrist*, ed. G. Flügel, 95) played an active part in the revolt of 'Abd al-Raḥmān b. Muḥammad b. al-Aṣḥ'ath [see *IBN AL-AṢḤ'ATH*] and fought in his ranks at Dayr al-Djamādjim [q.v.] (82/701); he left a partial account of this battle in which he recounts, *inter alia*, his honourable, even triumphant, return to his family in Kūfa in one single day without having had to abandon one of his weapons (al-Ṭabarī, vi, 349-50, 364).

To swordsmanship, the family added another claim to fame: learning; in fact it is rare to consult an early Arab book without finding some reference to an al-Kalbī. These references, brief or more detailed, concern three different persons, who were already difficult to distinguish in early days.

I.—Muḥammad b. al-Sā'ib al-Kalbī (Abū 'l-Naḍr) died in Kūfa at the age of at least 80 in 146/763. He was interested in all contemporary branches of learning: universal history; the history of religions, pre-Islamic (al-Shahrestānī, *Milal*, Cairo 1947, 1220-64), Jewish (Ibn 'Abd Rabbih, *ʿIqd*, Cairo 1948, i<sup>2</sup>, 157) and Christian; poetry (Ibn Khallikān, Cairo 1948, iii, 436), literature and philology; genealogy, tradition and ancient legends. He employed his wide knowledge in a commentary on the Kur'ān (*Tafsīr*), the longest ever composed (al-Dhahabī, *Ibar*, Kuwait 1960, i, 106). So great was his fame in this sphere that Sulaymān b. 'Alī, perhaps during his governorship of Baṣra (133-9), brought him to that city to teach kur'ānic exegesis. With the support of Sulaymān b. 'Alī, Muḥammad al-Kalbī put forward, despite the opposition of his hearers, an interpretation of the Kur'ān which went contrary to received opinion; it is probable that he expressed pro-'Alid views. His courses were written down (*Fihrist*, 95), but his *Tafsīr* is now lost, apart from a few sparse fragments in various works. This is perhaps to be explained by his use, direct or indirect, of written sources and chains of tradition (*isnād*) which did not conform to the norms fixed for *ḥadīth* criticism, and above all by the fact that, as a Shi'ī, he had advanced opinions contrary to Sunni orthodoxy, especially in *ḥadīth* and in the different levels of kur'ānic interpretation (al-Ṭabarī, *Tafsīr*, Cairo 1374, i, 76, 91, 216-7, etc.). He was sometimes accused of heresy, of *riḍā*, of saba'ism, of *irdjā'* and so on, and sometimes of forgery and falsehood. Even in the 20th century he has impassioned opponents among the scholars of al-Azhar (Aḥmad Shākir, in his edition of the *Lubāb al-Ādāb* of Usāma b. Munqidh, Cairo 1935, 123-4, n. 5). Yet he has remained an authority, and even his detractors draw on him as a source.

II.—Hishām b. Muḥammad b. al-Sā'ib al-Kalbī, Abū 'l-Mundhir, generally called Ibn al-Kalbī, was probably born in Kūfa around 120/737 and educated in that town; he died there in 204/819 or 206/821, in the caliphate of al-Ma'mūn. His death was greatly regretted by the caliph (al-Khaṭīb al-Baghādī, Cairo 1931, xiv, 45-6) for reasons which are not particularly clear; we do know, however, that the 'Abbāsīd caliph al-Mahdī (d. 169/785) made use of Ibn al-Kalbī's knowledge when countering the Umayyad attack in Spain (al-Ṭabarī, viii, 172-3). It was probably during this caliph's rule that Ibn al-Kalbī stayed

in Baghdād. Like his father, he was interested in all branches of knowledge of his time and he wrote a good number of works, more than 150 according to the *Fihrist*. This immense oeuvre was incorporated, to a great extent, in the works of his direct and indirect disciples: Muḥammad b. Ḥabīb, Ibn Durayd, al-Ṭabarī, Abū 'l-Faraj al-Isfahānī and many others who borrowed a great deal from him without much concern for acknowledgement and often with over-vague references to the master's work. A few titles, however, have been recovered from this anonymous mass by Ibn al-Kalbī's fame:—1. *Djamharat al-Nasab*: W. Caskel and G. Strenzić have published two imposing volumes, one a study on everything closely or remotely connected with Arab genealogy and with Ibn al-Kalbī in particular, and the other genealogical tables culled from the work of Ibn al-Kalbī (*Gamharat an-Nasab des Ibn al-Kalbi*, Leiden 1966). Ibn al-Kalbī was the uncontested master of Arab genealogy, and in his *Djamhara* Ibn Ḥazm did no more than give currency to the work of his eminent predecessor, without acknowledging it to a great extent. In his lifetime Ibn al-Kalbī was the source, arbiter and sometimes amused dispenser of titles of nobility.—2. *al-Aṣnām*, published for the first time in Cairo in 1912 by Aḥmad Zakī, has been translated into German (by Rosa K. Rosenberger, Leipzig 1941), into English (by N. A. Faris, Princeton 1952), and into French (by M. S. Marmardji, in *Revue Biblique*, xxxv (1926), 397-420: a fragmentary translation; more recently, W. Atallah has published a new ed. of the text together with an annotated French translation (Paris 1969)). As on genealogy, Ibn al-Kalbī remains an authority on the history of Arab paganism; Ibn Durayd, al-Naḍjirāmī, Yāqūt, 'Abd al-Kādir al-Baghādī and others consulted his work, summarized it, and always cited him as a reference.—3. *Ansāb al-Khayl*, in which the author set forth genealogical accounts illustrated by short poetic pieces celebrating the most famous chargers of history (ed. Levi Della Vida, Leiden 1928; a copiously annotated edition by Aḥmad Zakī appeared posthumously in Cairo in 1946).—4. A few fragments of various length have been preserved, vestiges of lost works such as *K. al-Kulāb*, *K. al-Lubāb*, *Shi'r Ḥatīm al-Ṭā'ī*, etc.

To some extent Ibn al-Kalbī's work has been mingled with that of his father, but only partially; in the narrative of the battle of Dayr al-Djamādjim, for example, he naturally cites his father, who had taken part in the combat, but he also had recourse to other witnesses (al-Ṭabarī, vi, 342-50). He is so scrupulous in his pursuit of exactitude that he even quotes his own father through the medium of other narrators (*ibid.*, ii, 272, vi, 360). Apart from oral sources, Ibn al-Kalbī cited specialists who had access to biblical and Palmyran sources (*ibid.*, ii, 273); he was kept informed of archaeological discoveries in the Yemen (Ibn Durayd, *Ishṭihāk*, ed. Hārūn, Cairo 1958, 524); he seems to have had a secretary called *Djabala* who provided him with translations from Pahlavi (*Fihrist*, 244) and he himself consulted the archives and tablets of the Christian communities of al-Ḥīra (al-Ṭabarī, i, 628). Equipped with modern methodological criteria, it is easy to point to lacunae in Ibn al-Kalbī's knowledge and to criticize some of his opinions on the history of languages or some of his narratives, which are more legendary than historical. In his universal history he often had to fall back on oral sources alone, and he should be given credit for having written these down. All in all, his work is not inferior to that of other historians of

oriental or classical antiquity. Some Arab writers were fiercely critical of him, but such criticisms, sometimes based on scholarly rivalry, were often sectarian or motivated by religious fervour, for, like his father, Ibn al-Kalbī fell foul of Sunnī orthodoxy. On the other hand, he did have ardent supporters (Yāqūt, Beirut 1956, ii, 187-8, 219, 504), and detractors and admirers alike were frequently largely dependent on his work. Among modern scholars, I. Goldziher has criticized Ibn al-Kalbī (*Muh. Stud.*, i, 185-7) by taking literally the early criticisms directed against him; he bases his arguments on the false, self-glorifying genealogies which Ibn al-Kalbī recounts with humour, and on his pro-ʿAbbāsīd views (al-Ṭabarī, viii, 172-3), using these to throw doubt on his scientific worth. Th. Nöldeke (*Gesch. der Araber und Perser*, Leiden 1879, xxvii and index) restored the balance, and since then criticisms of Ibn al-Kalbī have been reduced to their proper dimensions: even so, neither ancients nor moderns have evaluated him at his true worth. Present-day research is confirming Ibn al-Kalbī's eminent role in the history of Arab literature.

III.—ʿAbbās b. Hishām, Hishām's son and not his brother as al-Kūfī states (*Fihrist*, 95). Al-Khaṭīb al-Baghādī (xvi, 46) speaks of an Ibn al-Kalbī who must be the grandson of Muḥammad al-Kalbī. Al-ʿAbbās transmitted his recollections of his father, Hishām, passing on some of his learning to philologists like Ibn Durayd (*Ishṭikāḥ*, *passim*) and to historians like al-Balādhurī and al-Ṭabarī. Nothing further is known about him.

*Bibliography*: Main accounts: Ibn Saʿd, *Ṭabakāt*, Beirut 1957, vi, 358-9; Ibn Kutayba, *Maʿārif*, ed. ʿUkāshā, Cairo 1969, index; Ibn al-Nadīm, index; al-Khaṭīb al-Baghādī, Cairo 1931, xiv, no. 7386; Ibn Khallikān, *Wafayāt*, Cairo 1948, iii, 436-8, v, 131-3; Yāqūt, *Udabāʾ*, Cairo 1936, xix, no. 112; Dhahabī, *Mizān*, Cairo 1963, iv, 304-5, 556-9. Among modern writers, the editors of Ibn al-Kalbī usually provide ample bibliographies. Note the introductions to the *Djamhara* (Caskel-Strenzick) and to the *Asnām*. See too Brockelmann, *Blachère*, *Litt.*, and also Kahhāla.

(W. ATALLAH)

**KALBIDS**, a family stemming from the tribe of the Kalb b. Wabara [*q.v.*], which Arab sources relating to the Maghrib call Banū Abi 'l-Ḥusayn (or al-Ḥasan).

In the Maghribī chronicles, governors and senior officials of the Umayyad administration in Ifrīkiya who were of Kalbite origin appear frequently, as do others belonging to the rival Ḳays tribe. While the more astute of the caliphs in Damascus sometimes managed to steer an even course between these two adversaries, their representatives in the Maghrib, in Spain and in Sicily often leaned to one side or the other, guided either by their personal sympathies or by the circumstances obtaining at any particular time. Thus the disputes and often bloody battles provoked by the traditional antagonism of the two tribes intensified the chaos in a situation where a Kalbite *wālī* frequently followed a Ḳaysite one and *vice versa*.

Under the Aghlabids, who relied largely on Muḍarite elements, the Kalbites began to decline, but they were the main prop and stay of Fāṭimid political and religious policy; they therefore swiftly found in Ifrīkiya a milieu favourable to their rise, so that by the middle of the 4th/10th century they were the governing element of Muslim Sicily. At this period Kalbite elements were probably already allied with the Kutāma Berbers.

For services rendered particularly to the first *imāms* of Ifrīkiya, the Kalbites were speedily rewarded by the Mahdī and his descendants; in al-Ḳā'im's day, 'Alī b. Abi 'l-Ḥusayn al-Kalbī (one of the first dynasts of this family and son-in-law of Sālim b. Abi Rāshid, the Fāṭimid governor of Sicily from 305/917 to 325/936) died at the siege of Agrigento (326/938) in the midst of the struggle pursued by Sicilian Fāṭimid supporters against those who had remained faithful to the caliphate in Baghdād. His son al-Ḥasan b. 'Alī, who had distinguished himself in Ifrīkiya in the campaigns waged by al-Ḳā'im and al-Manṣūr against the *Khāridjite* Abū Yazid [*q.v.*], was the first of a succession of Kalbite governors in Sicily, a kind of hereditary emirate (cf. *Kitāb A'māl al-a'lām* (see *Bibl.*)), which lasted until the mid-5th/11th century.

Confronted by that chaotic situation caused by the rebellions in Palermo and Agrigento against the Fāṭimid representatives, the Caliph al-Manṣūr deemed it logical and sensible to entrust Sicily's management to those whose fidelity was proven beyond doubt and who, moreover, could maintain a neutral stand between the rebels and the *imāms* of Ifrīkiya. Only a few years after his arrival in Sicily, al-Ḥasan had two victorious encounters with the Byzantine forces in Calabria and Apulia. He took this opportunity to build a mosque at Reggio, but it was destroyed a few years later. On al-Manṣūr's death (Dhu 'l-Ḳa'da 341/March 953), al-Ḥasan returned to Ifrīkiya, leaving the government of the island in the hands of his son Aḥmad, but without definitely abandoning his role as military commander in Sicily and Calabria. He was later recalled to the area by his brother 'Ammār, who was hard-pressed by the Byzantines. Aḥmad, the second Kalbid *wālī* of Sicily (342/954-358-69), found himself involved in some decisive battles; most notable were the capture of Taormina (351/962), whose name was changed to Mu'izzīyya in honour of the *imām* al-Mu'izz, and the fall of Rametta and the simultaneous victory at sea known as the *wak'at al-madīās* (battle of the straits), which is celebrated in a turgid *ḥasīda* by Ibn Hānī' (*Diwān*, ed. Zāhid 'Alī, 1352/1934, no. 40, 540-59).

In the succeeding years the different Kalbid governors pursued sporadically their conflict with the Byzantines, but military offensives were rarely large-scale: Byzantium had now admitted the need to enter into peace negotiations with the Fāṭimids, especially since the ambitions of the Emperor Otto I regarding southern Italy had become known. These ambitions also fired his son, Otto II, who, when he ventured into Calabria, found himself faced with a coalition of Muslims and Byzantines, the latter driven by necessity to stand shoulder to shoulder with the Kalbid troops, the former providentially assisted by the rivalry of the two Christian empires. The clash between Otto II's troops and those of the Kalbid *wālī* 'Alī b. al-Ḥasan, son of the first Kalbid governor of Sicily, took place in Muḥarram 372/July 982 at Capo Cotrono in Calabria. At first the Muslims seemed overwhelmed but the battle quickly turned in their favour. This was perhaps the last great Muslim victory against the Christians in Sicily, aside from a few offensives of little importance such as the forays of 376/986 into Calabria, the siege of Cosenza a couple of years later, new attacks on Taranto in 381/991, the storming of Matera in 384/994, a surprise attack on Benevento in 392/1002 and finally a brief siege of Capua.

In Egypt too the Fāṭimids employed the services of leading members of the Kalbid family, some of

whom were sent to Sicily by the *imāms* of Cairo to act as governors. This was true of, for example, *Djā'far* b. Muḥammad, in Egypt counsellor to al-'Aziz bi-'llāh (al-Mu'izz's successor in 364/975), who governed the island for two years (372/983-374/985). This period saw the apogee of Kalbid prestige: in Egypt, when al-Ḥākim bi-amr Allāh [q.v.] was proclaimed caliph, the Kutāma Berbers, Fātimid supporters, demanded that control of affairs be entrusted to al-Ḥasan b. 'Ammār, the victor of Rametta and nephew of al-Ḥasan b. 'Alī b. Abi 'l-Ḥusayn; in Sicily, the Kalbid Abu 'l-Futūḥ Yūsuf b. 'Abd Allāh (379/989-388/998) governed the island with great wisdom for eight years. The former was granted the title of *Amin al-Dawla* and the latter that of *Thiḳat al-Dawla*.

The fortunes of the Banū Abi 'l-Ḥusayn family soon declined from this peak: in Egypt there was a conspiracy against al-Ḥasan, while Sicily sank into chaos under *Djā'far* (388/998-410/1019), son of Yūsuf. Although the steadily increasing autonomy enjoyed by Sicily from the outset of Fātimid rule in Egypt coincided with the greatest splendour of the amirs' court in Palermo, it proved detrimental to the political realities of the moment, in the face of which the Kalbid rulers should have shown greater administrative prudence and zeal. Instead, they preferred relaxing in the mansions of Palermo, numerous at this period, to the efforts of military undertakings or the cares of political responsibility. Indeed *Djā'far*, amir of the island for twenty years, seems to have been the founder of Castello di Mareolci in Palermo. The effects of this decline were apparent in all fields, but they were especially marked in military matters: the Muslims suffered their first setback in Bari in 394/1004 at the hands of the Byzantines and the Venetians, and the following year they were checked by the Pisans at Reggio.

This already serious state of affairs worsened under the rule of *Djā'far*'s brother, the Kalbid amir Aḥmad b. Yūsuf al-Akḥal (410/1019-427/1036), about whose campaigns in Calabria and Apulia the Arab chroniclers have little to say. It is certain, on the other hand, that during the 15-year span of this governorate a new element, the Zirids, played a far larger part than formerly in the political and military life of Sicily. In fact, al-Mu'izz b. Bādīs, at the instigation of many of al-Akḥal's opponents, who complained of his injustice and malpractices, sent his own son, 'Abd Allāh, to the island at the head of a large military contingent. Al-Akḥal sought the help of the Byzantines, with whom he had already entered into negotiations. The latter defeated the Zirid forces, but then withdrew to Calabria, leaving 'Abd Allāh to effect the easy defeat of his opponent, whom he besieged and killed.

The struggle for power among Yūsuf's sons, their continual intrigues and boundless ambitions, characterized the governorate of al-Ḥasan, called al-Ṣam-ṣām, the last Kalbid amir of Sicily (431/1040-445/1053; the latter date is given variously in the Arab chronicles). Various local *kā'id*s [see *IBN AL-HAWWĀS* and *IBN AL-THUMNĀ*], however, had already begun to lay claim to power on the island and their struggles for supremacy hastened Norman intervention in Sicily.

Of the total period of Muslim rule in Sicily, the Kalbid era was one of the most prosperous. As their reign began when the bloodiest and most devastating military offensives could be considered over, some of the most far-sighted of the rulers of the Banū Abi 'l-Ḥusayn family, sustained by the prospect of

autonomy, promoted the marked development of western Sicily. Palermo and some other urban centres prospered once more, thanks to the new impetus given to municipal enterprises, to public works and to cultural matters. In the capital especially, the study of the traditional sciences had already been inaugurated in the preceding period, and some of the most enlightened Kalbid amirs, themselves often enthusiastic versifiers, encouraged an exceptional development of poetry, as may be seen from the few extant extracts of the vanished anthology compiled by Ibn al-Ḳaṭṭā' al-Ṣiḳillī [q.v.].

*Bibliography:* The historical, geographical and literary texts dealing with the Kalbids of Sicily have been collected by M. Amari in *Biblioteca arabo-sicula*, Leipzig 1857, appendix, Leipzig 1875 (Italian tr., i, Turin-Rome 1880; ii, 1881; appendix 1889); the historical data on this family have been studied by this same historian in *Storia dei Musulmani di Sicilia*<sup>2</sup>, ed. C. A. Nallino, Catania 1933-39.

Some interesting information on the relationship between the Kalbids and the Fātimid *imāms* of Ifriḳiya can be found in Abū 'Alī Maṣṣūr al-'Azīzī al-Djāwḍharī, *Sirat al-ustādḥ Djāwḍhar*, ed. Muḥ. Kāmil Ḥusayn and Muḥ. 'Abd al-Hādī Ṣḥā'ira, Cairo 1954 (Fr. tr. by M. Canard, Algiers 1958); certain texts relating to these relationships have been translated into Italian by U. Rizzitano in *RSO*, xxxii (1957), 546-55; cf. also U. Rizzitano, *Gli Arabi in Italia, in L'Occidente e l'Islam nell'Alto Medioevo*, Spoleto 1965, i, 93-114; idem, *Un compendio dell'Antologia di poeti arabo-siciliani intitolata "ad-Durrah al-ḥaṣīrah min šu'arā' al-Ḡazīrah" di Ibn al-Qaffā'* "il Siciliano", in *Atti del Acc. Naz. Lincei*, 8th series, vol. viii, Rome 1958, 335-78. In the *Kitāb a'māl al-a'lām* of Lisān al-Dīn b. al-Ḳhaṭīb, one chapter is devoted to the Banū Abi 'l-Ḥusayn family; cf. the edition by Aḥmad Muḥṭār al-'Abbādī and Muḥ. Ibrāhīm al-Kittānī, Casablanca 1964, 122-36 (Sp. tr. by R. Castrillo Marquez, Madrid 1958). (U. RIZZITANO)

**KAL'E** [see **KAL'A**].

**KAL'E-I SEFID**, a fortress in Fārs, in 30° 10' N. Lat. and 51° 30' E. Long. (Greenwich). It is built on a mountain with a flat top, in the eastern part of the valley of Kohra, which falls steeply down on all sides. On its summit, which can only be reached by cliff-paths, lies an extensive well-wooded plateau watered by numerous springs. A strong garrison is necessary for its defence, as is noted in the *Fārsnāma*. Descriptions of the fortress and the country round it are given, among Oriental writers for example, by Ibn al-Balkhī in the *Fārsnāma* (the pertinent passage is copied by Mustawfī, *Nuṣḥat al-Ḳulūb*, 'Alī Yazdī and Mīrkhwānd (see *Bibl.*). Of descriptions by European travellers in the 19th century, that of Stolze deserves special mention; along with Andreas he explored the mountain and castle thoroughly. The statements of Kinneir, who visited **Kal'e-i Sefid** in 1810, are unreliable, according to Stolze.

The name of the fortress is given in the Persian geographers and historians as **Kal'e-i Isfid** (Sefid, Sepid), the "white citadel"; **Kal'e-i Ispid-diz** (the "white fortress") is also found; **Kal'e-i Sefid** is the only form in use at the present day. Translated into Arabic the name is given in Ibn al-Aṭṭār (ed. Tornberg), xi, 46 as al-Ḳal'a al-Bayḍā'. The name "white citadel", which is found elsewhere as a name for a castle in areas where Arabic and Persian are spoken (e.g., in al-Ḥīra, al-Madā'in, in the oasis of Ruḥba east of Ḥawrān, and in the region of Ḳayrawān, in Afghanistan, etc.; for Bireḍjīk cf. above i, 1233), may

very probably originate in the dazzling white colour of the building-stone used. The name Kal'e-i Gul u Gulāb (citadel of the rose and rose-water), borne by Kal'e-i Sefid in al-Bundārī (Houtsma, *Recueil*, ii, 183, 13) is remarkable.

Kal'e-i Sefid is the most noteworthy point on the mountain road which leads from Behbahān to Shīrāz and furnishes communication between Khuzistān and Fārs. It may be regarded as certain that a commanding place like this was very early fortified. The "Persian passes" through which Alexander the Great tried to enter the ancestral home of the Achaemenids and which were defended by the Satrap of Persis, Ariobarzanes, with his strong forces, have often been sought in the valley of Kal'e-i Sefid; e.g., by Vincent, Mützel, Droysen, Forbiger. Ritter (*Erdkunde*, ix, 138), in differing from these, considers Kal'e-i Sefid to be the stronghold of the Uxians and places the "Persian Gates" farther east. Ritter's view has been attacked particularly by Mützel in his edition of Curtius (Berlin 1841), p. 414 f. and by Stolze (*op. cit.*, 262 f.; see bibl.). That the region of Kal'e-i Sefid does not correspond to the situation of the "Persian Gates" of the historians of Alexander and that the latter should be located elsewhere has been fairly convincingly proved by Stolze, *op. cit.*

Kal'e-i Sefid is not mentioned by the Arab geographers of the Middle Ages. Like the adjoining town of Nawbandjān (Nawbandajdjan) it must have been allotted to the Persian province of Sābūr in the Caliphate period. From the 4th/10th century on we find cropping up in the Oriental sources a nomadic people named the Shūl, after whom the whole area, inhabited by them from the west of Shīrāz to the frontiers of Fārs and Khuzistān was called Shūlistān. There is definite evidence to show that Kal'e-i Sefid belonged to Shūlistān. On the Shūl and the land of Shūlistān cf. the references in Quatremère, *Hist. des Mongols*, 380 f. (see bibl.) and also Mustawfī, *Ta'rikh-i Guzida* (ed. Browne, GMS xiv), 538, 658, 660, 696, 726.

Kal'e-i Sefid is frequently mentioned by Persian poets and chroniclers. It is first found in Firdawsī's *Shāhnāma* (ed. Mohl, ii, 92, 245 f.); here the conquest of the stronghold is related as one of the noteworthy deeds of the hero Rustam. As the *Fārsnāma* (written about 500/1106) reports, the fortress of Kal'e-i Sefid had lain in ruins for many years until it was rebuilt by a certain Abū Naṣr from Tīr Murdān (a district of the province of Sabūr) during the turmoils of the last decades of Būyid rule, that is in the first half of the 5th/11th century. The mountain, difficult of access, served not infrequently in wartime as a secure hiding-place. For example in 534/1139 Buzāba, governor of Fārs, retired here before Karā Ṣonkor, atabeg of the Saljūq Sultan Mas'ūd; cf. the article BŪZ-ABEH. The Salghūrid Abū Bakr [g.v.], atabeg of Fārs from 623 to 658 (1226-1260) (on him see SALGHURIDS) transported his treasures to Kal'e-i Sefid and placed a garrison in the citadel in order to have a place of refuge here in case of a catastrophe. The last atabeg of Fārs of the Salghūrid dynasty, Saljūqshāh, met his death at the foot of Mount Kal'e-i Sefid in battle with one of Hūlāgū's generals in 663/1264; see J. v. Hammer, *Gesch. der Ilchāne*, Darmstadt 1842, i, 243 and cf. also Mustawfī, *Ta'rikh-i Guzida*, 509.

Although Hūlāgū issued an order to destroy all the fortresses in the lands conquered by him, an exception was made of Kal'e-i Sefid, as is expressly mentioned; cf. the passage in the *Ta'rikh-i Waṣṣāf*

in Quatremère, *op. cit.*, 382. The citadel could therefore continue to serve as a place of refuge, and was also on several occasions used as a state-prison for political opponents. Thus for example Mas'ūd Shāh of the Indjū dynasty, who ruled as governor of Fārs from 736/1335, imprisoned his brother Muḥammad in Kal'e-i Sefid [see INDJŪ]; when later Abū Ishāq, a younger brother of the Mas'ūd Shāh just mentioned, came into conflict with the Muẓaffarid Mubāriz al-Dīn and had to flee after the capture of his capital Shīrāz in 754/1353 he went to Kal'e-i Sefid (see Mirkhānd's account in Quatremère, *op. cit.*, 382; Mustawfī, *Ta'rikh-i Guzida*, 658, 15 f.). A few years later the sons of Mubāriz al-Dīn, Shāh Sulṭān and Shāh Shudjā', rebelled against their father, blinded him and imprisoned him in Kal'e-i Sefid in 759/1358; see Mustawfī, *Ta'rikh-i Guzida*, 681; Defrémery in *J.A.*, 1864, ii, 112. In 785/1383 Shāh Shudjā' had his son Sulṭān Shiblī sent to Kal'e-i Sefid as an alleged rebel (see Mustawfī, *op. cit.*, 724; Quatremère, *op. cit.*, 382; Defrémery, *op. cit.* (1845), i, 437).

Kal'e-i Sefid has attained special fame through its capture by Tīmūr. The latter on his second campaign in Fārs in 795/1393 passed by the road from Behbahān to Shīrāz, besieged this barrier fortress, considered impregnable, and stormed it on the third day. All the members of the Muẓaffarid dynasty were captured and put to death (cf. Sharaf al-Dīn 'Alī Yazdī, *Zafarnāma*, Calcutta 1887, i, 600 f.; Mustawfī, *op. cit.*, 751).

We read of the capture of Kal'e-i Sefid by Hamza-Bey several centuries later, in the reign of Shāh 'Abbās I; see Quatremère, *op. cit.*, 384. The Mamasani have now settled in a large part of what was once called Shūlistān; they are a robber tribe, who centre round Kal'e-i Sefid. On them see Layard in the *JR Geog. S.*, xv, 28; Ritter, *Erdkunde*, viii, 390. ix, 137; C. de Bode, *Travels in Luristan and Arabistan*, London 1845, i, 210, 219 f., 262 f. When the Mamasani in the latter part of the reign of Fath 'Alī Shāh (1797-1834) were in constant rebellion under a robber chief named Wallī Khān Bakash, an army of Ādharbaydjānī troops was sent against them, who besieged Kal'e-i Sefid and forced the stubborn defenders of the citadel to yield (cf. Curzon, *op. cit.*).

It should further be mentioned that below the fortress on the mountain there was at one time a second smaller castle, the name of which is variously given as Astak (*Fārsnāma*, 158, 17) or Nishnāk (Mustawfī, *Nuzha*, 132, 5; further variants of the name are given here in note 1).

The little village of Tell Espīd should not be confused with this; it lies northwest of Kal'e-i Sefid in the adjacent plain on a hill some 2400 feet high; cf. Wells in the *Proc. of the Roy. Geogr. Soc.*, 1883, v, 161 and Herzfeld, *op. cit.*, 85.

**KAL'Ē-I SULTĀNIYYE** [see CANAK-KAL'Ē BOĞHAZI].

**KALENDER** [see KALANDAR].

**KALENDEROGHLI MEHMED** (d. 1018/1609), leader of the *Djelāli* [q.v. in Supp.] rebels of Anatolia, was born in the village of Yassıvırān, in the *sandjak* of Ankara. He managed to obtain a *timār* in this *sandjak* and was promoted to *çavuş* when Lālā Mehmed Paşa [q.v.] was *beglerbegi* of Anatolia. As one of the "deserters" (*firārî*) who fled at the critical moment in the battle of Mezö-Keresztes ([q.v.], 1005/1596), he was deprived of his *timār*; when he appealed, his dismissal was confirmed and he was threatened with further punishment, whereupon he, like so many others who had been proscribed as "deserters", joined the *Djelāli* movement under Karayazdîl, then the virtual ruler of Anatolia. Karayazdîl died in 1010/1601, and was succeeded as leader by his brother Deli Hasan. In 1011/spring 1603, Deli Hasan came to terms with the government in Istanbul and crossed into Rümeli to serve as *beglerbegi* of Bosna, but Kalenderoghll, together with such other leaders as Karakuş Ahmed and Kara Sa'îd, stayed in Anatolia and maintained their resistance in the area of Ankara—Akşehir—Kütahya. He came to the fore as one of the officers of Tawil Khaill, who surprised the army of the vizier Naşûh Paşa near Bolvadin (1014/1605), so that when the sultan (Ahmed I) attempted to come to terms with the *Djelāli* leaders Kalenderoghll was appointed *beglerbegi* of Karāmān (and thus obtained the title of *pasha*). However, he did not assume the duties of this post but was granted Ankara as *arpalik* [q.v.]. His position became precarious with the death of Lālā Mehmed Paşa, who had been his protector, and the appointment of Murād Paşa ("Kuyudju" [q.v.], 1015/1606) as grand vizier. Moreover, the people of Ankara had refused to permit him to enter the city; he was obliged to leave one of his officers to deputize for him and to withdraw eastwards.

Meanwhile, Murād Paşa had marched against the rebels and summoned Kalenderoghll to join him in the campaign against *Djānpulātoghll* 'Alī Paşa at Aleppo. Suspecting a trap, Kalenderoghll disobeyed this order, thus revealing himself as a rebel. When Murād Paşa moved towards Aleppo, Kalenderoghll, at the head of a numerous host of *segbāns* [q.v.], moved westwards, occupying the Aegean coastlands and the Bursa district, so as to threaten Istanbul itself. He defeated the government forces sent against him and even laid siege to Bursa; he failed to take the city but fired the suburbs. Greatly disturbed by Murād Paşa's decisive defeat of *Djānpulātoghll* in 1016/1607, Kalenderoghll summoned all the *Djelālî* leaders to join him; nearly all obeyed, with the exception of Muslu Çavuş, who was operating around Silifke, and *Djānpulātoghll* himself, who was attempting to take refuge in Istanbul. Kalenderoghll's proposal to offer battle in the region of Mar'āsh - Aleppo was accepted, with a few dissenters. The army of over 70,000 *segbāns* was defeated in the *yayla* of Göksün [q.v.] by Murād Paşa's troops, composed entirely of *kapu kulları* and reliable tribal levies from south-east Anatolia and the Arab lands (22 Rabi' II 1017/5 August 1608). Kalenderoghll

and his companions fled, hoping to reach safety in Persia. Hotly pursued, he managed to take refuge with Shāh 'Abbās, but since he would not abandon his turbulent ways he was put to death.

**KALGHAY**, KALGHA, KAQHALGHA, a title best known as indicating the "deputy" or "their apparent" of the *khāns* of the Crimean *Khānate* [see KIRIM]. The term has been subjected to a variety of linguistic, sociological and political analyses, the most important of which are summarized here.

Linguistically, the title has been associated with the Tatar word *kalghay*, "he will remain" or "let him remain", on the basis of an anecdote given by Halim Girāy (*Gülün-i Khānān*, Istanbul 1287, 11 ff.). This popular etymology, followed by Hammer (*Geschichte der Chane der Krim* . . ., Vienna 1856, 39), Howorth (ii/1, 610) and Ahmed Djewdet (*Ta'rikk*, i, 73), is untenable. A Mongol origin (Pelliot, *İnalçık*) is unlikely, since the term is not encountered before 1475. For a full discussion of the problem, see Doerfer, iii, p. 499, and J. Matuz, *Qalga*, in *Turcica*, ii (1970), 101-29.

In a sociological or institutional sense, there were ample precedents for the office of *kalghay*. The *Khānate* of the Golden Horde and its successor state, the Crimean *Khānate*, like other stable governments, required a trusted official who could make decisions in the absence of the *khān*. The *kalghay*, as deputy and heir apparent, was invariably a brother or a son of the *khān* (M. de Peyssonel, *Traité sur le commerce de la Mer noire*, ii, Paris 1787, 252). As direct descendants of Çingiz-Khān [q.v.], the *khāns* of the Golden Horde and of the Crimea followed closely many Mongol or inner Asian traditions. In fact, the office of *kalghay* corresponds rather closely to the Mongol prince known as the *otigin-ajān* or "master of the hearth or the home yurt or patrimony". (cf. B. Vladimirtsov, *Le Régime social des Mongols*, Paris 1948, 67 and 126). According to Mongol tradition, the home yurt was entrusted to the care of the *khān*'s youngest son. It would appear significant that most *kalghays* were chosen from among the younger brothers of the *khān* until the end of the 10th/16th century, a time when Islamic-Ottoman practices became more influential in the Crimea (see GIRĀY and the accompanying genealogical table). İnalçık reports (*loc. cit.*) that slightly more than half of the *khāns* had previously served as *kalghay*, which emphasizes the role of deputy over that of their apparent. Clearly the Ottoman sultan (after 883/1478) and the tribal aristocracy could always impose their will, and often did, to disrupt an orderly succession and to weaken an able or over ambitious Girāy dynastic line. A convocation of the tribal dignitaries, termed a *kuriltay* [q.v.], also represented a weakened version of an inner Asian institution; the original *kuriltay*

apparently consisted only of family members of a ruling dynasty. In the Crimean *Khānate*, as in the Golden Horde, the privilege was extended to the tribal *mirzās* [q.v.], thus weakening the authority of the ruling family (cf. B. Grekov and A. Iakoubovski, *La Horde d'Or*, Paris 1939, 121-3).

In accordance with the inner Asian practice of conferring an *indjū* or fief upon princes and holders of high office, the *kalghay* maintained his seat of power in Aḳmesdjid, exercising from there complete administrative and judicial authority over the inner Crimean territory from Aḳmesdjid to the Ottoman enclave of Kefe (Kaffa). He held his own daily *diwān* [q.v.] and was attended by officials with ranks corresponding to those of the *khān's* *diwān* in Bāghčesarāy. It was in the composition of the court and in the powers given to *kadīs* that one may observe Islamic political influences among the Krlm Tātār elite. The *diwān* of the *kalghay* could recommend the death penalty for criminals within the *kalghay's* territory, but this penalty was subject to the review of the *khān* and his *mufti* and *kādi-ʿasker* [q.v.]. The appointment of a *nūr al-dīn* [q.v.], a second deputy and heir apparent to the *khān*, after 992/1584, may indicate an Ottoman influence. Henceforth the tendency was to appoint a brother of the *khān*, younger or older, to the rank of *kalghay*, while the position of *nūr al-dīn* was reserved for his favourite son. Thus, a certain preference was given to seniority of line, as in the case of the later Ottoman sultans, rather than seniority in a given Girāy family.

In the 12th/18th century the revenues of the *kalghay* included 10,000 piastres from the customs dues of Karasubzār [q.v.], 5,000 p. from the salt works of Kerč, 3,000 p. from the customs dues of Kaffa [q.v.] and a tribute of 2,500 p. from the honey tax of Moldavia and 1,000 p. of the same from Wallachia. He also received the capitation tax (*djizya*, [q.v.]) from certain Christian villages, a revenue which he often turned over to officers of the court, and he inherited the property of *mirzās* in his district who died without suitable heirs (Peyssonel, ii, 254).

The *kalghay* could be called upon by the *khān* to lead Tātār contingents to war (usually in support of the Ottoman army, at which time special subsidies were forthcoming) or on Tātār raids into the territories of Poland-Lithuania, Muscovy or Circassia; on these occasions the *kalghay* had full powers and received one tenth of all booty in keeping with Mongol custom. When the *khān* led the army, the *kalghay* often remained behind to guard the Crimea from Cossack or other attack. If he accompanied the *khān*, he was placed in command of the right wing of the army (Ewliyā Čelebi, *Seyāhāt-nāme*, x, 47-8). The *kalghay* generally could be expected to support the prerogatives of the dynasty against encroachment by the sultan or the *mirzās*.

In the sphere of foreign affairs, the *kalghay* could send his own envoys together with those of the *khān* and could negotiate independently of the *khān* under certain circumstances. A proportional amount of all tribute (*ḥsh*) payments from Muscovy, for example, had to be specifically allotted to the *kalghay*. (Note the lists of articles sent to the Crimea in H. Feyizhan and V. Velyaminov-Zernov, *Materiali po istorii Krimskago Khanstva*, St. Petersburg 1864, *passim*).

The palace of the *kalghay*, situated on high ground on the left bank of the Saigir river in Aḳmesdjid, was demolished after the Russian conquest of 1783. Close to the old town, the Russians built the new enclave of Simferopol, which became the seat of power for the Russian governor of the Crimea. The

office of *kalghay* typified the combination of inner Asian and Islamic institutions, a feature common to the institutions of the Turco-Tatar peoples of western Asia.

**KALHĀT** (22° 42' N., 59° 17' E.), the chief coastal settlement of the Banū Salīma and Mālik b. Fahm (Azd) tribes of south-eastern 'Umān, probably since pre-Islamic times. Their clans had also settled on the Persian side of the Straits of Hurmuz and, under the leadership of the *Djulandā* (b. Karkar), exercised a degree of control at the entrance to the Gulf from their fortresses at al-Dikdān and Huzv until evicted from the latter by 'Aḳud al-Dawla. The collapse of Buwayhid power and its replacement by that of the Saldjūqs, the demise of the Ibādī Imamate in 'Umān and Ḥaḳramawt and a shift of Indian Ocean trade to the Red Sea brought about a radical change in political groupings at the entrance to the Persian Gulf and saw the final decline of the old trading centres of Sirāf and Ṣuḥār. The merchants of Sirāf had already started to develop the island of *Qays* in Buwayhid times and it was their princes who gained control of the entrance to the Gulf at the beginning of the 6th/12th century, gradually bringing back part of the Indian Ocean trade to the Gulf.

At the same time the traditional relationship between the peoples of south-eastern 'Umān (who were mostly Ibādīs) and Hurmuz, then the local port for Kirmān, was activated. *Kalhāt* was fortified and became the new entrepôt of the "monsoon" trade, a role previously held by Ṣuḥār. In an effort to challenge the control of *Qays*, an alliance was made with the Salghūrids of Fārs; it was this that led to the capture of *Kalhāt* by the *Kh*ʿarazmīs some time between 611/1214-5 and 617/1220-1. A few years later Maḥmūd b. Aḥmad al-*kusī* (var. *kushī*, *kāshī*) of *Kalhāt* subjugated *Qays* and brought the whole of the coast as far as *Ḍufār* (Dhofar) under his rule; his expedition sent to reduce the peoples of interior 'Umān perished in the southern desert in 660/1261-2.

Although Maḥmūd made Hurmuz his capital, he never lost his attachment to *Kalhāt* and finally retired there; his descendants, however, became increasingly Persianized and estranged from the mainly Arab population of their second capital, repressing Ibādism, which was inimical to dynastic rule. Some time before the middle of the 8th/14th century *Kalhāt* was severely damaged by an earthquake and during the course of this century gave way to *Maskaṭ* (Muscat) as the "monsoon" trade centre on the 'Umān coast. Sacked by Albuquerque in 1508, it was never properly rebuilt by the Portuguese, who developed *Kurayāt* as their southernmost fortified settlement. In the second half of the 16th century, *Kalhāt's* trade was still worth a third of *Maskaṭ's* to the Portuguese factors, but by the end of their occupation in the mid-17th century, its demise appears to have been complete, replaced even as a local port by *Ṣūr*.

(J. C. WILKINSON)

**KĀLĪ** "carpet" [see **BISĀT**, in Suppl.].

**AL-KĀLĪ**, ABŪ 'ALĪ ISMĀ'IL B. AL-KĀSĪM B. 'AYDĪHŪN B. HĀRŪN B. 'ISĀ B. MUḤAMMAD B. SULAYMĀN/SALMĀN (*mawlā* of 'Abd al-Malik b. Marwān or of his son Muḥammad) **AL-BAGHDĀDĪ**, great Arab philologist (288/901-356/967). The genealogy and following data are vouched for by his autobiography, which was preserved by his pupil, al-Zubaydī (p. 204 f.). He was born in the year 28(8)/901 in Manāzḍjird [q.v.], to the north of Lake Van. In 303/915 he set out for Baghdād; after a longer stay in Mosul, he arrived there in 305/917, along with people from the frontier town of Kāllkalā (Erzerum), whose *nisba* he took in the hope of receiving particular favours in his studies as a man of the frontier. In Baghdād he studied *lugha* and *akḥbār* with the most renowned scholars of his time, such as Ibn Durayd, Ibn al-Anbārī, Niffawayh, Ibn al-Sarrādjī, al-Zaḍḍīdjī, al-Akḥfash al-Aṣḡar, al-Muṭarriz the *ghulam* of Ṭha'lab, and others; under the direction of Ibn Durustawayh he studied thoroughly the *kitāb* of Sibawayh in al-Mubarrad's interpretation; he read Ibn Kutayba's books with the author's son Abū Dja'far and the books of Yaḥyā al-Munaḍḍijīm also with the author's son Aḥmad etc.; he also devoted himself to the study of the *ḥadīth* under the guidance of well-known traditionists such as Abū Bakr 'Abd Allāh b. Abī Dāwūd al-Sijīstānī and 'Abd Allāh b. Muḥammad b. 'Abd al-'Azīz al-Baghawī; he read the *Qur'ān* with the *imām al-kurrā*, Ibn al-Mudjāhid. In 328/939 he left Baghdād, apparently on the invitation of prince al-Ḥakam, the son of 'Abd al-Raḥmān III, for al-Andalus, arriving in Cordoba on 27 Šha'bān 330/17 May 942. He died there, as al-Zubaydī adds, highly honoured, in Rabī' II 356/March-April 967; according to Ibn al-Faraḍī, i, 65 f., no. 221; \*Cairo 1373/1954, i, 84, no. 223, he died on Saturday 7 Djumādā I 356/20 April 967 (this precise information is probably from al-Kālī's son Dja'far, from whom Ibn al-Faraḍī transmits, see

Ibn Baṣḥkuwāl, 129, no. 189; \*Cairo 1374/1955, 127, no. 292).

Al-Kālī, frequently cited also as Abū 'Alī al-Bagh-dādī, became the key figure in the 'Irāqī tradition in the West. On his emigration to Cordoba, he managed to take with him a great part of his library. Books which he did not possess, or which had been mislaid on the way in Kayrawān, he either dictated from memory in his new home or made commentaries and critical observations on them, following the 'Irāqī tradition which he knew, and taking into account examples of other traditions (see Ibn Khayr, 395 *passim*; Zubaydī, 203; Kīfī, i, 205; Sellheim, 95 ff.). As a grammarian he paid no heed to the quarrels of the schools, such as the well-known one between the Baṣrans and the Kūfans since the days of the two rivals al-Mubarrad and Ṭha'lab, but relied on his own judgement, although he agreed on the whole with the *madḥhab* of the Baṣrans (cf. Kīfī, i, 205). For his pupils see the passages mentioned in Fulton, 9, according to al-Dabbī, Ibn Baṣḥkuwāl and Ibn al-Babbār.

Few of his numerous works remain (Kīfī, i, 206; Yāqūt, *Udabā'*, ii, 352; Fulton, 6 f.). The best known is his *K. al-Amālī*, which deals with every conceivable question of philology in so far as it concerns the 'arabiyya; cf. 'Umar al-Daḥḥāk in *MMIA*, xlv (1969), 515-37; the best edition is that of the Dār al-Kutub, Cairo 1344/1926; the third volume contains the *Dhawl al-Amālī wa 'l-Nawādir*, with Bakrī's *Tanbīh*; Bakrī's commentary on the whole work, with the title *Simt al-la'ālī fi ṣarḥ Amālī al-Kālī* was published by 'Abd al-'Azīz al-Maymanī (Memon) in three volumes with indexes, Cairo 1354/1936. Kālī's great dictionary, the *K. al-Bārī* 'fi 'l-lughā, was arranged according to a phonetic system very similar to the *K. al-Ayn* of al-Khaḥlī b. Aḥmad, and must have comprised about 4,500 folios: see *A facsimile of the manuscript of al-Kitāb al-Bārī* 'fi 'l-lughā by Ismā'īl ibn al-Kāsim al-Kālī, ed. with an introduction by A. S. Fulton, London 1933 (cf. Hāshim al-Ṭa'ān's thesis (M.A.), *al-Bārī li-Abī 'Alī al-Kālī*, Baghdād 1972 (?)); J. Kraemer in *Oriens*, vi (1953), 212 f.; S. Wild, *Das Kitāb al-'Ain und die arabische Lexikographie*, Wiesbaden 1965, 65 ff. For two Mss. of his *K. al-Maḥṣūr wa 'l-mamūdā*, see *Fihrist al-kutub al-'arabiyya*, Dār al-Kutub, ii, Cairo 1345/1926, 40; printed in Cairo 1392/1972. The *Kitāb al-Masā'il al-Shirāsiyya*, listed by Brockelmann, S I, 944, 16, apparently has nothing to do with al-Kālī. So too, the *K. al-Amḥāl* ascribed to him in the *Fihrist al-maḥḥūḍāt*, Dār al-Kutub, 1936-55, i, Cairo 1380/1961, 78, is in fact the *K. al-Amḥāl* of Hamza al-Iṣfahānī.

**KĀLĪ**, **KĀLĀʿĪ**, the name used by the Arabs for tin (or for an especially good quality of tin), which is sometimes also called *al-raṣāṣ al-kaʿlī* and *al-raṣāṣ al-abyaḍ*, that is, "kaʿlī lead" or "white lead" (see *LA*, s.v.; Dozy, *Supplément*, s.v.; Vullers, *Lex. pers.-lat.*, ii, 735; Quatremère, in *Journal des Savants*, 1846, 731). For the other names for tin in Arabic (*ḥayṣar* = κασσίτερος, etc.), see, for example, al-Dimashqī, *Cosmographie*, ed. Mehren, 54. The word probably comes from the Far East, whence the Arabs could have borrowed it directly, without the intermediary of modern Persian (although this is also possible) as al-Djāwālīkī believed (ed. Sachau, 125), considering the modern Persian *kalhā* to be the original. The correction *kalāhi* for *kalhā* proposed there is based on Ibn Saʿīd, quoted by G. Ferrand, *Relations de voyage . . .*, Paris 1913-4, 343. The word found in the Persian dialect of Māzandarān, *kaʿlī* (in Gilāni: *kaʿlib*; see Melgunof, in *ZDMG*, xxii, 198), must have come from Arabic, and thence to the Turkish *kalay* and the modern Greek καλάι. As a loan-word *Kalāʿī* travelled further still, into Portuguese (*calaim*, *calin* = tin from India; see Dozy and Engelmann, *Gloss. des mots espagnols et portugais dérivés de l'arabe*), Leiden 1869, 245; Yule and Burnell, *Hobson-Jobson*, 143). It has been thought that the region of Kalah [q.v.] in the Malacca peninsula, which was celebrated for its tin mines, gave rise to the word. The Arab geographers and lexicographers usually derive *kaʿlī* from al-Kalʿa (= Kalah; e.g., Yākūt, s.v.; al-Firūzābādī, *Kāmūs*, s.v.; cf. also Ḥamd Allāh Mustawfī, *Nuṣḥa*, ed. Le Strange, 203). The word is also—and certainly erroneously—connected with an (alleged) source of tin called al-Kalʿa in Ceylon (Yākūt, i, 21, iv, 162), in Spain (Yākūt, iv, 162; Ḥamd Allāh Mustawfī, 203) and in the Yemen (al-Firūzābādī, *op. cit.*).

The usual word for tin in present-day Malay appears to be *timah*. Also found with this meaning are *kaling*, *kaleng*—not *kelang* as Langlès, Quatremère, Dozy-Engelmann, Yule-Burnell and others write it—which, according to the dictionaries, means primarily tin-plate or tinned iron-plate (though the meaning tin may be an older one); cf. Wilkinson, *A Malay-Eng. Dict.*, Singapore, 1901, 497<sup>b</sup>; idem, *An abridged Malay-Eng. Dict.*, Singapore, 1919, and Klunkert, *Nieuw Maleisch-Nederl. Woordenboek*, Leiden 1916). It is clear that the Arab word *kaʿlī* does not derive from *Kalʿa* (= Kalah), but from this Malayan word. Quatremère firmly supports this etymology but Dozy-Engelmann and Yule-Burnell do not commit them-

selves. It is difficult to credit that the Malayan *kaling* is a corruption of *kaʿlī*. The possibility has also been considered that the name of the district of Kalah, from the Malayan *kaling*, means simply "land of tin"; this view was expressed as long ago as Langlès in his edition of the *Voyages of Sinbad the Sailor in Grammaire de la langue arabe* by Savary (Paris 1813, 499 = offprint, Paris 1814, 63). Yule and Burnell quote as an analogy the fact that the little state of Salangor (north of the city of Malacca) was formerly known as Nagri Kalang, "the land of tin". Furthermore, according to Wilkinson, *Malay-Eng. Dict.*, 526<sup>b</sup>, *Kelang*, *Klang* properly only the name of a district of Salangor and a small urban town ship within that district, is also often extended to include the whole state of Salangor. Perhaps the origin of *kaʿlī* is to be found in this *Kelang*.

*Kalʿī*, *kaʿlāʿī* is also used for a type of sword which is often mentioned, especially in early Arabic poetry (cf., for example, Aws b. Ḥadjār, ed. Geyer, 33; Ruʿba b. al-ʿAdjādī, ed. Ahlwardt, 49, l. 43; scholia to Ṭarafa, *Muʿallaqa* (apud Arnold, *Septem Moallakat*, Leipzig 1850, 61). On al-Ṭhaʿlībī, *Laṭāʾif*, 102, 130 (cited by Dozy, *Supplément*, ii, 396<sup>b</sup>), see Fleischer in *Sitz.-Ber. d. Sächs. Gesellsch. d. Wiss.*, (1886), 45. Cf. also Ibn Saʿīd, *Ṭabakāt*, i, 50). This kind of sword is generally considered to be of Indian origin (cf., e.g., al-Firūzābādī, *al-Kāmūs*, s.v.), and indeed Indian swords were famous from early times among the Arabs and were celebrated by the poets (cf. Schwarzlose, *Die Waffen der alten Araber*, Leipzig 1886, 127-8 and A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919, 88-9). As a more definite place of origin Arab geographers and lexicographers usually give al-Kalʿa, where the tin of the same name comes from (e.g., Yākūt, s.v.). Sometimes the Syro-Arab desert (the Bādiya), or the district of Hulwān in ʿIrāk (cf. *LA* and *Kāmūs*, s.v.) is given as the place of origin. The Yemen, which produced the finest swords after India, is sometimes given as the place where the *sayf kaʿlī* came from; as in the glossary of Ṭarafa's *Muʿallaqa* cited above. Jacob, *Alt-arab. Beduinen-leben* (Berlin 1897, 149) would like to opt for the Yemen, more specifically the "fortress" (*kaʿlā*) of Aden; in support of this hypothesis is the fact that a poem by ʿAlkama (ed. Socin) no. 3, speaks of the "pearls of Kalʿa" (*kaʿlāʿī*). Yet the derivations of the Arab word from an East Indian place called al-Kalʿa (= the Kalah of Malacca [q.v.]) seems more likely. The distinction between the two kinds of sword, *kaʿlī* and *kaʿlāʿī* (cf. Freytag, *Lex. Arab.-Lat.* s.v. *kaʿlā* and *kaʿlāʿī*), is in any case invalid (contra Schwarzlose, *op. cit.*, 130). (M. STRECK)

**KĀLĪF**, also **KĀYLĪF**, a town on the Amu-Daryā (al-Masʿūdī, viii, 64 calls the latter "Kālif River"), west-north-west of Tirmīdh. The main part of the town with the fortress *Ribāʿ Dhi-l-Karnayn* lay to the south of the river; there was a castle nearby. On the outskirts on the northern bank lay the fortress called *Ribāʿ Dhi 'l-Kifl* [see DHU 'L-KIFL]. In 1220 the Khwārizmshāh Muhammad II marched on the town to prevent the Mongols from crossing the Amu-Daryā. According to Mustawfī, *Nuṣḥat al-Kulūb*, 156 (translation 153), Kālif was famous in the 8th/14th century for its fruit and had some importance as trading-post on the road from Balkh to Naḥshab (Nasaf) [q.v.] in Sogd. The town still exists (Russian Kelif) but is now situated on the northern bank of the river only. The ford in the Amu-Daryā is still of importance on the route to Afghānistān.

**KĀLIKĀLĀ** [see ERZURUM].

**KALIKAT** [see Supplement].

**KALIKĀTĀ** [see CALCUTTA].

**KALĪLA WA-DIMNA**, title of an Indian mirror for princes, formed by the corruption of the Sanskrit names of the two principal characters, two jacks, Karaṭaka and Damanaka (in the old Syriac translation the forms are still Kalilag and Damnaḡ). It was translated from Sanskrit into Pahlavi and thence into Arabic, and became widely known in Muslim as well as Christian literatures.

1. The original work. The Indian original was composed by an unknown Viṣṇuīte Brahman, according to Hertel probably about the year 300 A.D. in Kaṣhmīr; the main argument for this, the transcription of denarius by *dināra* is, however, not conclusive, as the pronunciation of the *r*, as *i* is older than Hertel supposes (see also A. Berriedale Keith in *JRAS*, 1915, 505). It consisted of an introduction and five books, each of which bore the name *tantra*, i.e., "occasion of good sense". The book was intended to instruct princes in the laws of polity by means of animal-fables composed in perfect Sanskrit. The oldest descendant of the original work is the *Tantrākhyāyika*, rediscovered by J. Hertel (see *Tantrākhyāyika, die älteste Fassung des Pañcatantra*, tr. from the Sanskrit with intro. and notes by J. Hertel, 2 parts, Leipzig-Berlin 1909). A second recension of the original work is called the *Añcatantra*. J. G. L. Kosegarten published an uncritical mixed text (Bonn 1848); on this Th. Benfey based his translation, *Pantschatantra, fünf Bücher indischer Fabeln, Märchen und Erzählungen*, tr. from the Sanskrit with intro. and notes, 2 vols., Leipzig 1859. In the introduction to this work the history of the spread of Indian literary themes to Europe was first exhaustively investigated.

2. The Pahlavi translation. A rather early recension of the *Pañcatantra* was translated from Sanskrit into Pahlavi by order of the Sasanian king Khusraw Anūsharwān (531-579) by his physician Burzōe, whom he had sent to India for this purpose, and expanded by the addition of an appendix of fables from other Indian sources; of these the three first (chap. 11-13 in de Sacy) are taken from the twelfth book of the *Mahābhārata* (*ibid.*, chap. 138, 139, 111); the other five (de Sacy's chap. 14, 15, 18, 18 and the story of the king of the mice, see below, not given in de Sacy) have so far not been found in Indian literature, although there is no reason to doubt their Indian origin. Burzōe prefaced his translation with an autobiographical introduction which the vizier Buzurdjimihr, it appears, signed with his own name as an honour to the author (see *Burzōes Einleitung zu dem Buch Kalila wa-Dimna*, tr. and annot. by Th. Nöldeke, *Schriften der wissensch. Gesellsch. in Strassburg*, fasc. 12, Strasbourg 1912).

3. The old Syriac translation. Burzōe's Pahlavi translation itself is lost; but by about 570 A.D. it had already been translated by the Periodont Būd into Syriac. This translation only survives in one manuscript, which was formerly preserved in the monastery at Mārdīn, then in the library of the Patriarch of Mōṣul and afterwards came into the possession of Mgr. Graffin in Paris. From a defective copy of this, which Socin had brought with him, Bickell prepared the first edition (*Kalilag und Dam-*

*nag, alte syrische Übersetzung des indischen Fürstenspiegels*, text and Germ. tr. by G. Bickell, with an introduction by Th. Benfey, Leipzig 1876). F. Schulthess was later able to prepare a much more reliable text based on three new copies which Sachau had had prepared in Mōṣul (*Kalila und Dimna*, Syriac and German, Berlin 1911).

4. The Arabic translation. About two centuries later 'Abd Allāh b. al-Muḡaffa' [see *IBN AL-MUḠAFFA'*] translated Burzōe's Pahlavi version into Arabic. He wrote an original preface to his book, probably inserted in Burzōe's introduction the section on the uncertainty of religions, added after the first book of the *Pañcatantra* a chapter written by himself on Dimna's trial (chap. 6 in de Sacy), which by punishing the traitor satisfies the feeling of justice outraged by the immoral teachings of this book, and apparently also added the chapter "monk and guest" (no. 16 in de Sacy). Ibn al-Muḡaffa's edition was originally a stylistic work of art intended for literary connoisseurs; but because of the nature of its contents it soon became very popular and therefore much corrupted in transmission. Even the numerous quotations in Ibn Kutayba's *'Uyūn al-Aḡhbār* already no longer reproduce Ibn al-Muḡaffa's text word for word. The fairly numerous manuscripts of the work are all of late date. Sylvestre de Sacy's edition (*Calila et Dimna, ou Fables de Bidpai*, Paris 1816) is based on an inferior manuscript and is arbitrarily emended from other manuscripts (see Nöldeke, in the *Göttinger Gelehrte Anz.*, 1884, 676). In de Sacy's text, Ibn al-Muḡaffa's preface is preceded by a new preface by an otherwise unknown Bahnūd b. Saḡwān or 'Alī b. al-Šāh al-Fārisī, in which he gives an account of the history of the book in India, as well as a report said to have been written by Buzurdjimihr regarding Burzōe's mission to India with the commission to bring back the book; in several manuscripts this is followed by another story of Burzōe's being sent for a miraculous plant. Some manuscripts (see J. Derenbourg, *Directorium vitae humanae*, 323) add at the end two more fables, of the heron and the duck and of the dove, the fox and the heron from other, as yet unknown sources. This latter story is also inserted in the oldest Oriental reprint of de Sacy's edition, Bülāk 1249 (according to Chauvin, *op. cit.*, p. 13); from this it has passed into the more recent editions printed at Cairo, Mōṣul and Beirut, the list of which in Chauvin, p. 13 ff., according to Cheikho, p. 6, is not yet complete. Valuable contributions to the criticism of de Sacy's text from Italian manuscripts are given by I. Guidi, *Studi sul testo arabo del Libro di Calila e Dimna*, Rome 1873. The story of the king of the mice and his ministers, not given in de Sacy, which is shown by the Syriac text to belong to the Pahlavi work, was published by Nöldeke in text and translation in the *Abhandl. der Königl. Gesellsch. der Wissensch. zu Göttingen*, xxv/4 (1879). The complete material from 16 Paris manuscripts for the story of the ascetic and the broken jug was given by Zotenberg in the *JA* Ser. 8, vii (1886), 116-23.

While the numerous printed editions of the East (Bülāk 1249/1817; Cairo 1297/1835; Bayt al-dīn 1869; Mōṣul 1874, 1876; Beirut 1880, 1884) in the main reproduce the texts of the Sacy and Guide, A. N. Tabbara (*Kalila et Dimna, trad. arabe copiée d'après un ancien manuscrit trouvé à Damas*, avec notes, Beirut 1904) claimed to have discovered a new source for textual criticism; but his manuscript (of 1080/1675) is too modern to afford new material and his edition is, besides, bowdlerized. On the other hand I. Cheikho found in the Lebanon monastery of Dayr

al-Shīr a valuable manuscript of the year 749/1339, and made it accessible in an excellent edition: *La version arabe de Kalīlah et Dimnah d'après le plus ancien manuscrit arabe daté*, Beirut 1905 (many later eds.). A new edition by Khallī al-Yazīdī (ibid., 1908) was followed by that of Salīm Ibrāhīm Ṣādir and Shāhīn 'Aṭīya (ibid., 1910), intended for school use. The latest of note is that of T. Husayn and 'Abd al-Wahhāb 'Azzām (Cairo 1941), based on a Ms. from Aya Sofya dated 618/1221 and therefore earlier than that of Cheikho. The modern European translations from de Sacy's text are given by Hertel (*op. cit.*, 393); to these may be added M. Moreno, *La versione araba de Kalilah e Dimnah*, tr. into Italian, San Remo 1910 (see RSO, vi, 201), in his *Kalila et Dimna, fables de Bidpai* (Paris 1957); A. Miguel follows 'Azzām's edition with the addition of chapters from Marṣaff (4th ed., Cairo 1934) and Derenbourg's *Directorium*).

5. Arabic versifications. The translation by Ibn al-Muḳaffa' has been three times put into Arabic verse. The first version was made by his younger contemporary Abān al-Lāhīqī [q.v.]; see also A. E. Krymski, *Abān al-Lāhīqī, le Zindāq (environ 750-815), versificateur arabe des recueils des apologues indo-persans. Essai sur sa vie et ses écrits, tiré de l'unique manuscrit de Souli. . .*, Bibl. Khéd. N<sup>o</sup>. 594, et d'autres sources primitives. Appendices: a. Barlaam et Joasaph, essai littéraire-historique; b. Texte arabe intact d'al-Awrāq par Souli, éd. en collaboration avec Mirza Abdoullah Ghaffarow (also in Russian with Russian title) Moscow 1913; on the manuscript cf. Horovitz in the *Mitt. des Seminars für Orient. Sprachen*, Westas. Stud., x, 35. This version is lost; with the help of it, but on the basis of the text of Ibn al-Muḳaffa', about the year 1100, Ibn al-Habbāriya [q.v.] composed in ten days a poetic version in elegant and flowing language entitled: *Natā'idī al-Fiṭna fī Naẓm Kalīla wa-Dimna*, lith. Bombay 1317 (see Houtsma in *Oriental Stud. Th. Nöldeke. . . gewidmet*, i, 91-6). A third versification of the book, entitled *Durr al-hikam fī amthāl al-husūd wa'l-'adajam* was completed by 'Abd al-Mu'min b. al-Husayn al-Ṣaghānī after 80 days' work on 20 Djumādā 640/15 Nov. 1242). It exists only in a manuscript in Vienna (see Flügel, *Die arab., pers. und türk. Hss. der . . . Hofbibliothek zu Wien*, i, 469, no. 480).

6. The later Syriac translation. In the tenth or eleventh century a Syriac cleric translated the work from Ibn al-Muḳaffa's text again into the then already dead language of his church; he endeavoured to give the book a Christian tinge and therefore amplified the verses of the Indian original, already much distorted in the Pahlavi translation, into long and weary moral discourses. He also made a series of mistakes in the translation. But as the text he used was much nearer the original than the most of our manuscripts, this translation is, in spite of its defects, of considerable value for textual criticism; it is edited by W. Wright, *The book of Kalilah and Dimnah transl. from Arabic into Syriac*, London 1884. In contrast to the naturalism of the original, Keith-Falconer, the English translator of this version (Cambridge 1885) is even more prudish than the latter itself; on text and translation see Nöldeke in the *Göttinger Gelehrte Anz.*, 1884, 673 ff., 1885, 753 ff.

7. Persian prose and verse translations. According to Firdawsī in the *Shāhnāma* (see de Sacy in *Not. et Extr. X* (1818), i, 140 ff.), Ibn al-Muḳaffa's book was translated into Persian under the Sāmānid Naṣr b. Ahmad (302-31/914-43) by order of the vizier Bal'fami [q.v.]; but it appears that this translation was never completed. By order of the same ruler the

poet Rūdhakī (d. 304/916) put the book into Persian verse of which, however, only 16 verses have survived in quotations in Asadī's *Lughat-i Furs*, ed. Horn, p. 18 sqq.

Ibn al-Muḳaffa's work was translated into Persian prose probably after the year 539/1144 (see Rieu, *Cat. of the Pers. MSS. in the Brit. Mus.*, 745-6) by Niẓām al-Dīn Abu 'l-Ma'ālī Naṣr Allāh b. Muḥammad b. 'Abd al-Hamīd, who dedicated his work to Bahrām Shāh of Ghazna [q.v.]. Naṣr Allāh in a new preface announces his intention of reproducing the work completely, including the aphorisms which seemed to him particularly valuable, with all the rhetorical adornment of artificial prose; he gives only Burzōe's introduction in ordinary prose, as an artificial style does not suit its matter. The work was lithographed in Tehran in 1282/1864 (this disposes of Chauvin's doubts, p. 46/7), 1304 and 1305; cf. de Sacy in *Not. et Extr. X*, i, 96 ff.; E. G. Browne, *A literary history of Persia*, ii, London 1906, 349.

A metrical version of the book was composed for Sulṭān 'Izz al-Dīn Kaykā'ūs (641-62/1244-63) by Aḥmad b. Maḥmūd al-Tūsī Kānī'ī, a contemporary of Djalāl al-Dīn Rūmī at Konya, whither he had fled before the Mongols from his native city of Tūs; it was probably based on Naṣr Allāh's translation, which, however, he nowhere mentions (see Rieu, *Cat. of the Pers. MSS. in the Brit. Mus.*, 582 ff.; E. G. Browne, *A history of Pers. literature under Tartar dominion*, Cambridge 1920, 111).

This work was, however, put in the shade completely by the revision of Naṣr Allāh's translation done by Husayn Wā'iz Kāshifī (d. 910/1504) [see KĀSHIFĪ], the court-preacher of Husayn Bayqarā of Herāt [see HUSAYN MĪRZĀ]. In honour of Husayn's minister Aḥmad Suhaylī he called his work *Anwār-i Suhaylī*. He professed to be making the rhetorical artificial prose of Naṣr Allāh easier to understand by giving it a new version but in reality he created an even more florid and verbose concoction, "full of absurd exaggerations, recondite words, vain epithets, far-fetched comparisons and tasteless bombast and represents to perfection the worst style of those florid writers who flourished under the patronage of the Timurids" (E. G. Browne, *A literary history of Persia*, n. 352). But as this style remained predominant in Persia and particularly in India down to the threshold of the modern period, the work had an unparalleled success and was printed in England (first complete edition London 1836), where it was used as a text book for the examination of English officials in India in Persian and repeatedly printed and lithographed in India and Persia, translated into several Indian dialects, into Pushtu, Georgian and all the principal languages of Europe (see Chauvin, 26-43). Husayn replaced the four prefaces of Ibn al-Muḳaffa' by a new introduction from a so far unidentified source; de Sacy supposes (*Not. et Extr. X/i*, 59) that in it we have the older *Djāwidān Khirad*, which al-Turtūshī was still able to use for his *Sirāḡi al-Mulūk*, Būlāk 1289, 97, 185. The Emperor of China, Humāyūnfāl, is persuaded to give up the idea of abdicating his throne by his vizier, who tells him how the Indian king Dabshalīm was directed by a dream to a cave in which an old man would give him a treasure. Of the latter Dabshalīm keeps only the testament of Hoṣhang, king of Persia, which contains 14 pieces of advice for rulers, and with these he goes to Ceylon where the Brahman Bidpai or Pilpai explains each of these precepts by stories which form the separate chapters of the book.

Dislike of the extravagant and luxurious style of

the *Anwār-i Suhaylī* induced the Emperor Akbar (1556-1605) to commission his vizier Abu 'l-Faḍl to prepare a new edition of the work. This bears the title '*Iyār-i Dānīsh*' and was completed in 996/1578. It retains the arrangement of its model but restores Ibn al-Muḳaffa's preface and Burzōe's introduction. The work itself is still unpublished but a Hindustānī translation by Ḥafīz-uddīn, entitled *Khīrād Afrōz*, was published by Th. Roebuck (Calcutta 1815) and by Eastwick (Hertford 1857), London 1867) on account of its elegant diction.

8. Turkish translations. Ibn al-Muḳaffa's work was twice translated into Eastern Turkī from Naṣr Allāh's translation; see the manuscripts in Dresden in Fleischer, *Cat. Codd. Mss. orient. Bibl. Regine Dresdensis* (Lipsiae 1831), 19, 136 and in Munich in Aumer, *Die pers. und türk. Hdss. der K. Hof- und Staatsbibliothek*, 54.

Naṣr Allāh's edition was translated into old Ottoman Turkish (not into Eastern Turkī, as Hertel, p. 407, says, relying on a somewhat misleading expression of Éthé's, *op. cit.*) by Mas'ūd for 'Umar Beg, prince of Aydın (d. 748/1347) (a Ms. in the Bodleian, Marsh. 180). This prose text was put into verse by an unknown author who dedicated his work to Sulṭān Murād I (761/1359-792/1389); only about half has survived in a Gotha manuscript (see Pertsch, *Verz. der türk. Handschr. d. Herz. Bibl.*, 168, 189). A modern Ottoman prose version, which must have been made before 955/1548, exists in the Bodleian Ms. Marsh. 61; cf. H. Éthé, *On some hitherto unknown Turkish versions of Kalilah and Dimnah in the Actes du 6<sup>e</sup> Congr. internat. des Orientalistes*, 2<sup>nd</sup> sect., i, 241 ff.

'Alī b. Šāliḥ, called 'Alī Wāsi' or 'Alī Čelebī, translated the *Anwār-i Suhaylī* into Ottoman rhymed prose and dedicated his work to Sulṭān Sulaymān I (1512-20) with the title *Humāyūn-nāma*; it has been several times printed in Būlāḳ and Istanbul (see Chauvin, p. 50). Among the different European translations of the *Humāyūn-nāma*, the best known is the French of Galland, published after his death by Gueulette (Paris 1724); it was reprinted many times and "continued" in 1778 by D. Cardonne (see Abdel-Halim, *Antoine Galland*, Paris 1964, 180-8, 254-9). It was translated into German, Dutch, Hungarian and Swedish, and into Malay by Gonggrijp (Batavia 1866) and the latter version inspired a Javanese translation by Kramaprawira, which was put into Javanese verse by an anonymous poet. The luxuriousness of its language, in which the *Humāyūn-nāma* surpassed even its Persian original, induced the *muftī* Yahyā Efendī and 'Uḥmānzāde, who died in 1139/1726 as *kādi* in Cairo, to prepare extracts from it (see Éthé, *op. cit.*, 242).

The *Anwār-i Suhaylī* was translated, apparently with the assistance of the *Humāyūn-nāma* by Faḍl Allāh b. 'Isā Tashkandī, at the instigation of Muḥammad Mūsā Bay Bāččā into modern Eastern Turkī prose (to be more accurate, into the language of Tashkant and Fargḥāna as the colophon says, or the language of Turkeṣtān and Fargḥāna as the title states). Muḥammad then had the book lithographed by the calligrapher Mirzā Ḥāshim Khojandī, according to the colophon in 1306/1888; according to the title, the book was published in 1893.

Ibn al-Muḳaffa's book was translated from the Arabic into Kaḏan Turkī by 'Abd al-'Allām Fayz Khān Oghlu and printed at Kaḏan in 1889 (University Press, *Orient. Bibliographie*, iii, 1421), in the same year at Wjatschakof (*ibid.*, iv, no. 3935) and in 1892 at Čirkova (*ibid.*, vi, 167, no. 3166). The introduction,

however, was borrowed from the *Anwār-i Suhaylī*.

9. The Mongol translation. The Mongol translation which Malik Ifṭīkhār al-Dīn Muḥammad b. Abī Naṣr, a descendant of Muḥammad Bakrī, prepared in Kaḏwin has not survived (see Hamd Allāh Mustawfī, *Ta'riḫ-i Guzīda*, ed. Browne, Gibb Mem. xiv, 844-5, tr. 233; Browne, *A history of Persian literature under Tartar dominion*, 93, and correctly stated as early as Hammer-Purgstall in the *JA*, 3rd Ser., i, 580). This statement is confused in Ḥādīdī Khālifa, v, 239, who ascribes a translation into Turkish (*luḡat al-Turk*) to the ancestor Muḥammad Bakrī (see de Sacy, *Not. et Extr.* X, 175; Éthé, *op. cit.*, 243, does not take notice of von Hammer's correct statement). As Flügel wrongly translates in *linguam Tatarorum*, Hertel (p. 414) wrongly identifies this reported Tatar translation with the above mentioned Kaḏan Turkī (so-called Tatar) translation quoted in Chauvin, 78, n.

10. The Ethiopic translation. An Ethiopic version, which was certainly based on an Egyptian text of the Arabic of Ibn al-Muḳaffa', is also lost: it is mentioned in a work composed in 1582 (see Wright, *Cat. of the Ethiop. MSS. in the Brit. Mus.*, 816; see also Nöldeke, *Gött. Gelehrte Anz.* 1884, 676, n. 5).

11. The Hebrew and older European translations. At the beginning of the twelfth century a certain Rabbi Jō'el translated Ibn al-Muḳaffa's work into Hebrew (see S. de Sacy, *Notes et Extraits*, ix (1813), 397-466) from a valuable manuscript which, however, already contained the false story of Burzōe's mission and the two not genuine fables at the end of the heron and the duck and of the fox, dove and heron. From the unique manuscript, exceedingly corrupt in the beginning, J. Derenbourg published his translation along with that of Jacob b. Eleazar of the 13th century (*Deux versions hébraïques du Livre de Kalilah et Dimnah in the Bibl. de l'École des Hautes Études*, fasc. 49, Paris 1881). Jacob's version while based on a similar text to that of Jō'el is, however, very free, composed in elegant rhymed prose and full of biblical locutions. The version of Rabbi Jō'el was then translated into Latin by the baptised Jew John of Capua for Cardinal Ursinus between 1263 and 1278 with the title *Directorium vitae humanae* (cf. Johannes de Capua, *Directorium vitae humanae*, publ. and annot. by J. Derenbourg in the *Bibl. de l'École des Hautes Études*, fasc. 72, Paris 1887). With the exception of an old Spanish version, which reproduces the same text as Rabbi Jō'el much more faithfully than John of Capua does (see Clifford G. Allen, *L'ancienne version espagnole de Kalila et Digna, texte des mss. de l'Escorial, précédé d'un avant-propos et suivi d'un glossaire*, thesis, Paris-Macon 1906), all later translations into Western European languages, with the exception of quite modern ones, are based on the Latin text of John of Capua (see Chauvin, 59-72; Hertel, 366-400). Most noteworthy are the Italian versions by Firenzuola (*Discorsi degli animali ragionanti tra loro*, Florence 1548) and Deni (*La filosofia morale del Doni*, Venice 1552), and the French adaptations by G. Pottier (*Plaisants et factieux discours sur les animaux*, Lyons 1566) and P. de la Rivey (*Deux livres de philosophie fabuleuse*, Lyons 1579). In 1664 G. Gaulmier published a translation from the Arabic text entitled *Liures des lumières* . . ., attributing its elaborations to "David Sahod d'Ispahan". A version of a Greek translation (see below) appeared in 1666, prepared by P. Poussine. The last two works inspired La Fontaine (for the influence of *Kalila wa-Dimna* on the *Roman de Renart* and

especially on La Fontaine, see M. F. Ben Ghazi, 'Abd Allāh ibn al-Muqaffa', unpublished thesis, Paris 1957, ii, 153-82).

12. The Greek translation. Towards the end of the 11th century, Symeon son of Seth translated Ibn al-Muqaffa's work fairly freely into Greek from a manuscript which was still free from later additions but contained the chapter on the king of the mice and his ministers. He called the book Στεφανίτης καὶ Ἰγγυλάτης, because he recognised in *Kalīla* the Arabic *ikhil* and in *Dimna* the Arabic word for "trace". See Στεφανίτης καὶ Ἰγγυλάτης, *Quattro recensioni della versione greca del Kitāb Kalilah wa-Dimna*, pubbl. da Vittorio Puntoni, *Pubblicazioni della Soc. Asiat. Ital.*, ii, (1889). This version was in turn translated into Latin and German as well as into several Slavonic languages.

13. The Persian translation of the *Hitōpadēsha*. The later Sanskrit version of the *Pañcatantra*, the *Hitōpadēsha*, was translated very freely into Persian, probably in the reign of Akbar, by a certain Tādj al-Dīn, under the title *Mufarrīh al-kulūb* (see de Sacy, *L'électuaire des coeurs, ou traduction persane du livre indien intitulé Hitoupadésa par Taadj-eddin, ms. persan de la Bibl. du Roi, N° 380* in the *Not. et Extr. X*, i, 226-64). This work was then translated by the highly esteemed Hindūstānī author Mir Bahādūr 'Alī Ḥusaynī in 1217/1802 into his mother tongue (see Garcin de Tassy, *Hist. de la Litt. hindouie ou hindoustanie*, i, 699). A year later the latter was edited by Gilchrist as *Ukhlaqi Hindee or Indian Ethics, transl. from the Version of the celebrated Hitopao'es or Salutory Counsel* by Meer Buhadoor Ulee, . . . under the superintendence of John Gilchrist, Calcutta 1803; cf. J. Hertel, *Die Aḥlāq-ē Hindī und ihre Quellen in the Zeitschr. d. Deutsch. Morg. Gesellsch.*, lxxii, 65-86, lxxiv, 95-117, lxxv, 129-200.

14. The older Malay translation. On a mixture of Ibn al-Muqaffa's work and a Tamil text of the *Pañcatantra* is based the Malay version *Hikayat Kalīla dan Damīna*, which was first brought to notice by Wernrdly in his *Maleische Sprachkunst*, Amsterdam 1736, and was published in 1876 by Gonggrijp at Leiden (2nd ed. 1892; cf. J. J. Brandes in the *Festbundel aan Professor M. J. de Goeje*, Leiden 1891, p. 77 ff.). This work was next translated into Javanese (Batavia 1878) and Madurese (*ibid.*, 1879).

15. Imitations of *Kalīla wa-Dimna*. Setting aside the fables included in the *roor Nights*, Ibn al-Muqaffa's work has been three times imitated in Islamic literatures. Ibn al-Habbārīya (see above) followed up his versification with the *Kit. al-Sādīh wa'l-Bāghīm* (printed in Cairo 1294). While this was only an imitation of the beast-fable, Muḥammad b. 'Abd Allāh b. Zafar al-Ṣakallī (d. 565/1169 or 568/1172) in his *Sulwān al-Muḥāḍā*, which he first composed in 545/1150 and dedicated in 554/1159 in a new edition to the *kā'id* of Sicily, Abū 'Abd Allāh Muḥammad al-Kuraḥī, intended to produce a mirror for princes, like the *Kalīla wa-Dimna*: in addition to beast-fables the book also contains historical anecdotes. It was lithographed at Cairo 1278, printed Tunis 1279, Beirut 1300; translated into Turkish by Kara Kḥalīlzāde (d. 1168/1754) and printed in Istanbul 1285; translated into Italian by M. Amari, *Solwan al-mota ossiano Conforti politici di Ibn Zafer, arabo siciliano del XII secolo*, Florence 1851, 1882 (Eng. tr. London 1852).

Another mirror for princes in which historic anecdotes are mingled with beast-fables for the edification of the reader, was composed about the end of the 4th/10th century by the prince of Ṭabaristān, Is-pahbadh Marzubān, in the Persian dialect of his

land. This work itself has not survived, but in the 6th/12th and 7th/13th century it was twice translated into classical Persian. This was first done at the court of the Saljūq of Asia Minor, Sulaymānshāh by his vizier Muḥammad b. Ghāzī of Malatya; his work, entitled *Rawḍat al-Uḫūl*, exists in two manuscripts in Leiden and Paris. The *Marzubānnāma* of Sa'd al-Dīn-i Warāwīnī, composed between 607/1210 and 622/1225, enjoyed greater popularity. It has been edited by Mīrzā Muḥammad (Gibb Mem. Ser., vol. viii).

Warāwīnī's version was translated by an unknown author into Ottoman Turkish (a copy of 848/1444 in Berlin; see Pertsch, *Verz. der Türk. Hdss.*, no. 444); this Turkish version was again translated anonymously into Arabic (Ms. Berlin, see Ahlwardt, *Verz.*, no. 8472). A second Arabic translation, which according to the Gotha Ms. (see Pertsch, *Die Arab. Hdss. der Herz. Bibl.*, no. 2692), is also based on the Turkish, was made by Ibn 'Arabshāh [q.v.]; there is another Ms. in Paris (de Slane, *Catal.*, no. 3524) and it was lithographed in Cairo in 1278. The same author then rewrote his work in artificial prose in his *Fākihāt al-Khulafā' wa-Mufāḥharat al-Zurafā'*, and added several new stories.

The same recension, which had been translated into Ottoman Turkish and which is distinguished from Warāwīnī's vulgate as well as from the *Rawḍat al-Uḫūl* by the tenth (concluding) chapter *dar bayān-i ziyādat-i 'umr wa-dawlat wa-zindagānī kardān bā dōst udushman*, was translated into Kazan Sulaymān Bek, son of Muḥammad Bek, and printed at Kazan in 1864 under the title *Kitāb Destūri Shāhī fī hikāyāti Dū-dishāhi*.

16. *Kalīla wa-Dimna* in Muslim art. *Kalīla wa-Dimna* was one of those books which inspired the Muslim artists of the pre- and post-Mongol Iranian schools as much as those of Baghdād. A description of the miniatures illustrating a considerable number of the manuscripts would require a monograph and is outside the range of this article. Reference should be made to K. A. Creswell, *A bibliography of painting in Islam*, Cairo 1953, and a few basic works: E. R. Martin, *The miniature painting and painters of Persia, India and Turkey from the VIIIth to the XVIIth C.*, London 1912; A. B. Sakisian, *La miniature persane du XX\* s.*, Paris 1929; I. Stchoukine, *La peinture indienne. . . au Musée du Louvre*, Paris 1929; B. Gray, *Fourteenth century illustrations of Kalilah and Dimnah*, in *Ars Islamica*, vii (1940), 134-40; Blochet, *Les enluminures des mss. orientaux. . . de la B.N.*, Paris 1929; M. S. Diwand, *A handbook of Mohammedan decorative arts*, New York 1958; Z. Ḥasan, *al-Taṣwīr fī l-Islām*, Cairo 1936; Kühnel, *A Bidpai Ms. of 1343-4 in Cairo*, in *Am. Inst. Iranian Art and Arch.*, v (1937); Talbot-Rice, *The Paris exhibition of Iranian art*, in *Ars Islamica*, v (1938), 282-91; M. Muhriz, *Rusūm Kalīla wa-Dimna*, unpublished thesis, Cairo 1946.

**KALĪM ABŪ ṬĀLIB**, Persian poet, was born according to contemporary evidence, in Hamadān. His life, until he went to India, was spent chiefly in Kāshān, and therefore he is often called *Kāshānī*. After receiving his education in Shīrāz during his early youth, he visited India in Dījahāngīr's reign, but returned to Persia in 1028/1618-9. Two years later, however, he migrated permanently to India. On his arrival, he sought his fortune in various

provinces, including Deccan, where he attached himself to Mir Djuṃla. Following Shāhḍjahān's accession, Kalīm entered the imperial court, and became poet laureate to the emperor. He was commissioned to write a verse account of Shāhḍjahān's reign on the model of Firdawsi's *Shāh-nāma*. He died in Kaṣhmīr in 1061/1651, and was buried there.

Kalīm's poetic output is said to comprise approximately 24,000 couplets. He tried his hand at almost every traditional form, but his claim to renown rests chiefly upon his *ghazals*, which are characterized by a subtlety of themes. His consistent use of the artifice known as *mithāliyya* (giving a statement in one line of the couplet and equating it with an appropriate illustration in the other) seems to have contributed to its popularity as an accepted poetic convention.

*Bibliography: Diwān*; 'Abd al-Ḥamīd Lāhorī, *Bādshāh-nāma*, B.M. Ms. Add. 6556; Muḥammad Ṣāliḥ Kanbū, *Shāhḍjahān-nāma*, iii, Calcutta 1939; Muḥammad Amīn, *Bādshāh-nāma*, B.M. **KALĪM ALLĀH** [see MŪSĀ].

**KALĪM ALLĀH AL-DJAHĀNĀBĀDĪ**, b. NŪR ALLĀH b. AḤMAD AL-Mī'mār (mason/architect), AL-ṢIDDĪQĪ, one of the leading Čiṣhtī saints of his time, who was responsible for the revival of this order in the Indo-Pakistan sub-continent when Muslim society was in a state of utter disorder. He was born at Shāhḍjahānābād (Delhi), whence his *nisba* al-Djahānābādī, on 24 Djuṃmādā II 1060/24 June 1650, eight years before Awrangzīb's accession to the throne. His ancestors, builders and masons by profession, originally hailed from Khodjand [q.v.]. His father and grandfather both played leading roles in the building of the famous Red Fort and the congregational mosque of imperial Delhi. Many of the inscriptions, mostly verses from the Ḳur'ān and the ninety-nine names of Allāh (*al-asmā' al-ḥusnā* [q.v.]), which decorate the mosque were made by his father, the *ustādh* Nur Allāh. He acquired his early education from local scholars, including Abu 'l-Riḍā Muḥammad, uncle of Shāh Walī Allāh al-Dihlawī [q.v.]. Later he left for the Hīdžāz to make the *Ḥadīdī* and *Ziyāra* and stayed there for a long time. He contracted his *bay'a* in the Čiṣhtī order with Yahyā b. Maḥmūd al-Gudjarātī (d. 1101/1689), who had migrated to Medina and settled there. During his stay in the Hīdžāz he was initiated into the Naḳshbandī and Kādīrī orders by Mir Muḥtaram and ShayḲh Muḥammad Ḡhiyāth (cf. *Nuṣḥat al-Khawāfir*, vi, 240-1). On his return to Delhi he stayed in a mosque situated between the Red Fort and the Džāmi' Masḡid in the quarter known as the Khānim kā Bāzār. He established a *madrasa* there which attracted a large number of students from far and wide who enjoyed free board and lodging. No details of this *madrasa* are available. The Sūfī poet Mirzā Maḥzar Džān-i Džānānī once saw him teaching the *Ṣaḥīḥ* of al-BuḲhārī to students in this *madrasa*, which probably formed part of the mosque in which he stayed. Ac-

ording to Mirzā Muḥammad AḲhtar Gūrgānī (*Tadhkira-i Awliyā'-i Hind wa-Pākistān*, Lahore 1954 (?), ii, 272), the emperor Awrangzīb later ordered the construction of a *khānkāh* for him, a complex of buildings comprising 'ibādat-khāna, *madjlis-khāna*, *langar-khāna* and private quarters. According to the same author the emperor Muḥammad Mu'azzam Bahādūr Shāh I [q.v.] became his disciple in his fourth regnal year (1123/1711), while engaged in an expedition against the rebellious Sikhs under Banda Bay-rāgī. Kalīm Allāh led a life of austerity, depending mainly on the *fulūḥāt* (offerings) received from devotees and disciples. Learning of his poverty, FaruḲhsiyar [q.v.], during his short but eventful reign, offered him financial assistance but he refused to accept it, perhaps fearing persecution at the hands of the *amīr al-umarā'* Husayn 'Alī Khān, one of the Sayyid king-makers known to Indian history.

As a rule he discouraged his disciples from coming close to the rulers and kings and even exhorted them not to approach or visit them. He also did not favour the *samā'*, as was in vogue in his days, although he himself enjoyed it. In one of his letters (no. 110) he vehemently condemns the immature or sham Šūfis whom he describes as "*mulḥids* who have given up the *sharī'a*". As against Aḥmad Sirhindī [q.v.], he favoured keeping good relations with the non-Muslims so that they might be impressed with the teachings of Islam. Similarly he did not shun the common people but rather liked their company. He discouraged the indiscriminate discussion of the knotty problem of *waḥdat al-wudjūd*. All his life he struggled for the glory and spread of Islam but like Shāh Walī Allāh al-Dihlawī, his successor in the field, his efforts met with little success.

He died on 24 Rabī' I 1142/17 Oct. 1729 at an advanced age at Delhi and was buried in the compound of his own *khānkāh*, which also served as his residence. The year of his death has been variously given as 1140/1727, 1141/1728 (cf. *Nuṣḥat al-Khawāfir*, vi, 241), 1142/1729 (appendix to *Sawā' al-Sabīl*, 139) and 1143/1730 as given by Ḡhulām 'Alī Āzād Bilgrāmī (cf. *Ma'āthir al-Kirām*, i, Haydarābād 1910, 42). The year 1142/1729 has been adopted as the most reliable one, as many authorities agree thereon. After the mutiny of 1857 the entire quarter wherein stood his *khānkāh* was pulled down by the British but his grave was spared. It had remained in a state of neglect and disrepair for some decades when Khwādījā Ḡhulām Farīd, spiritual guide of the ruler of Bahāwalpūr [q.v.], contributed a large sum for its reconstruction. It was later repaired and renovated by one of his descendants, who set up a beautifully carved stone railing around his grave and paved the tomb floor with marble flags. The tomb still exists and is the lonely structure standing between the Red Fort and the Džāmi' Masḡid. An 'urs is held every year at his tomb on the occasion of the anniversary of his death. It was regularly attended by the last Moghul emperor of Delhi, Bahādūr Shāh "Zafar" [q.v.], and other princes of the royal family.

His leading *khālifa* was Niẓām al-Dīn Awrangābādī to whom he addressed a number of letters on the problems of *taṣawwuf*. He left three sons and three daughters. His sons, however, were all minors at the time of his death.

He is credited with having written more than 20 books including: (1) *Sawā' al-Sabīl* (ed. Delhi 1343/1925), original in Arabic with Urdu tr., on various mystic problems; (2) *Irshādāt-i Kalīmī* (ed. Delhi 1346/1927), a selection of letters addressed to his principal *khālifa* Niẓām al-Dīn Awrangābādī, with

Urdu translation; (3) *Kashkūl* (in Persian, Delhi n.d.), described as a *poi-pourri* of *taṣawwuf*, composed in 1101/1690, when he was nearly 41 years of age; (4) *Murākka'* (in Persian with Urdu tr., Delhi n.d.), comprising what the Čiṣṭīs recite daily by way of *dhikr*, regarded as a supplement to No. 3; (5) *Mak-tūbāt* (Delhi n.d.), 132 in number, addressed to his principal disciples, outstanding among whom was Ni-zām al-Dīn Awrangābādī, interspersed with personal and private affairs; (6) *Tilka 'aṣḥarat al-Kāmila*, in Arabic (ed. Delhi with Urdu tr., n.d.), discusses ten problems of *taṣawwuf* which he claims to have solved while in *i'itihāf* [q.v.] during Ramaḍān; (7) *Mā lū-budda fi 'l-taṣawwuf*, (ed. Delhi n.d., in Arabic with Urdu tr.), deals with the aims and objects of *sulūk* and *taṣawwuf*; (8) Keeping up the tradition of his family he wrote a treatise on astrology styled *Risāla Tashrīḥ al-Aflāk-i 'Amilī muḥaṣṣhā bi'l-fārisiyya* (Ms. in the Naḍhīriyya Public Library, Delhi). He also wrote a commentary on the *Ḳānūn* of Avicenna of which a Ms. copy is preserved in the Raza (sic) Library, Rampur. A fine commentary on the *Ḳur'ān*, called *Ḳur'ān al-Ḳur'ān*, which was printed in the margin of a copy of the *Ḳur'ān* (ed. Meerut 1920), was also written by him. A certain *Kitāb al-radd ('alā) al-Shi'a* or *Risāla Radd-i Rawāfiḍ* and *Tasnim*, the latter on certain problems of *taṣawwuf*, are also attributed to him.

(A. S. BAZMEE ANSARI)

**KALIMA** (A.), the spoken word, utterance; can be extended to mean "discourse" and "poem". The *falāsifa* prefer to limit their discussion to the problems of grammar and logic: thus in the preamble to the *Naḍīyat* (Cairo<sup>8</sup> 1357/1938, 11) Ibn Sinā defines *kalima* as "a single word (*lafza*) which refers to an idea and the length of time that this idea is applied to any indeterminate subject whatsoever; for example, when we say 'he walked'." Cf. also *Manṭiq al-maṣhrīkiyyīn*, Cairo 1328/1910, 57-8, and p. 66 where *kalima* is given as a synonym for "that which grammarians call *fi'l*". But according to the *Ishārāt* (ed.

Forget, Leiden 1892, 11), logicians use *kalima* to apply to any wholly descriptive spoken word, noun or verb, which designates an indeterminate entity in a fixed period of time. (Cf. A. M. Goichon, *Lexique de la langue philosophique d'Ibn Sinā*, Paris 1938, and Fr. tr. of *Ishārāt*, Paris 1951, 84, n.l.).

The term *kalima* and the plural *kalimāt* occur frequently in the *Ḳur'ān*. It is used on numerous occasions in the very general sense of "spoken word", good XIV, 24, XLVIII, 26) or bad (IX, 74, XIV, 26, XVIII, 5, XXIII, 100). Yet it most frequently pertains to the realised Word of God. "The words of God cannot be altered", says the *Ḳur'ān*, X, 64. Subsequently *kalima* acquires a sense closely akin to *amr*, "decision", "order", or indeed *ḥadar*, "decree". R. Blachère frequently translates *kalima* by *arrêt*. There are numerous references (e.g., VI, 115, VII, 137, X, 33, 96, XI, 119, etc.; in the plural, VI, 34, 115, XVIII, 109, XXXI, 26, etc.). In XLIII, 28 it is said of Abraham: "and he made it an everlasting word (*kalimat*<sup>an</sup> *bāḳiyat*<sup>an</sup>) among his descendants". The commentators (see al-Bayḍawī, ed. Fleischer, ii, 237, 25) usually emphasised that this referred to an affirmation of the Oneness of God, the equivalent of the "first *shahāda*", as is suggested in XLIII, 26-7. One of the most frequently cited passages of the *Ḳur'ān* is III, 39 and 45, where Jesus is proclaimed as "a word coming from God". The commentators regarded this *kalimat Allāh* who is Jesus as a divine word linked to the creative *kun* ("be!"; cf. III, 47) and subsequently related the creation of Jesus to that of Adam: "Yes, in the case of Jesus God acted just as He did with Adam: God created the earth, then He said 'be!' and there he was" (III, 59).

Thus *kalima* is not an attribute of the Word [see *KALĀM*] but its expression, through which divine decisions are formulated and communicated. *Ḳur'ānic* commentaries discuss it with particular reference to the verses concerning Jesus, and also in the "professions of faith" (*akā'id*), e.g., *La Profession de foi d'Ibn Baṭṭa*, ed. and Fr. tr. H. Laoust, Damascus 1958, 58/107-8).

In 'ilm al-*kalām*, the problem of the *kalimat Allāh* is related to the problem of the attribute of *kalām Allāh*: created according to the Mu'tazilite, uncreated according to the later schools. In the course of the Aṣḥ'arī scholars' lengthy refutations of the Mu'tazilites, *kalima* and *kalām* were confused once again. Thus in al-Bākillānī's *Tamhīd* (ed. McCarthy, Damascus-Beirut 1957, 253) the Christians and the Mu'tazilites are credited with holding that "the Word of God is created", *kalimat Allāh makhlūka*. Al-Djuwaynī has the same to say of the Christians (*Irshād*, ed. Luciani, Paris 1938, 75/123). From the doctrine of *kalām Allāh* it follows that the divine utterances must be innumerable. All contingent existences (*al-mumkināt*) were created by *kalimāt Allāh*, that is by the repeated creative commands (*kun*, "be!"); therefore the Expression of the Reality (*al-ḥaqq*) is the self of the identities of the contingent existences, or the contingent existences themselves, *nafs a'yān al-mumkināt* (see *Dict. of Technical Terms*, 1271 ff., and al-Djurdjānī, *Tarīfāt*, ed. Flügel, Leipzig 1845, 194-5).

In the *Shi'a* and *Sūfi* vocabularies (at least as far as the *Sūfism* of *waḥdat al-wujūd* is concerned) *kalima* acquires frankly gnostic overtones. Consider the following examples:

a) From an Ismā'īlī lexicon. In the 4th/10th century Abū Ya'kūb al-Sidjīstānī stated in his *Kitāb al-Yanābi'*: "the horizon of Understanding is contiguous to the Word of God (*kalimat Allāh*), which is outside the totality of all beings that have been

formed beneath the Prime Intelligence" (ed. and Fr. tr. H. Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, 10/23). "The Word of God", says Corbin (*ibid.*, 29, n. 44), "should be understood as the divine imperative (*amr Allāh*) by whose will the Prime Intelligence exists". Further on (70/92) al-Sidjīstānī specifies: "Paradise is the *kalimat Allāh* by whose means He first founded those things which exist in Paradise". Finally, the penultimate chapter of the book considers the "meaning (*ma'nā*) of the Word (*kalima*) of the Primary Cause" (90-4/118-21). There *kalima* is analysed letter by letter (*k-l-m-h*) according to the principles of *dījafr* [q.v.], with reference to the Ismā'īlī hierarchies. To the extent that the Prime Intelligence is identified with *kalām Allāh* (91/119), *kalimat Allāh* becomes synonymous with the "First Cause, i.e., the Oneness" (90/118).

b) From an Imāmī lexicon. In his *Kitāb al-mashā'ir* (ed. and tr. H. Corbin, Tehran-Paris 1342/1964) Mullā Ṣadrā Shīrāzī (10th/16th-11th/17th c.) established the link between the Word of God and the Qur'ān. He deals with the *kalām Allāh*, but in specifying that the attribute of the Word (*kalām*) refers to the production of "perfect Words" (*kalimāt tāmmāt*) whose chief example is the creation of Jesus in Mary's womb (*op. cit.*, 57/193).

c) From a Ṣūfī lexicon. The chief exponent of *kalimat Allāh* was Ibn 'Arabī, who took it as his main theme in *Fuṣūṣ al-ḥikam* (ed. 'Affī, Cairo 1365/1946). His meditations on the experience of each prophet are called "the divine Wisdom in the Word (*kalima*)" of Adam, Seth, Abraham, Isaac, etc. In the chapter on Jesus he stresses this (i, 139); while in the passages dealing with the experience of Moses (i, 197 ff.), he notes Qur'ān, X, 64 ("the words of God cannot be altered") and adds (ii, 211); "the words of God (*kalimāt Allāh*) are in fact the essence (*a'yān*) of all things in existence; to them belongs eternity (*ḥidam*) by virtue of their immutability; to them belongs contingency (*hudūth*) because of their (concrete) existence and their burgeoning forth (with-in existence)".

Many other texts could be cited to show how *kalima* becomes the creative Logos of God, His Parole instauratrice, "instigating Word" (H. Corbin), the first and emanating Source of the production of all being which makes and is the essence of all things.

*Bibliography*: in the article. See also the main *tafsirs* on the Qur'ānic verses cited above.

(D. B. MACDONALD—L. GARDET)

**KALIMANTAN** [see Supplement].

**KALĪMĪ** [see YAHŪD].

**AL-KALKASHANDĪ**, the *nisba* or gentile of several Egyptian scholars of the Mamlūk and early Ottoman periods, the most important of whom are as follows:

(1.) Shihāb al-Dīn Abū 'l-'Abbās Aḥmad b. 'Alī ('Abd Allāh?) b. Aḥmad b. 'Abd Allāh al-Fazārī al-Shāfi'ī, legal scholar and secretary in the Mamlūk chancery, and author of several books. The main sources for his life are the fairly brief mentions of him in biographical and historical sources of the late Mamlūk period by al-'Aynī, al-Makrīzī, Ibn Taghrībirdī, al-Sakhāwī and Ibn al-'Imād; some of his compositions are recorded by Hādīdījī Khalifa; but it is above all from his own works that we gain most information. It is remarkable how little notice was taken of al-Kalkashandī by contemporaries or near-contemporaries. Al-Sakhāwī (d. 902/1497) even states in his *al-Daw' al-lāmi'* that al-Kalkashandī's *Ṣubḥ* comprises four volumes only, instead of the seven of reality, and he had obviously not seen an actual

copy. Nor does he seem to have seen a copy of al-Kalkashandī's *Nihāyat al-arab*, for he states in his defence of the study of history, *al-'Ilān bi 'l-taubbikh li-man dhamma ahl al-tawrikh*, tr. in F. Rosenthal, *A history of Muslim historiography*<sup>2</sup>, Leiden 1968, 434, that it was dedicated to the Ustādār Djamāl al-Dīn, when the dedicatee in the *Nihāya* itself is another person altogether (see below). Hence we do not know much about al-Kalkashandī's legal and professional life beyond the salient points and dates of his official career, let alone about his early years, education and private life.

He was born in 756/1355 at Kalkashanda (the form Karkashanda in Yāqūt, *Buldān*, must be based on a mispronunciation or a dialectical variant pronunciation), a small town south of Tūkh and north of Cairo in the modern *mudiriyya* of Qalyūb [q.v.], into a family of scholars. In his *nasab* or genealogy, al-Kalkashandī attached himself to the Banū Badr of the North Arab tribal group of Fazāra of Ghatafān [q.v.], see *Ṣubḥ*, i, 345, which had settled in this part of Lower Egypt after the Muslim conquest. In the course of his education at Alexandria, he concentrated on literature, tradition and law, with the aim of becoming a *ḥādī* of the Shāfi'ī law school, and his earliest compositions were in this sphere (see below). In 778/1376-7 he received his *idjāza* or licence to give judicial opinions and to lecture (*al-futyā wa'l-tadris*) on Shāfi'ī law and on the classic collections of traditions from the well-known scholar Shaykh Sirādī al-Dīn Abū Ḥafṣ 'Umar b. 'Alī, called Ibn al-Mulaḥḥin (d. 804/1401).

However, after a period of teaching, in 791/1389 al-Kalkashandī became a secretary in the chancery or *Diwān al-Inshā'* of the Mamlūk administration in Cairo, as a *kātib al-dast*, one of the secretaries who accompanied the chief secretary (*kātib al-sirr*) when the latter sat with the sultan for the dispensation of justice [see *Diwān*, ii Egypt]. The background to this appointment of his under the *kātib al-sirr* Badr al-Dīn Muḥammad b. 'Alā' al-Dīn 'Alī b. Faḍl Allāh al-'Umarī, of the famous secretarial family of the Banū Faḍl Allāh [q.v.], is indicated in the *maḥāma* in praise of the secretarial art and of his master which al-Kalkashandī inserts in *Ṣubḥ*, xiv, 112-28 (see on this Bosworth, in *BSOAS*, xxvii (1964), 291-8).

He died on 10 Djumādā II 821/16 July 1418 aged 65; it is not known whether he was still employed in the *diwān* at that date. His son Naḍīm al-Dīn Muḥammad, called Ibn Abī Ghudda (797/1395-876/1471), also achieved some fame as a legal scholar, a traditionist and a littérateur (*Sakhāwī, Daw'*, ed. Cairo 1353-5/1934-5, vi, 322-3; Makrīzī, *Sulūk*, ed. Cairo 1353-6/1934-6, iii, 821; cf. Brockelmann, II, 167, S II, 165).

Al-Kalkashandī's compositions fall into three groups: (a) law, (b) *adab*, (c) *ḥitāba*, the secretarial art, together with its genealogical and historical ancillary disciplines.

In the legal sphere, he composed commentaries on the works of two earlier scholars. Firstly, on the *Djāmi' al-mukhtaṣarāt fi furū' al-shāfi'iyya* of the Shāfi'ī scholar Kamāl al-Dīn Aḥmad b. 'Umar al-Nasā'ī al-Madlīdī (691/1292-757/1355), see Brockelmann, II, 254, S II, 271; Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, VIII, gives this commentary the title *al-Ghuayūth al-hawāmi'*, without, however, specifying his source; and secondly, on the treatise *al-Hawī al-saghīr fi 'l-furū'* of the Ṣūfī Shaykh Naḍīm al-Dīn 'Abd al-Ghaffār al-Kazwīnī (d. 665/1266, see Brockelmann, II, 494-5, S I, 679). These two works are mentioned by Hādīdījī Khalifa and

Sakhāwī respectively, but do not now seem to be extant.

In the realm of *adab*, al-ḲalḲashandī wrote a short work, the *Hilyat al-faḍl wa-sinat al-karam fi 'l-mu-fākhkhara bayn al-sayf wa'l-ḵalam*, for the bearer of the royal inkstand or *dawādār* [q.v.], Zayn al-Dīn Abu 'l-Zāhiri, when Sulṭān al-Zāhir Barḵūḵ appointed him to this high office in 794/1392; the text of this exists in independent manuscripts and is also inserted into *Ṣubḥ*, xiv, 23-140 (see Baġdathī Ismāil Paṣa, *Idāh al-maknūn*, Istanbul 1945-7, i, 421). Like so many other scholars, he wrote a commentary on Ka'b b. Zuhayr's poem in praise of the Prophet, *Bānat Su'ād*, which he says in *Nihāyat al-arab*, ed. Abyārī, 420, was called *Kunh al-murād fi sharḥ Bānat Su'ād* and which, he further says, contains fine meanings and expressions not known to him in other commentaries; this work is extant in manuscript. It is not very clear what connection, if any, this commentary on *Bānat Su'ād* has with a poem in praise of the Prophet attributed to al-ḲalḲashandī in Brockelmann, II, 167, and printed at Alexandria in 1288/1871; the ascription of this to al-ḲalḲashandī is in any case doubtful, see Sarkis, ii, 1522.

However, it is the works on secretaryship and related topics dating from al-ḲalḲashandī's later years which exhibit the full flowering and maturing of his genius, above all the stupendous *Ṣubḥ al-a'shā fi sinā'at al-inshā'*, the culmination of the secretarial manuals and encyclopaedias of the Mamlūk period and, indeed, of the whole Arabic *adab al-ḵatīb* literature (ed. Muḥammad 'Abd al-Rasūl Ibrāhīm, Dār al-Kutub al-Ḳhadīwiyya, Cairo 1331-8/1913-20, 14 vols). The *Ṣubḥ* was completed in 814/1412 and comprised seven volumes, containing an introduction, ten discourses (*makāilā*) and a conclusion. Within it, al-ḲalḲashandī gives a very detailed conspectus of the theoretical sciences and the practical skills required by a secretary concerned with official correspondence. The contents are analysed in detail in W. Björkman's indispensable guide to the *Ṣubḥ*, his *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten* (Hamburg 1928). A volume of indices has also been published (Cairo 1972). Noteworthy is the large number of original documents, going back to the earliest years of Islam, which al-ḲalḲashandī cites, those pertaining to Egypt and its external relations, from the Fāṭimid period onwards, being especially valuable. The attention of European orientalists such as Amari and Lammens was drawn to these treaties, investiture diplomas, etc. even when the *Ṣubḥ* was known only in manuscript. Al-ḲalḲashandī's sources embrace virtually the whole corpus of Arabic writers on *kitāba* and such related sciences as history and geography, but his proximate sources were the works of two authors of the 8th/14th century. These works comprise those of Shihāb al-Dīn Aḥmad b. Faḍl Allāh al-'Umarī (d. 749/1349), his *al-Ta'rif bi'l-muṣṭalah al-sharīf*, its supplement, the *'Urf al-ta'rif*, and his geography, the *Masālik al-abṣār*; and the *Taḥkīf al-ta'rif* of the *ḵādi* Taḳī al-Dīn 'Abd al-Raḥmān b. Muḥibb al-Dīn, called Ibn Nāzir al-Dījaysh (d. 786/1384). The sources of the *Ṣubḥ* are exhaustively discussed by Björkman, *op. cit.*, 75 ff., and the *Taḥkīf* (so far unedited and not mentioned in Brockelmann) and its author have been examined by R. Veselý, *Zu den Quellen al-Qalqaṣandī's Ṣubḥ al-A'shā*, in *Acta Universitatis Carolinae Pragensis*, Philologica 2 (1969), 13-24.

In the *Ṣubḥ*, al-ḲalḲashandī aimed at being encyclopaedic and exhaustive, but he later made a resumé of it, the *Daw' al-ṣubḥ al-musfir wa-djanā al-dawḥ*

*al-muḥmir*, dedicated to Kamāl al-Dīn Muḥammad b. al-Bārīzī, who later became *ḵatīb al-sirr* (the first volume only of this printed at Cairo, 1324/1906). The *Daw'* appears to contain a few items of information not found in the *Ṣubḥ*.

The study of genealogies, important to the secretary for identifying and correctly addressing the recipients of official documents, is dealt with in *Ṣubḥ*, i, 306-71, but al-ḲalḲashandī devoted two works specially to the science of genealogy. The chief one is the *Nihāyat al-arab fi ma'rifat ansāb al-'arab*, written after the *Ṣubḥ* and before the *Daw'* and dedicated to the Amīr Abu 'l-Maḥāsīn Yūsuf al-Umawī al-Ḳurashī. As well as a great deal of information on the science of genealogy in general, it deals with early Arabian history, the *Ayyām al-'arab*, etc.; but the core of the book is an alphabetically-arranged dictionary of Arab tribal names. The book was printed at Baġhdād in 1332/1914 from an unspecified manuscript, and properly edited (with a good biographical introduction, summarized by G. C. Anawati in *MIDEO*, vi (1959-61), 274-6) by Ibrāhīm al-Abyārī (Cairo 1959). One question discussed by Abyārī relates to the ascription by Hādījī Khalīfa, iv, no. 9556, cf. vi, no. 14070, of a work also entitled *Nihāyat al-arab* to al-ḲalḲashandī's son Muḥammad (see above), this work being written for Zayn al-Dīn Abu 'l-Djūd Baḳar b. Rāshīd, "Amīr of the Bedouins of the Eastern and Western Regions", sc. of Lower Egypt; Brockelmann, II, 167, S II, 165, attributed this work to the son Muḥammad and repeats this dedication to Abu 'l-Djūd. Abyārī, on the other hand, thinks it improbable that father and son should both write a work on the same subject and with the same title, and convincingly suggests that Muḥammad transcribed the original manuscript of his father's *Nihāya* in 874/1443-4 and presented this copy to Abu 'l-Djūd (*Nihāya*, ed. Cairo, intro., *shin-thā'*). Al-ḲalḲashandī's other genealogical work, described as a supplement (*istidrāk*) to the *Nihāya*, is the *Ḳalā'id al-djūmān fi 'l-ta'rif bi-ḵabā'il 'arab al-xamān*, dedicated to Abu 'l-Maḥāsīn Muḥammad al-Djūhanī al-Mu'ayyadī, and completed in 819/1416. This may well have been al-ḲalḲashandī's last work; it has been edited by Abyārī (Cairo 1964).

Finally, we have al-ḲalḲashandī's remaining work, the *Ma'āthīr al-ināfa fi ma'ālim al-ḵhilāfa*. This is a treatise on the constitutional position of the Caliphate, the qualities necessary for office, the duties of the caliphs, the documents issued by them (of which many texts are quoted), together with a history of the caliphs and some of the later sultans. The whole work is dedicated to the 'Abbāsīd caliph in Cairo, al-Mu'taḍid b. al-Mutawakkil (816/1414-845/1441), which places the composition of the work after that of the *Ṣubḥ* and in the last years of al-ḲalḲashandī's life; the non-historical part of the *Ma'āthīr* is clearly dependent on the *Ṣubḥ*. The work has only recently become known with the identification of two manuscripts in Turkey by the late Mükrimim Halil Yınanç and İbrahim Kafesoġlu; a detailed analysis of the work, with the parallels in it to the *Ṣubḥ* indicated, is given by Kafesoġlu in his article *Kalkaşandi'nin bilinmeyen bir esseri, Medsürü l'-Ināfe*, in *Tarih Dergisi*, viii, no. 11-12 (Istanbul 1956), 99-104. A printed edition of the *Ma'āthīr*, based on an unspecified manuscript and with no acknowledgement of the contribution of Turkish scholars, has been given by 'Abd al-Sattār Aḥmad Farrādī (Kuwayt 1964 3, vols.).

(2.) A famous family of Shāfi'ī scholars, originally from ḲalḲashanda but settled in Jerusalem, retained

the *nisba* of "al-Kalkashandi", including Takī al-Dīn Abū Bakr b. Muḥammad b. Ismāʿīl al-Maḳḳisī (783/1382-867/1463) and his nephew Karīm al-Dīn ʿAbd al-Karīm b. ʿAbd al-Rahmān b. Muḥammad b. Ismāʿīl al-Maḳḳisī (808/1405-855/1452), both of whom achieved fame in Cairo and in Palestine as teachers, authors and *muftīs*, see Sakhāwī, *Dawʿ*, iv, 311-12, xi, 69-71, and idem, *Iʿlān*, tr. in Rosenthal, *A history of Muslim historiography*<sup>2</sup>, 439-40. Probably to be attached to this Jerusalem family also is Burhān al-Dīn Abū ʿl-Fath Ibrāhīm b. ʿAlī al-Maḳḳisī, d. 922/1516 in Cairo, author of collections of traditions and of a treatise *Taḥbīt al-mulḥ bi-tafsīr ḥawlihi taʿālā kul allāhumma mālik al-mulḥ*, none of them published, see Brockelmann, II, 94, S II, 85.

**Bibliography:** As remarked above, the primary sources for al-Kalkashandi's life, outside his own works, are exiguous. See Sakhāwī, *al-Dawʿ al-lāmiʿ*, ii, 8; Ibn al-ʿImād, *Shadharat al-dhahab* vii 149; Makrīzī, *K. al-Sulūk*, iii, 821; Ibn Taghribirdī, *al-Manhal al-sāfi*, Cairo 1375/1956, i, 330-1; Tāshkōprüzāde, *Miftāḥ al-saʿāda*, i, 182. For secondary sources, see the biography prefixed to vol. xiv of the *Ṣubḥ*; Sarkis, ii, 1521-3; Kaḥḥāla, *Muʿdjam al-muʿallifin*, i, 317; Ziriklī, *al-ʿĀlām*, i, 172; M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923, V-XV; Brockelmann, II, 166-7, S II, 164-5; İ. Kafesoglu, *IA* art. s.v.

Studies based on the *Ṣubḥ* (in addition to those older ones mentioned in Brockelmann's *EI*<sup>1</sup> art.) include: M. Amari, *De' titoli che usava la cancellaria de' Sultani di Egitto nel XIV secolo scrivendo ai reggitori di alcuni Stati italiani*, in *Atti Reale Accad. Lincei*, Serie terza, xii (1883-4), 507-34; H. **KALLALA**, GUELLALA, a Berber-speaking village situated to the south of the Isle of Djarba

[*q.v.*], famous for its pottery workshops. A great variety of models (at least 120 types) are made there and sold throughout Tunisia. Formerly, they were exported to Algeria, Sicily and Tripolitania, but in recent years the manufacture of pottery has suffered a slight setback as a result of the importation of cheap European ware, some of it made from plastic. Kallāla pottery is of two types. The large *ʿzeffaya*, which demands great skill, is designed to support considerable pressure. Pieces can be as large as 1.50 m., with a low centre of gravity to allow the potter to operate the lathe and fashion the upper part at the same time. It is even necessary to make these pieces in several parts. The *ṣafri* (Berber *amiris*), a large container for oil or water (holding 200 to 250 litres), is made of four pieces mounted one on the other. The smaller *harrāsha* type is more finely finished and is used for a great variety of receptacles (for water, flour, oil, delicacies, spices), for casseroles, lids, pipes, lamps, perfume-holders, etc. Enamelled and decorated pottery is also made here. On the occasion of a marriage, neighbouring potters give the young couple a large glazed earthenware jar for storing part of the trousseau (blankets and winter clothing).

The Berber spoken in Kallāla (Arabic *Gollāla*, Berber *Iḥallālan* = "the potters") has preserved a number of archaic features. The dynamic accent has a phonological value: they say *afrukḥ amāshkun*, "the little boy", and *tafrukḥi tamāshkunt*, "the little girl"; but *afrukḥ d amāshkun*, "a little boy" and *tafrukḥi tamāshkunt*, "a little girl"; the feminine is definite or indefinite solely according to the placing of the stress. Vowel length is also a phonological factor: *aghrum* is "bread", but *aghrūm-is* (with a long *ū*) is "his bread" and *aghrum-ansən* (with a short *u*) is "their bread". There is a difference between *rahḥagh al-bāv-is*, "I have gone to his father's house" (movement, *bāv-is*) and *yalla al bāv-is*, "he is at his father's house" (rest, *bāv-is*). On some occasions the noun following the genitive is shortened: *imi*, "mouth" or "gate" (with a long *i*), but *imi-lhush*, "an area in front of the house" (with a short *i*). Numerals and prepositions can also influence the pronunciation of the nouns they accompany: *barḳūkas*, "couscous", but *edh berkukes*, "with couscous" (with a short *u*). *alḥush* means "house" but they say *usigh-d s-olḥush* (with a long *ū*) for "I have come from the house". A number of nouns have a pronoun value: *alḥum*, "camel", *alagḥm-is*, "his camel"; *albagḥal*, "mule", *albagḥl-is*, "his mule"; *alḥawḥḥ*, "coffee", and *alḥawḥt-is*, "his coffee". Two things should be noted in this last example: the voiceless dental is pronounced *ḥ* (aspirant) after a vowel and *t* (occlusive) after a consonant and the closed syllable remains so by means of gemination in a new syllabic structure. The treatment of *t* and *ḥ* resembles the *begadkefat* consonants in Hebrew and Aramaic. The opposing ones at Kallāla are *b:v*, *d:dh*, *g:y*, *k:x* (= postpalatal voiceless aspirant which tends to a "hushing" quality) and *d:d* (often pronounced *d*). In some cases analogy and a massive intrusion of Arabic words have shattered the harmony of the system, but the whole has the same correlations to be found among the Ghumāra of Morocco and the Zenaga of Senegal. Kallāla, along with Sedwikes, Almaj and Adjim, is one of the last strongholds of the Berber tongue on the Isle. An oral literature (songs, tales and riddles) still remains, but the language is sorely threatened by schooling, radio and television as well as by contact with the Arabic-speaking population.

**KALMUK**, the Turkish name for a Mongol people, the Oyrat, who in the time of Čingiz-Khān [q.v.] inhabited the forests to the west of Lake Baykal. The name is derived (probably only by popular etymology) from the verb *kalmak*, "to remain" and distinguishes the Oyrat, who "remained" pagans, from the Dungans (the Chinese-speaking Muslims), who had "returned" (the verb *dönmek*), according to the well-known Muslim idea, to Islam. A group of the Oyrat had accompanied Hülegü to the west and played a certain rôle in İl-Khānid Persia. The people as a whole, however, came into their own only after the collapse of the Mongol dynasty in China, when they wrested the greater part of Mongolia from the Čingizids and laid the foundations of the Kalmuk empire.

From the time of Ways Khān (1418-28) the Mongols on the Ili [q.v.] had to fight against the "infidel Kalmak"; accounts of these wars are given in the *Ta'rikh-i Rashidi*. Ways Khān was twice taken prisoner by the Kalmuks and had to give his sister in marriage to their chief, Esen Tayshi. Toghon, the latter's father, was then ruling in Mongolia on the Chinese frontier, where he was succeeded in 1439 by Esen Tayshi. After the death of Esen Tayshi (1455) the great nomad empire of the Oyrat broke up; individual princes are mentioned from time to time later as ruling in the neighbourhood of Muslim lands; at the beginning of 864/end of 1459 a Kalmuk embassy appeared in Harāt. The Muslim sources also report the restoration of the Oyrat empire under Khara Khula (d. 1634). In Turkestan during this period also the Kalmuks were regarded as powerful foes of Islam. The Kazakh Khān Tawakkul (Tefkel in Russian) had to flee before them to Tashkent, where he was received by the Özbek ruler Nawrūz Aḥmad (d. 963/1556); in reply to his appeal for help, Nawrūz declared that even ten princes such as themselves would be no match for the Kalmuks. At a later date, however, on the occasion of his embassy to Tsar Feodor (1594), Tawakkul was described in Russian documents as "king of the Kazakhs and Kalmuks", perhaps because a few bands of Kalmuks had attached themselves to him. In the winter of 1603-4 there occurred the first incursion of the Kalmuks into Khwārizm. Soon after, under Tsar Vasili Shuisky (1606-1610), the Kalmuks entered into relations with the Russian government for the first time, though it was not until 1632 that they settled on the Volga on a large scale. This branch of the Kalmuks had separated from their kinsmen, under the leadership of Kho-Örlök, as early as 1618. The territory of the Volga Kalmuks did not therefore form part of the empire founded by Khara-Khula, although relations between the two branches of the people had not yet been severed. Representatives of the Volga Kalmuks still appeared at the *kuriltay* [q.v.] of 1640; Batur, the son and successor of Khara-Khula, gave his daughter in marriage to the grandson of Kho-Örlök. By the same *kuriltay* the dominance of Buddhism was firmly established among all branches of the Kalmuks. The progress made by Islam described in the *Ta'rikh-i Rashidi* (p. 91) in

connexion with the above-mentioned marriage was apparently not maintained. Most of the Muslim territories in Turkestan were under the suzerainty of the Buddhist Kalmuk ruler on the Ili, the founder of the last great nomad empire in Central Asia, which lasted until it was destroyed by the Chinese in 1758; as late as 1749 the regent (*ataik*) of Bukhārā and his opponent had to submit a dispute to the verdict of an embassy from the Kalmuk ruler. A great part of the Kazakhs' pasture land was now seized by the Kalmuks, and Islam was almost completely banished from the southern part of Semireč'ye. Several Buddhist monuments, including Tibetan inscriptions, date from this period. It was only after the decline of the Kalmuk empire that these areas were re-occupied by the Muslim Kazakhs. The wars of the Volga Kalmuks with the Crimean Tartars and their raids into Khwārizm had less effect on Islam; from 1724 the Kalmuk chiefs on the lower course of the Volga were regarded simply as viceroys (*namesnik*) of the Russian tsar. They had no longer any connexion with the ruler on the Ili. The decision of the "viceroy" Ubashi and a large number (about 300,000) of his people to migrate from Russia and settle in Chinese territory proved disastrous to the Volga Kalmuks. During the migration heavy losses were inflicted on them in Central Asia, especially by the Kazakhs (1771). Henceforth the Kalmuks were of no political significance in either Russia or in China. During the Muslim rising in the Ili valley the great Kalmuk temple of Buddha near Kuldj was destroyed.

#### THE MODERN PERIOD.

After 1771, some 50,000 Kalmuks continued to live west of the Volga. Their descendants joined the anti-Bolshevik Southeastern League but after its disintegration in 1920 they were formed into an "Autonomous Oblast" (province), which was raised to the status of Autonomous Republic in 1933. In 1939 the population of the republic was 200,000 including 134,000 Kalmuks. It was partly occupied by the Germans in 1942 and abolished by the Soviet Government in 1943, when all the Kalmuks were deported to Central Asia on the grounds of alleged collaboration with the enemy. A Soviet decree of 1957 provided for the return of the Kalmuks to their territory, which was reconstructed an Autonomous Republic in 1958 with its capital at Elista (formerly Stepnoy), 150 miles south of Volgograd. According to the 1970 census, the population was 268,000, of whom 110,000 were Kalmuks. This constitutes 80 % of the Kalmuks living in the USSR. A few thousand still live in the Sinkiang-Uygur Autonomous Region of China, where they are known as Oyrats. Only a small number of Kalmuks, less than 2,000 living in Semireč'ye, ever embraced Islam, the rest remaining actual or nominal adherents of Buddhism.

**KALPAK** [see LIBAS].

**KALPI**, once a powerful town in Uttar Pradesh, northern India, 26° 8' N., 79° 45' E. The old town and fort stand on clay cliffs overlooking the river *Djāmnā* [*q.v.*]; there is a modern town to the south-east of the old one, which has some commercial importance and where a fine quality paper is still made by hand. The town was traditionally founded by a *rāḍīā* of Kannawḍj in the 4th century A.D., and fell into Muslim hands in the first conquest in 593/1196. The high fort, walled on three sides and defended on the fourth by the cliffs and river, was an important stronghold on the Dihli sultans' line of communication along the *Djāmnā*. In the early 9th/15th century, after Tīmūr's devastation of Dihli, Kalpi became independent for a short time under a former governor, Muḥammad *Khān* b. Malikzāda *Fīrūz*, until in 837/1433-4 Ibrāhīm *Shāh* of *Djawnpur* sought to annex it to the *Sharkī* sultanate; a counter-attack by Mubārak *Shāh* Sayyid of Dihli regained it, but in the following year during the Dihli-*Djawnpur* wars it was seized by Hūshang *Shāh Ghūri* of *Mālwa* and remained in the possession of *Mālwa* for the next ten years. About 847/1443 it was sacked by Maḥmūd of *Djawnpur*, but after the eventual fall of the *Sharkī* sultanate to *Bahlūl Lodī*, Kalpi reverted to Dihli, and *Bahlūl* appointed Kuṭb *Khān* *Lodī* as its governor. There were in addition several minor incidents during the 9th/15th century in which possession of Kalpi fluctuated between Dihli, *Djawnpur* and *Mālwa*. It fell into *Mughal* hands in 933/1527, and under Akbar became the headquarters of a *sarkār* and a copper mint. After the *Marāfhā* wars in the early 18th century Kalpi became the residence of a *Marāfhā* governor.

Among a number of old Muslim tombs to the west of the old town, one is outstanding, the *Čawrāsī Gunbadh* (lit. "84 domes"; this name is obscure). This is a square, nine-domed structure in a walled courtyard, with two graves under the central dome; popular belief assigns it to a *Lōdī* sultan; it is possible that it may have been of a *Lōdī* governor, as the style of its arches and the supporting systems is consistent with a late 9th/15th or early 10th/16th century date; certain *Djawnpuri* motifs in its decoration do not necessarily vitiate this conclusion, as stonemasons would have had no difficulty in travelling from one area to another on the *Djāmnā*. It is possible that the "84" of its name represents a date; if so 1584 V.S., about 934/1527-8, would be the most likely.

(J. BURTON-PAGE)

**KALŪDIYA** [see *KALAWDHĪYA*].

**KALWĀDHĀ**, a locality situated on the left bank of the *Tigris*, not far south of East *Baghdād*, capital of a district (*ḥassūdī*) of the same name. Here the *Nahr Bīn* flowed into the *Tigris*; a branch of the *Nahrawān*, it provided East *Baghdād* with a network of canals. *Kalwādhā* was a large town endowed with a Great Mosque frequented by the people of *Baghdād* since it was only a short distance to travel (*Ibn Rusta-Wiet*, 214, estimates it at three parasangs, but *Yākūt*, s.v., reduces it to one parasang, specifying that in his day the place was in ruins). The town is often mentioned in verses of the 2nd/8th century which extol its pleasures.

Tradition attributes its foundation to *Kalwādhā*, son of *Ṭahmūrath*, but philologists connect the name with *kalwādh*, the Ark of the Covenant, which was supposed to be buried there.

*Bibliography*: *Ibn Hawkal-Wiet*, 234; *Salmon*, *Introduction*, 151 n. 1; *Le Strange*, index; idem, *Baghdad*, 195-6. (ED.)

**AL-KALWĀDHĀNĪ**, ABU 'L-KHAṬṬĀB MAHFŪZ B. AḤMAD B. ḤASAN B. AḤMAD AL-BAGHDĀDĪ, a celebrated jurist (*faqīh*) of the Hanbali school and one of the architects of what *Makdisi* called "the resurgence of traditionalist Islam in the 11th century". Born on 2 *Shawwal* 432/6 June 1041, he was the disciple of Abū Ya'qūb during the same period as *Ibn 'Aqīl*. He studied *ḥadīth* and *fiqh* under his master "until he was pre-eminent in his knowledge of the Hanbali rite" (*bara'a fi'l-madhhab*). His other teachers were less well known, apart from 'Abd Allāh al-Wannī (d. 450/1058), under whom he studied the law of inheritance. It is said that he and *Ibn 'Aqīl* attended al-*Ghazālī*'s classes at the *Nizāmiyya*, but nothing is known of his opinion about the young man from *Khurāsān* who had just arrived in *Baghdād* (484/1091, see *Ibn Radjāb*, *Dhayl*, i, 177). Like the majority of Hanbalites, *Abu'l-Khaṭṭāb* did not share al-*Ghazālī*'s taste for theology and philosophy. His speciality was *fiqh*, and in this field he acquired the status of a *mudjtahid* who was accorded the right to put forward, in particular cases, new solutions according to his own judgement. *Ibn Radjāb* (*op. cit.*, 147-54) gives a number of examples of these solutions; in one striking case *Abu'l-Khaṭṭāb* went against the consensus of scholars (*idmā'*) in deciding that the marriage contract is not automatically broken when one of the partners is held prisoner of war by non-Muslims. In defence of his opinion he even declared that a *ḥadīth* of Abū Sa'īd, recorded in *Muslim's Saḥīh*, was not authentic; according to this *ḥadīth* a marriage is broken when the wife is held captive in the *dār al-ḥarb*, in the country of the impious.

Despite such independence of spirit, in most of his works al-*Kalwādhānī* is much more classical and less original than his rival, *Ibn 'Aqīl*. Among his works, *Ibn Radjāb* thought the most important were: *al-Hidāya fi'l-fiqh*, *al-Khilāf al-kabīr*, also called *al-Intisār*, and *al-Khilāf al-ṣaḡhīr*, which is also known as *Ru'ūs al-masā'il*. Manuscripts of the first two are extant in *Damascus*, along with *al-Tamhīd fī usūl al-fiqh* (see *Brockelmann*, S I, 687), an important work on the basis of the law.

Al-*Kalwādhānī* died in *Baghdād*, where he seems to have spent all his days, on Wednesday, 23 *Djumāda* II 510/3 November 1116, and was buried at the feet of *Ibn Ḥanbal* beside another celebrated Hanbali contemporary, Abū Muḥammad al-Tamīmī. By far the most important of his disciples was 'Abd al-Qādir al-Djillānī, who studied under him and *Ibn 'Aqīl* at the same time.

*Bibliography*: *Ibn Radjāb*, *Kitāb al-Dhayl 'alā Ṭabakāt al-Ḥanābila*, ed. H. Laoust and S. Dahan, *Damascus* 1951, 143-54; *G. Makdisi*, *Ibn 'Aqīl et la résurgence de l'Islam traditionaliste au XI<sup>e</sup> siècle* *Damascus* 1963, 259-63. (P. NWIYA)

**KALYĀNĪ**, a fortified town of the Deccan [see *DAKHAN*], 17° 53' N., 76° 57' E., about 37 miles west of *Bidar* [*q.v.*]. In the 4th/10th and 5th/11th centuries, it was the capital of the Late Western *Čalukya rāḍīās*, passing later to the *Yādavas* of *Devagiri* (= *Dawlatābād*, [*q.v.*]); after the foundation of the *Bahmanī* [*q.v.*] dynasty at *Devagiri*, *Kalyānī* was annexed as one of the strongholds on their northern borders; but there had presumably been a previous

Muslim conquest of the town since an inscription is preserved of a *djāmi'* *masdji'd* founded by Ulugh Khān (later succeeded as Muḥammad b. Tughluk) in 723/1323; and another Tughlukī inscription of 734/1333 is known. The fort was rebuilt by the Bahmanīs at the end of the 9th/15th century after the introduction of gunpowder. The fort was maintained in good repair, as is evident from a series of inscriptions on its bastions, in the 10th/16th century; these show that it was held by the Barīd Shāhīs [q.v.] as the successors to the Bahmanīs in Bīdar until 981/1573, after which it passed to the 'Adil Shāhīs of Bīdjāpur [q.v.]. It fell to the Mughal empire, after a protracted siege by Awrangzib, in 1067/1657, and was included in the Mughal *ṣūba* of Bīdar. When the Deccan became independent of the Mughals under the first Niẓām of Ḥaydarābād [q.v.], Kalyāni was one of the possessions included. From 1178/1764 it was governed by a line of Nawwābs of Kalyāni, of whom the first was Mir Muḥammad Ibrāhīm Khān, a son-in-law of Aṣaf Dījh of Ḥaydarābād.

*Bibliography*: G. Yazdani, *Inscriptions from Kalyāni*, in *EIM* 1935-36 (1939), 1-13; idem, *Kalyāni fort*, in *ARADHYd.* 1344 F., 17-23 and Pl. I. (J. BURTON-PAGE)

**KALYŪB**, a moderate-sized town in Lower Egypt with a railway station, 10 miles north of the central station at Cairo on the Cairo-Alexandria railway. The town proper lies about a mile west of the station and about 3 miles from the right bank of the Nile, on the Tur'at al-Sardūsiyya. Down to the middle of last century, Kalyūb was the capital of the Mudiriyya al-Kalyūbiyya, but then in 1871 under the Khedive Ismā'īl, the Dīwān of the Mudiriyya was moved to Benhā. Since that date Kalyūb has been a *markaz* (district capital). Branch lines run to Zakāziḳ and the Barrage du Nil. The majority of the inhabitants are Muslims. According to 'Alī Paṣṣa Mubārak, Kalyūb possessed a *Shari'a* court (*maḥkama shar'iyya*) and a hospital. Cf. 'Alī Paṣṣa Mubārak, *al-Khiṭa' al-djādida*, xiv, 114 ff.; Baedeker, *Egypt* (1914), 34; Sambey, *Kāmūs al-A'lām*, Istanbul 1314/1890, v, 3693<sup>b</sup>. The population of the *mudiriyya* of Kalyūb was 988,000 in 1960.

A Greek Κάλυπτονη—not yet, however, found—is at the base of the name. In the *Scalae* it is found under the form Καλυπτε (Maspero-Wiet, *Matériaux pour servir à la géogr. de l'Égypte*, Series i, 151).

*Historical*: John of Nikius mentions Kalyūb in his *Chronicle*, ch. 113 (ed. Zotenberg, 321, 509). 'Amr b. al-'Āṣ [q.v.] had a bridge thrown over the canal at this town to be able to conquer the other towns of the province of Miṣr (ca. 20/641). In 549/1154-5 the caliph al-Zāhir granted Kalyūb as a fief to his great favourite Naṣr b. 'Abbās. Usāma b. Munkidh so depreciated this present in the eyes of Naṣr and his father that it became one cause of the murder of the caliph by Naṣr and 'Abbās (Ibn al-Aṭhīr, xi, 126; Usāma b. Munkidh, ed. Derenbourg, i, 245; Ibn Muṣassar, ed. Massé, 93). In the fighting between Selīm I and Tumān-Bey, Kalyūb did not escape the raids of the Arabs (Ibn Iyās, *Ta'rikh Miṣr*, under Ṣafar 923/March 10 1517). For embassies etc. Kalyūb was the stage before Cairo. Thus, for example, in Rabī' I 925/March 1519 Khā'ir Bey had the Sulṭān's envoy received there with the greatest ceremony by the Kāḍī Barakāt b. Mūsā (Ibn Iyās, *op. cit.*, iii, 109). The town had again to suffer exceedingly from the exortions and plundering of soldiers and Mamlūks in the years 1219-20/1804-5; cf. al-Djābarti, *Adjā'ib al-Āthār*, sub annos. Kalyūb, as a result of its situation close to

the gates of Cairo, probably did not escape on other occasions the effects of the political happenings in the capital. Ibn Dukmāk (809/1406) and al-Zāhiri (839/1434-5) report that in their day Kalyūb was for the most part lying in ruins.

*Economic*: Almost all sources praise the wealth of Kalyūb in gardens and trees, among which the acacias (*sanj*) are mentioned as particularly valuable. In spite of the restrictive edicts of al-Malik al-Kāmil, the ground was very badly farmed, so that Kalyūb's prosperity suffered considerably (cf. 'Uḥmān b. Ibrāhīm al-Nābulusī—wrote 637-48/1240-9, Brockelmann, *GAL*, I, 409—who devotes a longish section to Kalyūb in his *Luma' al-Kawānin al-Muḍi'a fi Dawāwīn al-Diyār al-Miṣriyya*; quoted in 'Alī Paṣṣa Mubārak, *op. cit.*, 114 f.).—In 1240/1824-5 Muḥammad 'Alī built a cotton mill in Kalyūb and later a barracks and a remount depot were established there. The al-Shawāribī family deserves special mention for its share in the economic development of Kalyūb, where they also built a seray with a mosque.

There are six mosques in Kalyūb, in one of which the Friday service is held. Among these the "great Mosque", formerly called Djāmi' al-Zaynabī, with its great *Manāra*, made a great impression on Ibn Djabayr (578/1182-3 in Egypt; cf. Brockelmann, I, 629; 'Alī Paṣṣa Mubārak, *op. cit.*, 114). According to the inscriptions on its minbar and above the door, it was renovated in 1148/1735-6 by the Shaykh al-'Arab of Kalyūb, Aḥmad al-Shawāribī. Among the tombs of saints the most important is that of Sidī 'Awwād.

'Alī Paṣṣa Mubārak gives a very full account of the above-mentioned al-Shawāribī family, as one of the most prominent in the town. Al-Malik al-Zāhir Baybars gave them charge of the new bridge over the Baḥr Abu'l Manādīdja (cf. also al-Kalkashandī, tr. Wüstenfeld, 28) and granted them large estates as fiefs and an annual pension (which lasted till 1275/1858-9). Muṣṭafā Paṣṣa granted them the supervision of the whole province of al-Kalyūbiyya. Various members of the family also filled important posts in the administration, besides the office of Shaykh al-'Arab of Kalyūb, which seems to have been hereditary amongst them. Sulaymān al-Shawāribī's patriotism cost him his life; in Radjab 1213/Dec. 1798 he was beheaded by the French for his part in an attempted rising (cf. al-Djābarti, iv, 37 f.).

According to Ibn Dji'an (cf. 'Abd al-Laṭīf, *al-Ifāda wa'l-I'tibār* etc., French tr. de Sacy entitled *Relation de l'Égypte* etc., 595) the province of al-Kalyūbiyya comprised in his time (777/1375-6) 59 townships and yielded a revenue of 419,054 dinārs (but on p. 599 a list of 61 townships is given). Ibn Dukmāk gives 60 with a total revenue of 383,140 dinārs. In the time of the French expedition, the revenues of the province from the estates (*Descr. de l'Égypte*, i, 306 ff.) amounted to: (1) for the payment of the *miri*, 3,390,742 dinārs; (2) for the *kushūfiyya*, 1,710,462 dinārs; (3) for the *fā'iz* 15,119,199 dinārs.

The Baḥr al-Dardūs—according to legend built by Pharaoh and enlarged by his "vizier Hāmān" (Ibn Dukmāk, al-Kalkashandī)—was, according to the enthusiastic description in Ibn Dukmāk (whom al-Kalkashandī follows), a large canal, apparently with water always in it. This is indicated also by two documents of the years 891/1486 and 1061/1650-1 (quoted by 'Alī Paṣṣa Mubārak) in the possession of the al-Shawāribī family. Al-Kalkashandī notes that the canal in his time had disappeared and

that its place had been taken by the Abu 'l-Manâdjia canal (cf. Wüstenfeld, *op. cit.*, 25 f.); Maspéro-Wiet, *op. cit.*, 105). According to 'Alî Pasha Mubârak, there was only a small canal in his time: the Tur'at al-Sardûsiyya. Ibn Khallikân, Buṭrus al-Bustânî and 'Alî Pasha Mubârak give several scholars who bore the *nisba* al-Kalyûbi. The best known of them is Shihâb al-Dîn al-Kalyûbi [q.v.].

**AL-KALYÜBÎ**, AḤMAD B. AḤMAD B. SALÂMA, SHIHÂB AL-DÛN, an Arab author, pupil of the celebrated Shâfi'î faḳîh Shams al-Dîn (al-Shams) al-Ramlî (d. 1004/1596), was regarded in his day as an unchallenged authority and died towards the end of Shawwâl 1069/July 1659. He composed numerous works, of which 21 have survived, in the fields of *fiqh*, geography, medicine, secret sciences and *adab*. To the 17 works mentioned by Brockelmann, II, 364, we have to add: 1. a *Kitâb al-Mudjarrabat* in Göttingen (see *Verzeichn. der Hss. im Preuss. Staate, I. Hannover*, 3. Göttingen, iii, Berlin 1894, no. 100); 2. *Mi'vâdjî al-nabi* in the Zâhiriya or 'Umûmiya in Damascus (see Ḥabîb al-Zayyât, *Khazâ'in al-kutub fî Dimashk wa-dawâhîhâ*, Cairo 1902, 74, no. 40; Houtsma, *Cat. d'une coll. de Mss. arabes et turcs* . . ., Leiden 1889, no. 241); 3. *Risâla fî ma'rifat asmâ' al-bilâd wa-urûḥâ wa-afwâhâ* in Princeton (see Littmann, *A list of Arabic Mss. in Princeton Univ. Library*, Princeton-Leipzig 1904, 9, no. 40; 4. a *K. Hikâyât*, anecdotes of pious individuals, different from the *K. al-Nawâdir* in the Brit. Mus. (see Ellis and Edwards, *A Descr. List of the Arabic Mss. acquired . . . since 1894*, London 1912, 62, Or. 7018). Of his works there have been printed: 1. *Hâshiya* to al-Mahallî's (d. 864/1400) commentary on al-Nawawî's *Minhâdjî al-fâlibîn*, along with the *Hâshiya* of Shihâb al-Dîn al-Burullusî, Cairo 1306, 1318, 4 vols.; 2. *K. al-Ṣalawât*, Bülâk 1300; 3. *al-Tadhkira fî 'l-Ṭibb*, on the margin of al-Suwaydî's *Tadhkira*, Cairo 1302, alone Cairo 1305; 4. *Hikâyât gharîba wa-'adjiḅa* or *Hikâyât wa-gharâ'ib wa-'adji'ib wa-laḅâ'if wa-nawâdir wa-fawâ'id wa-nafâ'is*, usually briefly quoted as *Nawâdir al-Kalyûbi*, which was only assembled after his death (see *The Book of Anecdotes, Wonders, Marvels, Pleasantries, Rarities and Useful and Precious Extracts*, ed. by W. Nassau Lees and Mawlâwî Kabîr al-Dîn, Calcutta 1856, 1864, also in Cairo several times since 1274, last ed. 1323, 1328, the conclusion of which differs from the Calcutta edition.

**Bibliography:** Muḥibbî, *Khulâṣat al-aḥar min*

*a'yân al-harn al-hâdî 'aṣḥar*, i, 175; after this 'Alî Bâṣha Mubârak, *al-Khîṭaṭ al-djâdida*, xiv, 118; Sanguinetti, in *JA*, 1865, ii, 351; Leclerc, *Hist. de la Médecine arabe*, Paris 1876, ii, 303; Brockelmann, II, 364. (C. BROCKELMANN\*)

**KALYÜN** [see BAHRIYYA and SAFÎNA].

**KAMÄL** [see KEMÄL]

**KAMÄL AL-DÛN IBN AL-'ADÛM** [see IBN AL-'ADÛM].

**KAMÄL AL-DÛN AL-FÄRISÎ**, MUḤAMMAD IBN AL-ḤASAN, ABU 'L-ḤASAN, was the brilliant student of the great scientist Kuṭb al-Dîn al-Shîrâzî (634/1236-710/1311), and thereby the intellectual heir of Naṣîr al-Dîn al-Ṭûsî (597/1201-672/1274) and of the so-called "School of Marâgha" and its successor at Tabriz. His most impressive work is the *Tanḳîḥ* on the *Optics* of Ibn al-Haytham (ca. 354/965-430/1039), to which he added appendices on the refractions and reflections of a sphere, the rainbow, the halo, the *camera obscura*, and other topics in optics. His theory of the rainbow is particularly important as he demonstrates the combinations of refractions and reflections of sunlight within a drop of water that result in both the primary and the secondary rainbows; his investigations of celestial and meteorological phenomena with the *camera obscura* were brilliantly conceived and executed. Unfortunately, this work has been little studied.

Besides the *Tanḳîḥ*, works by Kamäl al-Dîn existing in manuscript are: *Tadhkirat al-abbâb* (e.g., Köprülü 941, fols. 128v-136, copied at Baghdâd in 737/1337; cf. Hâdjîdjî Khalîfa, ii, 257), on "friendly numbers"; *Asâs al-kawâ'id fî usûl al-fawâ'id* (Köprülü 941, fols. 1-128v, and in other Istanbul manuscripts; see M. Krause, *Stambuler Handschriften*, 509, and cf. Hâdjîdjî Khalîfa iv, 471), a commentary on the *Fawâ'id bahâ'iyya*, a mathematical treatise by 'Abd Allâh b. Muḥammad al-Khaddâm (b. 643/1245); and *Kitâb al-baṣâ'ir fî 'ilm al-manâzîr* (see Krause, *ibid.*), an independent work on optics. Nothing further is at present known of these works.

**Bibliography:** There are articles on Kamäl al-Dîn in Suter, 159, and Brockelmann, II, 273 and S II, 295. The *Tanḳîḥ* was published at Haydarâbâd-Deccan in 2 vols., 1347-8/1928-9. Various sections of it are discussed by E. Wiedemann, *Ueber die Brechung des Lichtes in Kugeln*, in *Sitz. Phys.-Med. Soz. Erlangen*, xlii (1910), 15-38 (repr. in his *Aufsätze*, i, 597-640); *Eine Zeichnung des Auges*, in *Zentralbl. f. Augenheilk.*, xxxiv (1910), 204 ff.; *Zur Optik von Kamäl al-Dîn*, in *Arch. Gesch. Naturw. Techn.*, iii (1912), 161-77; and *Theorie des Regenbogens*, in *Sitz. Phys.-Med. Soz. Erlangen*, xlvi (1914), 39-56 (repr. in his *Aufsätze*, ii, 69-86); and by M. Nazîf, *Al-Ḥasan ibn al-Haytham*, 2 vols., Cairo 1942-3, *passim*. (D. PINGREE)

**KAMÄL AL-DÛN ISMÄ'IL** (better known as KAMÄL ISMÄ'IL-I IṢFAHÂNÎ), a Persian poet of the Saldjûki-Khârazmshâhi period and a distinguished master of the so-called 'Irâkî School in Persian poetry. His father, Djâmâl al-Dîn Muḥammad b. 'Abd al-Razzâk, was also an eminent poet and upon his death (ca. 588/1192) Kamäl, when still under 20 years of age, composed elegies and panegyrics which secured him the protection of local patrons as heir to his father.

Although some scholars put his father far above him (see for instance Ulugh-Beg's judgement in Dawlat-Shâh, ed. E. G. Browne 1901, 141-2; cf. *Ta'rikh-i Ḥasim*, Bombay 1322 AH, 36-8), his reputation as a panegyrist has overshadowed that of his father.

Of his life very few details are known. He seldom left Iṣfahân, his native town, whence he sent pane-

gyrics to various patrons elsewhere. Nevertheless, he travelled to **Kh**̄wārazm, and visited Rayy, **Ni**shāpūr and **Ṭabaristān**, a journey which, he himself says, took no less than three years. The resentment of local patrons, the death of a son by drowning and the loss of a brother, physical sufferings, especially dry scab (*dj̄arab*), ophthalmia, and tooth-ache, are the other autobiographical details which he mentions in his *diwān*. Kamāl devoted a large part of his work to the praise of the leaders of two patrician families of **Iṣfahān**, the **Sh**āfi'ī **Āl-i Khudjand** and the **Ḥanafi** **Āl-i Ša'īd**. Among other patrons to whom he dedicated panegyrics are: 'Alā al-Dīn **Tekīsh** (568/1172-596/1199) and Sultan **Djalāl al-Dīn** [q.v.] (617/1280-628/1230) of the **Kh**̄wārazmshāhs [q.v.], **Atābak Sa'd b. Zangī** (ca. 594/1198-623/1226) and his son **Abū Bakr** (623/1226-658/1260) of the **Salghurids**, and **Husām al-Dawla Ardashīr** (d. 602/1205) and his son **Sharaf al-Mulūk Ḥasan** (d. 602/1205) of the **Ispahbads** of **Ṭabaristān**. He also wrote mystical odes in honour of the well-known **Shihāb al-Dīn 'Umar-i Suhrawardī** [q.v.] (d. 632/1234), to whom he is said to have paid homage as a devotee (*murīd*). He apparently did not meet the *shaykh*, but certainly received letters from him since a unique copy of at least one letter has survived (see *MDAT*, 14). **Dawlat Shāh** tells us that toward the end of his days, Kamāl adopted an ascetic life and retired to a hermitage situated outside **Iṣfahān**, where he was tortured and killed by the **Mongols**. According to **Dawlat Shāh**, this happened in 635/1237-8. Other sources give 628/1230-1 and 639/1241-2, both improbable.

As a panegyrist Kamāl is admired and imitated by no less a poet than **Hāfiẓ**. His poetry is polished and rich in original ideas. The honorific title **Kh**hallaḡ al-Ma'ānī (Creator of Subtle Ideas), by which he is mentioned in some *tadhkiras*, does not occur earlier than **Djāmī** and **Dawlat Shāh**; it refers to the fertility of his imagination and his fine poetic figures, for which even the uncompromising **Shams-i Kay**s praised him (*al-Mu'djam*, ed. **Tehran Univ.**, 360). He also wrote *ghazals*, quatrains, satires and obscene verses, in all of which the social conditions of his troubled time are mirrored. A short satirical *mathnawī*, a Persian letter addressed to an unknown friend, and an Arabic pamphlet dealing with the bow (*Risālat al-Kaws*), are among his other works.

*Bibliography*: For recent works published in Persia, including the literature of the *tadhkiras*, see: **A. Khayyām-Pūr**, *Farhang-i Sukhanvarān-i Iran*, **Tabriz** 1340 S., 487-8; **Kamāl al-Dīn Ismā'il's Kulliyāt** has been lithographed in **Bombay** 1307. A new edition of the *Diwān-i Khallāḡ al-Ma'ānī Abū'l-Faḡl Kamāl al-Dīn Ismā'il Iṣfahānī has recently been published by **H. Bahr al-'Ulūm**, **Tehran** 1349 S. See also: *The hundred love songs of Kamāl Ad-Dīn of Iṣfahān*, tr. by **L. Gray** and rendered in English verse by **Ethel W. Mumford**, **London** 1930. The whole text of the *Risālat al-Kaws* is given in the *Maḡālī' al-Budūr* of 'Alā' al-Dīn 'Alī b. 'Abd Allāh al-Bahā'ī, 1299, ii, 167-72; **H. Ritter**, in *Philologica*, vii, no. 20, in *Isl.*, xxi, ascribes to him a *mathnawī* on mystical love which is not to be found in the published *diwāns*. Further references are in: **C. Rieu**, *Cat. of Pers. Ms. in the B.M.*, ii, 850-51; **H. Ethé**, *Neupersische Literatur*, in *Gr.I.Ph.*, ii, 269; **Browne**, ii, 540-42; **A. J. **KAMĀL AL-DĪN SHĪR 'ALĪ** [see **BANNĀ'Ī**].

**KAMĀL KHUDJANDĪ** (KAMĀL AL-DĪN MAS'ŪD), Persian lyric poet and mystic, was born in **Khudjand** (Transoxania), later settled in **Tabriz**, where he lived the rest of his life and, according to **Kh**̄wādamīr, died in 803/1400-1. **Kamāl Khudjandī's** modest *diwān* contains short, exquisite *ghazals* of five to seven verses with love, *Lebenslust* and frustration as central themes, and permeated with a deep pantheistic mysticism reminiscent of the school of **Ibn al-'Arabī** and **Djalāl al-Dīn Rūmī**. True to the tradition of the great Persian mystics, he never condescended to write panegyrics on potentates, and was often critical of the 'ulamā' (even in his capacity as *Shaykh al-Islām*) and the temporal authorities. **Hāfiẓ** held **Khudjandī** in high esteem and exchanged poems with him. Revered and much visited by the people, the shrine of **Shaykh Kamāl** was long regarded as a sanctuary.

**KAMĀL PASHA ZĀDE** [see **KEMĀL PASHA ZĀDE**].

**KAMĀNICA** [see **MALĀHI**].

**KAMĀNICA** (KAMIENIEC, KAMENETZ PODOLSKI), a fortress town of the Ukraine, situated in the region known as **Podolia**. **Kamānica** rose to prominence as a stronghold guarding the southern border of **Lithuania** and (after 1432) of **Poland** against the incursions of the **Tatars**. It was important, too, as a station on the commercial route extending from the **Black Sea** and **Moldavia** to **Poland** and the **Baltic**. The fortress occupied a position of great strength on a high spur of rock, a little above the confluence of the **River Smotric** with the **River Dnestr** (cf. **Dupont**, 29, who describes it as "le boulevard de la chrétienté dans cette partie de l'Europe"). **Ottoman** forces appeared before **Kamānica** in 1042/1633 (*Fedhlike*, ii, 160). Not until the **Polish-Ottoman** conflict of 1083-7/1672-6, however, did the town become subject to the **Turks**, falling to the **Grand Vizier Aḥmed Köprülü** in the first year of the war (1083/1672). **Kamānica** was not destined to remain for long under **Ottoman** rule, being returned to **Poland** in 1110/1699 at the **Peace of Karlowitz** which brought to an end the **War of the Sacra Liga** (1684-99). The town passed into the hands of **Russia** at the time of the **Second Partition of Poland** in 1793. In 1918, at the end of **World War I**, it reverted to **Poland** once more, but since 1945 it has been included in the **U.S.S.R.**

AL-KAMAR (A.), the Moon.

I.—Astronomy.—Al-Kamar is the one celestial body that in fact orbits the earth as mediaeval Muslim astronomers, following their predecessors, assumed all seven “planets” to do. The actual motion of the moon in its orbit is extremely complicated, as it is effected by a combination of the gravitational pulls of the sun and of the earth. It was a major aim of Muslim astronomers to devise a cinematic model that would enable them to predict this motion accurately, as several lunar phenomena, and in particular the first visibility of the lunar crescent after conjunction (*ru'yat al-hilâl*), which determines the beginning of a month, were of great significance to them. They did not fully succeed in their efforts, though they did conceive of a model essentially identical with that of Copernicus.

Among the pre-Islamic Arabs as among the Muslims, the basic calendaric unit was the lunar month, which began at the sunset following the first visibility of the lunar crescent after the moon's conjunction with the sun. The length of this month varies in accordance with the effects of two variables, the solar velocity and the lunar velocity; but in the mean the length of the lunar month is very close to  $29\frac{1}{2}$  days, which can be accounted for by alternating months of 30 days (full) with months of 29 days (hollow). For several centuries before Muḥammad the Arabs intercalated months when necessary to make the lunar months fall within the same season every year (see al-Bīrūnī, *Chronology*, ch. 5; Abū Ma'shar in *JA*, ser. V, xi (1858), 168-78 and Nallino, *Raccolta*, v, 156-8), but Muslims allow the months to “wander” with respect to the solar year.

One method of intercalation of the pre-Islamic Arabs according to al-Bīrūnī was essentially by observation of the *manzil* (lunar mansion) occupied by the moon at first crescent. The risings of the 28 *manāzil* [q.v.], which are individual stars or groups of stars that the moon conjoins with roughly at the rate of one each night of a sidereal month, were originally used for weather-predictions (e.g., in the *Kitāb al-Awā'ib* of Ibn Kūṭayba), but the conjunctions of the moon with these *manāzil* later became an important

element of catarchic astrology on analogy with the Indian usage of the conjunctions of the moon with their 27 or 28 *nakṣatras*. In general, the moon plays an important role in astrology as the transmitter to the world of the four elements of the influences of all the higher celestial spheres as well as of its own.

Muslim astronomers date the epoch of their era, the *Hiđra*, variously at sunset of 14 or 15 July 622 A.D. Each normal year thereafter contains 354 days. But, because of the slight inaccuracy of the estimate of  $29\frac{1}{2}$  days in a synodic month, an intercalation-cycle is employed according to which 11 years out of every 30 contain 355 days. The earliest known such intercalation-table, the *Muđjarrađ*, is for 210 years ( $30 \times 7$ ), so that the weekdays on which years and months begin are also cyclical; it occurred in one of the works of al-Fazāri (*fl.* 145/762 - ca. 174/790) (D. Pingree, in *JNES*, xxix (1970), 110-1), but is often repeated thereafter.

The earliest Muslim theories of lunar motion were based on Indian and Indo-Sasanian developments of Greek theories as found primarily in the *Ziđi al-Sindhind* and in the *Ziđi al-Shāh*. In these theories there was only one inequality in lunar motion—that explained by the assumption of an epicycle on whose circumference the moon (or rather the moon's apogee) rotates in the opposite sense to the rotation of the centre of the epicycle on the circumference of the deferent (see, e.g., D. Pingree on *Māshā' llāh's De elementis et orbibus coelestibus*). Rather crude “Indian” methods of estimating the time of the occurrence of the first visibility of the lunar crescent are often found in the early Muslim astronomers (see, e.g., E. S. Kennedy on Ya'qūb ibn Ṭāriq in *JNES*, xxvii (1968), 126-23), as are also Indian procedures for computing lunar parallax in latitude (see, e.g., O. Neugebauer, *The Astronomical Tables of al-Khwārizmī*, Copenhagen 1962, 71-2 and 121-6, and E. S. Kennedy in *Isis*, xlvii (1956), 33-53). In general, Muslim lunar eclipse-theory is Ptolemaic.

During the third century after the *Hiđra* Muslim astronomers gradually adopted Ptolemaic models of planetary motion, retaining from the earlier material mainly some new parameters and the use of sine and related functions in place of chords. For the moon Ptolemy hypothesized a deferent circle whose centre rotates on a small circle about the earth (the “crank-mechanism”) in the direction opposite to the order of the signs at the rate of double the moon's elongation from the sun. On the circumference of the deferent in the direction of the order of the signs rotates the centre of the lunar epicycle at the rate of the moon's mean velocity. On the circumference of the epicycle in the direction opposite to the order of the signs rotates the moon itself at the rate of its anomalistic motion. The plane of this mechanism is inclined to that of the plane of the ecliptic, and the diameter of the intersection of the two planes rotates in the direction opposite to the order of the signs at the rate of the moon's nodal motion. Further, the apogee of the lunar epicycle, from which point the moon's anomalistic motion is counted, is not the intersection of the line extending from the earth through the centre of the epicycle with the epicycle's circumference, but the intersection of the line extending from the point on the little circle about the earth opposite to the centre of the deferent through the centre of the epicycle with the epicycle's circumference (prosneusis). The choice of different parameters (that is, ratios of the radii of the three circles to each other, rates of (mean) motion of the moon, the sun, the lunar anomaly, and the lunar node, and

inclination of the lunar orbit) for use in this model will lead to different predicted longitudes and latitudes for a given time, and generally Muslim astronomers simply adjusted the parameters so that these predicted longitudes and latitudes would better conform to observed or otherwise determined "true" longitudes and latitudes.

There are two principal exceptions to this rule. Astronomers at Marāgha in the late 7th/13th century began a process of revision of the Ptolemaic planetary models in order to obtain more "perfect" models in which all motion is circular and constant about the circle's centre and in which, for the moon, its distance from the earth at quadrature is not as small an amount as will result from Ptolemy's model. The culmination of these efforts lies in the brilliant work of Ibn al-Shāṭir (*fl.* 750/1350) of Damascus, whose lunar model is essentially identical with that of Copernicus; the latter must somehow be dependent on the former. Ibn al-Shāṭir achieves his desired result by replacing the circle about the earth on which the centre of the deferent revolves according to Ptolemy with a second epicycle bearing the moon, whose centre revolves on the circumference of the first epicycle (see V. Roberts in *Isis*, xlviii (1957), 428-32; F. Abbud in *Isis*, liii (1962), 492-9; and E. S. Kennedy in *Isis*, lvii (1966), 365-78). The second revision was due to the Jewish astronomer Levi ben Gerson (1288-1344) of Orange in southern France. His complicated lunar models will be described in a major forthcoming publication by B. R. Goldstein (meanwhile see B. R. Goldstein in *Proc. Israel Acad. Sci. Hum.*, iii (1969), 239-54). The "Aristotelian" model of al-Bīrūnī (B. R. Goldstein, *Al-Bīrūnī*, New Haven 1971, i, 36-9 and 142-54) is no improvement over Ptolemy's.

One other problem relating to the moon that interested Muslim scientists was that of the nature of its light, or rather in what fashion the moon's light depends on the sun's. This problem was of prime importance for Ibn al-Haytham, whose treatise *Fī daw' al-kamar* (ed. in his *Madīmi' al-rasā'il*, Haydarābād-Deccan 1357/1938; cf. M. Schramm, *Ibn al-Haytham's Weg zur Physik*, Wiesbaden 1963, 70-189) is the most original mediaeval discussion of the matter.

II.—Folklore, literature, art, etc.—The moon played an important role in pre-Islamic Arabia. Lunar cults had a significant place there, though this has perhaps been exaggerated, but the Mesopotamian lunar god Sin undoubtedly became the supreme god of Ḥaḍramawt. The Bedouins of central Arabia, who carried on many activities during the night in order to avoid the heat of the day, revealed their interest in the moon through, among other things, a rich vocabulary designating its aspects and phases, the various nights of the lunar cycle, etc., as well as through kinds of rhyming riddles, questions posed to the moon which it is supposed to answer. The phases were sometimes likened to the progressive entry of the moon into a sheath (*ghilāf*), which was compared with a foreskin.

In Islam, apart from the moon's leading role as the regulator of the canonical acts, in scholarly astronomical theory and in the calendar of lunar mansions inherited from ancient Arabia [see ANWĀ'], one of the astrological processes, that of *ihhtiyārāi* [*q.v.*] (*electiones*), was based on the moon's position in one of its mansions at the moment that a given action took place. In a vaguer sense, the idea of a lunar influence on all sorts of natural phenomena was widely held. A cyclical theory of universal history considered the epoch inaugurated by Muḥammad as a lunar era.

In alchemy, silver is under the influence of the moon. Numerous magical and divinatory systems relate the moon to, for example, the skin and the bones of the skull, Monday, the feminine sex, the letter *djīm*, etc.

In literature, the moon features in many poetical similes. The human face, especially that of a beautiful woman or a handsome young man, is often compared with the full moon (*baḍr*). Frequent similes employ the crescent moon. Such comparisons are generally laudatory. Some poets, however, apparently employing Bedouin maxims, lay stress on the deficiencies of the moon, in a manner which seems sacrilegious to literary theorists. The mystics sought to make it the symbol of ineffable realities, a symbolism reflected especially in Persian and Turkish poetry.

The crescent sometimes appears in Muslim painting, but mainly at a later date in India under European influence. Above all, however, it is a decorative theme, stemming from pagan religious symbolism. In astrological treatises representations of the moon derive from Babylonian models by way of orientalised Hellenistic imagery.

Popular traditions of many kinds, handed down from antiquity, associate the moon with particular agricultural practices, attribute particular illnesses to its influence, and so on; from it are derived meteorological predictions, omens and various signs. Popular literature, proverbs and riddles often refer to the moon. Likewise, it is often personified. In many cases this is no more than a rhetorical device, but often too a true personalization is involved. The vocabulary and tales usher in a whole sub-mythology which is rarely accompanied by associated popular ritual practices, and yet God is never absent. The Moon, although subject to God, has its own power. It is said to have rendered homage to Muḥammad through a miracle which places the apocalyptic forecast of the Qur'ān (LIV, i) "the Moon has been split", in the Prophet's day. Eclipses particularly induced mythological figurations. Popular magical practices in the Maghrib make appeals to the Moon.

Place-names bear traces of ancient lunar cults, and personal names often incorporate the moon. The

crescent, always employed as a decorative motif, eventually became the emblem of Islam to Europeans, and was adopted as such by the Ottoman empire in the 19th century [see HİLĀL].

Pre-Islamic astral paganism endured for many years among the "Sabeans" of Ḥarrān, who invoked the Moon, among other deities. Traces of its influence can be found among the Yazīdīs and also the Nuṣayrīs of Syria, where 'All and Salmān are identified with the moon and where a religious sub-group is called the *ḵamariyya*.

*Bibliography*: Apart from the articles cited above, see M. Rodinson, *La lune chez les Arabes et dans l'Islam, in La lune, mythes et rites*, Paris 1962 (coll. *Sources orientales*, 6), 153-215, where the relevant references will be found. (M. RODINSON)

**KAMARĀN**, coralline island (with numerous small islets) in Yemeni territorial waters, less than three miles from the Salif peninsula, 200 miles north of Perim; its length is 14 miles, its maximum breadth 6 miles, its area 22 sq. miles. The impoverished inhabitants, who number between 1000 and 3000, are Sunnīs of mixed origin (Adeni, Ethiopian, Somali, Indian); they cultivate cotton and fish for pearls.

At the end of the 4th/10th century the king of Yemen kept prisoners on Ḵamarān; in the first half of the 10th/16th century the island was occupied and fortified by the Portuguese. In the second part of the 19th century Turkey, by virtue of the international health regulations, established there a quarantine station for pilgrims arriving through Bāb al-Mandab; they used to contract a disease called in Mecca "Ḵamarān sickness". In June 1915, as the Turks were attacking Aden, Ḵamarān was occupied by the British. Turkish sovereignty on all Red Sea islands ceased in 1923 under Article 16 of the Treaty of Lausanne. The quarantine station had passed under British administration; Holland became a participant in 1928, Italy in 1938; the Anglo-Italian Agreement provided that Great Britain should not "establish its sovereignty or erect fortifications or defences" on the island. When the quarantine station was closed in 1952, thanks to improvements in health controls on the mainland, it was said to receive 100,000 pilgrims yearly.

The international status of Ḵamarān is peculiar: in 1948 the Ḵamarān Order in Council declared that the United Kingdom had "power and jurisdiction" over the island and appointed the Governor of Aden as Governor of Ḵamarān, stating however that the island was not part of Aden Colony or of the Aden Protectorate, and that the Foreign Jurisdiction Act applied to it "as if it were a British colony or possession", a formula resembling that of trusteeship agreements (mandates). Since 1928 Yemen has constantly and unsuccessfully claimed sovereignty over Ḵamarān and protested against British concessions for oil research on it (the one given in 1955 to the D'Arcy Exploration Co. proved fruitless). On 1 December 1967 the "Peoples' Republic of South Yemen", following a British communication to the United Nations dated 30 November 1967 to the effect that the Kurya Murya islands would be restored to the sultan of Maṣḳat, issued a decree naming its own governor for Kurya Murya, Perim and Ḵamarān.

**KAMḤ**, the name for wheat in Syria and in Egypt; in 'Irāk wheat is called *ḥinṭa* and in Arabia it was called *dhurr*. These different words are also used in the literary Arabic of the western and eastern provinces of the Muslim empire.

Wheat was the main grain crop in the Near East from the beginning of the Muslim period (and much earlier), while in Europe in the Middle Ages even the upper classes ate bread made from barley and rye. The predominance of wheat among cereals distinguished Muslim countries from the Far East also, as Chinese travellers observed.

Muslim physicians recommended abstention from other bread and literary evidence shows that in the caliphal period only the poor classes of southern 'Irāk ate rice bread. In *Ḵhūzistān* and in some Caspian provinces, such as Māzandarān, however, there were extensive rice plantations or rice was even predominant. But in the central provinces of the Muslim world people ate bread made of cereals other than wheat only in times of distress, e.g., famines, or when the general prosperity had declined considerably, as in Egypt at the end of the 9th/15th century. Bread made of barley was the food of ascetics.

The accounts of the 'Irākī treasury of the 3rd/9th century, which have come down to us in extracts included in the works of the geographers Ḵudāma b. Dja'far and Ibn *Ḵhurradādhbih*, contain information on the quantities of wheat and barley received as taxes in kind. These figures point to a slight predominance of barley, but this cereal was used for animal fodder. Furthermore, the accounts show that barley was grown mainly in districts where the soil was apparently less adapted to wheat growing. It is worth noting that the equilibrium between wheat and barley was a striking feature of agriculture in 'Irāk from Sumerian times and is still characteristic at the present day. In the days of the caliphs Upper Mesopotamia produced great quantities of wheat which were shipped to southern 'Irāk. In Syria the provinces of Ḥamā, Ḥimṣ and Ba'labakk, and particularly the Ḥawrān, were veritable granaries, supplying the surrounding regions with wheat. In Palestine wheat of excellent quality was grown in the coastal plain, so that al-Muḵaddasī could praise the quality of the bread of Ramla. Egypt, which had earlier supplied Rome and Constantinople with wheat, exported it in the days of the caliphs and their successors to the *Ḥijāz* and to other countries. The main wheat-growing region was the Ṣa'īd, the southern part of the country. Arabic authors emphasize that some types of Egyptian wheat were unequalled. Barley-growing had been decreasing in Egypt before the Muslim conquest and probably continued to decline thereafter. European travellers who visited Egypt in the 8th/14th century dwell on the excellent quality of its wheat bread. So over many centuries the predominance of wheat remained unchanged. Throughout the coastal regions of North Africa wheat was produced and was the staple food, at least of the town-dwellers. Speaking of the province of Būna, the geographer Ibn Ḥawḳal says that wheat and barley were so plentiful that their quantities could not be measured. The Muslim merchants of North Africa exported wheat to the countries then called *Gḥāna* and Takrūr, now part of Senegal and Mali.

The predominance of wheat was universal in

Muslim lands. Only in very dry regions, such as Kirmān and Nubia, was *dhura* (sorghum) grown. Of course the wheat grown was not of the same variety elsewhere. The geographer al-Bakrī says that in the province of Sijilmāsa, in western Morocco, there was grown a small-grain "Chinese" wheat. All the texts quoted so far refer to the golden age of Muslim civilization. In the later Middle Ages the cultivation of wheat declined in many regions of the Muslim world, as regards both the extent of the areas cultivated and the quality of the grain, this being a result of bedouinization.

The papyri, the Arabic chronicles and the writings of various Arabic authors contain extensive data on the prices of wheat and of barley. In the Near East in the 'Abbasid period their price ratio was 2:1 and in the later Middle Ages 3:2. It is evident that grain prices rose under the Umayyad and the 'Abbasid caliphs, both in 'Irāk and in Egypt, by 900 per cent or even more. Prices in Egypt were however much lower than in 'Irāk. From the end of the 4th/10th century the price of wheat began to fall in 'Irāk and from the end of the 5th/11th century in Egypt, a fact probably connected with the main trends of demographic development: the growth of population (i.e., of consumers) in the caliphal period and the decrease from the period of the Crusades.

The measures in which the grain prices are given are in the classic period the *kurr* (2925 kg.) in 'Irāk, the *ghirāra* (208.8 kg.) in central Syria, the *makkūk* of Aleppo (about 82 kg.), the *tillīs* (67.5 kg.) and later the *irdabb* (69.6 kg.) in Egypt and various *mudd* in the provinces of North Africa.

**KĀMIL** [see 'ARŪP].

**KĀMIL, MUṢṬAFĀ** [see MUṢṬAFĀ KĀMIL].

**AL-KĀMIL** (AL-MALIK), title of two Ayyūbid princes.

1) AL-MALIK AL-KĀMIL NĀṢIR AL-DĪN ABU 'L-MĀ'ALĪ MUḤAMMAD, the eldest son of al-'Ādil [*q.v.*] Abū Bakr b. Ayyūb, born 573/1177 or 576/1180. In 595/1199 he left the D̲jazīra, where he had begun his political career as his father's representative (from 587/1191), to come to the aid of al-'Ādil at Damascus in his struggle against al-Afdal b. Ṣalāḥ al-Dīn. After the latter's defeat, father and son marched into Egypt, entering Cairo on 22 Ramaḍān 596/6 July 1200. Al-'Ādil was proclaimed sultan of Egypt and Syria. After the formal investiture by the caliph in 604/1207, al-'Ādil distributed his provinces between his sons [see AL-'ĀDIL]; al-Kāmil was to remain viceroy of Egypt for the rest of his father's reign. In 604/1207 he moved his residence to the newly finished Ka'at al-D̲jabal.

In Ṣafar 615/May 1218 the Franks made an un-

expected attack on Egypt (fifth Crusade [see CRUSADES]), landing at Dimyāt [*q.v.*]. Al-Kāmil was unable to prevent their capture of the Burđj al-Salsala (Tower of the Chain), the main stronghold of the harbour. Shortly after receiving news of this, al-'Ādil died in his camp near Damascus (Friday 7 D̲jumādā II 615/31 August 1218), and al-Kāmil became sultan of Egypt and supreme head of the Ayyūbid realm. On 25 Ṣha'bān 616/5 November 1219 the Franks finally succeeded in conquering the town of Dimyāt. For nearly two years al-Kāmil was able to hold them at bay from his new camp, called al-Manṣūra, south of Dimyāt, until the combined forces of al-Aṣḥraf [*q.v.*], al-Mu'azzam [*q.v.*] and other Ayyūbid princes, following their brother al-Kāmil's demand, reached Egypt in August 1221. The Franks, who had lost irretrievable time, tried to march against Cairo, but were encircled from all sides and after heavy fighting were forced to surrender (7 Rađjab 618/27 Aug 1221) and to leave Egypt: the fifth Crusade had reached its inglorious end.

The second period of al-Kāmil's reign was marked by the struggle for the leadership among the Ayyūbid brothers: al-Kāmil against al-Mu'azzam of Damascus (1221-1227) and—after the latter's death—against al-Aṣḥraf, who succeeded him (1227-1237).

As early as 619/1222 al-Aṣḥraf visited his brother in Cairo, and they concluded an alliance against al-Mu'azzam, who subsequently had to give way to al-Aṣḥraf in two separate disputes (succession at Ḥamāt, 619/1222; possession of Akhlāt [*q.v.*]). An alliance between al-Mu'azzam and the Khwārazmshāh Djalāl al-Dīn [*q.v.*], concluded during 622/1225, tilted the balance of power, and al-Aṣḥraf was compelled to seek an arrangement with his brother. In Ṣhawwāl 623/September 1226 he went to Damascus to submit to al-Mu'azzam and to renounce his supremacy over Ḥimṣ and Ḥamāt; until D̲jumādā II 624/May-June 1227 he was forced to remain as *de facto* prisoner. The Ayyūbid realm was on the verge of dividing into two states when the situation was completely altered by the sudden death of al-Mu'azzam (Friday, 1 Dhū 'l-Hiđđja 624/12 November 1227). His son al-Malik al-Nāṣir Dā'ūd [*q.v.*], a youth of 21 years, at once submitted to al-Kāmil, recognizing his supremacy.

In the same year 624/1227 rumours of a new Crusade reached Cairo. Presumably considering the situation desperate, al-Kāmil contacted Frederick II, offering him all Saladin's conquests. Frederick II accepted, and on 7 September 1228 landed at Acre. After hard bargaining the famous treaty which delivered Jerusalem to the Franks was signed on 11 February 1229.

Al-Kāmil's cordial relations with his nephew al-Nāṣir did not last. At a meeting with al-Aṣḥraf at Tell al-'Ađiūl (near Ghazza), he therefore agreed that al-Nāṣir should cede Damascus to al-Aṣḥraf; a treaty was signed at the end of 625/1228. The two brothers then marched against the Syrian capital. After a short siege, al-Nāṣir surrendered (21 Rađjab 626/15 June 1229) and had to accept the fortresses of al-Karak and al-Ṣhawbak in exchange. Damascus was handed over to al-Aṣḥraf; al-Kāmil was recognized as overlord of the realm. Princes favouring al-Kāmil were installed in all the minor principalities and took over al-Aṣḥraf's possessions in the D̲jazīra, thus further enhancing al-Kāmil's influence and control.

After a prolonged visit to the D̲jazīra, al-Kāmil returned to Egypt in Rađjab 627/May 1230, but only two years later the situation demanded his return. He marched to Salamiyya to prepare with the assem-

bled Ayyūbid princes against an expected attack by the Mongols. As no attack materialized, he decided to expel the ill-famed Artuqid ruler of Āmid, al-Mas'ūd Rukn al-Dīn Mawdūd (Dhu 'l-Hidjja 629/October 1232). The Artuqid soon surrendered and was sent into captivity at Cairo. Ḥiṣn Kayfā, the other important fortress of the prince of Āmid, capitulated soon afterwards and was given to al-Kāmil's son Naḍīm al-Dīn Ayyūb, who in 634/1236 also took over Āmid. Even in the Dījazīra al-Kāmil had become the most powerful sovereign, so that the other Ayyūbid princes were bound to feel threatened by him.

Al-Kāmil returned to Cairo in about Djumādā I 630/February-March 1233, but his stay was once more brief. The capture of Akhlāṭ by the sultan of Rūm Kayqobād [q.v.] (at the end of 629/1232) led him to mount a general attack on the Saldjūqs of Asia Minor; probably he planned to transfer—after the expulsion of the Saldjūqs—the Ayyūbid princes from Syria to Asia Minor, Syria to be governed as a unitary state like Egypt. The invasion began from Salamiyya in Ramaḍān 634/June 1234, but failed. The distrust and opposition of the Ayyūbid princes then forced al-Kāmil to abandon his plans; he returned to Cairo in Dhu 'l-Kāda 631/August 1234, but soon he had to hurry back to repel with the help of al-Ashraf the counter-attack of Kayqobād. After a prolonged stay with al-Ashraf at Damascus, al-Kāmil then returned to Cairo in Muḥarram or Šafar 634/September-October 1236.

A new breach between al-Kāmil and al-Ashraf opened up over the succession at Aleppo. An alliance led by al-Ashraf was formed against al-Kāmil and a fraternal war seemed imminent, when al-Ashraf fell ill and after a few months died (4 Muḥarram 635/27 August 1237). His most dangerous enemy having disappeared, al-Kāmil marched against Damascus, together with his nephew al-Nāsir, to whom he had promised that city. After two months' siege Damascus surrendered (19 Djumādā I 635/5 January 1238); the coalition against al-Kāmil disintegrated. Before al-Kāmil was able to reap the fruits of his triumph (to take Aleppo and install al-Nāsir at Damascus), however, he suddenly fell ill. He died on Wednesday, 21 Raḍiāb 635/6 March 1238, and was buried in the Citadel of Damascus.

*Bibliography:* H. L. Gottschalk, *Al-Malik al-Kāmil von Egypten und seine Zeit*, Wiesbaden 1958, where all the sources are enumerated.

(2.) AL-MALIK AL-KĀMIL NĀSIR AL-DĪN ABU 'L-MA'ĀLĪ MUḤAMMAD B. AL-MUZAFFAR ŠHIHĀB AL-DĪN GHĀZĪ B. AL-'ĀDIL MUḤAMMAD [q.v.] B. AYYŪB, nephew of the preceding, sultan of Mayyāfāriḳīn [q.v.]. He succeeded his father in 645/1247 and tried in vain to come to terms with the Mongols, who had already besieged Mayyāfāriḳīn in 642/1244 and repeated their attack in 645/1247. Thereafter al-Kāmil visited al-Malik al-Nāsir [q.v.], the Ayyūbid sultan of Aleppo and Damascus, in order to persuade him to mount a joint action against the Mongols; but he failed, as al-Nāsir hoped to appease them by dispatching his ambassador, the well-known historian 'Izz al-Dīn b. Šhaddād [q.v.] (cf. H. F. Amedroz, *Three Arabic Mss. on the history of Mayyāfāriḳīn*, in *JRAS* (1902), 785-812). The Mongols under Tašmūt b. Hülāgū began the third siege of Mayyāfāriḳīn in Dhu 'l-Kāda 656/October-November 1258 and conquered the town in 658/1260, in spite of the brave resistance of al-Kāmil and the inhabitants. Al-Kāmil and his brother al-Ashraf were brought before Hülāgū [q.v.], who personally killed them both. It was said that al-Kāmil's head was carried round several towns of

al-Dījazīra and Syria and finally hung upon the Bāb al-Farādis at Damascus; it was buried there at the *masḥad* of al-Ḥusayn after the city was reconquered by the Muslims.

3) AL-KĀMIL [see ŠHĀ'BĀN].

**KĀML** (A.), lice (the individual louse being *kaṃla*; some authorities believe that *kaṃl* applies only to females and that for males the term is *ṣu'āb*, pl. *ṣi'bān*, although the latter designates rather the nits). The family to which this hemipterous insect belongs has numerous species, but Arabic does not seem to have distinguished between them, for not even the head-louse (*pediculus capitis*) and the body-louse (*p. vestimenti*) are treated separately.

Although the existence of nits which cling to the skin was known of, the louse was thought to be engendered spontaneously in human sweat and body-dirt, in places covered by hair or clothing. At birth, the louse takes on the colour of the hair in which it emerges. Some men, called *kaṃil*, are more prone than others to give rise to lice, which in such cases have longer bodies. Measures of cleanliness are therefore useless, and the best way of avoiding the increase of these parasites is to wear silk clothing, since this fabric does not suit them. This is why 'Abd al-Raḥmān b. 'Awf and al-Zubayr b. al-'Awwām, who were *kaṃils*, begged the Prophet to permit them to wear it. By a special divine dispensation, lepers are free from this pest, since they cannot scratch without danger. On the other hand, hens and pigeons do not escape them, nor do monkeys, who have many and eat them as they groom themselves.

Eating lice is of course prohibited, as is eating food with which they have come into contact. Before Islam, in periods of famine people ate *kurra*, which was flour mixed with hair, obtained from spreading the flour on the head and then shaving it, but picking the lice out of the mixture was enjoined.

The *fuḥahā'* expatiated on the conditions under which one could get rid of this most repugnant of vermin. In normal circumstances, the use of carthamus oil was recommended, or vinegar mixed with sea water, or even mercury and sesame oil. Muslims are also permitted to delouse themselves when they are neither in the mosque nor in a state of consecration (*iḥrām* [q.v.]), but they are not allowed to crush these insects with fruit stones, for this would make the latter unfit for cattle fodder. Lice are usually crushed between the nails, and women in particular enjoy the crackling noise this produces. Killing a louse in the mosque is prohibited; it must even be kept in the clothing until the person concerned leaves, although a *hadīth* permits it to be buried when the floor is suitable. In the state of *iḥrām*, the pilgrim must avoid killing vermin; a louse which affords great discomfort can be removed delicately, or even killed, but should the pilgrim engage in systematic delousing he must give alms in return for the relief he has been granted.

Seeing a louse in a dream is interpreted in slightly different ways depending on the circumstances surrounding it. The insect is also used to determine the sex of an unborn infant. A little milk from the

expectant mother is placed in the hand and the louse dropped into it; if it crawls out the child will be a girl, if not, a boy, since in the latter case the milk is thicker. Other beliefs are attached to this pest; for example, a man who throws away a living louse forgets his acquaintances.

Although translators of the Qurʾān, basing themselves on Exodus VIII, 16 ff., generally employ the word "lice" for *kummal* in VII, 130/133, where the plagues of Egypt are mentioned, commentators offer different explanations of this term, which is held to designate either crickets or a sort of moth (*ḥirdān*, *ḥalam*, etc.).

Other insects related to lice are bugs and fleas. Bugs, hemipters of the *cimex* family, are distinguished by their stench and by the odour of bitter almonds which is given off when they are crushed. They are called *baḥḥ* and *banāt al-ḥaṣīr* because they hide in the bedmatting, but they are sometimes included (see *LA*, s.v.) in the species called *baʿūd*, "mosquitoes", because the latter were regarded as a metamorphosis of the bug, as were fleas, of which, the Arabs thought, they constituted a variety. Bugs may be killed, under the same conditions as other vermin, but as they appear mainly at night and in dwelling places, they were less of a problem to the *fukahāʾ* than lice and fleas.

The latter, diptera of the *pulex* family, were called *burgḥūth*, and also Abū Ṭāfir, Abū ʿAdī, Abū Wathḥāb, Ṭāmir b. Ṭāmir, colloquial names inspired by the backward leaps they make. They are born in the earth, in dark places, at the end of winter and in early spring, and they also change into mosquitoes. They can be got rid of by the use of talismans (as in Antioch) or of a reed smeared with asses' milk or billy-goat's fat, on which they will gather in return for a promise that they will be thrown outside without being killed and to the accompaniment of the appropriate formulas. It was popularly believed that if a fox whose coat was full of fleas took a tuft of wool in his mouth then the fleas would gather on it; if he slid gently into the water, they would be drowned.

According to tradition, injuring fleas is prohibited because they woke up a prophet in time for the morning prayer. However, killing them is permitted, except in the mosque or the state of *iḥram*, and, as with lice, it is advised that they should not be thrown in the fire. At an early date the question of whether the blood (or rather excrement) of fleas on the clothing or body necessitated washing was discussed, but the majority of *fukahāʾ* consider that a few stains do not impair ritual cleanliness.

**KAMMŪN**, cumin (*Cuminum Cuminum*), an umbelliferous plant which seems to be a native of eastern Iran. At an early date it was found in the

Near East (Syria, Palestine, the upper valley of the Nile), then spread throughout the Mediterranean basin. The Hebrew is *kammōn*, Greek *kūminon*, Latin *cuminum*.

Wild or cultivated, its aromatic seeds were much sought after. Physicians recognized its many virtues: carminative, emmenagogic, sudorific, etc. in potions and in electuaries (*maʿādījīm*). Dieticians knew it as an aid to digestion.

Many varieties were known and these were variously appraised. Cumin from Kirmān [q.v.] was considered the best; pharmacists described it as *bāsīlīkūn*, "royal". After this came cumin from Fāris, Egypt, Syria, the land of the "Nabateans", and Abyssinia (*habashī*).

Allied to a determinant specifying the type of plant, the word *kammūn* was used as a generic term to designate other plants, not necessarily umbelliferous ones, which bore aromatic or medicinal seeds. *Kammūn armanī*, "Armenian" or *kammūn rāmī*, "Byzantine" was in fact caraway (*Carum Carvi*). It was also called *kammūn barrī*, "wild cumin", as it is in some regions of France, where it is known as *cumin des prés*, "meadow cumin". *Kammūn ḥulw*, "sweet cumin", was one of the names for aniseed. In Bougie, in eastern Algeria, *kammūn al-djabal*, "mountain cumin", was the name for *Meum athamanticum* JACQ. *Kammūn aswad*, "black cumin", was fennel-flower (*Nigella sativa*), a ranunculus properly called *shūnīz*. It was also known as *al-ḥabba ʾl-sawdāʾ*, the "black grain", and is called *ḥabbet el-baraka* in modern Syria.

Alongside the word *kammūn*, diffused throughout the Arab world, is found another much rarer term. The consonantal outline of this word is *s-n-w-t*, but its exact pronunciation is not known: *sannūt*, *sunūt*, or *sinnawt*? Lexicographers also give it the meaning of "honey", "fruit syrup" (*rubḥ*), "cheese" and several other condiments. This rare term appears in some *ḥadīths*; it seems to be a Yemenite word. A denominative verb, *sannata*, is attested, with the imprecise meaning of "to throw *s-n-w-t* in a pan".

The Muslim West. Seeds of cumin were cultivated and used widely, both in medicine and in cooking; they were also attributed with magical and beneficial properties. Muslim Spain differed from the rest of the Arabic-speaking world in using, alongside *kammūn*, a dialectical phonetic variant, *kāmūn*, where it seems that the reduction of the gemination was compensated for by the lengthening of the preceding vowel. This form *kāmūn* also gave rise to a derivative: *kaymūn*, *keymōn*. Here we find the mutation *ā-ū* = *ay-ū*, which is attested in Spanish Arabic dialect for other nouns of the same morphological type: *kānūn*, *tābūt*, *dāsūs* (for *djāsūs*); this may be a case of pronunciation with *imāla* [q.v.].

The Spanish word *alcamontas*, signifying a range of aromatic seeds, cumin, caraway, aniseed, fennel-flower, etc., is an Arab loan-word given a Romance plural. It is the equivalent of the *quatre semences chaudes majeures*, "four main warm herbs", of the old French pharmacopoeia. In old Spanish the original Latin name for cumin often appears in a plural form, *cominos*.

In the Maghrib, Morocco is characterized by the widespread use of the Spanish form, *kāmūn*. In the extreme north-west of the country (the regions of Tangiers and Tetuan), the variant *kaymūn* is preserved. Herbalists in Fez sell a variety of this grain called *kāmūn šofī* or *kāmūn bū-šofa*, "fluffy cumin", imported from the Tuat. A potion made from it is used to cure pains in the entrails or stomach. In the

rest of the Maghrib, it would seem, *kammün/kämmün* is the one name used for cumin.

In Tunisia *kammün* symbolizes grace, charm (*sirr*), the absolute perfection of a beauty. Its seeds, thought to generate attraction, are one of the essential ingredients of love potions. The plural, *kmāmon*, designates "an assortment of aromatic seeds: cumin, coriander, aniseed, caraway, fennel-flower, etc."; a synonym for this is the plural *srārs*, "seeds". This is an equivalent of *alcamonias* and also of the Moroccan *rās 'l-kānūt*, lit. "the essentials in the shop (of the druggist, 'attār)". In Malta cumin is called *kemmün* and *kemmün helū* is used for aniseed (cf. above).

Throughout the Arab-speaking west the relative adjective *kammūnī* is used for a shade of green: in Spain a greenish brown, in Morocco a greenish khaki, in Algeria a pistachio green. In Takroūna, Tunisia, however, it is a bluish pink. Such descriptions are naturally related to the colour of the local variety of the seeds.

In the feminine substantive (*kammūniyya*), this epithet is applied to a variety of dishes seasoned with cumin.

The non-Arab-speaking Muslim world. The Persian name for cumin is *zira*, *zīrē*. The composites *shāh-zira* and *zira-i rūmī* designate caraway. A particular dish, containing cumin, is called *zīrabā*, *zīrbā*; in the archaic form *zīrabādī* (for *zīrabāg*), the dish and its name passed into the Arabic culinary vocabulary of the east and Muslim Spain. Alongside the learned-word *kemmün* the Turkish of Turkey uses a popular form, *kimyon*; the adjective *kimyoni* means olive green. The Persian dish mentioned above is called *zırva* and today describes "a dish of calves' feet with rice and garlic"—and apparently without cumin.

Finally, proverbs which feature cumin are found sporadically throughout the whole Islamic world. These belong to two series: in the first the cumin is promised that it will be well watered, tomorrow—this is the prototype of empty promises; in the second the cumin says, "rub me between your hands and I will release my good smell", which is the equivalent of "ring for service".

**AL-KAMMŪNĪ**, MUḤAMMAD B. IBRĀHĪM AL-TAMĪMĪ, a Ḳayrawānī panegyrist of the Zīrid al-Mu'izz b. Bādīs (first half of the 5th/11th century), was admired by the critics for the abundance and perfection of his laudatory, descriptive and elegiac poetry, remarkable alike for the choice of themes and images, the power of the language and the strict rhythm of the verse. But the vogue his poetry enjoyed during his lifetime was equally due to the verve, humour and sprightly imagination with which he recounted the vicissitudes of his disordered and picturesque life, and denounced the failings of some of his fellow citizens. However, very few lines of this classical yet personal output have survived.

**KĀMRĀN** mīrzā, second son of Bābur and of Gulrukḥ Begam, and half-brother of Humāyūn; he was born in Kābul ca. 915/1509. He was cleverer than Humāyūn and had a poetical turn, but he was cruel and vicious and a restless schemer. He repeatedly rebelled against Humāyūn, who was at last compelled by his officers to make him innocuous by blinding him in 960/1553. He went to Mecca in 961/1554 and died there in Dhu 'l-Ḥijjā 904/October 1557. The most interesting thing about him is the devotion of his wife, Māh Čīčak Bēgam Arghūn, daughter of Shāh Ḥasan of Sind. She insisted on accompanying him to Mecca, in spite of her father's remonstrances, saying that he had given her to Kāmran in the days of his greatness (in 954/1546) and that she would not abandon him now in the time of his misery. She died at Mecca a few months after her husband.

Kāmran was put in charge of Ḳandahār by his father, and in the beginning of Humāyūn's reign he was governor of the Panjāb. During the interregnum, when Humāyūn was in Persia, Kāmran and his younger brother, 'Askarī, ruled over Afghānistān. He left one son and three daughters. The son, Abu 'l-Ḳāsim, who inherited his father's poetical talents, was confined in Gwalior by Akbar in 964/1557, and was put to death some years later as a dangerous competitor. All three daughters were given in marriage; one of them, named Gulrukḥ, was a woman of masculine spirit; she married Ibrāhīm Ḥusayn Sulṭān, and she and her son were thorns in Akbar's side. (Firīshṭa, lith. ed., 221, and Muḥammad Ḥusayn, *Darbār-i Akbarī*).

Transl. Fund 1832); Bābur's *Memoirs*; Erskine, *Memoirs of Baber*; Gulbadan Bēgam, *History of Humāyūn* (O. T. F.), London, 1902; Badā'ūnī, *Muntakhhab al-Tawāriḳh*, i, 451 ff.; Elliot-Dowson, iv, 498, v, vi. There is a copy of Kāmran's *Diwān* in the Oriental Public Library, Bankipore, Cat., ii, 145, 215, where a biography of the author is given. (H. BEVERIDGE\*)

**KĀMRĀN SHĀH DURRĀNĪ**, ruler of Harāt in succession to his father, Maḥmūd Shāh (d. 1244/1282). By alienating the powerful Bārakzay family Kāmran contributed to the downfall of Sadōzay rule in Afghānistān in 1235/1818. Subsequently, Maḥmūd and Kāmran disputed possession of Harāt, which comprised an area extending from the Harī Rūd in the west to the Hilmand river in the east and from Sistān in the south to Maymana in the north, although their authority in the outlying areas was always contested. In his early years Kāmran revealed energy and ability, but during the last five years of his reign power passed to his able vizier, Yār Muḥammad Khān Allkozay (d. 1267/1851), who secured his position by control of the only effective military force, of the revenue and of the British subsidy negotiated in 1255/1839 and who deposed and murdered Kāmran in 1258/1842. Kāmran and Yār Muḥammad contin-

ued the Harātī tradition of alternately acknowledging and rejecting Iranian sovereignty and in 1253-4/1837-8 withstood a prolonged Iranian siege which devastated the Harāt valley.

**KĀMŪNIYA** [see AL-KAYRAWĀN].

**KĀMRŪP**, a region in western Assam [q.v.], the most north-easterly limit of penetration by Muslim armies in India. Conquest was not followed by any great settlement of Muslims in the region, which was in fact held only for limited periods. The few Muslims in the district today are mostly traders in the towns. For the history of the district as it affects Islam, see ASSAM. In the Muslim geographers (*Hudūd al-ʿālam*, Marwazī) it is often referred to as Kʿmrwn. (ED.)

**KĀMŪS** (A.), dictionary.

#### I. ARABIC LEXICOGRAPHY

The word *kāmūs/kawmas*, from the Greek *Ωκεανός* appeared in Arabic, at the latest at the time of the Prophet, with the meaning of "the bottom, the very deepest part of the sea". Nevertheless, following Ptolemy, the Arab geographers borrowed the Greek word again, in the form *Ukiyānūs*, and applied it to "the mass of water surrounding the earth", more particularly the Atlantic Ocean, which was called *Ukiyānūs al-muḥīf*, then more simply *al-Kāmūs al-muḥīf*. As this latter term was employed in a metaphorical sense by al-Firūzābādī [q.v.] as the title of his great dictionary, *kāmūs* eventually came to be a common noun denoting a dictionary, though it still carried some sense of "fullness, exhaustiveness", in contrast to *muʿdjam* [q.v.], "Lexicon". This distinction, however, was neither general nor absolute, so that nowadays *muʿdjam* tends to be used in the same sense as *kāmūs*. In classical Arabic, the concept of "dictionary" was not covered by any single term, each lexicographical work bearing its own title. A number of these titles included the word *luġha*, "language", and lexicography was called *ʿilm al-luġha* "the science of language". Sometimes this was confused with "philology", which today is called *fiḥḥ al-luġha*, an expression already employed in the Middle Ages by Ibn Fāris [q.v.] in the title of his celebrated *Sāḥibī*. The neologism *muʿdjamiyyāt* is now tending to gain currency.

In Persian, the general term for a dictionary was *farhang*, but, as in Arabic and also in Turkish, various expressions were also used in titles.

Mediaeval Arabic dictionaries may be classified in three groups, according to the arrangement used:

I. Those arranging roots anagrammatically, treating all permutations of a group of root letters under one heading, and separating biliterals, trilaterals and longer roots. Almost all such dictionaries adopted an alphabetical order based on phonetic principles, beginning with gutturals, a practice somewhat reminiscent of the order of the Sanskrit alphabet. This system was first used by al-Khalīl [q.v.].

II. Those employing the "rhyme order"; that is, arranging roots primarily under the final radical, then the first and any intermediate radicals. Within this framework, the normal alphabetical order was followed. The first major work to use this system was al-Djawharī's *Ṣaḥāḥ*. This system soon gained the ascendancy in general dictionaries, and was not seriously questioned until the 19th century, under European influence.

III. Those arranged, more or less, on the modern European pattern insofar as roots are concerned. The earliest example, Abū ʿAmr al-Ṣhaybānī's *Kitāb al-Djīm*, lists all words with the same initial in one chapter, but in no obvious order within the chapter. This has been called the "Kufan Method" (J. A. Haywood, *Arabic lexicography*). The modern arrangement proper goes back at least to Ibn Fāris. However, it found favour largely in specialized dictionaries such as those of the Kurʿān and *ḥadīth*. Al-Zamakḥsharī's *Asās al-balāġha* adheres most closely to this arrangement.

The following are the principal mediaeval Arabic dictionaries, arranged in rough chronological order. (The Roman numerals I, II, and III in brackets after titles indicate the arrangement used in accordance with the above classification).

2nd/8th century: Al-Khalīl b. Aḥmad [q.v.], *Kitāb al-ʿayn fi ʿl-luġha* (I), survives in at least three manuscripts; Père Anastase Marie de Saint Elie embarked on an edition in 1914, but he was unable to continue it beyond 144 pages and almost all the printed copies are lost. The first volume of a new edition, prepared by ʿAbd Allāh Darwīsh, appeared in Bagḥdād in 1386/1967 (with an alphabetical index). Abū ʿAmr al-Ṣhaybānī, *Kitāb al-Djīm fi ʿl-luġha* (II), is available only in manuscript (Madrid, Escorial no. 572).

3rd/9th century: Ibn Durayd [q.v.], *al-Djamhara fi ʿl-luġha* (I). This combines the anagrammatic arrangement with the normal alphabetical order. The Ḥaydarābād (Deccan) edition (1344 AH) has a useful index listing the content in the modern manner.

4th/10th century: Al-Ṣāhib ibn ʿAbbād [q.v.], *al-Muḥīf fi ʿl-luġha* (I), Ms. only (ʿIrāk Nat. Mus.). Abū Mansūr al-Azharī [q.v.], *Kitāb al-taḥdhib fi ʿl-luġha* (I), Cairo 1964. Al-Djawharī [q.v.], *al-Ṣaḥāḥ* (or *Ṣiḥāḥ*) (II), Cairo 1956 and Būlāḳ n.d. Ibn Fāris [q.v.], *Maḳāyīs al-luġha* (III), Cairo 1366-71 AH. idem, *al-Mudjmal fi ʿl-luġha* (III), vol. i (all published), Cairo 1958.

5th/11th century: Ibn Sida/Siduh [q.v.], *al-Muḥkam wa ʿl-muḥīf al-ʿaḳam fi ʿl-luġha* (I), Cairo 1958. This work was compiled in Spain.

6th/12th century: al-Zamakḥsharī [q.v.], *Asās al-balāġha* (III), Cairo 1953, largely concerned with the language of rhetoric.

7th/13th century: Ibn Mukarram or Ibn Manẓūr [q.v.], *Lisān al-ʿArab* (II), Būlāḳ 1300-8 AH, Beirut 1955-6. This is still the best-known large-scale dictionary.

8th/14th century: al-Firūzābādī [q.v.], *al-Kāmūs al-Muḥīf* (II). This is the standard handy dictionary, containing a very large vocabulary compressed into small space by the omission of supporting examples. It has been frequently printed, mostly in Cairo and in four volumes.

12th/18th century: Though not strictly mediaeval, Murtaḳā al-Zabīdī's *Tādj al-ʿarūs min djawāhir al-Kāmūs* (II), Būlāḳ 1306-7 AH, Kuwayt 1965, is best mentioned here. It is an expansion and extension of the *Kāmūs*, on the scale of the *Lisān al-ʿArab*.

The modern (European) dictionary arrangement is now normally used by Arabs. Buṭrus al-Bustānī used it for his 2-volume *Muḥīṭ al-muḥīṭ* (Beirut 1867-70), basically a re-arrangement of the *Kāmūs*. No large-scale Arabic dictionary has appeared in the Arab world since the *Tādj al-ʿarūs*. The most popular one-volume work is Louis Maʿlūf's *al-Mundjīd*, Beirut 1908, 18 Beirut 1965.

Bi-lingual dictionaries were rare in the Arab world until the present century. Kāshgharī's [q.v.] *Diwān lughāt al-Turk* (5th/11th century) explains Turkish words in Arabic, while al-Zamakhsharī's *Muḥaddimat al-adab* (*Samachstherii Lexicon Arabicum Persicum*, ed. J. G. Wetzstein, Leipzig 1843-50) gives the Persian equivalents of Arabic words. Neither is very conveniently arranged. To list all bi-lingual Arabic dictionaries published since the Renaissance would take several pages. Those mentioned below are of the literary language only, and do not include polyglot dictionaries.

Jacob Golius' *Lexicon Arabico-Latinum*, Leiden 1653, with a Latin-Arabic index, was pre-eminent until G. W. Freytag's larger work, with the same title, was published, Halle 1830-7 (also has a Latin-Arabic index). Both are based on the *Kāmūs*, recast in modern arrangement. A. de Biberstein Kazimirski's *Dictionnaire arabe-français*, Paris 1860, pays some attention to dialectal Arabic and is still very useful, since it is more complete than Père J.-B. Belot's *Vocabulaire arabe-français*, which has enjoyed general favour since 1883. Edward William Lane's *Arabic-English Lexicon*, London 1863-87, repr. 1955-7, though incomplete, is still widely used. These 19th-century works may well be superseded by two new dictionaries in the course of publication. The first, *Wörterbuch der klassischen arabischen Sprache*, published in Wiesbaden in fascicules since 1957, is sponsored by the Deutsche Morgenländische Gesellschaft (the present editor (1974) is M. Ullmann). Definitions are in German and English. It begins at the letter *kāf*, where Lane's *Lexicon* becomes mere sketches, because of the urgent need to supplement the deficiencies of Lane. The second is the *Dictionnaire Arabe-Français-Anglais*, edited by Blachère, Chouémi and Denizeau, published in Paris in fascicules from 1961. It covers both the classical and the modern languages.

R. Dozy's *Supplément aux dictionnaires arabes*, 2 vols., Leiden 1881, Paris 1927, is invaluable for words used in Arab Spain and the Maghrib, and for much late-classical vocabulary. Modern literary Arabic is well served by Hans Wehr's *Arabisches Wörterbuch für die Schriftsprache der Gegenwart*, Leipzig 1952; Supplement, Wiesbaden 1958; Eng. ed., J. Milton Cowan, *A dictionary of modern written Arabic*, Wiesbaden 1961.

The above account does not include dictionaries from European languages into Arabic. No comprehensive work has yet been published. Ellious Bochtor's *Dictionnaire français-arabe*, which appeared in a third edition revised and supplemented by Caussin de Perceval in Paris in 1864, has been practically forgotten. Belot's *Vocabulaire français-arabe* has gone through many revisions since 1889, but it is still inadequate. G. P. Badger's *English-Arabic Dictionary*, London 1913, is worthy of note. But the late Elias A. Elias's *Modern Dictionary English-Arabic*, Cairo 1913, has been very widely used. Munir Baalbaki's *al-Mawriḍ*, Beirut 1969, is fuller and more up-to-date, with considerable scientific and technical vocabulary, but Arabic definitions do not include some information—such as broken plurals—useful to

European Arabists. There is a useful Russian-Arabic Dictionary by Baranov, Moscow 1964, while Götz Schregle's *Deutsch-Arabisches Wörterbuch*, 1st fasc., Wiesbaden 1963, at present under publication, will be of benefit. Two French-Arabic dictionaries have been published in Beirut: the first, *al-Manhal*, is the work of Djabbur ʿAbd al-Nūr and Suhayl Idrīs (1970); the second (1972) is a French-Arabic *Mundjīd*.

*Bibliography*: The following general works contain bibliographies. R. Dozy, *Supplément*, v-xxix; Aḥmad ʿAbd al-Ghafūr ʿAṭṭār, *al-Ṣaḥāḥ wa-madāris al-muʿjamāt al-ʿarabiyya*, Cairo 1956, a reprint of the author's introductory volume to his edition of the *Ṣaḥāḥ*; A. Darwish, *al-Maʿādīj al-ʿarabiyya*, Cairo 1956; J. A. Haywood, *Arabic lexicography—its history and its place in the general history of lexicography*, Leiden 1959, 1965; Şiddīk Ḥasan Khān, *al-Bulgha fī usūl al-lughā*, Istanbul 1296 AH, contains an alphabetical list of the chief mediaeval Arabic dictionaries. For a brief account of L. Kopf's important but unpublished thesis on Arabic lexicography see *BSOAS*, xvii (1955), 617-8. See also W. Marçais, *Arabic lexicography* (in Arabic), in *Articles et Conférences*, Paris 1961, 145-70. (J. A. HAYWOOD)

## 2. PERSIAN LEXICOGRAPHY

The normal Persian word for "dictionary" is *farhang*, which also retains its original meaning of "learning, education". In its Middle Persian (Pahlavi) form it is applied to two glossaries which, though undated, preserve pre-Islamic material. The *Frahang-i 'oim ek'*, named after its first entry, lists Avestan words with their Pahlavi equivalents. The *Frahang-i Pahlawig* provides mainly the Persian equivalents of the basically Aramaic ideograms used in Pahlavi, with their traditional mnemonic readings. Owing to the great ambiguity of the Pahlavi script, many of these readings are fantastic, e.g., *binmīn* (Aram. *brh* read as *bnmn*) for *pus*, "son".

The earliest named dictionary of modern Persian is the *Risāla* of Abū Ḥafṣ-i Suḥdī, variously attributed from the 1st/7th to the 5th/11th centuries. Although no longer extant, this work seems to have been still available to compilers of the 11th/17th century. The *Lughat-i furs* by the poet Abū Manṣūr ʿAlī b. Aḥmad Asadī Ṭūsī is the oldest surviving Persian dictionary. Compiled about 450/1058-460/1068, its purpose was to explain about 1,200 rare and archaic words in the older poets of eastern Iran. It is arranged alphabetically by rhymes, each entry supported by a quotation in verse. A slightly earlier work by the poet Kaṭrān of Tabriz, *Tafāsīr fī lughāt al-furs*, is lost. No other Persian dictionary is recorded until the beginning of the 8th/14th century. The lexicographers of the period devoted their energies instead to the analysis of Arabic, particularly of the Qurʾān, in both Arabic and Persian. Of lexica with Persian glosses we have the *Kitāb al-maṣādir* and *Tarjūmān al-Kurʾān* of Ḥusayn Zawzanī (d. 486/1093), *Dastūr al-lughā al-ʿarabiyya* and *Kitāb al-mirḳāt* by Ḥusayn Natanzī (d. 499/1106), *al-Sāmī fī 'l-asāmī* (497/1104) by Abū 'l-Faḍl Maydānī, the celebrated *Muḥaddimat al-adab* (before 521/1127) by Abū 'l-Kāsim Maḥmūd al-Zamakhsharī, *Tādj al-maṣādir* by Djaʿfarak Bayhaḳī (d. 544/1150; a work of this name is also ascribed, almost certainly wrongly, to the poet Rūdakī, d. 329/940-1), *Ḳānūn al-adab* (545/1150-1) by Abū 'l-Faḍl Ḥubaysh Tiflīsī, a work based on al-Djawharī's Arabic *al-Ṣiḥāḥ* called *al-Ṣurāḥ min al-ṣiḥāḥ* (681/1282-3) by Djamāl al-Kurashī, and several others.

Also based on the Arabic *Ṣiḥāḥ* is the Persian *Ṣiḥāḥ al-furs* (or, *al-ʿaḍjām*) by Muḥammad Hindū-shāh Nakhdiawānī Shams-i Munshī, written in 728/1327-8. The third oldest Persian dictionary, forming the fourth part of a treatise on poetics called *Miʿyār-i Djamālī*, by Shams al-Dīn Muḥammad Fakhrī Iṣfahānī (Shams-i Fakhrī), an older contemporary of Ḥāfiẓ, was written in 745/1344. It is modelled on Asadī's work, but the supporting verses for its 1,600-odd words are mostly by the author himself, and so less reliable.

After this time the centre of Persian lexicography moved to India. Two works of the 8th/14th century are preserved, the *Farhang-nāma* (ca. 700/1300) by Mubārak Shāh Ghaznawī, Fakhr-i Kawwās, and Baḥr al-faḍāʾil (ca. 795/1393 ?) by Muḥammad b. Kiwām al-Balkhī. The *Adāt al-fuḍalāʾ* (822/1419) by Kādī-khān Muḥammad Dihlawī Dhārwal names other sources since lost. Many more Persian dictionaries were compiled in India in the next two centuries, of which it is possible to name only the *Sharaf-nāma-i Aḥmad Munayyri* (878/1473-4) by Ibrāhīm Kiwām al-Dīn Fārūkī, based on the poets, the *Tuḥfat al-saʿāda* (916/1510-1) by Maḥmūd b. Shaykh Diyāʾ al-Dīn Muḥammad, without quotations, *Muʿayyid al-afāḍil* (925/1519) by Muḥammad b. Lād Dihlawī, *Farhang-i Wafāʾi* (933/1526-7) by Husayn Wafāʾī, *Kashf al-lughāt* (ca. 950/1543 ?) by ʿAbd al-Raḥīm b. Aḥmad Sūr, and *Madār al-afāḍil* (1001/1593) by Ilāhdād Fayḍī Sirhindī.

The same period saw the rise of another stream to feed the Persian sea, namely the efforts of Turks to interpret Persian writers. After the anonymous and undated *Aḥnūm-i ʿaḍjām*, the first important works of this type are the three compilations by Luṭf Allāh b. Abī Yūsuf Ḥalīmī, *Baḥr al-gharāʾib*, *Niḥār al-mulūk* (872/1467-8) and the shorter *Kāʾima* (917/1511-2). Ḥalīmī stands out by reason of the critical attitude he adopted towards his sources. Among similar contemporary works were *Shāmil al-lughāt* (ca. 900/1495) by Ḥasan b. Husayn Karahīṣārī, *Wasīlat al-makāshid* (903/1497-8) by Khaṭīb Rustam Mawlawī, and the *Tuḥfa-yi Shāhidī* (920/1514-5) in verse, by Ibrāhīm b. Khudāyede. All but the last of these works were used by Niʿmat Allāh b. Aḥmad b. Mubārak al-Rūmī in the preparation of his celebrated *Lughat-i Niʿmat Allāh* (before 947/1540).

At the beginning of the 11th/17th century two major compilations appeared. In 1008/1599-1600 Muḥammad Kāsim Kāshānī Surūrī produced his *Madīmaʿ al-furs* for Shāh ʿAbbās Ṣafawī. Thirty-eight earlier dictionaries are named among his sources and nearly 6,000 words defined. At the same time, at the Moghul court, Djamāl al-Dīn Husayn Indjū Shīrāzī was preparing the work named *Farhang-i Dīhāngīrī* when it appeared in 1017/1608-9. More than 40 sources are quoted, though evidently not all directly, many in common with Surūrī, and some since lost. Surūrī, acquiring Indjū's work, revised his own dictionary by 1038/1628-9.

Later in the century two attempts were made to improve on these works. In 1062/1652 Muḥammad Husayn b. Khalaf Tabrīzī, Burhān, produced his famous *Burhān-i kāfiʿ* in Haydarābād, Dakhān, and two years later ʿAbd al-Rashīd al-Husaynī al-Tattawī his *Farhang-i Rashīdī*. Rashīd sought to shorten his work by omitting much of the quoted verse. Burhān's changes were more sweeping. For the first time the vocabulary, of some 20,000 words, was arranged completely alphabetically, in contrast with the complicated, partially alphabetic arrangements of his predecessors, and all attestation or indication of source was omitted.

From the very beginning mistakes had crept into Persian lexica, mainly owing to the ambiguity of badly written manuscript sources. Shams-i Fakhrī already had *grʿz* for *gavāz*, *pʿknd* for *yākand*, etc., and the number of errors mounted steadily with time. In the *Burhān* two major new types of falsity appeared. One was the inclusion of the traditional readings of the ideograms in Pahlavi, from the *Frahang-i Pahlawīg*, with the label "in Zand and Pāzand". The other was the tacit incorporation of the vocabulary of the *Dasātīr*, an anonymous and spurious "holy book of the ancient Persians" containing many distorted or invented words. The most flagrant errors in any dictionary, however, are probably to be found in the great Persian-Turkish *Farhang* (1075/1664-5) by Shuʿūrī Ḥasan Efendī. In addition to the vocabulary of his predecessors, almost every page of Shuʿūrī's work contains invented words, supported by bad verse attributed to fictitious poets. Their origin will probably never be known.

More than any previous dictionary, the *Burhān-i kāfiʿ* gave rise to a series of works criticizing or defending it. The most valuable of these is the *Sirādj al-lughāt* (1147/1734-5) by the poet Sirādj al-Dīn ʿAlī Khān Arzū. This was shortly followed by a vast compilation called *Bahār-i ʿaḍjām* (1162/1749) by a pupil of Arzū, Rāy Tēkčand Bahār, from whose time onwards the vocabulary of contemporary writers began to find a place in the dictionaries beside that of the classics.

By this time European contacts with Iran and India had led to a lexicographical interest. In 1669 Edmund Castell contributed the first printed Persian dictionary in his *Lexicon heptaglotton*, quoting Niʿmat Allāh's *Lughat* and a manuscript work by Jacob Golius (1596-1668) as his sources, but evidently also using Shuʿūrī *inter alia*. In 1680 Franz von Mesgnien Meninski's Turkish-Arabic-Persian *Thesaurus* appeared, incorporating the works of Ḥalīmī, Niʿmat Allāh and Shuʿūrī, and the *Dīhāngīrī*. Meninski's was the mountain from which John Richardson's *Dictionary Persian Arabic and English* (1777-80) was quarried, later to be enlarged by Francis Johnson (1829). J. A. Vullers' *Lexicon Persico-Latinum* (1855-64) and J. J. P. Desmaisons' *Dictionnaire persan-français* (1908) both drew on these European works, but also on the *Burhān*, the baleful Shuʿūrī, the *Bahār-i ʿaḍjām*, and other oriental works. F. Steingass's *Comprehensive Persian-English Dictionary* (1892) goes furthest on the downward path of omitting all references to sources.

In the 13th/19th century many more Persian dictionaries in the classical tradition appeared in India, including *Shams al-lughāt* (1220/1805-6) compiled under the direction of Joseph Barretto, *Haft kulzum* (1237/1822) by Kabūl Muḥammad, but ascribed to the sultan of Awadh (Oudh), *Ghiyāth al-lughāt* (1242/1826-7) by Muḥammad Ghiyāth al-Dīn, and the *Farhang-i Anandrāzī* (1306/1888-9) by Muḥammad Pādshāh Shād. In Iran Riḍā Kuli Hidāyat's compilation, *Farhang-i anḍjuman-ārā-yi Nāsirī* (1286/1869-70), was the most significant, despite his swallowing the *Dasātīr* whole.

The foundations of modern lexicography in Persian, relying on direct recording of the spoken and written word, may be said to have been laid in 1874 by J. L. Schlimmer's *Terminologie médico-pharmaceutique et anthropologique française-persane*. The number of present-day Persian dictionaries is legion. Mention can be made only of two outstanding but disparate ventures: in Europe Fritz Wolff's *Glossar zu Firdosis Schahname* (1935), with full references, and in Iran

the encyclopedic *Lughat-nāma*, begun by ʿAlī Akbar Dihkhudā (1879/1956) and continued under the direction of Muḥammad Muʿin and others.

*Bibliography*: P. de Lagarde, *Persische Studien*, Göttingen 1884; C. Salemann, *Bericht über die Ausgabe des Miʿjār i Jamālī, Beilage V, Chronologisches Verzeichnis der Farhange, in Mélanges Asiatiques*, ix, 4 (1888), 505-94; ʿA. A. Dihkhudā et al., *Lughat-nāma*, 40, *Muḥaddīma*, Tehran 1959, 178-378; S. I. Baevskiy, *Opisanie tadžikskikh i persidskikh rukopisey Instituta Narodov Azii*, vip. 4, 5, Moscow 1962-8; F. Tauer, *Persian learned literature*, III, *Philology*, in J. Rypka et al., *History of Iranian Literature*, Dordrecht 1968, 429-37.

(D. N. MACKENZIE)

### 3. TURKISH LEXICOGRAPHY.

a) Oriental Dictionaries. Turkish lexicographers maintained the arrangement of Arabic and Persian dictionaries.

The first Turkic dictionary is Maḥmūd al-Kāshgharī's *Divān lughāt al-Turk*, written in Baghdād in 466/1074 (ed. Kilisli Rifʿat, Istanbul 1333-5/1915-7; dictionaries based on it by C. Brockelmann 1928, B. Atalay 1943). It deals with the standard language of the Karakhanid Empire, including a number of dialect words. The meanings are given in Arabic and illustrated by quotations from Turkic folk poetry.

Kāshgharī's work served as a model for the Kipçak Turkish dictionaries produced in Egypt and Syria in the 8th/14th-9th/15th centuries (O. Pritsak in *PhTF*, i, 75-6; Abū Ḥayyān, *K. al-Idrāk* (712/1313, ed. A. Caferoğlu 1931); the anonymous *Tardjumān Turkī* (743/1343, not 643/1245, cf. B. Flemming in *Isl.*, xlv (1968), 226-9, ed. M. Th. Houtsma 1894); *Dijmāl al-Dīn al-Turki*, *K. Bulghat al-muḥtāk* (8th/14th cent., ed. A. Zajaczkowski 1954-8); the anonymous *K. al-Tuḥfat al-Zakiyya* (8th/14th cent., ed. T. Halasi Kun 1942, B. Atalay 1945); the anonymous *al-Kawānīn al-kullīyya* (9th/15th cent., ed. Fuad Köprülü 1928) and the recently discovered *K. al-Durra al-muḍīʿa* (partial ed. by A. Zajaczkowski in *RO*, xxix (1965).

In Khwārazm al-Zamakhsharī's *Muḥaddīmat al-adab* was popular. No less than 15 manuscript copies of this work, provided—fully or partly—with Khwārazmian Turkic glosses, have survived (Z. V. Togan in *TM*, xiv (1964), 81-92).

The Çağhatay dictionaries were compiled primarily to facilitate the reading of the works of Nawāʾī (844/1441-906/1501). Their arrangement is alphabetical and the items under each letter are entered according to the vowel which follows the initial letter. Poetical quotations help to illustrate the meanings of a word. Important are: Ṭālīʿ Imānī of Herāt, *Badāʾiʿ al-lughāt* (Çağh.-Pers., before 912/1506, ed. A. K. Borovkov 1961); the anonymous *Abuḥḥā* (Çağh.-Ottoman, first half of the 10th/16th century, ed. A. Vámbéry 1862, V. Velʿyaminov-Zernov 1968); Mīrzā Maḥdī Khān, *Sanglāḥh* (Çağh.-Pers., ca. 1172/1758, ed. Sir G. Clauson 1960).

Ottoman lexicography starts with versified vocabularies, averaging 2,000 Arabic or Persian words explained in Turkish. These vocabularies, destined to be memorized, are divided into *ḫiṭʿas* (sections) in which words of similar form or sound are grouped together. One of the earliest is the *Tuḥfe-i Ḥusāmī* (Pers.-Turk., 802/1399) by Ḥusām, mentioned in the *Tuḥfe-i Shāhidī* (see below). Famous were: Firīsh-teoğlu ʿAbd al-Laṭīf (d. before 879/1474), *Lughat-i Firīsh-teoğlu* (Ar.-Turk.), printed in the margins of another Ar.-Turk. versified vocabulary, *Subḥa-i*

*Sibyān* (n.d.); Shāhidī Ibrāhīm Dede, *Tuḥfe-i Shāhidī* (Pers.-Turk., 920/1514, lith. 1275/1853); Sünbülzāde Meḥmed Vehbī (d. 1809), *Tuḥfe-i Vehbī* (Pers.-Turk., 1st ed. 1213/1798) and *Nuḫbe-i Vehbī* (Ar.-Turk., 1st ed. 1220/1805); Ḥasan ʿAynī, *Naṣm al-Djawāhir* (Ar.-Pers.-Turk., printed 1250/1834-5); Ahmed ʿAṣim (d. 1235/1819), *Tuḥfe-i ʿAṣim* (printed, Bülāk 1254/1838-9).

Large dictionaries were also produced. In the Arabic-Turkish dictionaries the Arabic words are arranged in *bābs* either according to the initial or according to the last letter, and, under each *bāb*, divided into *faṣls* according to the second and following letters. The best known are: Muṣṭafā b. Shams al-Dīn al-Ḳaraḥīṣārī, *Aḫḫarī Kabīr* (*Aḫḫarī-i Kabīr*) or *Lughat-i Aḫḫarī* (952/1545), at least 15 editions between 1826 and 1906; Ahmed ʿAṣim, *al-Okīyānūs al-Basīf* (1st ed. 1230/1814-1233/1818), the translation of al-Fīrūzābādī's *al-Kāmūs al-Muḫīf*; Meḥmed b. Muṣṭafā al-Wānī (Wānkulu), *Tardjamāt Shīḫh al-Djawhārī* (printed by Ibrāhīm Müteferriḳa, 1141-1729), the translation of al-Djawhārī's famous *al-Shīḫh*. In the Persian dictionaries the Persian words are arranged in *bābs* according to the initial letter, and within each *bāb* in three sections according to the vowel after the first letter. Important are: Niʿmat Allāh b. Ahmed, *Lughat-i Niʿmat Allāh* (947/1540, unpublished), in which verbs and nouns are dealt with separately; Ḥasan Shuʿūrī, *Farhang-i Shuʿūrī* (1080/1669-1092/1682, printed by Ibrāhīm Müteferriḳa, 1155/1742); Ahmed ʿAṣim, *Tibyān-i nāfiʿ* (1st ed. 1214/1799-1800), the translation of al-Tabrīzī's *Burhān-i ḫāfiʿ*, with an arrangement as in modern dictionaries. The best known Turkish-Arabic-Persian dictionary is Esʿad Meḥmed Efendi's *Lahdīat al-lughāt* (1145/1732-3, printed 1216/1801-2).

b) European Dictionaries. The conquest of Constantinople (1453) brought the Ottomans into close contact with the West. Owing to various interests, many dictionaries were produced first by European, later also by Turkish lexicographers. Famous dictionaries were: Fr. Meninski, *Thesaurus*, Vienna 1680, revised as *Lexicon turco-arabico-persicum*, Vienna 1780; J. D. Kieffer-T. X. Bianchi, *Dictionnaire turc-français*, Paris 1835-7; J. Th. Zenker, *Türkisch-arabisch-persisches Handwörterbuch*, Leipzig 1866-76, reprinted 1967; J. W. Redhouse, *A Turkish and English lexicon*, Constantinople 1890, 1921; Shams al-Dīn Sāmī, *Dictionnaire français-turc*, Istanbul 1299/1882; I. Khloros, *Lexikon tourko-ellenikon*, Istanbul 1899/1900. Unilingual: Ahmed Wefīḳ Pasha, *Leḫje-i ʿOḥmānī*, Istanbul 1293/1876; Sh. Sāmī, *Ḳāmūs-i Türkī*, Istanbul 1317-8/1899-1900. Eastern Turkic: Pavet de Courteille, *Dictionnaire turk-oriental*, Paris 1870; Sheyḫ Süleymān Efendi, *Lughāt-i Çağhatay we Türkī-i ʿOḥmānī*, Istanbul 1298/1881.

Of the numerous modern dictionaries may be mentioned: Fritz Heuser, *Heuser-Shevket Türkisch-deutsches Wörterbuch*, Wiesbaden 1967; H. C. Honyfahir İz, *A Turkish-English dictionary*, Oxford 1957; eidem, *An English-Turkish dictionary*, Oxford 1952, several new editions, reprinted 1968; *New Redhouse Turkish-English dictionary*, ed. the American Board, Istanbul 1968. Unilingual: *Türkçe sözlük*, ed. Türk Dil Kurumu, Ankara 1969. For more titles see A. Caferoğlu, *Yeni Çağ Türk dili lügatleri*, in *Ist. Ün. Ed. Fak. Türk Dili ve Edebiyatı Dergisi*, xiv (1966), 9-52.

The vast majority of (non-Ottoman) Turkic languages are spoken in the Soviet Union. Before the Soviet period dictionaries of several of these languages already existed. However, their systematic investigation began only after World War I. Today dictionaries

of all Turkic languages spoken in the Soviet Union and in China, i.e., Altay, Āḡharbaydġānī, Baḡhkir, Čuvaḡh, Gagauz, Karačay-Balkar, Karaim, Karakalpak, Kazakh, Khakas, Kirghiz, Kumik, Nogay, Šhor Tatar, Turkoman, Tuviniān, Uzbek, (New) Uighur, Yakut, are available, see *Slovari, izdannie v SSSR. Bibliografičeskiy ukazatel'*, Moscow 1966, 129-162. Turcologists set great value on the following: E. K. Pekarskiy, *Slovar' yakutskogo yazika*, i, Petrograd 1917 (tr. into Turkish, *Yakut Sözlüğü*, Istanbul 1945), ii-iii, Leningrad 1927-30; N. I. Aḡmarin, *Thesaurus linguae Tschuvaschorum*, i-ii, Kazan, iii-xvii, Čebok-sarl 1928-50; K. K. Yudakhin, *Kirgizsko-russkiy slovar'*, Moscow 1940 (tr. into Turkish, *Kirgiz Sözlüğü*, Ankara 1945-8), 1965.

c) Special Dictionaries. Historical: K. Grønbech, *Komanisches Wörterbuch*, Copenhagen 1942; *Tarama Sözlüğü*, revised ed., Türk Dil Kurumu, Ankara 1963; A. Caferoğlu, *Eski Uygur Türkçesi Sözlüğü*, Istanbul 1968; *Drevnetyrskiy slovar'*, Leningrad 1969; E. Fazllov, *Staroubekskiy yazık*, Tashkent 1966-71. Comparative: L. Budagov, *Sravnitel'nyy slovar' turetsko-tatarskiikh narečiy*, 2 vols., St. Petersburg 1869-71, reprinted 1961; W. Radloff, *Versuch eines Wörterbuchs der Türk-Dialecte*, 4 vols., St. Petersburg 1893-1911, reprinted The Hague 1960, Moscow 1963; H. Kāzim Kadri, *Türk lugati*, 4 vols., Istanbul 1927-45. Dialect: *Türkiyede Halk Ağzından Söz Derleme Dergisi*, ed. Türk Dil Kurumu, 3 vols., Istanbul 1939-47, revised and enlarged ed., Ankara 1963; G. Jarring, *An Eastern Turki-English dialect dictionary*, Lund 1964. Etymological: M. Räsänen, *Versuch eines etymologischen Wörterbuchs der Türk-sprachen*, Helsinki 1969; Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972.

*Bibliography* (in addition to that in the article): Rieu, *Türk. Mss.*, 134-149, 263-9; Blochet, *Mss. Turcs*; F. E. Karatay, *Istanbul Üniversitesi Kütüphanesi Türkçe basmalar alfabe kataloğu*, 2 vols., Istanbul 1956; idem, *Tophkapı Sarayı Müzesi Kütüphanesi Türkçe yazmalar kataloğu*, ii, Istanbul 1961, 3-42; *Tarama Sözlüğü*, i, Ankara 1963, X-XCI; J. Benzing, *Einführung in das Studium der altaischen Philologie und der Turkologie*, Wiesbaden 1953; the bibliographies in *PhTF*, i; G. Hazai, *Sovietico-Turcica*, Budapest 1960, s.v. *Wörterbücher* (p. 314). (J. ECKMANN)

**KĀN** [see **KĀNĀN**].

**KĀN WA-KĀN**, the name of one of the seven post-classical genres of poetry (*fann*, pl. *funān*), the others being the *silsila*, the *dūbayt* or *rubā'ī*, the *muwashshah*, the *kūmā*, the *mawāliyyā* and the *radīal* [q.v.]. The genre was devised by the Baḡhdādī poets and its name derives from the formula used by storytellers to open their narratives: "there was and there was", i.e., "once upon a time"; originally, in fact, the *kān wa-kān* was just a rhyming story and it was only later that the term was applied to various subjects, particularly those of a moral or didactic nature, or to wisdom tales. Always written in dialectical Arabic, it was popular only in the East and especially in Baḡhdād. A *kān wa-kān* poem is in monorhyme with a long vowel after the *rawī* [see **KĀFIYA**]; in each verse the first hemistich is longer than the second and the metre is as follows:

1st hemistich:

mustaf'ilun,	fa'ilātun,	mustaf'ilun,	mustaf'ilun
↓	↓	↓	↓
mafā'ilun	fa'ilātun	mutafā'ilun	
	↓		
	maf'ilun		

2nd hemistich:

**KĀNĀ** [see **KUNĀ**].

**KĀNĀMĪ** [see **KĀNEMĪ**].

**KĀN'ĀN**, the biblical K'na'an, is a personality regarding whom the few extant traditions agree on scarcely a single point. Al-Bayḡdāwī (ed. Fleischer, i, 513) mentions him as the father of the famous Nimrūd (Numrūd according to the *LA* and the *TA*); he is also regarded as the ancestor of the Kan'aniyyūn (*LA*, x, 191) and of the Berbers (al-Mas'ūdī, *Murūdi*, index; al-Dimashqī, *Nukhbat al-dahr*, ed. Mehren, 266; Ibn Khaldūn, *al-'Ibar*, vi, 93, 97). Very little is known about him. Many believe that the story in *Sūra XI*, 44 ff. about a son of Nūḡ who disregarded his father's fervent pleas and refused to take refuge in the Ark, thus perishing with the unbelievers, refers to him (al-Bayḡdāwī, *ad loc.* and al-Tha'labī, *Kiṣaṣ al-ambiyā'*, Cairo 1324, 36). Al-Ṭabarī (i, 199) also mentions a son of Nūḡ called Kan'ān who lost his life in the Flood, but treats the *ḡur'ānic* verse in question as referring to Yām b. Nūḡ (see *Tafsīr*, *ad loc.*), although in i, 199 he identifies the latter with Kan'ān.

While Kan'ān appears here as a son of Nūḡ and Ibn al-Kalbī mentions "Shālūm, that is, Kan'ān" as Nūḡ's fourth son (in *Yāḡūt*, iv, 311), in the passage parallel to Genesis, ix, 25 (in al-Ṭabarī, *op. cit.*, 212) he appears as a son of Ḥām b. Nūḡ (cf. al-Ya'qūbī, i, 13 ff., 16; cf. also al-Mas'ūdī, iii, 240, 294). According to a third tradition (in *Yāḡūt*, *op. cit.*) Kan'ān was a son of Sām b. Nūḡ, and according to a fourth—but unreliable—tradition a son of Kūsh b. Ḥām (al-Dimashqī, *op. cit.*).

(B. JOEL\*)

**KĀN'ĀN PASHA** [see **KEN'ĀN PASHA**].

**KĀNĀT** (A.), pl. *kanawāt*, *kanā*, *kunī*, *aḡniya*, "canal, irrigation system, water-pipe". Used also for a baton, a lance, etc., the term originally meant "reed" [see **KAṢAB**] and it is with this meaning and that of "rush" that the word *kanū* is known in Akkadian (cf. Zimmermann, *Akkad. Fremdwörter*, Leipzig 1915, 56); becoming *kanā* in Hebrew and *kanayā* in Aramaic, it passed into Arabic and was also borrowed in Greek and Latin in the forms *κάννα*, *κάννη* (*κάννη*), *canna*; by an evolution parallel to that of *kanāt*, the Latin word *canalis* "in the shape of a reed", acquired the meaning of "pipe, canal".

In Persian *kanāt* is used today especially for those underground water pipes which are the subject of this article (hydraulic methods in general are discussed in **MĀ'**; **BĪ'R**; **FĪLĀḤA**; see also **KAṢARA**, etc.).

## I. IN IRAN

The *kanāt*, a mining installation or technique using galleries or cross-cuts to extract water from the depths of the earth, has been described as the greatest contribution made by Persians to hydraulics. *Kanāts* are a special feature of the Persian plateau, where geological conditions are favourable to the enrichment of underground pools of water and so to the spread of *kanāts* (see further H. Goblot, *Le problème de l'eau en Iran, in Orient*, xxiii (1962), 46-55, also published in an English translation in *The economic history of Iran 1800-1914*, ed. C. Issawi, Chicago 1971, 214-19). They are mainly associated with large alluvial fans in the piedmont zone between the high mountains and the *kavir* or salt desert, or in large alluvial valleys on the desert margin, but are also found in the larger intermontane valleys of the Zagros Mountains. By means of a gently sloping tunnel, which cuts through alluvial soil and passes under the water-table into the aquifer, water is brought by gravity flow from its upper end, where it seeps into the gallery, to a ground surface outlet and irrigation canal at its lower end. In eastern and south-eastern Persia, Afghanistan, and Balūčistān these installations are known as *kāris*.

The origin of the techniques used in the construction of *kanāts* is to be sought in the old kingdom of Urartu around Lake Urūmiyya (Riḍā'iyya in north-western Persia) (R. J. Forbes, *Studies in ancient technology*, Leiden 1955-8, i, 153 ff.). A *kanāt* built by Sennacherib (705-681 B.C.), whose father, Sargon II, claims to have learnt the secret of tapping underground water in his campaign against Urartu, still carries water to the city of Erbil (J. Laessle, *Reflections on modern and ancient oriental waterworks*, in *Journal of Cuneiform Studies*, vii (1953), 5-26). With the establishment of the Achaemenian empire *kanāts* appear to have spread westwards to the Mediterranean and Egypt and southwards to Oman and Southern Arabia. In Egypt *kanāts*, probably built during the Persian occupation, have been found in the *Kharga* oasis and Matruh (A. T. Olmstead, *History of the Persian empire*, Chicago 1948, 224; H. J. L. Beadnell, *An Egyptian oasis: an account of the oasis of Kharga in the Libyan desert, with special reference to its history, physical geography, and water supply*, London 1909, 171; idem, *Remarks on the pre-historic geography and underground waters of Kharga oasis*, in *Geographical Journal*, 1933, 128-39; G. W. Murray, *Water from the desert: some ancient Egyptian achievements*, in *Geographical Journal*, 1955, 171-81; G. F. Walpole, *An ancient subterranean aqueduct west of Matruh*, in *Survey of Egypt*, Cairo 1932). The second major diffusion of *kanāts* took place in the early centuries of Islam, when they were introduced into Spain by the Umayyads of Spain (see J. O. Asín, *Historia del nombre "Madrid"*, Madrid 1959) and thence to Marrakesh, where they are known as *khet-taras* or *rhet-taras*, the Canary Islands, Mexico and Chile (C. Troll, *Qanat Bewässerung in der alten und neuen Welt*, in *Mitteilungen der Österreichischen geographischen Gesellschaft*, 1963, 313-30; idem, *Techniques agricoles, milieu naturel et Histoire de l'Humanité*, in *Bull. de la société géographique de Liège*, December 1967). In the 4th/10th century they spread to southern Algeria, where they are called *foggara* (*Jahhara*). They are also found in the Damascus oasis, east of the River Jordan near Shunat Ninrun, south-east of Riyāḍ at al-*Kharāḍ*, north of *Dhahrān* at al-*Kāṭif*, in Cyprus and in the Turfan oasis, where the technique was apparently introduced in the 18th century (M. Cable and F. French, *The Gobi desert*,

Encyclopaedia of Islam, IV

New York 1944, 184-5. See further C. Troll and C. Braun, *Madrid, Die Wasserversorgung der Stadt durch Qanate im Laufe der Geschichte*, in *Abhandlungen des mathematisch-naturwissenschaftlichen Klasse, Akademie der Wissenschaften und der Literatur*, Mainz, 1972, No. 5, 105-90 for a discussion of the geographical disposal of *Kanāts*).

*Kanāts* are constructed by specialists called *muḥannīs* (*Ēhkhū* in Kirmān and Yazd, cf. Muḥammad Mufid, *Djāmi-i Mufīdī*, ed. Irādj Afshār, Tehran 1961, i, 127; Iskandar Beg, *Ālamārā-yi 'Abbāsī*, Iṣfahān 1956, i, 473; *kumush*, Ḥasan b. Muḥammad b. Ḥasan al-*Ḥummī*, *Ta'rikh-i Ḥumm*, tr. into Persian by Ḥasan b. 'Alī b. Ḥasan b. 'Abd al-Malik, ed. Sayyid Djalāl al-Dīn Tehrānī, Tehran 1934, 42; *Ālamārā-yi 'Abbāsī*, i, 473; *Kāris* in Afghanistan; and *Kumushkan* in Kurdistan), whose knowledge and skill are largely passed from father to son. The inhabitants of certain districts, notably Yazd, are highly rated for their skill as *muḥannīs*. The traditional techniques of the *muḥannī* are described in a 5th/11th century Arabic work, *Anbāt al-miyā' al-khafiyya*, by Abū Bakr Muḥammad b. al-Ḥasan al-Ḥāsib al-Karādjī, whose patron was Abū Ḥanīm b. Muḥammad, the *wasīr* of Manūčīr b. Wuḥmīr. This work was printed in Ḥaydarābād, Deccan, in 1940, and an abbreviated translation entitled *The construction of subterranean water supplies during the Abbaside caliphate*, was published by F. Krenkow in 1951 (*Transactions of the Glasgow University Oriental Society*, xiii, 23-32). In 1966 a Persian translation, with the title *Istikh-rāḍī-i ābhā-yi panhāni*, by Ḥusayn Khādīv *Djām* appeared in Tehran. This clarifies some of the difficulties in the published Arabic text. Al-Karādjī states in his preface that he had referred to various books by earlier writers on the exploitation of subterranean water and found them lacking. No craft was more beneficial than that which was concerned with the exploitation of subterranean water, because by its help the earth was made to flourish, men's lives achieved order, and abundant benefit accrued (*Istikh-rāḍī-i ābhā-yi panhāni*, 2). His account makes clear that the techniques employed by *muḥannīs* were mining techniques.

The first step in making a *kanāt* is to sink a trial shaft (*gamāna*) to prove the presence and depth of the ground-water-table. The choice of location of the trial shaft is affected by the slope of the land, general topographical conditions, variations in vegetation, and the site of the land to be irrigated or the settlement to be provided with domestic water (cf. *Istikh-rāḍī-i ābhā-yi panhāni*, on the indications by which the presence of underground water can be recognised, 19 ff.). When the trial shaft is sunk and water reached, the *muḥannī* then has to determine whether the well has struck a constant flow of water in an impermeable stratum (*āb-i kahri*). If this is the case, the alignment and slope of the *kanāt* from this shaft, which becomes the mother well (*mādar Ēāh*), to the point where the *kanāt* is to come to the surface above the land which is to be irrigated, has then to be established. If the gradient is too steep, the water will flow too fast and erode the walls and the tunnel will fall in. Work on the *kanāt* usually begins at the lower end, *i.e.*, where the water of the *kanāt* is to come to the surface. The *muḥannī*, using a small pick and shovel, digs back towards the mother well, though occasionally work is begun simultaneously at both ends. One of the most difficult problems of the *muḥannī* is to avoid the rush of water when the tunnel enters the water-bearing section and a breakthrough is made (cf. *Istikh-rāḍī-i ābhā-yi panhāni*,

on the digging of the trial shaft or *gamāna*, 35).

Vertical shafts are sunk from the surface to the tunnel every 20-150 yards or so, or are sunk first and then connected by a tunnel. The cross-section of a tunnel is usually elliptical with a height of ca. 4 ft. and a width of ca.  $2\frac{1}{2}$ -3 ft. It is usually unlined, but if it passes through soft soil, baked clay hoops (*kaval*, *nāy*, *tambūsha*) are used to prevent collapse (cf. *Istikhṛādjī*, 54 ff., 60 ff.). The vertical shafts are approximately 2 ft. 6 in. in diameter and their upper portions are strengthened by mud or stone linings. Their purpose is to give ventilation and to enable the soil excavated to be hauled to the surface in a bucket by a windlass. If the shaft is unusually deep a second windlass may be set halfway down in a niche. Round each shaft a ring of soil accumulates, and from the air the *kanāt* has the appearance of a line of small craters. On the whole, in those parts of Persia where *kanāts* are found in abundance, and also in Balūčistān and Afghānistān, conditions are favourable to the digging of wells and galleries by the methods and tools used by *muḳannīs*. The gravel of which the soil is largely composed crumbles easily under the pickaxe with no need of explosives or, at a normal pace, of extraordinary effort. Caving-in on a large scale is rare, though minor subsidence is common. The *muḳannī* carries a castor-oil lamp to test the ventilation, and if the air does not keep the flame alight another shaft is built (cf. *Istikhṛādjī*, 57-8). Al-Karāḏjī describes protective clothing suitable for the *muḳannī* (59).

The gradient of a *kanāt* is established by the use of a spirit-level suspended between two pieces of cord, each about 10 yards long. It varies from 1 : 1,000 or 1 : 1,500 in a short *kanāt*, but in a long *kanāt* is nearly horizontal (cf. *Istikhṛādjī-i ābhā-yi pan-hānī*, which discusses three types of levelling instruments, or *tarāz*, used by *muḳannīs* and a fourth invented by the author, 64 ff.). Al-Karāḏjī states that the gradient should be 1 *dhīrā'* per *farsakh*, i.e., rather less than seems to be the general practice (115). The length of *kanāts* varies. Some are quite short, but *kanāts* of 5-10 miles are common and some may be 20 miles or more, as is the case with several in Yazd and Kirmān. The depth of the mother well varies: shallow ones may be less than 25 ft., while many are as much as 150-350 ft. The deepest known mother well is at Gūnābād in eastern Persia and is 1,000 ft. deep.

The discharge of the water of *kanāts* varies according to ground-water characteristics, the nature of the soil and the season. Those which tap a permanent aquifer tend to have a constant flow throughout the year. If a *kanāt* does not tap a stable ground-water source or is in porous soil, its flow may be reduced to virtually nothing in summer, or in a dry year. The water of such *kanāts* is known as *āb-i rū'ī*. The flow of some *kanāts* may reach 400 gallons a minute, but that of most is much smaller, dropping to 30 gallons a minute or less. It is a disadvantage of the *kanāt* system that the water, since it flows all the year round, may be wasted when irrigation is not needed.

Regular cleaning and repair of *kanāts* is required, though the frequency with which this is necessary varies with the soil and the configuration of the land (cf. *Istikhṛādjī*, 120 ff. on the maintenance of *kanāts*). They are subject to damage and destruction by flash floods. The shafts are sometimes covered by a slab of stone to prevent them being filled by blown sand (see also below.)

In 1962 a distinguished French water engineer, M. Henri Goblot, estimated that about half the land under cultivation in Persia was irrigated by *kanāts*, while some of the crops under dry farming in the plateau would not have been cultivated if the construction of a *kanāt* had not made it possible to establish a village in the neighbourhood. The total number of *kanāts* is variously thought to be between 30,000 and 50,000 (see further H. Goblot, *Le problème de l'eau en Iran, op. cit.*). Dr. Esmail Feylessoufi, writing in 1958, put the number at the lower figure, of which he believed some 22,000 to be in running condition, and their estimated discharge to be 560 cubic metres per second (*Underground water kanāts and deep wells in Iran*, publication of the Independent Irrigation Administration, Tehran 1958, 9 ff.). M. Goblot accepts a rather higher figure, namely 40,000, with a total discharge of 600-700 cubic metres per second (see also idem, *Le rôle de l'Iran dans les techniques de l'eau*, in *Technique: review de l'enseignement technique*, 155-6 (January/February 1962), 12).

*Kanāts* have played an immensely important role in Persia, both in contributing to the spread of cultivation and also in influencing the site and nature of settlements. Hamadān, Qazwīn, Tehran, Nishāpūr, Kirmān, Yazd (cf. the legend of the foundation of Yazd by Alexander, which was preceded by the

Cross-section of a *kanāt*

making of a *kanāt*, Muḥammad Mufid, *Djāmi'-i Mufidi*, iii, 731-2), and many other towns owe their existence to *kanāts*. Until 1930, the water supply of Tehran, the modern capital, was provided by twelve *kanāts*. In some districts there is a heavy concentration of *kanāts*. Aerial photos, for example, showed that there was a total of 266 *kanāts* in the Varāmin plain, twenty-five miles south-east of Tehran, in the late 1950s (P. Beaumont, *Qanats in the Varamin plain, Iran*, in *The institute of British geographers, transactions and papers*, 1968, publication no. 45, 172). From the point where a *kanāt* comes to the surface, fields and gardens spread out round it and its branch canals, and settlements grow up along or near the *kanāt*, their size and number depending upon the volume of its flow.

Sometimes the ownership of the *kanāt* is in the same hands as the land which it waters. Sometimes the different parcels of land have a prescriptive right to the water of a *kanāt* with or without the payment of dues. Frequently the ownership of the land and of the *kanāt* is in different hands and the water is bought and sold. Many *kanāts* are *wakf* property or *khālīṣa* (cf. a *niṣhān* granting tax immunities to Fayḍābād, Balkh, which states that four *dāngs* of any *kanāt* brought into operation belonged to the *diwān*, H. R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 18 b).

The distribution of the water of a *kanāt* is based on time. The rotation period varies from *kanāt* to *kanāt*, and the order in which the different parcels of land receive the water is sometimes permanent and sometimes settled from year to year by the drawing of lots or some other method. Normally land higher up has the right to water before land lower down. The shares are often fragmented into very small units of time. If the flow of a *kanāt* is considerable and those having a right to the use of its water numerous, the distribution of the water is likely to be under an official known as the *mirāb*, who is chosen by the joint users, or, in the case of a *khālīṣa kanāt*, by the government, and is paid by a special due. The division of the water of some *kanāts* through branch canals goes back many years: that of one in Ardīstān is reputed to have originated in Mongol times.

The need for the careful regulation of the water of a *kanāt* among the various parcels of land it waters, or between the inhabitants of a town for which it provides domestic water, and the need to keep it in good repair impose a certain solidarity upon the users, though this does not prevent frequent, and sometimes bloody, disputes over the use of its water, or usurpation of this by those higher up to the disadvantage of those lower down. The maintenance of a *kanāt* in the case of joint ownership clearly poses certain problems, but there are numerous instances of *kanāts* owned by over a hundred persons being successfully operated. A substantial body of law concerning *kanāts*, based partly on custom and partly on the *Shari'a*, has grown up over the centuries. This includes especially the question of the *ḥarīm*, i.e., the land bordering a *kanāt* in which another well or *kanāt* cannot legally be sunk, and access to *kanāts* (see *Istikhṛādī-i ābhā-yi panhāni*, 42 ff.). Some of this law goes back to pre-Islamic times. Gardīzī mentions that 'Abd Allāh b. Ṭāhir (governor of Khurāsān 213/828-230/844) assembled the *fukahā'* from Khurāsān and 'Irāk to write a book on *kanāts* and rules for the distribution of their water, since disputes were continually taking place over them. He states that the book which resulted from their la-

bours, the *Kitāb al-ḥunī*, was extant in his day (*Zayn al-akhbār*, ed. Muḥammad Nāẓim, Berlin 1928, 8). In modern times customary law and the *Shari'a* have been supplemented or superseded by the civil law and governmental regulations (see further A. K. S. Lambton, *Landlord and Peasant*, London 1953 and eadem, *The Persian Land reform 1962-1966*, Oxford 1969).

There is frequent mention in histories of the repair of old *kanāts*, and the making of new ones by rulers and others. The upkeep of irrigation works (which included *kanāts*) was, indeed, one of the traditional functions of the ruler. There are also records of the destruction of *kanāts* by acts of war. In recent years, as a result of the use of power-operated wells in regions formerly watered entirely or partly by *kanāts*, and the construction of dams controlling surface irrigation water, the ground-water table has fallen, and many *kanāts* (whose flow is governed by the height of the water table) have become dry or their flow has been seriously depleted, (cf. P. Beaumont, *Qanats in the Varamin plain*, 177 ff. and idem, *Qanat systems in Iran*, in *Bull. of the International association of scientific hydrology*, xvi, 1.3/1971, 40). *Kanāts*, however, still remain the principal, and sometimes the only, source of irrigation and domestic water supply in many parts of Persia, but in the more densely populated districts they have lost their importance as the main suppliers of water.

*Oman and Trucial Oman.* A considerable number of *kanāts*, or *aflādī* (sing. *falādī*) as they are known, some in operation, others abandoned, are to be found in Oman, Trucial Oman, and Bahrein. Many of them are sited near *wādīs* and the alignment is often adjacent or parallel to the *wādī* bed. They are liable to damage in time of flood. For this reason the vertical shafts are frequently covered by stone slabs to lessen the danger of destruction. Tradition attributes the building of *aflādī* to Sulaymān b. Dā'ūd. It seems probable that, in fact, the *kanāt* system in Oman was developed first in Achaemenian and then in Sasanian times, while many *kanāts* appear to have been restored under Ya'ariba rule (see further J. C. Wilkinson, *Arab settlement in Oman; the origins and development of the tribal pattern and its relationship to the imamate*, unpublished Ph. D. thesis, Oxford 1969). One of the *aflādī* of Iskī is by tradition supposed to have been destroyed by Ḥadīdjādī b. Yūsuf [q.v.] during his expedition against Oman. At the present day the technique of making *aflādī* is confined to certain groups of the 'Awāmīr tribe.

In general the *kanāts* of Persia are neither so deep nor so long as those in Oman. At Nizwa there is a *falādī* the mother well of which is ca. 60 ft. deep; in the Buraymī oasis, which is irrigated by *aflādī*, the longest is ca. 9 km. In Central Oman an inverted syphon (*gharrāk fallāh*) is used in *kanāt* building to cross *wādīs*. There is considerable variation over the ownership of the *aflādī*, their administration, and the distribution of their water. In some cases the ownership of the *falādī* and the land it irrigates is in the same hands, but more often it is separate and the water is bought and sold. A special feature of the *aflādī* in Oman is that a share of the water belongs to the *falādī*, the revenue from which is devoted to its upkeep. Many *aflādī* have a special book recording the ownership, sale and distribution of the water. The rotation period of the water varies from *falādī* to *falādī*. It is measured by the sun by day and the stars by night. The water is divided into shares called *bāda* and subdivided into *rabi'a*, *kāma*, *aṭṭar*, and *ḥiyās*. The official in charge of the water

distribution is commonly known as the *ʿarīf*, who, in some cases, has under him a subordinate official or officials, known as *bīdār*. Another official, the *wakīl*, is normally in charge of the upkeep of the *falaǧī*. The *ʿarīf* and the *wakīl*, who are elected by the owners of the water, are paid by dues or a share of the water.

(A. K. S. LAMBTON)

## II. IN ARAB COUNTRIES.

The Persian word *kahrēz/karez* (see Vullers, *Lex. pers.-lat.*, ii, 767, 927; Desmaisons, s.v.), which was originally applied to underground irrigation systems before being replaced by *kanāt*, passed into Arabic in the form *shirīdī/ṣuhārīdī*, which generally designates a cistern, *kanāt* having a wider current use. Yāḳūt (s.v. *kanāt*) believes that the *kūra* of al-Ḳanāt (in the Sinǧiār region of the *Ḍiazīra*) took its name from underground water pipes, and these have been found near *Ḳaryatayn* on the ancient road from Damascus to Palmyra (Moritz, *Die antike Topographie der Palmyrene*, in *Abb. Pr. Ak.*, iv (1889), 12);

and in *Paysans de Syrie et du Proche-Orient* (Paris 1946, 283 and fig. 85), J. Weulresse notes that near *Ḍjarūd* (in the Damascus region) there are draining systems of 8 to 10 km. long, sunk at a level of 10 to 12 m., sometimes terminating in underground reservoirs whence the water is drawn by norias. Basing his observations on al-Nābulusī's *Rihla*, J. Nasrallah (*Voyageurs et pèlerins au Qalamān*, in *B.Et.Or.*, x (1943-4), 26) reports that a village named al-Ṣāliḥiyya, which lies between *Yabrūd* and al-Nabk (north of Damascus), had a *kanāt* which, legend has it, dried up when a Maghribī whom the village people had made unwelcome cast a spell on it; the ruin of the whole locality ensued. The same writer notes that the clearing of the *kanāt* begun shortly before the Second World War restored the prosperity of the region.

Methods of underground canalization spread from Iran to the Yemen and thence to Ḥiǧǧāz where the canals were called *ḫizāma* (pl. *ḫazāʾim*). Among various meanings, this term, according to al-Aṣmaʿī (*apud LA* and *TA*, rad. *ḫ-z-m*; cf. Yāḳūt, s.v. *kanāt*), especially designates a series of wells sunk at a certain distance from one another and linked by a gallery (*kanāt*) laid out at a level that does not tap the underground water. The water tapped by this method flows gently towards the centre of habitation it supplies or irrigates. The water outlet is known as a *fakīr* (pl. *fukūr*), but this term (cf. *LA* and *TA*, rad. *f-ḫ-r*) is also used for a well or a group of wells linked by a gallery, that is, it is practically synonymous with *ḫizāma*.

Al-Aṣmaʿī's description corresponds to a method which consists of tapping underground water, from an altitude higher than that of the intake point, by means of a series of wells linked by a gallery high enough to permit a stooping man to move through it (1 m. to 1.50 m.). Such a technique has the virtue of dispensing with machinery to raise well water to the level of the ground, reducing loss due to evaporation, tapping the seepage water, and finally of giving a gentle, regular incline to the underwater draining system, less steep than that at ground level.

That the Romans may have known of this technique is suggested by remains found in the *Ḳayrawān* region in Tunisia (see M. Solignac, *Recherches sur les installations hydrauliques de Kairouan et des steppes tunisiennes du VII<sup>e</sup> au XI<sup>e</sup> siècle (J.-C.)*, in *AIEO Alger*, (1952), 1-272, esp. 60 ff.), but the Arab origin of their works in North Africa is not in doubt. They have been found in Tunisia near Gafsa (Burseaux, *L'Oasis d'El-Guettar, ses ressources, sa décadence*, in *RT*, (1910), 364-73), among the *Nafzāwa*, where they are called *ḫhrīdīya*, and even in the immediate vicinity of Tunis (see M. Solignac, *Travaux hydrauliques hafsidés de Tunis*, in *R. Afr.* (1936), 517-80).

The method employed in the Algerian oases of Touat, Gourara, Sūf, Mzāb, Tidikelt and Figuig (*Fī-ǧīdī*) is called *foggara* (< *faḳḳara*), pl. *ǧǧāǧīr*, which seems to come from the same root as *fakīr*, although *f-ǧī-r* and *f-w-r* are also possible. Described many years ago by J. Brunhes (*Les oasis du Souf et du M'zab*, in *La Géographie*, v (1902), 180), they consist of underground canals sunk at a depth of 8 to 55 m., connected to the exterior by shafts originally designed to collect rainwater; at the outlet the main canal branches out so that gardens can be irrigated.

In the central Sahara and at Fazzān a pump well is called a *ḫḫattāra* (pl. *ḫḫatāṣar*), implying the notion of movement to and fro, but in Morocco this term is applied to the underground draining systems

existing in Tafilat, here and there in other regions, and especially in Marrākūsh. Wells sunk to a depth of 40 m. at the outset and spaced out at 10 to 20 m. on average, with shafts set out at similar distances over a total course of 4 to 5 km., are linked as before with a gallery at a slope of about 1%. Water from the aquiferous stratum and stream-level was distributed by conduits lined with stonework and earthenware (*kādūs*; Sp. *arcaduz*) for use in irrigating gardens and as drinking water. There were around 350 *khatāṣ* in Marrākūsh but some of them are now in ruins (see G. Deverdun, *Marrakech*, Rabat 1959, 15-7, 85-90 and index; Guides Bleus, *Maroc*, s.v. Marrakech).

Al-Idrīsī (ed. and tr. Dozy and De Goeje, 68/78) states that this technique was introduced into the Almoravid capital by a *muhandīs* by the name of 'Ubayd'Abd Allāh b. Yūnus; G. S. Colin (*La noria marocaine*, in *Hesp̄ris*, xiv (1932), 38) believes that he must have been a Jew from the oases of Touat and Gourara, but J. Oliver Asin's researches (*Historia del nombre "Madrid"*, Madrid 1959) throw new light on the problem raised by al-Idrīsī's note: it is in fact probable that the Arab name of Spain's present capital, *Mad̄irīṭ*, is formed from a Latin suffix *etum* and the word *mad̄irā*, which designates precisely those underground conduits of which traces have been found in the subsoil of Madrid; thus it is within the bounds of possibility that the engineer of Marrākūsh originated from al-Andalus. *Khatāṣ* have also been noted in Ifni and the same system was known in the Canary Isles and, in the Mediterranean, in Cyprus (cf. Oliver Asin, *op. cit.*, 365).

*Bibliography*: Among works cited in the article, the works of G. S. Colin, *La noria marocaine et les machines hydrauliques dans le monde arabe*, in *Hesp̄ris*, xiv/1 (1932), and that of J. Oliver Asin are fundamental and also contain full bibliographies. See also J. Brunhes, *L'irrigation*. . ., Paris 1902; *Bull. Etudes arabes*, no. 40 (Nov.-Dec. 1948), 208-13 and no. 41 (Jan.-Feb. 1949), 11-2. (Ed.)

**KANAWĀT**, pl. of *kanāt* [*q.v.*], is found as a toponym in Syria. It designates particularly "a canal of Roman origin which leaves the Barada upstream from Rabwa on the right bank, and divides into five branches which pass across Damascus, supplying the southern part of the city with water" (Ibn 'Asākir, *Description de Damas*, tr. N. Elisséeff, Damascus 1959, 252).

Kanawāt is also the name of a place that lies 85 km. south of Damascus, on the west slope of the Hawrān. Because of its wealth of water this very ancient settlement cannot be identified with the biblical Kenāt (Num. xxxii, 42; 1 Chron. ii, 23). Kanawāt (*Καναθα*, Canatha) enjoyed great prosperity in the first centuries of the Christian era; magnificent ruins dating from the Roman period still stand there. Under Trajan, the construction of a new canal is mentioned, but this was almost certainly the repair of an ancient one. The upper town still possesses an ancient water conduit in a good state of repair.

**KANAWDJ** or **KANNAWDJ** (Sanskrit Kanaakubdja; known to the Arabic geographers as Kanawdj, Kinnawdj, the latter form used also in *Hudūd al-'Ālam*), town in Farrukhābād district, Uttar Pradesh, India, 27°3' N., 79°56' E., formerly also the surrounding district. It has been identified, not beyond question, with Ptolemy's *Κάναγορα/Κάναγοζα*; it is certainly referred to in the travels of Fa-Hsien (A.D. 405) as a city under the Guptas, and as a capital and great Buddhist centre at the time of Hsüan Ts'ang's travels, circa A.D. 641, when under the great Harṣavardhana it had become the chief town of the Pañčāla country. As the capital of the Gurjara-Pratihāra dynasty (*Hudūd al-'Ālam*, s.v. *Jurz*) it exercised strong control over north and north-west India from the Satlād̄j to Bihār, bordered on the west by Sind; and it is presumably against this "kingdom" of Kanawdj rather than against the town that Muḥammad b. Kāsim, the conqueror of Sind, is alleged by the *Čač-nāma* to have made war. At the time of the Ghaznawid invasions of the 6th/12th century, when north India was ruled over by numerous petty kingdoms, the Kanawdj region was under the Gāhadawāla Rād̄jput̄s; together with Mālwā, Kalindjar, Dahgān and Badā'un, Kanawdj bore the brunt of the Ghaznawid attacks (Mas'ūd Sa'd Salmān, *Diwān*, 28, 219, 247, 262-65, 307, 397). Muslim colonies at Kanawdj and other of these places seem to have existed from the times of these incursions. Under the Ghūrīds the Gāhadawāla power was at first a formidable opponent, and Kanawdj was not annexed to the early sultanate until 595/1198-9; the hold seems to have been insecure, for it was necessary for Ilutmīsh to attack it again later — presumably decisively, for a few years later we find his young grandson 'Alā' al-Dīn Mas'ūd appointing a cousin, Djalāl al-Dīn, to the governorship of Kanawdj in 640/1243. Thereafter it figures frequently in the histories of Khaldjī and Tughluqid times, doubtless on account of its strategic importance on the banks of the Ganges; Ibn Baṭṭūṭa refers to it as well built and strongly fortified, and mentions its sugar trade. Kanawdj figures as one of 23 provinces in the time of Muḥammad b. Tughluq (*Masālik al-Absār*, Eng. tr. Spies, Aligarh 1943, 16).

Towards the end of the 8th/14th century Kanawdj was one of the centres of activity of the Hindū "rebels" against whom Malik Sarwar was despatched in 796/1394; and, in his new governorship which was soon to become the sultanate of D̄jawnpur, he was in charge of a region extending from Kanawdj to Bihār. When the sultanat al-shark achieved independence from Dihlī, Kanawdj, as its westernmost stronghold, was often a point of contention between the sultanates of Dihlī and D̄jawnpur, and there were many battles in its vicinity. The town was taken by Maḥmūd Tughluq in 804/1401-2, who held it as his temporary capital (probably with the connivance of the Sharkī ruler) against his recalcitrant *wasir* Mallū Ikbāl Khān Lodī [*q.v.*]; after the death of the latter it was recovered by the Sharkīs in 809/1407 (*Ta'rikh-i Mubārak Shāhi*, 175). It again figured in the Dihlī-D̄jawnpur conflicts at the time of Bahlūl Lodī versus Husayn Shāh Sharkī, and Sikandar Lodī versus his brother Bārbak [see SHARKĪ].

Humāyūn took Kanawdj for his father Bābur in the campaigns of 932/1526, to lose it, and his kingdom, to Shēr Shāh 14 years later. After the Mughal restoration the history of Kanawdj seems to have been largely peaceful, and the *Ā'in-i Akbarī* records it as the headquarters town of *sarkār*. In the 12th/18th century, with the decline of the Mughal power,

Kanawdj was variously in the hands of the Nawwābs of Farrukhābād, the Nawwābs of Awadh, and occasionally the Marāfhās.

Kanawdj appears as a mint town, Kannawdj *ʿurf* *Shergarh*, under *Shēr Shāh* and the later *Sūrīs*; its name was changed by Akbar to *Shāhgarh*, although under the later *Mughals* it appears as *Shāhābād*.

Its monuments are poorly described, although there are many tombs and shrines in the neighbourhood. The *Djāmiʿ* mosque, built by *Ibrāhīm Sharkī*, using much Hindu and *Djāy*n temple spoil, shows the westernmost extension of the *Sharkī* style [see *DJAWNPUR*, and *HIND*, Architecture].

(M. LONGWORTH DAMES—[J. BURTON-PAGE])

**KANBĀNIYA** (also *KANBĀNIYA*, with *KAN-FĀNIYA* once attested in the *Calendrier de Cordoue*), from Spanish *campaña*, in general denotes in Spanish Arabic usage, the countryside, but in particular the *Campiña*, sc. the vast, gently-undulating plain which forms the southern part of the *kūra* of Cordova; *al-Idrīsī*, *Description de l'Afrique et de l'Espagne*, ed. and tr. Dozy-De Goeje, 174, 209, makes it an *iklim* whose capital was Cordova and its main towns *al-Zahrāʿ*, *Ecija*, *Baena*, *Cabra* and *Lucena*. After leaving the capital, the approach to it was first through the *Bāb al-Kantara* and across the Roman bridge spanning the Guadalquivir near the caliphal palace and the great mosque, and then through the famous *Rabaḍ* [q.v.]; several roads then ran across its expanse. In addition to cereals and fruit, this fertile plain produced a celebrated variety of grapes called *kanbāni*. The plain was much used for hunting, and the upper ranks of Cordovan society liked to reside in the numerous country houses (*munya*) built there; moreover, the Christians themselves had churches there.

The *Campiña's* strategic situation made it a route for the passage of troops to attack Cordova in times of trouble, and is specially mentioned in regard to the revolt of *ʿUmar b. Ḥafṣūn* [q.v.], who managed to capture the fortress of *Bulāy* (Poley = Aguilar de la Frontera), from which he was able to send out expeditions, lay waste the agricultural lands and seriously threaten the capital's food supplies.

*Bibliography*: *E. Lévi-Provençal*, *Hist. de l'Esp. Mus.*, index and bibl. cited there; *R. Castejon*, *Cordoba califal*, in *Boletín Acad. Córdoba* (1929), 257; the Arabic geographers dealing with Muslim Spain (*Yāqūt* cites a village called *Kanbān*, which he seems to have formed from the *nisba* of *al-Kanbāni*, but he also mentions the *Kanbāniya*). See also *AL-ANDALUS*, *KURṬUBA*. (ED.)

**KANBĀYA** [see *KHAMBĀYAT*].

**KANBŌH** [see Supplement].

**KAND** [see *SUKKAR*].

**KANDĀBİL** (the earliest form of the name found in Arabic works), *GANDJĀBĀ* (current from the 16th

century), or *GANDĀVĀ* (the form found in classical *Balūʿī* poetry of the 15th century and widely used since the 18th century) was a town standing on a high elevation (*Balādhuri*, *Futūḥ al-buldān*, 445), alone on a desolate plain (*Iṣṭakhrī*, Cairo 1966, 106; *Ibn Ḥawqal*, Beirut 1962, 281), and from it routes led west to *Ḳuzdār*, north to *Mastandjī*, east to *Multān* and south to *Manṣūra* (cf. *Ibn Khurradaḍbih*, Leiden ed., 55-6; *Iṣṭakhrī*, 106, 179; *Ibn Ḥawqal*, 282; *Muḥaddasī*, Leiden ed., 456). Only the modern *Gandāvā*, situated 28°37' N and 67°29' E in the *Kačči* district of *Balūcīstān* Province, Pakistan, answers this description in all details. It stands on a hill 321 ft. high, at the head of the flat, desolate plain of *Kačči*, and from it the old routes lead in the directions specified in the sources (see *Elliot and Dowson*, *History of India as told by its own historians*, London 1867, i, 385).

The founding of *Kandābīl* was ascribed to the legendary *Bahmān Ardašīr* "to demarcate the boundary between the Indians (*Sindians*) and the Turks" (*Mudjmal al-tawāriḫh*, 117-8), i.e., between *Turan* or *Kaykān* and the flat *Budha* country of the *Sindian* people (*Yāqūt*, *Muʿdjam*, s.v. *Kandābīl*). In the seventh century, *Budha* included within its boundaries the present district of *Kačči* and the western areas of the districts of *Jacobabad*, *Sukkur*, *Larkana* and *Dadu* (*Fathnāma-i Sind*, 15, 39, 125). *Kandābīl* was the chief town in the northern part, while the capital was at *Kākārādj* (= *Kakar*, in *Dadu* district) in the more fertile southern part. With the Arab conquest (93/712), the whole of southern *Budha* was integrated with the central province of *Sind* (*ibid.*, 122-3) and the subsequent boundaries of *Budha* embraced only the northern region of *Kandābīl*, i.e., the present *Kačči* district and the country around it (*Iṣṭakhrī*, 104). The country was called *Budha*, *Budhiya* or *Budhiyya*, not because of any links with *Buddha* or *Buddhism* but because the bulk of the inhabitants were *Budhs*; *Zuṭṭs* also lived there (*Balādhuri*, *Futūḥ*, 436, 445). Both these communities (now Muslim) have survived, the *Budhs* living mainly in *Mutt* and the *Zuṭṭs* scattered over the whole country.

According to *Fathnāma*, 73, the Arab armies reached the *Kandābīl* region as early as 23/644 but withdrew after receiving the news of Caliph *ʿUmar's* death. From 23/644 until 92/711, the *Kandābīl* region of *Budha*, though subjugated by the Arabs, became a refuge for Arabs fleeing from the *Umayyad* government and was occupied by the *Brahmin* kings of *Sind*. In 660, *Čačh*, the ruler of *Sind*, led a successful expedition through the country of *Kandābīl* (*Fathnāma*, 49). During the caliphate of *Muʿāwiya* (42/661-61/680), the commander *Sinān* gained a victory in *Kaykān* (*Balādhuri*, *Futūḥ*, 433), but when he advanced through *Kaykān* into *Budha* on his second expedition he was killed there (*Fathnāma*, 83). In 69/688, the *Khāridjī* rebel *ʿAṭīyya b. al-Aswad al-Ḥanafi* was pursued by a section of *Muhallab's* army "to *Kandābīl* in *Sind*" and killed there (*Balādhuri*, *Ansāb*). Six years later *ʿIlāfi* rebels slew *Saʿīd b. Aslam*, commander of the *Makrān* district, at *Kandābīl* (*Balādhuri*, *Futūḥ*, 435). *Al-Ḥādīdjādī* despatched *Mudjīdjāʿa* in 85/704 to punish the *ʿIlāfis*, but they fled to *Sind* before his arrival; however, he subjugated the "tribes of *Kandābīl*" (*ibid.*, 435), who had probably aided the *ʿIlāfis*. Subsequently (704-11), *Kandābīl* was occupied by *Dāhār*, ruler of *Sind*, who appointed his nephew, *Dhol* son of *Čandar*, as the governor of "*Budhiya*" (*Fathnāma*, 94).

After the conquest of *Sind*, including "*Budhiya*",

by Muḥammad b. al-Ḳasim in 92/711 (*ibid.*, 121-4), the region of Ḳandābīl became an administrative division of al-Sind province and peace reigned, apart from occasional disturbances. In 101/720, the rebel sons of Muḥallab reached Ḳandābīl, regarding it as their last refuge, but their trusted ally Wadā' closed the gates and barred their entry into the town; they died fighting outside the walls of Ḳandābīl against the superior forces of Hilāl b. Aḥwaz al-Tamīmī, who had pursued them relentlessly [see AL-MUḤALLAB. In 55/754 Ḳandābīl was occupied by a group of Arabs, but they were ousted by Hishām b. 'Amr, governor of Sind. Some time in 222/837, another usurper, Muhammad b. Ḳhalīl, occupied Ḳandābīl, but 'Imrān, then governor of Sind, attacked him, conquered Ḳandābīl, and transferred the local chiefs involved to Kuẓdār (Balādhuri, *Futūḥ*, 445). Firmly checking all disturbances, 'Imrān brought lasting peace and prosperity to Ḳandābīl. A century later it had developed into the central market-place of the Budha hinterland, where "the Budh people" sold their produce and obtained all their supplies (Iṣṭakhri, 105-6). Palm trees were planted later, and in the 11th-12th century Ḳandābīl was a "big city, prosperous and pleasant, producing large quantities of dates" (*Hudūd al-'ālam*, 123).

Ḳandābīl remained an administrative district of Sind, under the rule successively of the Sumarās, the Sammās, the Arghūns and Turḳhāns, the Moghuls and the Kalhorā rulers [see SIND]. In the second half of the 9th/15th century Ḳandābīl, then known locally as Gandāvā and associated with Sibi province, became the capital of the Lāsharī Baluch confederacy in alliance with the Sammās. In 924/1518, Shāh Beg Arghun, en route for his conquest of Sind, sent a force to occupy "Gandjābā". It fell to the Moghul Emperor Akbar in 1574, was included in the sub-division (*mahāl*) of Fathpur (*Ta'riḳh-i Sind*, 130, 186, 235-6) and was governed from Bakhkhar. Nadir Shāh, who had subjugated the Kalhorās of Sind, transferred the Kačchi district, including Gandāvā, to Kalāt in 1740/1740 and thereafter (1740-1955) it became part of the ḳhānate of Kalāt, political capital of the Kačchi district and the winter resort of the ḳhāns of Kalāt. The city wall, repaired by Murād (an able officer of the Kalhorās) in the early 18th century, was still intact in the 19th century, but is now dilapidated and in ruins.

**KANDAHĀR**, a city in southeastern Afghānistān (in modern times giving its name to a province) situated in latitude 31°27' N. and longitude

65°43' E. at an altitude of 3,460 ft. (1,000 m.), and lying between the Arghandāb and Shorāb Rivers in the warmer, southern climatic zone (*garmsir*) of Afghānistān. Hence snow rarely lies there for very long, and in modern times the city has been favoured as a winter residence for Kābulis wishing to avoid the rigours of their winter (see J. Humlum *et al.*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 141-2; Ibn Baṭṭūṭa, iii, 89, likewise recorded in the 8th/14th century that the inhabitants of Ghazna moved to Ḳandahār for the winter).

Since it is one component of the triangle Kābul-Ḳandahār-Harāt, possession of which gives military control of Afghānistān, and is also at the end of a route via the modern railhead of Čaman to Quetta and northwestern India, Ḳandahār has been of strategic and commercial importance all through recorded history. Even in the Stone Age, the inhabitants of the nearby settlements of Mundigak and Deh Morasi Ghundai (4th-2nd millenia B.C.) traded with northwestern India, eastern Iran and the Eurasian steppes. In Achaemenid Persian times, the region of Ḳandahār was possibly to be identified with the Achaemenid satrapy of Harahuvāt; in the Persepolis Fortress tablets (c. 500 B.C.) there is more than one mention of the issue of rations for journeys between Susa and Kandarash (R. T. Hallock, *The evidence of the Persepolis tablets* [= ch. from the *Cambridge history of Iran*, ii], Cambridge 1971, 13, 29).

In Hellenistic times, the region of southeastern Afghānistān was known as Arachosia, and the town of Ḳandahār itself is probably to be identified with the μητρόπολις Ἀραχωσίας of, e.g., Isidore of Charax (on the problem of the city's ancient name, Alexandria of Arachosia or Alexandropolis, see G. Pugliese Caratelli and G. Garbini, *A bilingual graeco-aramaic edict by Asoka*, Serie Orientale Roma xxix, Rome 1964, 19-22). Then as now, Arachosia was famed for its grapes; the Indian author Kauṭīlya (4th century B.C.) speaks of Hārahūraka as a place whence wine was obtained. However, Greek rule here can only have lasted some 25 years, 330-305 B.C., for in the treaty between Seleucus I and Chandragupta the frontier between the Seleucids and the Mauryas was apparently fixed to the west of Ḳandahār, on the Helmand. Soon afterwards, Emperor Asoka had a series of rock inscriptions executed on a *tepe* in the old city of Ḳandahār, including one in Greek and Aramaic discovered in 1958 (see D. Schlumberger *et al.*, *Une bilingue greco-araméenne d'Asoka*, in *JA*, cclxvi (1958), 1-48, and Caratelli and Garbini, *op. cit.*), one in Greek in 1963 (see Schlumberger, *Une seconde inscription grecque d'Asoka*, in *CRAIBL* (1964), 126-40) and an Aramaic one also in 1963 (see A. Dupont-Sommer and E. Benveniste, *Une inscription indo-araméenne d'Asoka provenant de Kandahar (Afghanistan)*, in *JA*, cclvii (1966), 437-65); these show that Greek and Aramaic were still recognized in Ḳandahār as administrative languages, the local Iranian tongue presumably being unwritten. It may have been Asoka who introduced Buddhism to the region, though this is unproven. At all events, the faith appeared early, and the old city of Ḳandahār included a Buddhist monastery and its *stupa*, dated tentatively by G. Fussman to the 4th century A.D., see his *Notes sur la topographie de l'ancienne Kandahar*, in *Arts Asiatiques*, xiii (1966), 37-9.

The name Ḳandahār itself must be connected with Gandhāra, the ancient Indian kingdom on the upper Indus and Kābul Rivers which became a stronghold of Buddhism, and Arab historians do in fact use the form Ḳandahār/Ḳunduhār for Gandhāra proper. It is

possible that the name was transferred southwards to Arachosia by some migration of Gandhārans; there are stories, retailed by Chinese Buddhist pilgrims, of the Buddha's begging bowl being preserved in Kandahār (at a later date, it was shown in a Muslim shrine outside the city), brought thither by Gandhāran Buddhist refugees.

The actual site of Kandahār has varied at different periods of history. The old city, abandoned since the time of Nādir Shāh, lay 3 miles (5 km.) to the west-south-west of the modern city, at the foot of a rocky spur called the Kaytūl, the site being now called the *shahr-i kuhna*. Here archaeology has revealed a walled city, clearly dating back to Hellenistic times, and successively occupied in the ensuing Buddhist and Islamic periods (see Fussman, *op. cit.*, 33 ff.).

Very little is known on Kandahār in the Kushan period, but under the rule of the southern branch of the Hephthalites, the Zabulites (see HAYĀTĪLA), Kandahār fell within their kingdom (see R. Ghirshman, *Les Chionites-Hephthalites*, Cairo 1948, 104 ff.). In the Umayyad period, Arab raiders penetrated into the region of Kandahār after their occupation of Sīstān and their establishment of a bridgehead of Muslim arms at Bust [q.v.]. Arabic sources call the region around Kandahār al-Rukhkhādī (< Arachosia; the name survives today in the site of an Islamic settlement now called Tepe Arukh) or Zamīndāwar/Bilād al-Dāwar. It was the centre of a powerful local dynasty who bore the title of Zunbils, epigoni of the southern branch of the Hephthalites; down to the Ṣaffārid period (later 3rd/9th century) they constituted the main obstacle to the spread of Islam in eastern Afghānistān. Balādhuri records that the governor of Sīstān under Mu'āwiya, 'Abbād b. Ziyād b. Abihī, led a raid against Kandahār and captured it after bitter fighting; the poet Ibn Mufarrigh probably accompanied the expedition, for he composed an elegy for the Muslim dead (these verses, not related to any specific occasion by Ch. Pellat, *Le poète Ibn Mufarrigh et son oeuvre*, in *Mélanges Massignon*, Damascus 1956-7, iii, 217, can therefore be pinned down to 'Abbād's expedition). Balādhuri mentions the characteristic high caps (*kalānisa fiwāl*) of the Kandahāris, and although his Arabic text is somewhat ambiguous here, it seems that 'Abbād now re-named the town 'Abbādiyya after himself (Balādhuri, *Futūh*, 434, repeated in Yāqūt, *Buldān* (Beirut 1374-6/1955-7), iv, 402-3; cf. K. Fischer, *Zur Lage von Kandahar an Landverbindungen zwischen Iran und Indien*, in *Bonner Jahrbücher des Rheinischen Landmuseums in Bonn*, clxvii (1967), 192-3, and Marquart, *Erānshahr*, 270). But Muslim control must have been thrown off by the time 'Abbād was recalled from his governorship in 61/680-1; the name of 'Abbādiyya is heard of no more, and at the time of the Muslim débâcle in Zamīndāwar in 79/698 (see C. E. Bosworth, "Ubaidallāh b. Abī Bakra and the 'Army of Destruction' in Zābulistān (79/698)", in *Isl.*, 1 (1973), 268-83), there was no Muslim-controlled territory east of Bust.

In this early Islamic period, Muslim authors tended to reckon Kandahār as part of the province of Sind (e.g., Ibn Khurrādādhbih, 65, and Yāqūt, *loc. cit.*; Ya'qūbī, *Buldān*, 281, tr. 90, links Kandahār with Sind also), probably because the indigenous religion of the people of Zamīndāwar, the cult of the god Zūn, was considered as related to Indian faiths. In the reign of the 'Abbāsīd caliph al-Manṣūr there is mentioned a campaign by the governor of Sind, Hishām b. 'Amr al-Taghlibī, against Multān, Kaṣhmīr and Kandahār, but Marquart, following

Reinaud, identified this Kandahār with the classical Gandhāra on the upper Indus, and in particular, with Wayhind, capital of the Hindū-Shāhīs [q.v.] (Balādhuri, *Futūh*, 445; a fuller account in Ya'qūbī, *Historiae*, ii, 448-9; cf. Marquart, *Erānshahr*, 271-2, and Minorsky, *Hudūd al-'ālam*, 254).

However, Marquart commented how infrequently the name of Kandahār in Afghānistān appears in early Islamic sources. More commonly mentioned as the main centres of the region of Zamīndāwar are the towns of Pandjwāy (Iṣṭakhri, 250, says "al-Rukhkhādī is the name of a region, and Bandjwāy is its capital"), and then, one day's journey further on from Bust, Tiginābād. Ancient Pandjwāy was apparently situated on the road from Kandahār to modern Pandjwāy, according to Mir Husain Shah, *Panjwayee-Fanjuwai*, in *Afghanistan*, xvii/3 (Kabul 1962), 23-7; cf. Le Strange, 346-7. The exact site of Tiginābād, mentioned by Djuwaynī in the 7th/13th century and appearing on an 18th-century European map as Tecniabad, is still unknown (see Fischer, *op. cit.*, 191-2). Marquart thought that *al-Rukhkhādīyān*, "the two Rukhkhādīs", mentioned in the account of a raid into the region by Hārūn al-Rashīd's governor 'Isā b. 'Alī b. Māhān, referred to these two places Pandjwāy and Tiginābād (Mas'ūdī, *Murūdj*, viii, 127, cited in *Erānshahr*, 272). It is certainly these two towns which are mentioned in sources from the Ghaznavid and Ghūrid periods (e.g., Gardīzī, Bayhaḳī and Djuzdjānī), but there is no doubt that Kandahār itself continued to exist and to flourish. The Islamic old city of Kandahār, in whose remains one can clearly discern the classical eastern Islamic division of a citadel (*kal'a*, *kuhandiz*), a town proper within the walls (*madīna*, *shahrastān*) and suburbs (*rabaḳ*, *bīrūn*), probably developed during this time (cf. Fussinan, *op. cit.*, 39-42).

With the destruction of the Ghaznavid centre of Lashkāri Bāzār/Kal'a-yi Bist by 'Alā' al-Dīn Djihānsūz in 545/1150 (see GHŪRĪDĪS), the name of Kandahār comes back into prominence and is henceforth mentioned continuously. In 680/1280-1 Kandahār was conquered by Shams al-Dīn II b. Rukn al-Dīn Kart, the vassal ruler in Harāt for the Ilkhānid Abāḳa (B. Spuler, *Die Mongolen in Iran*, Berlin 1955, 158). Tīmūr conquered it and bestowed it on his grandson 'Ir Muḥammad in 785/1383. In 821/1418 Kandahār became part of Soyurghatmīsh b. Shāh Rukh's appanage, and in the later 9th/15th century it appears as a minting-place for Husayn Mirzā Bayḳarā of Harāt (875/1470-912/1506). It was under this latter ruler's overlordship that the Arghunīd Dhu 'l-Nūn Beg added the region of Kandahār and the adjacent parts of what is now northeastern Balūcīstān, scil. Sībī, Mustang and Quetta, to his other territories and made Kandahār his capital. This eventually led to conflict with the Tīmūrid descendant Bābur [q.v.], who was carving out for himself a principality on the Indo-Afghān fringes. Bābur captured Kābul from Dhu 'l-Nūn's son Muḳīm in 910/1504, and Muḳīm was allowed to fall back on Kandahār. However, Bābur felt that his hold on the Kābul River valley would be insecure whilst the Arghunīds remained in eastern Afghānistān, so he attacked Muḳīm and his brother Shāh Beg in Kandahār in 913/1507-8. Nevertheless, Shāh Beg was able to obtain Shaybānid help and return. Kandahār was not finally captured from him till 928/1522, after a drawn-out but intermittent siege (exaggeratedly enumerated in the sources as of five years' duration), the city's strong fortifications long preserving it; Shāh Beg now retreated southwards permanently to Sībī, Quetta and Sind (Mirzā Muḥam-

mad Ḥaydar Dughlat, *Ta'riḫ-i Rashīdī*, tr. N. Elias and E. D. Ross, London 1895, 202 ff., 357; *Bābur-nāma*, tr. Beveridge, London 1921, 227, 332-9, 365-6, 429-36).

The Mughals did not enjoy unchallenged possession of Kāndahār for long. After Bābur's death it was held by his son Kāmran Mīrzā, but was also coveted by the vigorous and aggressive Ṣafavid state in Persia under Shāh Ṭahmāsp I. After prolonged warfare with the Ōzbegs, the Ṣafavids had fallen heir to most of the Timūrid inheritance in Kḥurāsān, being in firm control of Harāt after 934/1527-8; they accordingly wished to consolidate their position by the addition of Kāndahār. Kāmran Mīrzā held the city against Ṣafavid attacks in 941/1534-6. In the internecine disputes of Kāmran and his half-brother Humāyūn [q.v.], the latter was in 950/1543 forced to take refuge with Shāh Ṭahmāsp. In 952/1545 Humāyūn and a Persian army took Kāndahār, but a month later Humāyūn turned on his Persian allies and seized the city for himself. In 965/1558 Ṭahmāsp recaptured it from the Mughal Emperor Akbar, and the latter did not regain it till 1003/1594-5. The Persians again took it from Dījihāngīr b. Akbar in 1031/1622, and after ten years' reversion to Mughal control it passed in 1058/1648 into the hands of 'Abbās II, remaining with the Ṣafavids till 1121/1709. The Ṣafavid province of Kāndahār also included the southerly districts of Mustang, Sībī, Kākārī, etc.; at various times in the 10th/16th century it was governed by royal princes of the Ṣafavid house (cf. K. M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 12-14, 35-6, 42). It is from the mid-11th/17th century that we have a drawing of the walled city of Kāndahār as it existed before Nādir Shāh's destructions, given by J. B. Tavernier in his *Travels*; he passed through Farah, Kāndahār and Kābul on his way from Iṣfahān to Āgra (the picture is reproduced in Fischer, *Zur Lage von Kandahar*, 149).

The end of Ṣafavid rule in Kāndahār came at the hands of the Gḥalzays [q.v.], an Afghān tribe who had settled in the vicinity of Kāndahār on lands left vacant when Shāh 'Abbās I had moved a considerable part of the original Abdālī [q.v.] occupants to the Harāt region. In the course of the 11th/17th century, the Gḥalzays had generally supported the Ṣafavid cause rather than that of the Mughals, but the leader of the Hōtak clan of the Gḥalzays, Mīr Ways, now rebelled against the Ṣafavids, and in 1121/1709 declared his independence, though he contented himself with the title of *wakīl*, "regent". On his death in 1127/1715, Mīr Ways was buried in Kāndahār, and his grave was, until recently at least, regarded as a source of *baraka* or blessing, despite its being overshadowed by that of Aḥmad Shāh Durrānī (see below). Mīr Ways's son Maḥmūd (d. 1137/1725) consolidated his power, and it was from Kāndahār that the Gḥalzays streamed westwards into Persia and overthrew the decrepit Ṣafavid monarchy (see L. Lockhart, *The fall of the Ṣafavī dynasty and the Afghan occupation of Persia*, Cambridge 1958). However, the Gḥalzays were unable to build a lasting state in Persia out of their conquests, and in 1150/1738 their original centre of Kāndahār was lost when Nādir Shāh [q.v.], with support from the Abdālīs of Iḥarāt, captured it after a lengthy investiture (Shawwāl 1149-Dḥu 'l-Ḳa'da 1150/February 1737-March 1738; Lockhart, *Nādir Shah*, London 1938, 114). Kāndahār was at this time apparently called Ḥusayn-ābād after the city's Gḥalzay governor Ḥusayn Sulṭān. Nādir now destroyed the "Gḥalzay fortress",

meaning here the whole of the walled city and not just the citadel. Today, the walls of the Islamic city are somewhat reduced in height, Nādir's destruction being aggravated by the depredations of local seekers of building materials, although as late as A. Le Messurier's time, substantial remnants of the triple enceinte were still visible (see his *Kandahar in 1879*, London 1880, 245-6). Nādir built a new military encampment, Nādirābād, to the southeast of the old city and of the modern one; coins were minted by him with the names of both Nādirābād and Kāndahār, but the former was abandoned on his death in 1160/1747 (see Lockhart, *Nādir Shah*, 120).

The development of the present-day city of Kāndahār is connected with the replacement of Gḥalzay power in the area by that of the Abdālī Afghāns, for Nādir (in whose army Aḥmad Khān Abdālī had been prominent) allowed the Abdālīs to return to their original home. After Nādir's assassination, Aḥmad established his power in eastern Afghānistān. He founded a new city of Kāndahār to the east of the old one, enclosing it with a wall and making it his capital; the city was named Aḥmad-Shāhī and this name, together with the epithet *Ashraf al-bilād*, "most noble of cities", appears on the coins which he minted there [see AḤMAD SHĀH DURRĀNĪ]. He was buried there, and Elphinstone reports that 40 years after his death his tomb was much venerated by the Abdālīs or Durrānīs, and that a right of sanctuary existed at it (*An account of the kingdom of Caubul*, London 1839, ii, 132).

Under the Durrānī *Amīrs*, Kāndahār still remained liable to vicissitudes. In the civil warfare among Aḥmad's grandsons Zamān Shāh, Maḥmūd and Shudjā' al-Mulk possession of the city fluctuated between the contenders. The Bārakzay amīr Dūst Muḥammad [q.v.] became unchallenged ruler in Kābul in 1241/1826 and transferred the capital thither, leaving his brother Kūhandil Khān as governor in Kāndahār. During the latter's governorship, Shāh Shudjā', of the line of Sadōzay Durrānīs dispossessed from control of eastern Afghānistān, had endeavoured to reconquer Kāndahār (1250/1834); during the First Afghān-British War, Shāh Shudjā' temporarily became amīr of both Kāndahār and Kābul (1255/1839). In the Second Afghān War, Kāndahār became for a few months in 1297/1880 the centre of an independent Afghān state under a member of the Sadōzay family, Sardār Shīr 'Alī. But after the attempt to seize Kāndahār made from Harāt by Ayyūb b. Shīr 'Alī b. Dūst Muḥammad, and Ayyūb's subsequent defeat by the British general Roberts, separate existence of this state based on Kāndahār was ended, and the united country handed over to 'Abd al-Raḥmān Khān [q.v.]; for a detailed account of all these events, see AFGHĀNISTĀN, v, History.

The modern city of Kāndahār had a population estimated in 1962 at c. 120,000, and the province of which it is the capital had in 1969 an estimated population of 724,000. The whole area round the city is a rich agricultural one, supplying the colder regions of northern Afghānistān, and also Pakistan, with fruit and vegetables; water is brought to many parts of this agricultural hinterland by a complex system of underground channels or *kāwīzs* from the nearby hills [see KANĀT]. In the 1960s Kāndahār acquired an airport of international dimensions, and the roads connecting it with Kābul and Harāt were metalled. As opposed to the capital Kābul, Kāndahār is in the centre of a strongly Pashto-speaking region, and has thus had an important rôle in the govern-

mental policy of encouraging that language; it was, for instance, in Kandahār that the Pashto propagandist society *Wiṣh Zalmyān*, "Awakening Youth", was founded in 1947. It has nevertheless lagged behind the capital in social and educational progress. Holdich remarked on the tolerance towards foreigners of Kābul compared with the fanaticism of Kandahār (*The gates of India*, London 1910, 377). In connection with this, Kandahār was the scene of anti-government riots in 1959, primarily caused by grievances over taxation, but also involving an element of conservative protest at the permissory abolition of the veil for women.

*Bibliography*: Given substantially in the article. For earlier history, the two works of K. Fischer, *Kandahar in Arachosien*, in *Wiss. Zeitschr. der Martin-Luther-Univ., Halle-Wittenberg, Geschichte-Sprachwissenschaft*, vi/6 (1958), 1151-64, and *Zur Lage von Kandahar* . . ., in *Bonner Jahrbücher* . . ., clxvii (1967), 129-232, are valuable. For the Islamic and modern periods, see the bibliography to *AFGHĀNISTĀN*, v. History, and scattered references in the standard histories of Afghānistān by, e.g., Fraser-Tytler and Masson and Romodin. For the 19th century onwards, the accounts of travellers, diplomats and soldiers (e.g., Elphinstone, Masson, Bellew, Le Messurier, Holdich, etc.) contain much relevant information.

(C. E. BOSWORTH)

**KANDAHĀR** (Deccan), locally often spelt Kandhār, Kandhār to distinguish it from its illustrious Afghān namesake, is a plains fort and the surrounding *ta'alluk*, mainly agricultural, known to have been part of the Bahmanī [*q.v.*] dominions, from whom it later passed to the 'Ādil Shāhīs. It seems, however, to have known previous Muslim occupation, since the main gate bears an inscription of Muḥammad b. Tuḡluk [*q.v.*] (*EIM* 1919-20, 16-7) and was presumably occupied by him on his expedition to south India. The fort, 25 miles south-west of Nandēf, is remarkable for its highly developed military architecture, which shows, successively from the exterior, a large glacis with a retaining wall, a covered way, a moat 2 to 3 m. deep and 21 to 24 m. wide, a massive *fausse-braye*, built in large dressed masonry by Muslims out of Hindu materials, with defensive bastions at intervals, a second covered way, and the main ramparts of the enceinte with strong towers and bastions. Across the moat is a single drawbridge leading to a series of gateways, of which the first, the *Djinsī* or Lohābandī Darwāza, facing north, is

protected with steel plates and defended by a bastion; a barbican court leads to the main gate, the Makka or Maḥll Darwāza, facing west. An inner court connects with the second covered way and leads to the third (Mānkall) gate, flanked with high bastions, before the interior of the fort is reached. A *Djāmi* *masǧid* of the late Bidjāpur style stands inside the final inner court. Many of the bastions of the enceinte bear guns, and some have inscriptions showing their construction by "Ākā Rūmī", presumably a Turkish engineer, of dates near 998/1590.

(J. BURTON-PAGE)

**KANDI**, a town in North Dahomey (11° 2' N., 2° 9' E.), is said to have been founded by a hunter from Nikki or Sinendé who, finding a large number of elephants, exclaimed *sinounou ba kamme!* ("I have come upon a great many elephants"). The word *kamme* is said to have become Kan-ni and then Kandi. According to another tradition, some women who slipped on the bank of a nearby watercourse fell down and broke their pitchers, *kan'di*.

Kandi was founded by Saka, the son of the king of Nikki. Having been sent by his father to fight against the king of Niampangou, he was welcomed with so many gifts that he revealed the purpose of his mission; unable therefore to return to Nikki, he settled in Kandi, his mother's homeland, where he fought against brigands and pacified the whole region. He gave himself the name *Mon* ("elder brother" in Bariba), which was corrupted to *Mo* by the local Mokolle. The seventh ruler, Guezere, was granted the insignia of authority by Nikki—a drum, covered with human skin, which was beaten with two human bones, and a commander's baton which was provided with a new leather cover every year. The most celebrated of the subsequent rulers of Kandi was Zibiri II (1911-29), who helped Geay, the administrator, to quell the revolt of 1917.

Since there were five generations between the first ruler and the 18th, it appears that the installation of the first Saka in Kandi occurred during the early decades of the 19th century. Although the first migration of the Bariba from the Niger was set in train by the invasion of the Muslim conquerors, hostility to Islam largely disappeared. Contact with islamized groups of Fulani led to the islamization of Bariba villages. In the town of Kandi, islamization appears to have been more rapid on account of the visits there by Hausa or Djerna merchants.

#### DYNASTIC TABLE OF THE RULERS OF KANDI

**KANDİL** [see KİNDİL].

**KANDIYA**, Ottoman name of a town on the north coast of Crete, the Herakleion of antiquity, which was captured by the Ottomans in 1080/1669 after a twenty-seven month siege by the grand vizier Köprülüzâde Fâdil Ahmed Paşa, this event marking the end of the struggle to wrest Crete from the Venetians which had been waged intermittently since 1055/1645.

The mediaeval Islamic name of the island of Crete, al-İkrīṭīsh [q.v.], was not unknown to the Ottomans, nor were they unaware that Crete had once before formed part of Dār al-Islām (cf. the post-conquest historical excursus in Silahdâr, *Ta'riḫh*, i (Istanbul, 1928), 530-8, which draws largely on the *K. al-Rawḍ al-mi'târ* of Ibn 'Abd al-Mun'im [q.v.] (wrongly attributed by Silahdâr to a certain 'Abd Allâh b. Wahb); on Shihâb al-Dîn Nuwayrî; and, for the 10th/16th century, on the *Bahriyye* of Pîrî Re'îs). In common usage, however, the Ottomans preferred the forms Girit (*Bahriyye*, 800), later Girid, for the island proper.

Kandiya, deriving from Ar. *khandak* (the "entrenched" fortification set up on the site by the first Muslim conquerors) > Gk. *χανδαξ* (accus. *χανδαξα*) > Venetian Candica or Cantiga (13th century) > (by false etymology) Candida (15th century) > Candia, although commonly used (with variants: la Candie, etc.) in western sources during the entire period of Venetian and Ottoman rule to denote the island as well as the town, was used by the Ottomans to denote only the town and its encircling walls (*kal'e-yi Kandiya*) and the metropolitan *sandjâk* which was dependent on it. Locally, among the Greek population, the name *Khandak* passed out of use after the Byzantine reconquest and was replaced by Megalokastron, or Kastron, the Castle par excellence (also occasionally found in 17th century western sources: Castron), which usage continued until the officially inspired revival of the ancient name of Herakleion, which the town has borne since the establishment of Greek rule in Crete at the end of the 19th century.

The fortress of Kandiya capitulated to the Ottomans on 5 Rabi' II 1080/2 September 1669; after the handing over of the fortress and its contents, and the ceremonial entry of Ottoman troops, a truce was concluded between the two commanders on 9 Rabi' II/6 September. The history of Kandiya in the period from the conquest to the temporary occupation of Crete by Muḥammad 'Alî Paşa in 1821—i.e., the years of more or less undisputed Ottoman rule—is obscure. For the immediate post-conquest period Ottoman historical and literary sources, most accessibly reproduced in Râshid and Silahdâr, and the vigorous account given by Ewliyâ Celebi, combine eyewitness accounts of the surrender of the fortress and its immediate "Ottomanisation" (sc. the conversion of the churches and other public buildings to Muslim use) with texts of the more formal *feth-nâmes* and diplomatic correspondence engendered by the occasion. Cf. also the *Kânûn-nâme* for Kandiya, drawn up in 1081/1670 (text in Barkan, *Kanunlar*, pp. 350-3).

Both Muslim and western sources agree that the damage caused to the town and the fortifications by the prolonged siege was considerable. Despite repairs put in hand by Fâdil Ahmed Paşa before his departure, and official attempts to encourage the inhabitants of the hinterland to settle in the town, the

signs of depopulation and devastation remained visible for many years. An interesting byproduct of the destruction was the export to Venice or Zante of timber from the ruined houses. Described as "Cyprus wood", it was used for the manufacture of chests or cabinets, which found a ready market in England.

The Ottomans had entertained high hopes for the riches to be garnered from Crete after the conquest of Kandiya: "a second Egypt", as Ewliyâ Celebi called it, but these hopes, particularly for Kandiya itself, were not to be realised. Shortly after the conquest the population was estimated at "not above 10,000, with Greeks and Jews", and Canea (Ḥanya) was ca. 1680 spoken of as "much better inhabited than Candia" and as the main centre for the trade of the island.

Perhaps the most important reason for the steady economic decline of Kandiya during the Ottoman period had little to do with its change of masters, being in fact the progressive silting up of its port. Already in the 1680s it was described as having "not water enough for ships of any considerable bigness" and as being largely choked with rubbish washed into it from the town, despite the initiative of a French merchant in bringing "an engine" from Marseilles to clean it. At this time, galleys were still being repaired in those bays ("arches", *göz*) of the Arsenal which had survived the siege, but no new construction of ships was carried on there.

There seems to be little to distinguish Kandiya in the 12th/18th century from other Ottoman provincial centres of similar rank and function. Authority was vested in a paşa of three *tugh*s, appointed triennially; real power obviously resided in the local military forces. These, in mid-century, apparently consisted of the 6,000 or so Turks who were able to bear arms, for, according to Richard Pococke, "all the Turks belong to some military body". The upkeep of the local military establishment was provided for from the *kharâdj* and *gümriük* receipts, with the exception of the pay for the Janissaries, which was remitted from Istanbul.

Throughout the 12th/18th century, and into the nineteenth, Kandiya steadily lost ground to Canea (Ḥanya) as a port and commercial centre. The necessity of transshipping cargoes into small lighters offshore, and the character of the town as a garrison centre and seat of a paşa, together conspired to encourage particularly the economically-dominant Marseilles merchants and their consul to settle at Canea. Although Kandiya remained, with its still splendid Venetian monuments and broad streets, the capital of the island until 1855, its day was long past. In the last decades of Ottoman rule its trade, largely in olive oil, soap, raisins and wine, amounted only to some 20% of that of the island as a whole, while administratively it sank to the level of a *sandjâk* under the charge of a *mutaşarrif*. With the rising tide of Greek nationalism, the Muslim population of Kandiya, which ca. 1889 had been estimated at 17,000 out of 24,000, shared the same fate as their co-religionists in other parts of the island. With the abandonment of Ottoman rule, and through communal strife, emigration and population transfer, Kandiya had, by 1923, ceased to exist as a Muslim town.

**KANDŪRĪ** or *kandūra* or *kandūri* a Persian word meaning a leather or linen tablecloth; in Hindūstāni this word means also a religious feast held in honour of a venerated person like Fāṭima. In this latter meaning the word has been imported, apparently, from India into the Indonesian archipelago. In Acheen the word is unchanged, while in Java it is slightly altered into *keṅduri* or *keṅdurin*; it may be noted that nowadays the more usual terms in Java are *seḍekah* or *siḍekah*, from the Arabic *ṣadāka*, *slametan*, from the Arabic *salāmat*, or *hādijat*, a well-known Arabic word, meaning need, want of a man's presence at a feast, and hence the festival itself. In general it is a feast given with a religious purpose, or at least in conformity with religious law, just like the *walīma* in the books of *fiḥh*. The occasions which give rise to it are numerous, for instance: days of commemoration, domestic events, especially circumcision, the completion of teaching the Qur'ān, certain periods, such as pregnancy, sowing and harvest, and sundry reasons like setting out on a journey, occupying a new house and other enterprises, the averting of epidemics and calamities, etc. According to the Law each *kandūri* should have a religious character: the poor must be invited, forbidden things should be avoided, but the strong local 'ādāt is always prone to look for means of effecting a compromise. Every complete *kandūri*, especially those in commemoration of deceased relatives and those given on the anniversary of a saint, is sanctified by means of recitation of the Qur'ān, *dhikrs* or prayers; popular superstition, however, regards such *kandūris* as consisting of actual offerings of food to the deceased. Almost every *kandūri* is opened by a prayer, the commemorative ones by the *do'a kibur*. In Acheen some months are called *kandūri* with a second word indicating the food the sacred meal consists of.

(PH. S. V. RONKEL\*)

**KANEM** (A. Kānim), today the name of a prefecture (capital Mao) in the republic of Chad. It is bounded in the north by Borkou, in the east by Batha, in the south by Chari-Baguirmi, in the south-west by the department of Lac and in the west by the republic of Nigeria (population 170,000). Its borders do not correspond exactly to those of the region which was one of the most ancient kingdoms of Africa and stretched, according to the most widely accepted view, as far as the caravan route from Kawar [q.v.] to Lake Chad in the west, to Baḥr al

Ghazal [q.v.] in the south, to the depression of the Eguei in the east, and in the north to a line drawn from Belgashipari to Birpo by the lake.

The most characteristic topographical feature of Kanem is the existence of numerous sand dunes running N.W. by S.E., separated from one another by hollows several hundred yards broad and sometimes four or five miles long. Dunes and depressions are specially marked in the northern part. The hollows, which are given the name of *wād* (*wādi*), are dry except during the rainy season, when ponds are formed in the deepest parts; their bottoms consist of soil impregnated with natron. Below this, to a depth of 3 to 30 feet, lies a vast waterbearing stratum. The climate of Kanem is that of tropical regions. The rains are unequally distributed and diminish from south to north. The date-palm grows wild in many of the *wāds*. It even forms a regular oasis at Mao. Cultivation is limited to the area around the villages, built on the slopes of the dunes. The commonest crop is the millet, to which may be added wheat, beans and cotton. The rearing of horses, cattle, sheep and camels is also a very important source of income for the inhabitants. The fauna is very rich and varied: the elephant, the rhinoceros, the hippopotamus, lion, buffalo and panther abound in Kanem proper and the ostrich, antelope, gazelle and giraffe on the northern steppes.

The population is far from being homogeneous. The diverse elements which compose it belong some to the negro group and some to the Arab group. To the first belong the Kanembū, the Buddūma, the Kūri; to the second the Ulād-Slīmān and the Shoa; the Tundjur and Tubu are classed between the two. The Kanembū, descendants of the first settlers in Kanem, constitute basis of the population, upon whom they have imposed their language. They are dark grey (*azrak*) in colour and tall in stature. Industrious and peace-loving, they are settled and devote themselves to agriculture. They profess Islam and are fairly strict Muslims. In their midst live groups of individuals called Haddād (in Kanembū *dogoa*) who, although differing from the Kanembū neither in language nor in physical type, are considered as belonging to an inferior race. Very warlike in disposition, armed with bows and arrows, they played an active part in the civil wars which desolated the country in the course of last century.

The Buddūma and the Kūri inhabit the islands of Lake Chad. The Buddūma, who occupy the northern archipelago, live by fishing, cattle-raising and the cultivation of millet. They have, for the most part, remained fetish-worshippers. The Kūri, on the other hand, while leading the same sort of life as the Buddūma, are completely islamized.

The Ulād Slīmān who came from Tripolitania and Fezzān in the middle of the 19th century, speak Arabic. Nomads and robbers, almost their sole means of existence was the slave trade and brigandage. The Shoa, long established in Kanem, continue to use the Arabic language but their physical type has been altered by admixture with the black population. The Islam which they profess is fairly strict. Nomads in the dry regions near the desert, they become settled in the moister southern regions.

According to the Arabic sources studied by Marquart (see *Bibl.*), the kingdom of Kanem seems to have been founded by the Zaghāwa. Al-Bakrī (de Slane, 29) mentions the inhabitants of Kanem as idolators and al-Idrīsī (ed. Naples-Rome 1970, i, 29), who cites the town of Mānām, seems also to consider them as such. Islam was introduced in the 4th/10th

century by the Tubu (Teda). This occupation seems to coincide with the accession to the throne of the Yazanīs, who claimed to be descendants of Sayf b. Dhī Yazan [q.v.] and became the disseminators of Islām, which had been introduced by al-Hādī al-‘Uthmānī, the predecessor of the Yazanīs. The *Kitāb al-Isṭiḥṣār* (ed. von Kremer, Vienna 1852, 32, tr. Fagnan, 61) places the conversion to Islam of Kanem about 500/1106-7. According to a Hausa legend, Abū Zayd al-Fāzārī (end of 6th/12th and beginning of 7th/13th century) preached Islam in Kanem and Borku. Another tradition refers the introduction of Islam to the end of the 5th/11th century, under Sultan Oumé (1085-97), who was probably assassinated during a pilgrimage to Mecca.

Sultan Selma (‘Abd al-Djalīl) (1195-1220) enlarged the kingdom; his son Dunama I (1221-59) further extended it to Fezzān and Waday and in the west as far as Niger. During the latter’s reign, some Muslims from Kanem founded a Malikī school in Cairo (between 640/1242 and 650/1252), and in 657/1257 an ambassador was sent to the Hafṣid court in Tunis. The soi-disant descendants of Sayf remained in power as long as the kingdom existed. During a troubled period beset with the So and Būlala revolts, four kings of Kanem fell in campaigns against the Būlala. These latter, after a century of incessant battles, eventually conquered the country. Sultan Dāwūd (1377-85) was driven from his capital, Ndjimi. ‘Umar b. Idrīs (796/1394-800/1398) had to retire to the west bank of Lake Chad, where one of his successors founded the kingdom of Bornū [q.v.].

In the 16th century, the sovereigns of the new state took the offensive against the Būlala. ‘Alī Dunama (876/1472-909/1504) and his son Idrīs Katakarmabi (909/1504-932/1526) forced the Būlala to submit and regained their ancient capital of Ndjimi, but the sovereigns were represented there by an *alifa* (*khalifa*) and remained in Bornu, of which Kanem became a province. The submission of the Būlala, however, remained precarious; Idrīs Alaoma (978/1571-1011/1603) was compelled to send five expeditions against them. In spite of this victory, the weakening of Bornū soon enabled the Būlala to regain their independence. But towards the middle of the 17th century they were in their turn conquered by the Tundjur, who came from Wādāy, and settled in the west of Baḥr al-Ghazal, and then in Fitri. Meanwhile the Tundjur had to endure the attacks of the rulers of Bornu, who reduced them to the state of tributaries. Their chief settled in Mao as an *alifa*. In the second half of the 18th century, part of Kanem was conquered by Muḥammad al-Amīn, ruler of Bagirmi [q.v.]. In 1809 the king of Bornu, driven from his home by the Peuls, appealed to al-Amīn, who had a reputation for piety and energy. He crossed the lake and wiped out the Peul forces, but henceforward Bornu was no more than a protectorate of Kanem. Taking the title of *shaykh*, al-Amīn al-Kanemi made his capital at Kuka and, after numerous campaigns, subdued the Bagirmi (1817).

When the Ūlād Slimān Arabs arrived in the middle of the 19th century, the sultan of Bornū entrusted them with the defence of the frontier against Wādāy, but they seized this opportunity to pillage the country; by the time of Nachtigal’s visit to Kanem in 1871, they were its real masters.

‘Umar b. al-Amīn moved his capital to Kuka; on his death, he was succeeded by his three sons, Abū Bakr I, Ibrāhīm and Hāshim (1884-93). The latter was unable to prevent Rabah from seizing the fortified town of Mamfa and proclaiming himself sultan

of Bornu. ‘Umar Sawda, Hāshim’s eldest son, finally became in 1902 the sultan of German Bornū.

Kanem, which was included in the French zone of influence at the Anglo-French conference of 21 March 1899, was occupied between 1901 and 1905. European domination provoked the hostility of the Sanūsīyya [q.v.], but the capture of their *xāwīya* at Bi’r Alali in 1902 weakened the rebels and their chief, Shaykh Aḥmad, submitted in 1905.

[See also BAGIRMI, BORNŪ, WĀDĀY]. (G. YVER\*)

AL-KĀNEMĪ (AL-HĀDĪDĪ) MUḤAMMAD AL-AMĪN B. MUḤAMMAD NINKĀH), b. 1189/1775-6 1253/1837, a scholar of Kanembu origin who founded the Shehu dynasty of Bornū [q.v.]. Brought up in Murzuk (Fazzān) where his father had property, he received an Arabic education, travelled in Egypt and the Ḥidjāz, and eventually settled in eastern Bornū. There, his learning and the following he acquired among Arab and Kanembu tribesmen enabled him to play a decisive role in Bornuan politics at the time of the Fulani rebellion. Eventually the Mai Ibrāhīm (1818-46) came completely under his control, and he struck a seal in his own name in 1235/1819-20.

As the power behind the throne of the Mais, he succeeded in defending the ancient empire of Bornū from the serious dangers which faced it. His support of the Mai Dūnama ended the Fulani rebellion. Although he was unable to prevent the establishment of Sokoto emirates in the old western dependencies, he

engaged the Sokoto 'ulamā' in a famous correspondence which seriously weakened their resolve to continue *djihād* against Bornū, and he contained the emirates of Katagum and Hadejia by a great campaign in 1826 which carried him as far as Kano before he was forced to withdraw. He secured the eastern frontier south of Lake Chad by operations against Bagarmi in 1821-4. In the first of these he was assisted by the Ottoman *ka'im-makām* of the Fazzān [q.v.], and he later maintained the Fazzānī connection (of commercial importance to Bornū) by alliance with the Awlād Sulaymān, who also helped him strengthen his influence in Kānem as a buffer against Wadā'.

As well as this, he radically reformed the structure of government in Bornū, replacing the ancient and ineffective feudal levies of the Mais by a new army of Kānembu infantry and Shuwa Arab cavalry with a *mamlūk* officer corps owing personal loyalty to him. The old Kanūri fief-holding offices remained in existence, but fiefs were progressively transferred to supporters of al-Kānemi, and a new council of advisers dominated the government. These advisers, mainly non-Kanūri, represented a new and reforming element in Bornuan politics.

Al-Kānemi, though a scholar of considerable standing, was not a prolific writer, only one short work of *fiqh*, *Nashīhat al-hukkām*, and a poem, *Nasīm al-ṣabā*, being certainly attributable to him. A number of his letters, however, are preserved.

(ABDULLAHI SMITH)

#### KANGĀWAR [see KINKIWAR].

**KANGHLI**, **KANKLI**, the name of a Turkish people living in mediaeval times in the steppes of Turkestan and south-western Siberia. We do not find mention of the **Kanghli** in the oldest Arab and Persian geographers and travellers of the 3rd-4th/9th-10th centuries, as we do of several other Turkish tribes. For Maḥmūd Kāshgharī, *kankli* was not an ethnic designation, but was, as a proper noun, "the name of a great man of the *Ḳlṗčak*", and as a common noun, "a heavily-loaded cart" (*Diwān lughāt al-turk*, tr. Atalay, iii, 379). In some early Turkish sources on the legendary origins of the Turkish tribes, e.g., the *Oghuz-nāma*, we find the story that the tribe got its name from the man who first constructed and used these heavy wagons for transport across the steppes (see Marquart, *Komanen*, 163); but Sir Gerard Clauson thought it equally likely that the wagon used by the Turks got its name of *kañli*/*kanghli* from the fact that it was introduced by the **Kanghli** people to the steppe Turks, see his *The name Uyghur*, in *JRAS* (1963), 147-8, and *An etymological dictionary of pre-thirteenth century Turkish*, 638.

The **Kanghli** are most frequently mentioned in the sources pertaining to the century or so preceding the Mongol invasions of the 7th/13th century, and are often spoken of as part of the *Ḳlṗčak* confederation, i.e., they belonged ethnically to the south-western group of Turkish peoples. They are also associated with the *Kimāk* [q.v.], themselves apparently one of the tribal groups eventually forming the *Ḳlṗčak*. Concerning their habitat, Abu 'l-Ghāzī in his *Shah-jāra-yi Tarākima* retails a legend that the **Kanghli** had a *khān*, Gök-Toñll, whose centre was on the

Yayik or Ural River (Barthold, *Four studies*, iii. *A history of the Turkman people*, 132), but by the beginning of the 7th/13th century they and the *Ḳlṗčak* were also close neighbours of the Mongol *Nayman* on the *Irtish* (idem, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, 151, Fr tr. *Histoire des turcs d'Asie Centrale*, 118). Minorsky read a passage in one of the manuscripts of *Djūz-djānī's Ṭabakāt-i nāsiri*, where there is mentioned a punitive expedition into the steppes in 615/1216 by the *Kh'ārazm-Shāh 'Alā'* al-Dīn Muḥammad, as referring to "Kādīr *Khān* *Yighur*, ruler of the **Kanghli** Tatars", whose lands stretched far north into the region of perpetual twilight in summer (see *Hudūd al-'ālam*, 309). It seems that the **Kanghli** nomadised over an extensive area of western Siberia, but came as far south as the *Sir Daryā* and northern fringes of Transoxania, where *Djuwaynī* mentions them several times in his story of the irruption of the Mongols into Transoxania. **Kanghli** and *Ḳarluḳ* [q.v.] had been amongst the rebellious troops of the *Ḳarā Khānīd* ruler, and their unruliness had led the latter potentate to call in the *Ḳarā Khitāy*, with disastrous results to his line [see *ḲARĀ KHITĀY*].

At the time of the Mongols' appearance, the **Kanghli** had a settlement called *Ḳarākum* on the lower *Sir Daryā*, not far from *Djand* [q.v.], mentioned as the place to which the *Merkit* fled after *Čingiz Khān* had defeated them and the *Nayman* on the *Irtish* in 1208; it was also the place where in 617/1220 the Mongol general Čin Temür rested before going on to occupy *Djand* (Barthold, *Turkestan down to the Mongol invasion*, 361-2, 370, 415). Many **Kanghli** tribesmen obviously formed part of the *Kh'ārazmian* armies confronting the incoming Mongols, and they suffered heavy losses when *Bukhārā* and *Samarḳand* were stormed by the Mongols; there seems to have been some dynastic connection between the *Kh'ārazm-Shāhs* and the **Kanghli**, if *Djuwaynī's* report that *Sulṭān Djālāl al-Dīn's* mother *Terken Khātūn* was a **Kanghli** is true (see *Djuwaynī*, tr. Boyle, i, 91, 106, 121, ii, 370, 465, and Barthold, *op. cit.*, 415; *Nasawī*, however, makes *Terken Khātūn* from the *Baya'ut* branch of the associated tribe of the *Kimāk/Yimāk*). Those of the **Kanghli** not massacred by the Mongols must have melted into the Turkish hordes making up a large proportion of the Mongol armies; western travellers to the court of the Mongol *Khāns* like *John of Plano Carpini* and *William of Rubruck* mention them as the *Cangitae* and *Cangle* respectively. Thereafter, they disappear from recorded history. They can hardly have been touched by Islam; indeed, the only reference to their religious beliefs is that the Mongol general *Toluy Khān* or *Ulugh Noyan* employed a **Kanghli** versed in the art of using the *yay* or rainstone (i.e., he was a *shaman*) to conjure up rain during his campaign against the Chinese in 628/1231 (*Djuwaynī-Boyle*, i, 193; Boyle, *The successors of Genghis Khan*, New York and London 1971, 37).

*Bibliography*: in addition to the references given in the article, see especially Marquart's detailed discussion of the **Kanghli** in his *Über das Volkstum der Komanen*, in *Abh. G. W. Gött.*, N. F., xiii (1914), 163-72. (C. E. BOSWORTH)

#### KIANGHRI [see ČANKIRI].

**KĀNGRĀ**, the *Nagarkot* of Muslim historians of India, occasionally referred to as *Kōt Kāñrgā*, is also the headquarters of the *taḡšil* of the same name in the Indian *Pandjāb*. *Kāñgrā* lies between 30° 5' N. and 76° 16' E. on the northern slope of the

low mountain ranges which run through the district, facing Dharamsālā, a fine hill resort in summer, and commands a view of the verdant Kāngrā valley below.

The pre-Mughal history of the town is not definitely known. It was, however, a stronghold of the Kafoč Rāḍipūt rāḍjās who held sway over the entire valley and one of whom, Sansār Čand I, is mentioned in a Sanskrit inscription of c. 1430 A.D. found in the temple-wall of Dēvī Badirēshri which is dedicated to *Djāwālāmukhī*, the local fire-deity. This historic inscription was unfortunately destroyed in the severe earthquake of April 1905.

Firishṭa describes Nagarkōt while recounting the exploits of Firūz Tughluḳ (cf. Brigg's tr., i, 454-5). The fabulous riches of the temple of Nagarkōt had earlier tempted Maḥmūd of Ghazna, who in 399/1008 overran the valley, captured the fort, which stood on the lofty ridge south of the town and was surrounded on three sides by extremely steep and inaccessible hills, and is reported to have carried off as booty an incredible amount of gold and silver, jewels, pearls, diamonds and rubies. However, neither Sudjān Rā'i Bhandāri, the Hindu historian of the reign of Awrangzīb [q.v.] (cf. *Khulāṣat al-Tawārīkh*, Delhi 1918, 71-2), nor Muḥammad Aslam Anṣārī, the author of *Farḥat al-Nāzirin* (extracts published by Ayyūb Kādirī, Karachi 1972, 222-3) mention this plundering by Maḥmūd, although the latter mentions a *makān-i Sebūktigin* in the fort of Kāngrā. The temple sacked by Maḥmūd was not the temple of Badirēshri, still revered by the Hindus, but the one situated within the fort, now no longer in existence.

The town and fort were recovered by the Hindus in 436/1044 and they set up an imitation of the sacred image destroyed or carried away by Maḥmūd. Firūz Tughluḳ captured the town in 762/1360 and again plundered the temple, whose loss in riches had been made good by the pilgrims and votaries through their offerings and gifts. A unique library containing 1,300 ancient Brahmanical texts also fell into the hands of the sultan, who had some of them translated into Persian. One on philosophy, natural science, divination and omens was translated into verse and styled *Dalāl-i Firūzshāhi* (cf. Firishṭa, *Gulshan-i Ibrāhimi*, Lucknow 1281 A.H., 148). Maḥmūd Tughluḳ (796-814/1394-1411) found asylum in this hill fastness while a fugitive from Delhi before his accession to the throne. In 990/1582 it was visited by Akbar at the head of a large force *en route* to Sind. The town (citadel) was included in the *Khālīṣa* while the surrounding hills were restored to the native chief *Djāy* Čand. The Hindus seem not to have forgiven the Muslim violation of their temple, and twice rose in rebellion, to be ultimately starved into submission by an imperial force under prince *Khurram* (later *Shāh* *Djahān*) in 1030/1621. *Djahāngir*, writing of the conquest of Kāngrā by *Khurram*, boasts of his being the first Mughal emperor to have brought about the complete submission of the valley of Kāngrā to Muslim rule (cf. *Tūzūk-i Djahāngiri*, Urdu tr., Lahore 1960, 654-6). By way of thanksgiving for this unique victory, *Djahāngir* ordered the construction of a mosque within the fort, the sounding of the call to prayer, the recitation of the Friday *khutba*, and the slaughter, inside the fort, of a cow, so sacred to the Hindus (cf. *Tūzūk*, Urdu trans., 697). *Djahāngir* also intended to build a summer residence for himself in the cool, salubrious climate of the valley, but the idea was never carried out. Obviously, *Kashmīr* was the pleasure-seeking

emperor's first choice. *Djāgāt Singh*, the landlord of Nūrpur and *fawājidār* of Kāngrā, rose in rebellion during the reign of *Shāh* *Djahān*, but this was soon suppressed and the rebellious chief was pardoned and promoted in rank; his loyalty was thus secured. I'timād al-Dawla [q.v.] the father of Nūr *Djahān*, died in Kāngrā in the entourage of *Djahāngir*. *Shaykh* Farid Murtaḍā *Khān* *Bukhārī* also breathed his last near here while he was the governor of Lahore.

Nagarkōt formed a part of the Mughal possessions till its cession in 1167/1753 to Aḥmad *Shāh* Durrāni by the effete Mughal administration of Delhi. In 1188/1774 a Sikh chieftain, *Djāy Singh*, obtained it by a stratagem, but it was acquired by Sansār Čand of the line of the dispossessed Rāḍipūt princes of Kāngrā. In 1221/1806 the Gurkhas defeated Sansār Čand, who had attacked Bilāspūr and obtained possession of the valley. They perpetrated scarcely credible atrocities on the population. In 1224/1809 Kāngrā was captured by *Randjīt Singh*, Sansār Čand's overlord. It passed to the British in 1262/1846 after the first Sikh War. During the military uprising of 1857, some disturbances took place in and around the valley but these were soon firmly suppressed.

Kāngrā now forms part of the Indian Republic; its sacred temple of *Djāwālāmukhī* is visited by thousands of pilgrims every year. Awrangzīb is said to have brought a canal here from the river Beas; when a burning torch or taper was cast into the water, the flames were not extinguished (cf. Muḥammad Aslam Anṣārī, *Farḥat al-Nāzirin*, extracts, Karachi 1972, 222-3).

The terrible earthquake of April 1905 resulted in irreparable damage to the fort and temples as well as harm to other buildings of archaeological importance. The place, apart from being a hill-station, abounds in game including several species of pheasants, partridges, quails, snipe and deer. Mango grows wild in abundance, but the fruit is poor. The handful of Muslims living in the valley, mainly members of the lower class, were expelled during the communal disturbances of 1947 in the wake of partition.

(A. S. BAZMEE ANSARI)

**KĀNĪ**, ABŪ BAKR, a prominent Ottoman poet and prose stylist of the 12th/18th century. He was a native of Tokad, and although Ebu 'l-Diyā gives the date of his birth as 1124/1712, this conflicts with Edib Efendi's statement that he was still a young man (*new-djewan*) when he left for Istanbul. He received his education in Tokad, where he also entered the order of the Mewlewi dervishes, becoming the disciple (*mürīd*) of *Shaykh* 'Abd al-Wāhid. Faṭīn relates that at some period of his early life he was employed as a secretary in Erzurum, yet it was from Tokad that he accompanied *Hekim-oghli* 'Ali Pasha to Istanbul early in 1168/1755 when the latter passed through that town on his journey from Trabzon to assume the office of Grand Vizier for the third time. In the capital he entered the Imperial *Diwān* as a secretary, rising rapidly to the high rank of *kh'wād-jegān*. When, and under what circumstances, he left Istanbul for the Danubian provinces is not known, but from the early 1180s the letters in the *Münshē'āt* show him to be in such cities as Silistra, Russe (Ruscuq) and Bucharest, serving as secretary to either the *voivods* of Wallachia or to Yegen al-Hādīdj Mehmed Agha (later Pasha; cf. the *dhayl* of Ahmed Djāwid to 'Othmān-zāde Tā'ib, *Hādīkat ul-Wūzerā'*, Istanbul 1271, 32). When the latter became Grand Vizier in 1196/1782, he summoned him to Istanbul; but once here Kānī's disrespectful attitude so angered his master that it was only through the intercession of the *re'īs ul-küttāb* *Khayrī* Efendi that he escaped being put to death and was sent instead into exile on the island of Lemnos. The date of his return to Istanbul is unknown, but he died there in Rabi' II 1206/Dec. 1791 and was buried near the *türbe* of Ferīdūn Pasha in Eyyüb. A portrait of him with the *voivod* Alexander is said to hang in the Peleş Museum in Sinaia, Roumania.

Kānī's poetical work is represented by two *diwāns*, both of which were collected posthumously. The first, and most important, was compiled by the *wak'a-nūwis* *Khālīl Nūri* Efendi on the instructions of the *re'īs ul-küttāb* Mehmed Rāshid (most probably during his second tenure of this office, *Dhu* 'l-Ḳā'da 1206-Muḥarram 1209/July 1792-Aug. 1794 and contains what may be regarded as his more serious work. The circumstances of the compilation of the second *diwān*, containing his humorous and satirical verses, many of which are extremely lubricious, have not been determined. Kānī's poetry is of such uneven quality that one should be cautious in accepting general appraisals of its value. Certainly there is throughout an intrusive facetiousness, a fondness for word-play and an unconventional recourse to the vernacular which often obscures the meaning; but there is, too, that same verbal inventiveness and freshness of imagery that marks his prose, and which must have had the charm of novelty to his cultivated contemporaries.

Kānī is generally more highly esteemed as a prose-writer than as a poet, and in the personal letters which are included in his *Münshē'āt* he does, indeed, show a highly individual style, and is himself presented as a personality of irrepressible wit and insouciance. The *Münshē'āt* is, however, for the most part a collection of the official correspondence written while he was secretary to Yegen Mehmed or the *voivods* of Wallachia, the letters therein being grouped in accordance with the social station of the

person addressed, and obviously intended to serve as models for this type of composition. Kānī, also, enjoys the distinction of having composed the first phrase-book in Ottoman Turkish, the *Bürūdj-i Fünūn*, divided into twelve chapters in honour of the Apostles (Ms. in Topkapı Sarayı, Emānet *Khazinesi*, no. 1158). It was commissioned by Constantine, the *Scarlat voivod* of Wallachia, for the use of his brother (*li-eb karindashim olan Aleksandri Beg-zāde*) and presents very interesting specimens of the formal polite language of the period. None of Kānī's works has yet been published, apart from a few extracts in anthologies.

*Bibliography*: Study of the *Münshē'āt* could greatly supplement the biographical information found in Ebu 'l-Diyā Tewfik, *Nümüne-i edebiyāt-i 'Othmāniyye*<sup>6</sup>, Istanbul 1329, 49-54, from which Gibb, *Ottoman Poetry*, iv, 159-74, derives. Of the *tedhkire*-writers, Faṭīn Efendi, *Khātīmet ul-esh'ār*, Istanbul 1271, 352, gives some erroneous details of his life, while 'Arif Hikmet ('Ali Emīri, no. 789, f. 55a) merely repeats the information found in *Djeldet Pasha, Ta'rikh*, Istanbul 1309, v, 234, which was itself taken from the history of the *wak'a-nūwis* Edib Efendi; the brief notice on him in Silāhdār-zāde Mehmed Emln ('Ali Emīri, no. 795, f. 57a) is incorrect, and 'Abd ul-Fettāh *Shefkat* ('Ali Emīri, no. 770, 163-4) does no more than quote six *ghazels* and one *na't* from his poetry. The most recent study of Kānī is in the anonymous article in the *IA*, vi, 158-9, to the bibliography of which should now be added *Istanbul Kütüphaneleri Türkçe Yazma Divanlar Kataloğu*, iii, Istanbul 1967, 862-6. (J. R. WALSH)

**KĀNĪ**, MİR 'ALĪ *SHER*, historian of Sind, son of 'Izzat Allāh al-Husaynī al-Shīrāzi, was born in Thāffā, the capital of Sind in the Mughal and pre-Mughal period, in 1440/1727 and died there in 1203/1788. His grave still exists on the nearby Maklī hills. He received his education from local scholars, some of whom are mentioned in his *Maḳālāt al-shu'arā'*<sup>7</sup> (Karachi 1957, 114, 150, 339, 359, 817). In 1175/1761 he was commissioned by the Kalhōfa ruler of Sind, Ghulām Shāh 'Abbāsī (1170-86/1757-72), to write a Persian history of the ruling dynasty on the lines of the *Shāhnāma* of Firdawsī [q.v.], but this was never completed. Five years later he began compiling his *Tuhfat al-kirām*, which he finished in 1181/1767.

A born poet, Kānī wrote many verses while still a boy of 12. In poetry he acknowledged as his teacher Mīr Abū Turāb Ḥaydar al-Dīn "Kāmil", a great-grandson of Abū 'l-Ḳāsim Namakīn, a poet of no mean achievement and a nobleman of the times of Shāh *Djāhān* [q.v.].

The most important works in his large output in prose and verse are: (i) *Tuhfat al-kirām*, a general history in 3 vols., of which the last is mostly biographical and devoted to Sind (Lucknow and Bombay 1304/1886); (ii) *Maḳālāt al-shu'arā'*<sup>7</sup> (composed in 1174/1727, alphabetically arranged lives of the poets of Sind who wrote in Persian (ed. Karachi 1957); (iii) *Maḳlī Nāma* or *Būstān-i bahār*, a poetic description in prose and verse of the tombs and social scenes on the Maklī hills, the necropolis of Thāffā (ed. Hyderabad 1967); (iv) *Mi'yār-i sālikān-i tarīkat* (1202/1787), lives of saints and *Ṣūfī* poets from the time of Muḥammad to the close of the 12th/18th century in 12 *mi'yars* (ed. Ḥaydarābād 1968); (v) *Ta'rikh-i 'Abbāsīya*, an unfinished history of the Kalhōfas, in prose and verse, undertaken at the command of Ghulām Shāh Kalhōfa, (Rieu, iii,

1061b); (vi) *Niṣāb al-bulaghā*<sup>2</sup>, an encyclopaedic work compiled in 1198/1783; the only copy known is in the private library of Muḥammad Ibrāhīm of Gaḥī Yāsīn (Sind); (vii) *Maḥnawīyyāt-wa Kaṣā'īd-i Kānīc*, ed. Karachi 1961 (a collection of his longer poems). A detailed list of his works is given in the *Maḥālāt al-Shu'arā*, 7-28 (Introduction).

**Bibliography:** Autobiography in *Maḥālāt al-shu'arā*, Karachi 1957, 531-62; *Mihrān*, Sindhi quarterly, Karachi, v/2 (1956), 131-167; C. A. Storey, *Persian Literature*, 138, 656, 854, 1030-31. (A. S. BAZMEE ANSARI)

**KANIK**, ORHAN VELİ (1914-1950), Turkish poet who introduced major innovations to 20th century Turkish poetry. Kanik's early poems, published under the pen name of Mehmet Ali Sel, were formal lyrics written in traditional metres. After 1936 he adopted free verse, which had first been introduced in the 1920s by Nazım Hikmet (1902-1963). Kanik's first collection of poems, *Garip* (1941) also contained poems by his colleagues Oktay Rifat (b. 1914) and Melih Cevdet Anday (b. 1915). These three poets published a joint manifesto which called for a vast transformation of the structure, function, and language of poetry, whereby poetry would be made to reflect and address itself to the tastes of the masses.

Kanik's later volumes—*Vazgeçemediğim* (1945), *Destan Gibi* (1946), *Yenisi* (1947), *Karşı* (1949)—sought to further the aesthetic principles set forth in the manifesto. His poetry, written in free verse without rhyme, utilized a straightforward style based on the natural rhythms and the idiomatic resources of colloquial Turkish, shunning conventional moulds and metres and avoiding the stereotyped metaphors which had characterized the work of most of his predecessors and some of his contemporaries. Kanik championed a form of poetic realism which often featured the man-in-the-street as the modern hero. His poems about the sea and the city of Istanbul are notable for mellifluous lyricism. Satire is a prevalent element in Kanik's poetry: some of his satirical lines and brief poems have become proverbial among Turks.

Kanik's complete poems were posthumously published in 1951 under the title *Bütün Şiirleri*, which had gone into eleven impressions by 1971. He was also a leading translator of French poetry and drama. In 1949 he published his poetic versions (in rhymed syllabic metres) of 72 selected anecdotes of Nasreddin Hodja.

Mader, *Orhan Veli Kanık*, Frankfurt 1966; T. S. Halman, *I am listening to Istanbul (Selected poems of Orhan Veli Kanık)*, New York 1971. Some translations also appeared in *Encounter*, March 1972, 31. (T. S. HALMAN)

**KANĪSA** (pl. *kanā'is*), synagogue, church, temple.

(i). Etymology and meaning. The word *kanīsa* is the Arabised form of the western Aramaic *kənīshā* (eastern Aramaic *kənūshā*), which means "meeting, assembly". Some Arab lexicographers (Ibn Manẓūr, al-Firzābādī and al-Zabīdī) give this etymology, but others (al-Khafājī, al-Bustānī) derive the word from the Greek ἐκκλησία, as does the 4th/10th century Coptic writer, Ibn al-Muḥaffa' (cf. J. Assfalg, *Die Ordnung des Priestertums*, Cairo 1955, 3). The word *kanīsa* is not found in the Qur'ān,

unlike its synonym *bī'a* (pl. *biya'*), which appears once (XXII, 40). On the other hand it is found in *ḥadīth*, archaic poetry, capitulation treaties made by the caliphs and their generals with the inhabitants of conquered cities, and also in papyri.

As used by Muslim authors, historians and geographers, the word *kanīsa* designates equally the cultic place (*muta'abbad*) of the Jews (synagogue), of the Christians (church) and of the pagans (temple).

Plan of an eastern church

A: Sanctuary — B: Altar with ciborium — C: Episcopal throne — D: Diaconicon or sacristy — E: Baptistry — F: Baptismal font — G: Main door — H: Dais, amongst the Chaldeans and Syrians — I: Choir, amongst the Byzantines and Copts — J: Gallery, amongst the Chaldeans and Syrians — K: Ambo, amongst the Byzantines and Copts — L: Lecterns — M: Nave — N: Narthex.

*Kanīsa* is an element of numerous church-names. The most famous of these is the *Kanīsat al-Kiyāma* (the Church of the Resurrection) in Jerusalem, which some writers twist into *Kanīsat al-Kumāma* (the Church of the Sweepings), making a play on the root *k-n-s*, which means "to sweep" in Arabic. In Egypt alone, the word *kanīsa* appears 187 times in al-Maḥrīzī's *Kitāb al-Khiṭāf*. In modern Eastern vernaculars, *knīse* is used for "church" and *knīs* for "synagogue".

In the work of Christian writers, *kanisa* means both the assembly of the faithful and their meeting-place. In Bible translations, both it and *bī'a* are used indiscriminately for the two Greek words ἐκκλησία and συναγωγή, or the two Syriac words ʿidā or *h<sup>o</sup>nūshā*. The relative adjective is *kanasi* or *kanā'isi*, "ecclesiastical" (*al-Sifr al-kanā'isi* = The Book of Ecclesiastes).

(ii). The Christian building. Despite some differences depending on periods and rites (Chaldean, Syrian, Byzantine, Copt), all churches are built on more or less the same plan, whether in Mesopotamia, Syria, Palestine or Egypt. The eastern church is rectangular in form, always orientated towards the east, and is divided into two main parts, the sanctuary and the nave.

The sanctuary (*haykal*) or Holy of Holies (*Ḳuḍḍ al-aḥḥas*) is separated from the nave in the Chaldean or Syrian church by a wall with two doors, and in the Byzantine or Coptic church by a marble or wooden screen with three doors. A veil (*sitr*) hangs over the main door. In the centre of the sanctuary is the altar (*madhbah*), surmounted by a ciborium (*kubba*), except in the Chaldean church, where the altar is placed against the eastern wall. A lamp (*hindil*), which must be kept burning night and day, is hung in front of the altar. Again with the exception of the Chaldean church, at the far end of the sanctuary, in the apse which forms the eastern wall, is found the bishop's throne (*kursi*); the Chaldean sanctuary, which is topped by a dome, has no apse. In all rites, entry to the sanctuary is strictly forbidden to the laity. At the left of the sanctuary is the diaconicon or sacristy (*bayt al-khidma*) and at the right the baptistry (*bayt al-ma'mūdiyya*), with the baptismal font (*ḏurn al-'imād*). The position of these two places relative to the sanctuary may be reversed.

The nave (*sahn*) includes a varying number of bays. In Chaldean and Syrian churches the dais (*minassa*) is situated in the anterior bay, where in Byzantine and Coptic churches is found the choir (*khurus*), often covered by a dome. The Chaldeans and Syrians place the pulpit (*bim*) in the central bay; on the left side is the site of the ambo (*anbil*) in Byzantine and Coptic churches. On the dais, in the choir on the pulpit two lecterns (*harrā'a*) are placed. The front of the nave is reserved for men and the rear, formerly separated by a wooden screen, for women. The nave may be preceded by a narthex on the western façade or bordered with a gallery on the north or south side.

In all rites, the church building is consecrated (*tadshin*), and the dedication of the Church of the Resurrection in Jerusalem is celebrated on September 13. Oriental church symbolism is particularly rich, each part of the building having its own spiritual significance (cf. J. Perier, *La perle précieuse*, in *Patrologia Orientalis*, xvi, 68-70, 159-66).

After the Muslim conquest, the Christians were prohibited from building any new churches; all they could do was repair and restore existing buildings, which in theory they were permitted to keep. In fact, however, over the centuries numerous churches were confiscated and converted into mosques, or even destroyed (cf. A. Fattal, *Le statut legal des non-musulmans en pays d'Islam*, Beirut 1958, 174-203).

**KANIZSA** (Turkish Kanizhe), a notable Hungarian fortress dominating the region between Lake Balaton and the River Mur. Kanizsa stood amidst marshes: "caenos palustrique loco sita est, fluviolo stagnante, et nullis coercito ripis, sed magis late diffuso ac carectis, multaue alno et arundine impedito, endique cincta" (Isthvanfius, 774). The Ottomans conquered the fortress in 1009/1600 after a wearisome siege, demanding the construction of approach roads across the marshes which were built of reeds and had to be renewed each day. Once taken, Kanizsa (with Szigetvár, Eszék, Siklos and Pécs) was entrusted to the care of Tiryāki Hasan Pasha. Alarmed at the loss of this important fortress, the Christians attempted to regain it in 1010/1601, but their attempts were foiled by the vigorous defence against them conducted by Tiryāki Hasan — a defence which became famous among the Ottomans and the details of which are recorded in the well-known *Ghazawāt-i Tiryāki Hasan Pasha* (cf. A. S. Levend, 99 ff.). Kanizsa remained under Ottoman rule until the war of the Sacra Liga (1648-99), yielding to the Christian forces in 1101/1690 and then passing definitively into the control of Austria.

**KANKARIDES** [see KURDS].

**KANKIWAR** [see KINKIWAR].

**KANNANÜR**, CANNANORE, a port on the Malabar coast of southwestern peninsular India in lat. 11° 52' N. and long. 75° 22' E.

Ibn Battūta sailed down this coast in 743/1342, and though he does not mention Kannanūr by name,

it seems that his mention of the powerful ruler of *Djurfattan*, whose ships traded with the Persian Gulf, 'Umān and South Arabia, refers to the local ruler there (*Rihla*, iv, 82-3). Aḥmad b. Māǧǧid (wrote ca. 895/1489-90) certainly speaks specifically of the "Bay of Kannanūr" in his account of the Malabar coastline (G. R. Tibbett, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, 201, 457). In the 8th-9th/14th-15th centuries the dominant power in Malabar was the line of Hindu rulers in Kalikat [q.v. in Suppl.] (Calicut), the Zamorins, whose authority extended from Kananūr in the north to Cochin in the south, and to whom the local Kolatirri Rāǧǧās in Kannanūr were tributary.

Islam must have come to Kannanūr with the arrival at an early date of Arab traders, one local tradition putting the origins of the family of Āli Rāǧǧās (Malayalam, "Lord of the Sea") at the beginning of the 6th/12th century. This family derived its name from its being admirals for the Kōlatirris, and these Āli Rāǧǧās were also heads of the local community of Malabar coast Muslims, the Māppillas [q.v.] or Moplahs, who were perhaps originally built round a nucleus of Arab merchants, but with increasing numbers of indigenous Malayali adherents; Kannanūr remains today an important Māpilla centre. From ca. 1500 onwards, the Kōlatirri Rāǧǧās of Kannanūr also exercised suzerainty over the Laccadive Islands [q.v.], and in the mid-10th/16th century they granted these to the Āli Rāǧǧās as a *djāgīr* [q.v.] or assignment in return for annual tribute; Kannanūr Māpilla merchants monopolised the lucrative coir trade of the Islands until the revolt in 1786 of the islanders against their harsh exploitation. The connection of the rulers of Kannanūr with the Maldive Islands [q.v.] comes also from an early date, with the king of the Islands being tributary to the Rāǧǧās by ca. 1500.

The arrival of the Portuguese in South India was at first welcomed by the Kōlatirri Rāǧǧās, who hoped to throw off the control of Kalikat. Vasco da Gama was at Kannanūr in 1498, and Cabral in 1500, and on his second voyage to India in 1502, da Gama made an agreement with the Rāǧǧā and established there a stockade and a garrison of 200 men. The first Portuguese viceroy, Francisco d'Almeida, established four forts on the Malabar coast, at Anjediva Island, Kannanūr, Cochin and Quilon, the Kannanūr stockade being erected into a proper defensive position, Fort St. Angelo, in 1505, probably on the site of an existing stronghold. In 1506 and 1507 the Portuguese garrison there fought off naval attacks by the Zamorins of Kalikat; Almeida made it the headquarters for his fleet, and it was from Kannanūr that the destruction of the combined fleets of the Egyptian Mamlūks and of the Zamorins at Diw (Diu) in *Shawwāl* 914/February 1509 was organised.

The Dutch captured Kannanūr and Cochin in 1663 and took over the Portuguese position on the Malabar coast. But by the end of the 17th century the trade of the Dutch East India Company in Malabar declined as that of the English East India Company grew, and the Kannanūr fort was reduced to one tower. Hence in 1771 the Dutch sold Fort St. Angelo and other forts to the Āli Rāǧǧās. In these decades, the latter showed themselves as generally unfriendly to the British East India Company, intriguing with the Dutch and French and consistently supporting the expansionist policies of Ḥaydar 'Alī [q.v.] (Hyder Ali) of Mysore. The Bibī of Kannanūr (sc. the female representative of the Āli Rāǧǧā line)

further supported Ḥaydar 'Alī's son Tipū Sulṭān; hence in December 1783 Kannanūr was occupied by a British force under Col. MacLeod, and again captured in December 1790 by General Ralph Abercromby, when the Bibī submitted and 5,000 of Tipū Sulṭān's troops surrendered. An agreement made in 1796 with the Bibī left her Kannanūr and the Laccadive Islands in return for an annual assessment of Rs. 15,000, an arrangement which continued in force down to the 20th century.

Kannanūr eventually became part of the Madras Presidency, with Kannanūr as the *chef-lieu* of the *tāluḳ* of Chirakkal, the northernmost *tāluḳ* of the District of Malabar. Its importance and size grew in the 19th century, especially as it was also till 1887 the military headquarters of British forces on the west coast of South India, and a cantonment was laid out, with Fort St. Angelo separating it from the Māppilla Old Town. In 1861 the Laccadive Islands were sequestered from the Bibī on account of misgovernment, and again in 1875, this time permanently. In modern India, Kannanūr is now in the northernmost part of Kerala state, and since the administrative re-organisation of 1958-9 has formed one of the eight constituent districts of that state; according to the *Census of India* 1961, Vol. vii *Kerala*, Pt. ii/A, 40, 118, Pt. ii/c, 152-3, the population of Kannanūr district was then 1,780,294 (including 1,237,254 Hindus, 418,832 Muslims, 123,575 Christians, and 551 Jains), and that of Kannanūr town (municipality plus cantonment) 48,960.

(C. E. BOSWORTH)

**KANNĀS** (A.), lit. sweeper, is a term synonymous with *kassāk*; other words used in the Arab Orient for the same occupation are *sammād* and *zabbāl*, which denote "dung collectors" or scavengers who collected garbage, such as animal dung, to be used as fertiliser. The *kannāsūn*, the sanitary workers, swept public squares (*riḥāb*) and other places such as prisons (*sudjūn*), dungeons (*maṭābik*) and latrines (*kunūf*), and transported garbage in boats or by other means to places outside the cities. The earliest known report in Islamic literature of scavenging is a tradition collected by Abū 'Ubayd b. Sallām [q.v.], who noted that the indigenous Arameans (known to the Arabs as *Anbāṭ*, sing. *Nabaṭ*) cleaned a dung-hill at Bayt al-Maǧḍis during the caliphate of 'Umar b. al-Ḳhaṭṭāb. The *Anbāṭ* of Syria and 'Irāk are reported as having been used occasionally as forced labour by the Umayyad government.

There is evidence to suggest that the *kannāsūn* and the *kassākūn* were organized into guilds throughout the 'Abbāsīd period. *Djāḥiẓ* [q.v.] speaks of a certain 'arif al-kannāsīn who was the chief of the sweepers living in the Karkh quarter of Baghḍād in the 3rd/9th century. Al-Rāǧhib al-Iṣfahānī, writing in the 5th/11th and early 6th/12th century, also gives evidence that sweepers' guilds were found in Arab society during the later part of the 'Abbāsīd period. The bulk of literary evidence relating to workers of the 'Abbāsīd epoch gives the impression that the so-called "low crafts" such as those of the

dustmen, cuppers, weavers, leather workers, brokers and fishmongers, were stigmatized. Some of these groups of workers kept apart from each other and shared only a mutual dislike. In one anecdote, presumably not to be taken literally, a *kannās* was described as preferring to drink from a filthy pot used for conveying human excrement than drinking from the clean cup of a cupper. A proverbial saying of the Umayyad period says that there is nothing to choose between a cupper and a sweeper because they are equally worthless. Similar attitudes prevail today among different groups of low-caste workers in India.

It is interesting to note a contrasting view on the status of scavengers presented by the authors of the epistles (*rasā'il*) of the *Ikhwān al-Ṣafā'* [q.v.], who pleaded that the dustmen's rôle in urban society was of greater public utility than that of the perfumers ('*aḥḥārūn*). So the scavengers deserve honour (*sharaf*), the *Ikhwān* writers argued, although there is no evidence that such logic had any influence on public opinion. The general contemptuous attitude towards the *kannāsūn* was not confined to the society of the Umayyad and 'Abbāsīd periods; it is equally noticeable in Arab society under the Mamlūks. Some Muslim jurists, while discussing the law of *kafā'a* [q.v.], state that *kannāsūn* are not acceptable as marriage partners by other groups in society. Scavenging therefore tended to be a hereditary occupation and the *kannāsūn* lived as a closed, endogamous group.

(M. A. J. BEG)

**KANO**, a city in northern Nigeria situated in lat. 12° N., long. 8° 30' E. Its population was estimated to be 295,432 persons at the 1963 census. Kano State has an area of 16,630 square miles and an estimated population of 5,774,842.

**History and Politics**: Kano is reputed to have originated before the 4th/10th century as a pagan settlement at the foot of Dalla hill, a large rocky outcrop which dominates the present city. The traditional accounts of this early period suggest that the inhabitants adhered to an animist, spirit-possession cult similar to the *bori* cult which has

survived in northern Nigeria to the present day, and that the cult head combined his priestly functions with those of a temporal ruler.

In the 4th/10th century the city was visited by "strangers" under their leader, Bagauda, who are described as having come from the north under pressure of famine in their own country. They settled in Kano with the consent of the indigenous inhabitants and then, by superior skills and cunning, established mastery over them. Whether these immigrants were Muslims is uncertain, although according to the traditional account Bagauda also bore the name Dāwūd. But they clearly did not belong to the indigenous cult and the Kano Chronicle (see *Bibl.* below) records that some generations passed before they became integrated into it. Their contribution to the development of Kano seems to have been that they set up a city state, with fairly clearly defined territorial boundaries and an administrative centre within the walled city, where previously there had existed only a stateless, hunting and primitive agricultural society living in scattered open hamlets and clearings in the bush.

After Bagauda, the first Islamic name to occur in the king-list is that of Osumanu Zamnagawa, who reigned from 743/1343 to 750/1349 by the Kano Chronicle dating. According to the same source, his reign was followed by the arrival in Kano of the Wangarawa, that is Islamic missionaries from Mali, during the reign of Yaji (750-87/1349-85), but a recent account based on the discovery of a 17th-century chronicle of the Wangarawa (Muḥammad al-Hāǧǧī, *A Seventeenth-Century Chronicle of the Origins and Missionary Activities of the Wangarawa*), in *Kano Studies*, i/4 (1968) suggests that this event took place in the 9th/15th century and not in the 8th/14th century. Other evidence also tends to support the view that the 9th/15th rather than the 8th/14th century was the point at which an Islamic presence became firmly established in Kano, even though some indeterminate Islamic influences may well have been abroad at an earlier date. For instance, it is between 793/1390 and 813/1410 that the quilted horse armour (Arabic *al-libd*, Hausa *lifidi*) together with mail shirts were introduced, a fact which suggests contacts with Islamic North Africa. Also, between 824/1421 and 841/1438 a "prince" and his followers arrived in the city from Bornū, a kingdom where Islam had already been established since, reputedly, the 5th/11th century. This was followed by the opening of trade relations with Bornu. By 856/1452 camels are said to have appeared in the city and slave-raiding in the country south of Kano had become a profitable occupation of the aristocracy. All of this suggests that Kano had, by the middle of the 9th/15th century, become involved in the trans-Saharan caravan trade and this, of course, offers a reliable indication for the chronology of Islamization.

The next major landmark in this chronology is the arrival in Kano of the well-known Abū 'Abd Allāh Muḥammad b. 'Abd al-Karīm b. Muḥammad al-Maghīlī al-Tilimsānī (d. 909/1504), a Muslim 'ālim and missionary from North Africa. This personality became the focus of the Islamic tradition in Kano, and indeed in Hausaland as a whole. He is credited with introducing the *Shari'a* and *Ṣūfism* and indeed all things Islamic are said to go back to al-Maghīlī. No doubt he was personally important; but the true significance of his presence in the city is that it signals the time when, as a result of increasing involvement in the Saharan trade complex

and political contacts with Bornū, Kano became opened up to the surrounding Islamic areas of North Africa and Egypt.

A further step on the way toward fuller islamization took place during Muhamman Rumfa's reign (867-904/1463-99). He is said to have introduced Islamic segregation of the sexes, the public observation of Islamic festivals and he also appointed eunuchs to office, thus possibly copying a practice common in courts elsewhere in the Islamic world during the Mamlūk and Ottoman periods.

Kano's relations with the other Sudanese and Saharan states during the period before the Fulani *djihād* are both involved and sometimes obscure. They are treated in Johnston (*op. cit.*, *Bibl.*) and Hogben and Kirk-Greene (*op. cit.*, *Bibl.*) and need only be reviewed in outline in an article essentially concerned with Islamic aspects. In the 9th/15th century Kano was probably subject to Bornū, to the extent of paying tribute. In the early 10th/16th century it was defeated by Songhai, but the native dynasty remained in power, paying tribute to Songhai but apparently otherwise undisturbed. Songhai control seems soon to have lapsed and later in the century Kano came under the domination of the Kebbi kingdom after a period of debilitating wars against its neighbour Katsine. Throughout the 11th/17th century both the city and the state of Kano were the targets for constant attacks by the warlike Kwararafa from the Benue area. During the first half of the 12th/18th century Bornū again became overlord of Kano, but its place was later taken by the Gobir kingdom, whose king, Babari (1155-84/1742-70), established mastery and levied tribute. These military defeats, however, seem to have had little detrimental effect on the wealth and prosperity of the city, while the rulers appear to have retained all their authority within their kingdom and to have increased in pomp and circumstance. For instance, Babba Zaki (1182-90/1768-76) introduced a uniformed bodyguard of musketeers into his court and is described as having deliberately imitated the ways of the Arabs—in the first instance presumably the life-style of the Arab merchants resident in Kano, but through them the ceremonial and protocol of North African and Egyptian courts. He ruled as an able but ruthless despot. There is evidence of some factional divisions in his court, however, while the account of the reign of one of his near predecessors, Kumbari (1143-56/1731-43), tells of popular resentment against excessive taxation. These scraps of evidence may point to a state of affairs that brought about the events of the reign of Muhamman Alwali (1195-1222/1781-1807), namely the successful Fulani *djihād* in Kano, the expulsion of Alwali and the installation of the first Fulani amir of Kano, Sulaymanu (1222-35/1807-19), who founded the Fulani dynasty which has ruled the emirate since that time. Sulaymanu was followed in 1235/1819 by Ibrahimu Dabo, a renowned warrior who earned the Hausa epithet *Ci gari*, "conquer city". During the following half-century frequent attacks on the city by the ousted Habe dynasty were defeated, while intermittent war was carried on against the Ningi pagans, a powerful group who still held an enclave on the southern border of the amirate which had not been pacified during the *djihād*.

During the reign of the amir Usuman (1262-72/1846-55) the German explorer, Heinrich Barth, visited the city. He describes it as a thriving centre of trade, with a market plentifully stocked with goods of European and North African origin. He

also provided a sketch map of the city as it was at that time and estimated its population at 30,000 (*op. cit.*, *Bibl.*).

In 1311/1893 a civil war broke out in Kano, occasioned by a succession dispute between two contenders for the throne, Yusufu and Tukur. Tukur, the nominee of the caliph in Sokoto, proved unacceptable to Kano, but at the root of the trouble lay Kano's resentment at Sokoto's interference. The civil war subsided on the death of the two principal protagonists but served to establish the limitations on caliphal authority. The tension between Sokoto and its powerful feudatory Kano has continued to be a factor in their relations ever since.

Kano figured prominently in the events leading to the British occupation of Hausaland early in the present century. It was visited at the end of the 19th century by the British missionary Canon C. H. Robinson and again early in the 20th century by a party of which Dr. Walter Miller was a member. Both gave somewhat unfavourable accounts of Islam and of the Kano administration, which probably contributed to the climate of opinion in the United Kingdom which made the occupation possible. On the eve of that occupation the amir of Kano, Aliyu (1312-21/1894-1903), gave asylum to the Magajin Keffi, the murderer of Sir Frederick Lugard's emissary, Captain Moloney. This provided Lugard with part of his justification for military intervention and in *Dhu 'l-Ḳa'da* 1320/February 1903 the city fell to a British force after a brief and ineffective resistance.

During the colonial period, Kano developed both as a centre of the newly introduced Western system of education and as the emporium of the new groundnut trade upon which the economy of northern Nigeria came largely to depend. It was the locale of the School for Arabic Studies, an institution set up by the colonial government to train teachers of Arabic and the Islamic sciences in modern pedagogic methods. Abdullahi Bayero College, a college of Ahmadu Bello University, was also founded in Kano.

The city has always been, and still is, an important centre for Ṣūfī activities. Muḥammad b. 'Abd al-Ḳarīm al-Maghīlī is traditionally supposed to have introduced Ṣūfism to Hausaland, and Kano and Katsina were the two centres he visited. It may be assumed that the Ḳādiriyya [*q.v.*] was the first of the *ṭarīqas* to be established and it is still probably the *ṭarīqa* of the majority even at the present day. But the Tiḍjāniyya [*q.v.*] are also strong, reflecting, perhaps, the rivalry with Sokoto referred to above. The Sokoto ruling family is identified with the Ḳādiriyya and indeed bases its claim to political authority largely on the *silsila* of Shehu Usuman ḍan Fodio ('Uṭmān b. Fūḍī) linking him to 'Abd al-Ḳādir al-Djīlānī. This is perhaps not unconnected with the fact that the former *amir* of Kano, Muhammadu Sanusi, became at one time the official head of the Tiḍjāniyya in northern Nigeria.

During the closing era of the colonial period, which saw the rise of European-style political parties in northern Nigeria, the two *ṭarīqas* were deeply involved in the political struggle for power which the prospect of independence provoked. The Ḳādiriyya in Kano was, on the whole, identified with support for NPC, the party of the establishment led by the late Alhaji Sir Ahmadu Bello, a scion of the Sokoto ruling house, while the Tiḍjāniyya tended to favour the northern Nigerian opposition party, NEPU, led by Malam Mainu Kano. While

the Kano ruling dynasty was bound by its essential interests to support NPC, the rivalry with Sokoto was by no means healed and in 1963 the reigning amir of Kano, Sir Muhammadu Sanusi, "resigned" under pressure from the central government headed at that time by the premier of the Northern Region of Nigeria, the late Alhaji Sir Ahmadu Bello. This event, symptomatic of the clash of interest between the traditional "given" authority of Sokoto arising out of the Fulani *djihād* in the early 19th century, and the rising economic and political power of Kano in a changing world, gave rise to agitation for an autonomous Kano state. This has, in some measure, been conceded by the present military administration. These tensions, which were real and which at times manifest themselves in a violent fashion, should however be seen in a proper perspective. They were inevitable in a society that has a long and sophisticated political tradition. But at a social and cultural level the people of Kano, and indeed their rulers, shared, and still share, with those of the rest of northern Nigeria, including Sokoto, a strong sentiment of their common Islamic identity and a corresponding sense of solidarity.

Learning and literature: The tradition of Islamic literacy in Kano goes back to the late 9th/15th century *‘ālim* and Islamic missionary, al-Maghīlī, who composed a set of *fatāwī* for the benefit of Muhammad Rumfa, ruler of Kano from 867/1463 to 904/1499. Later scholars such as, for instance, Ahmad b. ‘Umar b. Muhammad Aḳit and a certain ‘Abd al-Rahmān b. ‘Alī b. Ahmad al-Ḳaṣrī are said to have visited Kano shortly after al-Maghīlī, although the exact chronology of their visits is uncertain. No record of any composition from their pens survives but they may reasonably be supposed to have nourished the tradition of Islamic learning established in the city by this time. Later, ca. 937/1530, Makhlūf b. ‘Alī b. Ṣāliḥ al-Bilbālī resided in the city and it is likely that, through his acquaintance with the *faqīh* al-‘Āḳib b. ‘Abd Allāh al-Anṣamunī al-Massūfī, he was a link with the Egyptian polyhistor, Djalāl al-Dīn al-Suyūṭī [see AL-SUYŪṬĪ], the influence of whose writings is known to have been seminal in the development of an indigenous Islamic literature in Hausaland, both in classical Arabic and in the two main vernacular languages, Hausa and Fulfulde (see E. M. Sartain, *Jalāl ad-Dīn as-Suyūṭī's relations with the people of Takkūr*, in *JSS*, xvi (1971), 193-8).

As far as is known, the earliest extant work of a Kano *‘ālim* is al-‘Aṭiyya li ‘l-mu‘fi of ‘Abd Allāh b. Muhammad b. ‘Abd al-Salām, known in Hausa as Abdullahi Sikka. This work is a long *manzūma* of forty *abwāb*, in the *basīf* metre, on the *‘ibādāt* and matters relating to Islamic eschatology. Its importance lies in the fact that it demonstrates the thoroughness with which the basic religious sciences were established in Kano early in the 11th/17th century, when the author flourished. Moreover, certain of the *abwāb* such as *Bāb al-djūlūs min al-dunyā*, *Bāb ‘alāmāt ḳurb al-sā’a*, and the like, suggest the presence of Ṣūfī influences and the currency of Mahdist expectations even at this early date.

Kano was not subsequently remarkable for creative literary activity but seems to have relied on imported literary materials from peripheral Islamic areas and, later, on the writings of the prolific literary families of Sokoto. The first Kano scholar to have contributed to the vernacular Islamic literature which developed in Hausaland from ca. 1164/1750 onwards was Usuman, an *imām* of Miga,

in Kano amirate. Born in Sokoto, he came to live in Kano during the reign of Sulaymanu, composing there his long Hausa *manzūma*, *Mu san samuwar Jalla*, "Know the Existence of the Glorious God". This is a typical versification on *tawḥīd*, manifestly based on such classical Arabic sources as the well-known *Umm al-barāḥīn* of Muḥammad b. Yūsuf al-Sanūsī and the *Djawharat al-tawḥīd* of Ibrāhīm al-Laḳḳānī.

Another, rather later contributor to the vernacular Islamic literature in Kano was Asim Degel, who flourished ca. 1262/1846. Also a native of Sokoto, he moved to Kano when he was a young man and composed a Hausa *naẓm* on astrology, drawn from the Arabic works of such locally popular North African authors as the 8th/14th-century Muḥammad ‘Abd al-Ḥaḳḳ, known as Abū Mukrī and the 11th/17th-century ‘Abd al-Wāḥid b. al-Ḥusayn b. Ismā‘īl al-Raḍīrāḍī. Of greater literary interest is his *Wakar Muahammadu*, the "Song of Muḥammad", a long Hausa versification in the Arabic *ṭawīl* metre, giving great prominence to the *mi‘rādī* and displaying late accretional influences which seem to reflect his familiarity with the writings of Ibn ‘Arabī and such later popular writers on this sense as al-Ghayṭī and al-Dardīr.

Another well-known literary personality who was a native of Kano and received part of his schooling there before settling in Salaga, northern Ghana, was Alhaji Umaru Salaga (b. ca. 1271/1854; d. 1353/1934). One of his well-known Hausa works is *Wakar Nasara*, the "Song of the Christians", in which he gives an account of the British occupation of Hausaland as seen through Hausa eyes. Some also attribute to him the otherwise anonymous works *Wakar Bagauda* (see *Bibl.*), and *Bahandamiya*, also a Hausa versification on the occupation, but these attributions are uncertain. He composed a number of works in Arabic as well as in Hausa.

Among mid-20th-century authors in the Islamic tradition the best-known is probably Alhaji Muhammadu ḡan Amu, a writer of *madīḥ* in Hausa, whose long Hausa *manzūma* with the Arabic title *Manzūma fi bayān al-dīn* is widely read in Northern Nigeria. Much of this Islamic writing consists of panegyric to ‘Abd al-Ḳādir al-Djīlānī and Ahmad al-Tidjānī. Typical of this genre is the composition of Malam Abubakar Atiku, a well-known member of the Tidjāniyya in Kano, which bears the Arabic title, *‘Aybat al-fuḳarā’*, and is a macaronic poem in Arabic and Hausa praising al-Tidjānī.

An important part in the Islamic life of Kano City is played by the *makarantan ilmi*, the schools of higher Islamic learning. There are at least twelve substantial establishments of this type in Kano city, although in fact the total number is much greater than this, for any Muslim literate may set up such a school. In these institutions higher Islamic learning—*fiḳh*, *ḥadīth*, *tafsīr* and such classical literary masterpieces as the *Mu‘allakāt*, the *Mahāmāt* of al-Ḥarīrī and the works of Ibn ‘Arabī—is taught. Kano is now well known for the excellence of its higher Islamic schools and is a centre to which students come from all over the western and central Sudan. The *makarantan ilmi*, which exist independently of the secular, state education system, foster a continuing and still vigorous tradition of Islamic scholarship in the city and it seems probable that Kano has now overtaken Katsina and Sokoto—both earlier centres of learning—as the focus of traditional Islamic education in northern Nigeria.

*Bibliography:* Two main sources for the

history of Kano are available in English translation: First, "The Kano Chronicle", in H. R. Palmer, *Sudanese Memoirs*, iii, Lagos, 1928; an Arabic text of the chronicle is also preserved in Ibadan University Library, a prose work originally in Arabic, written down at an undetermined date but probably ca. 1298/1880 (see M. Hiskett, *The Kano Chronicle*, in *JRAS* (1957)), and quite clearly the record of a very old oral tradition; second, *Wakar Bagauda*, the "Song of Bagauda", a Hausa verse chronicle which is also a 19th-century record of an ancient oral tradition, broadly repeating the account given by the Kano Chronicle but diverging from it considerably in its early chronology, for the Hausa text, English translation and critical commentary see Hiskett, in *BSOAS*, xxvii/3 (1964); xxviii/1 (1965) and xxviii/2 (1965). An important source in Hausa is Alhaji Abubakar Dokaji Kano, *Kano ta Dabo Cigari*, Zaria 1959, the history of the city according to local tradition. In addition to these primary sources an Arabic *Ta'rikh Kano* is listed by Adeleye (*op. cit.*, below) under Ibadan, 82/212; an unpublished Arabic account of the Kano civil war by Muhammad Bukhārī, vizier of Sokoto (d. 1328/1910) is preserved in the Nigerian National Archives, Kaduna (Kadcaptory 2, 30). An unpublished Hausa versification in praise of Kano and its notable personalities by Aliyu ḡan Sidi, *amir* of Zaria from 1321/1903 to 1339/1920 circulates in Ms. in northern Nigeria; Alhaji Muhammadu ḡan Amu (see above) has also written an unpublished verse history of the city and its surrounding villages, a copy of which is held in the author of this article's personal microfilm collection.

Among the accounts of the 19th-century European travellers that of Denham, Clapperton and Oudney, *Narrative of Travels and Discoveries in Northern and Central Africa*, London 1826, is the earliest and those of Heinrich Barth, *Travels and Discoveries in Northern and Central Africa*, London 1857, and P. L. Monteil, *De St. Louis à Tripoli par le lac Chad*, Paris 1894, are especially useful. For the views of Christian missionaries in the late 19th and early 20th centuries see especially C. H. Robinson, *Hausaland or Fifteen Hundred Miles through the Central Sudan*, London 1896, and W. R. S. Miller, *Reflections of a Pioneer*, London 1936. Early official accounts of the British administration include W. F. Growers, *Gazetteer of Kano Province*, London 1921; *Annual Reports on Northern Nigeria 1900-11*, London 1911 and many other official documents preserved in Nigerian National Archives, Kaduna, and the Public Records Office, London. A serving soldier's eyewitness account of the battle prior to the occupation of Kano City will be found in F. P. Crozier, *Five Years Hard*, London 1932.

The most comprehensive secondary account by a modern scholar of the general history of Kano is S. J. Hogben and A. H. M. Kirk-Greene, *The Emirates of Northern Nigeria*, London 1966; much useful detail also in H. A. S. Johnston, *The Fulani Empire of Sokoto*, London 1967, and Mary Smith, *Baba of Karo*, London 1964. The Kano civil war is described in some detail by R. A. Adeleye, *Diplomacy in Northern Nigeria 1804-1906*, London 1971; another account of the British capture of the city which deals more fully with military aspects is D. J. M. Muffett, *Concerning Brave Captains*, London 1964.

Information concerning Kano in recent times

will be found in *Kano Survey*, Zaria 1950, and in the publications of the Ministry of Information, Kano State.

(M. HISKETT)

**KĀNPUR**, CAWNPORE, a city situated on the banks of the Ganges river in Uttar Pradesh province in the Indian Republic at lat. 26° 28' N. and long. 80° 20' E., and also the name of an administrative district of that province.

Until the later 18th century, Kānpur was little more than a village known as Kanbaiyāpur or Kanhpur, and since it was situated on the western frontiers of Awadh or Oudh [*q.v.*], the district of Kānpur was disputed in the middle decades of the 18th century by the Nawwābs of Awadh, the Mughal emperors in Dihli and the expanding power of the Marāthās. After the British victories of Baksar and *Djāḡimaw* (1764-6), the Treaty of Fayḡābād made in 1775 with the Nawwāb allowed the British to garrison two places in his territories. From 1778 onwards, Kānpur became one of these two garrisons, and after 1801, the Kānpur district and others were permanently ceded by the Nawwāb to the East India Company.

The most notorious event in Kānpur's comparatively uneventful history took place during the Indian Mutiny of 1857-8. The small British garrison was besieged by Dhondu Pant or Nāna Ṣāḡib, the Marāthā holder of the *djāḡir* or assignment of Bithūr, and surrendered on promise of a safe conduct to Allāhābād; in the event, however, the men were immediately massacred (27 June 1857) and the women and children later slaughtered and their bodies thrown into a well. Kānpur was occupied by General Henry Havelock on 17 July and only lost again for ten days in November when mutineers from Gwalior took it temporarily (cf. Sir George Trevelyan, *Cawnpore*<sup>4</sup>, London 1894; P. C. Gupta, *Nana Sahib and the rising at Cawnpore*, Oxford 1963). Lesser incidents worthy of note include the Plague Riots of 1900, when six policemen were killed by a mob which attacked huts in which plague victims were isolated, and the 1913 Mosque Riot, when there was a disturbance arising out of road-widening plans involving the demolition of a latrine attached to a mosque and 18 Muslims were killed (see M. Yanuck, *The Kanpur mosque affair of 1913*, in *MW*, lxiv (1974), 307-21).

Kānpur has since grown into the most populous city in Uttar Pradesh and one of the largest in India (population of the city according to the 1961 census, 973,907, of which the vast majority were Hindus, and of the district, 2,381,353 (including 2,059,930 Hindus, 286,147 Muslims, 24,397 Sikhs, etc.); 1971 census preliminary estimate, city 1,151,955, district 2,992,535). Situated as it is on the Grand Trunk Road connecting Dihli with Calcutta, and at a nodal point of the north Indian railway system, Kanpur has been well-favoured to become the modern industrial centre of the present day, with extensive textile, leather, food processing and general engineering plants (cf. D. N. Majumdar et alii, *Social contours of an industrial city: social survey of Kanpur*, 1954-6, New York 1960). Kānpur now has a university which includes the Indian Institute of Technology. The surrounding Kānpur district forms an extremely fertile part of the Ganges-Djāmnā Dōāb, and has flourishing agriculture and forestry.

**KANŞ** [see ŞAYD].

**KANŞAWH AL-GHAWRĪ** (usually but incorrectly vocalized *Kānşūh al-Ghūrī*), the penultimate Mamlūk sultan of Egypt, was of Circassian origin and a *mamlūk* of Sultan *Kāʿitbāy*. He was trained in the military school (*ṭabaḳa*) named *al-Ghawr*, whence his *nīsba*. He became governor (*kāshif*) of Upper Egypt (886/1481-2), was appointed an *amir* of Ten (889/1484), and took part in operations against the Ottomans on the Syrian-Cilician frontier, during which time he was governor (*nāʿib*) of *Ṭarsūs*. In *Rabīʿ II* 894/March-April 1489 he was appointed grand chamberlain (*ḥādīb al-ḥudūdīyāb*) of Aleppo, where he suppressed a dangerous rising of the townspeople in 896/1491. Subsequently he became governor of Malatya, commander of the guard (*raʿs nawbat al-nuwab*) and finally (906/1501) secretary of state (*dawādār kabīr*) to al-ʿAdil *Ṭūmān Bāy*, who had proclaimed himself sultan in Damascus. A military revolt against al-ʿAdil broke out in Cairo at the end of Ramaḍān 906/18-19 April 1501. A junta of high *amirs* compelled al-Ghawrī to become sultan (1 Shawwāl 906/20 April 1501). His installation was probably intended as a temporary expedient: he was already about sixty years old, and he had not played an outstanding part in court politics.

Al-Ghawrī's situation at the outset was precarious. Two of his predecessors were still living. A more serious threat came from the veteran royal *mamlūks* (*ḥarāniṣa*), since their privileged status was weakened on the accession of a new sultan who would recruit his own *mamlūks*. In the first month of his reign, al-Ghawrī sought to anticipate trouble by ordering the *mamlūks* of al-ʿAdil to go to Upper Egypt. Nevertheless, in *Dhu ʿl-Hijjā* 906/June-July 1501 he was faced by a disturbance from *mamlūks* demanding the bounty traditionally paid on a sultan's accession. A further danger was represented by the two powerful *amirs* who had acted as king-makers at his accession. One of them, *Miṣr Bāy*, was arrested on 12 Muḥarram 907/28 July 1501, and although he escaped to organize a conspiracy against the sultan, this failed and he was killed (12 Ramaḍān 907/21 March 1502). The other, *Ḳayt al-Raḍiābī*, acted as al-Ghawrī's principal minister, but on 16 Raḍiāb 910/24 December 1501 he too was arrested on the grounds that he was plotting to have himself proclaimed sultan in Syria in alliance with the rebel governor of Aleppo, *Sībāy*. Thereafter al-Ghawrī relied chiefly on two ministers, neither of whom was likely to endanger him. *Zayn al-Dīn* (al-Zaynī) *Barakāt b. Mūsā*, the son of an Arab, was appointed *muḥtasib* of Cairo (*Shāʿbān* 910/January-February 1505) and became the leading financial official, retaining his position even after the Ottoman conquest. On 4 *Djumādā II* 913/11 October 1507, al-Ghawrī appointed his brother's son, *Ṭūmān Bāy*, as secretary of state. The loyalty of the Mamlūk élite was always doubtful, and on several occasions al-Ghawrī demanded from the *amirs* an oath on the *Kurʿān* of *ʿUṭhmān*. His own *mamlūk* recruits (*ḍiṭbān*) were untrustworthy, and revolted even in *Shawwāl* 921/December 1515, when war against the Ottomans was imminent.

Al-Ghawrī was confronted by formidable fiscal problems, resulting from prolonged economic decline and administrative ossification, and aggravated by natural calamities (such as the severe epidemics of plague in 910/1505 and 919/1513) and the maritime power of Europeans in the Mediterranean, the Indian Ocean and the Red Sea. Payments to the soldiery fell into arrears, or were met by extraordinary levies.

Extortion, practised upon disgraced officials or after the death of rich persons, was another expedient to fill the treasury. The strain on the finances of the Mamlūk state was increased by al-Ghawrī's efforts to improve his forces and armament in the face of the growing external threat from the Portuguese, *Shāh Ismāʿīl* and Sultan *Selm I*. Al-Ghawrī organized (from 916/1511) a unit armed with handguns. Since such weapons were dispised by the genuine *mamlūks*, this Fifth Corps (*al-ṭabaḳa al-ḥāmisa*) was recruited from heterogeneous elements: Turkomans, Persians, *awlād al-nās* [*q.v.*] and local artisans. The Fifth Corps was a cause of tension between al-Ghawrī and his *ḍiṭbān*. Al-Ghawrī also made a serious and sustained effort to build up a stock of artillery. He established a cannon-foundry, and was frequently present at the testing of the new pieces from 913/1507 onwards.

During most of the reign, Damascus was governed by *Sībāy*, who as governor of Aleppo had rebelled in 910/1504-5, but had subsequently made his peace with al-Ghawrī. Appointed on 17 Shawwāl 911/13 March 1506, *Sībāy* held Damascus until his death at *Mardj Dābiḳ*. Apart from operations against the local Bedouin, he led expeditions against *Muḥammad b. al-Ḥanash*, the powerful *muḥaddam* of al-Biḳāʿ (*Muḥarram* 912/June 1506), the *Banū Lām* tribe in the region of *Karak* and al-Shawbak (*Ṣafar* 914/June 1508), and the chief of *Ḥawrān*, *Ibn Sāʿid* (*Rabīʿ II* 916/July 1510), the last two of which threatened communications with the *Hijjāz*. In 917-18/1511-12, friendly relations with each of these were established. As *Ṣafawid* and Ottoman power developed on the Syrian frontier, al-Ghawrī sought to ensure the continuing loyalty of *Sībāy* by the marriage of *Sībāy's* daughter to his own son (920/1514).

A revolt against the *Sharīf Barakāt* of Mecca, which broke out in 907/1502, was finally suppressed in 913/1507. An ominous new danger appeared in the Portuguese, who were establishing themselves on the coast of India and seeking to exclude Muslim shipping from the Red Sea. In *Djumādā II* 911/November 1505 an expeditionary force was sent to assist *Mahmūd Shāh*, the ruler of *Gudjarāt* [*q.v.*], against the Portuguese. It included royal *mamlūks*, *awlād al-nās*, negro archers (more probably, arquebusers) and Turkomans, under the command of the *amir* *Husayn Muṣhrif al-Kurdī*, who fortified *Djudda* [*q.v.*] against a Portuguese attack. *Husayn*, who, in combination with the fleet of *Gudjarāt*, won a naval victory off *Ḳawl* (Ramaḍān 913/January 1508), was heavily defeated by the Portuguese near *Diū* [*q.v.*] in *Shawwāl* 914/February 1509, and withdrew from the Indian Ocean.

Al-Ghawrī was meanwhile striving to construct warships in the gulf of Suez. He was obliged to obtain materials from the Ottomans. A gift of timber, iron and powder from *Bāyezīd II* reached *Būlāḳ* in *Shawwāl* 916/January 1511. When in *Muḥarram* 919/March-April 1513 the Portuguese attacked *ʿAdan* [*q.v.*], al-Ghawrī appointed *Husayn Muṣhrif* governor of *Djudda*, while a force of the Fifth Corps and royal *mamlūks* was ordered to Suez, to protect the fleet in building there. After prolonged procrastination the Fifth Corps left Cairo in *Raḍiāb* 921/August 1515. By that time about 2000 Ottoman sailors under the command of *Selmān Reʿīs* were at Suez. An expedition by *Selmān Reʿīs* and *Husayn Muṣhrif* coincided with the fall of the Mamlūk sultanate, and laid the foundation of Ottoman rule in the Yemen.

The rise of *Ṣafawid* power threatened Mamlūk control of northern Syria. A crisis occurred in the autumn of 913/1507, when the *Ṣafawids* invaded the *Dulgadr*

(*Dhu* 'l-Kadr, [q.v.]) principality, at that time, under 'Alā' al-Dawla, a dependency of the Mamlūk sultanate, to which it was of great strategic importance. Sibāy prepared an expedition from Damascus, but hostilities were averted. Thereafter for some years relations were peaceful.

The accession of Selīm I as Ottoman sultan dramatically altered the situation. Al-Ghawrī tried to profit from the developing crisis between Selīm and Shāh Ismā'īl. The Ottoman victory at Čaldırān [q.v.] on 2 Radjab 920/23 August 1514, however, alarmed al-Ghawrī and his *amirs*. Selīm's hostility towards 'Alā' al-Dawla of Dulgadlr, who had refused to help the Ottomans, immediately threatened Mamlūk interests. The Ottomans defeated and killed 'Alā' al-Dawla (Rabi' II 921/June 1515). The passing of the Dulgadlr principality under Ottoman domination alarmed the *amirs* in Cairo, while Sibāy and the governor of Aleppo, Khā'ir Bey (who was already in touch with Selīm), reproached al-Ghawrī for his delay in sending reinforcements. In spite of the serious financial situation and the demoralization of his forces, al-Ghawrī prepared an expedition, and on 15 Rabi' II 922/18 May 1516, he left Cairo. Tūmān Bāy was appointed viceroy (*nā'ib al-ghayba*), but the effective control of the administration was in the hands of Zayn al-Dīn Barakāt.

On 10 Djumādā II/11 July, al-Ghawrī reached Aleppo, where Ottoman ambassadors presented a conciliatory message from Selīm, to whom al-Ghawrī in turn sent peace proposals. Selīm, who intended another campaign against the Šafawids, decided, however, first to end the danger to his flank. Conflict was now inevitable, and a decisive battle ensued at Mardī Dābiq, north of Aleppo, on 25 Radjab 922/24 August 1516. The flight of the Mamlūk left wing, commanded by Khā'ir Bey (who was probably in secret understanding with the Ottomans), led to the break-up of the whole Mamlūk position. In the confusion, al-Ghawrī fell from his horse and died, apparently of apoplexy. His body was never recovered.

**KANSU**, a province in the north-west of China, bounded in the south and east by the provinces of Szechwan and Shensi and in the west and north by the province of Chinghai and the Sinkiang Uighur and Inner Mongolia Autonomous Regions. The province, first formed under the Great Khan Kūbilāy in 1282 A.D., received its name from the towns in the extreme north-west, Kanchou (Changyeh) and

Suchou (Kiuchuan); both towns are already mentioned in the *Hudūd al-'ālam* and Gardizi, the former in the form Khāmḍjū (in the Mongol period Kamḍjū) and the latter as Sukḥḍjū or Sūkḍjū.

1. *To the end of the Mongol period.* Until the thirteenth century A.D. this territory was for the most part under the domination of foreign peoples of Turkish (Uyghur) or Tibetan (Tangut) origin; immediately before the Mongol conquest there was a Tangut kingdom here under the Hsai (or Hsi-hsia) dynasty (1032-1227) with their capital at Ningsia (Yinchwan). Rashīd al-Dīn, in giving a list of the twelve provinces (*shing*, Chinese *shêng*) of China, divides the Tangut region into two, with Kīndjānfū (now Sien, the capital of Shensi) and Kamḍjū (Kanchou) as their respective capitals. In actual fact, Kanchow was the capital of Kansu; Kansu and Shenn were then, as later, combined in a single government, the only difference being that the residence of the governor was then in the capital of Shensi and not, as later, in the capital of Kansu. The boundary between Kansu and Shensi was formed by the Hwang Ho, so that Lanchow, the present-day capital of Kansu, then belonged to Shensi. In connection with Quengianfu (*i.e.*, Kīndjānfū, Sian) Marco Polo mentions Prince Mangalay (d. 1280, the Mangqalā of Rashīd al-Dīn) Kūbilāy's third son, as ruler of Tangut, while Rashīd al-Dīn refers to his son Ananda; according to Rashīd al-Dīn, he was the founder of Muslim dominance in this area. Born about 1270 (at the beginning of the 14th century he was thirty years of age), he was brought up by Muslim foster-parents; but it was only after the conversion of the Il-Khān Ghazan (*i.e.*, ca. 1295) that he openly professed Islam. He converted the greater part of his army, numbering nearly 150,000 men to Islam, and the people of Tangut, except the peasantry, were likewise converted. Taken to task by his cousin the Great Khān Temūr Ōldjeytū (1294-1307) for his conversion, Ananda remained faithful to Islam and after a period of interruption was restored to his dominion. In 1307 a party wished to raise him to the throne of the Khānate, but he was put to death after the success of a rival candidate, Temūr's nephew Khayshān (1307-1311). It was not until 1323 that Ananda's son Örg-Temūr was appointed prince of Tangut.

As Marco Polo shows, there were already Muslims in Kansu before Ananda's time; however, he says nothing about the dissemination of Islam south of the Hwang Ho. The Turkish-speaking Salar, who live at the present day on the southern banks of that river, are mentioned as living there as early as the Ming dynasty (1368-1644) and described as unruly subjects, although no Muslim risings are recorded during this period. The story which reached Timūr's territories about 1398 to the effect that the founder of the Ming dynasty had ordered the massacre of some 100,000 Muslims and had completely eradicated Islam in China finds no confirmation in any Chinese source.

2. *In the post-Mongol period.* After the collapse of the Yüan dynasty which took place in 770/1368,

Muslims in Kansu, as well as those of other provinces of China, were put under the rule of the newly-established Ming dynasty, which, at the beginning of the new régime, adopted a discriminatory attitude against non-Chinese. It oppressed *Hui-hui* or Muslims, and generally speaking, the *Hui-hui* under the Yüan dynasty were obliged to settle in China, and began to be assimilated to the Chinese way of life through intermarriage with native Chinese women. They were physically and linguistically sinicised as time went by; *Hui-hui* under the Ming dynasty gradually changed their original, Islamic surnames to Chinese ones (e.g., from Muḥammad to Ma, etc.), and adopted Chinese languages; nevertheless, they adhered strictly to Islam. This process also affected Kansu Muslims, with some characteristics different from those of China proper.

In the early Ming period there were many Muslims in Kansu, while some of them are reported to have returned to Samarkand, according to the *Ming Shih-lu* or the *Veritable Annals of the Ming Dynasty*. At Kanchou, Liangchou and Suchou there were some Muslims who had newly emigrated from Central Asian countries in the middle Ming period (*Ming Shih-lu*, sub anno 1527), and some from the Komül region, with which the Ming dynasty had had political relations. Apart from such new-comers, native Muslims originating from the Yüan period greatly increased in number and were distributed in south-eastern parts of Kansu as far as adjacent parts of Shensi. There were also Muslims in districts of Kung-chêng-fu, Chinchou, T'aouchou and Kuyüan in the Kansu Province, according to the *Ming Shih-lu* and local gazetteers of the Ming dynasty.

In 1604 Father Benedict Goës, who travelled from Agra through the Tarim Basin to Ming China in search of the historic Cathay and who reached Suchou, mentions "Saracens", that is to say, Muslims, who lived in Suchou segregated from the Chinese there. Though his description is in some parts ambiguous, we may conclude that there were Muslims at Suchou in the late Ming period.

Under the Ch'ing dynasty, which succeeded the Ming in 1644, the situation of Muslims in Kansu, Ninghsia and Shensi changed little; however, we have much more information on the Kansu Muslims under the Ch'ing, as seen in the *Ch'ing Shih-lu* and other historical sources and local gazetteers of the dynasty. In the Ch'ing period, Kansu had one of the densest concentrations of Chinese Muslims. Chinese-speaking Muslims of Ch'ing China were generally called *Hui-min* ("Islamic people") in Chinese. The main habitats of Kansu Muslims were Kanchou, Liang-chou, Lanchou, Kuyüan, Chingchou, Hochou, Chingyüan, Piliang, Fuchiang, etc.; other places adjacent to Kansu where they lived were Hsining, Hsünhua, Kueitê in Chinghai Province, and Ninghsia, Chin-chi-pao in Ninghsia Province.

The size of the Chinese Muslim population in Kansu is unclear: M. Broomhall (1910) estimated it at two or three millions. According to the statistics of the government of the Chinese Peoples' Republic, the Muslim population of Kansu is estimated at 1,086,597 (30% of the total population of Kansu Province in 1953), and that of Chinghai at 257,959; thus the total population is 1,330,000. The basis of Broomhall's estimate is not clear, but, as compared with the present situation, these seem to be acceptable statistics. Generally speaking, Kansu Muslims are more densely distributed in the southern part of Kansu, that is, south of the Yellow River.

Islam in Kansu as in other provinces of China,

is that of the Ḥanafî rite, with some influence from the Shâfi'î one, as is shown by investigations of D'Ollone on Islamic legal practices prevalent in modern Kansu (D'Ollone, *Recherches sur les Musulmans chinois*).

The most important feature among the Muslims of Kansu is the prevalence of Sūfism, apparently originating in the middle of the 18th century. In contemporary Ch'ing sources, one of the Sūfî teachings of Kansu Islam is called *Hsin-chiao* (the "New Sect" or "New Teaching"), which was reported for the first time in 1761 immediately after the Ch'ing conquest of Eastern Turkistan. One Ma Ming-hsin, a native of Anting, Kansu, started to spread the so-called "New Teaching" in the district of the Salar tribes in Hsining after his return in 1761 from a period of religious study at Yarkand and Kâshghar in Eastern Turkistan. With the support of Sū-ssü-shih-san and Hu-ma-liu-hu, both Salar *mullas*, he founded the "New Sect" in 1762. This propagated a mystical ritualism characterized by: (1) loud chanting of religious songs, as opposed to the low chanting by the Old Sect or Old Teaching; (2) prayers with head-shaking and body movement in a dance-like manner—foot-stamping, hand-waving, and face turning up towards heaven; (3) belief in miracles, visions, apparition of spirits and prediction of good or bad omens; and (4) worship of Muslim saints and their tombs. Ma Ming-hsin was revered as the saintly founder of the sect. However, one cannot consider the "New Sect" founded by Ma Ming-hsin as a reform movement reacting against the traditional sects, generally called Ancient or Old Sects (*K'u-pai*, *Chiu-pai* and *K'u-hsing-pai*).

In ca. 1760-80 the centre of the *Hsin-chiao* was at Hsünhua, a town near Hsining, where *Hsin-chiao* adherents quarrelled incessantly among themselves in the 1760s and 1770s; and in 1781, Ma Ming-hsin and Sū-ssü-shih-san led an attack on the Muslims belonging to the Ancient Sect. Government suppression of sectarian strife led *Hsin-chiao* adherents to open rebellion against the Ch'ing dynasty in that year, and, though it was suppressed by the Ch'ing army, a second revolt broke out in 1783 at Shi-fêng-pao, Kansu. Since the 19th century, major centres of *Hsin-chiao* adherents have been in Chang-chia-chüan, Kansu, and in Chi-chi-pao, Hinghsia.

In 1862 a new revolt broke out at Chin-chi-pao, where Ma Hua-lung who came from the direct "apostolic" line of Ma Ming-hsin, maintained his quarters. Ma Hua-lung is reported to have been a mystical saint who was able to perform miracles; but his rebellion was suppressed in 1871 by the Ch'ing army. The mystic order of Ma Hua-lung was called *Djahriyya* from the 19th century onwards (D'Ollone); the headship of the Order passed to Ma Yüan-ch'ang, a disciple of Ma Hua-lung, who had his headquarters at Chang-chia-chüan, Kansu. Ma Yüan-ch'ang is mentioned by G. Andrew who visited him in the early 20th century; he died in 1920 during an earthquake which occurred in Kansu during that year.

Besides *Hsin-chiao*, another characteristic of the Sūfism of Kansu Islam is the institution of *mêng-kuan*. *Mêng-kuan*, especially the Four Great *Mêng-kuan*, was reported in Ch'ing sources for the first time in 1786; the Six Great *Mêng-kuan* were also reported in 1943. They are (1) the *Hu-fei-yeh* sect, including *Pi-chia-ch'ang kung-pei*, *Lin-t'ao kung-pei*, etc.; (2) the *Ka-ti-lin-yeh* sect, including *Ta-kung-pei*, *Yang-men*, etc.; (3) the *K'u-pu-lin-yeh* sect; (4) the *Sha tsü-lin-yeh* sect; (5) the *Sai-ai-lo-wo-lo-ting-yeh* sect; and (6) the *Che-ho-lin-yeh* *Djahriyya* sect.

According to the missionary D'Ollone, who made a study of aboriginal peoples in the borderlands of China in 1906-9, the tombs of three Islamic saints were revered among Kansu Muslims. Mêng-kuan adherents were also called *Kung-pei-chiao*, that is, "followers of Tomb Teaching". Thus, the *Djahriyya* sect of Kansu Muslims may be said to be one of *meng-kuan*, tomb-worshippers.
